

ANTIQUE RADIO CLASSIFIED

VOLUME 2

OCTOBER 1985

NUMBER 10

THIS MONTHS COVER COURTESY OF BILL BELL, ARTIST. COPYRIGHT BILL BELL - REPRINTED WITH PERMISSION.

ANTIQUE RADIO CLASSIFIED

Publishing Details

Antique Radio Classified (USPS 735-090) is published monthly, 12 times yearly, at a subscription rate of \$15.00 per year by G.B.S. Enterprises, 9511 Sunrise Blvd., #J-23, Cleveland, Ohio 44133, (216) 582-3094.

Second-class postage paid at Cleveland, OH.

Publisher and Editor - Gary B. Schneider.

POSTMASTER: Send address changes to address above. Antique Radio Classified - Copyright 1985.

Purpose

Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby thru the buying, selling, and trading of radios and related items. In addition, there will be coverage of upcoming radio conventions, meets, flea markets, etc. Other items of interest to collectors will be included in issues as material or suggestions are received.

Display Ad Rates

Antique Radio Classified accepts display advertising for companies that provide a product or service to the radio collecting hobby. As artwork is reduced 35% when printed, original should be 1.54 times the desired finished size and must be camera ready artwork. Original size areas are available as follows:

Full Page	10-1/2" H x 7-1/2 W	\$30.00
Half Page	5-1/4" H x 7-1/2 W	15.00
1/4 Page	5-1/4" H x 3-3/4 W	7.50
1/8 Page	2-5/8" H x 3-3/4 W	3.75

Business Card - same as 1/8 page

Above rates based on circulation of 1,000 subscriptions.

Full page ads may be vertical or horizontal format.

Multiple insertions for 3 months qualify for a 10% discount.

All artwork must be received by the 1st of the month to be included in the following issue, which is mailed on the 1st day of the calendar month.

Classified Ads

Each subscriber is entitled to one 20 word classified ad free of charge per issue. Additional words over the limit are 10¢ per word. Multiple insertions of same ad are discouraged. This is to allow for a varied ad content in each issue. Multiple insertion ads for more than 2 issues must be run as a display ad. All ads must be printed neatly and be received by the 10th of the month before next issue. All issues mailed on the first of the month.

Payment

All ads must be paid for in advance. Make checks payable to Antique Radio Classified.

Subscription Rate

Subscriptions are available on a yearly basis, \$15.00 per year. Sample issues: \$1.50.

Submission of Material

Antique Radio Classified welcomes and solicits any information that pertains to the radio collecting hobby. This may include material such as upcoming radio events, meetings, radio books and publication reviews, new radio clubs and organizations, radio auctions and price reports, sources of old radio material and restoration supplies, and any other material that would be of interest to the hobby. All material submitted should be typewritten and verified for accuracy.

Change of Address

Notification of change of address should be made well in advance to receive uninterrupted copies of Antique Radio Classified. Do not depend on the Post Office to let us know.

Fine Print

The publisher is not responsible for any buying and selling transactions incurred by readers thru the content of this publication.

Antique Radio Classified subscription and ad rates subject to change, as well as frequency of publication, content, and size.

The Silvertone Model 1152 was one of Sears Roebuck and Co.'s first mantel style radios, having been introduced in late 1930. It was manufactured for Sears by the Colonial Radio Corp. of Buffalo, New York and was also sold with the Colonial nameplate as the model 41. Colonial had been a radio supplier of Sears radios since 1929 when the Colonial Radio Corp. of Long Island City, New York and the King Mfg. Corp. of Buffalo had merged. King had made radios for Sears since the mid 1920's. Between 1928 and 1936 Sears had no less than 17 different radio manufacturers supplying sets. Colonial was the largest followed by the United Air Cleaner Corp. Some like Zenith and Sterling made only one model. Others included the Transformer Corp. of America, Echophone, Crosley, Majestic, CRC, Century, Detrola, Case, Howard and Air King. Colonial was one of the largest radio companies in the country through its association with Sears and Graybar and its manufacture of car radios for Oldsmobile, Chevrolet, Pontiac, Plymouth and DeSoto. It remained in business till 1944 when it was bought by Sylvania Electric Products Inc.

The model 1152 is a six tube tuned radio frequency receiver employing a number of unusual features. Three type 24 tubes are used, two in the RF stages and another as detector. The detector is resistance coupled to a transformer coupled push/pull audio coupler and output transformer. Volume is controlled in a most novel manner by varying the coupling between the primary and secondary on the antenna and RF stages. This variation in coupling is effected by moving the primary coils. The antenna and RF coils are also moved by the rotation of the tuning condenser to maintain uniform sensitivity over the frequency range. The detector primary is not moved to control volume but is moved by rotation of the tuner. This system of volume control does not change voltages or currents in the tubes. An elaborate system of pulleys accomplishes this and it works very well. Volume is controlled smoothly with no static as is frequently heard when a conventional control gets a little dirty.

Another feature that is seldom found in a mantle set is the 10 inch speaker. The resultant tone quality is much better than most con-

temporaries of the model 1152. The field coil is used in the negative side of the filter circuit and the voltage drop across the field coil is used to obtain the various bias voltages. An 80 rectifier tube supplies direct current which is filtered by a single 16 mfd. capacitor.

SILVERTONE 1152

The cabinet of the Silvertone 1152 is a sturdy molded wood fiber front similar to the "Repwood" material used by Crosley. The arch is more conventional - walnut veneer over plywood. When removing the chassis from the cabinet the dial must be lined up to the arrow at 680 Kc's or it is nearly impossible to get out. I speak from experience!

Many Silvertone schematics and those of suppliers are not in Riders Manuals. I am lucky to have a copy of the "Service Information and Parts List for Silvertone Radios 1928 to 1936" and would be willing to help with anyones Silvertone. For \$2.00 and a SASE I will send whatever information I have.

Next month a Crosley model 48 "Wiget" will be featured. Good collecting - Frank Heathcote, 1235 N. 3rd St., Logansport, IN 46947

WITH THE COLLECTORS

WE WERE ALL BEGINNERS AT ONE TIME

I am writing this "Collector Profile" to relate to the new collectors who have recently started, like myself, and to jar a few thoughts in those who are old pros.

I got my start in technical school long after tubes had given way to the transistor and the chip. Luckily I had one semester of tube theory with a fine teacher I owe it all to. He taught me the theory behind a superhet and with a little game we played in class I could troubleshoot any problem (on paper).

One day while going through a flea market I saw the most important radio in my collection. It's not the oldest or the rarest, or even the most expensive. It's the first! It's that old set I know you've all seen and probably wouldn't buy now, but then it was the apple of my eye.

Mine was a Philco Model #610 which I got for \$20. The cabinet was in rough shape and the chassis was covered in dust. Now that I think about it the only good thing about it was the logo at the top.

I took my prize home and immediately plugged it in. Luckily I didn't destroy it in my ignorance. One of the tubes glowed blue and this taught me one of the best parts of the hobby, "the search". After going to the local parts club and being told I must have the wrong number because it didn't have any letters in it I realized this wasn't going to be easy. I then

wrote a letter to RCA and here I was in luck. The man that got my letter knew someone in the hobby and he had the tube. This taught me the best aspect of the hobby, the nice people you meet.

Well that old radio looked great when I was done. I still remember the feeling when I put it on display and lit it up. I don't think I'll ever sell it.

I have been in the hobby three years now, not even enough time to decide if I like small radios or consoles. The searching is a lot easier since finding out about the A.W.A. and A.R.C.. And now I don't plug the radios in as soon as I get them anymore. One thing for sure - the thrill is still there and it always will be. I am also a lot richer, not in money, but in the friends I have met and the history I have learned.

I hope to meet many more of you through the classifieds and maybe in person at an event. I have enclosed some photos of my meager collection, but I know you will understand - because we all started with one!

Editors note - Yes, we all can relate to this story. I even have my first radio - an old TRF battery set, brings back memories 17 years ago when I didn't even know what an 01A (tube) was. Thanks go out for this article to: Leonard Arzooomanian, 12 DiFillippo Court, N. Providence, RI 02904.

PHOTO REVIEW

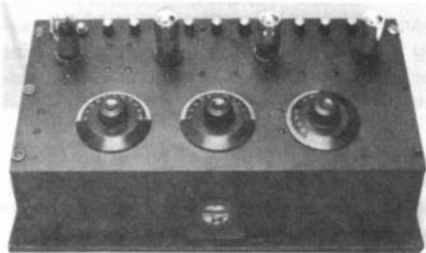

The "Photo Review" column is intended to present in pictorial form many of the radios, speakers, tubes, advertising, and other radio related items in the collections of other collectors. These photos are meant to help increase awareness of what's available in the radio collecting hobby. Photos are solicited from other collectors for use in future issues of A.R.C. Items desired are the more unusual radios and other items related to the hobby (covering the years 1900 to 1940's). Photos must be B&W (any size) and be sharp in detail, preferably with a light colored background. Please include a short description of each item submitted.

ECHOPHONE - This Model S-5 was advertised in the March 1931 issue of *Radio Retailing* for \$69.95. The eight tube superhet has a tube line up of four 24's, two 45's (push-pull output), a 27 oscillator and an 80 rectifier. The 17 1/2" high cabinet is a very attractive "Gothic" design finished in figured walnut. From the Echophone Radio Mfg. Co., Ltd. in Wackegan, IL (John Miller - Lexington, KY)

AMPLION - Called the "Patrician", this speaker is of the enclosed horn type. (Greg Farmer - Fridley, MN)

OZARKA - A four tube set using UV-199's, the model number is unknown. The dial on the right side is actually a rheostat. The other two are variable tuning condensers. From about 1923/24? (Greg Farmer - Fridley, MN)

HARTMAN CO. - A scarce pedestal horn speaker made by the Hartman Co. of Mansfield, Ohio, the company did very little advertising. They also made speakers for the Saal Co. of Chicago and put a "S" in the middle instead of the Hartman "H". The driver is an Utah and produces a quite mellow sound when compared to the metal horns of its day. Fred M. Schultz, Ligonier, IN

WORLD WAR II GERMAN RECEIVER

Soon after the United States' entry into World War II, it was discovered that the German military enemy had developed engineering and manufacturing technology that far surpassed ours in many ways, and radio communication was included.

My younger brother was an Air Force officer/engineer assigned to a special unit in Dayton, Ohio whose main duty was to research and analyze captured enemy equipment of all types and to integrate desirable features into our weaponry. He often spoke of German talent and ingenuity.

I obtained this communication unit from a collector friend who knew little or nothing about it, who in turn obtained it from a much older collector's estate in a large package deal of antique artifacts. Therefore, I had no way of backtracking it's history, except what became obvious during restoration.

I spent a considerable amount of time repairing and restoring this unit with no parts required except for a few missing metric screws, and it now looks much the same, inside and out, as it perhaps did when new on the battlefield. All I.D.'s and wording in German was retained.

It is a German army field communication unit used in combat zones identified as TFuG.K 443845. The combat carrying case still shows only minor battle damage and has all the attachments for back pack straps, vehicle mounting and frequency charts. It measures 17½" x 13½" x 8" and weighs 38 lbs. without it's external power supply.

Of particular interest to the readers is of course, what is inside the carrying case. The main framework for the entire unit is cast in one piece of machine finished aluminum or magnesium, as are the three front panels, deeply engraved with all the control I.D.'s and legends in German language and symbols. Access to all tubes, fixed adjustments, and for

maintenance is either thru provided holes or by removal of back and side plates.

The receiver with it's hybrid circuitry tunes 3000 KHz to 6600 KHz with little or no measurable change in selectivity or sensitivity, and has excellent noise rejection. The transmitter tunes 4500 KHz to 6600 KHz for both CW and voice modulation. Frequency remains surprisingly stable across the entire tuning range into a resistive dummy load and with varying amounts of RF power output.

GERMAN TFuG.K 443845

All tubes bear the German war industry Swastika, indicating they are the original. Tubes are small but quite rugged, unusual in design, also provided with extractors. The field power supply was missing, but was no doubt some form of portable power such as man powered generators, with regulated outputs. The lower panel across the bottom provides for performance monitoring, CW or voice modulation, speaker or headphone connection, as well as power supply inputs.

This is truly an interesting piece of foreign equipment from a technician's point of view and a conversation piece for a serious collector's exhibit... (Contributed by William H. Stuber, P.O. Box 153, Woodward, Iowa 50276)

COLLECTORS VALUE GUIDE

CONTRIBUTED BY: JAMES KREUZER, 257 HASTINGS, BUFFALO, NY 14215

Dear Jim, It has not been easy getting a list of Scott prices around. I have talked to Scott collectors, including Jim Clark, plus a few general collectors. One problem I am sure you can appreciate is that for some models I have no recent selling references. As an example, the Allwave 2-volt model. There aren't any in collections as far as I know. This makes it difficult to set a price.

On the matter of cabinets, I spoke to a well known historian in Texas, who is probably the most knowledgeable person on Scott radios. He indicated that it would be impossible to set prices on cabinets, although he published a list in 1978 to this effect. I have reproduced this list for you. (Editors note: This list is not printed in this value guide). Most of the values on it would be close in relation to each other. Example - a Napier console would still be more valuable than a Georgian. Since he doesn't feel that prices can be established for cabinets, I am not going to presume I could price them. The results of the auction of Scott radios in Georgia last year is another reason why it is difficult. The "hearsay" value of Scott radios can be tremendous.

Finally, for the early (non-chrome) Scott sets, there are virtually no recent sales to base prices on. Having talked to some Scott collectors, I think I have a good idea what someone might pay if any of these sets came up for sale.

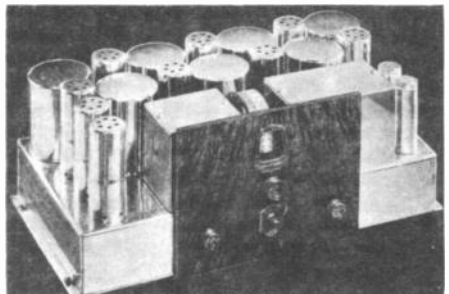

The following price list is per your "perfect" description. For sets, this would mean complete with original knobs, escutcheon, and speakers. Obviously, both radio and amplifier chassis would constitute a complete set. I am fairly comfortable with these prices. You know many of the factors that will cause these to vary, including the fact that some Scott sets are art-deco. I feel that these radios are some of the hardest to fix a price on. I have paid a wide range of prices for Scotts, from \$150 for a nearly perfect Allwave 12, to \$25 for a Phantom AM-FM in the original box. (No one at the Auction knew what it was.)

If I can be of futher assistance in this, please let me know. I have found this price guide difficult, and I can appreciate the problems you have been having pricing all the various sets you have listed in A.R.C. Regards - Kent King, 3637 Liberty Rd., Delaware, OH 43015

E.H. SCOTT:

WORLD RECORD SUPER 8	\$500

FM TUNER	150
COMM. RECEIVER	2000

Note: Because my knowledge of Scotts was limited, I decided to let some of the Scott collectors pool their ideas of Scott values for use in this price guide. I am very grateful that Mr. Kent King had accepted this responsibility. This is a very controversial subject, one that may offend some people. But let us be understanding in the difficulties it presents those trying to set these "Value Guides", and above all, the appreciation for the work and research Mr. King has done, plus the many other collectors who help contribute to these "Value Guides" but aren't always acknowledged. - James Kreuzer

WITH THE COLLECTORS

THE SIX DOLLAR SATELLITE STATION

It all started back in 1979, with 25 dollars and a "GOOD IDEA". The 25 dollars was for the creation of a tax-exempt corporation, and the "GOOD IDEA" was to preserve the history and equipment of broadcasting. I had been collecting since the third grade and I had just learned how to spell "museum"; so I assumed a NATIONAL BROADCAST MUSEUM would soon be a reality.

With a dedicated staff and three disappointments for each success, we opened our doors in downtown Dallas on May 16, 1981. It was the grand opening of the West End Historical District, and four thousand people toured the Museum that first day. Donations of vintage equipment continued, and our exhibit area covered 5,488 square feet. Everything looked great from the outside, but with absolutely no monetary support from the broadcasting industry, money was always a problem. And when our landlord refused to renew our lease at any price, we locked the doors for the last time on my birthday in December 1983. It took 21 moving vans to transport the collection to a storage area donated by Museum Trustee Russell H. Perry.

Our luck soon changed, however, when Trustee Trammell Crow Jr. donated 9,339 square feet rent free at the Dallas Communications Complex. Trustee Andy Bell, himself a veteran broadcaster, pulled the necessary strings at the Chilton Foundation Trust, and we soon had a 100 thousand dollar grant. But we still needed 500 thousand to finish-out the free building, and with no money from broadcasters, we remain in storage.

And now our luck has changed again, as The Nostalgia Channel agreed to donate free up-linking and transponder time. I raided our warehouse and found a 1971 model audio cassette machine that would play continuously, and with six dollars, I purchased a supply of cassettes at Radio Shack. Using the Museum's collection of over 15 thousand recordings, I made six 45 minute programs on my home stereo. Then, at 11:00 AM on May 31st, THE NATIONAL BROADCAST MUSEUM SUPER-STATION hit the air. Except for telling my mother, we had no advance publicity, but received our

first call from California within 15 minutes. The calls and letters have not only continued, but they have increased! I now have to turn off my phone in order to sleep and make new tapes. We play music from the years 1899 to 1959, plus an old radio show once each hour. Last week a man in Fallbrook, California sent us 602 78RPM records, and we received two checks this week.

So The National Broadcast Museum is now open again, 24 hours a day, 7 days a week, playing the most beautiful music in the world, from the LARGEST BROADCAST MUSEUM IN THE WORLD. Our new address is SATCOM 4, Transponder 21, audio 6.2. Give us a listen sometime, or better yet, send us a donation! If you would like to make a request, call (214) 748-1112. If you get my answering machine, then you'll know I am either sleeping, making another tape, or working my shift at KDFW-TV in Dallas, Texas. (Contributed by Bill Bragg, National Broadcast Museum, 2001 Plymouth Rock, Richardson, TX 75081)

A-K BREADBOARD REVIEW

CONTRIBUTED BY: RALPH WILLIAMS, RD 1 - BOX 44, ORIENT, NY 11957

Atwater Kent produced eleven different "Open Set" models (breadboards) from the beginning in 1922 until the box sets replaced them in 1925. Many collectors are familiar with most of the Open Sets but it seems that when details get discussed, a pictorial catalog of the sets and their main variations would be useful. It is in this respect that this column is being published - a detailed listing of each breadboard manufactured by Atwater Kent. Along with the photo of each model will be a brief description of that model. The photos will all be to the same scale so that the sets can be compared for size and configuration. Since the later breadboards appear more often for sale and collecting, this month's photos are of a typical model Ten and Twelve - Ralph Williams.

ATWATER KENT MODEL 12 - PART NUMBER 4910: Three variations of this model were produced. They were all characterized by having three audio amplifiers instead of the two that were used on the Model 10. The last amplifier on the set pictured could be turned off using the large knob on the last two-tube amplifier unit. This is the primary distinguishing feature of this variation of Model 12. The other special feature is the socket for the second radio amplifier. It has no rheostat. This set is sometimes called the Model 12C. The size of the base board is 34 x 10 inches.

ATWATER KENT MODEL 10 - PART NUMBER 4340: Model 10 was the most common of the breadboards. Number 4340 was the first of four major variations of Model 10. The set had three radio frequency resonators. The coils were parallel with their axes vertical. The tuning condensers were green in color as was the three-tube unit. Nameplates and binding post were used to connect the coils and the condensers in the first sets produced. The size of the base board is 31½ x 10 inches.

The next installment of this series will include another Model 10 and a Model 9. Antique Radio Classified would like to hear how you feel this column is of use to you, along with any comments or suggestions for future installments of this series.

RADIO CLUB LISTING

RADIO CLUB LISTING - The following is a list of all known radio clubs that have an affiliation with the history or collecting of radio and wireless equipment. Most of these clubs publish their own bulletins to keep their members informed, as well as sponsoring conventions and flea markets throughout the year. These clubs are a good way to meet fellow collectors in your area who share the same common interest, as well as receiving their club bulletins. Almost of the clubs invite out-of-state membership. The information presented here is as accurate as possible, however not all of the clubs have given A.R.C. their latest club status. When writing these clubs please mention you saw their name in *Antique Radio Classified*. (GBS)

ANTIQUE WIRELESS ASSOCIATION, INC. - C/O Bruce Roloson, Box 212, Penn Yan, NY 14527. Publishes the bulletin *The Old Timer's Bulletin* on a quarterly basis. Dues \$8.00 per year. Sponsors regional conventions as well as the Annual Conference in September at Canandaigua, New York.

ANTIQUE RADIO CLUB OF AMERICA - C/O William Denk, 81 Steeplechase Rd., Devon, PA 19333. Publishes the bulletin *The Antique Radio Gazette* on a quarterly basis. Dues are \$10.00 per year. Sponsors several regional chapters of A.R.C.A. as well as an annual convention in a different area of the country each year, usually in June.

ANTIQUE RADIO CLUB OF ILLINOIS - C/O Randy Renne, 1020 Idlewild Dr., Dixon, IL 61021. Publishes *ARCI NEWS* on a quarterly basis. Dues are \$10.00 per year. Sponsors meets throughout the year in addition to the large "Radiofest" meet in August of each year.

ANTIQUE RADIO CLUB OF SCHENECTADY - C/O Jack Nelson, 915 Sherman St., Schenectady, NY 12303

ARIZONA ANTIQUE RADIO CLUB - C/O Lee Sharpe, 2224 West Desert Cove Rd. #205, Phoenix, AZ 85029. Publishes *Radio News* on a quarterly basis. Dues are \$10.00 per year.

ARKANSAS RADIO CLUB - P.O. Box 4403, Little Rock, AR 72214. Additional information not known.

BRITISH VINTAGE WIRELESS SOCIETY - C/O Robert Hawes, 63 Manor Rd., Tottenham N17, London OJH, England. Publishes *Vintage Wireless* on a monthly basis. Write for U.S. membership rates.

BUCKEYE ANTIQUE RADIO & PHONOGRAPH CLUB - C/O Steve Dando, 627 Deering Dr., Akron, Ohio 44313. Publishes the *SOUNDINGS* newsletter on a quarterly basis. Dues are \$5.00 per year. Sponsors several informal meets at collector's homes throughout the year, plus they exhibit at area shopping malls.

CALIFORNIA HISTORICAL RADIO SOCIETY - CHRS, P.O. Box 1147, Mountain View, CA 94041. Publishes the *CHRS Official Journal* four times a year and the *CHRS Newsletter* four times a year. Dues are \$10.00 per year. Sponsors California area conventions and flea markets.

HOUSTON VINTAGE RADIO ASSOCIATION - C/O Ron Taylor, 12407 Mullins, Houston, TX 77035. Publishes the *Houston Vintage Radio News* and also the *Grid Leak* on a frequent basis. Dues are \$15.00 for members within a 75 mile radius and \$6.00 per year for all others. Yearly activities include a show and public auction held in the spring in an area shopping mall, swapfests, picnic and banquet.

INDIANA HISTORICAL RADIO SOCIETY - C/O E.E. Taylor, 245 N. Oakland Ave., Indianapolis, IN 46201. Publishes the *IHRS Bulletin* on a quarterly basis. Dues are \$6.00 per year. Sponsors at least four swap meets per year in various areas of Indiana including the well attended meet in the fall at Auburn, Indiana.

LONG ISLAND ANTIQUE RADIO SOCIETY - 160 S. Country Rd., East Patchogue, NY 11772

MICHIGAN ANTIQUE RADIO CLUB - C/O Jim Clark, 1006 Pendleton Dr., Lansing, MI 48917. Sponsors two swap meets in the Lansing, Michigan area.

MID-AMERICA RADIO CLUB - C/O Robert Lane, 1444 E. 8TH, Kansas City, MO 64106. Status unknown.

MID-ATLANTIC ANTIQUE RADIO CLUB - C/O Joe Koester, 249 Spring Gap South, Laurel, MD 20707. Publishes a newsletter for members. Sponsor monthly meets about half way between Washington, DC and Baltimore, MD.

NIAGARA FRONTIER WIRELESS ASSOCIATION - C/O Larry Babcock, 8095 Centre Lane, E. Amherst, NY 14051. Publishes the *NFWA Chronicle* on a quarterly basis. Dues are \$5.00 per year. Conduct swap meets and meetings four times a year in the Buffalo, New York area.

RADIO CLUB LIST (continued)

NORTHWEST VINTAGE RADIO SOCIETY -
Box 02379, Portland, OR 97202

PUGET SOUND ANTIQUE RADIO ASSOCIATION - C/O N.S. Braithwaite, 4415 Greenwood Ave. N., Seattle, WA 98103. Publishes *The Horn of Plenty* monthly. Dues are \$10.00 per year. Hold swap meets and meetings in Seattle, Washington area.

ROCKY MOUNTAIN WIRELESS ASSOCIATION - 16500 W. 12th Dr., Golden, CO 80401. Status unknown.

SACRAMENTO HISTORICAL RADIO SOCIETY - 5724 Gibbons Dr., Sacramento, CA 95608. Status unknown.

SOUTHERN CALIFORNIA ANTIQUE RADIO SOCIETY - C/O Floyd Paul, 1545 Raymond Ave., Glendale, CA 91201. Publishes the *California Antique Radio Gazette* on a quarterly basis. Dues are \$10.00 per year. Holds four swap meets and meetings at various locations in Southern California.

SOCIETY OF WIRELESS PIONEERS - P.O. Box 530, Santa Rosa, CA 95402. Publishes the *Sparks Journal* on a quarterly basis. Membership requirements.

VINTAGE RADIO & PHONOGRAPH SOCIETY - P.O. Box 165345, Irving, TX 75016. Publishes *The Reproducer* approximately six times a year. Dues are \$13.50 per year. Sponsors radio meets in Dallas, Texas area.

WHIPPANY VINTAGE RADIO CLUB - 217 Ridge Wale Ave., Florham Park, NJ 07932. Status unknown.

HINTS & TIPS...

NEW COLUMNS! - From the many requests as indicated in the recently completed Survey Forms that were sent out in the July issue of A.R.C., we would like to try a few new ideas. The first is a *Collectors Question & Answer* column. Each month we will list any questions that collectors may have concerning restoration problems, repair problems, sources for restoration supplies, or other relevant questions. Readers are then asked to respond to A.R.C. if they know the answers to any of the questions. Results will be printed in the first available issue. The second is a *Tips & Hints* column. Using the broad spectrum of knowledge that is available from the readers of A.R.C., it is hoped that each person could contribute a few tips or hints he has learned about servicing & repair, restorations, parts replacement & procurement, or other ideas that could benefit others. What some collectors take for granted may not be common knowledge to others. With these two new columns we now have a means for collectors to help others in the hobby and to share the knowledge for all to use. Lets get these two columns started soon - send us your "Questions" or any "Tips & Hints" you may have. (GBS)

RADIOFEST '85 REPORT

Radiofest 85 held August 9th and 10th at the Clock Tower Inn at Rockford, Illinois proved to be the biggest and best ever with over four hundred collectors in attendance and some ninety five sellers in the flea market. Action started early Thursday with the advance guard arriving early led by Ralph Muchow and yours truly! Already twenty five sellers were hawking their goodies in the flea market.

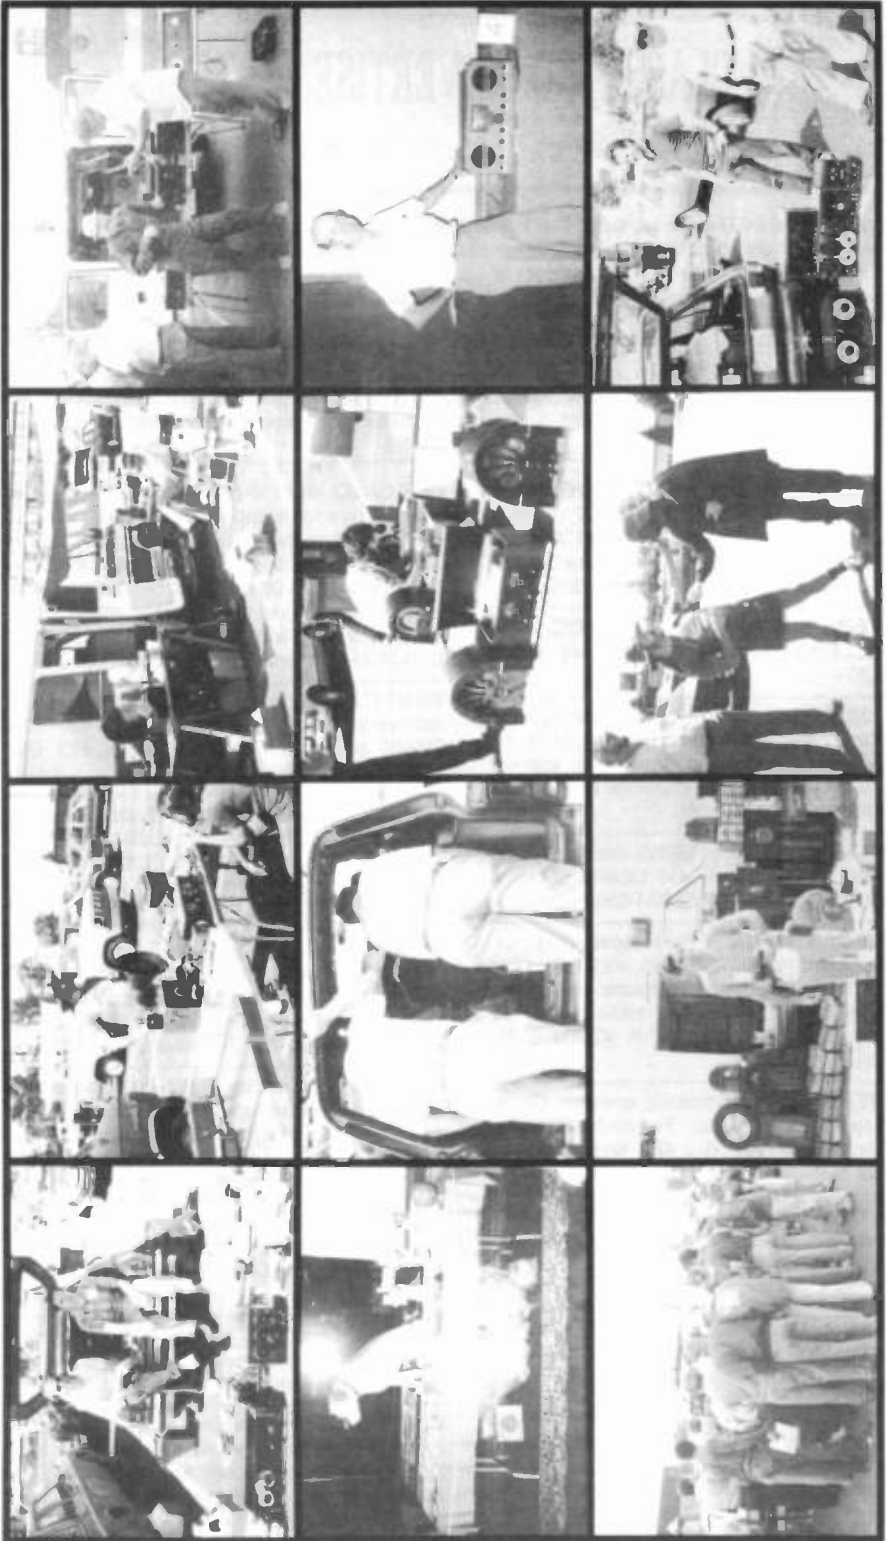

Friday saw blue skies and a continuing caravan of sellers entering the flea market parking lot. Many fine sets were changing hands including such sets as a Marconi 106, AK 12, AK 9, Paragon RA10-DA2-10R, Cutting & Washington 11A, Eaglelet lamp radio (and ended up later to be a contest winner), many nice Philco, Atwater Kent, and Zenith cathedrals along with mounds of tubes, parts, magazines and speakers. Collectors Friday could also learn repair and restoration techniques from Larry Wright and George Hauscke and listen to the fascinating presentation on Reginald Fessenden by John Topel. And for those buyers of A.C. radios in the flea market an opportunity to test their radios before purchasing them, thanks to Jim Farago who brought along an A.C. inverter, and did additional service with his Public Address system.

The theme of Radiofest 85, Radio Advertising, had a display open for viewing both Friday and Saturday with a special emphasis on radio magazines. Thirty seven different titles and over one hundred issues were on display along with a complete set of Harmsworth's Wireless Encyclopedia from England. Friday's festivities concluded with a donated-item auction in the flea market and later a reception in the Hospitality Room (which was open for the duration of the meet).

Saturday saw many local collectors arrive and swell the ranks of both buyers and sellers. This was the day of the bargain hunter and many sets were sold at below market value. Darth Vader made his grand entrance to judge the "Heaviest Radio Contest". After much discussion Jim Thompson was awarded the prize - an "Anchorflex Three" - for his entry of a Radiola 30 with record player. John Wolkonowicz held the audience spellbound as he presented "The Life and Times of Atwater Kent" in an afternoon seminar.

The contest this year of Radiofest was the biggest ever with over thirty five entries competing for awards in ten categories. When the final decisions were in, Craig Husboe had won Best of Show for his Grebe CR-6. Contest results will be listed elsewhere. Radiofest 85 concluded with a banquet attended by seventy guests. Dr. Ralph Muchow was our M.C. for the evening festivities which included door prizes and our featured guest Joe Slattery. Mr. Slattery's program was on the trials and tribulations of the early staff announcer on radio and was enjoyed by all. After the banquet, many adjourned to the Hospitality Room to savor the time of Radiofest and make plans for next year.

Just a note - many have said this was the best Radiofest ever, the planning and preparations, the publicity, everything came together in the right place at the right time. As Radiofest Chairman, I reminded those at the banquet, all of the planning, publicity, etc. means NOTHING if you, the collectors, do not support Radiofest by your attendance. You, the collector, have made Radiofest the success it is and by your continued support will help make Radiofest one of the best in the country. A special *Thank you* from the Radiofest committee and hope to see you at "Radiofest 86". (Joe Willis - Antique Radio Club of Illinois)

RADIOFEST '85 PHOTOS

CLASSIFIED ADVERTISEMENTS

CLASSIFIED AD DETAILS: Each subscriber is entitled to one free 20 word ad each issue. Additional words over the free limit are 10 cents per word. Enclose correct payment with ad, as we do not bill for ads. Ads must be received before the 10th of the month to appear in the following month's issue. Late ads will be held for the following issue. Limit of two multiple insertions of same ad. Ads may be sent in advance, however each ad must be submitted on a separate sheet of paper, preferably a 3 x 5" index card. Publisher reserves the right to edit ads and is not responsible for errors due to illegibly written ads. **OPTIONS:** Shaded ads are available at a cost of 10 cents per word additional, including free words. WANTED: August 1927 issue of Radio News magazine. Also other issues of same magazine. Henry R. Kuhn, 1397 Washington Circle, Forestville, OH 45230

STAND BY! - STAY TUNED! Here's news of a new wireless book to be published later this year: The biggest, most comprehensive ever to be produced. It will include a directory of well over 1,000 photographs of domestic receivers (Great Britain), spanning four decades from the early 1920's to the late 50's, complete with detailed information about them all. As well as this unique directory, the book will include a well-illustrated year-by-year account of the development of the wireless and of broadcasting from the catwhisker and crystal set to the first transistor. Written by Jonathan Hill, the new work will be of equal interest to collectors, art and design students, the technically minded and to those requiring authoritative directory information. Although including a large amount of information, the book is written in an interesting style that will appeal to the layman as well as the expert. The book will be available in two editions: A realistically priced soft-cover edition and a deluxe hardback Limited Edition which will be signed and numbered and will come complete with a free "Date-at-Glance" calculator. For complete details of this new, upcoming, British written book please contact *Antique Radio Classified*, 9511 Sunrise Blvd. # J-23, Cleveland, Ohio 44133. Send SASE and state your preference of soft-cover or hardback versions. When complete details of publication release date and prices are available, you will be notified as to how to order this new book.

Don Dean, 1711 Colleen St., Sarasota, FL 33581 (813) 966-2661

NOW YOU KNOW...

Now You Know - Ever wonder what those over-grown, grid-leak shaped devices called "Amperite's" were. Found in many 1920's battery sets, these devices were called the "Self-Adjusting Rheostat" by the manufacturer. In simple terms they are designed to maintain a constant voltage to the tube filaments. The Amperite has a specially treated filament which has the unique property of changing resistance in relation to the varying voltage of the "A" battery. Thus when the "A" battery is fully charged, it allows only the proper amount of current to enter the filaments. As the battery runs down through use, the resistance of the Amperite filament decreases, so as to tend to maintain a constant current through the tube filaments at all times. Designed to eliminate the requirement for many rheostats on battery sets, they come in different versions depending on type of tubes used in radio. For your convenience the following chart is printed. (GBS)

TUBE	FILAMENT CURRENT "AMPERES"	TYPE AMPERITE TO USE	"A" BATTERY SUPPLY "VOLTS"	TUBE
RADIOTRON UY-201-A	.25	AMPERITE No. 1 A	6	CURRINGHAM C-301-A
