1984 EDITION NO. 52

This edition supersedes Television Factbook No. 51 (1982-83 Edition) and all Updates thereto. This Factbook also starts a series of weekly TV Action Updates, reporting on new station starts, FCC grants, applications, allocations changes, etc. The Updates enable subscribers to keep the facilities data current in the Stations Volume. Subscribers may purchase these Updates in combination with the Factbook. For details, see Service Order Cards in this volume.

CHYRON AT CAMERA MART:

WHERE YOU'LL FIND THE BEST NAMES IN VIDEO.

CHYRON VP-1

ACTUAL VP-1 GENERATED GRAPHICS PHOTOGRAPHED FROM A MONITOR

Chyron VP-1 Character Generator: Astounding Capability at an Affordable Price.

The Chyron VP-1 is a broadcast quality generator that gives you superb image resolution: crisp, clear characters and an extraordinary range of special effects usually found in units costing far more.

Use the VP-1 with any micro-computer to achieve exciting, creative visuals and titles for all your video graphics: news, weather, election results, advertising, training, sales presentations and educational aids.

You get two fonts supplied, expandable to six; eight colors from a palette of 64, for characters background and edging, plus extensive common capability, including font selection, color selection, placement, spacing, italics and many, many more!

In New York see the Chyron VP-1 *only at Camera Mart!*

"TO RELIEVE MY CAMERAMEN'S BACKACHES AND MY

Art Biggs coordinates major engineering purchases for the six Corinthian stations. After careful evaluation of all the 1/2-inch camera/recorders on the market, he made a multi-million-dollar purchase of the Sony Betacam™ system.

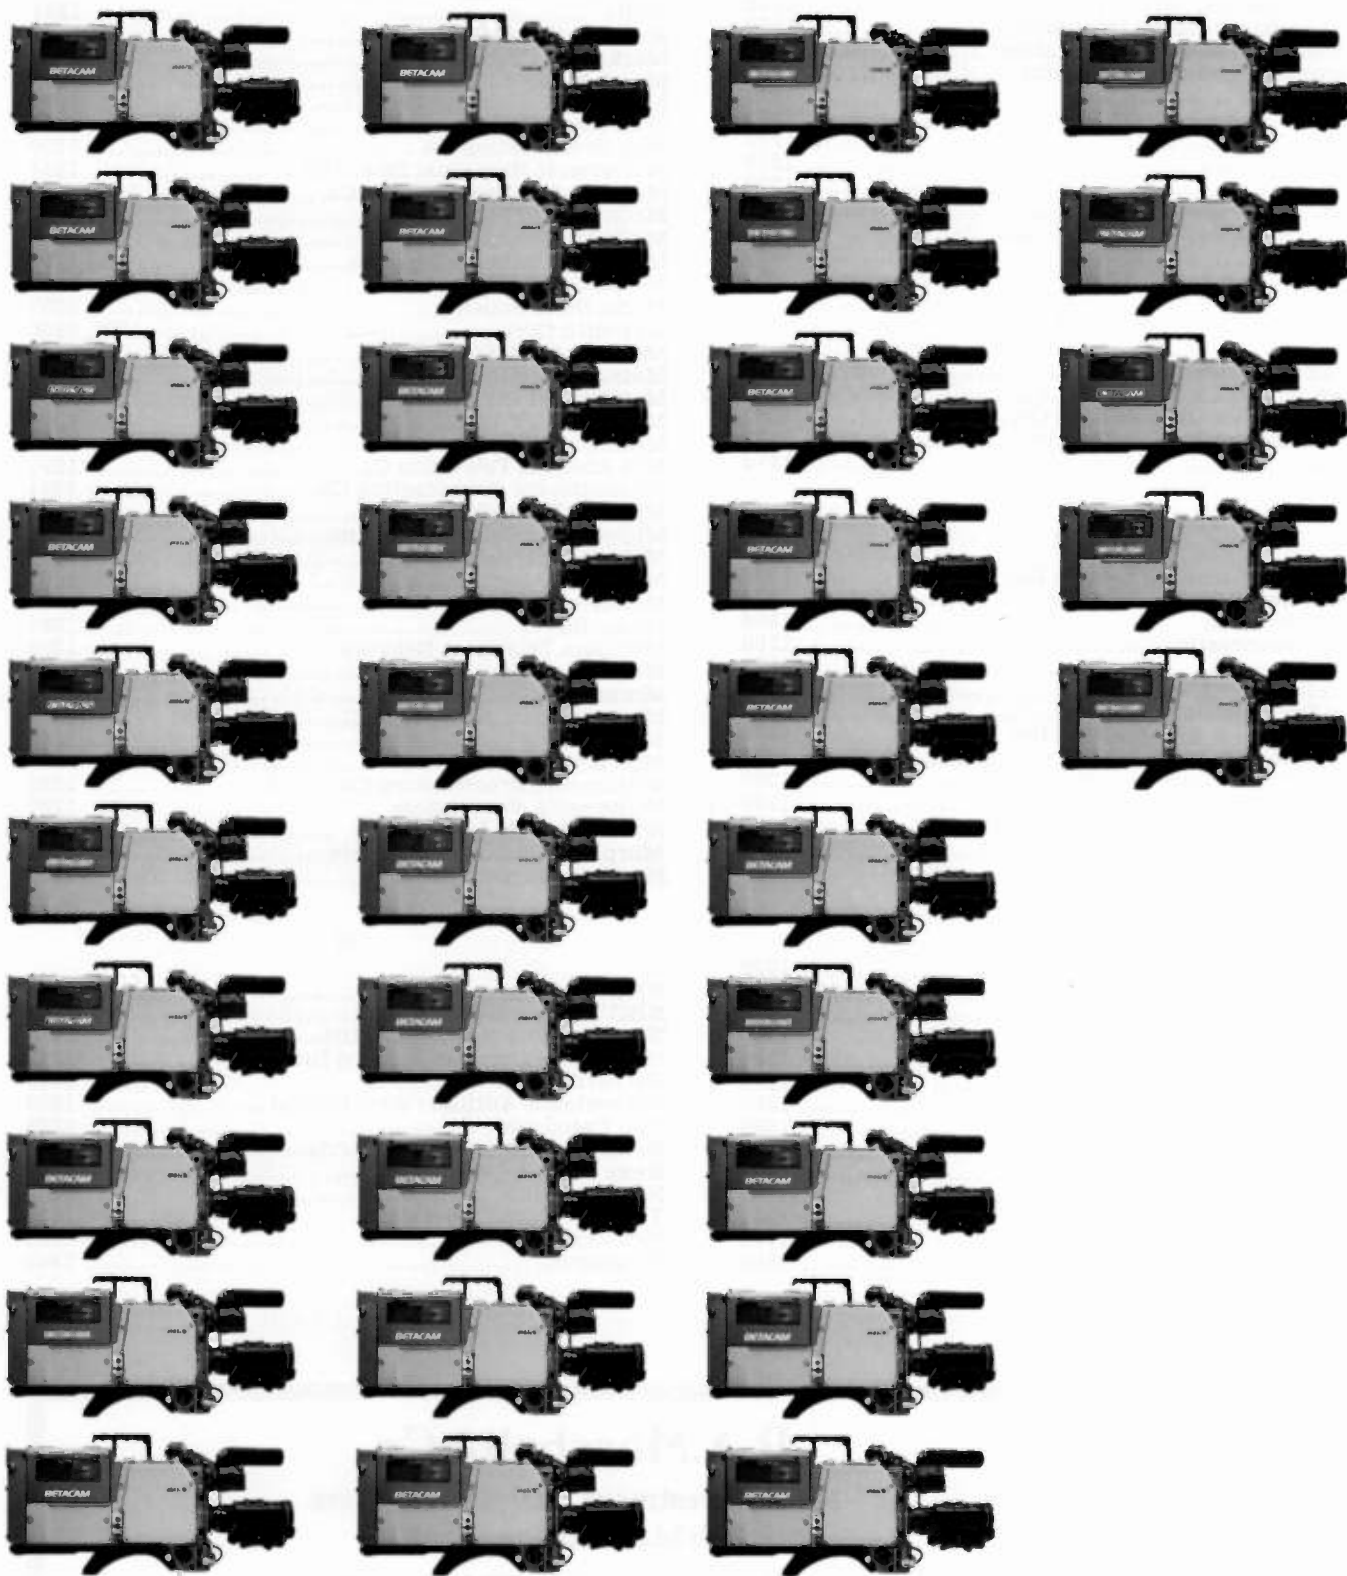

"Betacam has several pluses. The most obvious of them are size and weight. We have one-man camera crews at all our stations. The camera/recorder that they take into the field is

right at 54½ pounds. Betacam will reduce this load by more than half—a significant reduction.

"As for quality of playback, you can see the difference with the naked eye. Its superiority is most apparent in scenes of fully saturated colors, particularly reds. It's cleaner. It doesn't have quite as much of the heavy, stringy-type noise we've grown to tolerate over the years.

CONTROLLERS' HEADACHES, I TOOK ALL OF THESE."

-Art Biggs, Vice President, Engineering, Corinthian Broadcasting Corporation

"Another Betacam plus is that it's not a patchwork approach. It's a total Sony system developed from the camera to the recorder to the player.

"Then there's the bottom line. Betacam is at a very attractive price. It would have cost me hundreds of thousands of dollars more to get the same amount of camera/recorders that even approach this kind of quality from someone else.

"I'll definitely be back for more."

For more information on the Sony Betacam system, and there's a lot more to know, contact Sony Broadcast in New York/ New Jersey at (201) 368-5085; in Chicago at (312) 860-7800; in Los Angeles at (213) 841-8711; in Atlanta at (404) 451-7671; or in Dallas at (214) 659-3600.

TARGET/AID SEPARATES THE MEN FROM THE BOYS

Even the men 18-24 from the boys 18-24. Not to mention the boys from the girls, the old money from the new money, the Mercedes set from the tractor set from the Mercedes *and* tractor set. . . In fact, TARGET/AID helps to define audiences to a degree never possible before.

TARGET/AID® uses ClusterPlus™, a powerful marketing segmentation tool developed by Donnelley Marketing Information Services and Simmons Market Research Bureau, to profile a market or an audience by lifestyle characteristics. That gives you a big advantage over just age and sex demographics,

MEN

because lifestyles are much better indicators of the products and services consumers are likely to buy.

TARGET/AID can bring a whole new perspective to broadcast advertising.

Now you can determine more than just the specific demographics of a broadcast audience; you can see what kind of *consumers* those numbers represent.

TARGET/AID lets you sharpen and refine your sales and marketing approach. You can differentiate stations, programming and formats from others with seemingly identical audience ratings. Even markets with similar rankings can be totally different when you examine the lifestyles of their populations.

TARGET/AID is the tool that allows you to pinpoint those audience differences and use them to your advantage.

That means a better selling approach for stations and better buying strategies for advertisers.

So whether your audience drives a tractor, or a Mercedes or both, TARGET/AID can help you identify your targets and deliver them more efficiently. Because TARGET/AID defines audiences like never before.

TARGET/AID—The Ratings and Lifestyle Connection.

Available only from Arbitron Ratings.

CHANGING ADDRESS?

PLEASE KEEP IN TOUCH!

We want you to get the best service possible and to do so, we need your help!

Because of the new format of TELEVISION & CABLE FACTBOOK, it's very important that we don't lose touch with you. To insure that you receive the next volume of this two-volume set as soon as it's published, we need to be advised of any address change that might affect delivery.

For your convenience, we have included the postage-paid card below.

Please change your records to reflect my new address and to insure that I will receive the second volume of my two-volume TELEVISION & CABLE FACTBOOK as soon as it's published.

Description of Station Directory Section

THE STATION MAPS

The only official and uniform rough guide to a station's physical coverage is found in the files of the Federal Communications Commission. Each TV station grantee is required to submit to the Commission its coverage contours predicted on the basis of engineering formulas designated by the Commission. The FCC specifies three grades of service as a general indication of the probable quality of reception.

The FCC does not intend or expect the predicted coverage contours, submitted by each station, to reflect whether a signal is received or not received at any specific location. Rather, the Commission regards the contours as a general guide to probable reception. The basic use made by the Commission of the contours is as a tool to determine where to allocate channels to minimize interference among stations.

Though all stations and applicants are required to submit predicted contours to the FCC, stations may also file contours based on actual measurements of transmitted signals. Under FCC rules, such filings are not mandatory, and only a relatively few stations have offered such measurements voluntarily. The Commission has no official and uniform rules for measuring service contours; such submissions are associated with stations' files but are not given official status by the Commission.

The maps are intended to serve as guides. It should be emphasized that the use of maps for legal proceedings, such as those before the FCC, may require precision greater than that reasonably obtainable in maps of the size employed in the *Factbook*.

On May 29, 1975 the FCC amended Section 73.699 of the rules providing revised charts for the prediction of field strengths of TV stations and requiring licensees to file new contours with renewal applications filed after the effective date. When a revised map was not available from the station or the FCC, a note to that effect appears on the station page.

The three grades of predicted contours required by the FCC are as follows:

Grade B Service: The quality of picture expected to be satisfactory to the median observer at least 90% of the time for at least 50% of the receiving locations within the contour, in the absence of interfering co-channel and adjacent-channel signals.

Grade A Service: Satisfactory service expected at least 90% of the time for at least 70% of the receiving locations.

Principal City Service: Satisfactory service expected at least 90% of the time for at least 90% of the receiving locations.

We obtained the predicted contour maps from the FCC files or from the stations. We publish two contour lines, "Grade A" and "Grade B."

(The composite maps and all other contents of this book are copyrighted by Television Digest, Inc., publishers of Television & Cable Factbook. The American Map Corp. (46-35 54th Rd., Maspeth, N.Y. 11378), is the copyright owner of the base maps which are reprinted herein under Licenses #14244 and #14244-V. Reproduction in whole or part is prohibited without written permission of the copyright owners.)

ARBITRON TV STATION CIRCULATION

The counties listed on the station pages represent the home market Arbitron Metro area plus those counties in which the station receives a Net Weekly Circulation of at least 5% according to Arbitron circulation estimates. Each of these counties is then delineated by three circulation categories which include those in which the station's circulation is 50% or more, 25%-49% and 5%-24%. In some instances, counties listed do not appear on the maps, since the reduction in scale required to include them would impair the legibility of the maps.

The station circulation estimates which determined the allocation of each county to the proper category were derived from samples obtained over several survey periods. The estimates were based on Arbitron market surveys conducted during 1982 and 1983.

The Total Households and Television Households which are listed for each county qualifying for inclusion in one of the three circulation categories are current Arbitron projections as of January 1983 (see Definitions of Arbitron Terms).

Net Weekly and Average Daily Circulation totals for each station are based on the above surveys.

(Data from Arbitron are fully protected by copyright. Reproduction in whole or part is prohibited without written permission from The Arbitron Company, 1350 Ave. of the Americas, New York, N.Y. 10019.)

DEFINITIONS OF ARBITRON TERMS

Total Households—A household is a single dwelling unit, which may be a house, an apartment, or a group of one or more rooms. The total households figures shown in the current study are Market Statistics Inc. estimates projected to January 1, 1983 and rounded to the nearest hundred. These estimates include households on military installations.

Television Households—A television household is an occupied dwelling unit having one or more television sets. Updated estimates of TV households in each county are prepared annually by the Arbitron Research Department.

EDITOR'S NOTE: Total Households listed for each station in this Volume of the Television and Cable Factbook do not include households in any county in which the station's circulation is less than 5%.

TV Penetration—The percent of total homes having one or more television sets at the time of the surveys. TV penetration uses current regional penetration estimates derived by the Advertising Research Foundation from U.S. Bureau of the Census surveys conducted in accordance with ARF specifications.

Net Weekly Circulation—The estimated number of different television households viewing a particular station at least once per week, Monday-Sunday, Sign-on to Sign-off.

Average Daily Circulation—The estimated average number of different television households reached by a particular station on each day of the week, Sign-on to Sign-off.

SURVEY METHODS, Described by ARBITRON

Arbitron uses one-week, interviewer-supervised family viewing diaries to secure information for television audience estimates. Families are contacted initially by mail to inform them of their selection for the survey. They are then contacted by telephone to secure their cooperation in the survey and to elicit basic information as to television set ownership and number of sets owned in the household. Contact is maintained with the sample families through followup calls to encourage proper recording and prompt return of the diaries.

Sampling is controlled by geographic units of no larger than county size, and in some instances for reasons of population distribution, terrain or technical control a county is divided into two sampling units. Sample homes are selected by computer from all available households with listed telephones in the sampling universe through a systematic interval selection technique with random selection occurring within each interval.

In the Metro and ADI Rating Area, households with unlisted telephones are included in the sample universe by using a list of potential telephone numbers. Known listed numbers, business numbers, nonresidential business exchanges, unassigned number blocks, and number blocks outside the Metro have been eliminated.

The Arbitron family viewing diary measurement technique is used for both market surveys of television viewing and broadscale station circulation information by county.

At least four times each year, Arbitron surveys every county to provide viewing information for every television market in the country. Further details on Arbitron sampling procedures are available from Arbitron.

EXPLANATION OF FCC SYMBOLS

FCC Filing Symbols:

1. **BPCT**: Broadcast Permit Commercial Television.
2. **BMPCT**: Broadcast Modification of Permit Commercial Television.
3. **DOC**: Docket (designation applied by FCC to hearing cases).
4. **GRANTED**: Date of authorization by FCC.

Note: "BPCT" and "BMPCT" designations, accompanied by numbers, are affixed by the FCC to applications for new or changed station facilities to identify each when it is accepted for filing. They therefore constitute file numbers. Each map in the *Factbook* is accompanied with its file number to facilitate reference to the Commission's official files. In each case, the file number used is the one affixed to the application for facilities which were subsequently authorized by the FCC and in use at the time this *Factbook* was published. "Docket" numbers are used in those few cases where the application was in a hearing status and a file number hasn't been assigned. The "granted" date indicates when the FCC approved construction of facilities involved.

After a station is completed according to the terms of its construction permit, it receives a license; this is identified by a number with a "BLCT" (Broadcast License Commercial Television) prefix. When a license is renewed,

Station Directory Description

a number with a "BRCT" (Broadcast Renewal Commercial Television) prefix is employed. Applications for licenses or license renewals do not include requests for changes in facilities, thus do not affect predicted Grade A & B contours. Therefore, they are not employed as references in the *Factbook*.

The Grade A & B contours on the maps are predicted by station engineers according to the formulas designated by the FCC, as previously explained. They are based on facilities in use by stations at the time of *Factbook* publication. Where a station has a construction permit for a change in facilities but has not completed the change, both existing and projected contours are shown—the latter by dotted broken lines.

BBM SURVEY METHODS

BBM is a non-profit tripartite association of advertising agencies, advertisers, broadcasters and broadcast representatives.

BBM conducts national surveys of television viewing and radio listening in all ten Canadian provinces.

A television market survey is taken over a seven day period and compiled and reported as the average of two or three weeks. Three week surveys are the designated sweep surveys. BBM identifies a range of dates during which a sweep survey can be taken. The individual weeks selected by BBM are not disclosed. Network television reports are also produced for twenty-five weeks of each year.

BBM provides detailed survey data for approximately 50 recognized markets across Canada. BBM divides the country into more than 300 mutually exclusive sampling units or cells which when combined cover all of Canada's ten provinces. During an annual household enumeration conducted by telephone during the summer each year a master file of all individuals aged 2 and over and residing in over 200,000 households of potential television survey respondents is compiled. From this master file BBM draws its television sample during the following year.

Randomly selected individuals are mailed a diary in which they are asked to record their personal television tuning by quarter hour for a specific seven day period. The returned diaries are then weighted to represent the population within each sampling cell. Projections are made separately by age/sex group and by week of survey. In the bilingual markets of Montreal and Ottawa-Hull the in tab diaries are also weighted by language group.

For each home station, BBM provides rating information by time periods and for each programme for all specified markets in either central and/or extended markets. Furthermore, full coverage audience data or total station tuning from all measured areas is also published.

The definition of the central markets correspond to Statistics Canada defined Census Metropolitan Areas (CMA) or Census Agglomerations (CA) from which the home stations broadcast. To be considered a central market, CA/CMA will normally contribute the largest of the total hours of tuning to a home station. All BBM central markets have one accompanying extended market (similar in definition to an Area of Dominant Influence) except for some markets where no concentration of hours of tuning to home stations is found within the CA/CMA.

U. S. Television Station Directory

Data updated to October 1, 1983. Includes Rate Digests, personnel, facilities and other data. CP holders reported due by November 1983.

EXPLANATORY NOTES

Rates, personnel and other data supplied by stations. STA means Special Temporary Authorization pending license.

RATE DIGESTS: These show only the highest one-time rate charged by the stations. Most rates are also subject to frequency discounts, separate or additional rehearsal charges, talent & production charges, etc. For further details and for contract conditions, specifications etc., consult complete station rate cards, available from the stations on request.

STATION POWER: Powers shown are Effective Radiated Powers (ERP).

NETWORK SYMBOLS (registered trademarks)    indicate ABC, CBS and NBC TV network affiliation.

THE STATION PAGES

The individual station tables show a complete listing of all counties grouped by Arbitron Net Weekly Circulation levels, with Total Households, and TV Penetration in each county individually. For definitions of Arbitron terms, see Introduction.

SATELLITE STATIONS are shown with a dash line pattern in relation to the parent listing. In the satellite listing the parent station is shown with a dash line pattern.

Where a station has a construction permit for a change in facilities and has set a target date, but has not completed construction, both existing and projected contours are shown—the latter with dotted lines.

THE STATE PAGES

Following the map of each state, two rankings for each market are shown: Arbitron's Area of Dominant Influence Television Households and Arbitron's Prime Time Television Households. ADI Households Rank is established by Arbitron. Arbitron's Prime Time Television Households are based on average quarter-hour TV households reached during evening prime time (7:30-11 p.m., Eastern & Pacific Time Zones; 6:30-10 p.m., Central & Mountain Time Zones), all home market stations combined.

The state pages also carry additional cross-reference material, indicating for example, those stations within the state that are identified with two or more cities, or with cities in another state.

Operating commercial and educational TV stations by VHF and UHF are shown for each state in a status report as of October 1, 1983.
