Broadcasting is your business!

It's all your business — television, cable, radio, satellite . . . the entire industry. Everything is connected. And when you read **Broadcasting** every week , you stay connected.

Broadcasting is the industry's leading publication — with the broadest coverage, biggest editorial staff, and the most experience. Over 60 years.

Broadcasting — and only **Broadcasting** — gives you the whole picture. It ties everything together. It can help you make decisions. Do deals. Scoop the competition. Advance your career.

You don't get all this anywhere else — only in Broadcasting ... every week!

TV PROGRAMS. What's hot? What's not? What's available? What strategies seem to work?

THE TV NETWORKS. Sell the networks to the affiliates — does it make sense? How can the networks tap new revenue sources? Is affiliate ownership a viable idea?

RATINGS. Weekly ratings roundup for the four networks — Fox included. The latest prime-time shuffle. Syndication — what's doing well ... and where?

LOCAL TV. How are local stations boosting hometown sales?

CABLE. Will signal compression mean a boom in cable revenues? How to push pay — how to change viewer attitudes toward PPV.

RADIO. What formats are working now? The stations making money — what are they doing right?

BUDGET CUTS. How others are doing more with less in the newsroom. And elsewhere.

TECHNOLOGY. HDTV — what will it cost to gear up? DBS — who gets the remaining frequencies? New equipment — how quickly will you recoup the cost?

WASHINGTON. More wrangling over fin-syn. The issue of cable deregulation. The latest court decisions and FCC moves — who is helped, who might be hurt.

CHANGING HANDS. Which broadcast properties and cable systems have changed hands, and for how much?

Broadcasting is the publication of record!

We're on a mission.

Our mission is to *meet our customers' evolving needs by expanding the unique capabilities of satellite communications.*

For years, we've been known as the company that "makes ideas happen." And the global sharing of information is the biggest idea of all.

As we continue to apply our technology and the expertise of our dedicated professionals, the potential of satellite communications grows even greater.

Our near-term commitment alone is massive.

By the end of 1993 we will be orbiting over one billion dollars in new spacecraft, upgrading our ground control facilities, and expanding our communications capabilities.

We're on a mission to maintain our renowned leadership in every aspect of satellite communications. The services we offer our customers will continue to be the most advanced, the most reliable, and the best managed available.

To realize that mission, we will continue to commit everything we have. There is no other way at Hughes Communications. That's why the future belongs to us and our customers. And that future is right on schedule.

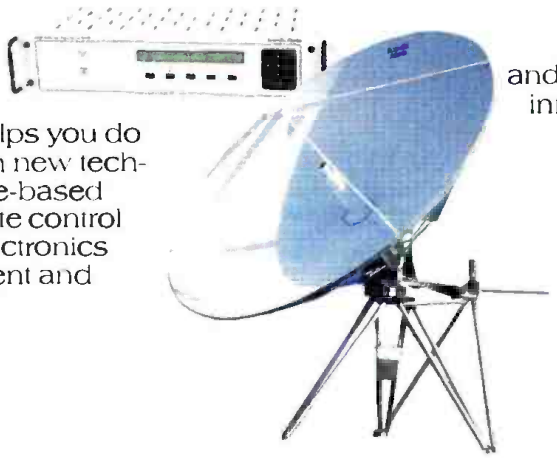
BROADCASTERS HAVE THE TOOLS TO TRANSFORM THE WORLD.

BUT THE WORLD HAS CHANGED.
More than ever before, the world of broadcasting is all business. And everyone's watching more closely than ever. Watching equipment costs. Watching the bottom line.

Scientific-Atlanta helps you do more with less. With new technology, like software-based products to automate control of earth stations, electronics and studio equipment and more.



Even hallmark products like our new video receivers and satellite antennas are redesigned and re-engineered to give you optimum performance at the most competitive price.

Broadcasting is different today—and so is Scientific-Atlanta. For more information on our new generation of satellite broadcast products, call (404) 925-6001.

Scientific Atlanta
Our customers are the winners.

[1] C-band and Ku-band columns indicate numbers of transponders on each satellite. End-of-life estimates are based on launch date plus average 10 years. Several of the newer birds are built to last 12 years.
[2] Although not of use for customers with nonsteerable antennas. Comsat developed a system to track and maintain use of birds that have used up station-keeping fuel and have gone into north-south drift.
[3] GTE and Contel merged in March 1991. Contel ASC's second satellite, ASC II, was renamed Spacenet IV

In 77 years, the advertising industry has changed dramatically.

1915: Founded on a commitment to service and excellence.

1992: The standard of excellence today.

The accuracy and quality of the Advertising Red Books is constant.

BACK IN 1915, most advertising agencies functioned as "agents" of the media, taking a 15% commission for the ad space they could sell. So logically, the first Red Book was an "Advertiser" edition, providing valuable leads and other information to agency sales forces.

By the 1920s, the business had changed. Agencies grew wealthy from the marketing and creative services that could turn brand names into household words overnight. The first "Agency" book premiered in 1922, an inside guide for the thousands of suppliers whose graphic and production services might help make those ads even better.

Enhancements were constant as the Red Books kept pace with the needs of an ever-changing business. Two comprehensive listings were added: subject indexes, geographical indexes, and trade name index that's as much in demand today as it was in the beginning.

And the improvements continue. Today's Red Books provide a new responsibilities index and an expanded special market section for public relation firms and house agency section... just a few of the features that make the Red Books totally unique to the ad biz.

And just as essential as they were 77 years ago.

U.S. Radio Markets

The following is the Arbitron population ranking for Fall 1991, based on market definitions at that time. It is based on the 1990 U.S. Bureau of Census estimates updated and projected to January 1, 1992.

The MSA number is the population of all persons aged 12 or older in the Metro Survey Area. The TSA number is the population total of all persons 12 or older in the Total Survey Area. Following that are the call letters of stations that fall within the market as defined by Arbitron.

Certain market population totals are also embedded in larger nearby markets. It is therefore possible for a station to be listed in more than one market.

U.S. Radio Markets: Arbitron Metro Survey Area Ranking

This chart ranks the 261 radio markets by Metro Survey Area population (see also the following chart of rankings by Total Survey Area). Figures include all persons aged 12 or older and are based on 1990 U.S. Census Bureau estimates updated and projected to January 1, 1992. Data reflects the Fall 1991 Arbitron market definitions.

An asterisk (*) following a market name indicates that the market is embedded in a larger nearby market. See *U.S. Radio Markets* beginning on page E-2 for details.

U.S. Radio Markets: Population Ranking

This chart ranks the 261 radio markets by Total Survey Area population (see also the preceding chart of markets ranked by Metro Survey Area). Population figures include all persons aged 12 or older and are based on 1990 U.S. Census Bureau estimates updated and projected to January 1, 1992. Data reflects the Fall 1991 Arbitron market definitions.

An asterisk (*) following a market name indicates that the market is embedded in a larger nearby market. See *U.S. Radio Markets* beginning on page E-2 for details.

Prior to 1971, data reflects factory sales by U.S. manufacturers plus those products imported directly by distributors or dealers for resale. All import statistics are based upon average value as published by the U.S. Department of Commerce, which is F.O.B. and therefore excludes U.S. import duties, freight charged from the foreign country to the United States, and insurance.

U.S. Radio Audiences

Radio was in more U.S. homes than ever as 1992 approached. The Radio Advertising Bureau (RAB) estimated that 99.9% of 94.4 million U.S. homes were radio-equipped as of January 1, 1991. RAB also estimated that the number of working-order radio sets in the United States totaled 557.8 million in 1991: 355.5 million of these were home and personal radio sets; 202.3 million were out-of-home receivers.

Arbitron ADI Market Atlas

The Area of Dominant Influence (ADI) is a geographic market design that defines each television market exclusive of others, based on measured viewing patterns. Each market's ADI consists of all the counties in which the home market stations receive a preponderance of viewing, and every county in the continental U.S. is allocated exclusively to one ADI—there is no overlap. The total of all ADI's represents the total television households in the U.S.

The ADI is a standard market definition. As a television buying tool it is a geographical and demographic means for maximum efficiency. As a station tool it is a geographic and demographic means for maximum efficiency. As a station tool it has applications for sales, programming and promotion planning.

Following, in alphabetical order, are Arbitron's 210 ADI markets for 1991-1992 with coverage maps for each, and county by county breakouts of TV households. Other data includes the markets' stations, their cities of license, channel numbers and network affiliations.

Coverage maps show total survey areas in light shading, the ADI's themselves outlined in black, and Arbitron Metro rating areas in white. The survey areas consist of all counties in which the home market stations are viewed to a significant extent, including via cable. The Metro Areas usually conform to U.S. Census Standard Metropolitan statistical areas.

Non-ADI markets do not meet Arbitron's criteria for having an ADI of their own, they are listed with the ADI of which they are a part.

A cross reference list of cities in Multi-City ADI's appears on E-94 and a listing of the Non-ADI markets appears on E-95 .

Non-ADI Markets

The following single-county markets did not acheive ADI status because the preponderance of viewing is not to the home-market station. Neither did they meet the criteria of the 10% Rule to become an ADI. The home counties in Non-ADI markets are assigned to the ADIs that do receive the preponderance of viewing.

TV Markets by Nielsen Marketing Research Territory

Nielsen Marketing Research territory groups are another standard way of reporting sales data. The following table ranks TV markets within each Nielsen Territory, known as a Designated Market Area (DMA). This provides a yardstick for determining the number of spot markets needed to achieve a given coverage of territory. For example, if the national media are not delivering sufficient advertising weight in New England, the planner will find that 3 TV markets (Boston, Hartford and Providence) contain over 75% of New England territory households. Or the planner can use the table to get a better idea of what TV markets are needed to cover all of New England. Data is from the Nielsen Station Index, tabulations based on a January 1992 estimate.

The Top 100 Companies

The following chart lists the top 100 companies publicly reporting electronic communications-related operations for 1990. ECI revenue comprises a company's business interest in radio, TV, cable, satellite, allied services and manufacturing. Items not included in ECI revenue for programmers include revenue from theatrical releases and the home video market. For manufacturers, it includes revenue from sales of television sets or products for the general public not built specifically or primarily for Fifth Estate commercial use. The 1990 ECI Index was $44.7 billion, a 9% increase over 1989's ECI Index of $40.9 billion. The top 10 companies accounted for 55% of the total 1990 ECI Index, with a combined ECI revenue of $24.8 billion.

All data was obtained from *Broadcasting Magazine's* "13th Annual Survey of the Fifth Estate".

How Network Delivery Varies by Market

National advertisers use spot television to increase network advertising weight in specific markets to achieve a predetermined level. These market goals are derived from the advertising budget and the market's share of the brand's projected sales. Thus, a spot schedule is usually indicated where a market has an unusually high brand-sales potential, or where the network weight delivered for the brand is below the national average used in planning, or both.

The first factor, market brand potential, varies by product and is difficult to generalize. The second factor, local market network audiences, must be generalized because planning is based upon next season's *anticipated* network performance. The prevalence of network package buys, which tends to deliver average audience levels, supports the use of average data.

The following tabulation, chosen especially for *Broadcasting & Cable Market Place*, shows Arbitron Television's Areas of Dominant Influence (ADI) in total number of U.S. TV households. Also listed, in percentage, are the network audiences in each ADI market during prime time hours. It is this market audience figure, when compared to the market's share of the population, that indicates whether the network commitment will perform above or below the national plan average in that market.

All figures are based on Arbitron Television's May 1991 Network Program Group Analysis.

Prior to 1971, data reflects factory sales by U.S. manufacturers plus those products imported directly by distributors or dealers for resale. All import statistics are based upon average value as published by the U.S. Department of Commerce, which is F.O.B. and therefore excludes U.S. import duties, freight charged from the foreign country to the United States, and insurance.

We're on a mission.

Our mission is to *meet our customers' evolving needs by expanding the unique capabilities of satellite communications.*

For years, we've been known as the company that "makes ideas happen." And the global sharing of information is the biggest idea of all.

As we continue to apply our technology and the expertise of our dedicated professionals, the potential of satellite communications grows even greater.

Our near-term commitment alone is massive.

By the end of 1993 we will be orbiting over one billion dollars in new spacecraft, upgrading our ground control facilities, and expanding our communications capabilities.

We're on a mission to maintain our renowned leadership in every aspect of satellite communications. The services we offer our customers will continue to be the most advanced, the most reliable, and the best managed available.

To realize that mission, we will continue to commit everything we have. There is no other way at Hughes Communications. That's why the future belongs to us and our customers. And that future is right on schedule.

There's only one right choice. Yours.

Comark offers Klystrode-, ESC- and IOT-equipped UHF technology.

Why buy from a company that only sells vanilla when you can choose the flavor that suits you best?

Now one company offers you the power of choice.

Comark, backed by the global resources of Thomson-CSF, offers the full range of leading-edge transmitter technologies—and the expertise to help you choose the one that will match your needs for power level, efficiency, specification compliance and reliability.

• **Klystrode®-equipped:** Field-proven Klystrode air- or water-cooled transmitters have a simplified support system that needs no pulsers. Transmitters are available in stereo-compatible common amplification* or diplexed configurations. Output ranges from 10kW to 240kW.

• **IOT-equipped:** Inductive Output Tube transmitters are second-generation systems. Like their Klystrode cousins, water- and air-cooled transmitters are available in stereo-compatible common amplification* or diplexed configurations. Output ranges from 35kW to 240kW.

• **ESC-equipped:** Traditionally diplexed transmitters feature EEV Energy-Saving Collector (ESC) tube technology, which eliminates carbon coatings to promote long tube life. Available output ranges from 70kW to 280kW.

**All Comark common amplification transmitters contain a field-proven, patent-pending system that protects the stereo pilot frequency per FCC specification 73.682 (c) (3) and meets peak FM carrier deviation limitations.*

With an ongoing commitment to innovation in TV transmission, only Comark has been recognized by the broadcast industry for outstanding engineering achievement in the development of advanced UHF technologies. So no matter what flavor you want, contact Comark at 800-688-3669.

CALL OR WRITE TODAY

We carry a large supply of cords, receivers, monitor and mic-line amplifiers.

Please write or call for further information and printed material on our Audioclarifiers and amplifiers.

Audio Implements GKC is a small company located in Brookfield, Wisconsin, a suburb of Milwaukee. We invented this ear piece and have manufactured it **since 1967**. All major television networks use our products and have for many years. We hope to have the opportunity to be of service to you.

The On-Camera Audioclarifier is used mostly for talent. It comes with six different size ear tips or a custom ear piece. Both custom and tip models are also used for security and surveillance work.

You can measure...

with the best monitor and the most accurate test set.

The FMM-2/FMS-2 series monitors provide an even greater degree of precision measurement than ever before... **You can measure** S/N below **90 dB, You can measure** crosstalk below **85 dB, You can measure** separations of better than **70 dB, You can measure** frequency response to better than **0.25 dB, You can measure** distortions to lower than **0.01%**, and much more... Our uncluttered panels and autoranging voltmeters make these measurements a dream.
