**80 Amperes, 125 Volts; 10 Amperes, 250 Volts**

3" Porcelain Base; No. 2780 Flat Composition Handle

These switches can be used very satisfactorily for inductive loads.

Diameter of porcelain base, 3 inches.  
Height over cover, 1<sup>3</sup>/<sub>4</sub> inches.  
Height over handle, 2<sup>5</sup>/<sub>8</sub> inches.  
Supporting screw spacing, 2<sup>3</sup>/<sub>8</sub> inches.

2833	\$155.54	Solid, Indicating	1	10	6
2834	155.54	Slotted, Indicating	1	10	6

**6 Amperes, 125 Volts; 3 Amperes, 250 Volts**

1<sup>13</sup>/<sub>16</sub>" Porcelain Base; No. 2777 Round Composition Handle

The metal cover extends over and covers the porcelain base.

Diameter of porcelain base, 1<sup>13</sup>/<sub>16</sub> inches.  
Height over cover, 1<sup>1</sup>/<sub>2</sub> inches.  
Height over handle, 1<sup>3</sup>/<sub>32</sub> inches.  
Supporting screw spacing, 1<sup>3</sup>/<sub>8</sub> inches.

2430	\$56.56	Solid, Indicating	10	100	25
------	---------	-------------------	----	-----	----

Standard finish on all metal covers of surface switches unless otherwise noted is polished nickel which will be supplied when finish is not specified.

Rotary switches can be converted into lock switches by removing the handles and substituting No. 2384 Universal Rotary Switch Lock Attachment.

**Bryant Double-Pole Surface Switches  
With Metal Covers**

With Porcelain Base and Flat Composition Handle

**10 Amperes, 125 Volts; 5 Amperes, 250 Volts**  
2" Porcelain Base; No. 2777 Round Composition Handle

Diameter of porcelain base, 2 inches.  
Height over cover, 1<sup>5</sup>/<sub>16</sub> inches.  
Height over handle, 2<sup>1</sup>/<sub>16</sub> inches.  
Supporting screw spacing, 1<sup>3</sup>/<sub>8</sub> inches.

No. 2393 can be supplied, on special order, at no advance in price, on a base 1<sup>3</sup>/<sub>4</sub> inches in diameter, which is the diameter of the metal cover.

Cat. No.	Per 100	Style Base	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2393	\$99.54	Solid, Indicating	10	100	27

Standard finish on all metal covers of surface switches unless otherwise noted is polished nickel which will be supplied when finish is not specified.

Rotary switches can be converted into lock switches by removing the handles and substituting No. 2384 Universal Rotary Switch Lock Attachment.

## Bryant 3 and 4-Point Surface Switches

With Metal Covers, Porcelain Bases, and Round Composition Handles

### 3-Point—3 Amps., 125 V.; 1 Amp., 250 V.

Diameter of base, 2 inches.  
 Height over cover,  $1\frac{3}{8}$  inches.  
 Height over handle,  $1\frac{5}{16}$  inches.  
 Supporting screw spacing,  $1\frac{3}{8}$  inches.  
 No. 2455 can be supplied, on special order, at no advance in price, on a base  $1\frac{3}{4}$  inches in diameter, which is the diameter of the metal cover.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2455	\$67.88	Solid	10	100	27
2456	67.88	Slotted	10	100	26

### 3-Point—5 Amps., 125 V.; 3 Amps., 250 V.

Diameter of base,  $2\frac{1}{4}$  inches.  
 Height over cover,  $1\frac{13}{32}$  inches.  
 Height over handle,  $1\frac{3}{16}$  inches.  
 Supporting screw spacing,  $1\frac{1}{2}$  inches.

2175	\$79.18	Solid	10	100	18
2027	79.18	Slotted	10	100	33

### 3-Point—10 Amps., 125 V.; 5 Amps., 250 V.

Diameter of base,  $2\frac{1}{8}$  inches.  
 Height over cover,  $1\frac{1}{8}$  inches.  
 Height over handle,  $2\frac{1}{4}$  inches.  
 Supporting screw spacing,  $1\frac{1}{16}$  inches.  
 No. 2176 can be supplied, on special order, at no advance in price, on a base  $2\frac{1}{4}$  inches in diameter, which is the diameter of the metal cover.

2176	\$118.22	Solid	10	50	18
2030	118.22	Slotted	10	50	18

### 4-Point—5 Amps., 125 V.; 2 Amps., 250V.

Four-point switches are used in connection with two 3-point switches where current is to be controlled from any one of more than two points. A 4-point switch is installed between the 3-point switches at each additional point.

Can also be used individually as pole-changing switches.  
 Diameter of base,  $2\frac{1}{8}$  inches.  
 Height over cover,  $1\frac{1}{8}$  inches.  
 Height over handle,  $2\frac{1}{4}$  inches.  
 Supporting screw spacing,  $1\frac{3}{4}$  inches.

No. 2183 can be supplied, on special order, at no advance in price, on a base  $2\frac{1}{4}$  inches in diameter, which is the diameter of the metal cover.

2183	\$254.52	Solid	10	30	11
2033	254.52	Slotted	10	30	19

Standard finish on metal covers is polished nickel which will be supplied when the finish is not specified.

Rotary switches can be converted into lock switches by removing the handles and substituting No. 2384 Universal Rotary Switch Lock Attachment.

## Bryant Triple-Pole Surface Switches

With Metal Cover

10 Amperes, 125 Volts; 10 Amperes, 250 Volts

$2\frac{1}{16}$ " Porcelain Base; No. 2779 Wing Composition Handle

Diameter of base,  $2\frac{1}{16}$  inches.  
 Height over cover,  $1\frac{29}{32}$  inches.  
 Height over handle,  $2\frac{5}{8}$  inches.  
 Supporting screw spacing,  $2\frac{1}{32}$  inches.  
 Standard finish on metal covers unless otherwise noted is polished nickel which will be supplied when the finish is not specified.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2046	\$311.08	Solid, Indicating	1	10	5
2634	311.08	Slotted, Indicating	1	10	5

## Bryant Electrolier Surface Switches

With Metal Covers, Porcelain Bases, and Round Composition Handles

10 Amperes, 125 Volts; 5 Amperes, 250 Volts

Diameter of base,  $2\frac{1}{16}$  inches.  
 Height over cover,  $1\frac{3}{16}$  inches.  
 Height over handle,  $2\frac{1}{4}$  inches.  
 Supporting screw spacing,  $1\frac{3}{4}$  inches.

### 2-Circuit, Operating 1, 2, 1 & 2, Off

First position, circuit 1 on; 2nd position, circuit 1 off and circuit 2 on; 3rd position, circuits 1 and 2 on; 4th position, all circuits off.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2216	\$139.98	Solid	10	10	3
2215	139.98	Slotted	10	10	4

2074	155.54	Slotted, Indicating	10	10	4

### 3-Circuit, Operating 1, 1 & 2, 1 & 2 & 3, Off

First position, circuit 1 on; 2nd position, circuits 1 and 2 on; 3rd position, circuits 1 and 2 and 3 on; 4th position, all circuits off.

2187	\$155.54	Solid, Indicating	10	10	4
------	----------	-------------------	----	----	---

Standard finish on metal covers is polished nickel and will be supplied when the finish is not specified.

Rotary switches can be converted into lock switches by removing the handles and substituting No. 2384 Universal Rotary Switch Lock Attachment.

## Bryant 3-Speed Motor Control Switches

Operating 1, 2, 3, Off

10 Amperes, 125 Volts; 5 Amperes, 250 Volts

First position, circuit 1 on; 2nd position, circuit 1 off and circuit 2 on; 3rd position, circuits 1 and 2 off, circuit 3 on; 4th position, all circuits off.

Diameter of base,  $2\frac{1}{8}$  inches.  
 Height over cover,  $1\frac{1}{8}$  inches.  
 Height over handle,  $2\frac{1}{4}$  inches.  
 Supporting screw spacing,  $1\frac{3}{4}$  inches.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2666	\$155.54	Solid, Indicating	10	10	4
2667	155.54	Slotted, Indicating	10	10	4

## Bryant Reversible Triple-Pole Expulsion Type Surface Switches

For Inductive Loads

35 Amperes, 125 Volts; 20 Amperes, 250 Volts; 10 Amperes, 600 Volts  
 2 H.P. 3-Phase, 250-600 Volts

No. 781

For controlling 3-phase a.c. motors up to and including 2 h.p.

The switch mechanism has a composition base and handle which serves to indicate the position of the switch. Two covers are available: One is cast iron, lined, finished black, designed to be attached to conduit fittings made by The Crouse-Hinds Co., The Appleton Electric Co., The Columbia Metal Box Co., and the V. V. Fittings Co.; the other cover is stamped steel, finished black, with insulating lining.

The cast iron cover is dust-tight and ideal for use in flour and textile mills.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
780	\$349.96	Switch Only, No Cover	1	10	13
781	622.16	Switch with Black Cast Iron Cover, Indicating	1	10	40
782	388.86	Switch with Stamped Steel Cover, Indicating	1	10	16
783	272.20	Cover Only, Black, Cast Iron	1	10	31

**Bryant Surface Switches**

With Porcelain Bases, Covers and Handles

Rotary switches can be converted into lock switches by removing the handles and substituting No. 2384 Universal Rotary Switch Lock Attachment.

**Single-Pole**

6 Amperes, 125 Volts; 3 Amperes, 250 Volts  
Diameter base, 2 inches. Height over cover, 1<sup>9</sup>/<sub>16</sub> inches; over handle, 2<sup>5</sup>/<sub>16</sub> inches. Screw spacing, 1<sup>3</sup>/<sub>8</sub> inches.

2077	\$226.24	1	10	10

**Bryant Expulsion Type Electric Railway Surface Switches**

Single-Pole, Brown Porcelain Base, Cover, Handle

3 Amperes, 600 Volts

Connections for one enclosed fuse No. 2316.

Has No. 2782 brown porcelain handle.

Solid, indicating base, size 3<sup>7</sup>/<sub>8</sub>x3 inches.

Height over cover, 1<sup>23</sup>/<sub>32</sub> inches; over handle, 2<sup>1</sup>/<sub>2</sub> inches.

Screw spacings, 3<sup>1</sup>/<sub>8</sub>x<sup>3</sup>/<sub>8</sub> in.

Cat. No.	Per 100	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
2315	\$230.28	1	25	37

**Ferrule Type Cartridge Fuse**  
For use with No. 2315.

Enclosed, indicating base.

Length, 3<sup>3</sup>/<sub>16</sub> inches.

Diameter, <sup>9</sup>/<sub>16</sub> inch.

No. 2315

2316	\$20.20	25	100	4
------	---------	----	-----	---

**Bryant Expulsion Type Surface Switches**

For Inductive Loads and Electric Railway Circuits With Metal Cover

No. 2773

Designed with barriers between parts of opposite polarity which are effective in limiting the arc formed when the circuit is broken.

The 600-volt rating only is N.E.C.S.

It is not advisable, though possible, to convert 600-volt switches to lock switches by the use of No. 2384 Universal Lock Attachment.

The window in the cover of indicating switches is located so that, when the switch is mounted on a wall above eye level, the indications can be read right side up under the handle.

Standard finish on metal covers is polished nickel which will be supplied when the finish is not specified.

**Single-Pole**

**Bryant Flush Plates for Tumbler Switches**

Schedule II

1-Gang

2-Gang

The standard finish is brush brass which will be furnished when no finish is specified.

Perma finish is a durable colored lacquer that resembles brush brass.

S plates of the same material may be assorted in various finishes, thicknesses and gangs to make up carton and standard package quantities. No other assortment permitted.

When ordering combination plates, specify S section to accommodate switches with handles operating vertically.

By installing No. 746 jewel, any of these plates can be made into pilot light plates.

Brass mounting screws, finished to match, are packed in the carton with each plate.

**Solid Brass Plates, One Horizontal Row  
Symbol S**

Description	Car-ton Gangs	Std. Pkg. Gangs	Pkg. Wt. Lbs.	STANDARD FINISH		PERMA FINISH	
				Cat. No.	Per 100	Cat. No.	Per 100

The price of brush brass .040-inch S plates above 3 gangs, when dimensions and spacings are standard, is 44 cents list per gang (Perma, 36 cents).

**Solid Brass Plates, One Vertical Row (Tandem)**

2-Gang	10	100	22	3792	\$142.82	3792-P	\$131.50
3-Gang	10	100	22	3793	214.22	3793-P	197.26

The price of brush brass solid S plates in one vertical row (tandem) above 3 gangs, when dimensions and spacings are standard, is 84 cents list per gang (Perma, 76 cents).

**Bryant Flush Plates**

**Explanation of Catalogue Numbers for Flush Plates**

When specifying flush plates there are three things that must be known:

1. The style of plate.
2. The material of which it is made.
3. The number of gangs.

Except for tandem plates (plates arranged vertically) and combination plates, each listed Bryant flush plate has a catalogue number which describes the kind of plate it is.

OP52 is the catalogue number for a 2-button push switch plate, Templus composition, 2-gang.

OV61 is the catalogue number for a duplex flush receptacle plate, .060-inch stamped brass, 1-gang.

OPF12 is the catalogue number for a plate for one 2-button push switch and a single flush receptacle, .040-inch stamped brass, 2-gang.

OV211 is the catalogue number for a plate with doors for a duplex flush receptacle, solid brass, 1-gang.

In each case the left-hand letter O indicates a flush plate. See examples.

I. The symbol letter or letters immediately following describe the style of plate. See examples, letters P, V, PF and V2.

II. The figure next to the right-hand figure indicates the material of which the plate is made.

1. Indicates brass, .100 inch thick (solid).
6. Indicates brass, .060 inch thick, stamped.
5. Indicates Templus moulded composition.
4. Indicates brass, .040 inch thick, stamped.
7. Indicates De Luxe wood inlay plates.
- Indicates Hemo bakelite plates. In this case II is substituted for the first letter O.

—B used in conjunction with No. 7 indicates the all metal plate of the De Luxe type.

—P after any plate catalogue number indicates that Perma finish is desired.

III. The right-hand figure indicates the number of horizontal gangs wide.

When the simple elements of this number system are learned it will be found easy to specify Bryant plates by catalogue number.

**Examples**

NOTE.—Plates in combinations exceeding 8 gangs cannot be furnished in .060-inch or .040-inch. Combination plates can only be furnished in the thickness specified with each section.

## Bryant Special Finishes

**GENERAL.**—The standard finish of all brass shell devices and brass flush plates, unless otherwise noted, is brush brass, which will be supplied when the finish is not specified. Standard and special finishes on all devices of one catalogue number may be assorted to make up the standard package quantity, which will be the same as though all were standard finish.

Assortment of catalogue numbers may be made only as indicated in the catalogue pages where the devices are listed. Prices on all special finishes other than those listed, including gold, will be quoted on application.

Sample of finish desired should always be submitted to avoid mistakes and delays.

### Socket Type Devices

**QUANTITY DISCOUNTS.**—When socket type devices or metal covered attachment plug caps in special finishes are ordered in quantities the list prices for finishes only will be reduced as follows: lots of 250-499, one shipment, one finish, 10%;

lots of 500-999, one shipment, one finish, 20%; lots of 1000 or over, one shipment, one finish, 50%. For mogul sockets in special finishes, add double the prices which apply to standard sockets.

**CHAINS AND METAL CHAIN PARTS.**—Chain guides, per foot or cut in lengths not longer than 1 foot, and chain parts, singly or in combination, can be supplied in any special finish, except silver and gold, at an addition to list price of 4 cents per unit. For silver finishes add 20 cents list per unit. Gold finish prices on application.

### Surface Switch Covers

The standard finish on all metal covers of surface switches unless otherwise noted is polished nickel, which will be supplied when the finish is not specified. For covers in any other finish, except silver or gold, add to list 20 cents each. Silver or gold finish prices on application.

\*Applies only to multiple gang and combination plates.

Bryant Flush Plate Sections

Schedule H

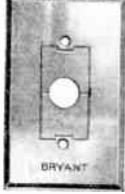

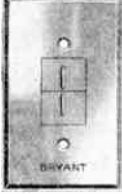

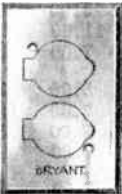

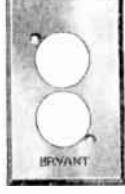

Combination plates should be described by using the letters shown with the illustrations of the respective plates, giving the letters in order from left to right, or from top to bottom, as the devices are to be mounted.

The list price of a horizontal combination plate of two or three sections, in brush brass finish when dimensions and spacings are standard and the devices are arranged in one horizontal row, will be the sum of the lists shown. The list

price of a horizontal combination plate of 4 or more sections in combination is the sum of the list prices shown plus 25% of that sum for the combination feature.

For plates with devices mounted tandem or in more than one horizontal row, add 20% to the sum of the list prices for 2 and 3-gang plates; for 4 or more gangs, add 50%.

Use the prices below when ordering combination plates.

## Bryant Flush Plate Sections

The standard package quantity is 10 plates of one description (not 10 gangs). The carton quantity is 2 plates.

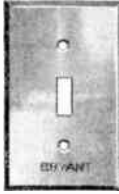

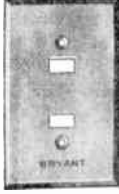

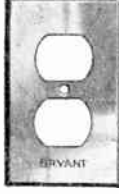

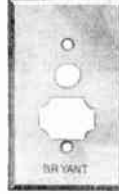

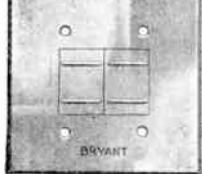

A combination plate cannot be so considered for billing purposes unless it is described by at least two different letters, but letters may be used to describe any desired arrangement of plate sections.

The standard finish of plates is brush brass which will

be supplied if no finish is specified. For special finishes see another page.

Except for those listed as such, Templus and Hemo moulded composition plates cannot be supplied in combinations.

Use the prices below when ordering combination plates.

**Electrically Connected Combinations**

Each switch section takes same rating as corresponding single switch. Any combination can be supplied in 2 or 3 sections. Order by using single switch numbers in the order of the combination desired. The price is the sum of the lists of the switch sections. Combination switches are regularly supplied with common feed. If separate feed is desired, remove the shunt connection. Any of these switches can be supplied in lock style. When so specified, add L to catalogue number and \$63.00 per 100 for each switch.

## Hubbell Combination Brass Plates

Hubbell Combination Plates are made in .100-inch solid brass, struck up .060 and .040 inch brass. The standard finish is brush brass. If desired in Lacco finish specify and deduct 8 cents per gang from list prices. The advance for special finishes should be added to brush brass list

prices. If plates are ordered by letter only and no finish is specified, brush brass will be supplied. A combination plate must be made up of 2 or more different letters. For example: AA is not a combination plate.

\*Screw spacing, 2 3/8 inches. Adapter to 3 3/32 inches for box mounting supplied with this section.

\*\*Only supplied in solid brass.

†Combinations embracing two adjacent G, Y, or K sections for Nos. 7250, 7310, 7410, or 7438 receptacles, require an extra blank gang between them to provide space for insertion of caps.

Standard package consists of 10 plates of one combination (not 10 gangs).

Carton consists of 1 plate.

Standard finish is brush brass, and will be so furnished unless otherwise specified.

The price of any combination plate up to and including 3-gangs is the sum of the individual prices of the component plates.

For combination plates of 4 or more horizontal gangs, add 25%. For tandem gangs, add 25% to price of horizontal plates. Tandem plates are supplied in solid brass only.

Socket Material

(A) Pull devices in white finish but with chain eyelet, chain and acorn in any electro plated finish except brush brass add \$2.00 per 100 advance over price shown for key, keyless and push sockets.

(B) Finishes not listed, prices on application.

Pull devices in brush brass finish but chain, tassel and eyelet in other finishes add to list difference between columns 1 and 2.

(C) Standard finish on brass shell devices is brush brass. Furnished on all orders where no finish is specified.

Plated finish on pull chain parts furnished at an addition of \$2.00 per 100. Subject to quantity reduction.

Standard and special finishes of one catalogue number may be assorted to make up standard packages.

The above prices for special finishes apply to small lots. When ordering in quantity lots of one finish, one shipment, single or assorted catalogue numbers, they are reduced as follows:

Lots 250 to 499, finish price reduced 10%.

Lots 500 to 999, finish price reduced 20%.

Lots 1000 and over, finish price reduced 50%.

These quantity deductions should be made from prices of finishes before the trade discounts are figured.

Assembled or unassembled sockets with brush brass but unlacquered shells take same price as brush brass.

Plug Caps and Flush Plates

(D) For genuine bronze plates, prices on application.

(E) These prices should be added to brush brass prices and not Lacco.

(F) Prices applying to finishes on standard flush plates are based on single plates. When ordering gangs, add \$14.00 per 100 gangs for each gang beyond the first, regardless of finish except gold.

The above prices for special finishes apply to small lots. When ordering in quantity lots of one finish, one shipment, single or assorted catalogue numbers, they are reduced as follows:

100 to 499 gangs or caps, finish price reduced 10%.

500 to 999 gangs or caps, finish price reduced 20%.

1000 gangs or caps and over, finish price reduced 50%.

These quantity deductions should be made from prices of finishes before trade discounts are figured.

Unfinished flush plates, that are polished and buffed, will be supplied at same price as polished brass plates or at same price as brush brass if ground but not polished.

Unfinished flush plates, not polished or buffed (in rough state) will be furnished at same price as Lacco plates.

For ivory or white enamel finish on bakelite plates add the same extra as for brass plates.

## H & H Pony Size Surface Tumbler Switches

With Nickel Cover (Snap Fastening)

With polished nickel covers and indicating handles.  
Diameter of base, 2 inches.

**H & H Type C Flush Tumbler Switches**  
**For Type C Gas Filled Lamps**

Specially built to handle the initial current surge of gas filled medium size lamps.

Base is all bakelite, 2 inches deep.

Special phosphor bronze blades and contacts with large surfaces provide for the absorption and dissipation of heat.

Two arc snuffers cut off the arc and greatly increase breaking capacity.

Fit standard tumbler switch plates.

No. 4281

**20 Amperes, 250 Volts**

Cat. No.	Per 100	Description	AMPERES		Car-ton	Std. Pkg.	Pkg. Wt. Lbs.

### Bell Bush Plate With Push Button

Carton, 10. Standard package, 50.  
Screw holes spaced  $2\frac{3}{8}$  inches on centers.

#### Solid Brass

3141	\$118.78	3141-D	\$113.12	1	21
------	----------	--------	----------	---	----

No. 3141

### For Telephone Outlets

Carton, 10 gangs; standard package, 50.  
All telephone plates may be assorted in standard packages and cartons.

Screw holes spaced  $2\frac{3}{8}$  inches on centers. This is a standard spacing and accomplished by using a sub-frame which is fastened to the box, and the plate is then attached to this frame, thus allowing adjustment for unevenness in box installation.

#### Single Outlet, .040-Inch Brass

**H & H Plates**

**Symbols for Plates in Combinations**

Standard combination plates of at least two different units are made up to order, from the units listed below. If spacings or dimensions differ from the standard units, special plate prices apply.

The price of a combination plate is the sum of the individual prices of the component plates. For a tandem combination, or a combination plate in which the gangs are placed in more than one row, add 25 per cent to the prices shown. For example, if plate PBD were a tandem plate, the price would be \$2.22 plus 25 per cent or \$2.77.

Standard package is 10 separate plates of the same combination.

Standard finish is brush brass.

**H & H Bakelite Canopy Pull Switches**

These switches can be wired easily and quickly, without removing the mechanism. Just slip off the bakelite disc, attach the wires and replace the disc, bending down the tab. Made of lustrous brown bakelite.

Possibility of shorting is eliminated—current carrying parts are enclosed in a bakelite compartment separated and insulated from all other metal parts.

**Regular Style, without Mounting Attachment**

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

Furnished with short chain and 6-foot cord.

Cat. No.	Per 100	Length Stem In.	Car-ton	Std. Pkg.	Pkg. Wt. Lbs.
7745	\$70.00	1/4	10	100	12
7746	70.00	3/8	10	100	12
No. 7745	7716	5/8	10	100	12

**With Adjustable U Bracket**

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

For pan type fixtures. Adjustable for any depth of pan. Gives a rigid, straight down easy pull.

Offers greater wiring convenience and economy of installation.

Complete with short chain and 6-foot cord.

7745-B	\$70.00	1/4	10	100	17
7746-B	70.00	3/8	10	100	17

No. 7745-B

**With Z Bar**

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

A new, rigid canopy switch support. Fastens to fixture stud with lock nut and switch is attached to Z bar with stem. Affords a straight down pull, removing all strain from the canopy.

The short chain and 6-foot cord go out through a small knockout in lower side of canopy.

7745-Z	\$70.00	1/4	10	100	17
7746-Z	70.00	3/8	10	100	17
7716-Z	70.00	5/8	10	100	17

No. 7745-Z

**With Chain Link**

6 Amperes, 125 Volts; 3 Amperes, 250 Volts

Used between any two links. Tighten the stem and the switch is locked to the chain. It can't slip out or pull out. Makes a stable permanent installation. Furnished with short chain and 6-foot cord.

Standard finish is statuary bronze, but brass, black, or nickel is optional.

7745-II	\$70.00	1/4	10	100	17

No. 7746-AH

\*Angle pull.

**Rotary Switches**

3 Amperes, 125 Volts; 1 Ampere, 250 Volts

Depth of rotary switch, 3/8 inch.

Diameter of stem, 5/8 inch.

Fitted with 6-inch No. 48 stranded fixture wire. Wires up to and including 8 inches supplied without extra charge. For longer wires, add 9 cents per foot for each conductor.

Standard finish is brass on exposed parts, but wash nickel, bronze, or black is optional.

No. 7776

## Type A Square D Safety Switches Quick-Make and Quick-Break Interlocked Cover Control Single Throw—Fusible

No. 88251

All switch parts are mounted on individual insulating bases, making it possible to remove and replace any switch part from the front of the switch in a few minutes time.

The cover control makes it impossible to open the cover when the switch is in the "on" position. Prevents operation of switch with box cover open.

Positive quick-make and quick-break action prevents the arc from holding and burning blades and jaws.

**Type A Square D Safety Switches**  
**Quick-Make and Quick-Break**  
 Interlocked Cover Control  
**Single Throw—Not Fusible**

No. 84343

All switch parts are mounted on individual insulating bases, making it possible to remove and replace any switch part from the front of the switch in a few minutes' time.

Positive quick-make and quick-break action prevents the arc from holding and burning blades and jaws.

Square D Cover Control makes it impossible to open the box cover when the switch is in the "on" position. It also prevents the operation of the switch with the box cover open. By means of a key authorized persons can open the cover when the switch is "on" and can operate the switch when the cover is open.

## Square D Meter Service Switches

Accessible Main Fuses  
Meter Test and Not-Meter Test  
Sequence: Switch-Fuse-Meter

No. 30331, Flap Open

No. 10373, Open

Designed for use in connection with meter service, with the main line fuses so located at the front of the switch, that the customer may have access to them for replacement, after first throwing the switch lever to the Off position then raising the auxiliary cover or flap. Opening the flap does not afford access to the switch mechanism proper, this mechanism being under the main cover and sealed.

Both switch blades and fuses are ahead of the meter and are dead when switch is off.

The switch cannot be put in "on" position until flap is closed, the switching mechanism interlocking with the flap.

Customer's service is not interrupted while testing meters when these meter testing devices are used.

‡Type C non-interlocking.

**Bull Dog Type C Safety Switches**

Non-Interlocking, Quick-Make, Quick-Break  
Single Throw, Fusible

No. 50221S

Bull Dog Type C (punched clip) externally operated switches are designed for use where severe service conditions do not exist to warrant investment in the more ruggedly constructed, machine made, Type A Switch.

Quick-make and quick-break is a feature of the Bull Dog Type C line. As a safety factor quick-make is more important than quick-break, as it prevents unintentional operation of the switch, because of the conscious effort required to compress the quick-make spring.

Only one spring is used to perform both the functions of quick-make and quick-break. The operation of the switch is not dependent on this spring, however. The switch could be operated if the spring broke or were removed.

The blade and crossbar construction is unique. There is no chance for a blade to remain in contact after the handle is pulled to the "off" position.

Black enamel finish; luminized finish can be furnished at additional 10 per cent.

**Colt-Noark "Acco" Meter Service Switches**

**Standardized—Accessible Service Side Fuse Type**

Sequence: Switch-Fuse-Meter

The "Acco" Switch provides a complete meter service unit including main switch and cutout, with meter protective and testing facilities.

When the switch is at "off" position, the slide cover may be opened and fuses removed with assurance that the fuse contacts are dead; the switch cannot again be moved to

"on" until the slide is closed.

For testing purposes separate switches are provided on the load side of the meter.

The "Acco" conforms to standard cabinet dimensions, using all standardized endwalls and accessories.

**For Single-Phase and D.C. Service**

## Colt-Noark New Sequence Meter Service Switches

### Sequence: Switch-Meter-Fuse

### Accessible Fuse Covers

The S.M.F. System is built upon two general types of devices: One with the switch blade on each side of the fuses, and the other with both switch blades at the left of the fuses. The former is particularly adapted to the use of links, and the latter to the use of flexible jumpers for testing.

No. 6636

\*Plug fuses.

## Colt-Noark Combination Entrance Switches Sequence: Meter-Switch-Fuse

No. 7936RL4

No testing facilities.

For use with separate meter test box. Single door and dead front plate over main switch and branch circuit distribution blocks.

Conduit endwalls.

### Solid Neutral 60 Amps., 125-250 V. 3-Pole

Cat. No.	Each	Main Fuses	Range Fuses	Lighting Fuses	Std. Pkg.

## Colt-Noark Combination Fuse Cabinets

### Surface Mounting

These cabinets may be coupled directly to the meter service or entrance switch or mounted in some other convenient location in the building. The 60-ampere cutout is equipped with a fuse puller.

All wiring within the cabinet is covered by a dead front plate.

Cat. Nos. 2 and 4 are also supplied already wired for convenience in attaching to meter cabinet.

**Type A Trumbull Safety Switches**  
Quick Make and Quick Break—Interlocking

2, 3 and 4-Pole, 30-2400 Amperes  
230-575 Volts A.C., 250-600 Volts D.C.  
800 Amperes and Above, Quick Break Only

No. 36364

Knockouts in ends, sides and rear. Above 400 amperes, no knockouts furnished.

Multiple terminal lugs furnished on switches 800 amperes and above.

All switches 400 amperes and above have ebony asbestos bases.

All switches listed below will break full rated load, except the 800 and 1200-am-

peres which break full load at 230 volts a.c.—250 volts d.c. and loads of not over 200 amperes at 575 volts a.c.—600 volts d.c.

## Type RM Trumbull Safety Switches

Quick Make and Quick Break—Interlocking

Break Full Rated Load

### RM (Rotor Movement) Design

A rugged, full safety device for installations where size is a prime factor. Entire switch and fuse block unit is removable from box. Thus, entire box space is available for connecting conduit and running wires.

When switch is pulled off, the blades throw into deep narrow slots in the base and thus effectually snuff out any arc which might have a tendency to follow.

No. 92321-C

The fuse block mounted over the switch base, brings fuses directly to the front in most accessible position. Dead front construction.

†60-ampere construction.

Three and four-pole fusible switches with solid neutral strap replacing fuse can be furnished at regular prices.

## Trumbull Safety Switches

In Cast Iron Weatherproof Boxes

Quick Make and Quick Break—Interlocking

No. 34361C

Equipped with gaskets in cover making a weatherproof box.

All switches break full rated load.

The 3 and 4-pole switches with a neutral strap replacing either one blade and fuse assembly or one blade only can be furnished at same price as the regular switches.

Special charge for drilling holes in cast iron boxes.

**Type C Trumbull Enclosed Switches**  
**Single Throw—Quick Make and Quick Break**  
 Break Full Rated Load

No. 40321, Fusible

Key slots in rear of box at top with which to hang box in position until ready to fasten permanently.

All switches equipped with outside grounding lug.

Knockouts in ends, sides and rear.

The 30-ampere 575-volt switches are made of 60-ampere stock.

This line meets requirements for a high-class punched-clip switch in externally-operated box.

Type C line has no interlocking features. Switch is of punched-clip construction; there is a difference between punched-clip switches in machine work, alignment, adjustment and in electrical and mechanical strength.

## No. AF-1 Trumbull Circuit Breakers

15 to 50-Ampere  
Frame Size  
250 Volts, 3-Pole

An unusual principle of arc interruption is incorporated in the design of these breakers. On overloads of short circuits a thermal strip deflects, releasing a latch which in turn causes the contacts to open. The contacts themselves open within a heavy cylinder, creating a terrific pressure which extinguishes the arc.

The 50-ampere frame size has an interrupting capacity of 5000 amperes and the larger frame sizes an interrupting capacity of 10,000 amperes.

With one design of breaker as listed for the various frame

sizes, assemblies may be made for enclosed breakers, load centers, panelboards of all types including the convertible, as well as switchboards of front or back connected construction.

\*Add letter H to Cat. No. for hinged cover box. Enclosing cases are of bakelite. A handle guard is provided, into which may be inserted a padlock for locking the breaker in either the off or on position.

†For screw cover box add letter F to Cat. No. for flush mounting or letter S for surface mounting and add \$2.30 to list price of circuit breaker only. This enclosing case is furnished only for the 2-pole 50-ampere frame sizes.

## No. AF-1 Trumbull Circuit Breakers

Illustration shows the enclosed AF-1 breaker in a neat, rounded corner, steel box.

Starting with the 100-ampere frame size, interchangeable trip units are available and all breakers off inverse time limit protection. In breakers 100-ampere frame size and above, dual overload is provided as a standard feature.

The 50-ampere frame size breakers do not have interchangeable trip units.

**Type R.B. Trumbull Tumbler Switches Without Overload Protection**

No. 2361

Particularly adapted for use on small motor-driven machines; with automatic apparatus such as oil burners, ice machines, either for control or as a positive disconnect. Also used on lighting circuits.

On the 2-pole, 3-way and 4-pole switches, the R.B. type roller contact provides greater rupturing capacity and longer life.

The 3-pole switch is mounted on moulded composition base which can easily be removed for wiring. Cover is held by two screws.

**2-Pole**  
30 Amp., 250 Volts; 5 Amp., 600 Volts;  
2 H.P., 250-600 Volts

## Circle T Trumbull Radio Switches

Schedule B

No. 917, S. P. S. T.

No. 921, 3 P. S. T.

This line of small switches for radio work, is so designed as to stand up under the severest use to which they will be subjected, and at the same time to take up a minimum amount of space. Unusually strong and compact.

Connections can be made from either front or rear. Contact screws are placed in the switch posts thus making the wiring easy. Four projecting corner points on each post hold the connecting wires in position after they have been fastened under the binding screws.

All metal parts are nickel-plated. Mounted on polished fibre base.

**Mercoid-Triplex Time Switches**

**Mercoid-Triplex Time Switches**

Type No. 402, Closed

Type No. 402, Open

Type T10-V2

With self-starting synchronous motor movement of the highest quality with heavy cut brass wheels and pinions turned and milled from tool steel, hardened and polished.

Has snap action switch mechanism with positive make and break of contact and locking in On and Off position. Operated by cams on bottom of On and Off clamps which are easily adjustable around the all-metallic finish, brass, rotating 24-hour or weekly program rim. Clamps can be set closely so the time switch will operate at times desired. Extra On and Off clamps may be used for additional operations. On and Off clamps may be set adjacent to each other, in which position switch will throw On and Off in 30 minutes with the 24-hour rim and in 3½ hours with the weekly program rim. Lever is provided for operating switch mechanism by hand, which also indicates On and Off position of switch.

Mercoid mercury tubes are used. There can be no open arcing, oxidation or corrosion. The contact is permanently clean and instantaneous in operation and will last indefinitely without deterioration.

Clock face has silver finished dial and time is quickly read from distinct hands and legible numerals. Seconds indicator rotates while current is on.

Clock is quickly set on time from center thumb screw without loosening On and Off clamps.

Steel housing is cadmium-plated to prevent rusting; has a gasketed, padlockable and sealable door opener. Mechanism is easily demountable by removing two screws.

Molded terminal block with wiring screws in bottom row for quick connection of line and load wires.

Dimensions of housing: height, 12 inches; width, 6¾ inches; depth, 3¾ inches.

Synchronous motor regularly shipped for connection to 110-volt 60-cycle current. If so specified on order can be furnished for connection to 220 volts 60 cycles or for 110 or 220 volts 50 cycles.

Packed 10 in a standard package.

Approximate shipping weight, 7 pounds.

Additional On and Off Clamps . . . . . per set \$ 5.50

\*May be used to control 1-h.p. a.c. repulsion-induction motor or ¼-h.p. a.c. split phase motor.

†Type No. 402 may be connected to control two separate 20-ampere single-pole circuits or a 20-ampere double-pole circuit.

**Combination Type**

Illustration shows Mercoid Type V Transformer Relay installed in Triplex Time Switch housing. This relay meets the severe service conditions encountered with frequently operating automatic equipment such as oil burners, stokers, air conditioners, etc. Also for many other operations requiring thoroughly dependable remote control.

When used in combination with Triplex Time Switch, the switch may be set to connect day or night thermostat to relay or to control (by time) the relay operation when used for other purposes.

Prices on application.

**Cast Iron Weatherproof Housing**

This type is furnished for outdoor installations.

A heavy wing nut compresses soft rubber door gasket against case.

Height, 13½ inches; width, 8¼ inches; depth, 4½ inches.

Approximate shipping weight, 20 pounds.

Type W, without Glass Opening in Cover

.....extra \$8.00

Type WO, with Glass Opening.....extra 10.00

Padlock with 2 Keys

.....extra 2.00

**Special Mounting**

Illustration shows Triplex Time Switch mounted on bakelite plate without steel housing. Overall dimensions: 7 inches high, 5½ inches wide, 2⅝ inches deep. This type can be mounted in traffic light housings, on panel boards, or with equipment where housing is not required.

Snap action switch mechanism can be furnished with Mercoid tube or tubes to provide: Single pole, double pole, single pole double throw, and with smaller

capacity tubes for single, double, triple or 4 pole; single or double throw.

Prices on application.

**Triplex Weekly Program Dial**

This dial makes one revolution in 7 days. Each day is provided with On and Off clamps, easily adjustable to daily schedule. Clamps may be removed from the rim for any day or days; switch will then remain in last position thrown until the next clamp operates. For example, in heating a school, night thermostat can remain in control from Friday at 4 P.M. until Monday morning at 7 when day thermostat is connected.

## Sauter Time Switches

The general purpose of a time switch is to automatically close an electrical circuit for a desired number of hours, usually once or twice a day.

Sauter Time Switches are accurately designed with rugged and precision workmanship throughout. They have been endorsed by many of the foremost electric light and power companies, outdoor advertising companies and are used by the U. S. Government for airways beacon control.

### Synchronous Motor Time Switches

Single or Double Circuit—A.C.—110 or 220 Volts

The Type ZY switch consists of a 2 to 3-watt self-starting slow speed 200-r.p.m. subsynchronous motor, a precision-made gear train with highly polished pinions, a quick-make quick-break laminated copper contact with silver arcing tips, a plain 24-hour dial adjustable to any desired schedule and a pressed steel dustproof case with ample room for wiring and convenient knockouts for conduit connections.

### Low Capacity Self-Winding Escapement Switches

Single Throw—A.C. and D.C.—110-220 Volts

These switches consist of a large precision-made clock movement having a 4-day running reserve mainspring and a 7-jewelled escapement (ZEE has 13 jewels) compensated for temperature fluctuations. The clockspring is automatically wound each day by a 20-watt 110-220-volt motor which operates satisfactorily on frequencies of from 25 to 80 cycles and at voltages 20 per cent above or below rated voltage. Except for the 10 to 30 seconds required to wind the clockspring, this motor is entirely disconnected from the line.

Provided with a quick-make quick-break laminated copper contact with silver arcing tips, a plain 24-hour dial adjustable to any desired schedule, and a pressed steel dustproof case with ample room for wiring and convenient knockouts for conduit connections.

\*Prices include switch with plain 24-hour dial and dust-proof case. Add \$10.00 for weatherproof case and \$17.00 for astronomic dial.

\*\*A single-pole double-throw switch with no open position. Used for any 3-wire control system.

†A 2-circuit switch; operates in the following sequence: Circuit 1, On; circuits 1 and 2, On—all Off. Circuit 1 is controlled by 15-ampere 2-pole switch; circuit 2 by a 15-ampere single-pole switch. Total capacity, 4950 watts.

‡A 2-circuit switch; operates in the following sequence: Circuits 1 and 2, On; circuit 1, Off; circuits 1 and 2, Off. Both circuits controlled by a 15-ampere single-pole switch. Total capacity, 3300 watts.

## Sauter Time Switches

### Heavy Duty Motor-Operated Self-Winding or Synchronous Time Switches

Single and Double Circuit—A.C. and D.C. 110-220 Volts

These switches consist of a self-winding escapement or synchronous clock. Heavy duty switches differ from low capacity switches in that the main switch contacts are operated by a motor rather than by the time dial. The use of this motor permits the design of a high pressure copper-to-copper butt contact with a quick double-make and double-break action. These contacts are good for a constant overload of 25 per cent.

All motor-operated switches are provided with a plain 24-hour dial adjustable to any desired schedule and a pressed steel dustproof case with conduit connection boxes for ease in wiring. An astronomic dial to automatically operate the switch in step with sunset or sunrise, and a cast iron weatherproof or immersion-proof case can be supplied if desired.

When synchronous motor clock is desired, deduct \$20.00 from price

Add for astronomic dial, \$17.00.

Add for week-end and holiday cut-out, \$25.00.

\*Two-circuit switches; operate in following sequence: Circuit 1 and 2, On simultaneously; circuit 1, Off; circuit 2, Off.

\*\*Momentary contact switches; operate as follows: Circuit 1, On momentarily (6 to 8 seconds); circuit 2, On momentarily (6 to 8 seconds).

\*\*\*Two-circuit switches; operate in following sequence: Circuit 1, On; Circuit 2, On; circuits 1 and 2, Off simultaneously.

Add for weatherproof or immersion-proof housing; †\$20.00; ‡\$25.00.

### Other Sauter Time Switches Available

Symbol ZMO

Symbol HZ

Also available: 110-220-volt switches up to 300 amperes; 4600 and 8000-volt switches up to 50 amperes, and many 110-220-volt switches having special sequences. Prices upon application.

### Ordering Information

When ordering specify type, ampere rating, number of poles, voltage, whether A.C. or D.C., frequency, type of dial, type of case, and on 2-circuit switches give switch sequence.

**Anderson Automatic Time Switches**

**Universal Motor Wound with Mercury Tube Contacts**

110 and 220 Volts D.C. or A.C. 60 to 25 Cycles

No. 11901

This type, having a reserve power in the spring of from 12 to 52 hours, is particularly suited for use in circuits that are subject to line interruptions.

For Season Changing Device (Astronomical Dial) add \$20.00 list.

For Wooden Housing complete with porcelain tubes, add \$10.00 list.

Approximate dimensions 13 inches high, 4½ inches wide and 4¼ inches deep.

Approximate weight net 9 pounds.

Approximate weight boxed 12 pounds.

**Type MSD Single Pole Single Throw**

**Anderson Automatic Time Switches**

**Double or Triple-pole, High Tension, Oil Break**

**Type L Eight Day, Hand Wound**

This type of switch is constructed for handling alternating current up to and including 6600 volts, and is furnished either two or three-pole. This apparatus is used in connection with small current transforming apparatus where the lamps can safely be connected to the secondary coil of transformer in its position of maximum voltage. Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

**For Potentials Not Exceeding 3300 Volts**

No.	Cap. Amps.	No. of Poles	High with Terminals	DIMENSIONS, INCHES			Ship. Wt., Lbs.	Each
				Width	Depth			
11039	25	2	20½	11	7	83	*\$120.00	
11040	50	2	20½	11	7	83	*130.00

11085	50	3	22	19	8	129	†196.00

For the Sunday or holiday cut-out attachment installed in any of the above, add \$14.00 to price.

For the double daily operation attachment installed in any of the above, add \$14.00 to price.

For the time extension device installed in any of the above, add \$14.00 to price.

Type L Switches may have either the time extension or the double daily operation attachment, but cannot have both.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

**Type SL Electrically Wound, Fully Automatic**

The Type SL is for controlling circuits up to 6600 volts. The switch is so designed that the current has a quick-make and break and is opened and closed in a tank of oil.

Prices listed below are for complete apparatus, including oil chamber and sufficient oil to fill same to working level.

Specify on order full particulars of winding circuit.

**For Potentials Not Exceeding 3300 Volts**

No.	Cap. Amp.	No. of Poles	High with Terminals	DIMENSIONS, INCHES			Ship. Wt., Lbs.	Each
				Wide	Deep			
11098	25	2	22	11	8	92	*\$200.00

11105	50	3	23½	19	9	137	†276.00

\*One gallon of oil, included in list price, shipped with each switch.

†Two gallons of oil included in list price, shipped with each switch.

‡Three gallons of oil included in list price, shipped with each switch.

The Sunday or holiday cut-out attachment, the double daily operation attachment and the time extension device cannot be put in any Type SL Electrically Wound Time switch.

A 110-volt heating coil in switch tank only, is standard equipment in all the above. 220-volt coil supplied if so stated on order.

For season changing device (Astronomical Dial) add \$20.00 to price.

Wooden housings complete for all L and SL Switches: For the 25 and 50-ampere, 2 and 3-pole 3300 volts, and the 2-pole 6600 volts add \$20.00 to list price; for the 3-pole 25 and 50-ampere 6600 volts add \$28.00 to list price.

## Dunco Relays

### Midget Relays

Type ADBX1

Used for the control of heaters, signals, small motors, etc.

Wiping contacts are of fine silver.

The shading coil of Dunco design insures quiet a.c. operation.

Base size, 2 3/4 x 1 7/8 inches.

Coils: a.c., 60 cycles, 6 to 150 volts; d.c., 2 to 60 volts.

Contacts: 110 volts a.c., 6 amperes; 220 volts a.c., 3 amperes; 115 volts d.c., 1

ampere. Non-inductive load.

Type ABTX1, S.P., D.B., Front Contact..... each **\$3.85**

Type ADBX1, D.P., S.B., Front Contact..... each **4.95**

Type BSBX1, S.P., S.B., Back Contact..... each **3.85**

Type BDBX1, D.P., S.B., Back Contact..... each **5.50**

Type CSBX1, S.P., S.B., D.T..... each **4.68**

Type CDBX1, D.P., S.B., D.T..... each **6.60**

### Power Relays

Used for the control of heaters, signals, small motors, etc.

Wiping contacts are of fine silver; adjustable tension; quiet a.c. operation.

The use of finest materials together with careful, individual attention during manufacture and inspection make these carefully designed relays dependable.

Types ABYS8 and ADBT8 are also approved for 1 h.p.

Type ABYS8

Type	Each	Contact Arrangement	Base Size In.	CONTACT RATING AMPERES V. V. V. A.C. A.C. D.C.
ABYS8	\$6.60	S.P., D.B., Front Contact.	4 1/4 x 3	30 20 6
ADBT8	8.80	D.P., S.B., Front Contact.	4 1/4 x 3	30 25 4
ATBD8	11.00	3-P., S.B., Front Contact.	4 1/4 x 3	30 25 4
AFBG8	13.20	4-P., S.B., Front Contact.	5 x 5	30 25 4
BSBS8	6.60	S.P., S.B., Back Contact...	4 1/4 x 3	10 8 2
BBUK8	8.80	S.P., D.B., Back Contact...	5 x 3	30 20 6
BDBK8	11.00	D.P., S.B., Back Contact...	5 x 3	30 25 4
CSBT8	8.80	S.P., S.B., D.T.....	4 1/4 x 3	8 6 2
CDBP8	13.20	D.P., S.B., D.T.....	6 1/4 x 3	30 25 4
DDBP8	15.40	Same as CDBP8 except all Separate Circuits.....	6 1/4 x 3	30 25 4

Type H3 Hinged Cover, Aluminum Finish K.O. Box ..... each **\$1.65**

Add \$3.30 to price for 230-volt d. c. coils.

### Mechanical Latch-In Electrical Release Relays

Used for push button control or similar applications.

One coil closes contacts, another opens contacts. Latching member is metal, locking against molded bakelite keeper. This latch construction guards against sticking or excessive wear. Moving contacts insulated from armature.

Base size, 4 1/2 x 3 3/4 inches.

Type	A.C. Coils Each	D.C. Coils Each	Contact Breaking Arrangement	MAIN CONTACT RATING, AMPERES			
				110 V. A.C.	220 V. A.C.	115 V. D.C.	230 V. D.C.
CS600B	.....	<b>\$7.70</b>	S.P., S.T., D.B.	30	20	6	3
CS601B	.....	<b>8.80</b>	D.P., S.T., S.B.	30	25	4	2
CS609B	.....	<b>8.80</b>	S.P., D.T., S.B.	8	6	2	2
CS600C	\$8.80	.....	S.P., S.T., D.B.	30	20	6	3
CS601C	9.90	.....	D.P., S.T., S.B.	30	25	4	2
CS609C	9.90	.....	S.P., D.T., S.B.	8	6	2	2

Type	CONTACTS		A.C. COIL VOLTAGES		Cycles
	Front	Back	Min.	Max.	
CS600B	1	.	.	6	110
CS601B	2	.	.	6	110
CS609B	1	1	.	6	110
CS600C	1	.	6	220	25/60
CS601C	2	.	6	220	25/60
CS609C	1	1	6	220	25/60

Add \$4.40 for 230-volt d.c. coils.

### Ordering Information Required

Voltage and frequency of coil line.

Nature of load relay contacts must handle.

If special operating characteristics are desired, explain fully.

Wiring diagrams of special circuits are often helpful.

## Dunco Relays

### 3-Wire Relays

Used for the control of heaters, refrigerator units, pressure, etc. Protective resistor is a part of the relay. Instrument contacts make but never break current.

For use with 3-wire H-L-C instrument or push button.

#### Used Where Control Circuit and Load are Fed by Same Line

Type	Each	RATING, AMPERES		Base Size Inches
		110 Volts A.C.	110 Volts D.C.	
ABYT8PO	\$8.80	30	6	4 1/4 x 3
ABTX1PO	5.50	6	1	2 3/4 x 1 7/8

#### Used Where Control Circuit and Load are Fed by Different Lines

ADBT8O	\$9.90	15	2	4 1/4 x 3
ADBX1O	6.05	6	1	2 3/4 x 1 7/8

### Type CXB51 Sensitive Relays

Wide application is possible in electronic tube circuits for radio, light sensitive cells and other uses where input to primary circuit of relay is small. Both fixed contacts and tension spring of relay are adjustable. Contacts open and close with a definite snap action.

Contacts: S.P., D.T., S.B. rated at 110 volts a.c., 2 amperes; d.c., 1/4 ampere. Base size, 2 3/8 x 2 1/4 inches. Can be supplied with coils consuming as little as 1/100 watts d.c., or 2/10 watts a.c.

Type CXB51, D.C. Coil..... each **\$5.50**  
 Type CXB51, A.C. Coil... each **7.70**  
 Hinged Cover K.O. Box... each **1.65**

### Mercury Tube Relays

With enclosed contact break. Tilts tube with swinging action; assures smooth positive closure with minimum jar and shock. Mercury to mercury make and break.

Base size, 5x4 inches.

Type CXH1027, S.P., Front Contact..... each **\$11.00**

Type CXA1028, S.P., Back Contact..... each **11.00**

Also with 2 or more tubes; prices upon application.

### Relay Sets for Low-Voltage Thermostat Control

Type RS73

Complete with relay and transformer mounted in sheet metal housing with external binding posts for thermostat connections.

#### Used with 2-Wire Snap Action Thermostat

Type	Each	110 VOLT A.C. RATING H.P. Amps.
RSA70	\$8.25	1/4 6
RS71	11.00	1 30

#### Used with 3-Wire H-L-C Thermostat

RSA72B	\$9.35	1/4 6
RS73	13.20	1 15

### Telephone Auxiliary Signalling Relays

**Type RS2.**—Relay and condenser in H3 sheet metal, hinged cover housing. Signal remains on as long as circuit is closed.

Type RS2..... each **\$11.00**

**Type RSA2.**—Same as Type RS2 except in W6 cast aluminum housing.

Type RSA2..... each **\$17.60**

**Type RS3A.**—Relay, condenser and push button in W6 cast aluminum weatherproof housing. After telephone circuit once energizes relay the signal remains on until relay is released.

Type RS3A..... each **\$23.20**

Type RS3A

**Mercoid Automatic Controls**

Mercoid Controls have a wide application in both the domestic and industrial fields. They are generally employed for the control of motor driven automatic heating or refrigeration equipment, electric space or tank heaters, and for numerous industrial applications.

Equipped throughout with Mercoid sealed mercury contact switches.

The following are brief descriptions of several Mercoid Controls which are standard.

**Sensatherm**

A sensitive air type thermostat for low or high voltage requirements. Used for controlling automatic heating, refrigeration, or air conditioning equipment.

Furnished standard for low voltage to operate with the Mercoid Transformer-Relay. It can directly handle 50 watts or less on 110 or 220 volts without a relay. The standard range is 55° to 85° F. Other ranges are available. Total differential, 1° F. (plus or minus 1/2°).

Sizes, 3 1/16 inches high, 1 1/16 inches wide, and 2 1/4 inches deep.

Gold finish with thermometer.  
 Type H, for Heating.....each \$10.00  
 Type R, for Cooling.....each 10.50

**Type V Transformer-Relay**

A reliable low voltage mercury contact relay, which also acts as a transformer inducing low voltage (24 volts) on the pilot circuit. Its construction does away with all hum and chatter.

Equipped with carefully taped and impregnated heavy duty coils.

Has a steel cabinet.  
 Rating, 10 amperes, 110 or 220 volts.

Type V, 60-Cycle.....each \$15.00  
 Type V, 50-Cycle.....extra 1.00  
 Type V, 25-Cycle.....extra 2.00  
 Type V, D.C.....extra 2.50

**No. 855 Thermostat**

Designed for direct control of motor operated automatic heating or refrigeration equipment, unit heaters or electric heaters, and various other industrial applications.

It is actuated by means of a sensitive bellows. The mercury enclosed contact switch is not affected by dust, dirt, or corrosive gases.

Single-pole, single throw. 10 Amps. 4 Amps.

No. 855, for Heating, 56°-80°, 38°-60°...each \$22.50 \$21.00  
 No. 855, for Unit Heaters, 45°-72°.....each 22.50 21.00  
 No. 855, for Refrigeration.....each 25.00 23.00

For thermometer on cover, add \$1.50 to above lists.

**Dual Sensatherm**

Type HH Dual Sensatherm is generally used to lower the temperature at night and restore it to normal in the morning.

A clock is available for this instrument with a 7-day dial for setting daily programs a week in advance.

Also used with air conditioning equipment.

Type HH, Dual Heating.....each \$17.50

Type HR can be furnished as a summer-winter thermostat. The individual adjustments permit close regulation at any desired temperature on both the heating and cooling units.

Type HR, Dual Heating and Cooling.....each \$18.00

**Mercoid Automatic Controls**

**No. 71 Pressure and Low Water Control**

A combination control which prevents the hazard of firing into dry boilers and also guards against building up excessive steam pressure. Pressure setting can be raised or lowered by turning the adjustment screw.

Available in numerous ranges for pressures up to 300 pounds. Standard range is 1 to 10 pounds, minimum differential, 3 pounds.

Furnished single-pole, 150 amperes, fully automatic to open circuit on a rising pressure or dropping float.

No. 71, Single-Pole, 10 Amperes.....each \$36.00  
 No. 71, Single-Pole, 4 Amperes.....each 34.50

Also available in lower or higher pressure ranges and with double-pole or 2-circuit switches.

**No. 72 Low Water Control**

Used as a safety limiting control to prevent automatic heating equipment from firing into a dry boiler. Also used with electrically operated boiler feed pumps to maintain the water level in the boiler.

When ordering, specify maximum pressure, specific gravity and kind of liquid controlled, electrical capacity, and whether circuit is to open or close when float rise. Furnished single-pole single throw.

10 Amps. 4 Amps.  
 No. 72, for Pressures to 30 Pounds.....each \$30.00

No. 72, for Pressures to 150 Pounds.....each 34.00 \$32.50  
 No. 72, for 150 to 300 Pounds Pressure...each 54.00 52.50

For single-pole double throw or double-pole single throw add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

**No. 31 Pressure Control**

A positive safety limiting device used on steam boilers. It is actuated by a Bourdon tube of great strength and elasticity. Standard range 1 to 10 pounds, differential 3 pounds. Can be furnished with steel Bourdon tube for unusual applications, or for pressures up to 3,000 pounds. Standard controls furnished for fully automatic operation, but can be supplied semi-automatic.

Unless otherwise specified, instrument will be shipped single-pole, 10-ampere rating to cut-out on rising pressure. When ordering special control, specify cut-in and cut-out points required, kind of substance controlled, and the maximum pressure to which the control will be subjected.

No. 31, Single-Pole Single Throw, 10 Amperes...each \$16.00  
 No. 31, Single-Pole Single Throw, 4 Amperes...each 14.50

Also available in lower or higher pressure ranges and with double-pole or 2-circuit switches.

**No. 858 Pressure and Vacuum Control**

Recommended for low pressure, steam, or vapor-vacuum boilers in connection with stokers, gas or oil burners, where close regulation is required. Also used for controlling refrigeration, brine pumps, air compressors, liquid by head pressure, etc.

Has an adjustable operating range from 10 inches vacuum to 15 pounds pressure. Outside adjustments provided for setting both range and differential. Controls available for higher range on close operating pressure.

Unless otherwise specified, Model A-3 is furnished with 10-ampere Mercoid Switch to open circuit on rising pressure.

No. 858, Single-Pole Single Throw, 10 Amperes...each \$22.00  
 No. 858, Single-Pole Single Throw, 4 Amperes...each 20.50

Available single-pole double throw in 4-ampere type only at \$2.50 addition to list.

**Mercoid Limit Controls**  
No. 848 A & B Controls

Designed to automatically open and close an electric circuit with a change in pressure or vacuum on steam, air, gas, water and other liquids that will not attack brass. Used for boiler control with automatic heating equipment also for pressure control on refrigerants other than ammonia.

Particularly adapted to conditions that require close differential. Model B-6 provides an unusual combination of long range, high pressure and yet close control at any point in the range.

Single-pole, single throw.

	10 Amps.	4 Amps.
Model A-1, for Press. from 1-15 Lbs. . . . .	each \$29.00	\$27.50
Model B-1, for Press. from 10-60 Lbs. . . . .	each 30.00	28.50
Model B-4, for Press. from 25-100 Lbs. . . . .	each 35.00	33.50
Model B-6, for Press. from 0-200 or 50-250 Lbs. . . . .	ea. 40.00	38.50

Available in other ranges for either vacuum or pressure.

**No. 35 Risertherm**

Designed for temperature control by surface contact on risers of hot water systems or on hot water tanks. Widely used with automatic heating equipment. Easily mounted on either vertical or horizontal pipe or tank.

Standard range is from 110° to 220° F. with an approximate operating differential from 6° to 25° F., depending upon the size of pipe and the operating conditions of the installation.

No. 34 is identical with No. 35 except that the Mercoid Switch is in reverse position and the range is from 140° to 230° F. It is used in connection with a thermostat for dual control of unit heaters to prevent operation of the fan until the coils are heated.

Single-pole, single throw.

	10 Amps.	4 Amps.
No. 35, 110°-200° for Heating. . . . .	each \$16.00	\$14.50
No. 34, 140°-230° for Unit Heaters. . . . .	each 17.00	15.50

**No. 36 Boiler Control**

Immersion type controls have proven to be the correct type of limiting device for control of automatic heating equipment on hot water boiler installations.

There is no lag in the operation of these controls. Back angle type is also available.

Range No. 1, 105° to 160°, differential approximately 20°. Range No. 2, 140° to 214°, differential approximately 20°.

Range No. 3, 200° to 226°, differential approximately 13°.

Single-pole, single throw.

	10 Amps.	4 Amps.
No. 36, Ranges Nos. 1 and 2. . . . .	each \$18.00	\$16.50
No. 37, Back Angle Type, Ranges 1 and 2. . . . .	20.00	18.50
No. 37, Back Angle Type, Range No. 3. . . . .	each 22.00	20.50

For single-pole double throw or double-pole single throw add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

**Type G-2 Immersion Boiler Control**

Designed for close regulation of electric equipment from slight changes of temperature in any liquids such as water, steam, or oil. Not injurious to brass. Recommended for control of domestic hot water storage tanks. Double adjustments provided for setting both range and differential.

Type G-1 has straight bottom connection.

Unless otherwise specified, instruments furnished single-pole, 10-ampere rating, to cut-out on rising temperature.

Standard range, 110° to 220°. Other ranges, 15° to 110°, 30° to 135°, 70° to 180°, and 155° to 245°.

Single-pole single throw.

	10 Amps.	4 Amps.
No. G-1, All Ranges. . . . .	each \$32.00	\$30.50
No. G-2, All Ranges. . . . .	each 34.00	32.50

For single-pole double throw or double-pole single throw, add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

**Mercoid Limit Controls**

**Warm Air Furnace Control**

No. M-51 is used to protect warm air furnaces from overheating where automatic heating equipment is used. No. M-53 is to control fans or blowers to prevent operation unless the furnace is warm enough to deliver heat.

These controls are operated by a bi-metal coil projecting within the furnace hood. Adjustable mounting flange and a graduated temperature dial is provided.

Also furnished with long bi-metal stems for bake-ovens and industrial applications where close regulation is desired.

Single-pole single throw.

	10 Amps.	4 Amps.
No. M-51, Limit Control, 50°-650° F. . . . .	each \$16.00	\$14.50
No. M-53, Fan Control, 50°-650° F. . . . .	each 16.00	14.50
No. M-55, Temperature Control, 40°-280° F. . . . .	18.00	16.50

For single-pole double throw or double-pole single throw, add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

**Type M-61 Stoker Control**

This control is generally used to fire the stoker intermittently during the period the room thermostat is in the off position, but may be used to limit the maximum temperature, or stop the stoker if the fire dies out.

The graduated dial clearly indicates the stack temperature. A simple double adjustment is provided for setting both the cut-in and cut-out temperatures.

Available with stainless steel well to protect the bi-metal operating coil.

Single-pole single throw for 50°-650°. Furnished with mounting flange and steel well, 10-ampere rating unless otherwise specified.

	10 Amps.	4 Amps.
No. M-61, with Plain Flange, no Well. . . . .	each \$16.00	\$14.50
No. M-61, Improved Flange, Steel Well. . . . .	each 20.00	18.50

**No. 46 Lever Arm Control**

Has numerous applications where it is desired to mechanically open and close electric circuits.

Standard control has a brass arm extending 4 1/2 inches to right for making mechanical connections. Can be furnished with arm extending to left and with longer or shorter arms when so specified. Furnished also for top or bottom mounting.

A 3-position High-Low indicator lever arm control as well as float operated control is also available.

Single-pole single throw.

	10 Amps.	4 Amps.
No. 46, Snap Action Lever Type. . . . .	each \$10.00	\$8.50

For single-pole double throw or double-pole single throw, add \$4.00 to 10-ampere list and \$2.50 to 4-ampere list.

**No. 40 Float Control**

Designed for maintaining fluid levels, or automatically controlling the operation of sump pumps or cellar drainers.

Suitable for any liquid that will not deteriorate brass or solder.

Furnished standard with 4-foot rod and 2 floats, requiring 1 1/2-inch travel to operate, however, adjustable stops on rod permit wider operation.

Where longer rod is required the proper number of floats and counterweights necessary for operation can be furnished at extra charge.

Single pole, single throw.

	10 Amps.	4 Amps.
--	----------	---------

No. 40, Arm and Float Type. . . . .	each \$22.00	20.50
-------------------------------------	--------------	-------

Other lever arm and float controls available.

Glass plug fuses will be packed in display cartons of 5 when so specified.

**Jefferson Plug Fuses**

The Jefferson Plug Fuse is made with a porcelain Safety Insulator Top, porcelain being one of the best insulators. Thus, user may replace the fuse with perfect safety.

The top of the Jefferson Plug Fuse has a cutout which is filled with clear mica and the specially formed fuse element makes it possible to see at a glance whether the fuse is blown.

## Buss Clear Window Plug Fuses

Phantom View

Entire strip can be seen through extra large window, against pure white background, indicating when a Buss Fuse has blown.

Solid one-piece body, sealed gas tight. Prevents danger of fire and property damage.

Buss Fuses always make good contact in the cutout. Excessive heating and needless blowing of fuses are avoided.

No. ....	*810	815	820	825	830
Amperes.....	10	15	20	25	30
Each.....	\$.07	.07	.07	.07	.07

Standard package 100. Weight, 65 lbs. per 100.

\*Except for instrument protection, Fusetrons should be used instead of small size fuses, as they give true and complete protection while their remarkable time-lag prevents useless blows from starting currents, etc.

Buss Fuses are packed five in a handy box that provides extra fuses when needed. Information printed on box tells user what to do when a fuse blows.

Special merchandising stand furnished free with order for 200 fuses.

Complete information on application.

## Buss Fusetrons

A Fusetron is a thermal cutout to which a fuse is added. Protects motor as well as circuit wiring.

The Fusetron is a simple, inexpensive device that will give complete electrical protection. It will actually protect small motors against overload and at the same time give protection against short circuits.

Overloads on the motor as low as 25 per cent, if continued, will cause the thermal cutout in the Fusetron to open the circuit.

Will not blow on starting currents because the fuse element used is large enough to carry these currents.

Fusetrons are made to standard fuse dimensions, just pull out the fuses and put in Fusetrons.

### Size to Use

See name plate of motor or device for amperes. Under ordinary conditions the ampere rating of the Fusetron should be the same or the nearest higher rating. On electric refrigerators the size must be at least 20 per cent greater than the ampere rating of the motor.

### 125 Volts

Fits standard plug fuse blocks.

This Fusetron is 1/8 inch higher than Buss plug fuses.

Each..... \$.15

No. ....	704	7045	705	7056	7062	708	710

Amp.....	2.5	3.2	4	5	6.25	8	10

Other sizes can be obtained at the same prices. 125 volts from 1/10 to 30 amperes; 250 volts from 1/10 to 15 amperes; 600 volts from 1/10 to 10 amperes.

## Clearsite Non-Renewable Plug Fuses

Clearsite Plug Fuses mount the fuse link under the fuse window thereby giving clear vision of the link. The drop-out type of link is used which lessens the internal operating pressure.

The fuse body is made of heat-resisting molded insulation, black in color.

**Tested Fuse Wire**

Fuse wire is carefully wound on spools having heavy flanges which effectually protect the soft fusible metal from abrasion or other mechanical injury; these are then placed in small cans that are properly labeled and sealed, so that fuse wire may be stored away for an indefinite time without depreciation in quality or appearance.

The 30 and 60-ampere fuse blocks have ferrule type clips.

The 100 and 200-ampere fuse blocks have formed clips.

The 400 and 600-ampere fuse blocks have milled in clips.

Fuse blocks over 600 amperes are made with multiple milled parts for each pole.

## Economy Renewable Cartridge Fuses

250 and 600 Volts

Economy Fuses always operate at rated capacities. The drop out renewal link is quickly and easily replaced and the restoration of a blown Economy Fuse to its original efficiency is the work of a few moments only.

These fuses operate successfully under all conditions of service without filling material of any description. Fuses bear the "Und. Inspected" label in all capacities from 0 to 600 amperes in both 250 and 600 volts.

**Buss Super-Lag Renewable Fuses**

250 and 600 Volts

Buss Super-Lag Fuses have a super-long time-lag. They do not blow as often as old style fuses; will not pop open on every surge or harmless overload.

The fuses give better motor protection, make it possible to fuse nearer to the motor rating, and prevent single phasing.

Few simple parts of the Buss Fuse case make renewal quick and easy. Faulty renewal is impossible.

Heating from poor contact is prevented; charring and burning of cases practically eliminated; needless blowing of fuses is avoided; and fuse bills are materially reduced.

**Buss Super-Lag Renewal Links**

One-Piece Links on All Sizes

All Buss Super-Lag Renewal links are made in one piece. This insures better contact within the fuse than when several links and washers must be bolted together.

Thus needless blows due to heat from poor contact are eliminated and charring of fuse cases is avoided.

Renewal of large size fuses is made very simple, and time and trouble are saved.

Buss Super-Lag Renewal Links are of standard size, interchangeable with all standard makes of renewable fuses.

**Buss One-Time Fuses**  
250 and 600 Volts

Ferrule Contact Fuse—1 to 60 Amperes

Knife Blade Contact—70 to 1000 Amperes

Buss One-Time Fuses are guaranteed, with good contact, to operate perfectly at any overload without charring or burning the fuse case.

Buss One-Time Cartridge Fuses are listed as standard by the Underwriters' Laboratories in all sizes up to and including 600 amperes. Sizes larger than 600 amperes are not tested or listed by the Underwriters and should not be used. (Use two smaller fuses in parallel.)

**Ideal Fuse Pullers**

Designed to eliminate danger of pulling and replacing cartridge fuses by hand and bending of fuse clips through improper removal. Also adapted for adjusting loose cutout clips, handling laboratory test tubes, live electrical parts, etc.

Approved as standard by safety departments of thousands of industrial plants. Made in four handy sizes.

**Midget Size**

For handling small fuses, grid leaks, etc., 1/4 to 1/2 inch in diameter. Has 3 laminations, 5 inches long.  
Each.....\$ .45

**Pocket Size**

A popular size for general use. For fuses 0 to 200 amperes, 250 volts and 1 to 100 amperes, 600 volts. Has 5 laminations, 7 1/2 inches long.  
Each.....\$ 1.25

**Giant Size**

For fuses 100 to 600 amperes, 250 volts and 60 to 400 amperes, 600 volts. Has 7 laminations, 12 inches long.  
Each.....\$ 3.75

**Jumbo Size**

A large powerful tool for handling fuses 200 to 800 amperes, 250 volts and 200 to 600 amperes, 600 volts. Has 9 laminations, 20 inches long.  
Each.....\$ 11.20

**Jefferson Super-Lag Renewable Enclosed Fuses**

Care should be taken to insure clean contact surfaces between the copper blades, renewals and washers. The nut should always be drawn up tight.

**Jefferson Super-Lag Renewable Links**

Care should be taken to insure clean contact surfaces between the copper blades, renewals and washers. The nut should always be drawn up tight.

## Union Renewable Fuses

250 and 600 Volts  
Ferrule Type

3 to 60 Amperes

Only three simple parts, the absence of loose washers, both ends open for inspection and cleaning, and the link bent at one end which automatically adjusts it to the proper length are features that make the new ferrule type fuse quick and easy to renew.

### Knife Blade Type

70-600 Amperes

An exclusive feature of the knife-blade type fuse is the longitudinal vents which are cut in the fibre casing at both ends just inside the brass ends and which lead to the inside of the casing. When the link blows, the pressure of the volatilizing metal is relieved, and because of the low pressure area at the vents, the molten fuse metal is not forced into the cap and the stud threads.

A rugged fibre bar which will not warp holds the knife-blade assembly in perfect alignment and assures correct assembly of the fuse. Brass ends are riveted to fibre case.

\*The National Electrical Code does not cover any type of 250-volt enclosed fuse above 600 amp. Fuses of higher capacity are not listed as Standard by the Underwriters' Laboratories but are built to the same strict standards as those so listed.

## Colt-Noark Water-Tight Fuse Boxes

For Potentials Not Exceeding 250 Volts

No. 3670

No. 3190

Each box requires a fitting at each end.

Columbia Type A Surface Cabinets

Columbia Type A Surface Cabinets

For Cut-Outs Service Switches and Panel Boards

For Cut-Outs, Service Switches and Panel Boards

**CONDUIT DRILLING.**—Cabinets are regularly furnished with knockouts for 1/2-inch conduit spaced evenly on all sides. Specify if boxes are wanted without knockouts. For special conduit drilling, a small extra charge is made. Knockouts other than 1/2-inch can be supplied if required.

**SIZES AND THICKNESS OF STEEL.**—Cabinets are listed in standard sizes and gauges (thickness). Cabinets of any size and thickness of steel up to 3/16 inch thick can be made to order.

**GALVANIZED CABINETS.**—Type A Cabinets in any size can be furnished in galvanized steel. Add 15 per cent to list prices.

**WEATHERPROOF CABINETS.**—These cabinets can be made with slant tops, rubber gaskets and solid brass catches, for exposure to the weather. Black japan or galvanized.

**HOLES FOR CUT-OUT, SWITCHES, ETC.**—Furnished at cost of one cent per hole per box. For tapped holes, add two cents per hole per box.

**BOXES WITHOUT COVERS.**—If boxes are required without covers, deduct 20 per cent from prices. A flange will be supplied on front edges for mounting a wood trim or other cover if specified on order.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements, and bear the Underwriters' labels.

## Columbia Type P Flush Cabinets

For Cut-Outs, Service Switches and Panel Boards

These cabinets are provided with removable steel trim and door Plain type without ornamental beads; body is formed from one piece of steel with corners folded in and securely welded.

Finished in black baked japan. Regularly equipped with knob and turn catch.

Cabinets having surface area of over 360 square inches are furnished with vault handle.

Cabinets can be supplied with any style hinges, catch or lock.

Holes for cut-outs, switches, etc., add one cent per hole per box net. For tapped holes, two cents per hole net. Minimum 50 cents net per order.

CONDUIT DRILLING.—Cabinets are regularly furnished with knockouts for 1/2-inch conduit. For special conduit drilling an extra charge will be made. Knockouts other than 1/2-inch are furnished at a net charge of \$1.00 for each variation from 1/2 inch regardless of quantity. This covers any number of knockouts in any number of boxes.

### Panel Board Cabinets

This style cabinet is especially adapted for panel boards. Give size of panel, or specify maker's name and manufacturer's number. Sizes not listed at proportionate prices. This style of cabinet can also be furnished for surface work if so ordered.

The boxes listed below are made of sheet steel of the required thickness to conform with Board of Underwriters' requirements and bear the Underwriters' labels.

All boxes are hinged on right unless otherwise specified. When ordering, specify hinged side first.

**Bull Dog Safety Fusernters**  
 2 or 3-Wire Service, 125-250 Volts  
 30-Ampere Plug Fusible Circuits  
**Flush Mounting**

No. B4F

The luminized fronts fit the finest decorative scheme or make an excellent base coat where other finishes are desired.

Numerous knockouts are provided. Plenty of wiring space makes for easy and economical wiring.

Circuit wire lies directly on screw shell, eliminating two joints per circuit over other types of contacts. Screw shells

are removable and replaceable without removing fronts.

No. BS4F

Equipped with switch plates provided with rectangular knockouts for standard makes of toggle switches as noted below.

Specially adapted for stores and other buildings where the cost factor precludes the use of more expensive panelboards.

For gasoline filling stations the combination including a Saftofuse is much in demand.

The Saftofuse is a fusible switch.

Toggle switches are not included in the price nor furnished with Fusernters.

**Square D Combination Fuse Cabinets**  
 With 60 and 30-Ampere Circuits

3-Wire Mains - 2-Wire, 30-Ampere Solid Neutral Branches  
 3-Wire, 60-Ampere Solid Neutral Branch

The 60-ampere fuses are attached to a bakelite cover so that when the cover or holder is removed, the fuses are disconnected and come out with the holder. Contact jaws are inaccessible as they are reversed below the surface, making them dead front.

Cabinets for flush mounting are aluminum; for surface mounting, black.

Standard package, 1. Cabinets are packed 5 to a carton.

Above panels equipped with lugs only in the mains.

### Nos. NTP3 and NTC3 Standard Type

**Mains:** 125-250 Volts, 3-Wire  
**Branches:** 30-Ampere, Single Pole Tumbler Switches  
Plug or Cartridge Fuses  
Main Lugs Only—Solid Neutral

Single door construction.

Standard type panel dimensions: 19 inches wide, 4½ inches deep, and 4-inch gutters.

NTP-304-L	NTC-304-L	\$34.00	4	30
NTP-308-L	NTC-308-L	40.00	8	60
NTP-312-L	NTC-312-L	50.00	12	60
NTP-316-L	NTC-316-L	74.00	16	100
NTP-320-L	NTC-320-L	84.00	20	100
NTP-324-L	NTC-324-L	94.00	24	100
NTP-328-L	NTC-328-L	104.00	28	100
NTP-332-L	NTC-332-L	114.00	32	100
NTP-336-L	NTC-336-L	140.00	36	200
NTP-340-L	NTC-340-L	150.00	40	200

When ordering always specify whether for flush or surface mounting.

## Square D Nofuze Lighting Panels

Single Pole—Solid Neutral  
Main Lugs Only

Galvanized boxes. Green duco trims.  
Specify flush or surface trim. Flush trim has ¼-inch extension all round.  
All exterior parts are chromium plated.

### No. NA1B-3

\*Prices are based on 15-ampere breakers. The 20 and 25-ampere breakers can be supplied at the same price, except increased main busbar capacity may be supplied, if required, at a small additional cost. The 35 and 50-ampere breakers can be supplied at \$1.00 extra per circuit, plus increased busbar capacity.

**Square D Saflex Convertible Panels**

For Flush or Surface Mounting

Listed by Underwriters Laboratories, Inc.

**Saflex**  
30, 60, 100, 200, 400, or  
600 Amps., 250 or 575 Volts

**Saflex, Jr.**  
Shallow Type—6 Inches Deep,  
19 Inches Wide  
30, 60 or 100 Amps., 250 Volts

**Square D Nofuze Load Centers**

Single and Double Pole Arrangements

15, 20, 25, 35, and 50-Ampere Circuits

125, 125-250 Volts A.C. and D.C.

Features of Square D Saflex and Saflex, Jr. Panels:  
Complete safety. No live parts can be touched and circuits may be opened safely under maximum loads.  
All poles broken simultaneously. No possibility of single phasing.  
Underwriters approval on switch for rupturing full load.  
Unit switch can be locked in "on" and "off" positions.  
Visible indication of "on" and "off" position of switch blades.

Adequate provision for fuse ventilation.  
Oversize wiring gutters.  
Current is broken by compact and separate switch element mounted between bus and fuse.  
Units are of full 2 and 3-pole construction, requiring a minimum number of circuit parts to be mounted.  
Light weight switch blade assembly is only part carried on steel unit door; fuses mounted on fixed base.  
Saflex units are constructed to take 250-volt and 600-volt N. E. C. fuses in sizes from 30-ampere to 600-ampere. Switches are rated 230-volt and 575-volt a.c. and 250-volt d.c. Saflex, Jr. units are constructed for 30, 60, and 100-ampere, 250 volts only.

All units are readily removable and the various sizes are interchangeable within the same cabinets and upon the same bases.

Fuse jaws and clips are interchangeable within each unit without dismantling the unit.  
Switch contacts are of the high pressure type.

Provision is made for testing fuses.  
Cabinets may be supplied without interior or with complete interior assembly or with busses only, permitting the installation of interiors as required at a future date.

Interiors complete with busses can be readily mounted upon the mounting studs in the cabinet.

Metal blanks are supplied to cover busses for future circuit requirements.

Unit bases are made of ebony asbestos.  
Standard finish is black.

Cabinet doors are equipped with chromium plated vault handles with integral Yale lock.

Units are mounted in individual steel boxes for maximum mechanical protection. No molded parts are exposed.

Unit doors are provided with steel guides independent of hinges to ensure alignment.

Prices and Complete Information upon Application

List prices are based on 15, 20, and 25-ampere circuits. For each 35 or 50-ampere single pole circuit substituted for each 15, 20, or 25-ampere single pole circuit, add 65 cents each list.

For each 35 or 50-ampere double pole circuit substituted for a 15, 20, or 25-ampere double pole circuit, add 75 cents each list.

Be sure to specify capacity of each circuit when ordering.

Nofuze Load Centers are shipped unassembled. Breakers, boxes and cover plates are packed individually.

Using Overcurrent Protective Device in 1 Leg Only

**Solid Neutral Bar in Other**  
 Mains: 4-Wire, 3-Phase, 125-250 Volts  
 Branches: 2-Wire, 125 Volts, Single Pole

Branches, single pole or double pole toggle switches and 30-ampere plug or cartridge type fuse connections.

Cabinet dimensions, 20 inches wide, 5½ inches deep. Numeral in Box No. indicates height in inches. Wiring gutters, 4 inches.

Cat. Nos. and prices include panel (less fuses) and cabinets complete.

## Bull Dog Lighting Panelboards

Circuit Breaker Type

No. NA1B312L with Main Lugs

These panels have circuit breakers in the branches in lieu of toggle switches and fuses.

They are adapted for use in buildings where circuits are subject to overloads which would involve much fuse replacement and where frequent switching is done at the panels.

The breakers are quick-make and quick-break with automatic overload trip and inverse-time-limit feature. They cannot be held closed against overload. The trip is automatic and self-indicating with manual reset.

Cat. Nos. listed cover 15-ampere breakers. No increase in price for 20 and 25-ampere breakers. For 35 and 50 amperes, add \$1.00 for single pole and \$2.00 for double pole.

Prices include panel and cabinet complete.

## Benjamin Panelboards and Cabinets

Benjamin Panelboards are easily and economically installed and incorporate features that insure low maintenance and efficiency in operation. A particularly advantageous feature of these panelboards is that all parts are removable from the front. They are compact and well proportioned and thus add to the appearance of any wiring installation.

### Features of Benjamin Panelboards

**BASES.**—Molded composition, strong, fireproof, of high dielectric strength and unaffected by heat, moisture, oil or acids.

**PANEL.**—Indestructible in that molded base units are mounted on steel back. Barriers and switch plates are of steel.

**SWITCHES.**—Single pole, 125-volt, and double pole, 250-volt, tumbler type are 30-ampere heavy duty with quick break and make mechanism.

**SWITCH PLATES.**—Individual for each 4-branch circuit on 1-fuse panels; 2-fuse panels have individual switch plates for each pair of branch circuits.

**CAPACITY.**—All current carrying parts are based on maximum current density of 1000 amperes per square inch cross section.

**MAIN CONNECTIONS.**—Furnished in 30, 60, 100 and 200 amperes capacity in 4 standard types: Main Lugs Only, Fusible Only, Fusible Main Knife Switches and Fusible Main Brush Switches.

### Types of Panelboards

**SAFETY TYPE.**—The cabinet for this panel is of the door-in-door construction, the large door giving access to mains and branch fuses, and small door to branch switches only. Large door is equipped with Yale lock and key and small door with latch only.

This type of panel is recommended for installations where branch circuit switches are manipulated by inexperienced persons and where it is desired to keep fuses under lock and key.

**PROTECTIVE TYPE.**—This type panel has a dead front protective shield covering the face of the panel which prevents accidental contact with any live part while changing fuses or operating switches. The cabinets have a single door

with a combined spring latch and knob and a Yale lock.

Cabinets for panels having Fusible Main Knife switch have 2 doors: 1 door for the knife switch and the other for the branch fuses.

Panels with Fusible Mains have a small door in the protective shield, giving access to the main fuses.

**OPEN TYPE.**—This type panel is identical to the Safety Type except that it has a single door which gives access to all the fuses and switches on the face of the panel. This panel is recommended for installations where the manipulation of switches and the renewal of fuses are attended to by authorized persons. Equipped with combined Yale lock, latch and knob.

#### 1-Fuse Panels

These Panels are polarity type with a solid neutral bar to which the grounded conductors of the branch circuits are attached.

Panels and cabinets can be furnished in the types listed below:

##### Safety Type

**TYPE NSPT.**—Branches, 30-ampere, 125-volt single pole tumbler switches, for plug fuses; mains, 125-250-volt.

##### Protective Type

**TYPE NLPT.**—Branches, 30-ampere, 125-volt single pole tumbler switches, for plug fuses; mains, 125-250-volt.

#### 2-Fuse Panels

##### Safety Type

These panels are arranged for 2 fuses for each 2-wire branch circuit.

Panels and cabinets can be furnished in the types listed below.

**TYPE SPT, 2-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains 125-volt.

**TYPE SPT, 3-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains, 125-250-volt.

##### Protective Type

**TYPE LPT, 2-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for plug fuses; mains, 125-volt.

**TYPE LPT, 3-2-WIRE.**—Branches, 30-ampere, 250-volt double pole switches, for plug fuses; mains, 125-250-volt.

##### Open Type

**TYPE OCT, 2-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches for cartridge fuses; mains, 125-volt.

**TYPE OCT, 3-2-WIRE.**—Branches, 30-ampere, 250-volt double pole tumbler switches, for cartridge fuses; mains, 125-250-volt.

**TYPE OPK, 2-2-WIRE.**—Branches, 30-ampere, knife switch, for plug fuses; mains, 125-volt.

**TYPE OPK, 3-2-WIRE.**—Branches, 30-ampere, knife switch, for plug fuses; mains, 125-250-volt.

Type SPT

## Benjamin Little Sentry Panel Boards with Cabinets

For Residences, Apartment Buildings, Small Stores, Schools, Small Factories and Similar Places Having from 4 to 12 Branch Circuits

Little Sentry Panels are ready for installations. Require no preliminary labor or adjustment. Trim, panel and fuse receptacles can all be removed from the front. Wiring terminal of fuse receptacle is one piece and is held in place by two small bolts. Contact is made with the entire base of the fuse shell.

Safety is assured the user because a protective shield covers all live metal parts.

The following features make easy installation of Little Sentry Panels:

Panel is easily removed by a quarter turn of 4 screws.

Each neutral branch connection is opposite fuse for that circuit simplifying the tracing of circuits.

Fuse receptacles easily removed from panel without disturbing wiring.

Blown fuse can easily be located. The slot in the receptacle base makes it simple and safe to use a test lamp.

### Type NP Little Sentry Panels with Cabinets

For 3-Wire Service

Mains: 125-250-Volt

1-Fuse Branches

Branches: Arranged for Plug Fuses Only

Price includes neutral bar, main lug, lug for each branch circuit and portion of back plate, box and trim.

Sub-Feed, Through Feed or Double Lugs

4 wire, 3 phase 120-208 volts solid neutral service. Cap. Main Lug.....	200A	400A	600A	800A	1200A
Add. for Panel Com. with Cabinet.....	\$12.00	24.00	36.00	48.00	60.00

Price includes lugs and portion of bus bars, back plate, box and trim that may be necessary.

**Benjamin Panel Boards and Cabinets**

**Standard Galvanized Steel Boxes**

**CONSTRUCTION.**—One piece of code gauge galvanized steel, over-lapped and riveted at corners with 3/4-inch flange turned inwardly all around outside edges. This flange adds materially to the rigidity of the construction.

**GUTTER SPACE.**—All boxes for standard panel boards have 4-inch gutter space.

**DEPTH.**—Standard steel boxes are made deep enough to allow 1/8-inch clear space back of panel boards and not less than 1/2-inch clear space between door and current carrying parts on panel boards.

**DRILLING AND KNOCKOUTS.**—Boxes will be drilled for conduits without extra charge provided complete drilling information accompanies order. This information must be available before work can be commenced. On application, data sheets for laying out box drilling dimensions will be furnished.

A sufficient number of 1/2 and 3/4-inch knockouts are provided in top of cabinet to accommodate the total number of branch circuits supplied by the panel. One-half this number are provided in bottom of cabinet.

**FLUSH OR SURFACE ADAPTATION.**—All standard steel boxes are made with flanges turned inwardly and can, therefore, be used for either flush or surface installation.

## FA Panelboard and Cabinet Units

### Explanation of Descriptive Catalogue Numbers

These catalogue listings were devised for your convenience and to enable us to give you better and faster service. Please note them carefully and use them in ordering.

With this method of descriptive listing your order is fully understood in all details through the various

numerals and letters comprising each catalogue number. Should a clerical error be made when sending us the order the mistake will at once be noticed and inquiry made. This saves expensive shipments and a great deal of valuable time that occasionally is needlessly wasted when numerals and not descriptive listings are used.

FA Panelboard Boxes

Standard Knockout Arrangement

Boxes will always be shipped with standard knockouts unless special drilling template for each box is sent with order.

For quick delivery, order boxes with standard knockouts. These knockouts will fill the majority of

your requirements as satisfactorily as special drillings. Avoid delay in your own office and save the expense of making out special templates by using standard knockouts.

All box dimensions are inside measurements.

Types LNT1P, NA1B, A2B and NA2B Panelboard Boxes made of No. 12 gauge steel or less, 19 in. wide, 60 in. maximum height, 4 3/4 in. deep

Types LNT1P, NA1B, A2B and NA2B Panelboard Boxes made of No. 10 gauge steel, 19 in. wide, any height, 4 3/4 in. deep

Types N1P, 2P, T2P and NT1C Panelboard Boxes made of No. 12 gauge steel or less, 23 1/2 in. wide, 60 in. maximum height, 4 3/4 in. deep

Types R3G and NR3G Panelboard Boxes made of No. 12 gauge steel or less, 12 in. wide, 60 in. maximum height, 4 in. deep

Types N1P, 2P, T2P and NT1C Panelboard Boxes made of No. 10 gauge steel, 23 1/2 in. wide, any height, 4 3/4 in. deep

## FA Safety Type NT1C-4D Panelboards and Cabinets

Switch and Fuse Panelboards, One Fuse Type, Door-in-Door Construction

**PANELBOARD**— Made of sections of moulded material.

**BRANCHES**— 30 Amp., S. P. Tumbler Switches with Cartridge Type Fuse Connections for 120 Volt, 2 Wire, Solid Neutral Circuits.

**MAINS**— 3 Phase, 4 Wire; 120-208 Volt, Solid Neutral.

**BOX**— Code Thickness Galvanized Steel, 4 $\frac{3}{4}$ " Deep, 4" Gutters.

**FRONT**— Code Thickness Furniture Steel. Rust-proof and Black Finish. Flush Mounting unless Surface is ordered.

\*Prices based on 15-ampere breakers. No increase for 20 and 25-ampere breakers. For 35 and 50-ampere breakers, add \$2.00 for double-pole. Add increased mains, if required. †Panels with cartridge fuses instead of plug fuses can be

furnished at no additional charge. For Cat. No. substitute TC, NRTC, or RTC for TP, NRTTP, or RTP. Cat. Nos. and prices include panel (less fuses), barriers and code gauge steel cabinets.

*75	.20	A-21	5 <sup>5</sup> / <sub>16</sub>	60
*100	.25	A-23	6 <sup>1</sup> / <sub>16</sub>	60

\*Mazda C (gas filled) lamps. Should not be generally used out of doors unless protected from rain or snow.

### Flametint, Ivory and Old Rose—Inside Tinted 110, 115 and 120 Volts Medium Screw Base

Watts	Each	Bulb	Over All Length In.	Standard Package
25	\$.25	A-19	3 <sup>15</sup> / <sub>16</sub>	120
40	.25	A-21	4 <sup>7</sup> / <sub>16</sub>	120

### Country Home Service Inside Frosted

Orders should specify 28-32 volts and country home lighting to distinguish from train lighting lamps. The prices apply only to lamps which are designed for an average voltage, as determined by the manufacturer, suitable for operation on 28-32 volt circuits, and do not apply to lamps ordered for individual voltages within the range.

### 28-32 Volts Medium Screw Base

Watts	Each	Bulb	Over All Length In.	Standard Package
15	\$.25	A-17	3 <sup>5</sup> / <sub>8</sub>	120
25	.25	A-19	3 <sup>15</sup> / <sub>16</sub>	120

**G-E Mazda Photo Lamps**

**Photoflash Lamps**

Eliminates smoke, ashes and sparks from flashlight photography. No odor. Easy to operate and noiseless. Subjects do not close their eyes, so instantaneous is the flash.

The clear glass bulb contains a quantity of crumpled aluminum foil in an atmosphere of oxygen. A short filament is mounted within the mass of foil and serves to start the flash.

With medium screw base.

A-Bulb		Voltage Range for Operation	Bulb	Diam. Bulb In.	Max. Over All Length In.	Std. Pkg.
No.	Each

\*Flash with two (or more) cells of flashlight or dry battery, or house current.

A-21 Bulb

**Photoflood Lamp**

This lamp offers a new and economical source of diffused light. In appearance it resembles a regular 60-watt lamp used for house lighting. If operated at 115 volts a.c. or d.c. it draws approximately 250 watts, but in proper reflecting equipment, this new lamp is actinically as effective as a 750-watt lamp.

Rated life, 120 minutes at 115 volts. With medium screw base.

**G-E Sunlight Lamps**

S-2 Bulb

Sunlight lamps give the benefits of outdoor midsummer sunlight, indoors any time of the year. Will not operate on ordinary house lighting circuits except when used in special equipment designed to produce correct starting and operating voltage.

Types S-1 and S-2 are accepted by the Council of Physical Therapy of the American Medical Association.

\*Metal cap supplied with lamp.

These lamps will not be consigned and sales or purchases will not apply on agency or purchase contracts for other lamps.

**G-E Mazda CX Lamps**

110, 115 and 120 Volts

A-19 Bulb

Manufactured with a special glass bulb which transmits most of the ultraviolet radiation emitted by filament. Mazda CX lamps are made available for the purpose of providing a source of infrared radiation combined with mild ultraviolet.

Lamps larger than 60 watts should not be burned in key sockets or those having paper or fibre insulation. Such sockets may not withstand heat generated by lamps.

These lamps will not be consigned and sales or purchases will not apply on agency or purchase contracts for other lamps.

60	110, 115, 120	A-21	.55	.45

\*Natural ruby and natural amber lamps are regularly furnished in the light shade. Dark ruby and dark amber lamps used in photographic work will be furnished, only when definitely specified, at the same price.

†Does not include daylight blue or photographic blue.

‡This lamp not to be burned in enclosing globe.

**Extra Charges for Special Features**

**White, All Frosted and White Bowl Lamps**

Clear or Inside Frosted Lamps Each	Add. Charge for White, All Frosted or White Bowl Each	Clear or Inside Frosted Lamps Each	Add. Charge for White, All Frosted or White Bowl Each
Less than \$1.00	\$.05	\$4.00 to \$4.99	\$.25
\$1.00 to 1.99	.10	5.00 to 5.99	.30
2.00 to 2.99	.15	6.00 to 6.99	.35
3.00 to 3.99	.20	7.00 to 7.99	.40

The above prices apply only for the manufacturer's standard spray coatings defined below.

**WHITE.**—All-over coating of heavy density. Standard for all Mazda B lamps and all Mazda C lamps in A-23 and smaller diameter bulbs, except as covered under All Frosted below.

**ALL FROSTED.**—All-over coating of light density. Standard for all Mazda C lamps in S-24<sup>1</sup>/<sub>2</sub> and larger diameter bulbs; for tubular lamps listed under Limited Service; for all lamps in daylight and natural colored bulbs.

**WHITE BOWL.**—Bowl white coating of light, heavy, or extra heavy density used in accordance with the following:

1. Light density for all lamps in daylight or natural colored bulbs;
2. Heavy density for all Mazda B lamps and all Mazda C lamps in S-24<sup>1</sup>/<sub>2</sub> and smaller bulbs, except as in 1;
3. Extra heavy density for all Mazda C lamps in PS-25 and larger bulbs, except as in 1.

**ETCHING.**—Additional charges for etching letters or designs may be obtained upon application. Style of lettering or design should accompany such application.

Orders for large lamps with customer's etching may be filled either short or in excess, within the limits of 5%; except that on orders for less than 40 lamps the shortage or excess may equal but not exceed two lamps.

Etched lamps are not rejectable by the purchaser under the provisions of the standard specifications.

**VOLTAGE.**—Lamps of 105, 125 and 130 volts can be supplied at the same prices as lamps of 110, 115 and 120 volts. The prices for voltages other than 105, 110, 115, 120, 125 and 130 volts may be obtained upon application.

Prices of lamps in the 200 to 260 volt range other than 220, 230, 240, 250 and 260 upon application.

**SPECIAL BASING.**—The prices listed cover only lamps fitted with unskirted bases unless otherwise indicated. The prices of lamps fitted with bases other than listed may be obtained upon application.

**SPECIAL LAMPS.**—Any lamp requiring a change in construction from the standard, such as shape or color of bulb, tipped bulb, number of loops in filament, number of anchors, wattage, voltage, amperage, etc., will take a special price, which may be obtained upon application.

As it is impossible to always produce an exact quantity of any special lamps ordered, or of any lamps to be made tipped, when listed as tipless, or of any lamps to be furnished with natural colored, coated colored or tinted bulbs, all such orders may be filled either short or in excess, within the limits of 10 per cent, except that in orders for 20 lamps or less, the shortage or excess will not exceed two lamps.

## Miniature Mazda Lamps

Base abbreviations: Min.—miniature screw base; S. C.—single contact bayonet candleabra base; D. C.—double contact bayonet candleabra base.

Ten lamps constitute a unit package quantity.

## Neon Glow Lamps

105-125 Volt Service

S-14

G-10

T-4<sup>1</sup>/<sub>2</sub>

This orange-red lamp is used wherever economy or low level illumination is desirable. Will not burn out; after long use bulb gradually blackens. Useful life, 3000 hours.

Contained in bulb is Neon gas of a definite pressure and a pair of metallic electrodes.

Minimum operating voltage below label, 50 volts a.c., 10 volts d.c., except where noted on 1/2-watt G-10 bulb.

Lamps furnished without resistance only when with double contact bayonet base of corresponding size.

On d.c. only one (the negative) electrode glows but gives the same c.p. as do both electrodes on a.c.

Sprayed red or yellow finish, 5 cents extra.

Standard package, 10.

### S-14 Bulb—Clear Finish—Medium Screw Base

## Hamilton Beach Safety Night Lights

Provides a sufficient illumination to fill a room 12x12 feet with a soft moonlight glow making all objects visible. Ideal for nursery, bathroom, hall, basement, sick room, etc. Factories, hospitals, stores and hotels use this light to save turning on high wattage bulb. Uses less than one watt per hour.

Light consists of a transformer that reduces a 110-volt current to 1.9 volts. Transformer is enclosed in ivory Plaskon shell. Bulb is 3.8 volts operating at one-half voltage. Regular flashlight bulbs are used for replacement.

Operates on a.c., 60 cycles. Will not operate on d.c. Length over all including prongs, about 3 1/2 inches.

Packed 6 in a display carton.

Approximate shipping weight of six, 2 pounds.

Each ..... \$1.00

**Leland Flashers**

It is good advertising to flash a sign and real economy, as the current cost for the lamps and tubes is reduced from 30 to 50 per cent and their life nearly doubled.

All Leland Flashers are furnished with mercury-to-mercury switches enclosed in oxygen-free containers.

**Class 131 Unit Type Junior Flashers**  
On-and-Off, Alternating or Color Changing

Operated by means of an intermittent induction disc motor. Motor circuit is led through mercury switch so that when flasher, in operation, breaks the sign circuit it also breaks the flasher-motor circuit. The mechanism then returns by gravity action to its starting position from where the cycle is repeated.

The flasher coil draws only 3 or 4 watts and is on only half of the time—a 50 per cent saving in the cost of current.

The flasher parts are corrosion-proof; steel parts are cadmium-plated. Motor bearings are of the ball thrust type. Oiling is virtually unnecessary.

Can be mounted inside of advertising machines, small signs or displays. Mounting plate is 4 3/8 inches wide and 3 3/4 inches high. For a.c. only.

With indoor cabinet 6 inches high, 8 inches wide and 3 inches deep. Cabinet for No. 131-122 flasher is 4 inches deep. Outdoor cabinet, galvanized, \$8.00 extra.

Cat. No.	Each	Circuit Capacity Amperes	No. of Circuits
131-121	\$13.00	12	1
131-12A	15.00	12	2-Alt.
131-122	18.00	12	2-Sim.
131-241	16.00	24	1

Shipping weight, 8 pounds. Price includes indoor cabinet; without cabinet, deduct \$1.50.

Current specifications: 110 volts, a.c. any cycle. For d.c. specify Class 132 and add \$8.00 to price.

Speed is adjustable between 20 and 40 flashes per minute. On time is quickly adjustable between 1/2 and 2/3 of a cycle. High speed with maximum of 60 flashes per minute, \$2.00 extra; low speed with minimum of 10 flashes per minute, \$6.00 extra.

**Class 101 Unit Type On-and-Off Flashers**

Cat. No.	Each	Circuit Capacity Amperes	No. of Circuits	Total Load Amperes
101-241	\$30.00	24	1	24

Unless otherwise specified furnished for use with 110-volt a.c., 50 or 60-cycle current.

Prices on request for: D.C. 220 volts or 25 cycles; special speeds or cycles; extra circuits.

**Heavy Duty and Combination Flashers**

Heavy duty and combination flashers available to meet any requirement. Prices on application.

**Leland Flashers**

Economy and dependability of operation insured by design and construction. Induction disc motor gives maximum of power with minimum of input—2 circuit On-and-Off flasher averages 10 watts input—200 per cent reserve power; disc shaft runs in ball bearings of a combined radial and thrust type which are practically frictionless. Eccentric cams are oil-lubricated linen-bakelite to make them noiseless, wear-resisting and self-lubricating. Other bearing surfaces are bronze on steel and run at a low speed—a little oil on the various bearing surfaces, once in 6 months, is all that is required to insure continuous operation. Variation in speed is secured, without turning flasher off, by adjusting thumb screw on front.

**Class 103 Unit Type Speed Flashers**

## Noma Straight-Line Festoon Type Christmas Tree Lighting Outfits

No. 100-F

No. 100-M.—An 8-light series outfit with patented add-on connector attached to lead wire to connect other outfits. Berry beads securely fasten lamps to tree branch. With Mazda 15-volt M-22 bell shape lamps.

For average indoor 8 to 10-foot trees.

No. 100-M.....each \$1.15

No. 100-F.—Same as No. 100-M except lamps. With Mazda 15-volt F-6½ new

detector lamps, assorted colors. Burned out lamp glows; replace it and all lamps light up.

No. 100-F.....each \$1.50

## No. 3000 Noma 7-Light Multiple Christmas Tree Lighting Outfits

A straight-line outfit with standard add-on extension connector and adjustable Berry beads (patented).

For indoor and outdoor use; thoroughly weather-proof.

With 120-volt inside-colored Mazda lamps—assorted colors; C-9¼ intermediate base. Sockets and lamps are 18 inches apart, with 4-foot lead.

Being wired in multiple, no burnt-out lamp can affect the other lamps. Sockets are all bakelite.

No. 3000.....each \$2.25

## No. 175 Noma Christmas Tree Holders

Completely wired with an 8-light series Mazda lamp set to illuminate the bottom of the tree, which is usually the darkest part.

This holder is exceptionally well made of rustproof metal; inside basin holds 23 pounds of water as ballast, which will keep the tree moist for days.

Equipped with leader and double duty plug. A 2-way add-on extension connector controls all lights on the tree.

No. 175.....each \$4.00

## Adaptable Lamp Changers

Fits any style incandescent lamp. Furnished with or without steel poles.

**No. 3001 Safety Vapor-Proof Portable Lamp Guards**

For use wherever inflammable materials are used. Steel frame, vapor-proof receptacle. Heavily tinned.  
No. 3001, to Fit 25-Watt Lamps.....each \$5.00  
Will take 50-watt A-19 rough service lamp.

**Cable Rack Portable Lamp Guards**

Key or keyless socket embedded in the handle. Take 50-watt old style Mazda lamps; new style, 15-60 watts...

No. 2000R, with Key Socket.....each \$2.80  
No. 2001R, with Keyless Socket.....each 2.80

**No. 1453 Monitor Portable Lamp Guards**

A low priced guard furnished without socket.

Prevents breakage and helps to reduce danger from hot and broken lamps.

No. 1453, to Fit 40-Watt Lamps.....each \$1.70

**Protex Rubber-Handled Portable Lamps**

No. PGH

Protex Portable Lamps can be used with perfect safety. The handle is of rubber which will withstand well over 10000 volts. Rustproof guard is built for rough service. Rubber socket has lip which fits over butt of lamp to prevent water, etc. from entering.

Can be furnished with either open or closed end guard for all sizes of lamps up to and including 200 watts.

No. P, Protex Handle Only.....each \$1.25  
No. PGH, Protex Handle, Socket and Wire Guard with Hook.....each 2.50  
No. PGHR, Protex Handle, Guard, Hook and Reflector.....each 3.25

**No. VGH Vaprotex Rubber-Handled Portable Lamps**

A vapor-proof, shock-proof lamp for temporary lighting in hazardous locations.

For all sizes of lamps up to and including 100 watts; steel wire or aluminum guard.

No. VGH, 60-Watt Size, with Socket, Vapor-Proof Globe, Steel Wire Guard, Hook, Less Lamp...each \$9.00

**R & S Non-Watertight Hand Portables**

Extra strong, galvanized steel, with hardwood handle and No. 180 weatherproof keyless socket.

No. 473, 60-Watt.....each \$4.80

**No. 422 R & S Watertight Hand Portables**

Cast brass body, flat brass wire guard, hardwood handle with stuffing gland for cable and screw type globe No. 806.

Price, No. 422, 60-Watt.....each \$5.25

**No. 519 R & S Watertight Hand Portables**

All cast brass body, round wire guard with cast brass rings, hardwood handle, stuffing gland for cable and screw type globe No. 806.

No. 519, 60-Watt.....each \$7.20

**No. 445 R & S Bunghole Lamps**

Made entirely of brass and fitted with special 16 c.p. waterproof lamp and stuffing gland for cable.

Price No.445, with Special Lamp.....each \$12.60  
" " 391, Ex. Lamp, 110 Volt....." 1.60

## Graybar Direct Lighting Globes

These globes are shaped to give the maximum results which can be obtained with modern diffusing glass. They have a high efficiency, being low in brightness and without shadows or bright spots. They are of uniform quality and weight. The bowls are free of streaks, blisters, checks or other imperfections. Due to the smooth surface of opal glass, dust and dirt do not settle upon them.

are made in the standard sizes to accommodate various size lamps generally used in commercial lighting. They are interchangeable with the many styles and types of Graybar fixtures, all of which insure the correct lighting center to produce the best distribution.

They are available in either homogeneous opal diffusing or in the popular cased glass which consists of a layer of crystal glass over opal.

Graybar Semi-Indirect and Indirect Lighting Globes

Where semi-indirect or indirect lighting is desired, Graybar has a variety of glassware to offer. Most of these types follow the style of the enclosed semi-indirect lighting globe.

This type of globe is available in three distinct shapes.

The No. 44 series represents a development which makes it adaptable to fixtures already installed and where a totally indirect system is desired to replace a direct or semi-indirect system. The Silvray Lamp (silver processed bottom) is used with the unit.

This globe is constructed in either of two ways. It may consist of a single layer of opal glass of high translucent character or it may be made of crystal glass, heavily

enamel on the bottom with a slightly diffused top.

The No. 33 series of enclosed semi-indirect lighting globes is made of clear crystal glass with the lower half treated with a silicate enamel and the upper half slightly etched on the inside for better diffusion.

The No. 333 series shape is constructed with the lower part consisting of three layers of glass—opal, crystal, and opal, while the upper part consists of a thin layer of opal under the crystal. The No. 77 series is similarly constructed.

The No. 16 is an open type semi-indirect bowl of opal glass adaptable to the 11-R suspension fixture.

## Graybar G-Type Fixtures

The G-Type Fixture was designed for use with the No. 77 or No. 88 series of globes. As the necks on the globes are unnecessary with this fixture, they have been removed.

This combination of globe and fixture offers a highly efficient and pleasing unit. Graceful lines have been attained without hampering the sturdiness of construction.

The G Fixture is made in both the tube suspension and ceiling types. It is constructed of 22-gauge brass and furnished with 4 or 6-inch safety type fitters suitable to suspend all the globes of the No. 77 and 88 series. These globes range from 9 to 16 inches in diameter in the direct and semi-indirect type enclosing globe to accommodate up to 500-watt lamps.

The holder proper consists of three I-shaped lugs attached to the lower flange of the socket cover. They easily slip under the neck opening of the globe and form a neat support without strain of any kind for the globe. Once seated, the globe is locked in place by two locking slides which can be operated simultaneously with one hand by merely sliding them in or out of position. The whole mechanism of this holder is concealed by an accurate fitting, removable cover.

Wired complete with strap, screws, and knurled nuts, ready for installation.

Finish is satin chromium.

## Graybar X-Type Fixtures

X6C-3320

Since the introduction of the Graybar X-Type Fixtures, the purchase of inferior fixtures for economy has become unnecessary. The low price of this fixture has been obtained, without the sacrifice of workmanship or material, by quantity production and improved manufacturing.

Plated statuary bronze is the standard finish. When required, finishes such as English bronze, satin chromium or bronze metal can be furnished.

Made to accommodate all lamps up to and including 300 watts, and are wired complete with strap, screws, and knurled nuts, ready for installation.

## Graybar A-Type Fixtures

A6C-9920

The Graybar A-Type fixture offers a pleasing design with lasting finishes and fine workmanship.

To install glassware, merely slip the glass over the two arms on holder and lower self-aligning ring which makes the unit foolproof and dustproof.

Accommodates lamps up to and including 300 watts. Standard finishes are statuary bronze or pewter. For brass fixtures, statuary bronze, pewter, acid bronze, brush brass or bronze metal finish is supplied.

All fixtures are wired complete with strap, screws, and knurled nuts, ready for installation.

## Graybar Shelcrest Fixtures

M6H-3320

Graybar Shelcrests are a distinct advance in design, material and appearance from competitive commercial fixtures now available. They have many unique features—simple foolproof holder, sectional stem, swivel joint, shallow slip canopy, and maximum insulating qualities.

Shelcrest fixtures are supplied wired with No. 14 stranded asbestos-covered wire, marked for polarity. They are furnished in hanging and ceiling types, accommodating all lamps up to and including 300 watts. When used with Graybar No. 99, 66, 33, or 88 series, plain or decorated globes, Shelcrests are suitable for the finest of commercial interiors.

Made of genuine molded bakelite.

The standard finish of Shelcrest fixtures is Japanese Bronze. The color permeates the entire material and surface scratches, common to fixtures with any other finish, will not show on Shelcrests. The finish will not tarnish or fade.

## Graybar Lincrest Fixtures

L6H-9920

Lincrest Fixtures have screwless holder made of three metal segments actuated by single operating pin, protruding through a safety slot. One easy movement contracts segments on camera shutter principle—automatically centers the globe without strain on glass and locks in position.

Canopy is of No. 22 A. W. G. brass. Has rolled edges, knock-out, and solid brass slip collar securely fastened. Two set screws are in slip collar.

Suspension type has a cast brass hickey, ½ and ¾-inch female thread; stem, ¾-inch heavy brass tubing over iron nipple. Cast brass loops, brass chain, porcelain socket rigidly mounted in correct position. Smooth roomy wire channels. Overall length of suspension fixtures, 26 inches.

Supplied with No. 16 asbestos-covered stranded wire (unattached) with tracer in art silk braid.

Finished in heavy plated statuary bronze, buffed to a high polish and uniform color.

Graybar Stancrest Fixtures

S6H-9920

S6C-9920

Stancrest Fixtures have a screw type globe holder with  $\frac{5}{32}$ -inch brass screws threaded through heavy brass lugs. Screws are beveled to prevent loosening and upset to prevent removal. Four screws are provided for 6-inch fitters and three screws for the 4-inch fitters. Ceiling type is supplied with slotted strap and screws to take slotted barrel nuts.

Canopy is of No. 22 A.W.G. brass, with rolled edges and knockout. Solid brass slip collar, cast brass hickey. Stem is  $\frac{3}{4}$ -inch heavy brass tubing over iron nipple. Cast brass loops, brass chain, porcelain socket, and smooth roomy wire channel.

Supplied with No. 16 asbestos covered stranded wire (un-attached) with tracer in art silk braid.

Finished in heavy plated statuary bronze, buffed to a high polish and uniform color.

## Graybar R-Type Fixtures

The R-Type Fixture was designed to offer a pendant which permitted a choice of various reflecting mediums.

The 11R16 consists of the pendant 11R to which is attached the No. 16 opal glass bowl. This bowl is available in the 16-inch diameter only.

The 11R116 consists of the pendant 11R to which is attached the No. 116 porcelain enameled steel reflector. The inside of this reflector is coated with the best grade reflecting white enamel. The outside is finished in a rich cream color porcelain enamel. The combination presents a totally indirect fixture which is not unlike the appearance of the 11R16 when unlighted.

The 11R17 consists of the 11R pendant to which is attached a specially designed, shallow 20-gauge spun metal pan. The outside is finished in the same satin chromium finish as the pendant itself. A cup reflector designed to properly control the light is also supplied.

The 11R pendant as supplied with this fixture will be shipped with  $\frac{3}{4}$ -inch stem unless  $\frac{1}{2}$ -inch stem is specifically ordered.

## Graybar Domino System of Decorative Lighting

The Domino unit consists of a pointed oblong box composed of nine pieces of flashed opal glass held in a satin chromium frame, die-cast from the same metal alloy that is used in automobile hardware. A simple modernistic design.

Two special twin sockets accommodate lamps of from 25 to 100-watt sizes, the light being directed downward and sideways by a baffle plate of porcelain enamel.

The individual units are interconnectible at ends and sides. The diagram shows four simple patterns which suggest the decorative possibilities of the Domino System.

Length, 31 inches; width, 11 inches; depth,  $6\frac{1}{4}$  inches. Connector,  $2\frac{3}{8}$ -inch diameter, is listed separately.

Complete instructions are included with each unit.

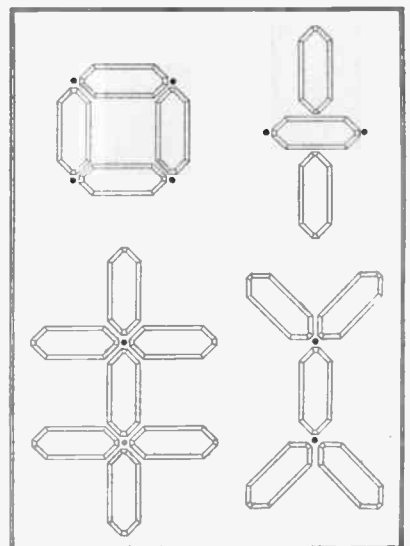

Domino units can also be furnished square as illustrated below.

Oblong Domino Lighting Unit

Square Domino Lighting Unit

Graybar Silvray Fixtures  
Commercial Units

**Puritan**

An attractive metal and glass indirect unit. The luminous louvre and the softly lighted glass disc combine to provide an unusually pleasing effect.

Self-aligning swivel joint concealed in canopy.

Finish, 2-tone aluminum and cadmium pewter.

Silvray Indirect Fixtures are ruggedly constructed of suitable heavy gauge metals of selected quality. They provide many additional advantages over ordinary indirect fixtures.

The Silvray Process marks a radically different method in the design and application of indirect lighting, eliminating the need of auxiliary reflectors. The inherent high efficiency of the Silvray Processed Lamp makes possible indirect illumination on a wattage basis no higher than is required for direct or semi-indirect lighting. Unusually excellent results as to distribution, intensity, and maintained high efficiency, are obtained with cleaning practically eliminated.

**Plymouth**

A totally indirect luminaire of massive proportions

Designed principally for use in large areas with relatively high ceilings, such as large retail establishments.

**Metalux**

A good appearing all-metal unit with modernistic lines. Totally indirect of the opaque bowl type.

Constructed of heavy gauge metals.

Reeded stem suspension. Self-aligning swivel joint.

Finish, cadmium pewter with black relief.

**National**

An indirect unit of unusual design, yet conventional.

Similar in construction and finish to the Puritan Unit.

These Silvray Fixtures actually take no part in the delivery of illumination, as they are equipped with the light-directing Silvray Processed Lamp. The sole function of the fixture is to provide the decorative note which the particular need may require.

Relamping is done from below. It should be remembered that after each processed lamp is replaced it restores the unit to its initial efficiency, regardless of the age of the fixture.

A safe bayonet type fitting makes the bowl instantly removable from the suspension by a simple twist—no screws or complicated assemblies.

**Standish**

A new departure in indirect luminaires, possessing a very small cross section.

Similar in construction and finish to the Puritan Unit.

**Bilite**

Totally indirect unit of the luminous bowl type.

The bowl of art glass is softly and evenly illuminated suggesting a light source.

**Moderne**

An all metal indirect luminaire of simple design.

Totally indirect of the opaque bowl type, possessing many attractive features.

**Old Colony**

A widely accepted all metal unit of good design.

Totally indirect of the opaque bowl type, possessing many attractive features.

## Graybar Silvray Processed Incandescent Lamps

**Indirect**

**Covelite**

**Spraylite**

The Indirect (bowl-silvered) Process is used with Silvray Commercial Fixtures and in Silvray Industrial Reflectors. The output of this type is uniformly 97 per cent clear lamp output.

The Covelite Process may frequently be used in place of auxiliary reflectors. It has the advantage of requiring extremely little space in cove, wall niche, and similar installations. It is used to advantage in indirect fixtures containing lamps in a horizontal position. Covelites for local lighting of lathes, etc. provides high intensity on the work, and completely shields the workers' eyes.

The Spraylite Process is for use in indirect floor lamps, for candelabra fixtures of ornamental indirect design, for foundries and other dirty industrials where exposed reflecting surfaces are practically useless, and for window lighting in existing reflectors.

Watts	Process Charge Each	Watts	Process Charge Each	Watts	Process Charge Each
40	\$.54	100	\$.59	400	\$1.31
50	.54	150	.62	500	1.80
60	.54	200	.90	750	2.80
75	.57	300	1.31	1000	3.75

Prices quoted cover cost of the process only. Lamps are not included. If lamps are not furnished and are desired complete, the list price of the clear lamp must be added to the above charges.

## Graybar Silvray Reflectors Industrial Units

The standard Industrial Reflector is furnished in green porcelain enamel outside and white matte porcelain inside, with detachable husk.

Complete eye-shielding is provided by the silver skin applied to the lamp itself. The design of the special reflector assures evenly distributed and diffused light of proper intensity.

The large area of the reflector creates in effect a modified form of indirect illumination for industrial plants and for locations where ceiling conditions do not permit the use of indirect luminaires.

**Graybar Muralier Fixtures**

Muralier Fixtures provide decorative painting composed specially for an architectural setting. Muralier presents a fixture which, in its luxurious blending of design and color effects marks a new epoch in this lighting age.

A refreshing change in the color scheme may be wrought by the alternate use of red, green, blue, or amber. These colors bring interior illumination in harmony with studied decorative effects.

Standard finish, oxidized aluminum.

Fixtures are completely wired and individually packed.

**Graybar Amolier Fixtures**

Amolier is an all-purpose unit with the meritable features of direct, indirect, and semi-indirect lighting.

The Galax dual-density enclosing globe of homogeneous structure affords maximum upward reflection of diffused light over a wide area and supports the etched aluminum deflector which screens the light source.

The low intensity direct light through the bowl section also lights the face of the deflector with a soft luminous effect. The combination is both pleasing and efficient.

Finish, oxidized aluminum.

No. 2121

This fixture operates on two circuits. One is for direct lighting ultra-violet radiation and uses one Type S-2 Mazda Sunlight Lamp. The other circuit is for the semi-indirect lighting component and uses three 50 to 150-watt Mazda lamps.

Length, 29 1/2 inches. Diameter, 19 1/2 inches. Reflector for S-2 lamp, 12-inch distributing type.

Finished in dull or green and polished aluminum, or in bronze.

No. 2121..... each \$41.35

No. 11-A

This fixture has ball-joint so that rays can be directed to any angle. Louvres surround the lamp.

Length, 12 1/2 inches. Diameter of concentrating type reflector, 11 1/2 in.

Finished in ivory or bronze.  
No. 11-A.....each \$24.75

No. 1742

This unit will find application in factories, basketball and squash courts, gymnasiums, swimming pools, bowling alleys, and similar locations.

Length, 11 1/2 inches. Diameter of wide spread type reflector, 12 inches.

Finished in aluminum.  
No. 1742.....each \$25.00

## Graybar Miller Ultra-Violet Lamps

Lamps operate on 108-118-volt, 60-cycle a.c. (lamps for other voltages and cycles can be supplied). The Udezine tubes make the necessary electrical contact as they go together—no tools or wiring required.

No. 9

Designed with the Udezine principle providing three lamps in one. Has outlet under base for inserting automatic time switch.

Furnished complete with column, one 18 1/2-inch Udezine tube and one 15 1/2-inch tube.

Diameter of reflector, 12 inches.

Finished in ivory with black stripes or in bronze with gold.  
No. 9.....each \$33.50

No. 8

Designed with the Udezine principle providing five lamps in one. Includes outlet under base for inserting automatic time switch.

Furnished complete with two 25 1/2-inch Udezine tubes and one 12 1/2-inch tube.

Diameter of reflector, 12 inches.

Finished in ivory or in bronze.  
No. 8.....each \$31.50

No. 19

Similar in design to Sunlite No. 9. This lamp uses the Type S-1 Sunlight Lamp. It is more powerful in its ultra-violet application. Comes complete with a table model automatic time switch which operates the lamp up to a 30-minute period.

It is constructed with the Udezine principle providing several lamps in one. Casters are on the base for ease in moving from room to room.

Diameter of reflector, 16 inches.

Finished in bronze.  
No. 19.....each \$74.50

No. 29

This Sunlite is designed especially for hospital use for therapeutic purposes. It uses the Type S-1 Mazda Sunlight Lamp which is controlled by an automatic time switch which is part of each lamp. The lamp is of aluminum with rubber tired casters for ease in moving.

Height, 6 1/2 feet extended, 5 feet closed.

Diameter of reflector, 16 inches.

Finished in polished aluminum.  
No. 29.....each \$149.50

No. 9

No. 8

Graybar Miller Nu-Mode Fixtures

Nu-Mode Lighting Fixtures are different in both design and lighting effect, yet they are adaptable to all types of lighting requirements.

The lustre, delicacy, and refinement of these fixtures is due to the application of porcelain on metal. The unusual durability is also due to the same factor.

The units are finished in green, ivory, citrus yellow, blue, or black with trim in choice of real gold plate or chromium.

**No. 1853 Bracket**  
 Length, 5 1/4 inches. Diameter, 3 7/8 inches. Projection, 2 7/8 inches.

Graybar Special Luminaires

No. K10 Service Receptacle and Switch

The Graybar K-Type Luminaire is constructed of 5-ply, white porcelain enamel fused into a heavy armco iron base. The porcelain will neither crack, blister, nor peel off. It can be wiped with a damp cloth to restore its original whiteness and lustre.

The shells are made in one piece and are seamless, thus eliminating crevices as possible dirt collectors.

The diffusing globe (Cat. No. 2519) is made of fine opal homogeneous glass, shaped to give a pleasing appearance when used with the K-Type Holder.

The unit is made in three types—K10 for use where service receptacle and switch are desired; K20, where switch only is required; and K30 for locations where neither switch nor receptacle is necessary.

Fixture Only—No Glass  
 K10..... each \$5.00  
 K20..... each 3.20  
 K30..... each 2.60

**Thermolite Heat and Light Applicators**

**No. T0750 Hand Applicator**

In the Thermolite, light and heat are generated in a reflector so constructed that these soothing agents when applied to the aching parts penetrate the actual tissue, relaxing the congestion and relieving the pain.

The Thermolite is superior to hot water bags, poultices, and other surface heating appliances on account of its penetrative power and because it is many times more convenient.

**No. T0750 Hand Applicator**

The inside hand polished reflector, 9½ inches in diameter, is separated from outer shell by dead air space serving to insulate metal parts against heat.

Furnished complete with 120-volt 200-watt bulb, 9 feet of cord and plug.

Finish, crystalized black and nickel.

110	10	100	9.50

For Brass or nickel finish add \$2.50 each.

## Buss Lights With Metal Shades

Buss Lights provide useful light to read, sew, study, or work by, because the lights have a neck that bends and a shade that tilts, to throw the light just where it is wanted. Can be quickly clamped anywhere by a screw clamp that holds securely on anything square or round up to 2 1/2 inches thick. In addition, they can be hung by a slot in the base on a hook or screw. The light hugs the wall like a permanent fixture. Each Buss Light is equipped with a 9-foot cord.

### Decorated All Metal Models

The tall, slender base and deep shade make this a useful and handsome desk lamp with all the regular Buss clamping, hanging and adjusting features.

Height, 14 inches.

Furnished in two finishes, statuary bronze or pastel green, with gold banding on base and shade.

No. 4262 Statuary Bronze. each \$3.25  
No. 4363 Pastel Green. . . . . each 3.25

### Plain All Metal Models

A utility model for workbench or garage, or for use as a bed lamp or just a handy lamp to carry around.

Height, 12 inches.

Furnished in two finishes, bronze lacquer or pastel green lacquer.

No. 2412 Bronze . . . . . each \$2.35  
No. 2514 Pastel Green . . . . . each 2.35

## Buss Light Demonstrating Stand

Holds three lights as illustrated, showing the clamping, hanging and adjusting features of the Buss light. Made of solid walnut. Takes only 6x9 inches of counter space. Given free on request with a dozen light order to dealers who do not already have a stand.

Diameter 8 5/8 inches; height of reflector only 4 3/8 inches.

Standard package, 12 reflectors.

Weight of standard package, 19 pounds.

No. 844.....each \$3.50

**Spacing of Reflectors**

The number of reflectors to use is influenced by the brightness of neighboring windows, the intensity of the street illumination, goods displayed, and color of the background, as well as the merchant's realization of the advertising and selling value of bright, well lighted windows. The closer reflectors are spaced, the brighter becomes the light in the window and vice-versa. In average installations spacing from center to center of reflectors is from 12 to 24 inches. In general, the following spacing is suggested:

- Large cities, business district.....12 inches
- Large cities, suburban district.....12 inches to 18 inches
- Small cities.....12 inches to 18 inches
- Towns.....15 inches to 24 inches

Standard package 8 reflectors, holders and twin sockets with cord and plug; weight, standard package, 26 pounds.

No. 750.....each \$13.00

## X-Ray Finishing Flanges and Plaster Rings

For Recessing X-Ray Reflectors above Ceiling of Window Finishing Flanges

Recessing the reflectors and wiring above the ceiling gives the window a neat appearance. Light-weight cast flanges finish off the opening, support the reflector in correct position and reinforce plywood ceilings that would otherwise be weakened after openings are cut. Louvers and color-ray can be used the same as when equipment is supported from transom bar or ceiling. On newly plastered ceilings, use plaster rings described below. Flanges are supplied unfinished; may be painted to match window ceiling.

Standard package, 10.

Flange No.	For Reflector	Std. Pkg. Wt. Lbs.	Each
10594	No. 11 Hood Jr. with Louver	12	2.50

10417	Nos. 804 and 810	24	1.60
14004*	Nos. 842 and 848	26	1.50
10517	No. 844 Comet	16	.80
10432*	Nos. 900 and 910	26	1.00
14110*	No. 1010 Blimp	26	1.25

\*Plaster ring available for use with this flange shown below.

## Plaster Rings

Plaster rings, made of light-weight cast iron, are used where reflectors are to be recessed above plaster ceilings. They serve as a ground to plaster to, as a base for securely mounting ceiling finishing flanges, and make the ceiling rigid by reinforcing the lathing around the opening.

Plaster rings are installed by the lathing contractor. Plastering contractor places final coat of

plaster flush with the bottom of the Plaster Ring. Finishing flanges support the reflector in the proper position and finish off the opening in the ceiling. Lugs on sides are placed off-center to allow for close spacing between reflectors.

Plaster rings are also available for hinged rims and general lighting reflectors.

Plaster rings should be ordered early, even before reflector equipment, so that they will be on the job ready for use when lathing is being done.

Standard package, 10.

No.	For Reflector	Finishing Flange No.	Std. Pkg. Wt. Lbs.	Each
14007	No. 510 Queen	11510	24	1.50
14008	No. 900 (Giant or No. 910 Leviathan)	10432	26	1.80
14111	Nos. 842, 848 and 1010	{14004 14110}	26	2.00

**X-Ray Color-Rays**

Color-Ray is an accessory for producing color lighting effects with standard X-Ray Window Reflectors. It consists of a simple metal frame with 4 sheets of colored gelatin (red, blue, green and amber); clips securely on the reflector; very easy to install or to change colors.

Standard package, 10.

For Nos. 440 and 441, also 33-A, 303-A and 338.

**Size 15x15 Inches**  
For Nos. 55, 99 and 10870, also Nos. 88, 808 and 888.

Cat. No.	Color	Each	Cat. No.	Color	Each
10372	Red	\$.15	10472	Red	\$.20
10373	Amber	.15	10473	Amber	.20
10374	Green	.15	10474	Green	.20
10375	Blue	.15	10475	Blue	.20

Standard package; 10 sheets one color or assorted.  
Weight, standard package, approximately, one pound.

**X-Ray Louvers**

For Concealing Light Source from View

Corner or island type windows often require a means of concealing the lamps and light from reflectors along the adjacent side. Louvers can be installed at any time in dimpled X-Ray Reflectors.

Hinged sections of continuous louvers available on order.  
Each louver is a complete unit; finish, gray.  
Standard package, 1.

**Type N Louvers, Fins at Right Angles to Glass**

Cat. No.	For Use with Reflector	Wt. Lbs. Each	Each
12400-N	No. 400 Jack.....	1	\$3.00
12410-N	No. 410 Jill.....	1	3.00
12500-N	No. 500 King.....	1	3.00
12510-N	No. 510 Queen.....	1	3.00
12900-N	No. 900 Giant.....	2	3.75
12910-N	No. 910 Leviathan.....	2	3.75
12110-N	No. 1010 Blimp.....	2	4.00

**Type P Louvers, Fins Parallel to Glass**

12410-P	No. 410 Jill.....	1	\$3.00
12510-P	No. 510 Queen.....	1	3.00
12910-P	No. 910 Leviathan.....	2	3.75
12110-P	No. 1010 Blimp.....	2	4.00

**LightStrip**

LightStrip is a standardized lighting channel and can be made to any length with outlets spaced as required on the job. It is made with CurtiStrip and LightStrip unit assemblies in 3 sizes from 25 to 150 watts capacity.

Each section of LightStrip requires the same total length of No. 1 CurtiStrip also 2 No. 6 end caps and No. 16 couplings to connect short pieces of CurtiStrip or pieces over 10 feet long. It may be a short 1-light section or a longer section with many lights. It is wired on the bench, is easily installed and quickly connected to the lighting circuit like a fixture. It has ample capacity for carrying wires. The same methods of support used for CurtiStrip are used for mounting LightStrip. All CurtiStrip fittings and plug-in receptacles are standard for LightStrip.

Reflectors are bright aluminum finish; other metal parts are cadmium-plated.

**For 25-Watt T-6½ Intermediate Base Tubular Lamps**

**No. 26 Unit Assembly**

No. 26 assembly includes bright aluminum reflector and intermediate base socket unit. Minimum spacing between units 8 inches on centers. Cover spacers are cut 8 inches less than actual center to center spacing between units.

Standard package of 10 sets weighs 4½ pounds.  
No. 26 Assembly.....per set \$1.35

**For 25 to 150-Watt Medium Screw Base Tubular Lamps**

These assemblies include bright aluminum reflector with spring clip to hold lamp and medium screw base tilting socket. Socket tilts out for inserting or removing lamp.

**No. 27 Unit Assembly**

For 25-watt T-10 medium screw base lamps. Minimum spacing between units 9 inches on centers. Cover spacers are 8⅝ inches less than actual center to center spacing.

Standard package of 10 sets weighs 5¾ pounds.  
No. 27 Assembly.....per set \$1.55

**No. 28 Unit Assembly**

For 40-watt T-8, 75 or 150-watt T-10 medium screw base tubular lamps. Minimum spacing between units 15 inches on centers. Cover spacers are cut 14⅜ inches less than actual center to center spacing.

Standard package of 10 sets weighs 7 pounds.  
No. 28 Assembly.....per set \$1.75

**Wattage Required with LightStrip**

The same total wattage will generally be used with LightStrip as would normally be employed.

**PANEL LIGHTING:** For even lighting on flashed opal glass panels, the light source must be kept at proper distance from glass.

For narrow panels distance from front of LightStrip to glass must not be less than panel width.

For wide panels where several rows of LightStrip are used, distance between rows must not exceed distance from front of LightStrip to glass.

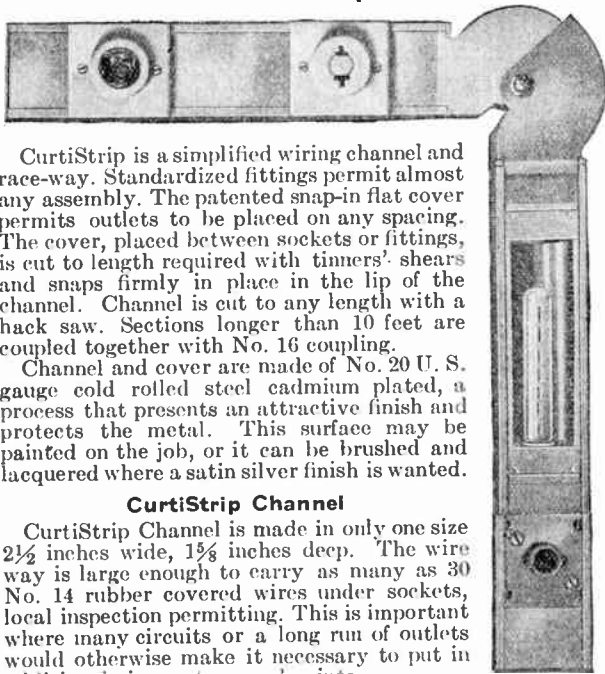

Where No. 27 or 28 are used behind glass panels, allow ½ inch of space between top of CurtiStrip and underside of glass.

For room illumination from panels 4 watts per square foot of floor area will generally give approximately 6 to 8 foot candles.

**COLOR LIGHTING EFFECTS:** Wattage and spacing should be the same as for white lighting.

## CurtiStrip

## CurtiStrip Sockets and Receptacles

CurtiStrip is a simplified wiring channel and race-way. Standardized fittings permit almost any assembly. The patented snap-in flat cover permits outlets to be placed on any spacing. The cover, placed between sockets or fittings, is cut to length required with tinners' shears and snaps firmly in place in the lip of the channel. Channel is cut to any length with a hack saw. Sections longer than 10 feet are coupled together with No. 16 coupling.

Channel and cover are made of No. 20 U. S. gauge cold rolled steel cadmium plated, a process that presents an attractive finish and protects the metal. This surface may be painted on the job, or it can be brushed and lacquered where a satin silver finish is wanted.

### CurtiStrip Channel

CurtiStrip Channel is made in only one size  $2\frac{1}{2}$  inches wide,  $1\frac{5}{8}$  inches deep. The wire way is large enough to carry as many as 30 No. 14 rubber covered wires under sockets, local inspection permitting. This is important where many circuits or a long run of outlets would otherwise make it necessary to put in additional risers at several points.

Illustration below shows one spacer and socket cover removed from a section of CurtiStrip, giving a clear idea of how wires are laid under terminal screws of CurtiStrip sockets and the large wire carrying capacity.

- Standard package is 100 feet of ten 10-foot lengths.
- No. 1 Channel with Cover.....per foot \$ .50  
Weight, standard package, 130 pounds.
  - No. 1-A Channel without Cover.....per foot .45  
Weight, standard package, 103 pounds.
  - No. 1-B Cover Only for No. 1-A Channel.....per foot .10  
Weight, standard package, 40 pounds.

Sockets and receptacles can be spaced as close as  $2\frac{3}{4}$  inches on centers. Their 2-piece construction saves time and simplifies wiring.

Cover spacers are cut  $2\frac{1}{4}$  inches shorter than the center to center measurements between outlets.

Example: Outlets on 18-inch centers have  $15\frac{3}{4}$ -inch spacers.

Wires are not cut but stripped and laid under terminal screws along groove. Porcelain top completely covers bare wire. Not necessary to compound terminals.

### No. 4 Plug-In Porcelain Receptacles

Polarized receptacle—15 amperes 125 volts, 10 amperes 250 volts dead front. Height over all in CurtiStrip  $2\frac{1}{4}$  inches.

Standard package of 10 weighs 7 pounds.

No. 4.....each \$ .65

### No. 5 Standard Porcelain Sockets

Standard porcelain socket with shade holder groove for use with X-Ray holders and for all other standard shade holders used on porcelain sockets.

Height over all in CurtiStrip  $2\frac{1}{6}$  inches.

Standard package of 50 weighs 27 pounds.

No. 5.....each \$ .55

### No. 5-A Special Porcelain Sockets

Special porcelain socket, no shade holder groove, for use with X-Ray holders and cove lighting reflectors.

Height over all in CurtiStrip  $2\frac{1}{6}$  inches.

Standard package of 50 weighs 27 pounds.

No. 5-A.....each \$ .55

### No. 8 Porcelain Angle Sockets

Porcelain angle socket for X-Ray cove lighting reflectors.

Height over all in CurtiStrip  $5\frac{1}{4}$  inches. Top of CurtiStrip to center of socket  $2\frac{3}{4}$  inches.

Standard package of 50 weighs 47 pounds.

No. 8.....each \$1.30

### No. 19 Nipple Attachments

Nipple attachment,  $\frac{3}{8}$ -inch female thread, for supporting reflectors on nipple or for use with X-Ray cove lighting reflectors.

Standard package of 10 weighs 3 pounds.

No. 19.....each \$ .45

### No. 19-BX Attachments

Attachment designed to connect  $\frac{1}{2}$ -inch BX to CurtiStrip or for attaching  $\frac{1}{2}$ -inch socket to CurtiStrip by using chase nipple.

Standard package of 10 weighs 3 pounds.

No. 19-BX.....each \$ .35

Recessed and Cove Lighting

**CurtiStrip Supports**

Standard Finish, Cadmium Plated

Five standard X-Raylets (CurtiStrip fittings) offer complete flexibility for mounting CurtiStrip. To bolt against any flat surface use No. 9 strap. To hang down from beam or ceiling use No. 2 hanger. This is adjustable from 4 to 34 inches over all, where a chain or rigid rod hanger is to be used, the No. 13 bracket should be substituted.

**No. 2 Universal Hangers**

This hanger can be made any length from 4 to 34 inches. Includes 2-piece perforated hanger, one No. 9 strap, 4 angle brackets and 6 bolts.

Standard package of 10 weighs 16 pounds.  
No. 2.....each \$1.05

**No. 9 Straps**

For holding CurtiStrip against any flat surface. Spread over all  $3\frac{5}{16}$  inches. Holes on  $3\frac{3}{16}$ -inch centers. Standard package of 10 weighs 2 pounds.

No. 9.....each \$0.10

**No. 13 Brackets**

Designed to hang CurtiStrip on pipe or chain hanger, pipe or chain not included.

Height top to bottom 3 inches. Standard package of 10 weighs 4 pounds.  
No. 13.....each \$0.30

**No. 15 Hangers**

For mounting CurtiStrip on wall or transom bar. May be used as shown or reversed.

With long leg of bracket at wall the distance from wall to center of CurtiStrip is 5 inches. Height of bracket may be varied from  $12\frac{1}{8}$  to  $8\frac{1}{4}$  inches or less by drilling new holes. With short leg of bracket at wall, distance from wall to center of CurtiStrip may be varied from  $8\frac{1}{4}$  to  $10\frac{1}{8}$  inches, height varying from 5 to 7 inches.

Standard package of 10 weighs 11 pounds.  
No. 15, Includes No. 9 Strap.....each \$0.65

**No. 24 Bracket Assembly**

For mounting CurtiStrip out from transom bar or for suspending from ceiling. Includes  $1\frac{1}{2}$ x3-inch rectangular flange,  $\frac{3}{8}$ -inch nipple  $6\frac{1}{4}$  inches long with 2 locknuts and No. 13 brackets.

Standard package of 10 weighs 9 pounds.  
No. 24.....each \$0.80

**CurtiStrip Fittings**

Standard Finish, Cadmium Plated

**No. 6 End Caps**

Designed to close and finish end of CurtiStrip. Provided with  $\frac{1}{2}$ -inch knockout (can be reamed to  $\frac{3}{4}$  inch) for lead-in circuits.

Standard package of 10 weighs 3 pounds.

No. 6.....each \$0.35

**No. 12 Service Boxes**

Designed for use where conduit larger than  $\frac{3}{4}$  inch is necessary.

Has four  $\frac{3}{4}$ -inch knockouts bottom, end and 2 sides, that may be reamed up to  $1\frac{1}{2}$  inches. Size extending outside of CurtiStrip  $2\frac{3}{4}$ x $2\frac{3}{4}$ x $2\frac{3}{4}$  inches.

Standard package of 10 weighs 12 pounds.

No. 12.....each \$1.70

**No. 14 Elbows**

Elbow is adjustable from 70 to 180 degrees. Cover is removable and eliminates fishing of wires. Separable body permits using elbow as splice box.

Standard package of one weighs 3 pounds.

No. 14.....each \$1.90

**No. 16 Couplings**

This coupling is used for connecting 2 pieces of CurtiStrip.

Does not reduce size of wireway or interfere with use of other CurtiStrip sockets and receptacles.

Standard package of 10 weighs 5 pounds.

No. 16.....each \$0.45

**No. 18 Box Adapters**

For connecting CurtiStrip to 4-inch standard octagonal outlet box. 1, 2, 3 or 4 adapters may be used so that CurtiStrip may be run in as many different ways from one outlet box.

Standard package of 10 weighs 6 pounds.

No. 18.....each \$0.65

X-Ray cove lighting reflectors may be mounted on No. 5-A Socket and entire length of CurtiStrip tilted to secure correct distribution of light.

Reflectors mounted on No. 8 Socket or No. 19 Nipple Attachments are adjusted individually.

CurtiStrip is generally fastened with No. 9 Strap.

## X-Ray Interior Floodlights Three Types of Light-Control

Three general types of light-control are provided with X-ray interior floodlights. The illustrations below give an idea of the distribution from each unit. These three types are briefly described as follows:

### Center Spot Beam

Distribution of Light from Nos. 44, 33-A or 88 Showing Flood of Light and Center Spot Beam

This combination of a flood and spotlight has a wide range of uses because of its intense concentration and wide general illumination. Small shop windows can be completely lighted with one or two of this type of unit so that the principal portions of the display are highlighted. At the same time there is sufficient light provided for the rest of the display.

### On Short Swivel Base

Cat. No.	Std. Lamp Watts
44	150-100
*33-A	200
33-B	200
*88	500-300
88-B	500-300

### On Portable Stand 54" High

Cat. No.	Std. Lamp Watts
*303-A	200
303-B	200
*808	500-300
808-B	500-300

### Spot Beam

Nos. 33-A or 88 with Control Ring to Conceal Lamp Produces Powerful Spot Beam

Where the general flood of light is not wanted but instead more of a spotlight effect is needed the Spot Beam should be used. A control-ring is used with the regular Type 33-A or 88 to confine all of the light into one powerful spot beam. This combination is generally used in store interiors for spotlight sales and wherever the light source should be concealed.

### On Short Swivel Base

Cat. No.	Control Ring No.	Std. Lamp Watts
*33-A	13351	200
33-B	13351	200
*88	18860	500-300
88-B	18860	500-300

### On 54" Portable Stand

Cat. No.	Control Ring No.	Std. Lamp Watts
*303-A	13351	200
303-B	13351	200
*808	18860	500
808-B	18860	500-300

### Flood of Light

Nos. 338 and 888 Type Floodlights provide a Wide Flood of Light

This distribution is readily understood. In X-Ray interior floodlights the overall spread is approximately 100° with the greatest concentration of light in the 40° zone.

The two sizes of this type of unit have a wide variety of uses.

### On Short Swivel Base

Cat. No.	Std. Lamp Watts
*338	200
338-B	200
*888	500-300
888-B	500-300

### On Portable Stand 54" High

Nos. 338, 338-B, 888 and 888-B can be supplied on portable stand 54 inches high so specifying.

\*Regularly supplied with Color-Frame and red, blue, green and amber gelatin for color highlighting. All others have no color equipment and are for white lighting only.

## No. 44 X-Ray Interior Floodlights

For 150 or 100-Watt Lamps

Concentrating type for white lighting only; no color equipment available. This is a combination of spot and floodlight. Base has universal adjustment.

Diameter of reflector 8 3/8 inches. Depth from back of socket to front of reflector 7 inches with 100-watt lamp, 7 1/2 inches with 150-watt lamp using holder extension (included).

Diameter of base 3 1/4 inches.

Standard package containing one unit weighs 5 pounds.

No. 44 ..... each \$7.00

## No. 33-A X-Ray Interior Floodlights

For 200-Watt Lamps

Concentrating type for white or colored lighting. For smooth soft edge beam use inside frosted lamps. Base has universal adjustment. Color equipment consists of 4 pieces of gelatin (red, blue, green and amber) frame and clips.

Diameter of reflector 10 1/2 inches. Depth back of socket to front of reflector 10 3/4 inches. Diameter of base 3 1/4 inches.

No. 33-A with Color Equipment, wt., 7 lbs. .... each \$9.50

No. 33-B without Color Equipment. .... each 7.75

No. 303-A Portable with Colors, wt., 31 lbs. .... each 21.00

No. 303-B Portable without Colors. .... each 19.25

Portables have 54-in. stand and 10-ft. cord with plug.

## No. 88 X-Ray Interior Floodlights

For 500 or 300-Watt Lamps

Concentrating type for white or colored lighting. Base has universal adjustment. Diameter of reflector 13 1/4 in. Depth from back of socket to front of reflector 11 1/8 in. Diameter of base 3 1/4 in. Color equipment consists of 4 pieces of gelatin (red, blue, green and amber) frame and clips.

No. 88 with Color Equipment. .... each \$16.50

No. 88-B without Color Equipment. .... each 13.75

No. 808 Portable with Colors. .... each 28.00

No. 808-B Portable without Colors. .... each 25.25

Weight, No. 88, 12 lbs., No. 808, 30 lbs.

Portables have 54-in. stand and 10-ft. cord with plug.

## X-Ray Control-Rings

For Interior Floodlights

A louver for converting regular interior floodlights into commercial spotlights. Consists of a circular spill shield for eliminating the spill of light common to all floodlights and confining all the light to one straight controlled beam.

Control-ring is used only with concentrating types and is available only for 200 and 500-300 watt sizes listed below. Attached by snapping spring-clips over the lip of the floodlight reflector. Does not interfere with the use of color-ray and can be used with reflectors when recessed.

Standard package, 1; shipping weight, 1 pound.

No. 13351 for Nos. 33-A, B and 303-A, B. .... each \$3.50

No. 18860 for Nos. 88, 88-B, 808 and 808-B. .... each 4.50

**No. 315 X-Ray Spotlights**  
For 250-Watt G-30 Lamp

Soft Spot Beam  
8" to 30"

Both Horizontal and Vertical Beam  
Adjustable from 6° by 30° up to 24° to 50°

Designed for spotlighting where adjustment in the size of spot or a sharply defined beam of light is needed.

Length over all 15<sup>3</sup>/<sub>8</sub> inches; yoke 7<sup>3</sup>/<sub>8</sub> inches; diameter barrel 5<sup>3</sup>/<sub>4</sub> inches; lens 4<sup>1</sup>/<sub>2</sub> inches.

Black enamel finish. Wired with 6 feet of No. 16 wire and separable plug. Slides provide color lighting and special effects shown above.

Each spotlight has 4 color frames, red, blue, green and amber, one metal and 2 glass slides for producing smaller sharp spot beam, soft spot and rectangular vertical or horizontal beam of light. At 10 feet this is adjustable 16 to 60 in.

Standard package containing one unit weighs 8 pounds.  
No. 315 Spotlight.....each \$22.50  
Lens Only for No. 315.....each 4.50

**X-Ray Portable Footlights**

150-100\*-Watt Lamps on 12-Inch Centers

Designed for show windows, small stages and wherever a standardized or portable footlight is needed.

Footlights used alone or in combination with regular reflector equipment light the display brightly from below, eliminating shadows so often objectionable in overhead lighting.

This type of footlight is also widely used in schools, lodge rooms, clubs, style shows, conventions and expositions, police show-up rooms, museums, art galleries, etc.

Sturdily constructed of heavy gauge steel with inside finished aluminum bronze. X-Ray reflectors on 12-inch centers. Height over all 5<sup>5</sup>/<sub>8</sub> inches. Depth from front to back 5<sup>1</sup>/<sub>2</sub> inches. Provided in 2 standard lengths, 4 and 8 feet, but can be made to any length. Furnished unwired (without wire) and unassembled. Removable wireway cover makes wiring easy.

Standard finish, statuary bronze lacquer enamel.

Standard package is one section. Average shipping weight per foot on sections 4 feet long or more is 4<sup>1</sup>/<sub>2</sub> pounds.

No. 10584 Section 4 Feet Long for 4 Lamps.....each \$38.00  
No. 10588 Section 8 Feet Long for 8 Lamps.....each 75.00  
No. 10589 (Use this number for other lengths)

On Orders up to 8 Feet.....per foot 11.25

On Orders for More than 8 Feet.....per foot 10.75

Specify length required.

\*With 100-watt lamps use short (7/8-inch) socket extension.

**X-Ray Scoopette and Hoodette Reflectors**

For 50-Watt (A-19 or P-19), 25-Watt (A-19) or 15-Watt (A-17) Lamps

Scoopettes and Hoodettes are miniature show window reflectors and are recommended for lighting display cases. Lamps burn in the natural position, base up. Provide a bright light without glare and of uniform intensity. Supplied in complete showcase lighting outfits or as separate reflector units, medium screw base sockets, for mounting on standard 3/8-inch brass pipe, 1/2-inch iron pipe size with standard thread.

**No. S-200 Scoopettes**

Designed for lighting show cases with inside height and depth approximately equal.

Width 4 inches. Depth from front to back 3<sup>5</sup>/<sub>8</sub> inches. Height over all 4<sup>1</sup>/<sub>2</sub> inches.

Standard package, 10.

Weight, standard package, 7 pounds.

No. S-200 Unit.....each \$5.00

**No. H-199 Hoodettes**

Designed for lighting wall cases with height approximately 2 to 3 times depth.

Width 3<sup>3</sup>/<sub>4</sub> inches. Depth from front to back 5<sup>3</sup>/<sub>8</sub> inches. Height over all 4<sup>1</sup>/<sub>2</sub> inches.

Standard package 10.

Weight, standard package, 9 pounds.

No. H-199 Unit.....each \$5.00

**Complete Outfits**

Scoopette or Hoodette Outfits are supplied complete with all fittings necessary to install in either wood frame or all-glass display cases. No switch box, switch, switch plate or lamps. Prices given in table below are for show cases with square ends. Add \$2.50 for case with one round end, \$3.25 for two round ends. Material regularly supplied unwired and unassembled. Add 20% for wiring and assembling.

Standard package, 1 complete outfit.

Length Case Outside	No. SCOOPETTES OR HOODETTES PER CASE						
	2	3	4	5	6	7	
4' to 6'	\$20.75	\$26.75	\$33.25				
6'1" to 8'		28.00	34.00	\$40.50	\$46.75		
8'1" to 10'				41.00	47.75	\$54.25	

Prices on complete lighting equipment for cases longer than 10 feet supplied on request.

When ordering complete outfits, specify all-glass or wood frame and give the following dimensions:

Inside length from glass to glass or wood frame to wood frame.

Distance from under side of top glass to under side of floor of case.

If cases are not of regular square end type, send a rough sketch giving dimensions and radius of the end curve.

**Display Case Lighting with X-Ray Reflectors**

Many types of display cases can be lighted with X-Ray Reflector equipment.

Light Strip can be used for lighting stock and display racks in clothing stores increasing their value as display cases and making easier the selection of pattern or style.

Cabinets can be lighted effectively with Scoop Jr. and Hood Jr. reflectors.

Corridors, passages and lobbies correspond in value to street frontage for window displays. Their effectiveness is increased by lighting with the smaller sizes of X-Ray window reflectors.

Display cases of silver and polished metals are attractively lighted with Hood Jr. reflector and recesses. Clear or daylight lamps or a combination of both, may be used.

Footlighting with X-Ray Portable Footlights or Light Strip or X-Ray reflector mounted below panels of diffusing glass is used in display case lighting. This arrangement permits having cases with lower head room and raising the platform to a more interesting height.

## Benjamin Duo-Service Floodlights

N. E. C. Standard  
For 750, 1000 and 1500-Watt Lamps

For lighting gasoline service stations, used car lots, etc.

Combines a wide coverage diffusing reflector with an intensive beam floodlighting projector. Provides uniform illumination of a surrounding area with simultaneous high intensity floodlighting of an upright or flat surface within, close to, or at some distance from area of general illumination. This high intensity floodlighting beam can be concentrated or spread by a simple screw adjustment.

Installed by slipping bracket arm over 1½-inch pipe.

Porcelain enameled steel reflector, green outside, white inside. Chromium or aluminum oxide metal projector and heavy cast aluminum hood includes a porcelain mogul base socket. All metal fittings not cast aluminum are cadmium-plated.

No. 5763, with Chromium Concentrating Beam Inner Projector...	each	\$34.00
No. 5763A, Same as No. 5763, but Fits 2" I.P. . . . .	each	34.00
No. 5764, with Ox. Alum. Spread Beam Inner Projector...	each	31.00
No. 5764A, Same as No. 5764, but Fits 2" I.P. . . . .	each	31.00
No. 5765, without Projector . . . . .	each	28.00
No. 5765A, Same as No. 5765, but Fits 2" I.P. . . . .	each	28.00
No. 5766, with Oxidized Aluminum (Wide Spread Beam) Inner Projector (Larger Than No. 5764) . . . . .	each	32.50
No. 5766A, Same as No. 5766, but Fits 2" I.P. . . . .	each	32.50

## Benjamin Play-Area Floodlights

For 750, 1000 and 1500-Watt Lamps

An open type, wide angle, diffusing floodlight designed for lighting outdoor recreational areas such as football and athletic fields, race tracks, etc. Provides uniform, strong illumination on the ground area to the front and sides and improves upper area illumination.

A wide range of adjustment, both horizontally and vertically, is provided by the rugged mounting bracket. A positive clamping mechanism locks the fixture at any desired position through this range.

Porcelain enameled reflector, green outside, white inside; inner reflector is non-corrosive aluminum oxide; all metal parts are cast aluminum or cadmium-plated.

No. 5752, Fits Over 1½-Inch I.P. . . . .	each	\$31.00
No. 5752A, Fits Over 2-Inch I.P. . . . .	each	31.00
No. 5753 (Less Inner Reflector), Fits Over 1½-Inch I.P. . . . .	each	28.00
No. 5753A (Less Inner Reflector), Fits Over 2-Inch I.P. . . . .	each	28.00
No. 5754, with Universal Mounting Bracket and Pipe Clamp . . . . .	each	29.00
No. 5755, with Universal Mounting Bracket, Less Inner Projector . . . . .	each	26.00

## Benjamin Open-Type Floodlights

A wide angle, open type diffusing floodlight. For floodlighting the smaller type of recreation area, playground, parking lot, gasoline station, etc.

Hoods are made in 3 types: pendent for attaching directly to a threaded pipe, or with universal mounting bracket for fastening to flat surfaces or, by means of the pipe clamp supplied with the bracket, to 1 and 1½-inch pipe or with bracket arm to

slip over 1½-inch pipe.

A wide range of adjustment vertically is provided by the universal mounting bracket hood, while both hoods provide complete adjustability of the reflector horizontally. Floodlight is durably constructed for outdoor service and is entirely weatherproof throughout.

The porcelain enameled steel reflector is finished green outside, white inside. Inner auxiliary reflector has special oxidized aluminum finish.

Pendent hood is malleable iron, tapped ¾-inch standard, supplied tapped 1-inch, when specified. Universal mounting bracket hood is cast aluminum. All metal fittings not aluminum castings are cadmium-plated to resist corrosion.

Packed one in a standard package.

For 300 and 500-Watt Lamps

No. 5770, with Pendent Hood . . . . .	each	\$17.00
No. 5771, with Universal Mounting Bracket . . . . .	each	19.00
No. 5772, (No. 5770, Less Inner Reflector) . . . . .	each	14.00
No. 5773, (No. 5771, Less Inner Reflector) . . . . .	each	16.00
No. 5774, (No. 5771 with Concealed Wiring, Mounting Bracket for 1½-Inch I.P.) . . . . .	each	21.00
No. 5775, Same as No. 5774, but Less Inner Reflector . . . . .	each	18.00

For 750, 1000 and 1500-Watt Lamps

No. 5970, with Pendent Hood . . . . .	each	\$18.00
No. 5971, with Universal Mounting Bracket . . . . .	each	20.00
No. 5973, (No. 5970, Less Inner Reflector) . . . . .	each	15.00
No. 5974, (No. 5971, Less Inner Reflector) . . . . .	each	17.00
No. 5975, (No. 5971, with Concealed Wiring Mounting Bracket for 1½-Inch I.P.) . . . . .	each	22.00
No. 5976, (No. 5975, Less Inner Reflector) . . . . .	each	19.00

## Benjamin Big-Ben Floodlights

For 750, 1000, 1500 and 2000-Watt Lamps

A long range, diffusing floodlight for lighting outdoor sport and recreational areas where greater distances are encountered.

Fixture hood is fitted with removable cast aluminum cap which carries socket as a unit. Cap has two porcelain knobs at sides and is fitted with one-piece porcelain insulated wire entrance bushing at bottom.

Mogul base porcelain socket is attached to hood cap.

Inner reflector of oxidized aluminum is positioned deep back in fixture and is closely fitted to lamp neck so as to intercept and utilize the greatest quantity of light.

Porcelain enameled steel reflector, green outside, white inside. All metal parts are aluminum or cadmium-plated.

No. 5776, with Slip-Fitter Base . . . . .	each	\$65.00
No. 5778, with Cross Arm Base . . . . .	each	67.50
No. 5780, with Wall Bracket Support . . . . .	each	72.50

**Benjamin Utility Portable Floodlights**

Has ample beam strength and sufficient beam control to meet the needs of smaller type flood-lighting jobs where it is necessary to project light to a considerable distance from place where floodlights are mounted.

With polished aluminum alloy reflecting surfaces sealed by heat-resisting stippled glass covers and special gaskets. Two wing nuts control adjustment so fixtures can be tilted up or down and turned in a complete circle.

Furnished completely wired.

**For 150-200-Watt Lamps—Reflector Diameter, 10<sup>7</sup>/<sub>8</sub>"**

\*For mounting in turf; with heavy duty attachment cord and plug. †To attach to pipe standards. Tapped for 1/2-inch i.p. With pig-tail for lead-in to fitting.

**Benjamin Junior Portable Floodlights**

A wide-spread, diffusing floodlight for use where light can be mounted relatively close to object or area to be floodlighted.

Porcelain enameled steel reflector is green outside, white inside. Reflecting surfaces are sealed against weather and dust by plain cover glasses and gaskets held by metal retaining bands. Can be tilted up or down and turned in a complete circle by loosening wing nuts.

Furnished completely wired.

\*For mounting in turf; with rubber-covered attachment cord and plug. †To attach to pipe standards. Tapped for 1/2-inch i.p. With pig-tail for lead-in to fitting.

**Benjamin Mobilites**

For automobile repair work the Mobilite can be used like a mechanic's creeper and rolled under car to light any portion being worked on. Clearance of Mobilite is so low that the 100-watt fixture will roll under running board of a car, bus or truck. In unlighted pits and under hydraulic lifts Mobilite makes greasing and service easier.

The Mobilite can be easily pushed or rolled anywhere—yet once set leaves both hands free for work. Cast iron truck has three fibre rollers, two at front and one at rear which is pivoted. Truck is enameled a brilliant red. A handle is provided for carrying the fixture about.

Porcelain enameled steel reflector is green outside, white inside. Can be tilted upward by loosening wing nut.

Reflector interior is sealed against dust and dirt by the cover glass, which is held in place by a removable metal band and retaining gasket. A rust-resisting guard welded to cover band, protects glass. Clear covers: plain on 100-watt units and stippled on 200-watt units.

Fixture is wired; with 25 feet of rubber-covered cable and rubber plug. A strain relief is provided at back of truck. Medium base socket—N.E.C. standard.

Size Lamp Watts	With 2-Wire Cable			With 3-Wire Cable

150, 200	5792	19.00	25	5794	19.75	26

**Benjamin Pit and Tunnel Lighting Fixtures**

**For Correct Lighting in All Types of Pits National Electrical Code Standard**

The proper lighting of pit interiors and the vehicles over the pits, lessens the danger of accidents to workers and increases their speed and effectiveness. The Benjamin Pit Lighting Fixture with refracting glass cover offers a most satisfactory means of obtaining this correct illumination.

The efficient trough-shaped porcelain enameled steel reflector assures maximum light output, while the refracting glass cover concentrates the major portion of the light on the underside of the object over the pit.

Suitable for built-in or surface installation in locations like automobile service and greasing pits, railway and traction line repair pits, viaducts, tunnels and similar locations. In some types of locations, such as viaducts, tunnels and subways, where lighting requirements are of a general nature, the pit light with a plain glass cover will be found more satisfactory than the refracting.

Fixture consists of a cover and a cast iron box which are held together by four bolts. Cover includes a cast iron frame, a heat-resisting glass cover, a double rubber gasket, which seals cover frame to box and glass to cover frame, and a brass wire guard.

The cast iron box includes a porcelain enameled steel trough-shaped reflector and a keyless socket. Box is tapped at both ends for either 1/2, 3/4 or 1 1/2-inch conduit.

Packed one in a standard package.

\*With wire clamp for feed wires.

**Type 79 Benjamin Glassteel Diffusers**

Complete with Hood, Reflector and Globe

National Electrical Code Standard

Provides soft, even light over a wide range of intensities. Direct and reflected glare is eliminated. Openings at the top of the reflector give ample light on the ceiling to relieve contrasts between the fixture and its background.

Composed of two separable elements—a hood with a wiring terminal base and a complete assembly of reflector globe and lamp, which can be taken down as one piece for easy cleaning. A slight upward pressure against the reflector rim, less than a quarter turn to the left and reflector assembly is released from hood; to put up—simply turn right and reflector is secured.

The terminal base in the hood is extremely simple to wire. Both wiring leads are brought in through the single center hole in the hood and terminal base.

A single lever on the side of the reflector controls the clamping or release of the globe in the fixture.

Reflector is porcelain enameled steel, with Benjamin Type 79 bayonet-lock coupling. Reflectors have built-in lamp holders and hayonet plate. Standard reflector has apertures at top for passage of light to ceiling.

Terminal base, N.E.C. standard, simple-to-wire. One type of terminal base is standard in both outlet box and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, outlet box, angle and pendant. Outlet type has one hole slotted for easy attachment.

Angle and pendant hoods are tapped for 1/2 inch conduit, can be supplied in 3/4 inch, when specified.

Reflectors are white porcelain enameled inside and out, with blue-black bead. Spring clamp globe holder, hood and bayonet plate are cadmium-plated.

**Pendant Hood Type with Keyless Lamp Holder**

Cast iron; tapped 1/2 inch standard; 3/4 inch when specified.

\*When using 150-watt lamp, socket extension No. 91 must be used to correctly position lamp in reflector.

**Lamp Holders**

Shock-absorbing lamp holders furnished in place of regular rigid lamp holder at an advance of 10 cents in price. When ordering, suffix regular reflector number with "SHB."

**Type 79 Benjamin RLM Dome Reflectors**

Porcelain Enameled Steel

National Electrical Code Standard

Constructed on a unique principle which permits the reflector, together with the lamp, to be taken down with one simple movement for easy cleaning.

Unit consists of two separable elements—hood with wiring terminal base, and reflector to which is assembled the lamp holding element. A slight upward pressure against reflector rim, less than a quarter turn to left, and reflector with lamp comes down as a unit.

The 3-point bayonet plate on top of the reflector is slipped into bottom of hood and both locked together by a quarter turn to right.

Contact is made at any point where reflector heel may be entered in hood. Polarization is automatically provided for by the circular design of the contacts.

Reflector is seamless porcelain enameled steel with bayonet-lock coupling. With porcelain lamp holder. Angle of cut off, 17 1/2°.

Terminal base is N.E.C. standard. One type of terminal base is standard in both ceiling and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders. Three types of hoods are provided, ceiling type outlet box, pendant and angle, side entrance type; outlet type has holes slotted for attachment.

Reflectors are porcelain enameled steel, green outside, white inside. Hood and bayonet plate are cadmium-plated.

Prices do not include wires or lamps.

Bayonet Type Coupling Permits Taking Down Reflector and Lamp as a Complete Unit

**Pendant Hood and Reflector with Keyless Lamp Holder**

Pendant hoods are cast iron, tapped 1/2 inch standard; 3/4 inch if specified.

## Type 79 Benjamin Symmetrical Angle Reflectors

Porcelain Enameled Steel

Characteristic Distribution Curve

The reflector is seamless porcelain enameled steel with Benjamin Type 79 bayonet-lock coupling. The reflector includes a N.E.C. standard porcelain lamp holder and a 3-point bayonet plate.

One type of terminal base is standard in both ceiling and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, ceiling type outlet box, pendant and angle side entrance. Outlet type hood has one hole slotted for easy attachment.

Reflectors are porcelain enameled steel; green outside, white inside. Hood and bayonet plate are cadmium-plated to prevent corrosion.

### Pendant Hood and Reflector with Keyless Lamp Holder

Pendant hoods are cast iron, tapped 1/2 inch standard; 3/4 inch if specified.

Cat. No.	Each	Size Lamp Watts	DIMEN., INCHES Diam. Height	Std. Pkg.	Wt., Lbs. Std. Pkg.
7541	\$3.25	50, 100	8 10 3/4	10	28

9543	5.35	300, 500	12 16 3/16	5	28

### Angle Type Hood and Reflector with Keyless Lamp Holder

Angle type hoods are cast iron. Tapped 1/2 inch standard; 3/4 inch when specified.

Cat. No.	Each	Size Lamp Watts	DIMEN., INCHES Diam. Height	Std. Pkg.	Wt., Lbs. Std. Pkg.
3541	\$3.25	50, 100	8 11 1/16	10	39
3542	3.75	150, 200	10 14 1/4	10	46
3543	5.35	300, 500	12 17 3/8	5	33

Prices do not include wires or lamps.

### Extra Reflectors

Fixtures, complete, except for hoods, are available for easy maintenance of the system. When ordering, specify catalogue number of complete fixture with the explanation "Less Hood," and deduct 80 cents from list price.

### Lamp Holders

Pull chain lamp holders with straight inner pull for medium base only, 80 cents advance list. When ordering suffix regular reflector number with "PUL."

Self-locking lamp holder prevents unauthorized lamp removal, medium base only, 50 cents advance list. When ordering, suffix regular reflector number with "LOK."

Shock-absorbing lamp holders lengthen lamp life, medium or mogul base, 10 cents advance list. When ordering suffix regular reflector number with "SHB."

## Type 79 Benjamin Elliptical Angle Reflectors

Porcelain Enameled Steel

National Electrical Code Standard

Exclusive Benjamin principle permits reflector together with lamp, to be taken down with one simple movement, for easy cleaning.

Each unit consists of two separable assemblies—a hood with a wiring terminal base and a reflector with a lamp holder and attaching plate.

Automatic polarization is provided by the circular contact design and contact may be made at any point where bayonet plate can be inserted in hood.

Reflector is porcelain enameled steel, green outside, white inside; with Type 79 bayonet-lock coupling. Reflector includes a porcelain lamp holder and a 3-point bayonet plate. Angle of cut off is 17 1/2°.

One type of terminal base is standard in both ceiling and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders.

Three types of hoods are provided, ceiling type outlet box, pendant and angle side entrance.

### Pendant Type Hood and Reflector with Keyless Lamp Holder

Pendant hoods are cast iron. Hoods for medium base reflectors tapped 1/2-inch standard; 3/4-inch, if specified. Hoods for mogul base reflectors tapped 3/4-inch standard.

Cat. No.	Each	Size Lamp Watts	DIMEN., IN.			Std. Pkg.	Wt., Lbs. Std. Pkg.
			Width	Depth	Height		
7522	\$3.80	75, 100	13 1/8	8 7/8	14 1/16	10	54
7525	4.50	150	13 1/8	8 7/8	15 1/16	10	56
7526	5.10	200	16 3/8	11 1/8	17 13/16	10	68
7537	9.10	300, 500	19 7/8	13 7/8	21 1/16	5	40
7538	10.10	750, 1000	19 7/8	13 7/8	22 1/16	2	27

### Ceiling Type Hood and Reflector with Keyless Lamp Holder

These hoods are cast iron and fit 4-inch standard octagonal and round outlet boxes of 1 1/2 inches or more depth.

Cat. No.	Each	Size Lamp Watts	Width	Depth	Height	Std. Pkg.	Wt., Lbs. Std. Pkg.
9522	\$3.80	75, 100	13 1/8	8 7/8	13 15/16	10	60
9525	4.50	150	13 1/8	8 7/8	14 15/16	10	62
9526	5.10	200	16 3/8	11 1/8	17 3/16	10	74
9537	9.10	300, 500	19 7/8	13 7/8	20 15/16	5	43
9538	10.10	750, 1000	19 7/8	13 7/8	21 1/16	2	28

### Angle Type Hood and Reflector with Keyless Lamp Holder

Angle type hoods are cast iron. Hoods for medium base reflectors tapped 1/2-inch standard; 3/4-inch when specified. Hoods for mogul base reflectors tapped 3/4-inch standard.

Cat. No.	Each	Size Lamp Watts	Width	Depth	Height	Std. Pkg.	Wt., Lbs. Std. Pkg.
3522	\$3.80	75, 100	13 1/8	8 7/8	15 1/4	10	70
3525	4.50	150	13 1/8	8 7/8	16 1/4	10	72
3526	5.10	200	16 3/8	11 1/8	19 5/8	10	84
3537	9.10	300, 500	19 7/8	13 7/8	22 1/4	5	48
3538	10.10	750, 1000	19 7/8	13 7/8	22 3/4	2	33

Prices do not include wires or lamps.

### Extra Reflectors

Fixtures, complete, except for hoods, are available for easy maintenance of the system. When ordering, specify Cat. No. of complete fixture with explanation, "Less Hood," and deduct 80 cents from list price.

### Lamp Holders

Pull chain lamp holders have the exclusive Benjamin Inner Pull feature in which the chain comes straight down inside the reflector. Furnished with any of the medium base fixtures listed above at an 80 cents advance in fixture list price. When ordering, suffix regular fixture number with "PUL."

Self-locking lamp holders prevent unauthorized lamp removal. Furnished with any of medium base fixtures listed above at 50 cents advance in fixture list price. When ordering, suffix regular fixture number with "LOK."

**No. 9 Benjamin Type 79 Ceiling Type Hoods**

National Electrical Code Standard  
1500 Watts, 600 Volts

The No. 9 Hood is standard for all Benjamin Type 79 ceiling type reflector fixtures. It incorporates a universal type of wiring terminal base which takes interchangeably any medium or mogul base Type 79 reflector.

Hood is cast iron, cadmium-plated. Body of wiring terminal base is of porcelain. Hood fits 4-inch standard outlet boxes of 1½ inches or more depth. One screw hole in hood is slotted for easy attachment.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.
9	\$.80	10	16

**Type 79 Benjamin Hoods**

National Electrical Code Standard  
1500 Watts, 600 Volts

No. 3

Standard for Benjamin Type Reflector Fixtures. Has universal type of wiring terminal base which takes interchangeably any medium or mogul base Type 79 Reflector. Hood is cast iron, cadmium-plated; body of terminal base, porcelain. Hood tapped for ½-inch conduit standard; ¾-inch when specified at same price.

**No. 3 Angle Type**

Used to bring wires in at right angles to reflector.

Standard package, 10; weight, 20 pounds.  
No. 3.....each \$.80

No. 7

**No. 7 Pendant Type**

Standard package, 10; weight, 14 pounds.  
No. 7.....each \$.80

**No. 2760 Benjamin Keyless Mogul Base Lamp Holder Assemblies**

National Electrical Code Standard  
1500 Watts, 600 Volts

This is standard equipment for Benjamin Mogul Base Type 79 Reflector Equipment.

Consists of a porcelain keyless mogul base socket and Type 79 bayonet attaching plate with composition gasket and attaching screws.

Plate and screw are cadmium-plated.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.
2760	\$1.10	10	13½

**No. 2751 Benjamin Keyless Medium Base Lamp Holder Assemblies**

National Electrical Code Standard

660 Watts, 600 Volts

This is standard equipment for Benjamin Medium Base Type 79 Reflector Equipment. Consists of a one-piece porcelain keyless medium base lamp holder and type 79 bayonet attaching plate with composition gasket and attaching screws.

Plate and screws are cadmium-plated.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.
2751	\$.55	10	8½

**No. 2762 Benjamin Shock Absorbing Mogul Base Lamp Holder Assemblies**

National Electrical Code Standard  
1500 Watts, 600 Volts

The shock absorbing lamp holder lengthens the lamp life by guarding the lamp filament against vibration, jars and shock.

Consists of a keyless mogul base lamp holder, Type 79 bayonet attaching plate, composition gasket and attaching screws.

Bayonet plate and screws are cadmium-plated.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.
2762	\$1.20	10	13½

**No. 2753 Benjamin Shock Absorbing Medium Base Lamp Holder Assemblies**

National Electrical Code Standard  
660 Watts, 600 Volts

The Benjamin shock absorbing lamp holder lengthens lamp life by guarding the lamp filament against vibration, jars and shock. For use with all type 79 medium base reflector equipment.

A 1-piece porcelain medium base keyless lamp holder, with shock absorbing spring and a Type 79 bayonet attaching plate with composition gasket and attaching screws. Plate and attaching screws cadmium-plated.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.
2753	\$.65	10	11

**No. 2752 Benjamin Pull Chain Medium Base Lamp Holder Assemblies**

National Electrical Code Standard  
660 Watts, 250 Volts

This pull chain lamp holder with the Benjamin Inner Pull Feature, provides a reliable method of individually controlling Benjamin Medium Base Type 79 Reflector Equipment.

Consists of 1-piece medium base porcelain lamp holder and a Type 79 bayonet attaching plate with composition gasket and attaching screws.

Plate and screws cadmium-plated.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.
2752	\$1.35	10	8½

**No. 2754 Benjamin Self-Locking Medium Base Lamp Holder Assemblies**

National Electrical Code Standard  
660 Watts, 600 Volts

The socket automatically locks as the lamp is screwed in.

Prevents unauthorized removal of lamps. May be used in all medium base Type 79 reflector equipment.

Consists of a medium base porcelain lamp holder with self-locking feature, bayonet attaching plate, composition gasket and screws. Screws and plate are cadmium-plated.

Cat. No.	Each	Std. Pkg.	Wt., Lbs. Std. Pkg.

## Benjamin Reflector Sockets Porcelain Enameled Steel

USES.—Each type of reflector performs a definite service. See individual description immediately above each listing.

REFLECTORS.—Seamless Crysteel porcelain enameled steel. They are weather-proof and may be used for indoor and outdoor service.

SOCKETS.—National Electrical Code Standard. Sockets are 2-piece porcelain, keyless, easy-to-wire type with Benjamin Lamp Grip which prevents loosening and falling of lamps under vibration.

Locking Type Socket (LOK) will be supplied with reflectors up to and including 200 watt sizes at an advance of 50 cents each. Key, No. 1399, at \$1.00 each. Pull chain socket (PUL) with lamp grip will be supplied with reflectors up to and including 200 watt sizes at an advance of 80 cents. Shock-absorbing socket (SHB) at 10 cents additional to list price.

FITTINGS.—Reflectors are supported by heavy cast fitting, independent of socket, making the whole fixture uniformly strong.

TAPPING.—Fitting tapped for 1/2-inch iron pipe regularly furnished; 3/4-inch tapping or 1/2-inch insulating bushing, No. 1265 for drop cord use, furnished if specified at no advance in price.

FINISH.—Reflectors are Benjamin green porcelain enamel outside; white inside.

## Benjamin Shallow Bowl Reflector Sockets Porcelain Enameled Steel

No. 5423  
150-Watt

Characteristic  
Distribution Curve

For general illumination where the lighting requirement is of an extensive character and where eye shielding is not considered of first importance.

**Benjamin Elliptical Angle Reflector Sockets**

Porcelain Enameled Steel

No. 5525  
Side View

No. 5525  
Front View

The Benjamin Elliptical Angle Reflector Socket is used in places in industrial plants where lighting requirements cannot be satisfied with overhead illumination alone, as well as cases requiring illumination from the side.

Reflectors are of porcelain enameled steel and are weather resisting. Socket is N. E. C. Standard, keyless two-piece porcelain easy-to-wire type with lamp grip which prevents lamps from becoming loosened by wind or vibration. Nos. 5522, 5525 and 5526, tapped for 1/2-inch pipe; 3/4-inch if specified. Nos. 5537, 5538 tapped for 3/4-inch iron pipe.

Cat. No.	Each	Size of Lamp Watts	DIMENSIONS, INCHES		Net Weight Standard Pounds	Standard Package

5538	9.70	750, 1000	13 7/8 x 1 9/8	20 1/4	4 1/8	2

Prices do not include wires or lamps.

**Benjamin Threaded Hood Glassteel Diffusers**  
Complete with Hood, Reflector and Globe

No. 26300, 200-Watt

In addition to the accepted merits of the porcelain enameled steel reflector this combination offers the following advantages:—

1. Light is permitted to reach the ceiling which softens the contrast between the working plane and the space above the reflector. This increases eye comfort.
2. The brightness of the unit is reduced to about 3 or 5 candlepower per square inch which further reduces eye effort resulting from both direct and reflected glare.
3. Protection of the glass from excess breakage because surrounded by the steel reflector.
4. Exceptionally good appearance of the lighted unit.
5. Reflection and diffusion favorable to the needs of the daylight lamp.

The total light output of the Glassteel Diffuser with a clear lamp is equal to that of an R L M reflector and bowl-enameled lamp of corresponding size.

Diffuser directs light on ceiling (about 7 per cent) and also more light on higher angles.

Comparison of corresponding brightness favors the Glassteel equipment, which is 3 or 5 against 15 candlepower per square inch of the R L M reflector and bowl-enameled lamp.

Hood is of porcelain enameled steel with Benjamin R R Thread.

Type X supporting fitting, tapped for 1/2-in. conduit.

Porcelain 2-piece socket, easy-to-wire type.

Reflector is porcelain enameled steel in two sizes with Type R R Threaded Neck permitting easy removal of the reflector. Reflector has six apertures at top for the passage of light to the ceiling. It also embodies a spring globe holder facilitating easy removal of globe for cleaning.

White porcelain enamel with small neat dark blue bead at bottom edge of both hood and reflector.

**Pendent Hood Type with Keyless Socket**

With X style fitting; tapped 1/2 inch standard; 3/4 inch when specified.

Size Lamp Watts	DIMEN. In.	Std. Pkg.	Wt. Lbs. Std. Pkg.	With Opal Glass Globe		With Daylight Glass Globe

**Ceiling Hood Type with Keyless Socket**

Hood is for mounting direct to, and covering, a standard 4-inch outlet box.

150, 200	18 1 1/4	4	50	26304	\$9.00	26314	\$9.50
300, 500	20 1 3/8	4	60	26306	12.50	26316	13.25

**Benjamin Special Diffuser Reflectors**

A diffuser reflector consisting of a dome reflector without apertures on the top and with a diffusing globe on a spring holder.

Reflectors are of porcelain enameled steel with either pendent or outlet type box of R R hood. Reflectors are attached to hood by means of heavy copper screw thread on reflector neck which makes removal for cleaning easy.

Reflectors finished in white porcelain enamel outside and inside, with black beaded edge. Hoods are white porcelain enameled.

**Pendent Hood Type**

Tapped for 1/2-inch conduit.

**Benjamin Parabolites**

Porcelain Enameled Steel

Characteristic Distribution of Curve

No. 1235, 150-Watt

Plane Through Major Axis

Plane Through Minor Axis

The Benjamin Parabolite is a specially designed fixture for the illumination of aisles, platforms, and other long narrow areas indoors or outdoors.

The reflector is porcelain enameled steel, white inside, and green outside. The socket is porcelain, keyless two-piece, easy-to-wire type with lamp grip. The separable X fitting is regularly tapped 1/2-inch and will be tapped 3/4-inch if specified, at no advance in price. The light is projected in a narrow stream with a low cut-off on each side.

## Benjamin Threaded Hood Fixtures Sturdox Fixtures

Made to withstand service conditions. Two-piece socket of heavy porcelain is unusually well constructed and simple to wire.

Reflectors may be interchanged without disturbing wiring as every Sturdox reflector fits every Sturdox hood.

### Type RR Equipment

Suitable for use around railroad yards, steel mills and other industrial plants where conditions require the most rugged and sturdy equipment.

The Type RR thread is the basis of railroad equipment. It allows easy removal of reflectors for cleaning and interchangeability among the various types and sizes of reflectors. Hoods are supplied in cast iron or porcelain enameled, in either pendent or outlet box type, and are threaded to accommodate any of the RR threaded neck reflectors shown to the right. Cast hoods are finished in green paint enamel and steel hoods in green porcelain enamel.

To obtain price of complete fixture add price of hood to price of reflector selected.

### Pendent Cast Hoods with Sockets

Tapped for 1/2-inch i.p. standard; 3/4-inch, if specified.

26214	6.00	750, 1000	14	15 3/8	5	27

Prices are for reflectors only.

**No. 26041 Benjamin Combination Outlet Boxes and Type RR Hoods**

This fixture combines a heavy duty cast iron outlet box and Type RR threaded hood with medium base keyless socket. For use with all medium base Type RR and Sturdox reflectors. Recommended for use in locations in which distance between ceiling and reflector must be reduced to minimum in order to provide

maximum clearance between reflector and floor. One-piece molded composition socket base; metal parts not of brass, cadmium-plated; Green paint enameled casting. Release of two screws permits removal of baffle plate and socket as a unit, which gives access to socket wiring terminals and provides an opening of 2 5/8 inch diameter.

Section and Face Plan of Outlet Box-Hood Showing Code Nos. to be Used in Specifying Tapping

Not tapped; can be tapped, at no extra charge, for 1/2, 3/4 or 1-inch conduit, 1, 2, 3 or 4 ways. Use code number shown on diagram to specify location of outlets. For example: No. 1, blank; No. 2, 1/2"; No. 3, blank; No. 4, 1/2". Diameter, 4 3/16 inches; height, 3 3/16 inches.

Standard package, 10; shipping weight, 45 pounds. No. 26041, without Wires or Lamps.....each \$1.75

## Type X Benjamin Socket Fittings

### For Socket-Reflector Equipment

These fittings are made separable for easy wiring.

No. 4653

The fitting consists of two flanges and two washers, one for either side of the reflector. By this method of construction, the socket and lamp are supported directly by the fixture stem, and the reflector is supported independently between the upper and lower flanges. This makes a weatherproof and rigid connection.

## No. 3622 Outlet Box Covers

This outlet box cover is made of galvanized steel.

Designed for use with X Type fittings, for attaching Benjamin Reflector Sockets direct to the conduit box.

The cover is placed between reflector and top flange, and is provided with four bayonet slots which slip over screws on box.

No other fittings are necessary.

Fits 4-inch outlet box.

Cat. No.	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price Each
3622	20	8	\$ .15

**Benjamin 1800 Series Separable Hood Reflectors**

National Electrical Code Standard

Complete fixtures consist of combinations of the hood and socket units and the reflectors. To obtain price of complete fixture add price of hood and socket to price of reflector selected.

Hoods are designed to take all reflectors interchangeably and to accommodate either medium or mogul base sockets. Hoods are cast iron finished in cadmium plate; reflectors are porcelain enameled, white inside, green outside.

Keyless, one-piece, easy-to-wire, N.E.C. standard porcelain sockets are supplied as standard.

Pull chain socket, medium base only, can be furnished when specified at an advance of 80 cents in list price. When ordering, add suffix "PUL" to Cat. No. of fixture.

**Benjamin 1800 Series Separable Hood Fixtures**

**No. E-18 Pendant Cast Hood**

Standard for any Benjamin 1800 Series reflectors and take interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, standard. Cast iron; finished in cadmium plate.

Standard package, 10; shipping weight 8 pounds.

No. E-18.....each \$ .50

**No. L-18 Angle Cast Hood**

Standard for any Benjamin 1800 Series reflectors, where it is desired to have the conduit entrance at right angles to the reflector, and take interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit standard. Cast iron; finished in cadmium plate.

Standard package, 10; shipping weight, 9 pounds.  
No. L-18.....each \$ .50

**No. T-18 Feed Through Cast Hood**

Standard for any Benjamin 1800 Series reflectors, where it is desired to have the conduit feed through the hood at right angles to the reflector, and take interchangeably any medium or mogul socket shown above.

Tapped for 1/2-inch conduit, both sides, standard. Cast iron; finished in cadmium plate.

Standard package, 10; shipping weight, 14 pounds.  
No. T-18.....each \$ .65

**No. C-18 Ceiling Cast Hood**

Standard for any Benjamin 1800 Series reflectors, and take interchangeably any medium or mogul base socket shown above. Fit any standard 4-inch outlet box. One screw hole in hood is slotted for easy attachment.

Cast iron; finished in cadmium plated.

Standard package, 10; shipping weight, 10 pounds.  
No. C-18.....each \$ .50

## Benjamin Snap-In Attachable Reflector Holders

Attach to Any Benjamin Reflector with 2 1/4-Inch N Neck

These snap-in holders can be quickly and easily attached to any Benjamin Shade Holder Reflector with 2 1/4-inch N neck without using tools. To attach, simply line up the rivet heads and crimpings in the collar of the holder with corresponding slots in the neck of the reflector. Then push down on the holder with the palm of the hand. The 4 bronze spring lugs of the holder will snap into position, fastening the reflector and holder securely together.

Standard package, 10; shipping weight, 1 pound.

### Type W Holder

Threads onto various heavy duty, metal-clad sockets with casings threaded for shade holders such as Bryant No. 4107 and similar G-E, Hubbell, H & H and Arrow sockets. Nickel finish.

No. 4382.....each \$.15

### Type S Holder

For attachment to Benjamin-Benco sockets and fittings.

Bright metal finish.

No. 4383.....each \$.15

### Type B Holder

For attachment to standard brass shell sockets. Natural brass finish.

No. 4384.....each \$.15

### Type P Holder

For attachment to standard porcelain sockets.

Bright metal finish.

No. 4385.....each \$.15

## Benjamin Dome Shade Holder Reflectors

Reflector and Lamp Manufacturers' (RLM) Standard

No. 14100N

Type N Shade Holder

Type S Shade Holder

For general illumination when it is desired to avoid reflected glare from the surfaces lighted and to avoid direct glare by having the angle of light cut-off agree with all state lighting codes. Angle of cut-off, 17 1/2 degrees.

Type N Shade Holder Reflector is fitted with a neck so shaped, as to fit any standard 2 1/4 or 3 1/4-inch shade holder.

Type S Shade Holder Reflector has a screw threaded holder to fit Benco Sockets and Type S Outlet Box Fittings.

Shade holders are green porcelain enamel outside; white inside.

\*Also takes 75-watt lamps.

**Benjamin Heavy Duty Gas and Vapor-Proof Fixtures**

Heavy 2-piece cast hood, porcelain enameled steel threaded reflector, socket and heavy screw globe of clear glass, together with necessary gaskets for sealing fixture.

Hood is regularly tapped 1/2 inch but may be ordered 3/4 inch at no advance in price; also furnished with outlet box hoods for attaching to Benjamin Water-Tight Outlet Boxes.

Hood is threaded to take reflector and neck of reflector in turn has an inside thread which receives the enclosing globe. Finish: hood, green enameled; reflector, green acid-resisting porcelain enamel outside, white inside.

## Benjamin Aluminum Vapor-Proof Projectolites

For lighting service in locations such as railroad round houses, where atmospheric conditions are severe.

Entire body of fixture and cover retaining band are of corrosion-resisting aluminum alloy; exterior is green lacquer. All other exposed metal parts are cadmium-plated.

Without necessitating re-positioning, complete unit can be taken down for easy cleaning and re-lamping on floor.

Unit is sealed against entrance of gases and moisture. There are no openings in reflector neck; all wiring is enclosed with leads from socket terminals passing through gasketed ball type adjustable fitting into connector body.

Adjustable ball joint permits positioning at practically any point through a 180° angle by loosening of holding bolt. A set screw in tapped end of adjustable ball fitting provides a means of lateral positioning.

Connector is 2-pole, water-tight type, polarized; rated 15 amperes, 125 volts; tapped for attachment to 1/2-inch i.p. Fixture is wired with No. 16 B. & S. gauge asbestos-covered fixture wire from socket terminals to connector plug. Wire leads not supplied.

## Benjamin Unit-Package Fixtures

For 75 and 100-Watt Lamps

An efficient, economical means of providing good illumination for outdoor and indoor locations about the home, farm, estate and roadside stand. These fixtures are replacing bare lamps used in such locations, by reducing glare and directing most of light which is wasted by a bare lamp, to floor or ground area which is to be lighted.

Porcelain enameled steel reflector has removable cadmium-plated cast hood and one-piece easy-to-wire medium base N.E.C. standard porcelain socket. Pipe and bracket are galvanized.

Packed complete in an individual shipping carton with a 17 1/2-inch length of 1/2-inch pipe and cast wall bracket.

### No. 1941 R L M Dome Reflector with Wall Bracket

Diameter of reflector, 12 inches.

Five in standard package; shipping weight, 28 1/2 pounds.

No. 1941.....each \$3.95

### No. 1943 Flat Cone Reflector with Wall Bracket

For yard and general outdoor lighting.

Diameter of reflector, 14 inches.

Five in standard package; shipping weight, 37 1/2 pounds.

No. 1943.....each \$3.50

### No. 1938 Angle Reflector with Wall Bracket

For lighting ground areas from the side and for use with small signs. Diameter of reflector, 8 inches.

Five in standard package; shipping weight, 28 1/2 pounds.

No. 1938.....each \$2.85

## Benjamin Variety-Lites

For 100 and 200-Watt Lamps

For lighting furnace rooms, attics and similar indoor locations; used outdoors for lighting yards, porches, etc.

Porcelain enameled steel reflector, green outside, white inside. Light can be directed exactly where wanted by adjustment of hinged-swivel mounting bracket which is controlled by three wing nuts. Bracket is cadmium-plated and enameled red. Porcelain one-piece N.E.C. standard socket.

Completely wired; with 4-foot rubber-covered cord and attaching plug.

Cat. No.	Each	Size Lamp Watts	Diam. Reflector, In.	Std. Pkg.	Wt., Lbs. Std. Pkg.
1930	\$3.20	100	8	1	4 3/4
1932	3.60	200	10	1	6 1/2

**Benjamin Intensifiers**  
National Electrical Code Standard

A supplementary lighting unit designed to illuminate small areas to higher intensities than furnished by the general illumination.

Reflector bowl is of heavy gauge metal with steel neck which contains keyless socket and focusing apparatus for positioning two different sizes of lamps. Universal adjusting bracket allows horizontal and vertical positioning and is attached to steel neck. Tapped 1/2-inch i.p. size.

Dust-tight cover consisting of glass disc, felt gasket and steel retaining band seals interior of intensifier.

No. 5603 taking an inside frosted 60, 75 or 100-watt lamp is equipped with clear glass cover. No. 5604 taking a clear 150 or 200-watt lamp furnished with etched glass cover. No. 5632, equipped with daylight glass cover, is recommended for work requiring color discrimination.

Outside finish is green paint lacquered. Inside reflecting surface is chromium-plated.

Cat. No.	Each	Lamp Size Watts	Glass Cover	DIMENS., IN.		Std. Pkg.	Wt., Lbs. Std. Pkg.
				Diam.	Ht.		
5603	\$11.75	60-100	Clear	9	11 3/4	1	6

5632	17.25	150-200	Daylight	12	15 3/4	1	9

**Benjamin Inspection-Lites**

For 15 to 100-Watt Lamps

For local lighting of inspection operations on plate glass, sheet glass, tin plate and many other similar materials where it is necessary to look through the material directly into the light source or at the reflection of the light source from polished or shiny surfaces. The qualifications necessary for inspecting glass and polished surfaces make this fixture ideal for showing up surface imperfections in a wide variety of materials such as leathers, coated papers and rubber stock having a sheen or gloss which ordinarily makes inspection difficult.

A one-piece porcelain enameled steel reflector produces uniform brightness over the entire surface of the opal glass cover. Reflector is green outside and white inside. Equipped with two medium base twin sockets.

Cover glasses are removable for relamping or cleaning the reflector. Glasses are held tightly in guides by flat bronze springs bearing against them.

Provided with two mounting brackets which are adjustable through an angle of more than 180 degrees making it possible to position the unit at the precise angle necessary for best seeing. Brackets are threaded regularly for 1/2-inch conduit. Mounting brackets are cadmium-plated. Sockets are N. E. C. standard.

Cat. No.	Each	No. of Lamps	DIMENS., IN.			Std. Pkg.	Shp. Wt., Lbs.
			Length	Depth	Height		
5607	\$20.00	4	30	6 3/4	9	1	28
5608	26.00	6	48	6 3/4	9	1	39

**Benjamin Bulletin Reflectors**  
For Intensive Lighting of Small Rectangular and Straight Top Signs

Particularly effective for the lighting of small rectangular signs, long, narrow ridge signs, transom signs, etc.

The distribution of this type of unit is unusually efficient, with a broad spread at top. Sign will be uniformly lighted clear to top and all along top edge. Lamp is close in to inside rear surface of reflector, which means a short cut-off behind reflector and high intensity of reflected light on the sign surface.

The body, with reflector, can be screwed to straight horizontal conduit, aluminum threaded cap removed, socket lifted out, wires fished through conduit and attached to terminals. Socket is then shoved down into place, and cap screwed on. Special shape reflector is porcelain enameled steel, green outside, white inside.

Hood is cast iron, cadmium-plated with threaded side outlet. One-piece porcelain socket, N. E. C. standard.

Tapping: 1/2 inch standard; 3/4 inch when specified.

Cat. No.	Each	Size Lamp Watts	DIMENS., IN.				Std. Pkg.	Wt., Lbs. Std. Pkg.
			Diam. B	Diam. C	Ht. A	Ht. D		
5731	\$2.40	50, 60	6	5 1/4	7 3/4	2 3/4	10	24
5732	2.50	75, 100	7	6 1/4	8 1/2	3 3/4	10	28

Prices do not include wires or lamps.

**Benjamin Emblem Reflectors**  
For Intensive Lighting of Circular Emblem and Other Small Signs  
National Electrical Code Standard

For lighting circular emblem signs of the type popularly used around automobile service and gasoline filling stations and other similar small signs.

Removable threaded aluminum cap gives easy access to wiring terminals on socket and cuts down cost of installation and wiring.

Conduit is led straight into side outlet of reflector hood. Hood, with reflector, is screwed to conduit, aluminum cap removed, socket lifted out, wires brought through and attached to terminals. Socket is then replaced in hood and cap screwed on.

Cast iron hood is cadmium-plated, with side outlet tapped for 1/2-inch standard 3/4-inch when specified.

One-piece porcelain socket, N.E.C. standard, with easily accessible terminal screws.

Symmetrical design reflector, is porcelain enameled steel green outside, white inside.

5702	2.20	75, 100	8	8	7 3/8	3 1/2	10	30

## Benjamin Dust-Tight Glass Covers

A light weight, economical device that will give the reflecting surfaces of Benjamin Industrial Lighting Equipment protection against dust and dirt.

It will give satisfactory service in the average industrial locations where fixtures are exposed only to the dust and dirt of

manufacturing operations. It is not recommended for installation where it will be subjected to acid or alkali fumes, excessive heat or continuous exposure to steam, etc.

Designed for Benjamin Reflector Equipment only. No assurance is given that it will fit other reflectors.

The cover consists of a circular felt gasket, clear glass disc and a one-piece steel retaining band, cadmium finished, having a locking lever with a compression spring.

It is easily attached—the locking lever is first released, which expands the band to its greatest diameter. Then the band is hooked over the reflector bead and the cover pushed up until the band engages the entire edge, after which locking lever is snapped into closed position.

The locking lever with compression spring gives positive tension on the band of the cover at all times. It is virtually impossible for the cover to work itself loose.

The cover in most cases weighs less than the reflector and is easily handled.

Cat. No.	Description	Std. Pkg.	Net Wt. Lbs., Each	Price Each
6408	Cover for 8-Inch Reflector	5	1	\$3.10

6420	Cover for 20-Inch Reflector	5	4 3/4	9.50

## Benjamin Gymnasium Fixtures

With RLM Dome Reflector

A completely guarded RLM fixture of good appearance, for locations where the lighting fixtures are subjected to frequent jars and hard knocks. Suitable for gymnasiums, indoor baseball courts, volley ball courts, indoor sport arenas, etc.

Special features of this fixture are: longer life; good illumination over horizontal and vertical surfaces; easy lamp removal—large opening in bottom of guard permits passage of lamp; easy cleaning; and attractive appearance.

Each unit consists of heavy gauge steel canopy and wire guard, medium or mogul base keyless socket, Reflector and Lamp Manufacturers' standard dome reflector, and four steel straps for attaching to ceiling. Canopy attaches to straps by means of four large machine screws which are furnished.

Steel canopy and wire guard are white paint enameled. Reflector is white porcelain enameled steel.

For 200-Watt Lamps

**No. 15061B Benjamin Symmetrical Reflectors Angle**

No. 15061B Reflector projects the light to the front as well as to the side and is used for illuminating post-office sorting racks, shelving, rows of books, and storage bins.

It directs the light on the working planes that need illumination, and eliminates the direct glare caused by bare lamps.

Reflector is durably constructed of rust resisting iron into which is fused the Benjamin porcelain enamel. Finish is green outside, white inside. Equipped with a built-in holder for attachment to all standard brass shell sockets.

## Benjamin Aligners with Shock Absorber

### Outlet Box Cover Type

Nos. 3366 to 3369, inclusive, have shock absorbing feature and flexible knuckle, permitting fixture to hang plumb. Fitting is supported by a cover of cast iron or steel which fastens to standard 4-inch outlet boxes and Benjamin Marine Junction Boxes as listed. Finish is galvanized.

No. 3366

Cat. No.	Each	Cover	For Box	Size Tapped In.	Std. Pkg.	Wt., Lbs. Std. Pkg.

## No. 3380 Benjamin 45-Degree Ball Fixture Aligners

### Outlet Box Cover Type

Consists of a cast iron ball which is mounted between 2 riveted steel plates. Ball is tapped for 1/2-inch iron pipe size. Has hexagon neck for gripping and holding ball when iron pipe is screwed in. Aligner tapped 1/2 inch. For standard 3/4 and 4-inch boxes.

Permits fixture to hang plumb and protects fixture against mechanical jars and shocks.

Attaches to standard box by means of 2 screws. Slot in cover of aligner eliminates necessity of removing more than one screw. Just remove one screw, back up other, slip aligner in place and replace screw. Tighten both screws to hold aligner in position. Finish, electro galvanized.

Standard package, 10; weight, 6 1/2 pounds. Price, No. 3380.....each \$ .30

## Benjamin Weatherproof Cable Suspension Fittings

Designed for quick, easy hanging of reflectors from messenger cables.

The hook and clamp construction of the fittings makes it possible to attach the reflectors to the cable with unusual speed and a minimum of effort. Permanent anchorage is assured without the use of any loops or wire clamps and rigidity of suspension is greatly increased.

### With Cross Arm

This type fitting is equipped with a cross arm having porcelain knobs at each end for supporting current carrying wires. Iron parts galvanized finish.

Cat. No.	Each	Tapped Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.
6036	\$1.65	1/2	10	22

## No. 5625 Benjamin Oxidized Aluminum Bowl Shades

This is an oxidized aluminum shade holder unit of concentrated distribution.

It can be attached to any standard brass shell socket, whether of bead type, Uno-thread or combination bead and thread type.

By adjusting the straps which attach the holder to reflector, in the slots provided, and by changing the position of the holder on the socket shell, the unit will accommodate any size lamp from 25 to 60 watts.

The shade is finished in dull green lacquer outside; oxidized aluminum inside. Straps and holder are cadmium-plated.

Cat. No.	Each	Lamp Watts	Std. Pkg.	Wt., Lbs. Std. Pkg.
5625	\$2.20	25 to 60	20	21

## Benjamin Pear Shaped Half Shades

For use with desk lamps, bracket lamps, oil gauge lamps, etc.

Fits standard brass shell sockets and takes Mazda lamps up to 60 watts.

The inside is aluminized; outside as indicated in the listing.

**No. 6848 Benjamin Water-Tight Fixtures**

**With 30-Degree Angle Reflector**

**For 150-Watt Mazda Lamps**

Heavy cast iron hood tapped for 1/2-inch iron pipe, porcelain receptacle with lamp grip. Threaded copper holder receives screw globe and 2 gaskets make fixture gas and water tight. Reflectors are of steel, porcelain enameled, finished white inside; without lamp.

FINISH.—Reflector green enameled outside, black bead. Iron hood is green paint enameled.

Diameter reflector, 16 inches. Weight each, 6 1/4 pounds. No. 6848..... each \$9.25

## No. 6896 Benjamin Drop Fixture Bodies

Heavy cast brass body is supplied tapped  $\frac{1}{2}$  inch for use with Benjamin drop fixtures and 2-piece wall fixtures.

Provided with outside thread to receive protecting guard and inside thread for standard globe.

Regularly unfinished; can be finished in dead black when specified.

Weight, 2 pounds.

No. 6896, without Plunger Key.....each \$2.00

## No. 6888 Benjamin 90-Degree Brass Angle Bracket Bodies

For 1-Piece Bulkhead or Wall Fixtures

Heavy cast brass body has outside thread to receive protecting guard and inside thread for standard screw globe.

Four holes, which take No. 10-24 screws, are provided for attaching to outlet boxes,  $4\frac{1}{2}$  inches in diameter.

Regularly furnished unfinished, but can be finished in dead black when so specified.

Weight,  $3\frac{1}{2}$  pounds.

Cat. No. 6888, Less Plunger Key.....each \$4.00

## Benjamin 90-Degree Angle Wall Brackets

For 2-Piece Wall Fixtures

Heavy cast fittings have  $\frac{1}{2}$ -inch male thread for connection to body of Benjamin 2-Piece Wall Fixtures Nos. 6820-6827.

Fittings are provided with 4 holes which take Nos. 10-24 screws for attaching to bulkhead, or to all outlet boxes  $4\frac{1}{2}$  inches in diameter.

Brass fittings are regularly unfinished, but can be finished in dead black when specified. Iron fittings are dead black.

Cat. No.	Material	Net Weight Pounds	Price Each
6894	Brass	1	\$1.70
6895	Iron	1	.80

## Benjamin Threaded Globe Holding Rings

Cast brass rings for use in connection with heavy duty water-tight fixtures; regularly unfinished but can be finished in dead black. Ring has outside thread to receive protecting guard and inside thread for globe.

6865	150	$\frac{3}{4}$	1.80

## Benjamin Protecting Guards

A brass guard which screws on outside of globe holding ring or fixture body. Used on Benjamin Heavy Duty Water-tight Fixtures and Hand portables. Finished in dead black.

Cat. No.	Fixtures Watts	Net. Wt. Lbs.	Price Each
6991	60, 100	$\frac{11}{16}$	\$2.00
6868	150	1	3.00

## R & S Vapor, Gas and Dust-Proof Fixtures

Screw Globe Type

These fixtures are designed for use in places where dampness, dust, combustible gases or corrosive vapors exist; such as for marine use, out-door use, oil refineries, grain elevators, mines, gas and chemical plants, etc.

They are so constructed that, should the protecting globe accidentally be broken, the fixture body will remain air-tight preventing vapors from entering the conduit line. Fixtures are made in cast iron (electro galvanized), cast brass and cast aluminum alloy.

### Specifications

Brass fixture bodies—standard finish is black oxidized throughout; special finishes upon request.

Iron fixture bodies—standard finish is electro galvanized.

Aluminum fixture bodies and guards—standard finish is natural aluminum color.

Reflectors are made of heavy steel, porcelain enameled green outside, white inside.

Guards are heavy gauge brass round wire, mounted on threaded brass ring; standard finish, black oxidized.

All globes are made of best American flint glass and guaranteed true to size. Only natural colored glass is used. Seating surfaces are ground true and smooth.

High grade cloth inserted rubber gaskets are furnished as standard equipment. Gaskets of other material will be supplied on request.

Receptacles are moulded composition, with shell moulded in base to provide for air-tight condition even though the globe should become broken.

Maximum size of conduit,  $\frac{3}{4}$  inch. When ordering, specify outlets required.

**R & S Swimming Pool and Fountain  
Lighting Fixtures**

Russell & Stoll Company, pioneers in the field of watertight and marine lighting, offer a complete line of underwater lighting units, perfect in every detail and suitable for every type of pool construction.

These fixtures are constructed of high grade valve bronze; equipped with polished chromium copper reflectors, clear spreadlight lens producing a wide horizontal beam of light without glare.

By the addition of color filters many attractive tints may be produced.

The illustration depicts a typical swimming pool wall construction with a No. 2362 bronze adjustable underwater floodlight in position in a cast bronze housing No. 2362H and a bronze cable box No. 2363 with cover removed and in which is coiled all surplus cable.

This floodlight pivots in the bronze housing allowing the fixture to be adjusted to the most efficient lighting angle; water cooled, because it is entirely surrounded by water when installed. By lifting floodlight out of pivot bearings in the bronze housing, fixture can be raised to surface and relamped in a few minutes without draining pool or disturbing current carrying line.

This unit will accommodate a Type G-30 floodlight lamp, 250 or 400 watts. Prices and detailed information of this fixture and various other style units covered in Bulletin 65 will be gladly forwarded upon application.

## Thompson Lamp-Maintenance Hangers

The Thompson Hanger is a safety lowering switch, adapted for use with any reflector, regardless of the kind or size, in any industrial circuit.

The hangers are made with many modifications to meet a wide range of conditions. There are three types of sheave housing, open front, the semi-enclosed and the seal type.

All line wire connections are located inside the hanger, but the wiring outside of the hanger may be either exposed or enclosed in conduit by means of appropriate fittings. Hangers providing for exposed outside wiring are termed semi-enclosed and others, conduit type.

### \*No. 93-A

No. 93-A

This model has a medium depth of canopy or enclosure, adapted for either indoor or outdoor use. It has two porcelain bushings in the back of the canopy to provide for the entrance of line wires into the hanger. Lends itself readily to either open wiring or conduit distribution.

Cat. No.	Std. Pkg.	Wt., Net	Lbs. Ship.	Price Each
†93-A	30	8	10	\$9.00

### \*No. 93-B

This model is for use where it is desired to enclose line wires directly into the hanger. This hanger is exactly like the Model No. 93-A except that instead of having two porcelain bushings, there is one hole in the back of the canopy for attaching the conduit fittings, which may be of any kind desired.

There are no porcelain knobs on this model.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
93-B	30	8	10	\$9.00

No. 93-B

### \*Nos. 94-A and 94-B

These two models have a deep skirted canopy to provide additional weather protection where it is desired.

Except for the difference in canopy, they are exactly the same as Nos. 93-A and 93-B respectively.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
†94-A	20	9	11	\$10.00
94-B	20	9	11	10.00

No. 94-A

\*These models have a sheave housing which is semi-enclosed in such a manner that it is necessary for the chain to pass in and out horizontally.

### Nos. †96 and 97

These two models correspond to the medium canopy hangers Nos. 93-A and 93-B, respectively, except that they have an open front sheave housing, which will enable the chain to operate at any angle in a vertical plane, below the horizontal, thus adapting them for use in connection with a sloping overhead support.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
†96	30	8	10	\$9.00
97	30	8	10	9.00

### Nos. †98 and 99

These models have also the open front sheave housing, but are otherwise exactly the same as the deep skirted models Nos. 94-A and 94-B.

Cat. No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping	Price Each
†98	20	9	11	\$10.00
99	20	9	11	10.00

†Porcelain knobs are provided on the sheave housing of these models only to serve as strain insulators if required.

No. 96

## Thompson Lamp-Maintenance Hangers

### Sealtype Series

No. 201-A

The Sealtype Hanger has a sheave housing designed to give the greatest possible protection against deterioration from dirt and corrosion to the wheel which is the only moving part in the upper member of the hanger.

This sheave housing is tapped for 3/4-inch conduit to enclose the chain. When the chain conduit is screwed into place the housing will be completely sealed, except for the opening in the bottom where the chain passes down inside of the hanger canopy. With this type of hanger the wheel is easily accessible for inspection.

The distinctive feature of the Sealtype Hanger series is the change in the sheave housing.

The Sealtype Hangers are offered to correspond with previously described models, as follows:

Cat. No.	Each	Corresponds to Model No.	Std. Pkg.	WEIGHT, POUNDS Net	Shipping
201-A	\$10.00	93-A	30	8	10
201-B	10.00	93-B	30	8	10
202-A	11.00	94-A	20	9	11
202-B	11.00	94-B	20	9	11

### Duplex Construction

In many plants the wiring distribution conduit will be some distance below the overhead support. To meet this condition, any of the models, except No. 95, can be supplied with the upper member in two parts, that is the sheave housing separated from the body of the hanger, and a special malleable iron flange plate tapped for 3/4-inch conduit attached to top of canopy and another one to bottom of sheave housing, in order that a piece of conduit of the desired length may be inserted between the two members thus formed.

In specifying this construction add the letter D to the model number and 50 cents each to the net price of the device.

## Thompson Shock Absorbers

All parts, except spring, are malleable iron castings galvanized; weatherproof.

The lamp or socket wires should be given a loose twist, or meshed spiral form, inside of the stem and canopy, so as to provide flexibility for the vibrating movement.

The canopies of both models come regularly with a 1/2-inch female thread at the top, but when so specified on the order a 3/4-inch male thread can be substituted. Both models have a 1/2-inch male thread at the bottom to be screwed into the lamp fixture.

Cat. No.	Each	For Lamps Weighing	Weight Pounds
80-L	\$1.50	1 1/2 to 5 Pounds	1

## No. 600 Kliegl Permanent Type Borderlights

For 60 to 100-watt clear or naturally colored lamps.  
 Furnished completely wired, with circuits ending at a special terminal block in a splice box at right or left end as specified.  
 Furnished in one continuous length, or in sections; with chains and pipe batten for hanging.  
 State length of border, number of colors and size of lamps required when ordering.  
 Prices on application.

## No. 731 Kliegl Cove Light Strips

Universally and adjustably mounted so that unit can be independently set to suit conditions; has GRC type reflectors with hinged frame for colored glass roundels.  
 Made in two sizes: No. 731 with short neck reflector for 100-watt lamps; No. 731A with long neck reflector for 150-watt lamps. Specify length of strip, straight or curved, and number of lights for each color per foot required when ordering. Prices on application.

## Kliegl Incandescent Spotlights

Prices do not include lamps.

## Kliegl Disappearing Type Footlights

No. 830

When not in use footlights may be closed down flush with stage floor, leaving an unobstructed platform. Serviceable in instances where the stage is used sometimes for entertainments and at other times for speakers and lecturers, as in schools, clubs, assembly rooms, etc.

Furnished completely assembled; in straight standard 5-foot lengths, with splice box, automatic cut-off switches and oak flooring. Receptacles wired on three 2-wire circuits for independent control of three colors. Sections have sufficient allowance to permit mitring on ends for curved installations. Special lengths, if needed.

Comply with Underwriters' requirements.  
 Lamps are not included in price.

No. 829

No. 829.....each \$50.00

No. 830

No. 830.....each \$85.00

Single row, open type footlight with receptacles for fifteen 60 to 100-watt lamps; complete 5-foot section.  
 Weight, 46 1/2 pounds.

Single row enclosed type footlight with colored glass roundels, for twelve 100-watt lamps; complete 5-foot section.  
 Weight, 56 pounds.

## Kliegl Permanent Semi-Flush Type Footlights

No. 621

Double-row enclosed type footlight with colored glass roundels; for 100 or 150-watt clear lamps.

No. 622

Single-row, open trough type footlight for 60 to 100-watt clear or naturally colored lamps. Fitted with single row medium screw base receptacles.

State length, number of colors and size of lamps required when ordering. Prices on application.

**Crouse-Hinds Floodlight Projectors**  
Medium and Long Range  
*Schedule F*

Has adjustable mountings with swivel base. By removing the base casting, a slip-fitter base is obtained which is designed to fit over pipe, the diameters of which are: Type ADA-12, 3/4-inch; Types ADA-14, ADE-14 and ADA-16, 1 1/4-inch.

Types ADA-14 and ADA-16, the standard mounting base is removed and a CGB295 connector is furnished in the top of the slip-fitter for wiring convenience. Several bases and brackets can be furnished.

**Type ADA-14** Two U-bolts are furnished with each Type ADA-12 floodlight which will clamp the floodlight to any pipe from 3/4 to 1 1/2 inches.

Type ADA-14, quadrant mounting, cast brass base; Type ADE-14, steel trunnion mounting, cast brass base.

Lamp receptacles for Type ADA-12, porcelain medium screw base (Cat. No. HL8509); for Types ADA-14 and ADE-14, Mogul screw base (Cat. No. HL2128); for ADA-16, porcelain Mogul screw base (Cat. Nos. HL2128 for PS lamp, HL7136 for G bulb lamp).

Lamps for Type ADA-12, 150-watt, PS-25 bulb; 200-watt, PS-30 bulb; or 250-watt, G-30 bulb. When using the G-30 bulb lamp, the floodlight must not be tipped more than 45 degrees below the horizontal.

Circular louvers for eliminating spill light can be provided.

Clear, pyrex, heat-resisting lens. Clear, spread or diffusing convex lenses can be furnished. Colored lenses can be furnished for ADA-12 color screens for ADA-14, ADE-14 and ADA-16.

Weight of Type ADA-12, 14 1/2 pounds; Type ADA-14, 42 pounds; Type ADE-14, 48 pounds; Type ADA-16, 66 pounds. Aluminum finish.

**Type ADA-12**

\*\*HL3252 extension for using 500 or 1000-watt G-40 lamps with this floodlight can be furnished at \$3.00.

†HL3683 slip-fitter base can be furnished separately at \$5.00, when it is desired to change from standard to slip-fitter mounting.

Catalogue numbers do not include incandescent lamps.

**Prices upon Application**

**Type ADR-12 Crouse-Hinds Floodlight Projectors**  
*Schedule F*  
Portable

Type ADR-12 Floodlight is a small compact unit especially adaptable for portable use either when a narrow beam spotlight or a wide evenly distributed beam of light is required.

Has a 1 1/2-inch crystal mirrored glass reflector with hammered surface when used with PS bulb lamp or smooth surface when used with G bulb lamp. Porcelain medium screw base lamp receptacle (Cat. No. HL8509). An adapter can be furnished for use with

21, 32 or 50 candle power, 6 or 12-volt bayonet base lamps at \$1.85 each.

Cast aluminum alloy housing. Non-ventilated, dust-tight and weatherproof.

Steel trunnion mounting with 12-inch wheel base of cast aluminum alloy.

Ten feet of rubber-covered cable is furnished with a medium screw plug. A watertight stuffing box is provided in the rear of the housing.

Clear Pyrex, or colored, convex, heat resisting lens in plain, spread or diffusing styles.

Lamps, 150-watt, PS-25 bulb; 200-watt, PS-30 bulb when used with a hammered reflector and diffusing lens for wide angle distribution; 250-watt, G-30 bulb when used with a smooth reflector and clear lens for spotlight use. When using the G-30 bulb lamp the floodlight must not be tipped more than 45 degrees below the horizontal.

Natural aluminum finish. Weight, 27 pounds.

Prices do not include incandescent lamps.

Prices upon application.

**Type LCE-24 Crouse-Hinds Floodlight Projectors**  
Medium and Long Range  
*Schedule F*

The increased efficiency of these projectors allows large areas to be lighted with a smaller number of projectors, with a corresponding decrease in installation cost, lighting load and maintenance costs. When projectors are used for lighting railroad or factory yards, the area immediately beneath the projector between the tower and the place where the main beam strikes is often quite dark. These projectors can be supplied with a large hood which reflects part of the stray light above the beam to the ground. Hood also prevents dust and soot from falling on the lens.

Cast aluminum alloy housing; dust-tight and weatherproof.

Crystal glass reflector with smooth or hammered surface, 24-inch diameter.

Porcelain Mogul screw base lamp receptacle. (Cat. No. HL8751.)

Clear, convex, Pyrex heat-resisting lens. Spread or diffusing convex, heat-resisting lens furnished without additional charge, if specified on the order.

Lamps, 750 to 2000-watt, PS-52 bulb; 1000 or 1500-watt, G bulb.

Case, natural aluminum finish; base and trunnion, galvanized.

Prices upon application.

## Type LCE-1120 Crouse-Hinds Floodlight Projectors

Schedule F

### Medium and Long Range

For use with 1500-watt lamps. The use of this projector reduces the installation cost, lighting load and maintenance cost for the illumination of large areas. Can be arranged with plain, spread or diffusing lens.

Has a 20-inch, crystal mirrored glass reflector either narrow or wide beam. The wide beam is recommended for everything except very long range projection. Mogul screw base lamp receptacle (Cat. No. HL7012).

Has 3-way focusing mechanism, operated from the outside of the case.

Steel trunnion mountings on cast feraloy base. Both horizontal and vertical adjustable stops are provided. The floodlight can be turned around or tipped over for convenience in relamping and cleaning, and returned to its exact original setting. Special bases for various mounting conditions can be furnished.

A 3-foot lead of 2-conductor, rubber-covered cable is furnished. The cable enters the housing through a water-tight stuffing box. Each wire covered with slow-burning insulation.

Case is natural aluminum finish; base and trunnion, galvanized finish.

LCE-1120	Wide Beam	41550	750 to 1500	PS-52	115

Prices do not include incandescent lamps.

Prices upon application.

## Crouse-Hinds Underwater Floodlights

Schedule F

Developed for submersion in water, such as in fountain and swimming pool installations. Provided with 2 tapped holes for connection to 3/4-inch flexible drain hose.

Type FDS-12 is especially adapted to underwater lighting of swimming pools by wet-niche method. Wet-niche bracket mounting allows unit to be lifted from its brackets and raised to surface of pool for relamping. Can also be furnished with angle bracket mounting for fountains.

Types FDE and FDV provide adequate lighting for any size or type of fountain. Type FDE-12 has a trunnion and swivel base. Type FDV-12 has a servicing pedestal which allows floodlight to be raised above water for relamping when mounted just below surface of water in a fountain.

Has porcelain mogul screw base lamp receptacle (Cat. No. HL7136). Has a 12-inch silvered glass reflector.

Lamps are 500-watt, 115-volt, G-40 bulb. Can be arranged for use with 250-watt, G-30 bulb or 400-watt, G-30 bulb.

## Crouse-Hinds Floodlights

### Short and Medium Range

Schedule F

Type RM

Type RME

Type RMU with Hood

Types RM and RMU Floodlights meet lighting requirements in roundhouses, steel mills, on construction work or wherever stationary, strong, gas and moisture-proof illuminating units are desired. When mounted in roundhouses or other buildings where corroding vapors circulate, they offer full protection against the damage to which exposed lights and wiring systems in such locations are subjected.

Type RM floodlights are designed for fastening to a flat surface and projecting light at right angles to the plane of the surface. Fastened by 4 lugs on back.

Type RMU floodlights have a universal wall bracket, which allows the beam of light to be directed where desired.

Type RME is a rugged, cast feraloy floodlight for portable use. Is trunnion mounting. Used where it is desired to transport the light to the job, also when working under eaves and locomotives.

Has porcelain enameled steel reflector. Porcelain enameled reflector used for wide spread beam and short range. Hammered glass reflector concentrates light for projection to a greater distance.

Porcelain, medium screw base lamp receptacle (Cat. No. HL674). Mounted on bracket adjustable with screw-driver.

Wiring connections for Types RM and RMU, 3/4-inch threaded hubs at top and bottom. A pipe plug is furnished to close the unused hub. For Types RM and RME, two 3-foot leads of No. 14 gauge stranded wire. For Type RMU, 30 inches steel armored cable with 2 CGB285 connectors.

Cast feraloy housing. Gas and moisture proof. Cast feraloy door frame, gasketed to exclude gas, moisture and dust from interior. Held in place by 3 swivel bolts with capped wing nuts.

Clear, convex, heat-resisting lens. Spread or diffusing convex, heat-resisting lens can be furnished.

For 10-inch floodlight, 60 or 100-watt A bulb lamps; for 12-inch floodlight, 150 or 200-watt PS bulb lamps.

Baked black enamel finish.

**Type MPA-1 Crouse-Hinds Floodlights**

**Short Range—Open Type**

*Schedule F*

With Cross-Arm Base

Short range, wide angle floodlight designed for illumination of gasoline service stations, tennis courts, playgrounds, swimming pools, parking lots, football fields and similar places. Has Mogul screw base skeleton lamp receptacle (Cat. No. HL7012).

The cross-arm mounting bracket of cast aluminum terminates in a round plate with a hole for  $\frac{3}{4}$ -inch bolt in the center. The bracket can be bolted to a wood or steel cross-arm.

The slip-fitter mounting consists of a cast aluminum bracket and slip-fitter for 1 $\frac{1}{2}$ -inch pipe.

The steel pole-bracket is drilled for two  $\frac{5}{8}$ -inch bolts or lag screws. Can be fastened to side of a wood pole or building.

Lamps are 1000, 1500 or 2000-watt, PS-52 bulb General Lighting Service. White bowl lamps can be used to reduce glare. Hard glass lamps are recommended as they reduce breakage caused by driving rain or snow.

Two leads, No. 12 asbestos-wrapped wire, attached to the lamp receptacle run through hollow support arm. Adapter cap for overhead wiring can be furnished with slip fitter mounting. Cross-arm and pole bracket mountings furnished with a wire outlet in bottom of bracket arm, which consists of a porcelain 1-wire cover; diameter of hole,  $\frac{5}{8}$  inch.

No. HL3935, Overhead Feed Cap Only.

Prices do not include incandescent lamps.

Prices upon application.

**Type MPA-2 Crouse-Hinds Floodlights**

*Schedule F*

**2-Lamp—Open Type**

Cross-Arm Mounting

Particularly adapted to the lighting of baseball parks, football fields, swimming pools, play grounds, tennis courts and gasoline service stations. Its size, shape and reflecting surface combine to make an efficient unit. Can be mounted on wood or steel poles, cross arms, steel towers or on sides of buildings.

Has 2 Mogul screw base skeleton lamp receptacles (Cat. No. HL7012). The 30-inch reflector is of copper-bearing steel with a 3-layer mat white porcelain enamel finish inside and a blue porcelain enamel finish outside.

Cross-arm mounting bracket of cast fer alloy terminates in a round plate with a hole for a  $\frac{1}{2}$ -inch bolt in the center and a cast quadrant slot. Bracket can be bolted to cross-arm.

Slip-fitter mounting is for 2 $\frac{1}{2}$ -inch pipe. Furnished with a wire outlet so that wires can be brought through the steel pole and out at the slip-fitter. Slip-fitter is attached to the standard bracket with two  $\frac{1}{2}$ -inch cap screws which are furnished with it.

Pole-bracket mounting is  $\frac{1}{4}$ -inch pressed steel formed to fit the pole. It is attached to the standard bracket with two  $\frac{5}{8}$ -inch bolts or lag screws.

Three asbestos-wrapped wire leads attached to lamp receptacles, one wire being common; run through hollow bracket arm and are long enough to permit splicing to rubber-covered wire.

Two 750, 1000, 1500 or 2000-watt, PS-52-bulb, General Lighting Service lamps. White bowl lamps reduce glare; hard glass reduces breakage caused by driving rain or snow.

Prices do not include incandescent lamps.

Prices upon application.

**Crouse-Hinds Floodlights**

*Schedule F*

Designed for the illumination of football fields, indoor baseball fields, parking spaces, gasoline service stations, and other areas of similar nature. Can be furnished with heat-resisting clear lenses or without lenses.

Aluminum finish. Has Mogul screw base lamp receptacle (Cat. No. HL7012).

Lamps: 1000-Watt Floodlight—750 or 1000-watt, PS-52 bulb, 110-volt General Lighting Service lamps; 1500-watt, PS-52 bulb lamp can be used in the unit without lens; 500-Watt Floodlight—300 or 500-watt, PS bulb, 110-volt General Lighting Service lamps.

Furnished with 3 feet of 2-conductor duplex cable. This cable has a very heavy weatherproof rubber jacket. The individual wires are insulated with slow-burning insulation of Type AF construction. The cable enters the housing through a stuffing box with tapered rubber bushing. The rubber jacket is cut away where it enters the housing, leaving only the slow-burning insulation inside the unit.

Where a group of floodlights are to be connected to open wiring, these floodlights can be furnished with Type FBB-2 Condulets and short leads of asbestos-covered wire instead of the duplex cable. This can be done without extra charge if specified on the order.

## Crouse-Hinds Industrial Lighting Units

Schedule F

Type RLS

Type RLU

Types RLS and RLU Industrial Lighting Units meet lighting requirements in roundhouses, steel mills or wherever a strong, stationary, gas and moistureproof illuminating unit is desired. When mounted in roundhouses or other buildings where corroding vapors circulate, they offer full protection against the damage to which exposed lights and wiring systems in such locations are subjected.

Reflectors are porcelain enameled steel. Size 12 or 16 inches.

Medium screw base lamp receptacles for Types RLS-12 and RLU-12 (Cat. No. HL8079); skeleton mogul screw base for Types RLU-16 and RLS-16 (Cat. No. HL7012).

Type RLS has suspension mounting. Type RLU has universal wall bracket.

Cast feraloy or cast silicon aluminum alloy housing; gas and moisture-proof.

Wiring connection of Type RLS, direct to conduit by 3/4-inch pipe. Type RLU connects to conduit by a flexible, steel armored cable and 2 CGB285 connectors, making a gas and vaporproof connection.

Clear, convex, Pyrex, heat-resisting lens. Diffusing, convex, heat-resisting lens can be furnished.

Cast feraloy or cast silicon aluminum alloy door frame held against an asbestos gasket by 3 swivel bolts and capped wing nuts. Door is hinged on one side.

Cast aluminum door and frame, natural aluminum finish; cast feraloy door and frame, black enamel finish.

## Type GCP-14 Crouse-Hinds Lantern Floodlights

Schedule F

### With Floodlighting Reflector

With 4-Inch Slip-Fitter

An ornamental type floodlight designed for illumination of buildings, gasoline service stations and other subjects where the appearance of the lighting unit is a factor of importance. Daytime appearance is that of an ornamental street lantern; at night the reflector on the inside transforms it into a powerful floodlight.

This lantern is listed in 2 ways. Form A for use in lighting buildings or other subjects where beam is directed above the horizontal. Sufficient light is reflected below horizontal with this type to illuminate lower portion of buildings. Has a heat-resisting top canopy. A horizontal adjustment of 45° is provided so that the beam can be turned to strike building at an angle, and still have one side of lantern parallel with building. Form B lantern furnished with one side panel of heat-resisting glass. Beam passes through this panel and the horizontal adjustment of reflector is locked. This type is intended for lighting ground areas and low buildings, such as gasoline service stations.

Has 14-inch hammered mirrored glass reflector (Cat. No. HL3862). Main floodlight lamp receptacle is porcelain Mogul screw base (Cat. No. HL2128); auxiliary lamp, porcelain medium screw base (Cat. No. HL6019); unit without reflector, Mogul screw base or series film cutout. Two leads of asbestos-wrapped wire are connected to lamp receptacle and extend one foot through bottom lantern. Frame is of cast aluminum alloy. Metal portions painted green on outside.

Usually mounted at curb line on ornamental posts when used for lighting buildings. Should be mounted from 8 to 14 feet above ground, poles spaced not closer than 20 feet apart. Table below gives maximum distances between poles for different sidewalk widths, for single units.

Sidewalk Width	10 feet	15 feet	20 feet
Maximum Spacing Between Poles	30 feet	45 feet	60 feet

Slip-fitter mountings for 4-inch pipe or 7-inch ornamental pole top. An adapter can be supplied for 4-inch slip-fitter to take 2 1/2-inch pipe. A cast feraloy double bracket can be supplied with slip-fitter for 4-inch pipe at bottom and arranged to take 2 Type GCP-14 lanterns with 4-inch slip-fitter bases. An ornamental cast feraloy base can be furnished with or without a pole. Top of base is tapped for 4-inch pipe. Base is attached to a concrete foundation by four 3/4-inch bolts, spaced 90° apart on a circle of 6 5/8-inch radius.

Main floodlight lamps are 300 to 1500-watt, PS bulb. When used with HL3252 adapter, 500 to 1500-watt, G bulb lamps can be used. Auxiliary lamp, any medium screw base lamp up to 200-watt, PS-30 bulb.

### With Wide Beam Reflector

Catalogue numbers do not include incandescent lamps.

Prices upon Application

**Type RDC-8 Crouse-Hinds Floodlights**  
For Lighting Pits, Auto Lifts and Underpasses

Schedule F

Form F

Form W

This floodlight is designed for mounting in concrete. It is made in 2 styles, one for floor mounting and the other for wall mounting.

Form F is designed for mounting in the floor. It is water-tight, with a door that overlaps the case, and yet the projection above the concrete is only about 3/16 of an inch. The surface of the door has a rough pebbled surface which prevents its becoming slippery. Has a wide, flat gasket between the door and the case. It is provided with a flat lens which is heavy enough to allow it to be stepped on or driven over and offers great resistance to tools or other articles that might be dropped on it. Can also be furnished with a new type of glass lens which has been treated to increase its resistance both to impact and to a static load. It is approximately 4 times as strong as any other heat-resisting glass, and is practically unbreakable under any conditions normally encountered. This special glass is available only in the plain type.

Any unit installed in the floor should be provided with a 1/2-inch drain pipe connecting the tapped drain hole in the bottom of the housing with a sewer. This provides a drain for condensation and maintains atmospheric pressure inside the unit. If connection to a sewer is not practical the drain pipe can be run several feet into the ground into a hole filled with crushed stone.

Form W is similar to Form F, except it is provided with a hinged and flush door, so that it can be set absolutely flush with the concrete wall. It can also be mounted on the wall by using the L bracket and mounted on the ceiling by using the Z bracket. This unit provides lighting for pits, underpasses, tunnels, washracks, etc. The refracting lenses can be set to refract the light either up or down.

Has an 8-inch porcelain enameled steel reflector. A silvered glass, narrow beam reflector can be furnished. Porcelain medium screw base lamp receptacle (Cat. No. HL6019).

Two 3/4-inch hubs are provided, one on each side of the housing so that wiring can be carried through the unit when several floodlights are mounted in a row. The reflector should be removed from the floodlight when wiring. Wire with slow-burning insulation must be used.

Form W has 8 3/8-inch flat, heat-resisting glass or flat refracting lens which projects the light in one direction. Form F has 8 1/2-inch flat, heat-resisting glass, impact-resisting, or flat, refracting lens.

Lamp, 100-watt, A-23 or PS-25 bulb; 150-watt, PS-25; or 200-watt, PS-30 bulb. Lamp receptacle bracket is adjustable and can be set for any of these lamps by loosening 2 screws and sliding the bracket until lamp filament is at the center of reflector. Unless otherwise specified, all units furnished with lamp receptacle set for 200-watt lamps.

Black enamel finish.

Prices do not include incandescent lamps.

Prices upon Application

**Crouse-Hinds Type RCDE-8 Floodlights**  
Explosion Proof—For Use in Hazardous Locations

Schedule F

Portable Unit

Designed to meet the requirements of an explosion-proof lighting unit. Recommended for lighting automobile greasing pits and lifts, and also for general use in hazardous locations. Can be supplied with mountings for fixed installation or portable use.

Can be furnished with trunnion mounting and either with or without carrying handle and wheel base. Recommended for use around oil refineries, chemical plants, and for lighting spray booths from the outside. For short range lighting, the 8-inch porcelain enameled steel reflector should be used; for longer range or for spotlight applications, the silvered glass reflector provides a narrower beam.

Has medium screw base receptacle (Cat. No. HL 6019).

The wiring chamber is separated from the floodlight housing by a wall and the point where the wires pass through the wall is sealed with a special compound. Two 3/4-inch hubs are provided, one on each side of the wiring chamber. Ample room is provided for splicing. In some cases, particularly when the unit is mounted in the floor it is advisable to fill the wiring chamber with compound after making the splice. A threaded cover is provided for the wiring chamber. Thirty feet of 3-conductor No. 16 cable is furnished.

Plain, impact and heat-resisting 8 1/2-inch lens (Cat. No. HL 5196). A refracting screen (Cat. No. HL5413), designed to refract the light in one direction, can be furnished. A heavy steel grid is provided over the lens.

Lamps are 100-watt, A-23 or PS-25; 150-watt, PS-25; or 200-watt, PS-30 bulb. For long range, narrow beam, 250-watt, G-30 bulb floodlight service lamp should be used. Unless otherwise specified, all units are furnished with lamp receptacle set for 200-watt lamp; if 250-watt lamp is to be used a special lamp receptacle and adapter are supplied.

Diffusing Lens

Spread Lens

All floodlight projectors listed are supplied with plain, convex, Pyrex, heat-resisting lenses. Unless another lens is specified, plain lens will be furnished. The plain lens does not alter the beam spread of the floodlight in any way.

It is often desirable to increase the natural spread of a floodlight beam either in all directions or in one direction only. To meet this condition, two different types of lenses as described below can be supplied. There is no additional charge for these lenses.

The convex, heat-resisting diffusing lens spreads the natural beam both horizontally and vertically, giving a larger light spot. This lens is used where the natural spread from the floodlight is not sufficient to cover the area desired. Diffusing lenses should not be ordered with any projector arranged for use with concentrated filament lamps, as these lamps are used to secure a narrow beam spread.

The convex, heat-resisting, spread lens spreads the light at right angles to the direction of the ribs, leaving the spread in the other direction the same. The resulting beam is elliptical in shape. When the ribs are vertical, the beam is spread horizontally and when they are horizontal, the beam is spread vertically. The lens can be set at the factory for either spread, and the order should specify which is desired. This type of lens is useful when lighting rectangular areas. The nominal beam spread produced with the standard spread lens is 45 to 50 degrees. The actual beam spread depends on the characteristics of the floodlight with which the lens is used.

To obtain the Cat. No. and list price of any lens, refer to table No. 1 for the diameter of lens required to fit the floodlight; then under table No. 2 will be found the Cat. No. and price of the style of lens of that diameter.

**Type DCB24 Crouse-Hinds Airport Revolving Beacons**

Conforms to requirements of the Department of Commerce. Housing, trunnion arms and base are cast aluminum alloy.

Optical system consists of 24-inch diameter, 10-inch focus precision parabolic glass reflector and 1000-watt, 115 or 30-volt, T20-bulb airway beacon lamp. Two incandescent lamps, mounted in an automatic lamp-changer, are used.

The front lens is a 1-piece, convex, heat-resisting roundel which produces a double beam of light. The main beam, consisting of 85% of the reflected light, passes straight through the lens, while the remaining beam is directed upward 25°.

Beacon revolves at 6 r.p.m.

**With Automatic Lamp-Changer**

**Type DCE-24 Crouse-Hinds Airport Floodlights**  
*Schedule F*

Type DCE-24 Airport Floodlight is used to light the landing area of an airport with from 3 to 8 floodlights grouped together, and the beams overlapped.

Furnished with a commercial precision mirrored glass reflector, 25 inches in diameter.

The housing is cast aluminum non-corroding alloy, one-piece, non-ventilated, dust-tight and weatherproof.

The door frame is hinged at side and clamped to the housing with 6 rugged C clamps.

Spread convex heat-resisting lens giving horizontal beam spread of approximately 40° or 80° can be furnished.

The focusing mechanism is 3-way, operated from outside of housing.

Louvers or vanes are attached to the door frame and are designed to cut off all direct lamp rays above the horizontal.

Type	Cat. No.	Description	LAMP			Wt. Lbs.
			Watts	Volt	Bulb	
DCE-24	40775	With 40° Spread Lens	3000	32	GT-38	122
DCE-24	40783	With 80° Spread Lens	3000	32	GT-38	122

Prices upon application.

**Type APW-3 Crouse-Hinds Airport Wind Cone Fixtures**

Every airport should be equipped with one or more wind direction indicators so that a pilot taking off or landing can readily ascertain the wind direction.

The wind direction indicator should be illuminated at night and the Crouse-Hinds Type APW-3 wind cone fixture is correctly designed to illuminate the wind cone. It consists of four weatherproof condulets with suitable deep bowl reflectors for 100-watt lamps, and an obstacle light mounted in the center of the cross.

The obstacle light is tapped on the bottom for a 1-inch supporting pipe, and has four 3/4-inch hubs 90° apart for the arms supporting the condulets with reflectors.

The length of the arms between the center obstacle light and the condulets on the arms should be governed by the length of the wind cone and the distance the cone is below the lighting units. Arms from 2 to 4 feet long are necessary.

Reflectors take 100-watt, 115-volt, A23-bulb lamps. Obstacle lights take 60-watt, 115-volt, A21-bulb lamps.

Cat. No.	Description	Weight Pounds
APW-3	Wind Cone Fixture Complete, Less Conduit	30
VAPX32175	Obstacle Light Only	4 3/4
V2847-S4	Condulet and Reflector Only	6 1/2

Prices upon application.

**Crouse-Hinds Ceiling Height Projectors and Indicators**

*Schedule F*

**Type DCE-14 Projector with Flange Base**

**Ceiling Height Indicator**

Every airport should be equipped with a ceiling projector and a ceiling height indicator by means of which the ceiling, or height of the clouds above ground, can be measured.

Projector is a powerful searchlight, the beam of which is pointed upward to the clouds, and indicator is a quadrant graduated directly in feet.

Projector has cast aluminum alloy housing, 14-inch diameter parabolic glass reflector, heat-resisting lens.

System of louvers cuts off all spill light.

**Type DCE-14 Ceiling Height Projector**

Prices upon application.

## Crouse-Hinds Airport Boundary, Obstacle and Approach Lights

For Series or Multiple Circuits  
Schedule F

No. VAW5440

No. VAP3170

No. VAP6491

It is customary to outline a landing field with boundary lights so that a pilot will know the shape and extent of the field. These boundary lights should either have frosted globes or be used with frosted lamps.

All multiple lamps which are used in boundary light circuits have inside frosted bulbs so that clear enclosing globes are desirable.

Red globes should be used on all obstacle lights. Green globes should be used on approach lights to mark the best approaches to the field.

Housing is cast aluminum. Guards can be furnished for the fixtures equipped with the plain globes. No guards are available for the units with the Holophane globes.

In all of these fixtures the globe seats on a rubber gasket. In the case of the plain globe units another gasket is used between the globe flange and the retaining ring or guard to further protect the glass.

Sufficient space is provided in the base of all units for convenience in making the electrical connections.

### Series Circuit

Take 6.6-ampere, 600 or 1000-lumen, S-24½ clear bulb lamp.

## Type APB Crouse-Hinds Disconnecting Boundary, Obstacle, and Approach Lights

With Spring Clip Series Receptacle

This light consists of two parts: a ground receptacle which is permanently fixed in the ground, and to which the underground cable is connected; and the disconnecting boundary light takes the form of a cone of metal with suitable wings, on top of which the boundary light is mounted and, when struck by a ship, the light is merely pulled from its ground receptacle and falls over on the ground. The ground receptacle is of the series type, and when the disconnecting

boundary light is pulled from the receptacle, the circuit is immediately restored. A ship striking one of these lights cannot be seriously damaged, since only a little force is required to push the boundary light over.

The standard is a cone of metal 12 inches in diameter and 24 inches high, equipped with four wings 12 inches square, thus making it much more visible than the ordinary pipe standard. The light can be equipped with a guard around the enclosing globe and a reflector attached to the guard which collects the light from the lower half of the lamp and throws it downward on the cone and wings, thus materially increasing the visibility at night. The light is thus thrown not only on the wings and cone but also on the ground immediately adjacent to the boundary light. In the bottom of the cone there is a bead which engages three springs having sufficient tension to prevent the wind from blowing over the boundary light.

The ground receptacle which holds the short circuiting spring clip series receptacle also forms a support for the cone. The design of the plug and receptacle is such that surface water on the field cannot get to the contacts, and when the boundary light is knocked over a door comes down over the receptacle and closes the opening. The housing of the ground receptacle is made of heavy cast ferrous alloy finished in black enamel. The disconnecting boundary light is made of cast aluminum together with a cast bronze guard and cast aluminum reflector. The cone and wings are made of lead-coated Armco Iron, or Keystone Copper Steel and will resist corrosion for a long time. The cable from the boundary light fixture to the disconnecting plug is extra heavy weatherproof cable, and the plug is equipped with a suitable watertight stuffing box. The cable is securely anchored to the boundary light. There is a hand hole in the side of the boundary light cone through which it is possible to reach the receptacle and insert the plug to complete the circuit.

A field one mile square can be bounded with Type APB disconnecting boundary lights without the use of line insulating transformers, resulting in a much cheaper installation on large fields.

Takes 600 or 1000-lumen, S24½-bulb, 6.6-ampere series lamps.

**No. 2639 Eveready Special Flashlights**

Case is silver and black striped. Size,  $6\frac{3}{4} \times 1\frac{1}{2}$  inches. Uses 2 No. 950 batteries and No. 7161 Mazda lamp. No. 2639, Complete with Batteries.....each \$ .45

**No. 2649 Eveready Focusing Flashlights**

Case is silver and black striped. Size,  $6\frac{1}{8} \times 1\frac{1}{2}$  inches. Uses 2 No. 950 batteries and No. 1161 Mazda lamp. No. 2649, Complete with Batteries.....each \$ .59

**No. 2604 Eveready Tubular Flashlights**

Furnished in black only. Bulls-eye lens; octagonal lens ring and safety-lock switch. Equipped with ring hanger. Size,  $6\frac{3}{4} \times 1\frac{1}{2}$  inches.

Use two No. 950 unit cells; No. 1161 Eveready Bulb; No. 14 Mazda Bulb. Unit package, 1. No. 2604, without Batteries.....each \$ .75

**No. 2671 Eveready Flashlights**

400-Foot Range

A 2-cell focusing flashlight, equipped with octagonal lens ring, lens retaining ring, safety-lock switch and ring hanger. Finish, black. Size,  $7 \times 1\frac{1}{2}$  in. Use unit cell No. 590; lamp No. 1611. Unit package, 4.

No. 2671, Without Batteries.....each \$ 1.05

**No. 2619 Eveready Miners' Flashlights**

Black metal case; beveled lens; octagonal lens ring and safety-lock switch.

Equipped with ring hanger.

Size  $1\frac{1}{2} \times 8\frac{7}{8}$  inches.

Use 3 No. 950 unit cells; No. 1162 Eveready Bulb; No. 17 Mazda Bulb.

Unit package, 1.

Price does not include batteries.

No. 2619.....each \$ 1.45

**No. 2672 Eveready Focusing Flashlights**

500-Foot Range

A 3-cell flashlight with beveled lens; octagonal lens ring with safety lock switch. Equipped with focusing device. Light can be focused to as sharp a point as desired merely by turning the end cap.

Has black metal case.

Size,  $1\frac{1}{2} \times 9\frac{1}{4}$  inches.

Use unit cell No. 950. Use lamp No. 1162.

Unit package, 1.

No. 2672, Without Batteries.....each \$ 1.45

**No. 2642 Eveready Focusing Flashlights**

800-Foot Range

A 3-cell flashlight equipped with focusing device and parabolic silvered reflector, non-rolling lens ring.

Black metal case with nickel-plated fittings.

Size,  $9\frac{1}{2} \times 1\frac{1}{2}$  inches.

Use unit cell No. 950. Use lamp No. 1162.

Unit package, 1.

No. 2642, without Batteries.....each \$ 2.20

**No. 2645 Eveready Flashlights**

5-Cell, Focusing

Used wherever exceptional power and range must be combined with portability. A few turns of end cap make light suitable for close up work, beam changing from a narrow penetrating shaft of light to a diffused and widespread ray.

Has beveled plate-glass lens, octagonal non-rolling lens ring, safety-lock switch, ribbon-design case and new ring hanger. Made in nickel-plated finish only. Size  $14\frac{1}{2} \times 1\frac{1}{2}$  inches. Use 5 No. 950 unit cells; No. 1163 bulb.

No. 2645, without Batteries.....each \$ 2.50

**No. 2647 Eveready Special Focusing Flashlights**

2000-Foot Range

This powerful flashlight is ruggedly constructed and low-priced.

Case is silver and black striped.

Uses 5 No. 950 Eveready batteries and Eveready Mazda lamp No. 1168.

Size,  $14\frac{1}{4} \times 1\frac{1}{2}$  inches. Packed in individual cartons.

No. 2647, without Batteries.....each \$ 1.00

**No. 2695 Eveready Mine Safety Flashlights**

A 3-cell safety light, nickel finish. Size,  $9\frac{1}{4} \times 1\frac{1}{2}$  inches.

Classified as permissible by Bureau of Mines, U.S. Department of Commerce, and carries Underwriters Laboratories' approval for use in Methane and air mixtures, and gasoline vapor.

Bulb is spring mounted and is so arranged that if the bulb glass is shattered the electric circuit will be instantly opened before the lamp filament can ignite inflammable or explosive mixtures of gases in the surrounding atmosphere. Fitted with a special lens made of extra heavy glass and a special projecting lens ring.

Unit package, one.

No. 2695, Without Batteries.....each \$ 3.95

## No. 2697 Eveready Boy Scout Flashlights

A 2-cell focusing light finished in khaki and equipped with ring hanger, belt clip and safety-lock switch. It carries the official Boy Scout insignia.

Size  $7\frac{3}{8} \times 1\frac{1}{2}$  inches.

Use two No. 950 unit cells; No. 1161 bulb.  
No. 2697, without Batteries.....each \$1.30

## Eveready Flashlights with Ring Hangers

All Eveready Flashlights, with the exception of pocket and lantern types, are now equipped with the ring hanger.

All Eveready Flashlights, both black and nickel, are furnished with ribbon design cases.

These are exclusive Eveready features.

## Eveready Unit Cells

The hours of service are definitely guaranteed.

## No. 409 Eveready Lantern Batteries

A 4-cell lantern battery for use in railroad lanterns.

Size,  $3\frac{29}{32} \times 2\frac{3}{4} \times 2\frac{3}{4}$  inches.

Unit package, 1.

Weight, 22 ounces.

No. 409.....each \$.40

## Excellight Portable Searchlights

No. 8-A

No. 8-B

This weatherproof light gives either a powerful concentrated searchlight effect that will pierce dense smoke or darkness or may be immediately changed to a diffused spreading light. Furnishes a ray of light that will show the way for a distance of 600 feet. The possibility of giving any lighting effect between these two extremes makes this searchlight invaluable.

Height, 11 inches.

Furnished with two No. 6 dry cells.

No. 8-A, Wt.,  $7\frac{1}{2}$  Lbs. ca. \$12.50

No. 8-B, Wt.,  $8\frac{1}{2}$  Lbs. ea. 14.50

No. 8-C, Wt.,  $8\frac{1}{2}$  Lbs. ea. 14.50

Adjustable Shoulder

Straps.....each 1.50

Extra Bulbs.....each .50

No. 8-C

## No. 3 Eveready Pocket Lights

A press on the button and entire lens slides forward and becomes fully illuminated; depress lens and light goes out.

Polished nickel case decorated with black and red enamel. Size,  $2\frac{1}{2} \times 1\frac{1}{8} \times \frac{5}{8}$  inches. Uses 1 No. 706 Eveready battery and No. 1180 Mazda lamp.

No. 3, without Batteries.....each \$.85

## No. 10 Eveready Spotlight Lanterns

Case is red enameled; bail, switch and reflector are nickel-plated.

Size,  $2\frac{5}{8} \times 2\frac{3}{8} \times 1\frac{3}{8}$  inches.

Uses 2 No. 935 batteries and solid glass spotlight lamp No. 1174.

No. 10, Complete.....each \$.59

## No. 1653 Eveready French Colonial Electric Candles

For use on the dinner table, telephone stand, in the nursery or sick room, etc.

Has a rich satin, silverlike finish, known as Butler finish.

Height, .. inches; width at base, .. inches.

Uses 2 No. 935 Eveready batteries and No. 1173 Mazda lamp.

Unit package, 3.

No. 1653, without Batteries.....each \$1.80

## No. 1654 Eveready Electric Candles

A switch in the base automatically turns the light on or off each time it is picked up or set down. It can be turned on permanently if a permanent light is desired for use on dinner tables, telephone stands, etc.

Has a rich satin silverlike finish, known as Butler finish. Bulb is housed in a casing of moonstone glass.

It is equipped with a band containing radium spots so that it can be easily located in the dark.

Height,  $6\frac{3}{4}$  inches. Width at base,  $2\frac{9}{7}$  inches. Use unit cell No. 935. Use lamp No. 1197.

Unit package quantity, 6.

No. 1654, Including Lamp and Batteries.....each \$1.00

## Eveready Wallites

For use any place where regular wired outlets are not desired or are impossible.

Finished in ivory. Unit package, 3.

### No. 4757

Size,  $5\frac{3}{4} \times 3\frac{3}{8} \times 2\frac{1}{4}$  inches. Uses 2 No. 950 Eveready batteries and No. 1166 Mazda lamp.

No. 4757, without Batteries....each \$1.30

### No. 4758

Gives twice as much light as No. 4757. Equipped with time-switch which automatically turns off light after a short period, preventing battery waste. Light can also be left on indefinitely if desired.

Size,  $6 \times 4\frac{1}{2} \times 2\frac{1}{2}$  inches. Uses 3 No. 950 Eveready batteries and No. 1167 Mazda lamp.

No. 4758, without Batteries...each \$1.65

No. 4758

**No. 6 Eveready Columbia Ignitor Dry Cell**  
With Screw Connections

A special high grade cell designed for all heavy service. It is particularly adapted for motor ignition. A set of ignitors will keep the engine running smoothly until every bit of current is exhausted.

Equally satisfactory for motor boats, gas engines, and in fact, any service where a reliable, long life battery is needed.

These batteries are carefully packed from fresh stock, and guaranteed to reach their destination in perfect condition.

Voltage, 1½.  
Width, 2½ inches.  
Height, 6 inches.

Packed 25 to a standard package.  
Weight of standard package, 57 pounds.

No. 6.....each \$ .37

**Columbia Gray Label Dry Cell**

This battery is especially designed for telephone work and light-drain service.

Fahnestock spring binding posts are furnished without extra charge when requested.

Voltage, 1½.  
Diameter, 2½ inches.  
Height, 6 inches.

Quantity in standard package, 50.

Approximate weight of standard package, 120 pounds.

Price.....per cell \$ .35

**No. 6 Hercules Dry Cell Batteries**

This battery is reasonably priced and will offer satisfactory service under all conditions.

No. 6.....each \$ .27

**Eveready Columbia Hot Shot Batteries**

Cells are connected by soldered copper strips and encased in a single metal container. The advantages of this new type covering are the ability to withstand rough usage, water-proof, thoroughly insulated to prevent internal short circuits and a woven fabric handle for convenience in carrying.

**No. A-600 Eveready Air Cell A Batteries**  
For Air Cell Receivers

An air depolarized constant voltage, non-rechargeable primary battery, especially made only for use as the A battery for air cell receivers.

Capacity is sufficient to operate an approved receiver for at least 1000 hours. Uses liquid electrolyte, but is shipped dry, and so undergoes no depreciation until activated. It is activated

for service by filling with water.

Length, 13 1/2 inches; width, 6 3/4 inches; height over all, 11 inches. Capacity, 600 ampere-hours; maximum load to which battery should be submitted, 650 milli-amperes.

Weight: dry, 25 pounds; filled with water, 37 pounds.

No. A-600.....each \$8.50

**No. 768 Eveready B Batteries**

Horizontal Type, 22 1/2 Volts

Suitable for portable sets where light weight and small size are essential, and for self-contained sets having battery compartments too small to permit the installation of a larger B battery.

It has plus 6, plus 18 and plus 22 1/2-volt taps, which permit of its use as a C battery in connection with power tubes.

Length, 4 1/16 inches; width, 2 9/16 inches; height, 2 3/4 inches.

Weight, 1 pound, 9 ounces.

No. 768.....each \$1.25

**No. 485 Eveready Layerbilt Radio B Batteries**

Vertical Type, 45 Volts, Medium Size

Made of flat layers of current producing elements compressed one against another, so that every cubic inch inside the battery case is completely filled with electricity-producing material.

Equipped with 3 Fahnestock clips giving voltages of 22 1/2 and 45.

This battery is 8 3/16 inches long, 3 1/4 inches wide and 7 1/8 inches high.

Weight, 9 1/2 pounds.

Price, No. 485.....each \$1.95

**No. 486 Eveready Layerbilt Radio B Batteries**

Vertical Type, 45 Volts, Heavy Duty

Made of flat layers of current-producing elements compressed one against another, so that every cubic inch inside the battery case is completely filled with electricity-producing material. For sets of 4 tubes or more.

Equipped with 3 Fahnestock Clips giving voltages of 22 1/2 and 45.

Length, 8 1/8 inches; width, 4 3/4 inches; height, 7 5/16 inches.

Weight, 14 1/4 pounds.

Price, No. 486.....each \$2.50

## Eveready Round Cell Radio B Batteries

### No. 570, Large Size, Vertical Type, 45 Volts

This battery is of cylindrical cell construction.

Length, 8 $\frac{1}{4}$  inches; width, 4 $\frac{1}{2}$  inches; height, 8 inches.

Weight, 13 $\frac{3}{4}$  pounds.

No. 570.....each \$1.80

### No. 572, Medium Size, Vertical Type, 45 Volts

Recommended for self-contained sets where lack of space will not permit the use of large size batteries. Cylindrical cell construction.

Length, 8 $\frac{1}{4}$  inches; width, 3 $\frac{1}{4}$  inches; height, 8 inches.

Weight, 9 pounds.

No. 572.....each \$1.35

## Eveready Round Cell Radio B Batteries

### No. 870, Large Size, Vertical Type, 45 Volts

This battery is of cylindrical cell construction.

Length, 8 $\frac{1}{4}$  inches; width, 4 $\frac{1}{2}$  inches; height, 8 inches.

Weight, 13 $\frac{3}{4}$  pounds.

No. 870.....each \$2.15

### No. 872, Medium Size, Vertical Type, 45 Volts

Recommended for self-contained sets where lack of space will not permit use of larger size batteries. Cylindrical cell construction.

Length, 8 $\frac{1}{4}$  inches; width, 3 $\frac{1}{4}$  inches; height, 8 inches.

Weight, 9 pounds.

No. 872.....each \$1.65

## No. 771 Eveready Radio C Batteries

### Vertical Type, 4 $\frac{1}{2}$ Volts

A 4 $\frac{1}{2}$ -volt unit, containing 3 cells provided with 4 Fahnestock spring clip terminals.

May be used in either the filament or A circuit, the plate or B circuit or the grid or C circuit.

A 4 $\frac{1}{2}$ -volt C battery is sufficient with most tubes when B battery voltages of not over 80 or 90 volts are used, and the signal is ordinarily loud. For

B battery voltages up to 120 volts, from 6 to 9 volts of C battery gives better results.

Length, 4 inches; width, 1 $\frac{3}{8}$  inches; height, 3 $\frac{1}{8}$  inches. Weight, 14 ounces.

No. 771.....each \$3.35

## No. 7111 Eveready Dry Cell Radio A Batteries

### Vertical Type, 1 $\frac{1}{2}$ Volts

A single 6-inch dry cell battery having 2 screw knurls and put up in an attractive round paper jacket.

Connected in various combinations to meet the requirements of WD-11, UV-199 and all other dry cell tubes.

Furnished in round jackets and with screw knurls.

Initial voltage of 1 $\frac{1}{2}$  volts.

Width, 2 $\frac{1}{2}$  inches; height, 6 inches.

Standard package, 25.

Weight, standard package, 57 pounds.

No. 7111.....each \$.40

## Edison Primary Cells

Edison Primary Cells are furnished in capacities ranging from 75 to 1000-ampere hours. The sizes best adapted for telephone work are 75, 250 and 500-ampere hour types, for average conditions, and the 1000-ampere hour cells for heavy duty service or when it is desirable to bring the renewal periods far apart.

The characteristics of this battery, which make it particularly well suited for telephone service, are: Uniform voltage under continuous discharge; extremely low and constant internal resistance; freedom from depreciation when the circuit is open; long life, with no attention between renewals; indicator panels in plates, which accurately show the approach of exhaustion in ample time to arrange for renewal and suitability for either open circuit (intermittent discharge) or closed circuit (continuous discharge) work.

The initial open circuit voltage of all Edison Primary Cells is 0.9. The closed circuit voltage averages 0.60 to 0.65 depending on the rate at which the cells are discharged.

### Use of Cells

Edison Primary Cells are used extensively for the following purposes: Local battery telephone exchange switchboards; telephone train dispatching (talking circuits); intercommunicating telephone systems; small common battery telephone systems; private branch exchange switchboards; pole changers, supervisory lamps and relays; telegraph work (local sounder and main line circuits); railway signals and crossing bells; railway interlocking plants; gas and gasoline engine ignition; low voltage motors; battery dental engines; fire, police and burglar alarms; auxiliary fire alarm systems (closed circuit); mine signals, bell systems and annunciators; program and self-winding clocks; electroplating; highway beacon lighting; chemical analysis and other school work.

### The A. C. Primary System

Edison Primary Cells are regularly used as a standby battery where a.c. power normally energizes low voltage lights or other apparatus. A power off relay throws the load on the battery when the a.c. fails. Uninterrupted operation may be maintained indefinitely because the attendant can always determine, by visual inspection, the available capacity of the standby battery.

### Maximum Recommended Discharge

Ampere Hour Cells	Description	MAX. RECOMMENDED DISCHARGE AMPERES	
		Continuous	Intermittent
75	.....	0.65	1.0
200	All Types	1.00	1.5
250	.....	1.00	1.5
500	All S Types	2.00	3.0
500	All M Types	2.50	3.0
1000	M Type	4.00	6.0

## Type 75 Edison Primary Cells

### Capacity, 75-Ampere Hours

Well suited for telephone work. Adapted to all classes of service where dependable capacity, uniform voltage and reliability are necessary requisites.

With round glass jar. Size overall, 3x7 $\frac{1}{2}$  inches. At a continuous discharge of 100 milliamperes this cell will deliver 80 ampere hours to a cut-off voltage of .6.

When the battery exhausts it is customary to replace with new cells and discard the entire exhausted battery; expensive jars or heat-resisting glass are not used with this type.

Price, Type 75.....each \$.90

**Type S-202 Edison Primary Batteries**  
Capacity, 200 Ampere Hours

Furnished with rectangular heat-resisting glass jar. Size over all, 3 3/8 x 6 x 11 inches. Inside dimensions of jar only, 2 7/8 x 5 1/4 x 9 inches.

Adapted for intercommunicating telephone systems, railway train dispatching systems, stationary gas or gasoline motors, electric clock systems, small motors, etc.

Use five cells for stationary gas or gasoline motors having make and break ignition and eight cells for jump spark. Recommended for stationary work only.

Type	Description	Price, Each
S-202	Complete Cell	\$3.40
S-200	Renewal	1.50
<b>Renewal Parts</b>		
S-200	Element, Assembled	1.35
200	Can Caustic Soda	.24
200	Bottle Battery Oil	.09

**Type S-206 Edison Primary Batteries**  
Capacity, 200 Ampere Hours

Made with heat-resisting glass jar and rubber gasket ring. Size over all, 5 3/4 x 9 3/4 inches. Inside dimensions of jar only, 5 x 7 1/2 inches. Adapted for motor boat ignition. Use five cells for single cylinder make and break engines; six cells for multiple cylinder, high speed make and break engines; eight cells for jump spark. The cover is fitted with a rubber gasket to prevent splashing. Type S-206 supersedes old Type VP cell.

Type	Description	Price, Each
S-206	Complete Cell	\$3.75
S-200	Renewal	1.50
<b>Renewal Parts</b>		
S-200	Element, Assembled	1.35
200	Can Caustic Soda	.24
200	Bottle Battery Oil	.09

**Type S-208 Edison Primary Batteries**  
Capacity, 200 Ampere Hours

With heat-resisting glass jar. Size over all, 5 3/4 x 9 3/4 in. Inside dimensions of jar only, 5 x 7 1/2 inches.

Adapted for stationary gas or gasoline engines, electric motors, burglar alarms, bell systems, program and self-winding clocks, annunciators, electric time stamps, mine signals, intercommunicating telephone systems, etc. Use five cells for stationary engines having jump spark ignition.

Cells have flat cover, without gasket and are recommended for stationary work only.

Type S-208 supersedes old Type Q cell.

Type	Description	Price, Each
S-208	Complete Cell	\$3.55
S-200	Renewal	1.50
<b>Renewal Parts</b>		
S-200	Element, Assembled	1.35
200	Can Caustic Soda	.24
200	Bottle Battery Oil	.09

**Type S-252 Edison Primary Batteries**  
Capacity, 250 Ampere Hours

With rectangular heat-resisting glass jar. Size over all, 3 3/8 x 6 x 12 1/2 inches. Inside dimensions of jar only, 2 7/8 x 5 1/4 x 10 inches.

Type S-252 cells are the most desirable of the smaller sizes, because of the small space occupied, and on account of the element being suspended high in the solution they are particularly efficient. They are designed for stationary work, but when used in trays are semi-portable.

Particularly adapted for telephone transmitter and fire-alarm service.

Type	Description	Price, Each
S-252	Complete Cell	\$3.60
S-250	Renewal	1.70
<b>Renewal Parts</b>		
S-250	Element, Assembled	1.55
250	Can Caustic Soda	.27
250	Bottle Battery Oil	.09

**Type S-305 Edison Primary Batteries**  
Capacity, 300 Ampere Hours

With round heat-resisting glass jar. Size over all, 6 3/4 x 10 1/4 inches. Inside dimensions of jar only 6 x 8 inches.

Adapted for stationary gas or gasoline engines, burglar alarms, bell systems, program and self-winding clocks, auxiliary and industrial fire alarm systems, etc. Also for telephones, including intercommunicating telephones, private branch exchanges, switchboards, railway telephone train dispatching at busy way stations, and similar service.

Type	Description	Price, Each
S-305	Complete Cell, with Heat-resisting Jar	\$3.80
S-300	Complete Renewal	1.90
<b>Renewal Parts</b>		
S-300	Element, Assembled	1.75
300	Can Caustic Soda	.30
300	Bottle Battery Oil	.09

**Types S-502 and M-502 Edison Primary Cells**  
Capacity, 500-ampere Hours

The 500-ampere hour cells are furnished with either multiple or single plate elements. The letter M before the reference number indicates multiple plate, 2 copper-oxide and 3 zinc plates. The letter S indicates single plate, 1 copper-oxide and 2 zinc plates.

The cells are used for telephone and telegraph service; railway signal, fire and burglar alarm systems, highway, beacons, and in many other fields where a high capacity cell is desirable.

For service in which the load frequently goes to 3 amperes, or where the cells are exposed to low temperature, the multiple plate cells are recommended. For service in which the load does not go over 2 1/2 amperes and the cells are protected from the cold, the single plate type will fully meet the requirements. Initial open circuit voltage, 0.9. Average closed circuit voltage 0.6 to 0.65 per cell. Maximum recommended continuous current for single plate types, 2 amperes; for multiple plate types, 2.5 amperes. Maximum recommended intermittent current for either types, 3 amperes.

**Type S-502**  
Single Plate Element

With rectangular heat-resisting glass jar. Size over all, 5 3/4 x 6 3/4 x 12 1/4 inches. Inside dimensions of jar only, 5 x 6 x 10 inches.

Type	Description	Price, Each
S-502	Complete Cell	\$4.40
S-500	Renewal	2.15
<b>Separate Parts</b>		
502	Jar	\$2.20
502	Cover	.45
...	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09

For Type M-502 cell, renewal and element, add 20 cents. Prices of the other parts are the same.

## Types S-504 and M-504 Edison Primary Cells

Capacity, 500-Ampere Hours

For telephone and telegraph service, railway signal, etc. With barrel-shaped heat-resisting glass jar. Size overall, 7x12¼ inches; inside dimensions of jar, 6x10 inches.

Type	Description	Price Each
S-504	Complete Cell	\$4.00
S-500	Complete Renewal	2.15
<b>Separate Parts</b>		
504	Jar	\$2.10
504	Cover	.55
	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09

For Type M-504, cell, renewal and element, add 20 cents.

## Types S-507 and M-507 Edison Primary Cells

Capacity, 500-Ampere Hours

For traffic signals and other classes of work where there is a possibility of rough usage. Has cylindrical enameled-steel jar. Size overall, 7¼x12 inches.

Type	Description	Price, Each
S-507	Complete Cell	\$4.40
S-500	Complete Renewal	2.15

**Separate Parts**

S-507	Jar	\$2.00
S-507	Cover	.55
S-507	Rubber Gasket	.20
S-507	Clamps	set of 3 .75
	Wing Nuts and Washers	per set .20
S-500	Element	1.90
500	Caustic Soda	per can .42
500	Oil	per bottle .09

For Type M-507 cell, renewal and element, add 20 cents.

## Exide Storage Batteries

BTMH Chloride Type

Exide Storage Batteries are made in a wide variety of sizes and types to meet the requirements of various kinds of power applications where a reliable source of direct current at steady voltage is required either constantly, intermittently or to tide over occasional interruptions in the normal power supply. There are three types of Exide Batteries made for these requirements.

The Chloride Type is built primarily for durability. Where long life and freedom from care and attention, together with dependability, are the deciding factors, this type of battery invariably receives the first call.

The Pasted Plate Type furnishes greater capacity in the given space than the Chloride Type.

The outstanding feature of the Ironclad Type battery is its unique positive plate which is totally different in construction from that of any other positive plate. In performance and longevity this type of Exide is second only to that of the famous Chloride.

Types BTMH, CTMH, PTMH, ETMH, BTE and KZHG are furnished in painted wooden crates, all but the first two types being equipped with carrying handles. Each crate assembly contains one cell equipped with pilot balls which roughly indicate the state of charge.

Cells of greater capacity than listed below are available in sealed glass jar assembly up to 1064 ampere hours at the 8-hour discharge rate.

Batteries are shipped charged and filled with electrolyte.

## Type M-1002 Edison Primary Cells

Capacity, 1000 Ampere Hours

The 1000 ampere hour cells are furnished with either rectangular or cylindrical jars. Type M-1001 is the specification for the cell with the cylindrical jar and M-1002 for the rectangular. The prices are the same.

This size was developed to meet demand for a battery that would operate efficiently in classes of service where heavy discharges are required for long periods. In railway signaling these cells are used for operating remote controlled switch movements, color light signals and track circuits. In the general trade for any heavy duty work or where it is desirable to bring the renewal periods as far apart as possible.

Initial open circuit voltage, 0.9 per cell; the average closed voltage, 0.6 to 0.65. The cells can be discharged continuously up to 4 amperes and intermittently up to 6 amperes.

### Type M-1002

With rectangular heat-resisting glass jar. Size over all, 6½x8¾x14 inches. Inside dimensions of jar only, 5x6x12¾ inches.

Type	Description	Price, Each
M-1002	Cell Complete	\$7.75
M-1000	" Renewal	4.25
<b>Separate Parts</b>		
1002	Jar	\$4.80
1002	Cover	.55
	Wing Nuts and Washers	per set .20
M-1000	Element	3.50
1000	Caustic Soda	per can .85
1000	Oil	per bottle .09

### Type M-1001

With cylindrical heat-resisting jar. Prices same as for Type M-1002.

**Plate Dimensions**

Allow 12 inches above the overall height of jar for height of battery rack to permit inspection with hydrometer.

Type	Width Inches	Height Inches	Thickness Inches
A Positive	5 5/8	4 1/2	7/32
P-22 Positive	5 13/16	5 7/8	7/32
P-30 Positive	5 3/4	7 1/8	7/32
P-40 Positive	7 3/4	7 3/4	7/32

The intermittent rating in amperes is the current the battery will give discharging 4 hours resting 16 hours, discharging 8 hours resting 16 hours, discharging 8 hours resting 16 hours, and discharging 4 hours to 1.7 volts per cell.

This ampere rate multiplied by 24 gives the intermittent ampere hours.

**Square D RectiFilters**

RectiFilter furnishes d.c. of the required purity from an a.c. circuit; designed to fill a long felt need for a reliable source of d.c. requiring no attention. It is only necessary to connect the a.c. line and the d.c. load to the proper terminals.

Used wherever a source of d.c. is required. Applications include furnishing power for telephone systems, signal systems, including fire alarm systems, sound on film equipment, broadcasting and public address equipment and magnetic chucks.

RectiFilter is an assembly of rectifiers, impedances, transformers and condensers, all designed to insure uninterrupted service. No moving parts or batteries to demand constant attention and maintenance.

RectiFilter must be chosen by characteristics of d.c. required and by maximum drain and duty cycle necessary to serve application. A.c. component (a.c. wave or ripple remaining in the d.c.) is shown for each unit, and while values are considered to be well within requirements for the service indicated, it is well to check against requirements for particular application before deciding upon unit.

After choosing the proper group, pick a unit that will give necessary voltage, considering the regulation required, necessary amperage and duty cycle demanded by the application.

**For Telephone Service (Heavy Intermittent Duty)**

## G-E Tungar Battery Chargers

25 to 60 Cycles, 115 to 230 Volts A.C.

### 6-Ampere Type

Form B

For charging 6 or 12-volt storage batteries.

Ideal for small garages and filling stations; private car owners also find this battery charger convenient.

The one "on" and "off" switch is the only moving part of this battery charger. Charges one 3-cell battery as quickly as larger capacity outfits charge several. Uses a full 6-ampere rate or can charge two 6-volt batteries connected in series at 3 amperes. Charging rates fixed in accordance with battery load. Will charge a 6-volt battery at 6 amperes, two 6-volt batteries at 3 amperes.

Prices include one Cat. No. 189048 Tungar bulb.

Cy.	DIMEN. IN.			Shp. Wt. Lbs.	Volts: Normal 115 Limits 105/125		Volts: Normal 230 Limits 210/250

## G-E Full Wave Tungar Battery Chargers

(Noiseless Type) For Telephone Service

Under this classification come outfits designed particularly for use with telephone systems operating on a single battery where it is necessary to charge the battery while it is operating on the telephone circuit.

### 30-Volt .3-5-Ampere Outfit

Intended primarily for continuous trickle charging in a small P.B.X. The full wave bulb Cat. No. 199698 is used. A reactance, or choke, of suitable capacity to filter the output is incorporated. An adjustable resistance in the secondary circuit permits adjusting the charging rate from .3 to .5 ampere on 11 or 12 cells of battery.

Full load efficiency 28%. Power factor 78%.

Cat. No.	Each	Volts A.C.	Cy.	DIMENSIONS, IN.			Approx. Shp. Wt. Lbs.
				Ht.	Width	Depth	
244708	\$50.00	*115	60	9 <sup>1</sup> / <sub>16</sub>	6 <sup>3</sup> / <sub>16</sub>	7 <sup>3</sup> / <sub>16</sub>	20

Available in other voltages and frequencies.

Prices on application.

Cat. No. 199698, Tungar Bulb. Shp. Wt. 1/2 Lb. each \$5.00

### 19-52-Volt 1-3-Ampere Full Wave Outfit

Cat. No. 3049455

Designed primarily to meet the requirements of inter-communicating systems and private branch exchanges. Can be used wherever a full wave filtered output up to 3 amperes is required. Two 2-ampere Tungar bulbs are used, the connections being such that the load is divided equally.

Flexibility is a feature of this Tungar. A terminal board conveniently located just inside the left hand door contains 6 sets of secondary taps and permits adjustment for operation on 9 to 24 cells of battery. A rheostat controlled from the panel gives close adjustment of the charging rate over a range of 1 to 3 amperes. A Type DW scale 0-5 ammeter is provided to indicate the rate.

The 19-52-volt rating is nominal, and was selected as 52 volts is the usual floating voltage of a 24-cell battery. This rectifier actually has sufficient capacity to charge at battery voltages up to 65 but the charging current will taper down to 1.75 amperes at 65 volts.

A suitable filter reactance is incorporated in the unit.

Full load efficiency 45%. Power factor 92%.

Cat. No.	Each	Volts A.C.	Cy.	DIMENSIONS, IN.			Approx. Shp. Wt. Lbs.
				Ht.	Width	Depth	
3049455	\$120.00	*115	60	17 <sup>1</sup> / <sub>2</sub>	12 <sup>5</sup> / <sub>8</sub>	14 <sup>3</sup> / <sub>8</sub>	78

Available in other voltages and frequencies.

Prices on application.

\*Will operate between the limits of 105-125.

Cat. No. 12X825, Tungar Bulb, Shp. Wt. 1/2 Lb. each \$4.00

**G-E Low-Voltage Half Wave Tungar Battery Chargers**

For Miscellaneous Applications  
115 Volts, 60 Cycles

No. 204170—24-30-Volt .5-2.5-Ampere Outfit

Interior View

A simple, compact outfit designed to charge from 9 to 12 cells of lead battery. Two secondary taps on the transformer permit adjusting the rectifier for its maximum output of 2.5 amperes at either 24 or 30 volts. An adjustable resistance of approximately 6 ohms is incorporated in this outfit which permits adjusting the charging rate from a maximum of 2.5 down to a minimum of about .5 ampere. A 2-ampere bulb is used.

Full load efficiency 55%. Power factor 50%.

Will operate between the limits of 105-125 volts.

Height, 9<sup>1</sup>/<sub>16</sub> inches; width, 6<sup>3</sup>/<sub>16</sub> inches; depth, 7<sup>3</sup>/<sub>16</sub> inches.

Approximate shipping weight, 25 pounds.

Cat. No. 204170.....each \$39.00

Available in other voltages and frequencies. Prices on application.

Cat. No. 195528, Tungar Bulb, Ship. Wt. 1/2 Lb...each \$4.00

**No. 199717—40-60-Volt .5-2.5-Ampere Outfit**

Similar in general construction to the outfit described above, but has a wider range of d.c. voltage.

There are 3 taps on the transformer secondary which adjust the output to 2.5 amperes at 40, 50 and 60 volts respectively. In addition an adjustable resistance is provided which will regulate the charging rate from 2.5 down to .5 amperes on any one of the taps.

Transformer is so designed that it has considerable inherent reactance regulation, giving rectifier a fairly flat characteristic even when none of the resistance is used. For example, when connected to the 60-volt tap the battery voltage can be increased from 60 to 75 volts and rectifier will continue to charge, the only difference being that charging rate will taper from 2.5 to 1.5 amperes.

A 6-ampere bulb is used providing ample capacity and long life.

Full load efficiency 60%. Power factor 50%.

Will operate between the limits of 105-125 volts.

Height, 9<sup>1</sup>/<sub>16</sub> inches; width, 6<sup>3</sup>/<sub>16</sub> inches; depth, 8<sup>3</sup>/<sub>16</sub> inches.

Approximate shipping weight, 29 pounds.

Cat. No. 199717.....each \$55.00

Available in other voltages and frequencies. Prices on application.

Cat. No. 189048, Tungar Bulb, Ship. Wt. 1 Lb...each \$8.00

**G-E 2-Ampere Tungar Battery Chargers**  
For Charging All Radio A and B and Auto Storage Batteries

Form B—25 to 133 Cycles—115 to 230 Volts A.C.

Designed to take care of all radio and auto battery charging requirements at home. The combination trickle charge and full rate feature is desirable for radio battery charging. No auxiliary devices or attachments are required other than an ordinary Mazda lamp which is essential to provide correct charging rate for radio B batteries only. Lamp may be inserted in external socket contained in terminal board which is mounted on back of casing.

Will trickle charge a 6-volt radio A battery or charge at full rate of 2 amperes.

For permanent connections to A and B batteries; charging may be controlled by merely throwing a switch.

Prices include one bulb, Cat. No. 277465.

Will charge 6-volt battery at 2 amperes or trickle rate of 3/4 ampere; 12-volt battery at 1 ampere; 2 or 4-volt battery at 1 ampere; 24 to 96-volt B battery at 1/10 to 1/4 ampere.

**G-E Tungar Constant Potential Rectifiers**

A full-wave, highly efficient rectifier with high power factor and good regulation. Furnished in strong, neat appearing steel casing.

Applications—magnetic chucks, electromagnets, small solenoids, small d.c. motors and many others.

For use wherever 2 amperes or less, 115 or 220 volts d.c. is required and only a.c. is available.

Two hinged doors provide easy accessibility to bulb and transformer. All joints in casing are welded, including door hinges and latches. Angle irons welded to rear of casing add ruggedness and provide a means for wall mounting.

A tumbler switch breaks both sides of a.c. line.

Equipped with a new type mercury barium Tungar bulb. This is a full-wave bulb rated 2 amperes at 250 volts.

Cat. No.	Each	A.C. Volts	Cycles	D.C. Volts	D.C. Amps.	Ship. Wt.Lbs.

## G-E Copper Oxide Rectifiers For Telephone Service

Designed to deliver a noiseless d.c. of 6 volts, 0.350 amperes. There is a multitude of applications that come within this rating. A few of them are as follows:

New apartment house interphone systems; replace batteries (dry cell or storage batteries) on existing apartment house interphone systems; school interphone systems that come within rated output of this outfit; to supply power for way station telephones on railroad telephone lines; to supply power for local sounders on railroad telegraph lines—the smooth, humless d.c. obtained from this outfit (oscillograph shows no ripple) is praised by Morse code operators—any general application where d.c. not in excess of the rated output is desired.

This rectifier consists of a copper oxide rectifying unit, transformer and necessary specially constructed filter (condenser and choke coil) all mounted on a steel base plate and enclosed in a rugged casing. Casing has an attractive crystallized green finish, which will not chip or mar.

Rating: 115 volts a.c.; 60 cycles; 6 volts d.c., .350 ampere d.c.

Approximate shipping weight, 25 pounds.

Cat. No. 6RC61D2.....each \$30.00

## G-E No. 6RC42D7 Copper Oxide Battery Chargers for Fire Alarm Systems 30, 45 or 60 Volts, .150 Amperes

Every municipality with a fire alarm system is a potential customer for a quantity of these battery chargers.

Cycle charging, the method most commonly used at present to supply power to the fire alarm system, requires a "standby" battery for each circuit, and has resulted in overcharging the batteries with a consequent short battery life. Briefly, cycle charging consists of an "A" and "B" battery for each circuit. The "A" battery is charged while the "B" battery is on circuit. The "A" and "B" batteries are interchanged daily.

Trickle charging the battery with a properly designed dependable rectifier eliminates the necessity of the "standby" battery and inherent troubles of charging.

The usual trickle charge will be approximately 100 mils. Model No. 6RC42D7 charger has a capacity of 150 mils, which is sufficient capacity to take care of even unusual conditions. One outfit will be required for each circuit.

A dry type charger; no moving parts, nothing to wear out. Minimum mounting space is required; can be mounted in any convenient out-of-the-way location. Fuse protection in both a.c. and d.c. circuits.

Approximate shipping weight, 50 pounds.

Also furnished for vertical mounting with or without casing.

Model No. 6RC42D7.....each \$32.00

## G-E Tungar Bulbs

### Standard Tungar Bulbs for Bulb Type Battery Chargers

Cat. No. 195528

Cat. No. 289881  
Trickle Bulb

Cat. No. 277465

Cat. Nos. 189048 and 189049

Cat. No. 195528.—For renewal purposes in the old design 2-ampere Tungars. Also adapted for other chargers which are not equipped to use the Cat. No. 277465 bulb which has the three points of contact in the base. A wire adapter permits making connection to plate (anode) at tip of the bulb.

Cat. No. 289881.—Used in standard Tungar Trickle Chargers and also in special trickle-charge Tungar units supplied to battery manufacturers for their combination. A battery and charger power units.

Cat. No. 277465.—All three contacts are made through base. This bulb has capacity for charging a 6-volt A storage battery at 2 amperes and a 120-volt B storage battery at not over .25 ampere.

Cat. No. 189048.—Should not be used where voltage requirements are over 45 volts except when charging B storage batteries at not over .25 ampere.

Cat. No. 189049.—Used with larger Tungars having a charging capacity of 100 volts at not over 6 amperes.

Cat. No.	Each	MAXIMUM RATING		DIMEN., IN.		Approx. Ship. Wt. Lbs.

289881	4.00	5	7.5	4½	1¾	½

### Special Tungar Bulbs

Cat. No. 217283.—Used for certain special applications such as rectifiers for motion picture projectors. This bulb is not interchangeable with 6-ampere bulbs used in standard Tungars.

Cat. No. 217283

Cat. No. 199698.—A full-wave Tungar bulb used in a Tungar for charging batteries in telephone supply installations and also in certain types of radio power devices. This bulb delivers an output up to 3 amperes, depending on the nature of the load.

Cat. No. 199698  
Full-Wave Bulb

Cat. No. 12X825.—Similar in construction to the standard Cat. No. 277465 except that it is designed to meet higher voltage requirements. Used in certain special Tungars for charging high-voltage batteries.

Cat. No. 206501.—A high-voltage bulb. Equipped with wire adapter so that it can be used in old style Tungars.

Cat. No.	Each	MAXIMUM RATING		DIMEN., IN.		Approx. Ship. Wt. Lbs.

217283	15.00	15	60	9½	3¾	3

**Jefferson Wizard Bell Ringing Transformers**

For residences or small flat buildings. Will operate door bells, buzzers, annunciators, and door openers. For 100-120 volts; 5 watts. Secondary, 10 volts. Size, 2 3/8 x 2 3/8 x 2 3/8 in. Weight, 1 lb. No. 230-101, 50-133 Cycles.....each \$1.25 No. 230-102, 25-40 Cycles.....each 1.50

**Jefferson Nucode Bell Ringing Transformers**

With Round or Square Cover

Mounted on an outlet box cover. Round cover fits 3 1/4 and 4-inch octagon boxes; square cover fits 3 1/4 and 4-inch octagon and 4-inch square boxes. Knockout in cover permits hanging a drop cord from same outlet box. Transformer wires do not interfere with lighting wires. Grounded to prevent shocks or possibility of fires.

No. 230-111

Depth, 2 1/4 inches; width, 2 3/8 inches; height, 2 1/4 inches.

Cat. No.	Each	Style Cover	Capacity Watts	PRIMARY Volts	Cycles	SECONDARY Voltages	Wt. Lbs.

230-142	2.00	Square	5	100-120	25-40	10	1 1/4

**Jefferson Tri-Volt Bell Ringing Transformers**

For 100 to 120 volts a. c. Generates 3 secondary voltages; 6, 12 and 18 and will take care of longer leads than Wizard or Nucode. Capacity, 5 watts; dimensions 2x2 1/2 x 3 3/4 inches. Weight 1 pound. No. 230-121, for 60 Cycles.....each \$1.50 No. 230-122, for 25 Cycles.....each 2.00

**Jefferson Heavy Duty Signalling Transformers**

When the current demand is greater than the capacity permitted with the small transformers, the heavy duty types should be used. Examples of such uses are large apartment buildings, hotels, factories, schools, etc. The core and windings are hermetically sealed in a heavy metal case. Standard winding will operate on 100 to 120 volts a.c., 50 to 133 cycles.

**50 Watts**

This transformer is designed for heavier signal work and installations that require more power than is generated by the Nucode or Tri-volt Type. Six secondary voltages; 4, 8, 12, 16, 20 and 24. Weighs 6 pounds.

Cap. Watts	DIMENSIONS, INCHES			No.	60 Cycles		No.	25 Cycles
	Length	Width	Height		Each	Each		
50	4 1/16	3 5/8	3 1/16	231-101	\$5.00	231-102	\$9.00	

**100 Watts**

Heavy duty transformer designed to take care of large installations and operate a greater number of bells and other signal devices than the smaller type transformers. Six secondary voltages; 4, 8, 12, 16, 20 and 24. Weighs 9 pounds.

100	5 1/16	4 1/16	3 5/8	231-111	\$5.50	231-112	\$11.00
-----	--------	--------	-------	---------	--------	---------	---------

**250 Watts**

Designed for unusually large installations. Secondary voltages; 4, 8, 12, 16, 20 and 24. Supplied with any desired secondary voltages at additional cost. Weighs 15 pounds.

250	5 5/16	5 1/16	4 3/4	231-141	\$8.25	231-142	\$16.50
-----	--------	--------	-------	---------	--------	---------	---------

**500 Watts**

Has an output of 500 watts, secondary voltages; 4, 8, 12, 16, 20 and 24. Furnished with any desired secondary voltages at additional cost.

500	7 3/8	6 3/8	5 1/2	231-151	\$14.50	231-152	\$29.00
-----	-------	-------	-------	---------	---------	---------	---------

For 220-V. 50 to 133-cycle transformers, add 15 per cent. Twenty-five cycles dimensions slightly larger; prices on application.

**Jefferson Low Voltage Transformers**

Designed for service wherever low voltage a.c. current is necessary, such as the operation of electrically controlled valves, thermostats, magnetic relays, etc. Approved by the Underwriters' Laboratories.

No.	Each	PRIMARY		SECONDARY		Wt. Lbs.

**Jefferson Universal Toy Transformers**

100-120 Volts; 50-133 Cycles A.C.

No. 535-161

Equipped with an extension cord, separable attachment plug and a slide type voltage control, making it possible to transmit the power in small and uniform steps. All models except No. 3 can be furnished in 25-40 cycles. Prices upon application.

**Little Jeff**

Recommended for operating all narrow gauge American Flyer, Dorfan, Ives and Lionel outfits and Gilbert Toy motors. Delivers 6 secondary voltages ranging from 5 1/2 to 11 1/2 volts in 1.2-volt steps. Cat. No. 535-161, 50 Watts, Weight 3 1/2 Lbs.....each \$3.25

**Midget**

Operates Ives trains, all narrow and small sized wide gauge outfits; American Flyer, all narrow and wide gauge trains Nos. 1471, 1472, 1463 and 1464; Lionel trains, all O gauge and small sized standard gauge. Also operates the Kokomo electricar. Delivers 18 secondary voltages ranging from 5 1/2 to 22 1/2 volts in 1-volt steps, with additional permanent voltages of 6 and 12 volts. Cat. No. 535-171, 75 Watts, Weight 5 Lbs.....each \$5.00

**Model 2**

Operates all American Flyer, Ives, Lionel and other wide gauge trains. Also Christmas lighting outfits up to sixteen 14-volt lamps. Delivers 24 secondary voltages ranging from 5 1/2 to 23 volts in 3/4-volt steps. Additional permanent voltages of 4 1/4, 9 and 13 1/2 volts. Cat. No. 535-181, 100 Watts, Weight 6 1/2 lbs.....each \$6.50

**Model 3**

Operates all types of trains. For use with window or counter display and Christmas tree lighting outfits up to thirty-two 14-volt lamps. Delivers 30 secondary voltages ranging from 1 to 30 volts in 1-volt steps. Additional permanent voltages of 6, 12, 18 and 24 volts. Cat. No. 535-191, 150 Watts, Weight 11 1/4 Lbs... each \$9.00

**Edwards Signaling Transformers**

Primary 110 Volts, 25-40 or 60 Cycles  
Secondary 4-8-12-16-20-24 Volts

**Schedule T**

These transformers adequately cover the signaling device field with a greater range of capacities.

Cat. No.	Each	Cycle	Watts	Wt. Lbs.
88	\$5.15	60	50	3
88	10.30	25-40	50	3
90	6.18	60	100	7
90	12.36	25-40	100	7
94	9.24	60	250	12
94	18.50	25-40	250	12
99	16.50	60	500	15
99	33.00	25-40	500	15

## No. 86 Edwards Steel Case Bell Ringing Transformers

Primary 110 Volts, 25-40 or 60 Cycles

### Schedule E

Correctly designed for the proper operation of all signaling devices.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	54	\$1.16
25-40	25	50	54	2.32

For 220-volt primary add 15 per cent to price.

## No. 86ER Edwards Bell Ringing Transformers

Fits on 3 1/4 and 4-Inch Octagon and Square Boxes

Primary 110 Volts, 25-40 or 60 Cycles

### Schedule E

Correctly designed for the proper operation of all signaling devices.

This transformer is of the exact wattage, voltage and other characteristics necessary to eliminate guess work on the part of the contractor or jobber.

For 220-volt primary add 15 per cent to price.

Cycles	Watts	Standard Package	Weight Pounds	Price Each
60	25	50	65	\$1.16
25-40	25	50	65	2.32

## No. 86ES Edwards Bell Ringing Transformers

Fits On 3 1/4 or 4-Inch Octagon and Square Boxes

Primary 110 Volts, 25-40 or 60 Cycles

### Schedule E

Correctly designed for the proper operation of all signaling devices.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	80	\$1.16
25-40	25	50	80	2.32

For 220-volt primary add 15 per cent to price.

## No. 86T Edwards Steel Case Bell Ringing Transformers

Primary 6-8-14 Volts, 60 Cycles or 110 Volts, 25-40 Cycles

### Schedule E

These transformers are of the exact wattage, voltage and other characteristics necessary to eliminate guesswork on the part of the contractor and jobber.

Cycles	Watts	Std. Pkg.	Wt. Lbs.	Price Each
60	25	50	56	\$1.55
25-40	25	50	56	3.10

For 220-volt primary add 15 per cent to price.

## Jefferson Luminous Tube Sign Transformers

Standard Types

Nos. 721-111, 721-121, 721-411

Designed for use in all types of portable or fixed, indoor or outdoor neon signs. The complete assortment of models provides a transformer to meet the most exacting requirements, both as to electrical and mechanical details.

Mid-point grounded, balanced design patented construction and many other improvements insure perfect secondary current regulation regardless to length of tubing operated; high efficiency permitting long tube lengths; cool operation; quietness; long life; neat appearance and lightness in weight.

The case in which transformer is assembled is made of extra heavy rust-resisting steel, flanged construction and with substantial brackets, insuring rugged construction. Binding posts and nuts are cadmium plated to guard against corrosion, while the case is black enameled, baked thoroughly to present a tough and durable finish.

### 110 Volts, 60 Cycles Binding Posts Standard (One at Each End of Case)

**Jefferson Luminous Tube Sign Transformers**

**Type 726 with Secondary Leads**

**Cabinet Type**

Equipped with primary pull switch and 7-foot primary cord with standard 2-prong plug and approved connector means for grounding. Where conduit or armored cable installation is required, entry may be made by removing the cord and bushing; if entry at top is more practical, a knockout is provided. A plate in the end of the case is removable for making connections from the supply circuit to transformer leads.

For conduit or armored cable installations these transformers may be obtained without the primary cord and plug, at a reduction of \$1.00. Likewise, the primary pull switch may be omitted and the price is reduced \$1.00.

**Cable on Secondary**

720-391	3.50	60	3000	18	3 <sup>3</sup> / <sub>4</sub>	2 <sup>5</sup> / <sub>8</sub>	4 <sup>1</sup> / <sub>8</sub>	4 <sup>1</sup> / <sub>2</sub>

All of the above transformers have 110-volt, 60-cycle primaries. Prices for other voltages and frequencies on application.

**Jefferson Oil Burner Ignition Transformers**

**Nos. 638-171, 638-251, 638-261 and 638-271**

**No. 638-281**

The introduction of various types of burners has required the development of different types of transformers. This is a transformer for every specific application—5000, 10000, 12000 and 15000-volt ratings; for intermittent and continuous service; grounded, mid-point grounded, balanced mid-point grounded, and insulated secondaries; and in core and shell type designs.

The cool operation is accomplished by exacting requirements, liberal design throughout, plus the use of quality materials of adequate size which results in long transformer life.

Equipped with built-in condensers of proper size and design to eliminate the possibility of objectionable radio interference.

Nos. 638-251, 638-261, 638-271 and 638-171 are assembled in the new stream lined case. This case is of heavy drawn steel of exceptional durability, treated to resist rust and finished in a high lustre long-wearing black enamel. All other types are assembled in similarly rugged and attractive cases of standard design. Universal mounting brackets of sturdy design are provided.

A junction box of liberal proportions is built into the top of the case. Knockouts are provided in two sides and in the end of the case for convenient entrance. Quick and easy splicing results and there is ample space for additional wiring which any installation may require. Primary leads 24 inches long are standard on all types.

**110 Volts; 60 Cycles Primary**

**Grounded**

\*Not equipped with radio filter.

The above transformers are designed for operation on 110 volt 60 cycle a.c. They are obtainable in other voltages and frequencies at extra cost. Prices on application.

## Jefferson Double Wound (Insulating) Transformers

50-60 Cycles

This type of air cooled transformer has been very commonly used in railway service for lighting and signaling purposes. In addition it is required for signaling systems of schools, factories, mines, etc., for remote control switching, for lighting purposes, to operate low-voltage equipment from power lines, for insulating circuits from power and lighting supply lines, for

emergency lighting systems, etc.

Illustration shows the standard type of double wound transformer which is equipped with wiring compartment for housing primary and secondary splices. Knock-outs are provided for making connections with rigid or flexible steel conduit or for inserting porcelain bushings where open wiring is employed.

The standard line does not comply with the A.R.A. standard, but does comply with the A.I.E.E. specifications. Transformers complying with the A.R.A. specifications can be furnished on special order.

## Jefferson Railway Transformers

Indoor Type

For Signal, Lighting and Rectifier Service

Designed to conform to the testing and constructional specifications of the American Railway Association. Intended for use in the operation of electrical equipment incidental to railway signal systems such as signal lights, battery rectifiers, relays and associated requirements.

This is an air cooled unit designed for wall or shelf mounting.

Windings developing or carrying 115 volts or less are brought out to standard A.R.A. terminals mounted on an attractive bakelite panel. Windings carrying in excess of 115 volts are brought out

of the housing in the form of flexible leads which are terminated in connecting lugs.

Generally, compensating taps are supplied on the primaries, although for some services, special auto transformer taps are furnished. When compensating taps are furnished, they are full of capacity rating.

Primary windings of 115 volts or less and all secondary windings are insulated to withstand a dielectric strength test of 3000 volts. Primary windings in excess of 115 volts are designed to withstand a dielectric strength test of 10000 volts.

Name plates and winding diagrams are furnished with each transformer which give the complete information required by the A.R.A. standards.

The following table outlines a number of the more popular types of transformers furnished for these services. These transformers fulfill practically all signalling system requirements, although in many cases transformers of special specifications are supplied.

## No. 807 Edwards High Voltage Annunciators

Hand Reset

110 and 220 Volts, A.C. or D.C.

Schedule T

Has metal case with double micarta backboard on which are mounted No. 80 drops.

Care has been given to insulation of all current carrying parts, eliminating all materials affected by heat or moisture.

Prices include a No. 100 3-inch Recti bell which may be installed adjacent to the annunciator or where desired. Annunciator is wired with marked connectors for this purpose. For central stations there are usually conditions requiring special features. Photographs and descriptions of annunciators for this service will be sent upon request.

Surface type metal case; standard finish is black. The 110 and 220 volts a.c. or d.c. are standard; other voltages on application.

Special finishes, upon application. Prices shown are for 110 volts a.c. or d.c.

## Edwards Annunciators

Special Annunciator Features

Schedule T

### No. 8 Manual Reset Drops

New, efficient drop used in all annunciators.

No. 8.....each \$4.00

### No. 80 Hand Reset Drops

Used in all hand reset annunciators.

No. 80.....each \$4.00

### No. 4 Electric Reset Drops

Used in all electric reset annunciators.

The indication is a white arrow which points directly at the name card. When reset, arrow drops out of sight behind name card. Front is of plain glass and a dull black background, it can be seen from any angle. Cannot shake or jar out of adjustment. Locked in normal position; cannot indicate until current is passed through magnets.

No. 4.....each \$6.00

Extras

Up to 24 volts d.c. or a.c. no charge. For 25 to 40 drops, add per drop, \$1.00.

For special commercial finishes, add per annunciator: 4 to 10 drop, \$6.00; 12 to 24 drop, \$8.00; 26 to 52 drop, \$12.00; over 52 drop, \$16.00. For solid bronze or brass cases, add per annunciator: 4 to 10 drop, \$12.00; 12 to 24 drop, \$20.00; 26 to 52 drop, \$30.00; over 52 drop, \$50.00.

Individual reset, with pushes on case, per push, \$4.00; with terminals only for remote control, per terminal, 60 cents.

Arrangement of drops, same addition as for special finishes.

Special markings, other than number, per drop, 30 cents.

Bell instead of buzzer, each \$3.00.

Switch on case, 1 or 2 point, each \$3.50.

**Edwards Lamp Annunciators**

*Schedule T*

OPERATION.—If locking pushes, toggle or push button switches are used, the lamps will remain lighted while the switch is on and will be extinguished while the switch is off. If standard momentary contact pushes are used, relays are supplied in a separate case with the reset button on the annunciator. If specified, relays can be mounted in the annunciator case, which, however, adds greatly to its size and does not improve its appearance.

In ordering, specify exact operating voltage, finish, with or without relays; if with relays, whether they are to be in separate case or in annunciator; if opaque glass type, whether  $\frac{7}{8}$  or  $1\frac{1}{4}$ -inch numerals.

**Bull's Eye Type**

- No. 421, For Surface Wall Mounting
- No. 422, For Flush Wall Mounting
- No. 423, For Desk

No. 422

anism on back of front plate, which is mounted directly on metal wall box. In larger size annunciators it is advisable for easier installation to have front plate hinged to a trim which fastens directly to metal wall box. This method of construction can be followed if specified.

**Opaque Glass Type**

- No. 424, For Surface Wall Mounting
- No. 425, For Flush Wall Mounting

No. 424

Equipped with  $\frac{5}{8}$ -inch opal signals arranged over card racks. Lamps are easily changed from front by removing opals. All metal case and trim.

Standard finish, brush brass or bronze for flush type; black or mahogany for surface types.

Illustration shows standard method of construction with all mech-

For use where it is advisable to have indications readable from a distance.

Lamps are in individual shield units; when lighted cause numerals to show plainly through opaque glass.

All metal case and trim. Standard finish, black or mahogany.

Made in 2 styles: for  $\frac{7}{8}$  or  $1\frac{1}{4}$ -inch numerals.

Prices shown are for  $\frac{7}{8}$ -inch numerals.

**No. 10 Edwards Return Call Annunciates**

Hand Reset

Standard Voltage, 8-12 Volts A.C.

*Schedule T*

Used in hotels, institutions, etc. for the purpose of calling the room and receiving acknowledgment from the room that the call has been heard, or vice versa.

Designed to eliminate the large number of wires necessary if the standard annunciator, bells and pushes are used. Presents reduction in size without affecting clearness of indication.

All metal case, surface type, in black, mahogany or oak.

## Faraday Annunciators

### Electric-Reset, Clover-Leaf-Target, Regular Size

#### All-Metal Cases

Schedule T

Reset buttons are regularly furnished on the case. Connections only can be furnished without additional charge so that annunciator can be reset from a remote point.

Round disc (5/8 inch) indications furnished instead of standard clover-leaf-target indications at same price.

Round-disc-target indications show a round white disc approximately 5/8 inch in diameter. Larger sizes than the standard can be furnished at an additional charge.

Each annunciator is furnished with 85 different markings—black characters on white background. Special markings, black on white background, add per drop, 30 cents.

Can be furnished with automatic-reset features, at no extra charge.

Multiple operation on a.c. or d.c. of not exceeding 3 annunciators, at no extra cost.

**STANDARD RESETTING.**—Electric-reset types are regularly furnished with one reset button for each 10 drops.

**EXTRA GROUP-RESET BUTTONS.**—Electric-reset annunciators are regularly furnished with one reset button for each 10 indications.

**SEPARABLE DROPS.**—Plug type removable, add to list price per drop, \$2.00.

Standard finishes: Surface type and desk type—black-velvet enamel, mahogany, walnut or golden oak; flush type—black-velvet enamel, white enamel, mahogany, walnut or golden oak.

Standard package, 1.

### Cat. No. 25-RM—Surface Type

For Operation on 18 Volts A.C. or 8 Volts D.C.

Will be wound up to 24 volts a.c. or d.c. at no additional charge.

Black-velvet enamel finish will be shipped unless otherwise specified.

## Edwards Ansercall for Return Call Systems

No. 139

No. 140

This device replaces return call stations except for d.c. operation. Fits any standard single gang switch box 2 3/8 inches deep and takes standard push-button-switch plates.

Buzz audible signal with no contacts, pivots or adjustment. May be varied after installation from loud low tone to a soft high tone through hole in sub-plate.

No. 140 has Annunciette type drop which leaves a visual signal. Operation of push button, when call is answered, automatically resets drop.

Standard, 8 to 12 volts, a.c.

Prices do not include plates.

No. 139, Non-Indicating... each \$4.80  
 No. 140, Indicating..... each 9.30

## No. 136 Edwards Surface Return Call Stations

Schedule T

Designed for installation in existing buildings. Provides a neat appearing plate mounted on a shallow cast box which provides entrance for conduit or open wires as desired. The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with the special Edwards No. 265 Return Call Push.

The cast box is rubberoid black, the plate is brushed brass or nickel. Special finishes, upon application.

Bakelite plate can be furnished if desired at an additional charge of 25 cents. Weight, 1 1/2 pounds.

Price, No. 136..... each \$6.00

## No. 137 Edwards Flush Return Call Stations

Schedule T

A flush plate of pleasing design for mounting on a standard single gang switch box. The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with the special Edwards No. 265 Return Call Push.

Standard finish is brushed brass or nickel plate. Special finishes, upon application.

Bakelite plate can be furnished if desired at an additional charge of 25 cents.

Weight, 1/2 pound.

Price, No. 137..... each \$5.00

## No. 138 Edwards Indicating Return Call Station—Schedule T

For use where it is desirable to indicate that a call has been made to the room during the occupant's absence.

It fits a standard 2-gang switch box. The audible signal is a Double Adjustment Lungen Buzzer. The visible signal is a white arrow outlined through a small round glass window. One push button is for the return call, the other to reset the indicating arrow.

Price, No. 138, Push and Buzzer, Wt. 1 Lb.... each \$12.00

**Edwards Elevator Annunciates**

**Hand Reset**

Standard Voltage, 8-12 Volts A.C. or D. C.

*Schedule T*

Presents a reduction in size without affecting clearness of indication.

Buzz audible signal.

Smooth, sturdy, reliable reset.

No. 130D, the up and down type, is equipped with reset push for each column of indications.

Order and price by number of drops not by number of floors.

Standard finish, black. Mahogany or oak, no extra charge.

Special finishes upon request.

**Kirkland Bulls-I-Units**

A device for effecting visual signals without the usual complex installation and maintenance problems. Unit is a complete annunciator, consisting of a light chamber, terminal block, socket, lens cap (removed from front) and a symbol insert, all in one. Adapted for all kinds of visual signal work,

particularly in the construction of lamp annunciators. For all kinds of control devices, panel boards, etc.

The usual jeweled lens of the beehive type can be supplied in red, green or fiery opal; also in clear white inside frosted type.

Clear type lens employs colored inserts behind lens and until lamp is lighted shows white, regardless of color of insert. When lamp lights, color shows brilliantly and is seen from every angle. Numbers, letters and symbols of the sticker type can be placed between lens and insert and can be seen clearly from a distance when lamp lights, although invisible until then.

To mount it is only necessary to drill a hole for each bulls-eye and slip unit in place, locking nuts on threaded sections in rear of panel or plate.

A variety of lamps can be furnished with No. 600 unit. The G6 or elevator lamp and flashlight lamps can be used for voltages from 3 to 24 volts; S6 lamp for 120 volts.

Style of insert: No. 600, white; No. 601, red; No. 602, green; No. 603, yellow; No. 604, signal blue.

Style of finish: CHR, standard chromium; SRB, statuary bronze; BRA, brass.

When ordering, give number and finish letters.

Made in two standard sizes. No. 600 has a lens 1 1/8 inch in diameter and requires a 1 3/8-inch mounting hole. Overall length, 2 3/8 inches.

No. 500 is for low voltage elevator T lamps only; has a lens 3/4 inch in diameter and requires a 7/8-inch mounting hole. Prices on application.

No. 600 Unit, with Clear Lens and Insert or Jeweled Lens, as Desired.....each \$1.50

**Kirkland Bulls-I-Plaques**

A practical development for the application of bulls-eye (pilot lights) with lettering or numbering, to panel boards, electrical devices and for all remote control visual indication purposes.

Cast in genuine solid bronze, aluminum or in nickel-silver; size, shape, lettering and numbering to order. Standard lettering or numbering is block type; all letters are raised and polished. Background is stippled and oxidized. Border may be plain, raised single flat-band, raised double flat-band or filed bevel edge. Special shapes or styles of lettering and numbering, trade-marks, monograms, etc., are extra.

Approximate thickness of plaque, 3/16 inch.

Square or Long Type Plaque, Including Raised Letters or Numbers.....per square inch \$1.15  
Minimum Charge for Square or Oblong Plaque.....each 3.30  
Circular Type, 2 1/2 Inch Diameter, Including Raised Letters or Numbers.....each 2.25

Special circular plaques furnished in any diameter. Furnished in brass if desired; add 5% for chromium finish.

When ordering specify: horizontal or vertical type of plaque; number of bulls-eyes to be on plaque; types of lens and color of bulls-eyes; type of border and finish of plaque; lettering or numbering on plaque; type, voltage and capacity of switches; also send rough sketch.

## Faraday Separable Connectors

For Flush or Surface Wall, Floor or Desk Mounting  
Types SCP, SCC, SCWF, SCD, SCDP and No. 922,  
Schedule D—Types SCA and SCB, Schedule T

Designed to provide means for perfect mechanical and electrical connections between the terminals of two cables where it is desired that they be easily disconnected for alterations, testing, etc. This applies especially to connection between rigid cable installed in conduit and flexible cables for annunciators, telephones, push-buttons, etc., either at the floor, wall, or at an office desk.

One half of the separable connector has contact points which are plugged into contact clips of the other half.

Made of bakelite having embedded therein either 4 or 10 terminal connectors; housed in solid bronze shell.

Standard package, 1.

### Type SCP Connectors Only—Without Bronze Shell

No. SCP-4, 4-Terminal Connector.....each \$8.00  
No. SCP-10, 10-Terminal Connector.....each 10.00

### Connectors with Housings Type SCC—For Floor Connection

Parts Comprising Type SCC

Standard size nipples for Nos. SCC-4 and SCC-10 are 3/4 inch; over 10 number standard size nipple is 1 inch.

Type SCB, with Desk Buzzer in SCC-10 Shell.....each \$20.00

## No. 922 Portable Type Connectors

Designed to meet conditions where it is desired that separable connector be portable. Housings are of cast aluminum.

Made in 10-terminal units (5 pairs) only.  
No. 922.....each \$40.00

Cat. No. SCA-2

## Faraday Interconnection-Strips

Schedule T

Designed to facilitate cable-terminal-interconnection for annunciators, push buttons, telephones, etc., and to eliminate splices.

No. CS-26

These strips provide time and labor saving means for fanning out and separating the conductors of cables without the costly forming or lacing of old time methods and for attaching them to their respective terminal locknuts in a neat way. By the use of Faraday Interconnection-Strips testing of the wire circuits is greatly facilitated, at any time, and changes in and additions to the wiring may be easily effected.

Height, 7 1/2 inches; depth, 2 3/8 inches. Metal channel space, 1 1/8 inches.

Standard package, 1.

Cat. No.	Each	Description	Width In.
CS-26	\$3.00	Strip Only with 26 Terminals (13 Pairs)...	1 1/8"
CSM-26	7.00	Same as Above, with Metal-Channel Mounting Form and Numbered Forming Strip.....	2 3/8"
CSM-52	12.00	Same as No. CSM-26, but has Strip for 52 Terminals (26 Pairs)...	4 1/8"

## No. CSC-1 Faraday Interconnection-Cabinets

Flush and Surface Types

Schedule T

Cabinets have installed therein a panel upon which is mounted one or more Faraday Interconnection-Strips and the necessary number of 5-point fused battery strips. The black enameled steel cabinet is provided with door and spring lock. May be furnished, at extra cost, with gutters similar to those of lighting panel boxes so that cables may be concealed.

Standard package, 1.

No. CSC-1 Surface Cabinet with One 52-Terminal (26 Pairs) Interconnection-Strip and One 5-Wire Fused Battery Strip.....each \$36.00  
Add for Each Add. 52-Ter. Interconnection-Strip... 13.00  
Add for Each Add. 26-Ter. Interconnection-Strip... 8.00  
Add for Each Add. 5-Wire Fused Battery Strip.... 11.00  
Flush cabinets at same prices as surface cabinets.

## Faraday Fused Battery Strips

Schedule T

Designed to provide fuse-protection on low voltage circuits.

Height, 1 3/8 inches; width, 3 inches. Standard package, 1.

## Faraday Heavy Terminal Strips for Large Size Wires

Schedule T

Base is solid 1/2-inch bakelite with extra heavy non-turning brass studs, numbered, as specified. Each wire can pass through a hole opposite its individual post, thus eliminating the use of forming strips. Terminals are 5/16 locknut pattern. Standard package, 1.

Cat. No.	915	916	917	918	919
No. Pairs of Terminals.....	5	10	15	20	25
Each.....	\$5.00	8.00	11.00	14.00	17.00

**Type P-160 Self-Winding Adjustable Program Clocks**

**24-Hour Schedule**

An automatic clock combined with a program device. Used as a master clock to control a system of clocks as well as to operate programmed signal system.

The only clock of this type that can be checked hourly with official time by connection with local Western Union Time Service.

Oak or birch case finished to match trim. Height, 41 1/4 inches; width, 18 1/2 inches; depth, 7 3/8 inches; 12-inch dial. Movement: 80 beat, spring-driven, pendulum-controlled. One hour's reserve power.

Program device sounds 4 second signals any 5 minute period of day. Time of sounding signals easily adjusted by rearranging pins on program disc. Can operate a number of different schedules concurrently. Can be equipped with contact for silencing bells. Operates any number of signals. One-bell installations can be furnished in compact units

with bell mounted on side of clock case.

Operation: 110 volt a.c. through transformer rectifier, or dry cell batteries direct.

Large installations requiring a number of bells, need additional relay and transformer rectifier to furnish extra power for bells. These are furnished at extra cost.

Complete descriptive bulletins and prices gladly quoted on application.

**Portland Anysset Count Controllers**

A rugged heavy duty instrument designed to automatically maintain a uniform count of production, tallied in predetermined units.

Can be quickly and easily set to any number within the capacity of the instrument so that when desired quantity has been tallied a warning is given, either by bell or light, and a switch is thrown which may be utilized to stop the machine or to perform certain necessary operations at that point. On this particular type of register, resetting is unnecessary to repeat the cycle.

Adapted for speeds up to 500 counts per minute. The electric switch will carry 110 volts; for

higher capacities an additional starter switch is necessary. Brake-stop switches may be used for an instantaneous machine stop. Terminal posts are provided for alarm signals for either bell or light operating from dry cell current.

The controller being automatic in its control features, can be used to operate a battery of machines where a limited counting, timing or measuring operation is necessary.

Size of heavy dustproof case, 10 3/4 x 4 x 3 3/4 inches.

When ordering specify motor ratings. Starting and brake-stop switches are extra. Controller may be obtained for either rotary or reciprocating movements. A right-hand register has actuating shaft on right hand side when facing register as illustrated; left-hand controller has shaft on left. Special fittings to suit individual requirements are designed on request.

- 3-Figure Capacity.....each \$29.25
- 4-Figure Capacity.....each 37.25
- 5-Figure Capacity.....each 45.25

**Edwards Non-Code Fire Alarm Stations**

6 to 110 Volts

Underwriters Approved

**No. 224 Flush Break-Glass Station**

No. 224

With hinged front so test operation is same as actual alarm operation. Size, 3 7/16 x 4 3/8 inches, to fit standard single switch box. Test key, hammer and chain with each station. Open circuit type furnished if not specified. Finish, red enamel.

Weight, 1 pound.

Price, No. 224, Open Circuit.....each \$7.50

Price, No. 224C, Closed Circuit....each 7.50

**No. 225 Surface Break-Glass Station**

Same as above but with cast fitting for surface wiring. Fitting can also be mounted on standard switch box for use with concealed wiring but where it is desired to have stations protrude from wall to be visible from a distance.

Weight, 3 1/4 pounds.

Price, No. 225 Open Circuit.....each \$9.50

Price, No. 225C Closed Circuit.....each 9.50

**No. 77 Surface Break-Glass Stations**

Low Voltage Only

No test. Open circuit only.

Diameter, 3 3/4 inches.

Standard finish, polished brass rim, red center.

Weight, 7 ounces.

Price, No. 77.....each \$2.90

Price, Glass for Any Station...each .44

Price, Hammer and Chain for Any Station.....each .60

**No. 2077 Faraday Surface Type Fire Alarm Boxes**

Open-Circuit, Non-Code-Ringing Schedule D

No. 2077.....each \$2.90

Extra glasses, 44 cents; chain and hammer, 60 cents.

**No. 2024 Faraday Flush Type Fire Alarm Boxes**

Open or Closed-Circuit Schedule D

No. 2024.....each \$7.50

Extra glasses, 44 cents; chain and hammer, 60 cents.

A break-glass box, English vermilion finish; non-conduit installations.

Height, 4 3/8 inches; width, 3 inches; thickness, 3/4 inch.

For systems where it is not required that location of box from which signal originates be indicated by automatic code-ringing of gong and where failure of operative current or derangement of circuits or apparatus is not required to be automatically indicated.

A break-glass box, finished in glossy English vermilion.

Fits a standard outlet box for conduit. Height, 4 3/8 inches; width 3 3/8 inches.

For fire alarm systems where it is not required that location of box be indicated.

Can be furnished hinged hammer type in place of chained hammer type at same price.

## Industrial Fire Alarm Systems

Industrial fire alarm systems are particularly designed and suitable for factories, schools, colleges, public institutions, hotels, theatres, office buildings, department stores, warehouses, apartment houses, etc. in fact for every class of building where life and property should be protected from fire hazard, but with full consideration that such a fire alarm system must be dependable, yet simple and economical, both as to initial cost and maintenance.

Industrial fire alarm systems may be classified in 2 general types:

Electrically-Supervised Closed-Circuit Code and Non-Code Ringing for local drill alarm purpose and for connection to municipal fire alarm systems.

Non-Supervised Open-Circuit Code and Non-Code Ringing Systems.

### Closed-Circuit Systems

Under the closed-circuit systems the following may be furnished:

**PLAIN CODE SYSTEMS** in which the operation of a station lever causes all audible devices such as gongs, horns, etc. to sound a pre-determined code indicating the point of origin of the alarm.

**PRE-SIGNAL CODE SYSTEMS** in which the first operation of a station lever causes a code to be sounded on certain audible signals, known as pilots. The second operation of the station by means of a special key will cause the code to be sounded on all audible devices, both pilots and general.

**POSITIVE NON-INTERFERING CODE SYSTEM** features may be included in either the plain or pre-signal code systems mentioned above. These features prevent the jumbling of the code signal in the event of more than one station being operated at or about the same time.

**MASTER CODE SYSTEMS** in which one standard code is used this code indicating "Fire" but where the exact location of fire is not required.

**INSTITUTIONAL AUXILIARY SYSTEMS** in which the operation of a station lever by a person, equipped with the proper key, causes a code to be sounded on all audible signals within the building for drill purposes. In the event of an actual fire the operation of the station lever will cause an alarm to be sounded on all audible devices within the building, and at the same time will transmit a signal over the municipal fire alarm circuits indicating the building on fire.

**GENERAL ALARM NON-CODE SYSTEMS** on which the breaking of glass in the station operates all signals continuously until glass is replaced or circuit switch is opened.

### Open-Circuit Systems

Under the open-circuit systems the following may be furnished:

**PLAIN CODE SYSTEMS** in which the operation of a station lever causes all audible devices to sound a pre-determined code indicating point of origin of the alarm.

**MASTER CODE SYSTEMS** in which one standard code is used, this code indicating "Fire" but where the exact location of fire is not required.

**GENERAL ALARM NON-CODE SYSTEMS** in which the breaking of glass in station operates all audible signals continuously until glass is replaced or circuit switch is opened.

**ANNUNCIATOR ALARM SYSTEMS** in which the breaking of glass in station operates a corresponding drop on an annunciator indicating point of origin of alarm and also operating audible signals.

### Fire Alarm Boxes

Fire alarm boxes for industrial fire alarm systems are manufactured in 6 types, to meet all conditions of fire alarm service as follows:

Positive Non-Interfering Type Code-Ringing Closed-Circuit.

Plain Type Code-Ringing Closed-Circuit

Pre-Signal Type Code-Ringing Closed-Circuit.

Double-Code-Ringing Type Closed-Circuit.

Shunt-Type Non-Interfering Code-Ringing Closed-Circuit.

Open-Circuit Type Non-Code-Ringing.

Code ringing closed-circuit fire alarm boxes are subdivided into the following groups:

Enclosed Pull-Lever Surface and Semi-Flush.

Break-Glass Pull-Lever Surface and Semi-Flush.

Weatherproof Pull-Lever Surface.

Weatherproof Break-Glass Pull-Lever Surface.

### Sounding Devices

Sounding devices for fire alarm systems are designed with the utmost care to afford the maximum of protection through dependable operation. Dependability is the more important as fire alarm sounding devices may remain idle for long periods of time and yet must be so constructed that, when the need arises, they function instantly and satisfactorily.

Sounding devices are divided into 2 general classes, viz.:

Electrical Sounding Devices.

Mechanical Sounding Devices.

Electrical sounding devices are predominant for use in fire alarm systems and comprise:

Straight Electric Signal Gongs—Single Stroke and Vibrating.

Electro-Mechanical Signal Gongs.

Small Electric Sirens.

Motor-Driven Horns and

Vibrating Horns.

Mechanical sounding devices consist of compressed air horns.

### Fire Alarm Control Cabinets

For regular, pre-signal or dual-operated and double code fire alarm systems.

Fire alarm control cabinets are designed for the control and supervision of Fire Alarm Circuits. They consist of ebony asbestos or slate panels having mounted thereon necessary controller-relays. Trouble-relays, time-limit-cut-outs, meters, terminals, fuses, etc., all being enclosed in heavy pressed steel fireproof cabinets with Yale locked doors. Glass windows are provided in doors to permit ready reading of meters without opening the doors.

### Fire Alarm Apparatus

Fire alarm apparatus is steadily being improved in quality and design from year to year and is guaranteed to be electrically and mechanically perfect. Particular attention, however, is called to the necessity of proper installation and maintenance if every day in the year satisfactory service is to be obtained. Installation suggestions are furnished with each system.

### Engineering Advice

Our engineering department will promptly advise and cordially co-operate with anyone contemplating the installation or use of fire alarm apparatus.

## Hospital Signaling Systems and Equipment

Hospital signaling systems are an absolute necessity in every modern hospital.

### Nurses' Calling Systems

Nurses' calling systems may be of either one of the following 4 types:

**LOCKING-BUTTON TYPE** in which the locking push button, suspended from a flexible, rubber-covered cord contains all the mechanism to actuate the audible and visible signals and to reset these when call has been answered.

**LOCKING-MAGNETIC SWITCH TYPE** in which the contacts of the non-locking push button at the end of a flexible, rubber-covered cord actuate a magnetic switch, protected by a steel case in the wall, the switch operating both audible and visible signals; this locking-magnetic switch type may be used on 110-volt circuits, either a.c. or d.c., or on low-voltage circuits if preferred.

**PULL-CORD-SWITCH TYPE** consisting of special toggle-type switch installed in the wall and operated by a pull-cord. This system is used in hospitals where low initial cost is a deciding factor; the operation of the pull-cord switch requires more effort on the part of the patient, and is sometimes not favored because of this.

**BEDSIDE-SERVICE-PHONE TYPE** permitting direct communication between patient and nurse by means of loudspeaking telephone thus providing greater convenience, and quickest service to patient.

### Nurses' and Maids' Location Systems

These systems indicate the location of nurses and maids in private rooms by an illuminated plug inserted in a receptacle at the door when entering. Upon leaving the room this plug is removed.

### Ambulance and Entrance Signaling Systems

Consist chiefly of the necessary push button, located at doors leading out of the building and a lamp-annunciator having a lamp signal for each location with buzzer as audible signal. Useful for night service.

### Nurses' Home-Calling Systems

These systems provide communication between office and the nurses' and attendants' rooms at their homes. Two types of systems may be used, viz.:

#### Return-Call Annunciator Type

#### Intercommunicating Telephone Type

In the return-call annunciator systems, nurses' or attendants' rooms are provided with a combination buzzer and push button-station while at building office, a combination annunciator and push button board is installed. In this way the office may call the nurse and the nurse may answer the call by operating the corresponding push buttons. Room stations may be provided with indicating drops which in nurses' absence remains visible until reset, indicating that a call has been made.

- In the telephone call system the combination annunciator and push button board is provided with an operator's telephone and the room stations are replaced by telephones. The room telephone may be provided with indicating drop for the same purpose as stated above.

Hospital signaling equipment is approved by Underwriters' Laboratories as well as by the U. S. Government for Veterans' Hospitals, etc.

### Engineering Advice

Our engineering department—specialists in this particular field of signaling—will gladly co-operate with architects, engineers, hospital superintendents, etc., in charge of operation to lay out systems and make recommendations.

There is no charge for this service.

## Type A Federal Sirens

This outdoor Type A Siren takes the place of bells, gongs, whistles, etc., wherever electricity is available. There are no gears or vibrating parts. This siren with double horn gives increased efficiency, greater volume, and pleasing tone.

Length over all, 14 inches; diameter of

horn, 10 inches; diameter of body, 5 $\frac{3}{4}$  inches.  
 Weight, packed in carton, 17 pounds.  
 Price, Type A, with Universal Motor,  $\frac{1}{8}$  H.P., A.C. or D.C., 6 to 250 Volts .....each \$40.00  
 Price, Brass, Copper or Porcelain Enamel Finish, 6 to 250 Volts .....each 45.00

## Federal Apparatus Type Sirens

6 or 12 Volts D.C.

Type E

For every type of emergency vehicle, fire apparatus, etc.

With G-E motor.

All types finished in chromium plate except No. 8 which is finished in black Duco.

Type E is furnished with either standard, bar or dash bracket, switch and cable.

No. C-5, Coaster Siren .....each \$67.50  
 No. C-5, Coaster Siren with Electric Brake .....each 80.00  
 Type E, with Flat or Regular Projector .....each 40.00  
 No. 10, with Long or Short Projector .....each 30.00  
 No. 8, with Short Projector .....each 25.00

## Federal Vertical Electric Sirens

Greater tone volume per horsepower is obtained by the improved vertical design.

This design also assures full weather protection at all times.

Furnished in sizes 2 to 7 $\frac{1}{2}$  horsepower according to the size of town.

Full details on vertical sirens for general alarm as well as fast code will be sent upon request.

## Edwards Horns and Howlers

Schedule T

No. 311

No. 311, for Indoor Use

No. 311 is a powerful signal for all indoor uses, in schools, mills, etc. Ideal in noisy locations as dismissal signal or emergency and fire signal.

Its appearance gives it an advantage in schools and fine buildings.

Equipped with a back plate, which mounts directly on wall, 4-inch square box, standard switch box, any outlet box with single gang switch cover, or any single gang conduit or Wiremold Type fitting. Wires are connected to this plate, and the horn easily hung at any later time without inconvenient connections, screws, etc. Approximately 5 $\frac{1}{2}$  inches high, 5 $\frac{1}{2}$  inches wide and 3 inches deep.

No. 311 ..... 311  
 12-30 Volts A.C. ....each \$10.00  
 110 Volts A.C. ....each 11.24

Nos. 312 and 313

No. 312 with Single Projector

No. 312 has same mechanism as No. 311 but equipped with projector for weather protection.

Drilled top, bottom or both for  $\frac{1}{2}$ -inch conduit.

Approximately 6 inches high, 11 $\frac{3}{4}$  inches long. No. 311 is the same as No. 312 except it has a double projector.

No. 312 ..... 312 313  
 12-30 Volts A.C. ....each \$15.00 \$18.00  
 110 Volts A.C. ....each 15.00 18.00

## Approved Mercoid-Triplex Terminal Blocks

With two No. 8-32 steel inserts molded in bottom projecting  $\frac{3}{16}$  inch to provide means for fastening with nuts to panel or housing.

Length, 2 $\frac{1}{2}$  inches; height, 1 $\frac{1}{8}$  inches; depth, 1 inch.

Four copper bus connectors fastened to molded block and separated by  $\frac{1}{16}$ -inch high molded barriers—8 brass screws No. 8-32 furnished to bind wires to connectors.

Each ..... \$ .75

No.	Each	H.P.	Volts	Motor Current	Cycles	Phase
2	\$195.00	2	110-220	Univ. D.C.-A.C.	Any	.....
3	295.00	3	220-440	A.C.	60	2 or 3
3	315.00	3	220	A.C.	60	Single
5	360.00	5	220-440	A.C.	60	2 or 3
5	395.00	5	220	A.C.	60	Single
7	400.00	7 $\frac{1}{2}$	220-440	A.C.	60	2 or 3

## Federal Remote Control Switches

Permits operation of sirens from distant localities. One push button is included.

Remote Control for Any 2-H.P. Siren .....each \$20.00  
 Remote Control with Thermal Cut-Out Relays for Any 3-H.P. Siren .....each 30.00  
 Remote Control with Thermal Cut-Out Relays for 5 or 7 $\frac{1}{2}$ -H.P. Sirens .....each 40.00

**Benjamin Industrial Signals**

For Calls and Warnings in Factories, Yards, Warehouses, Etc.

In Use in a Machine Shop

In the routine of business, getting men when needed at the office or telephone, is frequently difficult.

A well-installed calling system with the right signals in the line, however, makes it possible to reach any executive at once and without disturbance or loss of time to employees.

Benjamin Industrial Howlers have a peculiar pitch and penetrating tone which makes them most effective and satisfactory signals.

They are ruggedly made and perfectly assembled so that daily performance may be expected for years; their maintenance is less than other forms of signals.

Benjamin Howlers are made for either indoor or outdoor use on direct current or alternating current circuits.

These howlers are satisfactory for use as factory superintendent's and foreman's calls; tell-tale or warning, for water tank levels, steam or gas pressures, sprinkler systems, etc.; burglar alarms; traffic warnings for street crossings; draw bridge signals; in mines, municipal fire stations; at railroad crossings; for signaling the opening and closing hours of labor.

**Direct Current Industrial Howlers For Multiple Circuits**

These howlers may be employed successfully on circuits as high as 250 volts.

When six or eight direct current howlers are to be used on one circuit, not less than 32 volts should be used.

Sounding mechanism, vibrator type, has silver make-and-break contact points. An especially constructed condenser across contact points prevents arcing.

Vibrator springs of the best grade spring material are mounted independently of the armature.

Self-locking adjusting screw, reached through projector, regulates tone volume and pitch of note.

**No. 8326-H Heavy Duty Weatherproof Howlers**

Has cast iron body, tapped for 1/2-inch pipe connection. The one-piece, drawn brass, bell type sound projector is rigidly attached to a heavy pressed steel cover.

A gasket between cover and body makes the signal weatherproof.

Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Weight Pounds	Price Each
8326-H	Brass Bell	1/2-in. Conduit	*	5 3/4	\$15.00
8358-A	14-in. Conical	1/2-in. Conduit	*	6 1/2	16.25

\*Standard voltage is 110 volts, direct current, but any voltage from 6 to 250 direct current, inclusive, may be specified at an advance of 50 cents.

Specify voltage when ordering.

**Benjamin Industrial Signals**

**No. 8326-A Heavy Duty Non-Weatherproof Howlers**

Has pressed steel body with approved insulated side entrance for open wiring. The one-piece, drawn brass, bell type sound projector is rigidly attached to a heavy pressed steel cover which also carries the mounting bracket. Wire connections are easily accessible by loosening two screws and removing back. Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8326-A	Brass Bell	Open Wiring	*	2 1/4	\$12.50

\*Standard voltage is 110 volts d.c., but any voltage from 6 to 250 d.c., inclusive, may be specified at an advance of 50 cents. Specify voltage when ordering.

**Alternating Current Industrial Howlers For Series or Multiple Operation**

These howlers may be operated on either multiple or series circuits and will work well even in connection with vibrator or single stroke gongs, etc.

When used in series with other electrical devices special windings are furnished which allow passage of sufficient current to operate the other devices on same line. A 10 per cent variation in voltage will not affect the satisfactory working of the howler. Weatherproof types are recommended when signals are to be used outdoors. Sounding mechanism is of the vibrator type. The vibrations are the result of the alternating current cycles and no make-and-break contacts are required. No adjustments are needed.

**Heavy Duty Weatherproof Howlers**

No. 8346-H

Has a.c. mechanism; construction and finish same as for Cat. No. 8326-H.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8346-H	Brass Bell	1/2-In. Conduit	**	4 3/4	\$12.50
8357-A	14-In. Conical	1/2-In. Conduit	**	5 1/4	13.75

\*\*Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

**Factory Non-Weatherproof Howlers**

No. 8152-L

Has a.c. mechanism; construction and finish same as for Cat. No. 8326-A. Cat. No. 8152-L is exactly like No. 8355-A except that it is equipped with a 9-inch conical sound projector which tends to confine the volume of tone in one direction.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8355-A	Brass Bell	Open Wiring	**	2 1/4	\$10.00
8152-L	9-In. Conical	Open Wiring	**	2	8.75

\*\*Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

**No. 8152-S Mine Type Weatherproof Howlers**

Has pressed steel body and front cover with mounting bracket attached to front cover and a one-piece, drawn brass bell type sound projector. Electrical connections are made to insulated wire leads entering front cover. Made weatherproof by gasket and by sealing wire entrance. Finished in baked black enamel.

Cat. No.	Type of Projector	Connection	Voltage	Wt. Lbs.	Price Each
8152-S	Brass Bell	Open Wiring	**	2 1/4	\$12.50

\*\*Standard winding is for 60 cycles, 110 volts a.c., but any voltage from 6 to 250 a.c., inclusive, may be specified at an advance of 50 cents. Specify voltage and frequency when ordering.

## No. 8161 Benjamin Kode-Kalls

Operated mechanically by a precision-built clock work. For code calling systems of industrial plants, offices, etc. To operate, set dials at code numbers desired and push down on plunger; Kode-Kall then automatically repeats signal 3 times.

Can be used on any kind of signaling system—operated from batteries, lighting circuit or current of any voltage. Any type of signaling device can be used in circuit. Electrical contacts are rated at 100 watts at 110 volts.

Office green crackle lacquer finish, polished metal trim. Has rubber foot pads. Complete with cord and connector.

No. 8161, Wt. 9 Lbs. .... each \$40.00

## Benjamin Single Stroke Bells and Chimes

National Electrical Code Standard

For Series or Multiple Operation

Bells are for code calling in large offices, factories, schools, commercial establishments, etc. Ideal for coded fire alarms or other coded warning signal systems.

Mechanism is of the solenoid type with only one moving part—the plunger—which responds instantly when coil is energized.

Tone volume is adjustable. Soft, medium or loud tones may be obtained by turning set screw at bottom of casing, which regulates plunger stroke.

Bell

Installation is simplified by special mounting plate which provides a means of direct attachment to Gem Type Outlet Boxes or to any switch or outlet box cover having mounting holes spaced on 3/8-inch centers. In installing, mounting plate is first attached to outlet box or cover by 2 screws. Wires are then brought through large center hole in plate, and looped around binding screws. After wiring, device is attached by 2 screws threading into special mounting plate.

Chime

Plunger is of magnetic iron, with a bakelite striker and moves freely in a bakelite tube. Magnet coil is layer wound, impregnated and not affected by moisture. The chimes are identical in construction to the bells except that a metal chime bar with a wood resonating chamber is provided in place of a gong. All housings are of cast iron; housings, bells and resonating chamber of chimes are finished in black.

Cat. No.	Each	Description	Voltage	Wt. Lbs.
8110	\$9.70	3-In. Diam. Bell	110 Volts, 60 Cy. A.C.	3
8111	9.70	3-In. Diam. Bell	110 Volts, D.C.	3
8115	15.75	6-In. Diam. Bell	110 Volts, 60 Cy. A.C.	4
8116	15.75	6-In. Diam. Bell	110 Volts, D.C.	4
8117	19.75	8-In. Diam. Bell	110 Volts, 60 Cy. A.C.	6
8118	19.75	8-In. Diam. Bell	110 Volts, D.C.	6
8120	18.00	Chime	110 Volts, 60 Cy. A.C.	5
8121	18.00	Chime	110 Volts, D.C.	5

Standard voltages are listed above.

Special voltages from 6 to 48 volts, a.c. or d.c. may be specified at a reduction of \$2.00 in list price. For voltages over 125 volts, a.c. or d.c., add \$2.00 to list price. Special voltages and frequencies must be specified when ordering.

## Benjamin Motor Driven Signals

For Multiple Circuits

A weatherproof signal of unusual tone and penetration. Used indoors or out where service requirements are exacting. For use in steel mills, railroad shops, foundries and all locations where noise is excessive.

Pitch of signal is correct for cutting through conflicting noise. Suited for coding as there is no lag or coasting of motor to blur the coded signal.

Signal has heavy cast body, weatherproof rubber gaskets, drop-forged, heat-treated alloy steel ratchet and diaphragm anvil, phosphor bronze armature bearings and automatic wick-feed lubrication. Motor is series wound for starting power and has correct r.p.m. to produce penetrating tone. A set screw at rear of housing controls volume and pitch.

Standard voltage: 110 volts, 60 cycles a.c. or 110 volts, d.c. Special voltages up to 250 volts d.c. and 240 volts a.c. and frequencies from 25 to 50 cycles available at advances over prices. Power consumption, 55 watts.

Finished in baked black enamel. Red enamel furnished at an advance of \$1.25.

The double projector type motor-driven signal is used where sound is to be projected in opposing directions from a central location.

Conduit connection, 1/2 inch.

Net weight, 14 3/4 pounds.

Cat. No.	Projector	Voltage	Price Each
8175	Single Cast	110 A.C.	\$35.00
8176	Single Cast	110 D.C.	35.00
8180	Double Bell	110 A.C.	38.75
8181	Double Bell	110 D.C.	38.75

## Weatherproof Double Projector Howlers

No. 8788

The Projector Howler offers an effective and economical means of projecting sound from a central point up and down a passageway or platform.

This howler has cast iron body, with 2 mounting lugs and is tapped at side for 1/2-inch pipe connection. Two drawn brass, bell type sound projectors are attached to pressed steel front cover.

The sounding mechanism for the Double Projector Howler is of the vibrator type, furnished for d.c. or a.c. circuits, and is standard Benjamin Industrial Howler construction. All joints in case are gasketed to make mechanism weatherproof. Finish is baked black enamel. Red enamel finish will be furnished at \$1.00 advance in list price.

Cat. No.	Connection Inches	Voltage	Wt., Lbs. Each	Price Each
8788	1/2 Conduit	†D.C.	8	\$18.75
8790	1/2 Conduit	*A.C.	7	16.25

\*110 volts, 60 cycles is standard on Benjamin a.c. horns. However, any voltage from 6 to 250, and any frequency from 25 to 60 cycles, may be specified at an advance of 50 cents list. Voltages and frequencies must be specified when ordering.

†110 volts is standard for all Benjamin d.c. horns. However, any voltage from 6 to 250 may be specified at an advance of 50 cents list. Specify voltage when ordering.

**Benjamin Weatherproof Fire Alarm Howlers**

No. 8360

Specially built for use on fire alarm systems operating under stringent regulations. The Industrial Commission of the State Department of Labor, New York City, has approved them for use with standard fire alarm boards.

In series, without condenser, eight 14-volt or fourteen 8-volt howlers may be used, but where fourteen 14-volt howlers are used a condenser must be supplied on the panel board. The 110-volt howlers may be used for open circuit work where a time limit fuse or switch is inserted in the circuit. The use of 8-volt and 14-volt signals on one circuit is permitted. D.C. howlers are for use on multiple circuits only. The sounding mechanism for Benjamin Fire Alarm Howlers is of the vibrator type. These signals have cast iron body tapped for 1/2-inch pipe connection. A one-piece, drawn brass, bell type sound projector is rigidly attached to a pressed steel front cover. Signal is made weatherproof by gasket. Finished in red enamel.

Cat. No.	Type of Projector	Connection	Std. Voltage	Wt. Lbs.	Price Each
8360	Brass Bell	1/2-In. Conduit	*110 D.C.	5 3/4	\$16.00
8864	Brass Bell	1/2-In. Conduit	8 A.C.	4 3/4	13.50
8865	Brass Bell	1/2-In. Conduit	14 A.C.	4 3/4	13.50
8866	Brass Bell	1/2-In. Conduit	*110 A.C.	4 3/4	13.50

\*Standard voltage is 110 volts, D.C. or A.C., but any voltage from 6 to 250 inclusive, D.C. or A.C., may be specified at an advance of 50 cents. Specify voltage when ordering.

**Benjamin A.C. Industrial Buzzers**

The sounding mechanism of these buzzers is of the vibrator type. The vibrations are the result of the alternating current cycles and no make-and-break contacts are used. These buzzers will operate indefinitely without adjustment or attention, under all commercial conditions on either multiple or series circuits. Mine buzzer No. 8299-M may be used outdoors as well as indoors.

No. 8299-M

**Heavy Duty Mine Buzzers**

Open wiring type No. 8299-A has heavy stamped steel enameled case and 8-inch wire leads sealed in for outside connection.

Conduit type No. 8299-M has cast brass cover and is tapped for 1/2-inch pipe connection.

Finish, baked black enamel.

Cat. No.	Type Body	Connection	Std. Voltage	Wt. Lbs.	Price Each
8299-A	Stamped	Open Wiring	†110 A.C.	1 3/4	\$7.50
8299-M	Cast	1/2-In. Conduit	†110 A.C.	1 3/4	11.25

**No. 8297-A Office and Factory Buzzers**

One-piece pressed steel front cover has side opening with approved insulated wire entrance for open wiring.

Back plate is pressed steel, with mounting brackets top and bottom. This is an effective and reliable signal for offices, stock rooms, shipping rooms, etc., where a weatherproof signal is not necessary. Finished in black enamel.

Cat. No.	Type Body	Connection	Std. Voltage	Wt. Lbs.	Price Each
8297-A	Stamped	Open Wiring	†110 A.C.	1 3/4	\$5.75

†May be wound for voltages as high as 250 volts a.c. when specified, at no advance in price.

**Benjamin Heavy Duty High Voltage Push Buttons**

Rating: 5 Amperes, 125 Volts

No. 8493

No. 8734

For use with industrial signals. Quick, positive make-and-break mechanism is mounted on base of high heat molded insulating material.

Brass casing with mounting lugs. Casing will be tapped for 1/2 or 3/4-inch pipe, 1 or 2-way, if specified, without extra charge.

Finished in dead black.

**Non-Locking—Single Button**

Cat. No.	Description	Weight Pounds	Price Each
8493	Open Circuit Type	1 1/8	\$3.60
8874	Closed Circuit Type	1 1/8	3.60

**Non-Locking—2-Gang Button**

Cat. No.	Description	Weight Pounds	Price Each
8495	Open Circuit Both Buttons	1 3/8	\$5.00
8884	Open Circuit One Button, Closed Circuit One Button	1 3/8	5.00

**Locking Type—Watertight**

Cat. No.	Description	Weight Pounds	Price Each
8733	Closed Circuit Type	1 1/8	\$4.00
8734	Open Circuit Type	1 1/8	4.00

When ordering, specify size and number of outlets required.

**Benjamin Master Relays for Signal Systems**

For use with Benjamin Kode-Kall in operating the more extensive type of signaling installations where connected load is in excess of the 100-watt rating of the Kode-Kall, or where it is not desired to have the Kode-Kall wired into the high voltage signal circuit.

Contacts of relay have a non-inductive rating of 110 volts of 30 amperes

a.c. and 6 amperes d.c.; at 200 volts, 20 amperes a.c. and 3 amperes d.c.

Coil is rated at approximately 7 watts and operates at plus or minus 15% of rated voltages.

Relay is available in following voltages: 110 volts a.c. 60 cycles; 18 volts a.c. 60 cycles. However, the 110-volt a.c. relay operates at 15 to 30 volts d.c. and the 18-volt a.c. relay operates at from 4 to 6 volts d.c.

Relay is front connected and is mounted on a base of high insulating molded composition. Relay must be mounted in a vertical position.

Box supplied with No. 8336 is 6x6x4 inches in size and has 1/2-inch knockouts; finished in black japan.

No. 8335, Complete less Box, Wt. 3 1/2 Lbs. . . . . each \$12.00  
No. 8336, With Steel Knock-Out Box, Wt. 5 Lbs. . . . . each 15.50

**Telecode Relays**

This is a very sensitive, efficient and quick-acting circuit-closing unit standard with open-circuit contacts.

It can be had with back connections for panel mounting, with weatherproof conduit-fitting mounting or with 6x6-inch pressed steel box with knockouts.

No. 8314

No. 8313, with Panel Mounting . . . . . each \$12.00  
No. 8314, with 1/2-Inch Conduit Mounting . . . . . each 14.50  
No. 8315, with 6x6-Inch Steel Box . . . . . each 12.00

## Klaxon Industrial Horns

Electric motor-driven devices for operation on higher voltages. Effective in sounding time signals, fire or special hazard alarms or as warnings on derricks, etc.

For operation on 5 to 250 volts d.c. and on 10 to 460 volts a.c. Weatherproof housings are fitted with brackets for wall mounting and are tapped for conduit.

Types WS, W and WL with fire red lacquer finish; also available with Navy standard finish (baked black enamel over solid brass and copper plate) at \$3.00 extra.

In ordering give type desired, voltage of current supply and if a.c. or d.c.; advise cycle frequency if a.c.

### Type WS

Has a short projector, producing a harsh, piercing note which scatters in all directions. Suited for indoor use under severe noise conditions.

Length, 7½ inches; height, 11¼ inches. Shipping weight, 24 pounds.

Type WS.....each \$30.00

### Type W

With a ram's horn projector which directs its deep tone downward. Ideal for overhead or outdoor use.

Length, 12¼ inches; height, 11¾ inches. Shipping weight, 29 pounds.

Type W.....each \$30.00

### Type WL

With a long projector. Deep penetrating note of great power recommends this horn where long distances are to be covered or where note is to be directed toward a given point.

Length, 14¼ inches; height, 13 inches. Shipping weight, 29 pounds.

Type WL.....each \$30.00

### Type 1278-A

For use only on 110-volt 60-cycle current.

### Type 1281-A

For use only on 110 d. c. current.

Nos. 1278-A and 1281-A are small vibrator type horns for inside or protected outdoor use. Length, 5½ in.; height, 6½ in. including mounting bracket. Ship. weight, 5 pounds.

Red Lacquer Finish.....each \$5.00

## Klaxon 20 Horns for Marine Use

A detachable swivel mounting bracket and slip terminals make horn easily removable. Has weather-resisting Navy standard finish (baked black enamel over solid brass and copper plate).

Length, 11¾ inches; height without deck bracket, 10½ inches. Shipping weight, 15 pounds.

Type 530, 6 Volts. each \$28.00

Type 542, 6 Volts, with Attached Side Mounting Bracket.....each 25.00

## Klaxon 22 Horns for Marine Use

A high-frequency automotive type horn. Projector, screen and back shell are polished solid brass, collar is rustproofed; black enamel finish.

Length, 14¾ inches. Weight, 6¾ pounds.

Type 1141-A, 6 Volts.....each \$15.00

Type 1142-A, 12 Volts.....each 15.00

## Patterson Electric Tank Indicators

For Operation on Low-Voltage Transformer or Battery Circuits

Schedule T

No. A-20

No. B-21

Indicator gives a positive electrical alarm either in connection with a signal-gong or an annunciator, showing when contents of tank have reached a maximum or minimum level, or both.

Has self-cleaning contacts, brass-bushed bearings for vertical movements of rods in pipe. Will not fail when exposed to severe weather conditions; not affected by steam or vapor. All contacts are housed.

Standard package, 1.

No. D-23

No. E-24

Description	For Closed Tank		For Open Tank	
	Cat. No.	Each	Cat. No.	Each
*High and Low Water.....	A-20	\$30.00	B-21	\$30.00
Low Water (with 21" I.P. Stem)	C-22	18.00	D-23	18.00
High Water (with 20" I.P. Stem)	E-24	18.00	F-25	18.00
Add for Conduit-Connection Pattern for Pipe or Armored Conductor.....				each \$6.00

\*Furnished regularly allowing 12 inches between upper and lower balls.

If greater distance between base of flange and ball is required, extra stem will be furnished at the following prices:

	For A-20 and B-21	For C-22, D-23 and E-24 and F-25
Extra Stem up to 8 Feet.....per foot	\$1.44	\$1.00
Extra Stem up to 9 to 16 Feet...per foot	2.40	1.80
Extra Stem up to 17 to 20 Feet...per foot	3.00	2.40

**Edwards Flushcall Signaling Devices**

No. 660  
No. 760  
No. 1060

Flushcall signaling devices fit standard single gang boxes and take standard toggle switch plates. Can be ganged together with 110-volt receptacles, etc., in standard gang box and finished with standard plate.

For a.c. only. No adjustments needed. The uncertainty as to proper resistance, voltage, etc., for various uses has been eliminated.

**For Operation on 8 to 12 Volts, A.C., 60 Cycles**

These devices are suitable for operation of not more than two in multiple on Edwards No. 666 Powacall or No. 86 transformer; three in multiple on No. 88, 50-watt transformer; and four on No. 90, 100-watt transformer. Except No. 663 Melocall which is suitable for single use only.

1061	5.85	Buzacall, Replacing Buzzer....	1

Standard barrier boxes, allowing easy inexpensive combination of Flushcall and 110-volt devices, are made by all leading box manufacturers.

**Extension Signals to an Annunciator**

No. 696 Ringcall for ring extension with Edwards No. 88 50-watt (16-volt) transformer for system; and No. 668 Varicall for buzz extension with Edwards No. 666 Powacall for system. Two Varicall extensions in multiple on Edwards No. 88, 50-watt (8-volt) transformer.

No. 696, Ringcall.....	each \$1.32
No. 668, Varicall.....	each 1.14

**Edwards Nubels**

**No. 735 Nubel**

The No. 735 Nubel is a double magnet bell that operates perfectly on battery or transformer. It has phosphor bronze springs, silver contacts and new code binding posts. Grey enamel finish.

Standard package, 100; shipping weight, 45 pounds.

No. 735.....	each \$5.58
--------------	-------------

**No. 736 Buzzer**

The No. 736 Buzzer is of the same construction as the No. 735 Nubel.

Standard package, 100; shipping weight, 32 pounds.

No. 736.....	each \$5.55
--------------	-------------

**No. 737 Combrel**

The No. 737 Edwards Combrel is a double magnet bell and double magnet buzzer on one frame with the complete mechanism except the binding posts under a neat cover. For the apartment and flat. Has grey enamel finish that may be repainted. Gives excellent operation on battery or transformer.

Standard package, 50; shipping weight, 56 pounds.

No. 737.....	each \$1.13

## No. 15 Lungen Buzzer

Schedule E

Cover and base sheet steel; pivoted armature; ribbed edge spring cover. All nickel finish.

Standard package, 10, assorted.

Size No.	0	1	2	3	4
Dimen. in.	1 5/8 x 1 1/8	2 1/8 x 1 5/16	2 5/8 x 1 3/4	3 x 2	3 1/2 x 2 1/4
No. 15... each	\$1.90	1.80	1.90	2.00	2.70

## No. 16 Edwards Flush Buzzer

Battery or Transformer Operation

Schedule T

Used in offices, hospitals, residences, where the appearance of the usual surface type buzzer is objectionable. Buzzer is mounted on a sub-plate which fits any standard switch box. Standard switch plate with perforations to emit sound is furnished to cover buzzer and sub-plate.

Standard finish, brush brass; nickel at no extra charge. Special finishes, upon application.

Weight, metal plate, 3/4 pound; bakelite plate, 9 ounces.

No. 16, Metal Plate...	each	\$3.00
No. 16, Bakelite Plate...	each	3.30

## No. 750 Bronx Watchcase Buzzer

Schedule E

A brass case, heavily nickel plated; phosphor-bronze springs, silver-contacts.

Cat. No.	Each	Height Inches	Diam. Inches	Std. Pkg.
750	\$1.80	5/8	1 3/4	10

## No. 5006 Graybar Pull Cord Switches

Generally used in parlor car coaches.

Operates bus signal buzzers; also used as a stop light switch.

Overall block dimensions, 1 3/8 x 2 3/16 x 1 3/2 inches deep.

Prices and specifications upon application.

## No. 5003 Graybar Bus Signal Buzzers

Graybar Bus Signal Buzzers are of the totally enclosed type. A steel cover mounted over the mechanism, houses the unit and protects it from dirt and the weather.

All buzzers are thoroughly insulated and tested at a high voltage breakdown. The magnets are wound with enameled wire, assuring protection from moisture and short circuited turns.

For battery operation, either 6 or 12 volts. In ordering, state voltage required. The resistance of the buzzers is made high to utilize a minimum amount of current when operating. For other voltages, prices upon application.

Overall dimensions, 3 3/16 x 3 3/16 x 1 5/8 inches

Resistance, 15 ohms; voltage, 12. Dry or storage battery.

Prices and specifications upon application.

## No. 5000 Graybar Combination Vibrating and Single Stroke Bells

This bell makes it possible to combine 2 signals in one bell. Adaptable for double deck buses, the vibrating action being used for passenger's signal while single stroke action is for conductor's signal.

Guard extends partially over the gong. Supplied with 4-inch diameter gongs; stainless steel covers finished in black.

Overall dimensions, 8 3/4 x 4 inches.

Resistance, 15 ohms; voltage, 6 or 12. Dry or storage battery.

Weight, 2 3/4 pounds.

Specify voltage when ordering.

Prices and specifications upon application.

## No. 5004 Graybar Door Step Light Switches

For operating step lights. Heavy gauge bronze face plate, nickel finish. Plunger head is of stainless steel. Electrical contacts are enclosed in bakelite base.

Can be used to make and break circuits carrying as high as 10 amperes.

Dimensions: 2 1/2 inches high; 1 inch wide; 1 1/16 inches deep.

Packed in individual cartons containing switch, mounting screws and bumper plate.

Prices and specifications upon application.

## No. 5005 Graybar Bus Signal Push Buttons

For bus service requirements.

Formed to permit mounting on narrow window posts or installing on moulding. The cover of highly polished nickel finish is fastened to the bakelite base by 2 binding screws.

Mechanism is completely insulated. Contact springs are made of genuine phosphor bronze of the double-break, self-cleaning type, insuring positive action at all times.

Buttons are easily wired as terminal screws have large heads with upset ends to prevent their locking out when connections are looped. Connection permits looping of signalling circuit, eliminating splicing and soldering at each push button station. Overall dimensions, 1 1/2 x 1 inch.

Prices and specifications upon application.

## No. 71 Edwards Economy Skeleton Bells

Schedule E

A fully insulated, loud ringing bell for all ordinary purposes.

The outstanding feature of the Economy is the intensified stroke armature.

Size Inches	Each	Std. Pkg. Assorted
3	\$5.55	5
4	6.60	5
6	8.85	5
8	14.35	5
10	21.30	5
12	27.50	5

## No. 17 Edwards Economy Bells

Standard Voltage—8-10 Volts A.C., 6-8 Volts D.C.

Schedule E

This is a covered, double magnet bell for low cost burglar alarm and similar work.

It is the adjustable type.

Bakelite insulation.

Finish, black.

Standard package, 5. Can be furnished assorted.

Size.....inches	3	4	6	8	10
No. 17.....each	\$5.55	6.60	7.80	11.40	15.00

## No. 55 Edwards Bells

Standard Voltage—8-10 Volts A.C., 6-8 Volts D.C.

Schedule E

This single magnet bell is especially designed for low cost burglar alarm and similar work.

It is of the adjustable, non-weatherproof type.

Has black finish with nickel gong.

Standard package, 5. Can be furnished assorted.

Size.....inches	4	6	8
No. 55.....each	\$3.15	3.97	6.67

## No. 156 Edwards Monitor Bells

Battery or Transformer Operation

Schedule T

An entirely self-contained bell that presents a neat appearance.

The hammer rod moves on a straight line and strikes the inside of the gong. This allows the bell to be made weather, bug and dust proof.

The springs are phosphor bronze, the contacts pure

hard-drawn silver. Has a 3-inch gong, nickel, base is finished in black.

Weight, 1¼ pounds.

Price, No. 156, Vibrating.....each \$1.80  
 Price, No. 156, Single Stroke D.C. Only.....each 2.30

## Edwards Vibrating or Single Stroke Adaptabels

For All A.C. and D.C. Voltages

Schedule T

This is a compact bell of the Underdome, Turtle or Monitor Type.

Fits a variety of standard conduit boxes and similar fittings, concealed or surface. Mounting is also simple for non-conduit work.

The gong does not have to be removed for installation—first, mount plate on wall or on switch box, outlet box or any standard type fitting desired; second, connect wires to large convenient binding post; third, hang adaptabel on two strong lugs, then push it home. It snaps solidly into place. A few turns of the screw under the bell locks it in place.

As the electrical connections are made to the mounting plate only, the whole electrical installation can be made, tested and completed before painting and finishing.

The maintenance problem in hard service work, like traffic signals, railroads, etc., is simplified with a few spare adaptabels. Adaptabel is easily detached and a new one attached instead of repairing on the job or the complete electrical installation of a new bell.

The movement is completely enclosed in a cast aluminum housing. Protected against dirt, bugs, etc. When weather-proof is specified, it is protected with gaskets.

The a.c. vibrating mechanism is the polarized, no contact type. There are no coil springs or pivots. No adjustment necessary. Gongs are hot pressed steel, Parkerized to prevent rust.

The d.c. vibrating mechanism is also of the straight line plunger type. Gongs are of hot pressed steel, Parkerized to prevent rust.

All 6 to 12-inch adaptabels mount directly on wall, 4-inch square box, standard switch box or any outlet box with single gang conduit or Wiremold type fitting.

All 3 or 4-inch adaptabels have separable plate for mounting same as above and will also fit ¾-inch octagon boxes.

In ordering, specify voltage desired.

### Vibrating Type

No. 560 for A.C.—No. 561 for D.C.

Size Inches	12-30 Volts A.C. 6-9 Volts D.C. Each	110-130 Volts A.C. or D.C. Each	220-240 Volts A.C. or D.C. Each	Special Voltages or Resistance up to 48 Volts A.C. or D.C. Each
	3	\$9.30	\$11.30	\$13.80

	4	\$10.30	\$10.30
6	13.80	13.80	14.40
8	15.80	15.80	16.40
10	19.30	19.30	19.90
12	22.50	22.50	23.10

## No. 551 Edwards Plunger Type Bells

For All A.C. Voltages

Schedule T

A no-contact, polarized bell. For traffic signals, mines, warehouses and all standard signaling purposes.

Binding posts and all parts are completely covered; as hammer rod operates in a straight line, the hole in the cover is but little larger than the rod itself, which makes the bell bug and dust proof. Rustproof gongs are standard equipment, and with the addition of a rubber gasket the bell is weatherproof.

There are no contacts to wear, stick or replace. No pivots, coil springs or points of friction.

No adjustment. The only wearing part is where the hammer strikes the gong and the mechanism automatically adjusts itself to this.

No. 551, Single

Approved by the National Board of Fire Underwriters.

### No. 551 Single Gong Type

Size Inches	12-30 Volts Each	110-130 Volts Each	220-240 Volts Each	Weight Pounds
3	\$9.30	\$11.30	\$13.80	2½
4	10.30	12.50	15.00	3

8	25.60	28.00	30.50	16
10	30.00	32.80	35.30	19

For weatherproof type, add \$1.25.

Conduit attachment, add \$1.25 for separable conduit fitting for flush or surface conduit. Furnished at no extra charge on 110-220-volt bells.

### No. 551 F.G. Full Grid Type

Schedule T

Add to Standard bell:

Size Inches	Add Each	Weight Pounds
6	\$7.50	2¼
8	8.00	3¼
10	9.00	5½
12	10.50	7

No. 551 F.G.

Part Grid, No. 551 P. G., same price.

### No. 551Y Yard Type with Protective Hood

Add to Standard Bell for No. 551Y.....each \$25.00  
Special voltages up to 30 volts at no charge.

## No. 510 Edwards Clapper Type Bells

For Transformer and 110-Volt A.C. Lighting Circuits

Schedule T

No. 510 Standard

Conduit Type

These bells are designed with laminated magnets and specially constructed armature for efficient operation on transformer where a bell with contacts is desired. The contacts are silver, having a large area and excellent carrying capacity. They are easily replaceable.

Conduit fittings are made so that they may be installed with conduit and bell placed thereon after the wires are pulled through. Fittings are drilled top and bottom for ½-inch conduit unless ¾-inch is specified. A pipe plug is furnished for use when bell is on end of line.

### No. 510 Standard

Buzzer

No. 510 Y

**Edwards Plunger Type Recti Bells**

For Battery and D.C. Lighting Voltages

Brass hammer rod is so suspended at the armature that easy operation with no side motion is assured. The striking end of the rod is suspended by the case itself.

Springs of phosphor bronze act as demagnetizer between magnet head and armature when stroke has been made.

Contacts are silver.

Iron case, japanned; with felt gasket, oil treated.

Ball metal gong, finished in black to match the case.

No. 23F (D.C.)  
No. 24F (A.C.)

Showing Movement and Compact Construction

Solenoid type construction, giving a loud, clear ring. Operation is quick and precise, ideal for all coded signaling purposes. The construction eliminates springs and pivots. Entire mechanism is under gong. For surface conduit work a separable box is furnished with knockouts on all sides. Box can be mounted flush and an extension cover is furnished for mounting bell.

Operated either in series or multiple, but will be furnished for the latter unless specified. When conduit type is ordered, flush fitting is supplied unless otherwise specified.

No. 23F (d.c.); No. 24F (a.c.).

## Faraday Residence Call-Panels

The Modern Electric Bell  
For Surface Mounting  
Schedule A

An attractive installation harmonizing in color with the tone of the room.

Panel has hollow back-plates formed-up with molded edges, completely covering up the unsightly slack wires, the broken and uneven plaster and the grimy outline of the old style bells and buzzers.

Units are completely covered fully insulated and with adjustable contacts.

Standard finish: Panels, ivory; covers, jade green, blue or ivory, as specified.

Special color combinations such as blue, jade green or jet black panels with polished cadmium covers will be furnished on special order.

Panels will be furnished on special order with adapter-plates to mount on any standard outlet box, for new building work.

Standard package, 1.

### 1-Unit (Small) Panels

Width, 6 1/4 inches; height, 7 inches.

Cat. No.	Sig-nals	Description of Signal Units on Panel	Each
800	1	1—2 1/2-Inch Buzzer	\$2.80
807	1	1—Buzzer	2.80
802	2	1—Combination Bell-Buzzer	3.20

MTL-16	122.85	132.85	142.85
MTL-18	140.50	150.50	160.50

For half-grids, MBTL, and full-grids, MCTL, add to price of MTL:

Size.....inches	6	8	10	12
Each.....	\$7.00	8.00	9.00	10.00

For half-grid-guarded-weatherproof add to prices of non-guarded non-weatherproof:

Size.....inches	8	10	12	14	16	18
Each.....	\$15.00	17.00	19.50	43.40	53.90	68.90

For full-screen-guarded-weatherproof, add to prices of non-guarded non-weatherproof:

Size.....inches	8	10	12	14	16	18
Each.....	\$33.00	35.00	37.50	72.90	89.90	107.90

CONDUIT BELLS.—Adapter-plate allows any bell to be mounted on standard 4-inch square box or extension cover. Also fits single or double-gang conduit. Adapter-plate furnished as standard with 110 or 220-volt bells. On low voltage bells specify "conduit bell" if desired and add \$1.25. Cast wall box can be furnished at \$1.25 list addition to 110 or 220-volt bells; \$2.50 list addition to low voltage bells.

**Model KTS Faraday A.C. Signal Gongs**  
Monitor Pattern  
Schedule T

Single-Stroke, Solenoid-Plunger Type,  
Non-Weatherproof, Non-Guarded Gongs  
For Transformer and A.C. Light and Power Circuits

For general use and for paging systems of the code-calling type. Not suitable for closed-circuit-approved fire alarm systems where Underwriters approved gongs of 5150 or 5120 pattern should be used.

Regularly provided, without extra charge, with separable conduit-box-backs, adaptable to both surface and flush conduit installations. Boxes regularly have 1/2-inch knockouts; with 3/4 inch, when specially ordered.

Standard package, 1.

Cat. No. and Size Gong	12-30 V. Trans. Each	110-125 V. A.C. Each	220-250 V. A.C. Each
KTS- 4	\$10.30	\$10.30	\$13.50

KTS- 8	15.80	15.80	16.40
KTS-10	19.30	19.30	19.90
KTS-12	22.50	22.50	23.10

For full-grids add to list prices:

Size.....inches	4	6	8	10	12
Each.....	\$5.50	7.50	8.00	9.00	10.00

**Faraday A.C. Single-Stroke Fire Alarm Gongs**  
Schedule D

Listed as standard by National Board of Fire Underwriters. A.C. fire alarm gongs are arranged to be wired in series. Not more than 10 gongs can be used on any 110-125-volt a.c. circuit.

Specify the number of gongs required on each circuit and the voltage of the circuit.

Regularly provided, without extra charge, with separable conduit-box-backs, adaptable to both surface and flush conduit installations. Boxes regularly have 1/2-inch knockouts; furnished with 3/4-inch knockouts when so ordered.

Standard package, 1.

No. 5150 Monitor Pattern—Non-Guarded					
Size.....inches	4	6	8	10	12

No. 5120.....each	\$18.00	24.00	27.00	32.00	36.00

**Model MTTL Faraday A.C. Traffic-Signal Gongs**

Monitor Pattern  
Schedule T

Vibrating, Polarized, Weatherproof Enclosed,  
Non-Guarded Gongs

For Operation on A.C. Transformer or 100-110 Volt and 220-250 Volt Light and Power Circuits, 60 Cycles

Mechanism is polarized, no-contact non-sparking plunger-pattern with special hardened steel bearings, etc., to guarantee dependable signal operation where the work is practically continuous.

Mechanism is protected from dust, dampness and mechanical injury. Bakelite insulation throughout.

When ordering, specify cycles.

Regularly provided, without extra charge, with separable conduit-box-backs, adaptable to both surface and flush conduit installations. Boxes regularly have 1/2-inch knockouts but will be furnished 3/4 inch when specially ordered.

Standard package, 1.

Cat. No. and Size Gong	18-30 V. Trans. Each	100-110 V. A.C. Each	220-250 V. A.C. Each	Cat. No. and Size Gong	18-30 V. Trans. Each	100-110 V. A.C. Each	220-250 V. A.C. Each
MTTL-6	\$27.00	\$30.75	\$33.75	MTTL-10	\$42.00	\$45.75	\$48.25
MTTL-8	32.00	35.75	38.25	MTTL-12	52.00	55.75	58.25

Neck pattern Cat. No. ATTL can be furnished at same price if desired.

For BTTL half-grid guarded, add:

Size.....inches	8	10	12	14	16	18
Each.....	\$15.00	17.00	19.50	43.40	53.90	68.90

For CTTL full-screen guarded, add:

Size.....inches	8	10	12	14	16	18
Each.....	\$33.00	35.00	37.50	72.90	89.90	107.90

**Model ATN Faraday-Marlo A.C. Transformer Signal Gongs and Buzzers**

Neck Pattern

N.E.C. Standard—Schedule T

Vibrating, Clapper, Contact Type, Non-Weatherproof,  
Non-Guarded, Gongs Enclosed

For Transformer and A.C. Light and Power Circuits, 50-60 Cycles

Black enameled cases with bauer-barff finished gongs, polished nickel binding posts.

Standard package, 1.

Specify Cat. No. and voltage when ordering.

Cat. No. and Size Gong	6-9 V. Trans. Non-Conduit Each	WITH ADAPTER-PLATE FOR CONDUIT—	
		110-125 V. A.C. Each	220-250 V. A.C. Each
ATN- 3	\$9.30	\$11.30	Not Made
ATN- 4	10.30	12.50	Not Made

## Vibrating Bells

Regular Gongs, Sched. E—Fancy Gongs, Sched. T

Clapper Type, Non-Weatherproof

### Model O Faraday Skeleton Bells

For Battery Circuits Only

Designed to meet the requirements of good signal gongs with exposed mechanisms; high power patented pivoted armatures. Breakage of tension springs cannot disable gongs.

Contacts regularly Platinoid; platinum contacts, at an extra price. Bakelite insulation.

Wound to any special resistance at standard list additions; furnished converted-single-stroke when ordered at \$2.50 net extra. For important single-stroke work, standard single-stroke gongs are recommended.

For yard-type protected hoods, add \$25.00 each.

### With Regular Gongs

No. 601

An all-metal, one-piece type push button. Card racks are arranged so that a slot for inserting card is at each end of rack.

Mechanism is insulated and recessed to allow use of No. 14 wire and still leave room between screws and wall. Wire is fastened directly to same screw that holds one side of contact spring; pushing the button makes a contact on one screw only.

Standard finish, satin brass.

Packed with screws in individual boxes.

Cat. No.	Each	Description	Size Inches	Std. Pkg.	Wt., Lbs. Std. Pkg.
601	\$.25	Single Card Holder.....	2 1/2 x 2 1/4	50	5
602	.45	Double Card Holder.....	2 x 4 3/8	20	8 1/2

**No. 605 Edwards Bronx Pushes**

This is an all-metal 1-piece type push, of excellent construction, well insulated.

Size, 1 1/8 x 3 1/4 inches.

Standard finish is satin brass. Other finishes at increased prices.

Packed, with screws, in individual boxes for convenient shelf use.

Standard package, 20.

Weight, standard package, 3 3/4 pounds.

Price, No. 605 ..... each \$ .35

**No. 67 Edwards Bakelite Pear Pushes**

*Schedule E*

Keeps its finish indefinitely, will not warp, check or crack. With No. 620 push. Standard package, 10, one color.

No. 67, Black, Oak or Mahogany. each \$ .60  
No. 67, White Enamel. .... each .75

**No. 604 Edwards Bronx Plate Type Push Buttons**

The dimensions of the No. 604 push are small enough to allow its use in many places where the common plate type of push is too large to be adaptable. It is 3 5/8 inches long and 1 1/8 inches wide.

The mechanism is entirely insulated and is recessed to allow the use of No. 14 wire and still leave plenty of room between the screws and the wall, there being no chance of grounding. The wire is fastened directly to the same screw that holds one side of the contact spring; pushing the button makes a contact on one screw only, thereby assuring a positive contact. Standard finish, satin brass. Standard package, 20.

Price, No. 604, Bronx ..... each \$ .35

**No. 609 Edwards Bronx Push Buttons**

*Schedule E*

This push button is of excellent construction and is well insulated. All-metal, one-piece type.

Standard finish is satin brass. Other finishes at increased prices.

Size, 2 x 4 1/2 inches.

Packed in individual boxes, with screws.

Standard package, 20. Weight, 8 pounds.

Price, No. 609 ..... each \$ .40

**No. 610 Edwards Bronx Pushes**

*Schedule E*

This push is of the all-metal, one-piece type. It is of excellent construction, well insulated.

Packed, with screws, in individual boxes for convenient shelf use.

Standard finish is satin brass. For oxidized copper, add 5 cents each list. For all other commercial finishes, add 10 cents each to list. Satin brass and oxidized copper can be shipped from stock.

Size, 1 9/16 x 6 3/4 inches. Standard package quantity, 10. Weight of standard package, 1 pound.

Price, No. 610 ..... each \$1.75

**No. 650 Edwards 1-Piece Forged Brass Push Buttons**

A solid forged brass push button. Mechanism is securely riveted to solid brass case, making the push all one piece. Entirely insulated and can be mounted on metal trim. Oval head brass wood screws, 3/4-inch No. 6, are furnished. Height, 3 3/8 inches. Width, 1 1/8 inches. Depth, 5/8 inches. Standard package, 10.

## No. 9 Edwards Door Openers

Economy, Mortise Type, Solid Nose

Schedule T

Made of heavy pressed steel, heavily brass plated. Used extensively for apartments.

Fits same size mortise as same shape openers of other manufacturers. Width,  $3\frac{5}{8}$  inches; depth,  $1\frac{3}{4}$  inches; thickness, 1 inch; nosing opening,  $1\frac{3}{8}$  inches; face plate,  $5\frac{1}{8} \times 1\frac{1}{4}$  inches.

Price includes No. 89 pushout spring.

May be used on either right or left hand doors. Regular resistance is two ohms.

Special resistance up to 20 ohms, add to price \$1.00; 21 to 50 ohms, \$1.25; 51 to 75 ohms, \$1.50.

Standard package, 50.

No. 9.....each \$3.00

## No. 154 Edwards Door Openers

Mortise Type, Roller Nose

This type is suitable for heavy doors. It requires a smaller mortise than the Economy.

Width, 2 inches; depth,  $2\frac{7}{8}$  inches; thickness,  $1\frac{1}{8}$  inches. Nosing opening,  $1\frac{1}{4}$  inches. Face plate,  $1\frac{1}{4} \times 3\frac{3}{8}$  inches. Brass finish.

Price includes No. 79 pushout spring.

Can be supplied with a release check permitting the use of door opener where air checks are employed; add to price, \$2.00.

May be used on either right or left hand doors. Regular resistance is two ohms. Special resistance up to 20 ohms, add to price, \$1.00; 21 to 50 ohms, \$1.25; 51 to 75 ohms, \$1.50. Standard package, 10.

Price, No. 154.....each \$5.65

## No. 153 Edwards Door Openers

Plate Type, Roller Nose

Designed for doors too thin to take a mortise. Brass finish.

Width  $1\frac{1}{4}$  inches. Depth  $3\frac{7}{8}$  inches. Nosing opening  $1\frac{1}{4}$  inches. Face plate  $1\frac{1}{4} \times 3\frac{3}{8}$  inches. Side plate  $3\frac{3}{8} \times 2\frac{3}{4}$  inches.

Price includes No. 79 Push-out Spring.

Standard package, 1.

Price, No. 153.....each \$8.50

## No. 1541 Edwards Mortise Type Door Openers

Schedule E

Has roller nose. Face plate is extended to provide space for mortise for dead bolt.

When ordering, a sketch or template must be furnished to show exact location of dead bolt and screw holes. There cannot be less than  $\frac{5}{16}$  inch space between nosing and dead bolt openings. If no sketch is sent, standard door opener, as illustrated, will be furnished.

Height, 2 inches; depth,  $2\frac{7}{8}$  inches; thickness,  $1\frac{1}{8}$  inches. Nosing opening,  $1\frac{1}{4}$  inches; face plate,  $1\frac{1}{2} \times 6\frac{3}{8}$  inches.

Finish, brass.

Standard package, 1. Weight,  $1\frac{1}{4}$  pounds.

Price, No. 1541.....each \$10.30

## Faraday Control Cabinets for Burglar Alarm Systems

Surface Pattern

Schedule D

Cat. No. BO-373

Faraday Burglar Alarm Systems are in demand for private homes, country homes and estates and business establishments.

Faraday Burglar Alarm Control Cabinets are highly developed, scientific master-control units, performing functions that are invaluable for the protection of person and property.

Master control cabinets have, mounted on instrument panels, all the necessary relays, instruments, etc., to give an alarm by ringing bells, sounding sirens, etc., switching on interior lights (if so specified) floodlighting the outside of building or grounds, either in the entire protected area or any selected section thereof, etc.

At slight additional cost, relay control switches can be mounted on panel, so that by special arrangement with police department and telephone exchange, help may be automatically summoned.

Closed-circuit cabinets are furnished with electric-reset indicators.

Open-circuit cabinets are furnished with hand-reset indicators.

Standard finish: White enamel, golden oak, walnut or mahogany on steel will be furnished at no additional charge if so specified.

### With Automatic Clock-Control

Cat. No. BC-25 Closed-Circuit Type with Electric-Reset

No. of Sections.....	Drops			
	6	8	10	12
Cat. No. BC-25.....each	\$525.00	625.00	725.00	825.00
Add for Each Additional Section.....	\$50.00			

Cat. No. BO-373 Open-Circuit Type with Gravity Drops

	6	8	10	12
Cat. No. BO-373.....each	\$300.00	330.00	360.00	390.00
Add for Each Additional Section.....	\$15.00			

### Without Automatic Clock-Control

Cat. No. BC-259 Closed-Circuit Type with Electric-Reset

No. of Sections.....	Drops			
	6	8	10	12
Cat. No. BC-259.....each	\$270.00	340.00	410.00	480.00
Add for Each Additional Section.....	\$30.00			

Cat. No. BO-3730 Open-Circuit Type with Gravity Drops

No. of Sections.....	Drops			
	6	8	10	12
Cat. No. BO-3730.....each	\$190.00	220.00	250.00	280.00
Add for Each Additional Section.....	\$15.00			

For flush cabinets add 20 per cent to above lists.

In addition to the audible alarm which is regularly furnished, all of the above burglar alarm control cabinets can be furnished with relay control switches to close a 110-125-volt electric lighting circuit thereby lighting a number of incandescent lamps.

For 110-125-Volt Relay Maximum Capacity of Contactors 125 Watts, Add to List Price..... \$33.00

For 110-125-Volt Relay Maximum Capacity of Contactors 500 Watts, Add to List Price..... 55.00

For 110-125-Volt Relay Maximum Capacity of Contactors 1000 Watts, Add to List Price..... 80.00

**Edwards Burglar Alarm Springs**

*Schedule E*

Window springs should be placed in the frame several inches above the lower end of the upper sash—and the same distance below the upper end of the lower sash. Each sash should be mortised so that the nosing of the spring will be set in the recess when the window is closed. The mortise should be continued (beyond the necessary point) to permit the opening of the window for ventilation. It is advisable (although not necessary) that this system of installation be followed. Without the mortise anyone trying to enter the house and knowing of the window springs can easily open the window gradually, and hold the spring depressed with the finger.

The Edwards Springs when used properly as described are classified as follows:

Open circuit window springs—nosing in normal position contact is broken.

Closed circuit window springs—nosing in normal position contact is established.

Open circuit door springs—plunger in normal position contact is established.

Closed circuit door springs—plunger in normal position contact is broken.

Assortment of 100, all styles to make standard package.

**Edwards Burglar Alarm Traps**

*Schedule E*

Installed with cord or wire stretched across entrances, open spaces or attached to doors, windows, etc. Slightest movement of cord or wire operates trap which makes and holds contact causing continuous ringing of bell without additional devices.

**Covered Type**

Standard package, 10. Can be assorted. No. 27, For Open Circuit..... each \$1.50

No. 27-C, For Closed Circuit..... each 1.50

**Uncovered Type**

Standard package, 20. Can be assorted. No. 29, For Open Circuit..... each \$3.36

No. 29-C, For Closed Circuit..... each .36

**Edwards Constant Ringing Drops**

*Schedule T*

Especially designed for use in burglar alarm systems. With momentary closing of protective circuit this device causes bells to ring continuously, irrespective of subsequent opening of protective circuit. Plunger resets mechanism.

No. 26-B for ordinary use, 8-12 volts a.c., 6-8 volts d.c. No. 26-C recommended for battery systems where alarm may ring for several hours. Cuts own magnet out of circuit. Standard up to 24 volts a.c. or d.c. Standard package, 1.

No. 26-B.....each \$2.70

No. 26-C.....each 2.70

**Edwards Burglar Alarm Relays**

*Schedule T*

**No. 1238 Open Type For D.C. Only**

Adjustable for open or closed circuit operation. Pure hard drawn silver contacts. Contacts 1 ampere; 250 ohms recommended for closed circuit systems. Standard package, 1.

20 Ohms.....	each \$6.00
250 Ohms.....	each 7.00
251 to 600 Ohms.....	each 8.00

**No. 1239 Enclosed Type For A.C. or D.C.**

A small, compact, open or closed type as specified. Contacts 3 amperes 110 volts a.c., 6 amperes up to 48 volts d.c. Contacts 1 ampere, 110 volts d.c., 2 amperes up to 48 volts d.c. Standard package, 1.

8-24 Volts.....	each \$6.00
25-48 Volts.....	each 6.75
110 Volts.....	each 8.00

**Edwards Burglar Alarm Lock Switches**

No. 95.—Lock switches to be placed on the outside of the door so persons having key may enter without giving alarm. Polished brass or nickel.

No. 95A.—Two locks. On entering, alarm is turned off and after entering is turned on inside.

No. 95B.—Same as No. 95, with rod to go through door, fastened by nuts inside.

Price, No. 95, Standard Package, 1.....	each \$6.50

“ “ 95B “ “ 10.....	“ 7.95
“ Extra Keys, “ “ 1.....	“ .80

## Graybar Inter-Phone Systems

### System No. 1

#### Selective Ringing—Selective Talking

For use in business organizations, industries, stores, institutions, etc., where frequently, more than one conversation will take place at the same time, and where instantaneous connections without loss of time are necessary.

By pressing a button each station can selectively ring and talk with any other station without disturbing the rest of the stations in the system and as many separate conversations can be carried on simultaneously as there are pairs of Inter-Phones. For example, in a system of six Inter-Phones, three conversations can be carried on at the same time.

For each station in the system, one push button key is required in each Inter-Phone.

Available in standard sizes of 6, 12, 16, 20, and 24 buttons; and in Nos. 1324 and 1355 Wall Type Inter-Phones, No. 6016 Desk Sets, and No. 6016HR Hand Sets.

#### Cable

For connections between the various stations, cable specially designed for Inter-Phones can be supplied. This cable includes the necessary number of wire conductors (two pairs for battery leads and one pair for each station in the system) and is furnished in three different types to suit various locations and conditions:

No. of Stations.....	6	12	16'	20	24
No., Fireproof Braid....	134B	141B	157B	158B	136B
No., Brown Cotton Braid	155B	156B			
No., Lead Covered.....	134B	141B	157B	158B	136B

These cables are listed in detail elsewhere.

#### Cable Terminals

A cable terminal should be used wherever a junction is to be made between cables. For example: Where an outside lead-covered cable is connected to an interior cable, or wherever a branch is taken off from the main cable. In cases where the cable can be run direct to the Inter-Phone, no cable terminal is necessary. The number of cable terminals required should be determined by the installer. For 6 and 12-button systems use the No. 19A cable terminals. For 16, 20 and 24-button systems use the No. 19B cable terminals.

#### Batteries

Not more than 12 dry cells will be necessary for operating the system. (Five cells for the talking circuit; 4 to 7 cells for the ringing circuit, depending upon length of line.)

A Recti-Filter may be used for battery supply.

### No. 1324 Type Wall Inter-Phones

#### Surface Mounting

An all metal set having a hinged face plate, movable transmitter and hand receiver. The face being hinged, makes it possible to easily inspect all connections and apparatus without disturbing the installation.

Black with nickel trimmings.

Code No.	No. of Buttons	Height Inches	Width Inches	Depth Inches
1324C 6	6	10	6 <sup>3</sup> / <sub>8</sub>	3
1324C-12	12	10	6 <sup>3</sup> / <sub>8</sub>	3
1324C-16	16	14 <sup>5</sup> / <sub>16</sub>	7 <sup>1</sup> / <sub>8</sub>	3
1324C-20	20	14 <sup>3</sup> / <sub>16</sub>	7 <sup>1</sup> / <sub>8</sub>	3
1324C-24	24	14 <sup>3</sup> / <sub>16</sub>	7 <sup>1</sup> / <sub>8</sub>	3

### No. 1355 Type Wall Inter-Phones

#### Flush Mounting

A flush mounting set having a steel face plate on which is mounted all of the talking and signalling apparatus and a sheet steel outlet box arranged for 3/4-inch conduit. The outlet box can be separated from the set and built into the wall during the construction of the building.

The face plate is hinged at the bottom, making all terminals easily accessible for installation or inspection.

Dull black with nickel trimmings.

Code No.	No. of Buttons	Height Inches	Width Inches	Depth Inches
1355C-16	16	14 <sup>1</sup> / <sub>2</sub>	6 <sup>7</sup> / <sub>8</sub>	3 <sup>3</sup> / <sub>8</sub>

**Graybar Inter-Phone Outfits**

**Outfit No. 17**

This outfit consists of two No. 1003 type hand sets with all material required to install a simple intercommunicating system between two points not over 80 feet apart, and where the wire will be wholly indoors and not exposed to weather conditions or moisture. The material, in addition to the hand sets, consists of two connecting blocks with mounting screws, 80 feet of insulated twisted pair copper wire, 60 insulated nails for fastening wire, two hooks for holding hand sets, two bells, two battery connectors and illustrated installing instructions.

**Outfits Nos. 30 and 31**

Outfit No. 30 includes two surface wall No. 2527C-1 Inter-Phones and one No. 51H retardation coil in one box, but no installing or wiring material.

Outfit No. 31 includes two hand set Type No. 6043P Inter-Phones and No. 51H retardation coil in one box, but no installing or wiring material.

**Outfits Nos. 30A and 31A**

These outfits are for use where the wiring is to be run entirely under cover and not exposed to moisture or weather.

They include No. 30 and No. 31 Outfit respectively in one box and installing material in another box.

The installing material consists of 75 feet of insulated 3-conductor copper wire, two battery connectors, insulated nails, and illustrated installing instructions.

**Outfits Nos. 30B and 31B**

Outfits Nos. 30B and 31B are for use where the wiring is to be run in the open between or outside of buildings, and exposed to weather and moisture.

They include No. 30 and No. 31 Outfits respectively in one box, and installing material in another box.

The wiring material consists of 150 feet of outside 3-conductor copper wire, two brackets with screws, hooks and knobs to attach wires to building, two porcelain tubes to insulate wires when entering building, two battery connectors, 25 insulated nails for fastening wires inside building, and illustrated installing instructions.

**Graybar Inter-Phone Systems**

**System No. 11**

**Selective Ringing—Common Talking**

For use where conversations can be limited to one at a time. Each Inter-Phone is equipped with a number of push buttons for calling each other station in the system.

The wall type Inter-Phones can be furnished in capacities of 2, 3, 4, 6 and 8 buttons, accommodating 3, 4, 5, 7 and 9 stations respectively in a system. The desk and hand set Inter-Phones are furnished in capacities of 4 and 8 buttons, accommodating 5 and 9 stations respectively in a system.

No. of Buttons	WALL TYPE		Cradle Set	Hand Set
	Surface	Flush		
2	2527C-2	2539C-2	.....	.....
3	2527C-3	2539C-3	.....	.....

6	2527C-6	2539C-6	.....	.....
8	2527C-8	2539C-8	6044C-8	6034BB or BH

NOTE.—Sets described in detail on other pages.

**Retardation Coil**

A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

**Cables**

Cable especially designed for connection between the various stations can be furnished. This cable includes three common wires and one individual wire for each station.

No. of Stations.....	3 & 4	6 & 8
Code No., with Fireproof Braid.....	161B	162B
Code No., with Brown Cotton Braid.....	142B	.....
Code No., with Lead Covering.....	161B	162B

**Connecting Blocks**

Where a junction is to be made between cables, or wherever a branch is taken off the main cable, a connecting block should be used. In cases where the cable can be run direct to the Inter-Phone, the connecting block is not required.

**Batteries**

Five dry cells are required for the operation of this system, when the distance between the two stations farthest apart is 750 feet or less, and Inter-Phone cable, listed above, is used. On lines of greater length it is recommended that instead of increasing the number of battery cells to more than 5, larger wire be used. A Recti-Filter can be furnished for the battery supply in place of dry cells.

**Graybar Inter-Phone Systems**

**System No. 12**

**Master Station—Common Talking**

Consists of one centrally located "Master Station" Inter-Phone to which are connected other "Outlying Station" Inter-Phones.

The Master Station Inter-Phone is equipped with a number of push buttons; one for each outlying station in the system.

Outlying stations are equipped with one button for ringing the master station.

Only one conversation can be carried on at a time.

Capacity, one Master Station and from 2 to 8 outlying stations.

1	2527C-1	2539C-1	6044C-1	6042K
.	.....	.....	.....	*6042E
.	.....	.....	.....	6043E

\*No. 6042E is same as No. 6242K, but without face plate and wall box. For details see listing elsewhere.

**Accessories**

**Retardation Coil**

A No. 51H retardation coil must be ordered separately with each master station Inter-Phone and installed near the battery of the system.

**Wiring**

For connections between the outlying stations and the master station either cable or insulated wires can be used, depending largely upon the layout of the system. Three common wires are required throughout the system, and in addition, one individual wire from the master to each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable, and at all distributing and junction points, to install connecting blocks. From these connecting blocks separate wires can be run to the Inter-Phones.

The sizes of cable and the number of connecting blocks required should be determined in accordance with the installation instructions.

Cables and connecting blocks are described elsewhere.

**Batteries**

Five dry cells are required for the operation of this system when the distance between the master station and most distant outlying station is 750 feet or less and No. 22 A.W.G. wire (as in the case of Graybar cable) is used.

On lines of greater length it is recommended that instead of increasing the number of battery cells to more than five, larger wire be used. This should be determined in accordance with the installation instructions.

A Recti-Filter may be used in place of batteries.

NOTE.—Detailed information covering wiring diagrams, connection of wires and cables, connecting blocks, etc., can be found in our booklet, "Installing and Maintaining Inter-Phones," which will be furnished upon request.

## Graybar Inter-Phone Systems

### Master Annunciator System Nos. 12A and 12AC

#### 2-Way Ringing—Common Talking

Especially adapted for schools where the principal may call the teachers individually and the teachers can call the principal. Similar to the No. 12 system except that the master station includes an annunciator for identifying the calls from the outlying stations.

Only one conversation can be carried on at a time.

Capacity, one master station and 3 up to 20 or more outlying stations.

#### System No. 12A

The master station Inter-Phone includes a push button block having as many buttons as there are outlying stations, also one extra button for electrically resetting the annunciator drops.

Each outlying station Inter-Phone is equipped with a push button which signals the master station. This call will also be registered at the master station by the operation of the annunciator drop.

#### Outlying Stations

Wall type sets only, equipped with 24-volt ringers.

No. of Buttons	1
Code No., Surface Mounting	2527AC-1
Code No., Flush Mounting	2539AC-1

\*The push-button block includes a 6-foot connecting cord.

†No. 403 Type furnished unless otherwise specified.

‡No. 6042E is same as No. 6042K, but without face plate and wall box.

#### Accessories

##### Retardation Coil

A No. 51H retardation coil must be ordered separately for installation near the battery of each system.

##### Wiring and Battery Requirements

Two wires common to all stations in the system and two individual wires for each outlying station.

System No. 12A requires a battery of five dry cells, connected in series, to furnish current for ringing and talking.

System No. 12AC requires a battery of dry cells or storage batteries to total 24 volts may be used for the ringing and talking battery supply.

## Graybar Inter-Phone Systems

### Master Annunciator Systems Nos. 12B and 12C

#### 1-Way or 2-Way Ringing—Common Talking

Provides for communication between a master station annunciator and a number of outlying stations.

The master annunciator is equipped with a hand set Inter-Phone, and can be obtained with or without push buttons.

#### System No. 12B—1-Way Ringing

The annunciator is without push buttons, enabling the outlying stations to ring the master station but the master station cannot ring the outlying stations.

#### System No. 12C—2-Way Ringing

The annunciator is equipped with push buttons, one for each outlying station, enabling the outlying stations to ring the master station and the master station to ring the outlying stations individually.

#### Master Station Annunciators

CODE NOS.		No. of Drops	CODE NOS.		No. of Drops
For No. 12B	For No. 12C		For No. 12B	For No. 12C	
1204B	1204C	4	1216B	1216C	16
1206B	1206C	6	1220B	1220C	20

1210B	1210C	10	1230B	1230C	30
1212B	1212C	12	.....	.....	..

A No. 1003D Hand Set must be ordered separately with each annunciator. This set is equipped with a 3-foot cord, and can be hung on the hook on the side of the annunciator.

#### Accessories

##### Wiring

For System No. 12B one wire, common to all stations in the system, and in addition, one individual wire from the master station to each outlying station.

For System No. 12C one wire, common to all stations in the systems, also two individual wires from the master station to each outlying station.

##### Batteries

Only one battery is required for the operation of the system. This should consist of three or four dry cells, where the distance between the master station and the farthest outlying station is 250 feet or less, and No. 22 A.W.G. copper wire is used. On lines of greater length it is recommended that instead of increasing the number of dry cells to more than four, larger wires be used.

A Recti-Filter may be used in place of batteries.

#### System No. 14

##### 2-Station Private Line

For use where only two stations are required and where the sets are distantly located from each other.

Either station can ring the other.

No. of Buttons	METAL WALL TYPE		Desk Sets	HAND SETS	
	Surface	Flush		Surface	Flush
1	2527C-1	2539C-1	6044B-1	6043P	6042AE *6042AF

\*No. 6042AF is same as No. 6042AE but without face plate and wall box.

#### Wiring and Battery Requirements

Only two wires are used for connecting the Inter-Phones.

A battery of three dry cells is required at each station to furnish current for talking and ringing if the length of line is less than 750 feet. If the length of the line is increased, additional dry cells are required at each station to insure satisfactory ringing. The following list indicates the additional dry cells required at each station:

Length of Line Between Stations	ADDITIONAL NUMBER OF CELLS FOR EACH STATION A.W.G. COPPER WIRE			
	No. 12	No. 14	No. 16	No. 18
750 to 1000 ft.	1	1	1	2
1000 to 1500 ft.	1	1	1	3
1500 to 2000 ft.	1	2	3	..
3000 to 4000 ft.	2	3	..	..
4000 to 5000 ft.	2	..	..	..
5000 to 6000 ft.	3	..	..	..

**Graybar Inter-Phone Systems**

**System No. 15**

**Code Ringing—Common Talking**

A simple and inexpensive system for small residences, warehouses, or stores where only a few stations are required. Only one conversation can be carried on at a time.

Each station is equipped with one push button which rings the bells at all the other stations.

The various stations are called by signalling each one with a different code ring; for instance, two rings for Station No. 2, three rings for Station No. 3, etc. If more than 6 stations are in service, signalling code mistakes are likely to occur. System No. 11 is recommended where the initial installation comprises more than 4 or 6 stations.

No. of Buttons	METAL WALL TYPE		Desk Sets	HAND SETS	
	Surface	Flush		Surface	Flush
1	2527C-1	2539C-1	6044D-1	6043CD	6042CD

**Accessories**

A No. 51H retardation coil must be ordered separately and installed near the battery of the system.

Four wires are required for connecting the Inter-Phones.

Five dry cells are required for the operation when the length of the line is 750 feet or less, and not more than four stations are to be used, connected by Nos. 20 or 22 A.W.G. copper wire. If more than four Inter-Phones are required or if the line is longer than 750 feet, larger wires should be used in accordance with installation instructions.

**Master Annunciator System No. 18C**

**Non-Interfering**

Provides for communication between a central or master station and a larger number of outlying stations, as follows:

The master station can selectively ring and talk with any of the outlying stations and the outlying stations can call the master station annunciator.

Communication can be arranged between any two outlying stations through the medium of one or two connecting cords at the master station.

No connection can be made between this system and a public telephone system.

An annunciator supervisory feature is provided to indicate the termination of a conversation between the outlying stations. Where a large number of connections are required between outlying stations, the lamp signal, Private Exchange Switchboard for surface or flush mounting, is recommended.

**Master Station Annunciators**

Annunciators regularly equipped with answering cord only. If inter-communication between outlying stations is desired, one or two pairs of connecting cords may be ordered.

A No. 1003K Hand Set must be ordered separately with each annunciator.

\*Same as No. 6042D, but with face plate and wall box.

**Accessories**

One wire, common to all stations in the system is required, and, in addition, two individual wires between the master and each outlying station. Where there is a long run of a large number of wires, it will be found economical to use cable and install cable terminals or connecting blocks at all distributing and junction points. From there, the installation can be continued by means of separate wires to the various outlying stations.

Five or more dry cells are required for operating the system. A Recti-Filter may be used in place of batteries.

**Graybar Inter-Phones**  
**Description of Metal Wall Type**  
**No. 2527C, Surface Mounting**

No. 2527C-4

The No. 2527C Type Inter-Phone has a surface mounting metal housing which contains all of the talking and signalling apparatus, also a metal backboard, which is furnished for mounting the set to the wall.

The housing of the set is of rugged construction, being formed of sheet steel and is equipped with hinge hooks which match up with slots in the base of the metal backboard. This arrangement permits fastening the backboard in place on the wall and then mounting the housing unit to it.

The hinge arrangement of this set enables the installer to swing down the housing unit from the backboard for making connections to the terminals; also to permit interior inspection of the set at any time after its installation.

The metal backboard is designed to permit the entrance of wires or cabling from either the top, bottom or center of the set; also, a metal guide ring is located near the cable entrance at the base of the backboard so that the connecting wires may be looped through this ring to hold them in place and provide a proper bending point when the housing is swung forward.

Durable dull black enamel finish with nickel trimmings.

Code No.	No. of Buttons	For Systems	DIMEN. HOUSING, INCHES		
			Height	Width	Depth

2527C-8	8	11, 12, 20 and 21	7 1/2	5	2 5/8

**No. 2539C, Flush Mounting**

No. 2539C-2

The No. 2539C Type Inter-Phone has a flush steel face plate on which is mounted all of the talking and signalling apparatus, also a metal outlet box which is furnished for mounting the set in the wall.

The outlet box is of unique design in that metal aligning strips are fastened at the top and bottom front of the box so as to properly align the set after the face plate unit is fastened to the outlet box (in case the outlet box is installed out of plumb). It is equipped with adjustable ears for mounting it in the wall, the same as are furnished on standard sectional outlet boxes. Knockouts are provided

at both the top and bottom for the entrance of 1/2-inch conduit or connecting wires.

The face plate support for installer is an added feature of this set, consisting of a wire hook mounted on a small card with printed instructions for its use. This hook is for temporarily supporting the Inter-Phone face plate, of flush type sets, during installation, so that the wires may be readily connected to the terminals by the installer.

Durable dull black enamel finish with nickel trimmings.

## Graybar Inter-Phones

### Description of Hand Sets

#### Selective Ringing—Common Talking

#### No. 6038 Type

This hand set unit was designed for installation at the side of a desk, on the wall, or any vertical surface. The set may be installed at one end, side or in the alcove of the desk; also recommended for residential purposes for mounting at the bedside, either on the bed or on the wall within reach of the bed.

Made of Bakelite, reinforced.

The switch-hook box contains a switch-hook unit for holding the hand set in place. This hook operates on the same principle as the standard telephone hook. A 4-foot cord connects the hand set to the switch-hook box.

## Graybar Inter-Phones

### Description of Hand Sets

#### Selective Ringing—Common Talking

The Inter-Phone transmitter and receiver are a part of the hand set. A bar marked Press to Talk mounted in the hand set handle is held down by the natural position of the hand while talking. When not in use, the hand set can be hung on a hook or laid down in any position. Finished in dull black.

#### No. 6043, Surface Mounting

Surface Mounting Apparatus Units (No. 383 Type) are equipped with an insulated base, black finished round metal cover and nickel hook.

Approximate size, 3 1/16 inches in diameter by 1 1/16 inches deep.

#### No. 6042, Flush Mounting

Flush Mounting Apparatus Boxes (No. 382 Type) are intended to be set in the wall and are equipped with a brush brass finished face plate. These boxes consist of three parts—a Gem A Union sectional switchbox, an apparatus unit, and a face plate. The face plate is 4 1/2 x 2 3/4 inches; the wall box, 2 x 3 x 3 inches deep.

An important point to be observed is that wall box and face plate are the same as those used in electric light wiring for push button switches. Sets furnished either complete, including wall box and face plate, or minus these parts.

## Graybar Apartment House Inter-Phones

### System No. 21

Selective Ringing—Common Talking

#### No. 1524-E Loud Speaking Vestibule Set

Systems No. 21A, D, E, G, H, and J

Eliminates, as far as possible, all projecting and removable parts, such as the transmitter, receiver and switch-hook. Also safeguards theft of receiver and the cords.

The set consists of a flush mounting face plate. A push button is mounted at the bottom of the plate for talking and listening purposes.

Bronze brass finish.

Face plate, 5x16½ inches.

Equipped with a janitor call button.

To call one of the apartments from the vestibule, the push button (under the name of the party wanted) is pressed, which rings the bell of that apartment. The vestibule party next depresses the talking button at the bottom of the telephone set, and keeps it depressed while awaiting reply, and while conversing with the apartment party.

Only one conversation can be carried on at a time.

#### Battery Requirements

For the operation of each system three sets of dry batteries are required, each set to consist of three dry cells.

#### System No. 21A

Vestibule can call apartments; apartments can open door.

#### System No. 21D

Vestibule can call apartments and janitor; apartments can open door and call janitor.

#### System No. 21E

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry.

#### System No. 21G

Vestibule can call apartments and janitor; apartments can open door and call janitor; and janitor can call apartments.

#### System No. 21H

Vestibule can call apartments and janitor; apartments can open door and call janitor and laundry; janitor and laundry can call apartments.

#### System No. 21J

Vestibule can call apartments and janitor; apartments can open door and call janitor; and janitor can call apartments.

#### No. 1524-F Loud Speaking Vestibule Set

Systems No. 21AR, DR, and GR

These systems operate as described for the No. 1524-E except a relay is furnished in the vestibule set for closing the talking circuit when a receiver is removed from the hook at a suite station. This replaces the talking button described for the No. 1524-E.

#### System No. 21AR

Vestibule can call apartments; apartments can open door.

#### System No. 21DR

Vestibule can call apartments and janitor; apartments can open door and call janitor.

#### System No. 21GR

Vestibule can call apartments and janitor; apartments can open door and call janitor; and janitor can call apartments.

No. 1524-F

## Graybar Apartment House Inter-Phones

### System No. 20

Selective Ringing—Common Talking

No. 1520-R

No. 424-A  
Push Button Plate

The No. 20 Inter-Phone Systems are designed to provide an inexpensive and reliable means of communication between vestibule, apartments, janitor's quarters, laundry, and tradesmen's entrance.

There are six combinations of the No. 20 System, differing from each other in the number of locations in the apartments which are to be connected for inter-communicating service.

Only one conversation can be carried on at a time.

#### No. 1520-R Vestibule Inter-Phones

With Armored Receiver Cord

The No. 1520-R Inter-Phone consists of a flush mounting brush brass finish face plate with a push-button for signalling the janitor.

#### Battery Requirements

For the operation of each system a battery of not more than five dry cells is required. These can be placed in the basement or any other accessible place.

#### System No. 20A

Vestibule can call apartments; apartments can open the door.

#### System No. 20D

Vestibule can call apartments and janitor; apartments can open the door and call the janitor.

#### System No. 20E

Vestibule can call apartments and janitor; apartments can open the door and call janitor and laundry.

#### System No. 20G

Vestibule can call apartments and janitor; apartments can open the door and call janitor; and janitor can call apartments.

#### System No. 20H

Vestibule can call apartments and janitor; apartments can open the door and call janitor and laundry; and janitor and laundry can call apartments.

#### System No. 20J

Vestibule can call apartments and janitor; apartments can open the door and call janitor; and janitor can call apartments.

**Graybar Vestibule Push-Button Plates**

Designed to mount on either side of the vestibule Inter-Phone. A card holder is provided opposite each button. Push button plates can be obtained in two different sizes.

412A	12	5x16½	424A	24	5x16½

**Graybar Vestibule Mail Boxes**

Mail boxes may be obtained in groups of 3 to 8, being assembled complete in units and master-locked for mounting in single or double rows.

Finished in bronze, other finishes being considered special.

The overall dimensions of the individual letter boxes are 5 inches in width and 16½ inches in height.

## Graybar Inter-Phone Switchboards Nos. 108 and 109 Flush Wall Type

### Construction

The cabinet consists of birch woodwork fitted with either a wood or metal mat framing. The finish of the wood to be oak, mahogany, or walnut; the metal, bronze finished to match sample submitted.

The lamp and jack strips are mounted in face of the switchboard on a panel which is hinged, to give complete access to interior of the switchboard.

The recessed portion, including the front panel door and the plug shelf, is covered with black formica.

### Cord Circuit Equipment

The cross-connecting cords are supervised through a single lamp circuit. These lamps are located over the key position. The single

cam type ringing and listening key for each cord position is located on the face of the board.

### Lamp and Jack Equipment

The line lamp and jack equipment is mounted 10 per strip with associated designation strips.

### Night Alarm

All calls at the switchboard may be received through a buzzer signal by the operation of a push button key.

### Battery Switch

A push button control is provided for disconnecting the battery from the switchboard when required.

### Operator's Telephone Set

An all metal hand set which hangs at the left-hand side of the board and is suspended by means of a hook support, and connected with a suitable cord length.

### Cable Termination

Cable termination at the back of the switchboard will be at the selection of the customer. It is recommended that suitable cable lengths (up to 15 feet) be provided instead of a cable terminal which is usually fastened at the back of the board. These cable lengths consist of 20 pair size lead covered cables, one end terminating to the switchboard line lamp and jack connections and the other end tagged to enable the installer to make proper terminal connections to the cable terminal box. This method eliminates duplicate cable terminating points by omitting the terminal block at the switchboard.

The proper length of cable must be specified. If it is not possible to locate the cable terminal box within suitable distance of the switchboard, terminal strips will be furnished at back of board for terminating the lines.

### Extension Telephone

An extension telephone consisting of an all metal hand set will be furnished when specified. This permits visitors or employees to communicate directly with an apartment without interfering with the regular operator's service. For this purpose a jack is provided at the right hand side of the board near the hand set which is supported on a hook, in the same manner as the operator's telephone.

### Grilled Doors

The switchboard may be fully concealed from view by means of a fancy grilled door, made of bronze and finished to match the metal trim of any interior.

### Lighting Fixtures

Lighting fixtures are not ordinarily provided for illuminating the face of the switchboard, however special fixtures mounted separately from the switchboard can be provided when the board is mounted in a dark location.

### Further Information

Detailed information, covering types of switchboards, dimensions, wiring diagrams, accessories, etc., can be found in our Booklet GBT-86 which will be furnished upon request.

## Graybar Inter-Phones Elevator Inter-Phone Service

No. D-1640

An elevator Inter-Phone system provides for communication between the elevator starter and each elevator cab, also between the elevator starter, the engineer, the superintendent, the machine room, etc., depending upon the total number of master and outlying stations to be installed.

The elevator cab Inter-Phone D-1640 is designed to mount in back of the Underwriters' building certificate frame, which in a number of cases is required by law. This frame is hinged to a metal outlet box so that the cab operator has access to the Inter-Phone through this door. The set is compact, is concealed, has no projecting parts, and the exterior frame may be designed to match the trim of the cab in which it is installed.

The D-1640 Inter-Phone Set does not include the outlet box and mounting frame as shown in the illustrations. The elevator company usually provides a suitable type of frame and outlet box in which to mount the Inter-Phone Set. In some cases the elevator companies may wish to install a standard surface wall or hand type of instrument, depending upon the local requirements.

The starter's station Inter-Phone is usually installed in the control panel with the other operator's signalling equipment. This Inter-Phone may consist of a wall or hand type, depending upon the space available for mounting the instrument. The regular cab call button on the starter's panel will also be used for signalling the cab Inter-Phone by means of a code ring. Extra buttons will be provided for signalling the other stations in the system.

Assembly drawings of Inter-Phones and wiring diagrams will be furnished upon request.

**Graybar Inter-phone Cable**

For Interior Use

For Outside Use

The conductors are provided with single silk and single cotton insulation. The cable is impregnated with a wax compound and is covered with servings of paper and a heavy braiding, which is given a heavy coat of fireproofing paint.

- Three general types of cable are provided.
1. Interior Cable with outside braiding treated with gray fireproofing paint. Use only in dry places.
  2. Interior cable with brown glazed cotton outside braiding. Use only in dry places where exposed to view.
  3. Outside cable, lead covered. Always use this cable outside, and inside where there is apt to be moisture even in a small degree. In conduit installations lead covered cable should be used.
- Lead-covered cables are not listed with separate Code Nos. Any fireproofed type of cable may be ordered with a lead sheath.

All cables are provided with a standard color scheme, so that each pair can be distinguished from any other. The pairs are properly twisted to prevent inductive disturbances.

**No. 1012 Western Electric Magneto Wall Switchboards**

Ringer Type

This switchboard is intended for use in exchanges having 10 lines or less, and where the number of calls does not warrant having a regular telephone operator in attendance.

It has been installed by numerous rural companies who desire a switching station established in the country in which case it is installed in a farmer's home and the calls are answered by members of the family.

Being equipped with ringers, constant attendance at the switchboard is not necessary as the bells can be heard at some distance from the board.

In addition to this ringer, indicators are supplied with each ringer which give a visible signal showing which bell has been ringing.

The cabinet is well constructed of thoroughly seasoned, quarter sawed oak, which is given a durable light finish. The front is hinged and the apparatus and wiring is within easy reach for inspection or maintenance.

**Equipment**

Each line is provided with a jack and a 1000 ohm ringer, although 1600 or 2500 ohm ringers can be furnished if required. Four-cord circuits, with a listening-in jack bridged across the tip and ring, and a listening cord are provided for handling the calls, no supervisory or ring off signals being provided. A powerful five-bar hand generator is furnished for ringing purposes. The operator's telephone set consists of the regular long distance transmitter and receiver.

**Operation**

Subscribers are called by ringing with the hand generator over the listening cord with which the operator answers calls and listens in for supervisory purposes. Connections are made with the other cords, without the use of keys.

## Western Electric Magneto Non-Multiple Switchboards

### No. 1800 Sectional Unit Type

Method of Assembling No. 1800 Switchboard to 35 Line Capacity

The unit or sectional type construction for the small switchboard was introduced by the Western Electric Company a number of years ago, and since that time has been supplying the demand of discriminating buyers for a small switchboard that would meet their traffic requirements and eliminate the necessity of buying an "oversize switchboard."

The capacity of the No. 1800 Unit Type Switchboard is from 10 to 50 lines. While 50 lines has been set as an arbitrary maximum it is safe to assume that with a normally low calling rate as many as 70 or 80 lines can be handled conveniently. While the No. 1800 Unit Type Switchboard is small in size (floor space required only 2 feet x 2½ feet), this does not mean that this board receives less consideration or care in manufacture than a larger switchboard, for the same quality of material, skilled workmanship and rigid inspection are applied to all of the Western Electric products regardless of size. Red oak lumber, which has been kiln-dried, thoroughly seasoned and given a dark rubbed finish, is used in the construction of the units. The inside of the units have been specially treated to preserve wood and prevent warping or cracking.

To meet various requirements, there are different types of base or supporting units, cord units, line units and top units. To assemble a switchboard of 10 lines capacity for example it is only necessary to select units as follows:

- |                   |             |
|-------------------|-------------|
| 1 Supporting Unit | 1 Line Unit |
| 1 Cord Unit       | 1 Top Unit  |

These units are easily assembled into a complete switchboard which presents a neat, compact and serviceable appearance and can be arranged to meet any service condition. Line units can be added at any time.

All of the apparatus and terminals associated with the operator's cord and telephone circuits are mounted in the cord unit.

The circuits used are very simple. A diagram of each circuit is pasted to the inside of the rear doors for convenient reference. The back of each unit is hinged and, when open, all of the wiring and equipment are easily accessible.

This switchboard is specially recommended for small, rapidly growing telephone exchanges where the ultimate capacity cannot be definitely determined.

## No. 1240-D Western Electric Magneto Switchboards

### Non-multiple—Automatically Restored Line Signals

Capacity, 165 Lines 15 Cord Circuits

Front View

as to be within easy reach of the operator, reducing that work to a minimum.

The lumber used in the construction of the cabinet is red oak, thoroughly seasoned and kiln dried to prevent warping or cracking.

The exterior of the cabinet is given a dull golden oak finish which is very serviceable. As an added precaution against warping, cracking or decay the interior surfaces are coated with shellac.

The steel framework which supports the face equipment is copper plated as a protection against corrosion or rust, also insuring a positive ground connection for the apparatus.

An apparatus and terminal board is mounted in the rear of the switchboard on which are mounted the repeating coils, night alarm bell, and large screw terminals where all power wiring such as power ringing, transmitter battery, night alarm battery, monitor taps, etc., are terminated.

The No. 1240-D non-multiple magneto switchboard is furnished with either single or double supervision cord circuits. Single supervision boards may, if desired, be equipped with five cord circuits having toroidal repeating coils and switching keys. Double supervision boards may be equipped with either the condenser type non-hang-up cord circuits, or the condenser repeating coil type non-hang-up, non-ring-through cord circuits. The present switchboard, if arranged for single supervision, may be changed to a double supervision board simply by installing the necessary additional apparatus.

Dimensions

**No. 1801 Western Electric Private Exchange Switchboards**

Central Battery—Sectional Unit Type

Systems B, C or D

The No. 1801 sectional unit type switchboard (like the No. 1800) was originated by the Western Electric Co., and introduced to the telephone trade to supply the demand for a small flexible and economical switchboard. Adaptable to many conditions, this switchboard has been installed by small telephone companies, as private branch exchanges, for hotels, factories, public schools and institutions or any place where telephone service was required and the ultimate capacity could not be definitely determined.

Being of the unit type, with construction somewhat similar to the sectional book case, and so arranged that additional units may be readily added when required, this switchboard is adaptable to many line and traffic conditions which are met on the small exchange. The rear of the units is permanently closed. The front panels of all units are held in place with thumb screw locks and are hinged to permit access to the wiring, terminals and apparatus. All connections are made under screw terminals.

System A

used with the systems are listed under heading: Central Battery Telephones.

**SYSTEM A.**—This system provides for communication between the switchboard and stations only. There are no facilities for inter-communication between stations or for connections to a central office.

**SYSTEM B.**—This system embodies all of the features of System "A" and in addition has facilities or intercommunication between stations.

**SYSTEM C.**—This system embodies all of the features of System "B" and in addition two plug ended trunks are provided which may be equipped for connections to either magneto or central battery central offices.

**NOTE.**—Direct current is used for ringing the telephone bells in Systems A, B and C.

**SYSTEM D.**—This system has all of the features of system "C" except that it employs the regular two wire line circuit, and alternating current is used for ringing purposes.

The telephone sets used with this system are the regular central battery sets used with central office systems.

Write our nearest house for particulars. State which system is best suited for your requirements.

**No. 551 Type Western Electric Private Branch Exchange Switchboards**

This switchboard has the distinction of being a pioneer in the private branch exchange field since the adoption of the modern flat type relays, it being the first private branch exchange switchboard in which the new relays were used. Either the No. 551A or 551B switchboard makes an ideal installation for department stores, factories, hotels, and apartments in cities or towns where the present main central office is a dial exchange or a central battery manual office.

The compact cabinet presents a neat appearance and compares favorably with the furniture in any modern office.

**Types and Capacity**

Type.....	551A (40)	551B (80)	551B (320)
Station Lines Total.....	40	80	320
*Station Lines Wired for			
Relays.....	10	20	20
Trunk Lines.....	10	15	15
Cord Circuits.....	10	15	15

\*Certain lines are wired for relays to be used on lines where the telephone is located a considerable distance (800 feet) from the switchboard. Relays are not provided unless specified.

The No. 551D is a multiple P.B.X. for use where the number of station line circuits does not exceed 360 lines. The capacity of the No. 551D multiple P.B.X., based upon a minimum of three 2-panel sections, is as follows:

Station Line Circuit.....	3-panel basis	360
Trunk Circuit.....	3-panel basis	30
Cord Circuit.....	per section	15

Red oak lumber with a dark finish or birch with a mahogany finish is used for all exposed woodwork parts. The lumber is kiln dried and thoroughly seasoned to prevent warping and cracking. Iron reinforcing brackets are placed on the inside of the cabinet at the corners giving added strength. The keyshelves and fronts of the 551-P.B.X.'s have been faced with phenol fibre rubbed a dull black which not only results in a pleasing rich appearance but provides a hard and durable surface.

The stile strips which hold the line jacks and lamp sockets in place as well as the key mounting strips in the keyshelf consist of cold drawn galvanized steel. This insures alignment of the face and keyboard equipment, also prevents damage from moisture.

All apparatus inside the section, except hand generator and ringing resistance lamp, is mounted upon a relay gate which makes equipment immediately available for adjustment while gate is closed and leaves wiring fully exposed when gate is open. Cord-weight protection panel is mounted on the relay gate rather than being fixed in the section so that when gate is open and work is being done on cords or hand generator the gate wiring is still protected from damage.

Gate is equipped with mounting clips and screws. The mounting clips hold the relay mounting plates on the relay gate and permit the use of the one-piece relay gate.

The cabinet is compact and all parts are easily accessible. Switchboards in the 80-line capacity are equipped with removable end panels. This permits lining up of 2 boards and makes an ideal installation where several positions are required.

The line circuits are simple and terminate on terminal strips which are easily accessible.

**No. 551 Type Western Electric Private Branch Exchange Switchboards**

Continued

Certain lines are arranged for use with relays and intended to be used for the stations located considerable distance (800 feet) from the switchboard. The latest standard flat type relays are used throughout which permits placing the maximum amount of equipment in a small place.

Strip line jacks and associated lamp sockets are used in all boards on the line circuits. The number of jacks and lamps required are equipped and the remaining jack and lamp positions plugged with apparatus blanks. The blanks can be removed and jacks and lamps installed at any time. The panels upon which the individual jack and lamp sockets are mounted consist of one piece of dull finished black faced fibre which does not reflect the light. A designation strip is provided above each row of jacks for convenience in numbering. The black faced fibre panel presents a neat appearance and insures perfect alignment of the face equipment.

Jack ended trunks are used on all No. 551 type boards. The jacks and lamp sockets are individually mounted.

The cord circuits embody all of the features required for the successful operation of the private branch exchange. Connections between stations and from stations to trunks are easily established. Each cord circuit is arranged for dialing by the operator from the board and through dialing from any station on the private branch exchange to the machine switching exchange. This through dialing is accomplished by the operator throwing the night key and through dialing key in the proper position after putting up the night connections. The function of the night key is to cut out all the equipment from the circuit which is not required for night service.

The dial may or may not be used as desired it being easily installed when needed. It is connected to the local cable by means of a flexible cord and the dial itself held in place by a spring clip which is screwed to the keyboard. When the dial is not equipped the hole for the cord is suitably covered with an apparatus blank.

**No. 506 Western Electric Central Battery Cordless Type P.B.X. Switchboards**

Ideal as a dependable private branch exchange. Switchboard is of the single-operator position, cordless type, with all connections established by the operation of keys.

The entire equipment is enclosed in a cabinet of light oak, or of mahogany with a rich mahogany-walnut finish.

This board is a compact and effective switching unit, and harmonizes with other office furnishings.

The cabinet and steel framework are designed to permit the utmost accessibility of the apparatus.

The circuits are arranged for local manual service and for operation into either central battery manual offices or into panel or step-by-step automatic offices.

**Western Electric Magneto Telephones**

No. 1317 Type

General Description

2-Cell, Closed View

The No. 1317 type telephone represents the highest development attained in magneto telephone design and construction. It has been standard with the Western Electric Company for more than a decade, and its high efficiency, reliability and long life has been thoroughly proven by the hundreds of thousands in service.

**2 and 3-Cell Types**

No. 1317 telephones are made in two styles, namely, the "2-cell" and the "3-cell." The talking circuits of these two types are identical, i.e., they employ the same transmitters, receivers and induction coils. The battery compartment of the "3-cell" type is sufficiently large to take three standard dry cells, whereas only two dry cells can be placed in the "2-cell" type. The larger cabinet of the "3-cell" type also permits the mounting of the No. 48 type (5-bar) generator, while the "2-cell" type employs the No. 50 type (large 3-bar) generator.

The 3-cell set is the more powerful and the better set from a transmission standpoint but where a smaller set is desired the 2-cell sets can be used. The 50 type generator is exceptionally powerful for a 3-bar generator. This generator will ring thirty 2500 ohms ringers connected to a No. 12BB iron metallic telephone line 15 miles in length (provided, of course, that the line is properly installed and in good condition). It will operate more telephones on a line than many 4 or 5-bar generators.

2-Cell Dimensions

3-Cell Dimensions

**WOODWORK AND FINISH.**—The cabinet is made of quarter sawed oak and given three coats of high-grade varnish rubbed down by hand. Unexposed surfaces of the telephone are also given a protective finish so as to prevent warping.

**WIRING.**—All terminals including those for the transmitter, receiver, cord, line wires, etc., are plainly marked so that

there can be no possible mistake when making connections. The various cords, such as those of the transmitter and receiver and the flexible leads running to the condenser are all furnished with cord tips.

A complete and explanatory circuit label is pasted on the inside of the door of each telephone, in addition to which a booklet is furnished giving complete instructions for installation and maintenance.

**METAL FINISH.**—The transmitter bracket, gongs, switch hook, generator, crank and lock escutcheon are given an extremely durable and pleasing black finish.

**ADJUSTMENT.**—These telephones are carefully adjusted in the factory, and should, therefore, be satisfactory for service as received by the customer unless unusual service conditions should be encountered, in which case only the ringer will require readjustment. The adjustment of the ringer is a very simple matter and instructions furnished in the booklet are so clear that no difficulty will be encountered.

Western Electric Magneto Telephones

No. 1317 Type—Continued

No. 1317, 2-Cell, Open View

No. 1317 3-Cell Type

The 3-cell set is the more powerful and the better set from a transmission standpoint but where a smaller set is desired, the 2-cell sets can be used. The 50 type generator is exceptionally powerful for a 3 bar generator.

- No. 8A Transmitter Bracket.
- No. 144 Receiver.
- No. 143Y Switchhook.

\*Equipped with No. 1006A push button, Telephone user can signal central office secretly or not as desired and can signal other parties on same line by code ringing.

Western Electric Magneto Telephones

Nos. 6003 and 6004 Desk Types

Interior View of No. 6004D

The Nos. 6003 and 6004 type desk telephones consist of a No. 1020 AL Desk Stand and a No. 300 or 315 type Desk Set Box. These telephones comprise the combinations of desk stands and desk set boxes that are most used, and therefore for convenience in ordering, are covered by a single code number.

Combinations of apparatus differing from those covered by these code numbers listed may be obtained by ordering the separate items that will make up the desk telephone desired. The following items of apparatus are the electrical equivalent of the No. 1020 AL Desk Stand and may therefore be used in connection with any of the desk set boxes listed below.

- No. 1048AA Telephone Arm
- No. 1048AB Telephone Arm
- No. 1048AC Telephone Arm
- No. 1001C and H Hand Sets
- No. 1002AC Hand Set

NOTE.—In the case of the Nos. 300AA, 301AB, 315H, and 315J Desk Set Boxes provision is made for inserting a one microfarad condenser (see No. 21W condenser) in series with the receiver. However, condensers are not furnished unless so ordered.

## Western Electric Central Battery Telephones Nos. 6054 and 6059 Desk Type

No. 6054 Desk Telephone—No. 1020AL  
Desk Stand Partially Dismantled

The Nos. 6054 and 6059 desk type telephones consist of a No. 1020 type desk stand and a desk set box. These telephones comprise the combinations of desk stand and desk set boxes that are most used and, therefore, for convenience in ordering are covered by a single code number.

Combinations of apparatus differing from those covered by the No. 6054 or 6059 series of code numbers may be obtained by ordering a desk stand and a desk set box as separate items, also a telephone arm or a hand set may be used in place of the desk stand if desired.

For example, any of the desk set boxes that will function with the No. 1020AL desk stand will also function with the following:

- No. 1048AA Telephone Arm
- No. 1048AB Telephone Arm
- No. 1048AC Telephone Arm
- No. 1001C and H Hand Sets  
(See Hand Set Hangers)
- No. 1002AC Hand Set

584A-3	78AG	149A	46C

## Western Electric Central Battery Telephones Nos. 1533, 6054, and 6059 Types

Ringer and gongs are enclosed within the case thereby preventing tampering, reducing maintenance and greatly improving the appearance.

Case is made of heavy sheet steel, copper-plated, and finished with two coats of extremely durable black enamel (baked on) especially developed for this particular purpose.

The case is constructed so that every part of the interior is easily accessible when the cover is opened.

The base is flanged, thereby giving greater rigidity and preventing base from cutting into plastered surfaces.

Unit type of construction and universal terminal block employed. This permits of the telephone being readily converted from one class of service to another. This also permits of a desk set box being converted into a wall telephone or vice versa by a substitution of covers.

\*The No. 8AG Ringers were formerly wound to 1000 ohms instead of 1400 ohms. The 1000 and 1400 ohm ringers have the same impedance and may be used interchangeably in service.

All of these telephones are equipped with the No. 7A Transmitter Bracket, two T1A 6-inch transmitter cords, and a 30-inch No. 521 Receiver Cord with the exception of the No. 1533K, which contains one No. 92 Cord (3 feet long) in place of the No. 521 Cord.

See separate listing for "Central Battery Telephones for use with No. 1801 Switchboards," and for protectors.

The No. 323 Transmitters have a black finish.

**Western Electric Central Battery Telephones**

For Use with No. 1801 Switchboard

No. 6000AE

No. 1539A

**Systems A and B**

The telephones for No. 1801 Switchboard Systems A and B are of the series talking circuit type and equipped with 140 ohm vibrating bells which operate on direct current.

Code No.	Case and Finish	Mounting	Receiver
2537A	Metal, Black	Surface Wall	Watch Case Type
2539A	Metal, Black	Flush Wall	Watch Case Type
1533N	Metal, Black	Surface Wall	Hand Receiver
6034AU	No. 1020BJ	Stand Desk	Watch Case Type

NOTE.—Information on hand set type telephones and desk telephones equipped with hand receivers will be furnished on application.

**System C**

The telephones for No. 1801 Switchboard System C may be of the same types as used for Systems A and B, but in case the system is connected to an outside exchange, telephones equipped with standard central battery induction coil talking circuit should be used in order to obtain satisfactory transmission, as follows:

Code No.	Case and Finish	Mounting
1533M	Metal, Black	Surface Wall

**System D**

Any standard central battery telephone with ringers operated by alternating current either induction coil or series types can be used with System D. The No. 1533A wall type and No. 6059A desk type telephones may be selected for this system.

**No. 1320 Type Telephones for Police Service**

No. 1320A Outer Door Open

The No. 1320 type is a metal case weatherproof telephone for central battery service. It was designed primarily for the Police Patrol Service but will be found very satisfactory for general central battery service where a weatherproof telephone is required.

The apparatus is mounted on a metal frame which is removable as a unit from the case. An inner door protects the apparatus from the weather when the outer door is open. The overall dimensions are 6 $\frac{1}{8}$  inches deep by 13 $\frac{1}{8}$  inches high by 12 $\frac{3}{4}$  inches wide.

A loud ringing extension bell may be connected in multiple with the ringer of this telephone thereby providing means of signaling a patrolman from a distance (see extension bells).

A tapped hole is provided in each end of the case for receiving conduit. Four holes are drilled in the back of the case for receiving mounting screws or mounting clamps. The lock on the outer door is designed so that the key cannot be removed until the door is closed.

Outer door is not marked. Standard finish, gray paint. Special No. 1320A telephones may be obtained with outer doors marked (raised characters cast on door) in accordance with customer's requirements; color of finish, as specified.

\*Furnished only when specified in order.

A reliable telephone system in a mine permits instant communication throughout the plant. Routine business can be easily handled with such a system. In cases of power suspension, shut downs, or emergencies involving possible loss of life or of property the telephone is of inestimable value.

GENERAL—There are three classes of location must be considered for mine telephones. 1. Dry locations above ground or in protected parts of the workings such as the Superintendent's office and the engine room. In such locations the standard wall or desk magneto telephones are recommended. 2. Exposed locations above ground or in mines in which methane or other explosive gases or coal dust are not likely to be present in dangerous proportions. In such locations No. 1336 type telephones are recommended. 3. Mines or other locations in which methane or other explosive gases or coal dust are likely to be present in dangerous proportions. The No. 1536 type telephone is recommended for such locations.

**No. 1336 Type Telephones**

Briefly these are metal case magneto telephones in which the apparatus has been especially treated to provide resistance to moisture, acid fumes, and non-inflammable gas. All parts are enclosed in a cast iron case which provides protection against damage from water and falling objects. The top of the case is rounded so that water will readily drain off and any objects falling on the top will slide off to the ground. An outer door totally encloses all parts including the transmitter receiver and generator crank.

## Western Electric Magneto Mine Telephones

Continued

### No. 1336 Type Telephones

The sets are primarily designed for use on lines to which a large number of telephones are connected and where code ringing is used. Although intended chiefly for mine service they are also recommended for out-of-door use as in railway service, police alarm, etc.

Equipped with a No. 143J switchhook and a No. 31 induction coil.

Special No. 1336 type telephones equipped with a heavy brass padlock with 2 keys are obtainable. The padlock is attached to chain in place of latch pin. Orders for these telephones must state that padlocks are desired.

No. 1336A telephone is not equipped with a ringer. Intended for use where an extension bell is preferred to the regular telephone ringer, also for service where all the calls will be outgoing.

No. 1336E differs from the No. 1336A in that it is equipped with a ringer and an iron hood for protecting the gongs.

No. 1336J differs from the No. 1336E only in that a condenser is provided to permit the ringers of this telephone as well as others on the same line, being rung even though its receiver may have been left off the switchhook.

To add a condenser to a No. 1336 type telephone that was not originally so equipped the following apparatus and parts should be ordered: No. 21W condenser, one condenser strap P-43065, and two round head machine screws P-110187.

#### Dry Cells

Two standard size dry cells are required for each telephone to furnish current for talking. Western Electric Blue Bell Dry Cells are specially designed for telephone service and are recommended because they last longer and are more efficient for this class of service than other dry cells.

Two special Blue Bell Dry Cell cartons, impregnated with moisture-proofing compound, are furnished with each No. 1336 type telephone. These are to be substituted for the standard cartons furnished on the dry cells. These cartons resist the action of any moisture that may form on the inside of the case and prevent current leakage and rapid deterioration.

#### Case

The box, outer door, inner door and gong hood are of cast iron heavily coated with a rust-resisting finish. When the outer door is closed only the metal transmitter mouth-piece, receiver, receiver cord and the generator handle are exposed. When the outer door is closed these parts are protected from mechanical injury. When using this telephone it is, of course, evident that only the outer door need be opened.

#### Entrance for Line Wires

The line wires may be brought in either at the top or the bottom of the case. A short length of pipe is screwed into the top of the case and is covered with a pipe cap. This cap prevents water running into the set by following the line wires. In case the line wire is to be run to the telephone in pipe (conduit) no difficulty will be encountered in joining the conduit to the telephone as the wire entrance hole at bottom as well as the top of the case is tapped.

#### Mounting

Wrought iron mounting bars are secured to the back of the case. The upper end of these have pear shaped holes, and with this arrangement the telephone can be readily mounted by one man and without any danger of damaging it. This is accomplished by driving two lag screws into the mounting surface until their heads project about 1/2 inch. The telephone may then be hung upon these mounting screws (the heads of the lag screws will pass through the large end of the pear shaped holes) after which the lower mounting screws may be driven into place through the holes in the lower end of the mounting bars. Wrought iron mounting bars are employed as they are less subject to breakage than if lugs were cast on the case.

## Western Electric Magneto Mine Telephones

Continued

### No. 1536 Type Telephones

Designed especially for use in mines and other locations subject to the hazard of explosive gases or coal dust and have been declared by the United States Bureau of Mines permissible for use in mines or other locations where methane or other explosive gases or coal dust are likely to be present in dangerous proportions.

No. 1536E telephone is the same as the 1336E except that protective features are incorporated in the electrical contacts of the switchhook, generator, ringer.

No. 1536E has a 149A switchhook, a 31 induction coil and is furnished without condenser unless the condenser is called for in the order. The outer door is omitted. Projecting hood over the door protects the transmitter, receiver and generator crank. Line wires are brought in either top or bottom, when from the top an angle fixture is provided so moisture cannot enter. Holes in the bottom of the set drain off any accumulation of moisture. Special cordage adapter is provided at the receiver connection of the cord. Unusually hard usage and hoisting will not fray the insulation. Internal mechanism, batteries, line connection, etc. in the housing are inaccessible without unlocking the door and removing the cap screws around the side of the door. Switch hook, generator and ringer are separately removable so they can be carried away for repairs.

Two Blue Bell dry cells with screw terminals are furnished as part of the set. Cartons P-201339 are furnished with sets, but new cells can be ordered without cartons as one carton has a longer life than the cell. Wrought iron bars are secured to the back of the set for mounting. Two lag screws are needed (but not furnished) to mount set. Set as furnished is permissible, any change automatically voids the approval of the Bureau of Mines.

#### Systems

For a system in which all the telephones are connected to a party line, the set should be of such a design that all the stations can be clearly signaled, for example: No. 1336J telephone set for service below ground or exposed locations above ground and the 1536E for gaseous locations. No. 1317S wall telephone set for service above ground in unexposed locations or No. 6004-B desk type telephone set.

It is preferable, in cases where the size of the system warrants, to use a number of lines connected to a switchboard rather than to depend on one party line. Any of the lines may be a party line but it is much better to have the important stations such as engine room and superintendent's office connected to the switchboard by individual lines. With a switchboard and individual lines the 1336E or the 1536E telephones should be used below ground and in exposed locations. For the lightly loaded lines above ground and not exposed the 1317AH wall telephone set or the 6003B desk telephone set can be used.

#### Ringers and Extension Bells

The ringers used in these telephones may be readily adjusted if necessary with a screwdriver. The gongs emit a loud distinct ring, which can be heard a long distance, particularly so underground. However it is often desired to provide loud ringing extension bells in connection with mine telephones and for this purpose the No. 392 and No. 342 type subscribers sets are recommended as they are designed to withstand the severe conditions encountered in mine service.

#### Protectors

The telephone installed above ground should be equipped with protectors consisting of open space cut outs (for example the No. 60AP protector) to prevent damage to the telephone by lightning. In case there is a chance of contact between the telephone line and a power circuit protectors consisting of open space cut outs and fuses (for example the No. 58AP protector) should be used.

Western Electric Street Railway Telephones

Magneto and Battery Types

No. 1278 type telephones employ weatherproof iron boxes and are provided with insulated circuits. They are intended principally for exterior use by street railway companies operating telephone lines on which there is a chance of crosses with low voltage power circuits. This type telephone is arranged so that its circuit is cut off from the line except when its door is opened. When the telephone is in use a repeating coil is interposed between the line and telephone circuit proper, so as to protect the user, as far

as possible, from the chance of injury should the line become crossed with a low voltage circuit. When the door is opened, a line switch is released which connects one winding of the repeating coil across the line and connects two fuses and two open space cut-outs into this circuit. The telephone circuit proper is connected to the second winding of the repeating coil and has no direct contact with the line circuit. The fact that a repeating coil is interposed between the line circuit and the telephone circuit reduces the efficiency of the telephone to some extent and, therefore, the use of these telephones is not recommended on heavily loaded lines, except where the protective feature is essential. See No. 1336 type telephones. In case a car is held up awaiting orders from the dispatcher the door of the telephone is left open so as to permit of the telephone being signalled. (It is impossible for the telephone to be signalled when its door is closed.) As the talking circuit is only closed when the push button in the hand set is depressed, the battery in the telephone is not wasted under the above condition. The apparatus of this telephone is mounted on an iron shelf, which may be removed as a unit from the telephone for inspection. The connection between the apparatus on the shelf and the line and ground terminals is made through the medium of clips which register with contacts mounted on a terminal block secured to the back of the case. The case and door are of cast iron and have a galvanized finish. Both the top and bottom ends of the case are tapped for receiving 1/2 inch conduit.

The F, G and J telephones are equipped with a lock which is arranged so that the key cannot be removed until the door of the telephone is closed. The No. 1278H is equipped with a hasp, staple and pin similar to that used on No. 1336 type telephones, but padlock is not included.

For Magneto Service

Designed for medium line load.

In addition to the apparatus listed above these telephones are each equipped with: A special door switch. A special protector.

- 2 D. & W. No. 5001 Type C fuses—500 volt 1 ampere.
- 2 No. 2 protector blocks.
- 2 No. 1 protector blocks.
- 2 No. 3 protector micas.

Dry cells must be ordered as a separate item.

\*Equipped with hasp, staple and pin the same as No. 1336 type telephones. Ringer is disconnected from the line when door of telephone is closed.

†Generators have special mounting brackets.

Western Electric Portable Magneto Telephones

No. 1330E Closed

No. 1330E Open

Nos. 1330 and 1331 Types

These are complete magneto telephones mounted in substantial wooden cases. They are primarily for use in railway service and are designed to withstand the jarring and rough handling incident to train service. In addition to railway service these telephones are suitable for any service where a substantial type of portable telephone is required. While these telephones are not waterproof they are designed to withstand ordinary weather conditions.

The Nos. 1330F and 1331F telephones are equipped with a six-foot waterproof cord and No. 146 plug for connecting them to a telephone line through a No. 186 pole jack.

The Nos. 1330E and 1331E telephones are intended primarily for use where connection to the line will be made with a line pole.

No. 1375 Type

The No. 1375B is especially adapted for use in cases where the telephone user must carry the telephone considerable distances. While it is primarily intended for use on moderately loaded lines, the design of the generator is such that it may be satisfactorily operated on heavily loaded lines.

The generator, induction, coil buzzer and terminal block are mounted on an aluminum frame and secured in the case by means of machine screws.

The case is made of high grade leather and is designed to withstand considerable rough handling.

## Western Electric Cable Terminals

### Type C

A No. 22 A.W.G. cable stub  $6\frac{1}{2}$  feet long will be furnished on Nos. C-10 and C-16 unless otherwise specified. A 7-foot, No. 22 A.W.G. cable stub will be furnished with No. C-26 unless otherwise specified.

Code No.	No. of Pairs	Height Inches	Replaces
C-10	10	$12\frac{3}{4}$	8A
C-16	16	$14\frac{5}{8}$	8B & 8D
C-26	26	$17\frac{3}{4}$	8C & 8E

### No. 14 Type Without Protectors

This is for open wire distribution from lead-covered aerial cable, and is intended to be mounted on poles or buildings. No arrangement is made for protective devices. A 6-foot No. 22 A.W.G. cable stub is standard.

Code No.	Capacity Pairs	Length Including Nipples Inches	Width of Cover Inches
14B	11	9	$7\frac{1}{16}$
14C	16	$11\frac{17}{32}$	$7\frac{1}{16}$
14D	26	$16\frac{3}{32}$	$7\frac{1}{16}$

### No. 18 Type With Protectors

This is a protected terminal for open wire distribution from lead-covered aerial and underground cable. Inclosed in a black finished galvanized iron cover approximately  $8\frac{3}{16}$  inches in diameter, provided with a safety chain fastened to the mounting base.

Arranged for mounting on poles. Equipped with: No. 7A Fuses (7 ampere unless otherwise specified). No. 1 Protector Blocks. No. 2 Protector Blocks. No. 3 Protector Micars.

A 6-foot No. 22 A.W.G. cable stub is standard.

Code No.	Capacity Pairs	Length Inches	Code No.	Capacity Pairs	Length Inches
18A	10	$19\frac{9}{32}$	18D	30	$33\frac{1}{32}$
18B	15	$22\frac{1}{32}$	18E	50	$46\frac{25}{32}$
18C	25	$28\frac{29}{32}$	18F	60	$53\frac{21}{32}$

## Western Electric Telephone Cords

There is a Western Electric cord to fit any telephone set or switchboard. If none of the cords described below meet your requirements, write us, sending if possible a sample cord or a sketch, paying particular attention to the kind of tip required.

Always specify length of cord when ordering.

### Wall Telephone Receiver Cords

Code No.	Tinsel Cord	Brown Covering	No. Receiver End	Cord TIP Set End	Standard Length Feet
10	2-Conductor	Silk	29	62	$2\frac{1}{2}$ and 6
R2A	2-Conductor	Silk	103	103	$2\frac{1}{2}$
460	2-Conductor	Silk	29	29	$2\frac{1}{4}$

Used with receiver on wall set.

### Desk Stand Cords

Code No.	Conductor	Material	Length	Standard Length Feet
549	2-Conductor	Silk	29	$2\frac{1}{2}$
T1A	1-Conductor	Cotton	98	1
550	3-Conductor	Silk	...	$5\frac{1}{2}$ or 8

No. 549 is used with receiver and No. T1A is used with transmitter on Nos. 1020 and 1040 Desk Stand. No. 550 is used with stand to connect with desk set box.

## Western Electric Unmounted Condensers

### No. 21 Type

No. 21

Code No.	Rated Capacity	Voltage Tested On, A.C.	Use
21H	0.1	1200	No. 85 Type Interrupter Railway Sets Telegraph
21AA	1.0	1000	
21AK	0.5	1000	

### No. 142 Type

142B	.25	.25	.32	1000	Telegraph Railway Sets
142D	.05	.05	.06	1000	

No. 142B Type replaces Nos 21Y and 21AL Condensers.

No. 142D Type replaces No. 21U Condenser.

The No. 142 Type Condensers require one No. 27A Bracket when mounted in place of the No. 21 or similar type condensers.

Arranged to mount on  $\frac{1}{2}$ -inch horizontal and  $1\frac{1}{4}$ -inch vertical centers. Furnished with two nuts and washers for mounting.

Safe continuously applied voltage, either d.c. or effective a.c. at 60 cycles or less and of an approximate sine wave, is 300 volts.

No. 142

### Nos. 147 and 149 Types

The Nos. 147 and 149 Type Condensers are equipped with mounting tabs at lower edge of condenser and may be mounted by means of this tab and a mounting strap.

Safe continuously applied voltage, either d.c. or effective a.c. at 60 cycles or less and of an approximate sine wave, is 180 volts.

If No. 147 Type Condenser when substituted must fill space of No. 21 Type, order should specify P-409555 Adapter, and for the No. 149 Type Condenser, specify P-409556 Adapter.

**Western Electric A. C. Extension Bells**

Intended for auxiliary use in connection with wall, desk or telephone arm telephones. They consist of a ringer on a suitable mounting and two line terminals or binding posts. For magneto bridging non-selective service only.

**No. 127 Type**

Ringer mounted in an oak box. Approximate dimensions, width 6 1/2 inches; height 4 3/8 inches; depth 4 5/8 inches.

Code No.	Ringer No.	Resistance Ohms
127E	38AG	1020
127F	38BG	2500
127G	38FG	1620

**No. 392 Type**

Moisture-proofed loud ringing bells having a black finish metal cover and base with galvanized finish gongs.

When the extension bell is to be used on a central battery line a 2 M.F. condenser must be connected in series with the ringer coils.

Base is arranged for mounting a No. 21D condenser. Condenser is not furnished, however, unless so ordered.

The connecting leads to the ringer coils are so arranged that the condenser can be easily connected in series with the ringer without disturbing the line wires when desired.

Code No.	Resistance Ohms	Diameter Gongs, In.
392A	1000	6
392B	2500	6
392E	1600	6
392G	1000	8
392H	2500	8

Biassing attachment for selective ringing can be added.

**No. 342 Type**

Loud ringing bells for use in mines and other places where a bell protected from weather is desired. Consists of a No. 392 type bell mounted on a No. 149A backboard having a sloping roof which protects the bell.

Code No.	Bell Used	Resistance Ohms	Diam. Gongs, In.	Code No.	Bell Used	Resistance Ohms	Diameter Gongs, In.

**Western Electric Tubular Fuses  
Fiber Shell Type**

No. 7T

No. 7A

No. 11C

These fuses are carefully made from especially selected materials. The use of lead fuse wire prevents the possibility of overheating the shell. These fuses will carry their rated currents indefinitely without injury and will act reliably on one and one-half times their rated current values. Fuses of the same code number and rated capacity will give consistent performance as to rated and operating current values.

Code No.	Rated Capacity Amperes	Used with
7A	1 to 7 as Specified	Nos. 61, 77, 1074A and 1078 Protectors
7T	7	B Cable Terminals.
11C	7	Nos. 58AP and 1079AP Protectors

**Western Electric Hand Generators**

No. 48A

Western Electric hand generators are correct in both mechanical and electrical design and the materials used and manufacturing processes employed are such that their high efficiency is retained indefinitely.

All parts are accurately machined and fitted and the bearings are of such size that no trouble due to the armature scraping on the pole pieces will be encountered even after years of service. The gears are accurately cut.

All metal parts are given a protective finish and the armature winding is moistureproofed. The magnets are made from steel which was developed especially for this purpose.

**No. 22 Type Generators**

The No. 22 type generator is used on lightly loaded magneto lines and may be obtained for alternating or pulsating current.

These generators have three magnets except the No. 22E, which has only two.

**No. 29 Type Generators**

The No. 29 type generators are used where light weight is essential as in linemen's test sets, and portable telephones.

**No. 48 Type Generators**

The No. 48 is our most powerful hand generator and is used in telephone for heavily loaded line service.

**No. 50 Type Generators**

The No. 50 type generator was designed for use on moderately loaded lines and while it only has three magnets, it is considerably more powerful than a good many five-bar generators on the market, and will be found satisfactory for use on all but the very heaviest loaded lines. On a line of 12000 ohms, the No. 50 generator will operate six 2500 ohms Western Electric ringers and will operate thirty-five 2500 ohms Western Electric ringers on a line of about 1000 ohms.

The No. 50 generator is approximately 75% as powerful as the No. 48 type.

No. 50A

**Western Electric Hand Generator Boxes**

A hand generator box consists of a generator mounted in an oak cabinet having a hinged cover.

The leads from the generator are connected to terminals mounted close to the inside edge of the box.

Code No.	Generator	Current	DIMENSIONS OF BOX, INCHES		
			Width	Depth	Length
299F	48A	A. C.	8	6	9
299G	48B	A. C. and P. C.	8	6	9
303G	50A	A. C.	7 29/32	4 13/32	8 1/8

## No. 1001 Type *Western Electric* Hand Sets

No. 1001A

The No. 1001 type hand sets have been manufactured for over fifteen years. They were originally intended for the use of linemen and are designed to with-

stand the rough handling, incidental to such service. This design proved to be so satisfactory that it is now used extensively for a number of different purposes, as described below.

The handles are made of brass tubing with drawn brass end pieces and the transmitters and receivers are provided with drawn brass cases equipped with screw clamping rings, thereby making an instrument that is extremely rugged.

The No. 1001-C, and H hand sets are provided with a push button switch which is connected so that these hand sets function the same as the No. 1020-AL desk stand. In view of this, they may be used in connection with our regular magneto and central battery desk set boxes in place of a desk stand, in cases where the service conditions are such that a hand set is required. These hand sets have a nickel-plated finish.

### No. 1001A

Used by linemen as a test set on central battery lines. The cord is equipped with spring connection clips.

Push Button Spring Combination

Code No.	Transmitter	Receiver	CORDS		Push Button Spring Combination
			Code No.	Length	
1001A	244	131	243	8 in.	None
			574	2½ ft.	
			(Waterproof)		

### Nos. 1001C and 1001H

No. 1001C is used with Nos. 1330 and 1331 portable magneto telephones.

No. 1001H is used with No. 1375B portable magneto telephone.

Push Button Spring Combination

Code No.	Transmitter	Receiver	CORDS		Push Button Spring Combination
			Code No.	Length	
1001C	285	131	366	6 ft.	2 Make
			(Waterproof)		
1001H	244	131	422	5 ft. 2 in.	2 Make
			(Waterproof)		

### No. 1001E

Used with desk type Inter-phones where 5-conductor cord is required.

Push Button Spring Combination

Code No.	Transmitter	Receiver	CORDS		Push Button Spring Combination
			Code No.	Length	
1001E	244	131	398	6 ft.	1 Make and 1 Break

Push Button Spring Combination

Code No.	Transmitter	Receiver	CORDS		Push Button Spring Combination
			Code No.	Length	
1001J	244	131	502	6 ft.	1 Make and 1 Break

No. 1001J is used with desk type Inter-phones.

## No. 1002 Type *Western Electric* Hand Sets

No. 1002AC

The transmitter and receiver of the No. 1002 type hand sets are mounted on a nickel plated tubular brass frame, equipped with a hard rubber handle. A switch mounted within the frame is actuated by a plunger which terminates in a ring by which the hand set is suspended, when not in use. When the hand set is removed from the hook, the switch is automatically closed. These hand sets function the same as certain desk stands, and, therefore, may be used in place of desk stands, if required. A hook (No. 141A switch-hook) is furnished with each hand set.

NO. 1002-D

NO. 1002-E

NO. 1002-AC

### No. 1002D

Used in place of desk stands and telephone arms in connection with Interphones. Also for general use.

Code No.	Transmitter	Receiver	CORDS		Switch Combination
			Code No.	Length	
1002D	267	141	336	14 ins.	1 make and 1 break (4 conductors)
			402	8½ ins.	
			429	4 ft. 6 ins.	
			(4 conductors)		

### No. 1002E

Used in connection with a janitor's switchboard in apartment house equipment. Also for general use.

Code No.	Transmitter	Receiver	CORDS		Switch Combination
			Code No.	Length	
1002E	267	141	402	8½ ins.	2 make contact
			336	14 ins.	
			430	4 ft. 6 ins.	
			(2 conductors)		

### No. 1002AC

Used in place of local battery bridging or central battery desk stands. Functions same as No. 1040AL desk stand. Also No. 1801 swbd.

Code No.	Transmitter	Receiver	CORDS		Switch Combination
			Code No.	Length	
1002AC	267	141	318	4½ ft.	2 make
			(3 conductors)		
			414	4¼ ins.	
			415	9½ ins.	

## No. 1003 Type Hand Sets

NOTE.—The No. 1003 type hand sets are listed under Interphones.

### *Western Electric* Hand Set Hangers

No. 1B mounts on a vertical surface for holding a No. 1001 type hand set when not in use. The hand set is suspended by its receiver, which fits into a recess in the hanger. Cast brass; black finish. Overall dimensions, 3¼ inches wide, 2½ inches deep and 3½ inches high.

No. 1C is the same as the No. 1B, except that it is equipped with rubber studs and a spring, so arranged as to prevent the hand set from swaying. Used principally on steamships.

No. 1B

**Western Electric Desk Set Boxes**

**Nos. 300 and 315 Types**

For Use with Desk Stands, Telephone Arms, Etc., on Magneto or Central Battery Lines

Used with No. 1020AL desk stand and Nos. 1020CC, 1048AA, AB and AC telephone arm. Oak boxes equipped with induction coil, and with ringer, generator and condenser as indicated below.

**Ringers Operated by A.C.**

**Code Ringing**

Code No.	Ringer Resistance Ohms	Type Generator	Con-denser	Service
315H	1020	No. 22 (3 Bar A.C.)		Light Loaded Lines

300N	2500	No. 48 (5 Bar A.C.)	1 Mf.	Heavy Loaded Lines
300L	1620	No. 48 (5 Bar A.C.)		Medium Loaded Lines
300M	1620	No. 48 (5 Bar A.C.)	1 Mf.	Medium Loaded Lines

**No. 1020AL Western Electric Desk Stands**

For regular bridging magneto or common battery service. Insulated transmitter.

Includes one No. 20AL Desk Stand, one No. 323 Transmitter, one No. 144 Receiver and cords.

Black Japan finish.

**No. 186 Western Electric Weatherproof Telephone Jacks**

Weatherproof jack designed for mounting poles; affords a means of connecting a portable telephone to the line. Contains protective apparatus.

Lock will be furnished if specified in order.

**No. 58AP Western Electric Telephone Protectors**

Designed for protection against lightning and crosses with electric circuits.

Consists of two No. 11C-7 Ampere Fuses, two each Nos. 26 and 27 Protectors and Nos. 16, 29 and 48 Mountings.

**Western Electric Telephone Protector Blocks**

**Nos. 19 and 20**

No. 19

No. 20

Code No.	Description	USED WITH		Protectors, Nos.
		Protector Blocks, No.	Protector Micas, No.	
19	Plain Copper Block with Two Pins	20	10	58B, 60B
20		Grooved Copper Block with Two Bushings	19	10

**Nos. 26 and 27**

No. 26

No. 27

Provides better telephone service through fewer interruptions of operation. They are used together without a separator (protector mica) and form an open space cutout which will afford the highest grade of protection against high potentials due to lightning.

The No. 26 protector block is a solid piece of hard non-dusting carbon. The face of the block is especially ground to present a smooth surface. The No. 26 protector block is mounted on the ground side of the protector mounting.

The No. 27 protector block consists of a porcelain frame with a countersunk hard carbon plug which is fastened in place with low temperature fusing cement. The surface of the frame which bears against the No. 26 block, when assembled in a mounting, is finished by grinding. The air gap between the carbon insert in the No. 27 block and the face of the No. 26 block is held to close limits by this grinding process and the consistent operation of the cutouts at the proper voltage is thereby insured.

Ordinary lightning discharges will cause an arc across the air gap between the carbon blocks but will not heat them sufficiently to melt the cement used for holding the carbon plug in place. A cross with an electric light or power line, however, will cause a discharge or repeated discharges, of such duration that the heating of the carbon insert of the No. 27 blocks will melt the cement holding it in place and allow the mounting spring to push it into direct contact with the No. 26 block, thus permanently grounding the line.

Code No.	Description	Used with Protectors, Nos.
26	Carbon Block	12AP, 58AP, 60AP, 76AP, 1268A and 1269A
27	Porcelain Frame with Carbon Insert	

The new blocks are interchangeable with the old combinations of No. 1 protector block, No. 2 protector blocks and No. 3 protector mica in all subscribers' set protector mountings and are therefore available for improving protective equipment already in service, during the normal replacements. All orders for replacements of Nos. 1 and 2 blocks and No. 3 micas in subscribers' telephone station protectors should specify the Nos. 26 and 27 protector blocks; no separator (protector mica) is needed with the new design of block.

**Protector Micas**

No. 10

Code No.	USED WITH	
	Protector Blocks, Nos.	Protectors Nos.
10	19, 20 and 21	58B, 60B and 80A
11	19 and 20	178

No. 11 mica is twice as thick as the No. 10.

## Western Electric Telephone Protector Mountings

No. 83A

No. 83A is designed to protect drop wires between the overhead lines and the subscribers telephone set from lightning. This protector mounting consists of an iron box approximately  $8\frac{1}{16} \times 5 \times 2\frac{3}{4}$  inches deep with a cover and having a No. 84A protector mounted within it. Arranged to mount 10 pairs of No. 26 and 30 protector blocks. This

protector mounting provides for the protection of 5 pairs of wires. The box mounts directly underneath the crossarms on the poles. Two mounting lugs are provided for this purpose.

No. 86A is for housing the 58 type protector where outside installation is desired. Consists of a galvanized iron metal box having a sliding cover with locking screws. Three screws are furnished for mounting the protector in the box. Size, 10 inches long,  $5\frac{3}{16}$  inches wide,  $3\frac{1}{4}$  inches deep.

No. 86A

## Western Electric Hand Receivers

No. 144

With hard rubber case.

Cord not included; order separately.

## Western Electric Head Receivers

No. 528

Standard biopolar head receiver, brass case with improved wire type headband.

Used with operator's telephone set and all switchboards.

## Western Electric Ringers

No. 53 Type

Have gong posts suitable for  $\frac{5}{8}$ -inch woodwork; spacers can be furnished to adapt the No. 53 type to  $\frac{3}{8}$ -inch woodwork and the No. 38 to either  $\frac{3}{8}$  or  $\frac{1}{2}$ -inch woodwork. Black finish gongs are furnished as standard, but nickel finish gongs can be supplied.

Used with central battery (magneto) telephones.

Code No.	Approx. Resistance Ohms	Gongs		Mounts In Wood-work Inches
		Code No.	Diam. Inches	
38AG	1020	26A	3	$\frac{5}{8}$

53FG	1600	29A	$2\frac{1}{2}$	$\frac{5}{8}$

## Western Electric Transmitters

No. 323

High resistance, insulated transmitter. Provided with mounting lug and clamping bolt. Black finish.

Designed for use on magneto and central battery desk stands and telephone arms

No. 353

High resistance, insulated, bracket type transmitter. Black finished all over.

Designed for use on magneto and central battery wall telephones, requiring a bracket type transmitter

## Western Electric Testing Sets

Type 90500

Each set consists of a hand generator and a ringer, wired in series, and inclosed in a wooden case.

No. 90530

Code No.	Will Ring Through Ohms	Consists of
90530	10000	1 No. 22K Generator 1 No. 19B Ringer
90510	35000	1 No. 22K Generator 1 Special No. 19 Ringer
90511	50000	1 No. 22N Generator 1 No. 19A Ringer
90512	100000	1 No. 22N Generator 1 No. 19B Ringer

Size of case is  $5\frac{1}{4} \times 6\frac{5}{8} \times 5\frac{1}{4}$  inches.

It is finished in birch.

## No. 1017 Type Western Electric Test Sets

No. 1017 Type

No. 1017B

A wooden box telephone test set equipped with a regular local battery talking circuit consisting of a No. 266 transmitter, No. 13 induction coil, No. 189 receiver and a special three-cell dry battery unit.

NOTE.—The No. 1017C test set differs from the No. 1017B only in that it is equipped with a specially designed high efficiency generator. The No. 1017B will, under ordinary conditions, be found entirely satisfactory, but in case a more powerful set is required to meet unusual conditions, the No. 1017C set has been developed.

No. 1017B. For lightly loaded lines—it will ring 15, 2500 ohm bells over a 15 mile No. 12BB iron metallic line.

Code No.	Weight Including Battery Pounds	Size of Case Inches	Finish
1017B	8	$4\frac{7}{32} \times 6\frac{3}{32} \times 7\frac{7}{32}$	{ Birch { Mahogany
No. 1017C	For moderately loaded lines—it will ring 33 2500 ohm bells over a 15 mile No. 12BB. iron metallic line.		
1017C	8	$4\frac{7}{32} \times 6\frac{3}{32} \times 7\frac{7}{32}$	{ Birch { Mahogany

**Western Electric Lead Covered Telephone Cable**

The outside plant is a very important part of any telephone system. Unless satisfactory material is used in its construction, it is impossible for a telephone company to furnish satisfactory service even though the central office and sub-station equipment is of the best. Lead covered cable represents not only a large part of the capital invested in the outside plant, but also a most important part of the construction due to its function of being the transmitting medium for telephone messages.

There are certain characteristics which lead covered cable must possess in order to properly and efficiently function in a telephone system:—

1. It must be so constructed that it will have long life and thereby reduce depreciation to a minimum.
2. It must be designed to transmit telephone messages with a minimum transmission loss.

The Western Electric Company manufactures cable designed to conform to the above requirements and by virtue of the fact that its experience in this field covers the entire period since the first successful installation of lead cable for telephone use, its product is as nearly perfect as present day knowledge of the telephone art permits.

The Western Electric Company occupies an important position in the manufacture of lead covered cable for telephone use by virtue of the following facts:

1. It is the largest manufacturer of this commodity.
2. It has specialized on, and developed this product since its origin.
3. It manufactures for the largest users.
4. It is responsible for practically every important development and improvement.
5. Conscientious careful inspection and testing make sure that specifications are rigidly adhered to.
6. The design and development work is done by the largest force of telephone experts in the world.

Cable for aerial and underground telephone use is composed of copper conductors, insulated with paper, twisted into pairs and enclosed in a lead sheath. In general, cable with single wrapped conductors is recommended, since its electrical and mechanical characteristics are perfectly satisfactory for most conditions, and the cost is less than cable with double wrapped conductors.

The sheath is made of pure lead, lead antimony alloy or lead tin alloy. Experience has shown that while either lead antimony or lead tin is satisfactory for aerial or underground cable, the former alloy, being somewhat cheaper, is more generally used. While pure lead cannot be recommended where the cable is subjected to vibration, it is satisfactory for use within buildings.

**Extra Pairs**

Extra pairs are placed in all cables containing conductors smaller than No. 16 to take care of any pairs which may become defective in manufacture. In the majority of cables all or part of the extra pairs will often be found good and may be used for additional circuits. All pairs of No. 16 A.W.G. and larger except in submarine cable are guaranteed to meet the specification requirements when the cable leaves our factory.

The coding of all cables is on the basis of the actual number of pairs. Actual and guaranteed numbers of pairs in the various sizes of standard cables containing conductors smaller than No. 16 A.W.G. are as follows:

Actual Pairs	Guaranteed Pairs
6 to 149	Actual pairs less one
150 " 249	" " " two
250 " 349	" " " three
350 " 449	" " " four
450 " 505	" " " five
606	" " " six
909	" " " nine
1212	" " " twelve
1818	" " " eighteen

Cable Yard at Hawthorne Works

**Transmission**

The transmitting efficiency of telephone cable, considered as a separate unit, depends principally upon its capacitance and conductor resistance. When telephone cable forms a portion of a completed telephone connection, the transmitting efficiency of the telephone connection as affected by the cable portion depends somewhat on the relative position of the cable in that circuit and also by the type of other construction to which it is connected.

The following data are based upon average standard conditions, and may be used for approximate calculations. In the case of circuits involving several different types of construction, we recommend consulting our engineers.

A length of circuit which, when connected to short subscribers' loops, will cause a transmission loss of about 30 db (units of transmission loss, called decibels) is considered about the maximum length over which commercial transmission can be secured.

One db represents approximately the loss found in the following:

- 3.2 miles of No. 12 B.W.G.—B.B. galvanized iron circuit.
- 4 miles of No. 10 B.W.G.—B.B. galvanized iron circuit.
- 8 miles of No. 14 N.B.G. or No. 12 A.W.G. hard drawn bare copper circuit.
- 13 miles of No. 12 N.B.S. hard drawn bare copper circuit.

It then follows that 96 miles is about the theoretical commercial limit for No. 12 B.W.G.—B.B. galvanized iron wire circuit.

Under each listing is given the respective transmission loss or attenuation in db per mile of cable.

**Capacitance**

The capacitance of a cable circuit is important because it limits to a large extent the length of cable through which it is possible to transmit speech. The capacitance may be specified either as mutual, that is, the capacitance between the two wires or a pair; or as grounded, that is, the capacitance between a wire and all the other wires and the sheath. Mutual capacitance is preferable in defining the quality of the cable for telephone transmission, since the conductors are used in pairs as metallic circuits and seldom, if ever, singly as grounded lines. The grounded capacitance is about 1.6 times the mutual, but this ratio varies somewhat for different cables.

Capacitance may be measured by the d.c. charge method, the d.c. discharge method, or the a.c. method. The a.c. method, using a frequency of 800 cycles or higher, is preferable because it measures the true capacitance for the voice currents. The d.c. capacitance tends to be higher than the a.c. capacitance, and in specifying capacitance this fact should be recognized. The d.c. charge method is less subject to error due to improper manipulation of the testing equipment than the d.c. discharge method, and is therefore a more desirable testing procedure for d.c. testing.

Western Electric Cables are tested for mutual capacitance by the a.c. method, unless specifically requested otherwise.

Continued

### Special Cables

Special conditions often require cables with different characteristics from those which have been standardized and coded. Paper insulated cable, designed to withstand test potentials up to 1500 volts a.c., is supplied for special circuits such as for telegraph or signal circuits. If your condition necessitates special cable, write our nearest house, giving full details and information, and price will be furnished.

### Submarine Cables

Paper insulated submarine telephone cable may be divided into three general classes, depending upon the use for which they are intended.

1. High dielectric strength, tight core cable, designed for use in comparatively long lengths, where the cost of repairing a break in the cable will be less than the cost of an entirely new cable.

2. High dielectric strength, loose core cable, designed for use in comparatively short lengths, where high transmission efficiency and high dielectric strength are of importance; for example: a short river crossing cable connecting important open wire.

3. Single paper insulated loose core cable designed for use in comparatively short lengths where so high a dielectric strength is not necessary; for example: a short river crossing cable connecting land cables.

Either single or double armored cable can be furnished. In many cases, single armor gives sufficient mechanical protection. Double armor is used only in cases of extremely severe mechanical requirements. In still water with a mud bottom, single armor will be sufficient. With a rocky or uneven bottom, or with strong tides or currents, double armor should be considered.

### Composite Cables

Composite cable, that is, composed of conductors of two or more gauges can be furnished if desired. The combinations of pairs which will utilize the space within the lead sheath most economically are somewhat limited and our cable engineers will make recommendations along this line upon receipt of detail information as to the conditions to be met.

### Terminating Cables

Paper insulated cables are usually terminated in buildings by splicing on a short piece of textile insulated cable. Commercial textile yarns are liable to contain soluble salts, which will cause electrolytic action when exposed to moist atmospheres and result in poor insulation and sometimes produce corrosion of the conductors. It has been found that by removing such impurities substantial improvements of the insulating properties of the textiles are obtained. Only purified textiles are used in Western Electric Cables.

The uses of the several types of textile insulated cables listed in the tables following are discussed briefly below.

Types FA and GA cables are generally used for terminating. In Type FA cable all pairs, except a tracer pair, have the same colors of insulation. In Type GA cable each pair is distinguishable from every other by a color code. These two types of cable are made up of wires covered with two servings of silk and an outer serving of cotton.

Type AUA has conductors covered with two servings of cotton and an outer film of lacquer. This type of cable should be used where there would be objections to the usual method of waxing the exposed insulated conductors during installation. It replaces Type UA cable.

Types MFA, MGA, and NUA are similar to Types FA, GA, and AUA respectively, except that the conductors are enameled. The enameled cables are intended for the same kinds of service as the other three types, but are used where the humidity may be quite high for rather long periods, as, for example, near the sea coast in warm climates.

Cables with wool insulated conductors were once used for terminating, but it has been found that the cables described above are equally satisfactory for this purpose and are less expensive and easier to handle.

### Cables for Burying Directly in the Ground

There are many situations where cables buried directly in the ground would offer advantages over other forms of construction. The life of unprotected cable sheath may be very short, depending upon the particular soil conditions. To meet this need, the Western Electric Company have developed a type of covering for the cable sheath which effectively protects the sheath from soil corrosion. This protection consists of wrappings of paper and jute which have been thoroughly impregnated with preservative compound and which are thoroughly flooded with asphaltic compound while being applied to the cable. Cables having this type of covering are referred to as jute protected. In cases where somewhat more mechanical protection is desired or where some protection against low frequency induction from power lines is desired, a steel tape armor can be furnished. This type of sheath covering is similar to that used for the jute protected cables except for the addition of the steel tapes and a further covering of asphalt flooded jute.

Jute protected cables are about  $\frac{5}{32}$  inch larger in over-all diameter than the unprotected cables for the smaller sizes and about  $\frac{1}{16}$  inch larger for full size cables. For the tape armored cables, the increase in diameter varies with the size of the cable from about  $\frac{1}{4}$  inch to about  $\frac{3}{16}$  inch. Any lead covered cable can be furnished either jute protected or tape armored if so noted on the order.

### Recent Developments

A new form of paper insulation has been developed by the Western Electric Company which is known as pulp insulation because of its method of application to the wire. The paper is made directly on the conductor in such a way as to form a continuous, seamless tube.

A new method of constructing cable cores, known as the multiple unit design, has also been developed by the Western Electric Company. Units of 50 or 100 pairs are first separately stranded and then these units are cabled together to form the completed core. This construction offers a distinct advantage in splicing in that the color groups are units and require practically no time for separating in preparation for splicing.

No. 26 gauge cables, coded as Type AST, No. 24 gauge cables, coded as Type CSM, and No. 22 gauge cables coded as Type CSA are now regularly furnished with pulp insulation for all sizes and with the multiple unit design in sizes of 152 pairs and larger.

### Type CSA Cable

For Aerial or Underground Use

SHEATH.—Lead antimony.

CONDUCTORS.—No. 22 A.W.G., pulp insulation, with color groups depending upon size.

MUTUAL CAPACITANCE.—A.C. testing, .090 microfarad per mile of cable.

CONDUCTOR RESISTANCE.—Not exceeding 92 ohms per mile of cable at 68 degrees Fahrenheit.

INSULATION RESISTANCE.—Not less than 500 megohm miles.

DIELECTRIC STRENGTH.—Insulation of each conductor capable of withstanding an a.c. test potential whose maximum instantaneous value is 500 volts.

ATTENUATION.—1.8 decibels per mile at 1000 cycles.

Code No. and No. of Pairs	No. of Pairs Guaranteed	Thickness Sheath Inches	Mean Outside Diameter Inches	Approx. Weight Pounds per Foot	Convenient No. of Feet on Reel

### Type NUA Cable For Inside Construction

SHEATH.—Pure lead.

CONDUCTORS.—No. 22 A. W. G. tinned, enamel double cotton lacquered insulation, colored in accordance with standard color scheme so that each pair is distinguishable from other pairs in the cable.

CONDUCTOR RESISTANCE.—Not exceeding 105 ohms per mile of cable, at 68 degrees Fahrenheit.

INSULATION RESISTANCE.—Not less than 500 megohm miles.

DIELECTRIC STRENGTH.—Insulation of each conductor capable of withstanding an a.c. test potential whose maximum instantaneous value is 700 volts.

**Western Electric No. 224-C Vacuum Tubes**

**Cathode Ray Oscillograph Tube**

The Western Electric No. 224-C Vacuum Tube is a Cathode Ray Oscillograph Tube which may be used to obtain the performance characteristics of nearly every kind of electrical apparatus. It particularly fills the need for an oscillograph operating at frequencies up to a million or more cycles per second.

The spot of light produced by the cathode ray on a fluorescent screen within the tube may be moved simultaneously in 2 directions by varying voltages applied to 2 pairs of internal deflector plates, or by current passing through external coils, the resulting trace giving the relation between the 2 currents or voltages. A deflection of one inch is produced by 25 volts on a pair of deflector plates or by 25-ampere turns in suitable coils.

The power equipment required for the tube is a 300-volt B battery and a 6-volt storage battery.

**Western Electric Type 20 Thermocouples**

Type 20 Western Electric Thermocouples are for high frequency current measurements. Used in conjunction with an ungrounded, wooden-cased galvanometer or microammeter, they measure alternating currents of frequency well over 1,000,000 cycles with the same accuracy as obtained with d.c. instruments.

High grade materials, electrical spot-welding of parts and enclosure in a glass envelope evacuated to the same degree as high grade thermionic tubes, insure constancy of calibration.

Matching of couple elements for maximum sensitivity makes possible operation up to 15 millivolts output, with moderate power input in the heater. The almost linear characteristic in the 5-15 millivolt range increases accuracy of reading. This also permits use of more rugged galvanometers for measuring d.c. output.

Type 20 Thermocouples are convenient, precise, and dependable. They are mounted in hardwood containers with sturdy positive contact binding posts and identification plates.

Type	Maximum Heater Resistance Ohms	Couple Resistance Ohms	Nominal Current at 5 Millivolts Ma.	Nominal Current at 15 Millivolts Ma.
20A	.35	3	450	850
20B	.65	3	200	400
20AA	2.0	3	70	140
20AB	6.0	3	35	70

**Western Electric Audiphones**

Western Electric Audiphones reflect the skill and experience of their designers, Bell Telephone Laboratories and their makers, Western Electric Company—both leaders in the sound transmission field.

**No. 36-A**

The No. 36-A audiphone, illustrated at the left, consists of a microphone, a receiver, a rheostat, connecting cords and battery plug. It is suitable for those with a moderate degree of hearing impairment. No. 36-A.....each \$50.00

**No. 37-A**

This audiphone differs from the No. 36-A in that an amplifier is added. This gives a wider hearing range and is suitable for those whose hearing impairment is of an extreme character. It is designed for those who wish to carry the transmitter and amplifier in separate pockets. No. 37-A.....each \$95.00

No. 37-A.....each \$95.00

**No. 38-A**

Similar to the No. 37-A, the No. 38-A is also equipped with an amplifier and is also suitable for those having a considerable hearing impairment. This audiphone has the microphone, rheostat and amplifier assembled in a neat, metal box. It is offered for those who prefer to carry this box rather than having the transmitter and amplifier in their pockets. No. 38-A.....each \$95.00

No. 38-A.....each \$95.00

**Audiphone Accessories**

Two types of ear pieces are available, a stock earpiece furnished with each audiphone or if preferred an individually moulded earpiece (not included in price). The No. 12-A carrying case is available for use with the No. 38-A audiphone. The No. 11-C battery box is a convenient means of carrying the batteries needed with all three models. Special batteries for audiphone use are available.

**Western Electric Audiometers**

**No. 2-A**

Offers physicians an accurate, dependable method of testing the acuity and quality of their patients' hearing. Office assistants can easily and accurately chart each patient's hearing and file charts for comparative records. No. 2-A.....each \$550.00

No. 2-A.....each \$550.00

**No. 3-A**

Developed for use in industrial health work. By use of this instrument hearing tests are made speedily and accurately. No. 3-A.....each \$400.00

No. 3-A.....each \$400.00

**No. 4-A**

Designed for school use; enables the school physician or teacher to periodically check an entire classroom at one time. As many as 500 children can be checked within one school day. No. 4-A.....each \$518.50

**No. 5-A**

Successfully used in schools, industrial offices, automobile license examination rooms and by railroads. No. 5-A.....each \$235.00

No. 5-A.....each \$235.00

Full information on these audiometers on request.

## Commercial and Police Radio Broadcasting Equipment

Broadcasting today has become a vital and recognized factor in the entertainment and education of the American public. The broadcasting business has achieved this recognition by successfully assuming their two outstanding obligations to listeners in (1) Constantly improving the quality and variety of programs and (2) Improving the quality and performance of their equipment.

Station popularity comes as a direct result of sending out clear, undistorted programs of merit with the least possible number of interruptions and at a satisfactory volume. Western Electric offers broadcasting executives a complete service to help them improve the quality, volume and continuity of their broadcasting. Bell Telephone Laboratories, leaders in sound research, are continually

### 50-Watt Police Transmitters

This new police transmitter offers the latest and best equipment for modern police work.

Police requirements in some sections showed the need for a 50-watt transmitter and it has been carefully designed to meet every police need.

Clear, dependable voice transmission is a feature of all Western Electric Police Radio Transmitters.

### 400-Watt Police Transmitters

More than 40 cities in every part of U.S.A. are using Western Electric Police Radio to combat crime in their police work. The success of police radio is no longer questioned—police officials everywhere recognize its importance in their work.

Western Electric Police Radio Transmitters have improved facilities for maintaining frequency stability. Speech is transmitted with great precision. Its superiority of mechanical and electrical construction assures dependable operation. The equipment is compactly assembled and operating costs are low. The equipment was designed and manufactured to meet the needs of police radio work.

studying, checking, testing and developing new equipment and improvements on equipment already introduced. Western Electric adds precision manufacturing, using the choicest of materials in producing the highest quality apparatus. Graybar Electric offers these soundly developed, well manufactured devices to you through its conveniently located offices in 73 principal cities throughout the United States.

### Police Radio

In considering the problem of police radio, dependability in operation and clear transmission are often a matter of life and death. In the development of police radio equipment, Bell Laboratories and Western Electric have spared no expense to secure the utmost in quality and dependability.

### 100, 500 and 1000-Watt Commercial Broadcasting Transmitters

Western Electric offers commercial broadcasters a complete line of transmitting and speech input equipment from 100 watts to 500000 watts.

The 304-A Western Electric Transmitter has a power of 1000 watts secured by increasing the power of the 12-A transmitter (100 watts) by use of the 71-A amplifier. This unit can also be adapted to give a power output of from 100 watts to 1000 watts.

This equipment is a.c. operated, compact and offers the advantages of radiation cooled tubes, the latest in circuit arrangements, harmonic suppression, automatic control circuits and quality construction. It offers the small station owner the opportunity of easily and quickly increasing his power output along the most improved and up-to-date lines.

### 5000, 50,000 and 500,000-Watt Transmitters

The 5000, 50000 and 500000-watt transmitters offer station owners the very latest developments in the art of radio transmission. Dependability, quality of transmission, compactness and ease of operation were all considered carefully in the development and manufacture of these transmitters. Details regarding this equipment will be gladly furnished.

### Speech Input Equipment

Western Electric 9-A Speech Input Equipment offers flexibility of equipment in handling studio as well as remote pick-up points. Microphone switching, together with mixing apparatus and monitor speakers, are all provided with this equipment. Other advantages are a.c. operation, moving coil microphones, improved volume indicator, single panel mounting, factory wiring and master gain control.

### Police Radio Receivers

Graybar offers police departments a superior receiving set manufactured by the Stromberg-Carlson Company. This set was particularly designed to meet the special requirements of police work and represents the result of our experience with police radio installations in New York, Chicago, Detroit, Rochester and Atlanta.

## Western Electric

Public Address, Music Reproducer, and Radio Distribution Systems

Wherever large groups of people gather, indoors or out, there is a need for Public Address Equipment. Speech or music may be reinforced and, with excellent quality, reproduced so that everyone will hear perfectly.

Public Address Equipment is used for entertainment and education, at public meetings, for re-broadcasting radio programs, amplifying record music for dancing, or music appreciation study, making announcements, amplifying speakers' voices, advertising purposes, descriptions of races, baseball and football games, paging, and a dozen and one other sound transmission purposes.

Bell Telephone Laboratories, recognized leaders in the development of sound transmission, are responsible for the design of all Western Electric Public Address Equipment. To sound design, Western Electric adds all the advantages to be derived from their well-known high standards of manufacturing. This material is made available to users everywhere in U. S. A. through Graybar's 73 conveniently located offices. More than 1300 installations of Western Electric Public Address Equipment have given us an experience in this field of great value to prospective users.

No. 204-A Music Reproducer

### Hotels, Restaurants, and Clubs

The New Waldorf-Astoria illustrates the many uses for Western Electric Public Address Equipment and this installation is an indication that our equipment is accepted by the leaders.

Paging, voice amplification, transmitting programs of dance music (either records or hotel orchestra) wherever desired, re-broadcasting selected radio programs—any or all these things can be done through using our equipment.

Quality of reproduction is assured if Western Electric Equipment is used.

### Schools and Colleges

Western Electric Equipment was selected for such modern schools as the Brooklyn Technical High School (Brooklyn, N. Y.) and the University of Texas.

Educators have found Public Address Equipment useful for many classroom, auditorium, gymnasium, and athletic field activities.

Our booklet "Greater Educational Facilities" will prove interesting to anyone in the field of education.

### Churches and Auditoriums

For clear, undistorted voice amplification choose Western Electric Equipment—this has been the decision of many churches and auditorium managers.

To mention two leaders—the Atlantic City Auditorium (Atlantic City, N. J.) and St. Justian's Church (Hartford, Conn.).

### Outdoor Installations

For outdoor installation of all types—amusement parks, football fields, baseball parks, race tracks, and others, Western Electric Equipment has proven thoroughly satisfactory.

A few of the largest installations are Playland Park (Rye, N. Y.), Rose Bowl (Pasadena, Cal.), Athletics Ball Park (Philadelphia, Pa.), and several well-known tracks and other types of outdoor installations.

### Special Wire and Cords

Special wire and cords for Public Address and Speech Input Wiring can be furnished by Graybar. These wires and cords have been specially designed and manufactured for this type of installation work and full information and prices are available to any one from Graybar's 73 distributing houses or direct from executive headquarters at 420 Lexington Avenue, New York City.

# RADIO

The Graybar Electric Company offers its dealers a line of radio sets manufactured by the Colonial Radio Corporation of Buffalo, N. Y.

*COLONIAL RADIO.*—Always abreast of the time in circuit, style and construction and meeting the most exacting of performance requirements, embodies dealer and buyer advantages which make it one of the most outstanding lines on the market.

Every set produced at the huge plant in Buffalo, N. Y., must measure up to these Graybar-Colonial standards before it is offered to the trade. From the standpoint of engineering, it must be equal to or better than any other set in its class. From the standpoint of value, it must have the construction features and the style and deliver

performance equal to or better than any other set at the price. From the standpoint of merchandising, it must have the popular

appeal which makes it a live, moving number in the dealer's store.

This is why an ever increasing number of retailers regard Colonial Radio as one of their dependable, year-in and year-out sources of profit. It is made right, priced right and promoted right for successful radio retailing. It is endorsed by Graybar as being in every way worthy of the dealer's and the buyer's confidence.

All of the new and proved radio developments are present in the current line. Literature describing the new models and the complete advertising and merchandising

service available to the trade may be obtained from any of the branches of the Graybar Electric Company.

## JUDGE IT BY THESE "10 Features"

Get the facts. Compare Colonial Radio point by point with these 10 features as your guide:

1. ENGINEERING
2. CONSTRUCTION
3. PARTS
4. POWER
5. SELECTIVITY
6. TONE
7. OPERATION
8. DEPENDABILITY
9. SERVICE
10. GUARANTEE

Licensed by Radio Corporation of America and Associated Companies.

## Prices

The prices given on appliance and radio items listed on pages 676 to 706 inclusive are, in general, eastern prices. Prices on the Pacific Coast are slightly higher. This does not apply to Radiotrons. These prices are subject to change without notice and are not to be considered as quotations.

## Graybar Clothes Washers

With and Without Pump

Four-bladed aluminum Agitators. Smooth finished with rounded corners. Top bearings of agitator shafts above water line.

Tanks are one piece amnco iron vitreous porcelain enameled. Ventilated covers.

Pumps of two-bladed centrifugal type, gear driven. Cleaned by removing face plate, lubricated by a grease cup.

Motors are furnished for any frequency or voltage. Insulated from frame. Operate both agitator and wringer or spinner basket at the same time. Waste packed bearings.

Mechanism fully enclosed. Operates in a special lubricant. The floor space is 25x25 inches.

Cord, 10 ft. rubber covered with rubber attachment plug.

### Two-Speed Washers

No. 18 Without Pump, No. 18P With Pump

Capacity, 8 lbs. Dry Clothes, 12 gals. water

**TWO-SPEED AGITATOR.**—At Fast Speed the agitator oscillates approx. half a revolution at a speed of approx. 60 cycles per minute. At Slow Speed it oscillates a third of a revolution. Action controlled by positive clutches operated by single selective control lever.

**CHASSIS.**—Shallow cylindrical steel shell with superstructure of steel, mounted on three braced pressed steel legs. Cadmium-plated casters.

**TANK.**—Supported and clamped between rubber mountings in chassis. Green outside, white inside. Rubber rimmed. Cover polished sheet aluminum. Tank 14 1/4 in. deep, 22 in. diam.

**MECHANISM.**—Belt drive for the first reduction and worm gearing for second reduction. An oil pump within gear mechanism lubricates moving parts.

**PUMP.**—Operated by a lever on outside of machine. Tank is

also self draining, no shut-off valve. Nickel plated removable strainer.

**MOTOR.**—Approximate rating 300 watts, 1/4 h.p. Movable for adjustment of belt tension.

Shipping weight, No. 18, 245 lbs., No. 18P, 250 lbs.

### Two-Capacity Washers

No. 19 Without Pump, No. 19P With Pump

Capacity, Full Load, 8 lbs. Dry Clothes, 12 gals. Water  
Small Load, Between 2 1/2 or 3 lbs. 6-7 Gallons of Water

Two finishes—speckled green, black and white.

**TWO-CAPACITY AGITATOR.**—Reversible. Agitator disc at bottom of tank, upright for Full Load and Reversed for Small Load. Oscillates approx. half a revolution at speed of approx. 57 cycles per min. Action controlled by positive clutch operated by lever.

**CHASSIS.**—Pressed steel base mounted on four braced pressed steel legs. Cadmium-plated casters.

**TANK.**—Vertically corrugated. Cover, terneplate lacquered on outside surface. Tank is 13 in. deep, 22 in. diameter.

**MECHANISM.**—Single worm gear reduction. Moving parts lubricated by splash system.

**PUMP.**—Operates when motor is running. Cast brass shut-off valve controls draining.

**MOTOR.**—Approximate rating 300 watts, 1/4 h.p. Shipping weight for No. 19, 182 lbs., No. 19P, 188 lbs.

### Simplified Washers

No. 15 Without Pump, No. 25 With Pump

Capacity, 6 lbs. Dry Clothes, 10 gals. Water

Centrifugal types, spinner basket in place of wringer. Special feature, basket, mounted on a separate shaft is in same tank with agitator, thus conserving floor space. Both operate simultaneously and are controlled by one switch. The second batch of clothes washes while the first batch dries, a convenience and time saver.

**AGITATOR.**—Is mounted on a splined agitator shaft within the center column and so designed that it cannot fit over the spinner shaft. Agitator oscillates between 140° and 150° at a speed of approx. 72 cycles per min.

**SPINNER BASKET.**—One piece drawn sheet aluminum with separate breast ring double-locked seamed. Embossed base and perforated side. Exceptionally smooth inside and outside. Speed approximately 430 r.p.m.

**FRAME.**—Consists of three pressed steel legs joined together by a steel brace. There is a reinforcing brace for extra strength. Casters, rubber tired, self lubricating. Caster cups available if desired.

**TANK.**—Bolted to legs. Rubber rimmed. Cover, polished aluminum. Tank is 16 in. deep and 22 in. diameter.

**MECHANISM.**—A belt drive for the first reduction and a spur gear train for the second reduction. Moving part lubricated by splash system.

**PUMP.**—Operates whenever motor is running. Cast brass shut-off valve controls draining. Nickel plated brass strainer, easily removable.

**MOTOR.**—Vertical 1/8 h.p. approximate rating, 230 watts. Easy adjustment of belt tension is provided. Rubber bumpers clipped to leg brace absorb motor vibration.

Shipping weight, No. 15, 125 lbs., No. 25, 143 lbs.

### Wringers

Nos. 18, 18P, 19, 19P

Pressed steel cadmium plated wire brushed.

Reversible swinging types with soft rubber balloon rolls, 2 1/4 in. diameter, 12 in. long, clothes guides and tilting drain flume. Top section is separable.

Wringers swing and lock into any one of several operating positions. Simplified tension release, no gears, no oiling.

Wringers can be operated while agitators are running.

All the green finish models are equipped with wringer as illustrated, which has the release tension lever on top of wringer.

No. 19 black and white washers can be equipped with wringer having the new bar tension release located on both sides of wringer.

Prices upon Application

Apex Electric Ironers

Ironer has both ends unobstructed. Full open left end permits slipping of circular garments over roll.

With rubber-mounted, noiseless, horizontal motor fully insulated and enclosed in gear case. Knee control is rubber padded. Hand control is located on top of gear case. Intensified heat at full open end where major portion of ironing is done. Convenient control switches for motor and heating shoe. Has duo switch with bakelite housing and face plate.

Pilot light with Beetleware shield indicates current supply to heating element. With pressing lever to convert revolving roll to stationary pressing position for pleating or pressing. Shoe release lever permits open movement of shoe for cleaning or waxing; also an emergency release. Plated clothes rack swings to right of operator. Has rubber casters; two lock casters prevent movement while ironer is in use.

Model LF-3 Folding Ironer

When ironer is closed it occupies no more space than a kitchen chair. Easy to fold or unfold.

Dimensions when open: Width, 36 inches; depth, 20 inches; height, 36 inches. Dimensions when closed: Width, 20 inches; depth, 20 inches; height, 47 inches.

Shipping weight, 176 pounds.

Model LF-3.....each \$89.50

Model LL-3—Stand Type Ironer

Has 4 steel legs which support frame and are anchored with cross frame brace. At left or full open end a folding tray of 161 square inches of area is provided to rest large pieces while ironing.

Width, 36 inches; depth, 16 inches; height, 36 inches.

Shipping weight, 150 pounds.

Model LL-3.....each \$79.50

Shoe is of polished chrome-plated steel. The 1200-watt capacity heating element is compressed between two plates of mica insulation and is secured to back of shoe by heavy steel binder plate over strip of asbestos.

A strong, well ribbed steel stamping with a formed skirt provides the main frame.

Roll construction: 20 gauge rolled steel 5 inches i.d.; 6 inches o.d.; reinforced at left or free end with recessed steel stamping to receive roll drive and a steel stamped ring at right to accommodate roll bearing—provides non-sagging base on which is wound a knitted cotton padding protected with removable muslin cover. Roll swings up and into shoe when in ironing position, affording an overall pressure in excess of 150 pounds. Clearance between roll and receiving pan, 4½ inches. Roll revolves at the speed of 11 feet per minute.

Model LC-3 Deluxe Console Ironer

Combines all the advantages of beauty and utility. Porcelain table top finished in white vitreous enamel, edged with ivory to harmonize with white sides of cover and ivory legs.

Cabinet is scientifically balanced—a touch swings it over and down to an out of the way position at the rear, exposing the ironer for instant operation.

Length, 36 inches; width, 19½ inches. Height: To top of shoe, 35½ inches; to top of cabinet closed, 36 inches. Width folded, 28 inches; height folded, 35½ inches. Space required when closed, 36x19½ inches.

Shipping weight, 188 pounds.

Model LC-3.....each \$99.50

Model LL-4 Stand Type Ironer

This ironer has 4 steel legs which support the frame and are anchored by cross frame brace.

Similar to Model LL-3 ironer but without folding tray.

Width, 35 inches; depth, 16 inches; height, 36 inches.

Shipping weight, 140 pounds.

Model LL-4.....each \$59.50

## Graybar Sewing Machines

Standard Heads for Models 1731, 1728 and 1409  
With Knee Control

No. 2, Rotary  
Automatic Tension

No. 9, Shuttie  
Automatic Tension

Vindex C, Shuttie  
Side Tension, Disc Type

The three styles of standard heads, illustrated above, are full size lock-stitch types with chromium-plated bright parts, long slender lines giving streamline contour.

Equipped with built-in motor and built-in sewing light under arm, eliminating glare and shadows; small solid disc hand wheel, stitch regulator and bobbin winder.

### Cabinet Designs

Model 1731

Size, closed, 17 $\frac{3}{4}$ x23 inches. Height, 30 inches.

Walnut and gum richly finished. An attractive overlay of beautiful burl walnut is on front of door. Turned legs, gum finished to match cabinet. A cross stretcher makes them decidedly rigid and strong.

Equipped with any one of the three standard heads illustrated above.

Shipping weight, 87 pounds.

Model 1728

Size, closed, 17 $\frac{3}{4}$ x21 inches. Height, 30 inches.

Walnut and gum richly finished. Lid top and door front of matched burl walnut. The legs, constructed of gum finished to match cabinet, are strong and rigid. Striped walnut overlays ornament panels at top of legs.

Equipped with any one of the three standard heads illustrated above.

Shipping weight, 80 pounds.

Model 1409

Size, closed, 16 $\frac{1}{2}$ x20 inches. Height, 30 inches.

Walnut and gum richly finished. Door is relieved by overlays of walnut with a pendant near the top. Figured pilasters and beaded molding add further decoration. Turned legs, gum finished to match cabinet. Pocket for attachments in cabinet.

Equipped with any one of the three standard heads illustrated above.

Shipping weight, 87 pounds.

### Model 7000

Moderne in design, made of selected woods particularly adaptable for this style. The body is of genuine oriental wood similar in texture to our American walnut but with a finely figured mottle like burl.

Base and central feather on door, the edges of tops and overlays and the pilaster mountings are ebonized walnut.

The relief feather, frieze and pilasters on door are birdseye maple finished in rich tan pastel. The inlay trim is polished chromium.

When open, there is ample knee room. A deep pocket and shelf provide space for attachments and accessories.

This model comes only with the No. 2 Rotary Head and is equipped with knee control.

Size, closed, 16 $\frac{1}{2}$ x20 inches. Height, 29 $\frac{1}{2}$  inches.

Shipping weight, 108 pounds.

Prices on Application

**Graybar Sewing Machines**  
With Foot Control  
Portables Nos. 1735 and 1120

These models are designed with a view to convenience and compactness. When not in use they can be put away in the closet. Convenient to carry; set on any table; connect to any outlet. Constructed of genuine American walnut, and equipped with a convenient handle and locking device. There is a compartment in the base for attachments.

**No. 1735 Rotary (Model B)**

No. 1735 is equipped with the full-size standard No. 2 rotary head; lock stitch, built-in motor, automatic tension, sewing light, chrome-plated bright parts.

Shipping weight, 65 pounds.

**No. 1120 Shuttle (Expert BT)**

No. 1120 is equipped with 3/4 size No. 1 head; long shuttle type, lock stitch, motor recessed in arm of machine, sewing light, light weight, chrome-plated bright parts.

Shipping weight, 60 pounds.

**Paveway Regal Models**

**Portables**

Low-priced shuttle types, 3/4 size head, lock stitch. Motor built close to arm to allow use of small solid disc hand wheel, a feature of the higher priced machines. Spring tension on top of arm. Chromium-plated bright parts. Walnut veneer base with drawer for accessories.

No. 6002—Walnut cover with handle and locking device. Shipping weight, 60 pounds.

No. 1090C—Rubberized cover instead of wooden. Lighter in weight. Shipping weight, 45 pounds.

**Cabinet No. 1408**

Size, closed 16 1/4 x 20 inches. Height, 30 inches.

Walnut and gun richly finished. Equipped with the same sewing head as the Paveway Regal Portable. Foot control.

Shipping weight, 82 pounds.

A Full Set of Attachments Comes with Every Machine  
Prices on Application

**Hamilton Beach Home Motors**

This motor can be attached to any sewing machine, old or new. Set the pulley of the motor underneath the handwheel of the machine and slight pressure of the foot on the

speed control starts the motor.

Price, Motor with Speed Control, Cord and Plug . . . ea. \$12.50  
Price, Fan Attachment . . . . . each 3.00  
Price, Grinder and Polisher Attachment . . . . . each 1.50

**Hamilton Beach Fit-All Sew E-Z Motors**

This bracket is readily adjustable to any make or model sewing machine. Attaches in belt holes very ingeniously and is permanent.

Swings under head. Sews fast or slow or speeds between. Controlled by a slight pressure on the speed pedal. Operates on both A.C. or D.C., 105 to 115 volts, 25 to 60 cycles.

Furnished with speed pedal, cord and plug.

Hamilton Beach Fit-All Sew E-Z Motors . . . . . each \$19.25

**Hamilton Beach Tailor Type Sewing Motors**

The tailor type motor fits and operates practically all types and models of light tailor machines.

SIZE OF MOTOR.—Diam., 3 1/8 inches; length, 5 1/2 inches; length of shaft, 7 3/4 inches. Size of pulley, 1-6 inches. Weight, 4 3/4 pounds.

Motor wound for 115 volts, a.c. or d.c., 25 to 60 cycles. Watts, 41 to 70.

Shaft extension outside of motor is equipped with friction attachment for winding bobbins.

Furnished with speed control, cord and plug.

Tailor Type Motor . . . . . each \$28.50

**National Detachable Sewing Lamps**

This lamp is so constructed that there is no glare to hinder the operator of the machine. There is a brilliant light on the needle and the work. Lamp fits all makes of treadle and electric sewing machines.

End of reflector is covered. A pull chain is provided.

Heavily nickel-plated finish.

With 6-foot cord and plug to fit any standard socket and wall outlet and Mazda lamp bulb.

Special voltage bulbs are extra.

Price, Complete with 110-Volt Bulb . . . . . each \$3.95

## Graybar Vacuum Cleaners

### No. 40 Two Speed with Motor Driven Brush

The outstanding feature of this motor-driven brush cleaner is its two speed motor, which gives a Normal Speed and an Extra Speed. The Normal Speed gives a powerful suction that does a thorough cleaning job on any type rug. But if a still more powerful suction is wanted, a flip of a switch located underneath motor shell, will give a much greater speed.

This Extra Speed is particularly advantageous for quick cleaning or when an unusually difficult cleaning job is to be done.

The motor is rated at 300 watts,  $\frac{1}{2}$  h.p., approximately 10,000 r.p.m. It is of unit construction and may easily be removed from the case. The motor is mounted on rubber supports which prevent excessive noise and vibration.

Overall dimensions, 14 inches wide by  $13\frac{1}{2}$  inches long. Height at highest point, 8 inches. Weight 16 pounds.

No. 40.....each \$47.50

### No. 46 Motor Driven Brush

**With Exceptionally Strong Suction**

Designed and manufactured to sell at an extremely low price that will be attractive to the consumer, yet it embodies the Graybar quality in construction and efficiency.

The motor is rated at 310 watts,  $\frac{1}{2}$  h.p., approximately 10,500 r.p.m.

Overall dimensions,  $13\frac{3}{4}$  inches wide and 12 inches long.

Height at highest point  $7\frac{1}{4}$  inches.

Weight 13 pounds.

No. 46.....each \$27.50

### Graybar

#### Hand Cleaners

The hand cleaner takes the place of vacuum cleaner attachments.

It cleans just as effectively and much more convenient to use.

#### No. 44 Handy Cleanerette

Equipped with built-to-the-hand handle, modeled after hand set telephones; flat on top; black moulded composition. Rubber bumper. The cleanerette has a rubber covered cord 15 feet long. Cord has moulded rubber attachment plug. Overall dimensions,  $11\frac{1}{2}$  inches long without the bag,  $19\frac{3}{4}$  inches long with the bag. Nozzle opening is  $5\frac{1}{8}$  inches long and  $\frac{5}{8}$  inches wide. Weight 4 pounds. Wattage 175.

No. 1 Accessory Equipment available for No. 44 cleaner consists of a combination blower and suction tool, a glass container, a rubber clamping device, an aluminum adapter with screen and a sample can of dichloride.

Separately priced at \$1.75.  
No. 44, without No. 1 Accessory Equipment.....each \$16.00  
No. 44, with No. 1 Accessory Equipment.....each 17.00

#### No. 50 Hand Cleaner

Hand cleaner is equipped with a black moulded composition handle and fabric covered cord 15 feet long. Cord has an attachment plug. Overall dimensions,  $9\frac{3}{4}$  inches long without the bag,  $16\frac{3}{4}$  inches long with the bag. Nozzle opening,  $4\frac{7}{8}$  inches long and  $\frac{5}{8}$  inches wide. Weight 3 pounds. Wattage 120.

No. 50.....each \$10.95

#### Specifications No. 44 and No. 50

**FINISH.**—Die cast aluminum nozzle and fan housing, drawn aluminum motor case.

**BAG.**—Dark blue, self-supporting with spring wire loop inside. Breach type connection to fan outlet. No. 44 has aluminum bag clip. No. 50 has aluminum bag clip, black enameled.

**MOTOR.**—Universal type, ball bearing needing no oiling. Seven-bladed suction, independent cooling fan which discharges air through slits in motor case.

**BRUSH.**—A small bristle brush permanently attached to the rear edge of nozzle.

**CONTROL.**—Tumbler switch located on top and at rear of motor housing, adjacent to handle.

### Specifications No. 40 and No. 46

**BALL-BEARING MOTOR.**—Horizontal, universal type. Kept cool by means of an independent cooling fan. Bearings packed in grease and require no oiling. Large sized motor brushes. Especially designed suction fan with seven steel blades.

**BODY AND NOZZLE.**—Aluminum castings. Polished all over. Supported on three wheels. Rear wheel swivelled on end of motor housing. Nozzle edge protected by rubber bumper. No. 40 has moulded rubber wheels. Front wheels fitted with large cadmium plated hub caps and adjustable to regulate nozzle height. No. 46 has rear wheel adjustable to regulate nozzle height.

**SIZE OF NOZZLE.**—No. 40 is 13 inches long and  $1\frac{1}{8}$  inches wide. No. 46 is 13 inches long and  $1\frac{3}{8}$  inches wide.

**HANDLE AND HANDLE BALE.**—Steel, chromium plated. Cord hooks, heavy gauge aluminum. Trigger-type switch. Handle is spring balanced and detachable at top of handle bale. Insulated by fibre sleeve. No. 40 has an adjustable tilting catch and composition handle grip, corrugated on the underside. No. 46 has a black enameled wooden handle grip.

**MOTOR DRIVEN BRUSH.**—Metal spindle with chinese bristles set in tufts in spiral formation. Ball-bearings. Belt reduction from motor. Endless belt of flat rubber, extra belt comes with each machine. Brush held firmly in spring sockets. No. 40 has a special brush adjustment, provides for three adjustments.

Bag of dark blue. Hooks on handle. Breach type connection to fan outlet. No. 40 has a clip type emptying clamp, chromium plated steel. No. 46 has bag clip of aluminum, black enameled.

**WIRING.**—Motor cord detachable at base of handle. No. 40 has a rubber covered conductor cord fitted with rubber attachment plug. Cord is 20 feet long. No. 46 has a black fabric covered conductor cord with attachment plug. The cord is  $18\frac{1}{2}$  feet long.

**Graybar Quiet Type Fans**

The Quiet-Type Fans move large volumes of air with exceptional quietness. This is made possible by the entirely new design of blades. These are so shaped and pitched that they handle the air extremely quietly, yet provide a volume of air and at a velocity found only in much larger Standard Fans. These fans will be popular for use in homes, hospitals, offices, etc. where quietness in operation is important. Blades are polished aluminum finished in clear lacquer to prevent tarnishing. Adjustable pedestals for tilting. 8 foot cord with plug.

**Non-Oscillating A.C.  
Small Model**

Something drastically different in design for a desk fan. Interestingly modernistic with entirely new lines. Base, stem and rear housing are zinc die castings, finished in black enamel with a silver bronze stripe around edge of base. Guard and guard supports also black enamel. Guard is a departure from conventional design. Center portion of front has been omitted to show the pointed blade shell and blade construction. Blade shell is die-cast aluminum on which are riveted the three blades. A tumbler switch, providing single-speed operation, is located in front of base. Base is supported on four rubber feet to prevent marring. Silk cord, rubber plug. Net weight, 7½ lbs., shipping weight, 12 lbs.

No.	Each	Volts	Current	Speed	Watts
55X164G	\$13.95	110	60 Cycles A.C.	1425	40
55X166G	13.95	110	50 Cycles A.C.	1300	40

**Oscillating A.C. and D.C.**

Motor, oscillating features and base of the oscillating Quiet-Type Fans are similar to those used on Standard fans. The guards are conventional in design but very deep to accommodate the fan blades. Perforated base for wall mounting. A felt strip on base prevents marring. Entire finish black enamel with exception of blades.

**Small Model, 3 Blades**

Motor, oscillating feature and base of this fan are similar to those used on the Standard 10-inch Oscillating Fan. Three deep-pitch blades, single speed.

Net weight, 7½ lbs., shipping weight, 12 lbs.

No.	Each	Volts	Current	Speed	Watts
55X165G	\$14.95	110	60 Cycles A.C.	1490	37

49X478G	16.95	110	Direct Current	1490	23

**Large Model, 4 Blades**

This fan has four deep-pitch, 12-inch blades, and three speeds. Motor, oscillating feature and base are similar to those used on the Standard 16-inch Oscillating Fan.

This fan gives an air movement equivalent in cooling power to the 16-inch fan and yet has a quietness of operation equivalent to the conventional 12-inch.

Net weight, 17 lbs., shipping weight, 24 lbs.

No.	Each	Volts	Current	SPEED			Watts

49X491G	\$27.50	110	60 Cy. A.C.	1450	1200	1000	85
49X493G	32.00	110	D.C.	1450	1200	1000	65

**Graybar Standard Fans**

The Standard Fans are of drawn steel construction. Adjustable pedestals for tilting and a perforated base for wall mounting. Felt base prevents marring. Entire finish black enamel including the four blades. 8-foot cord.

Special finishes in colored spray enamel, chromium and electroplating may be had on special order. Samples of color shades should be sent with inquiries. Commercial color matching must be expected, exact tones and shadings not guaranteed. Net prices quoted upon receipt of specifications as to style, finish and number of fans desired.

**8-Inch Oscillating and Non-Oscillating A.C.**

This fan fills a long-felt need for a small yet powerful fan of high quality and low price. Sturdy single speed, induction type motor with switch mounted in back of motor case. Bearings provided with felt oil retainers, eliminating the need of frequent oiling. Steel blades.

Non-oscillating net weight, 4½ lbs., shipping weight, 7 lbs. Oscillating net weight, 5½ lbs., shipping weight, 8 lbs.

## Graybar Standard Fans

### 10-Inch Oscillating A.C. and D.C.

Identical in every way with the 10-inch non-oscillating with the addition of the oscillating feature. The oscillating mechanism is mounted on the rear end of the motor cap. The 80° oscillating arc is constant.

The oscillation of these fans cannot be started or stopped while fan is running.

Net weight, 7 lbs., shipping weight, 12 lbs.

### 12-Inch and 16-Inch Oscillating A.C. and D.C.

Universal swiveling provides complete lateral and tilted adjustment. Full sweep range is 90°. Oscillation can be started or stopped while fan is running, by means of the knurled control knob on top of gear case. Have a carrying handle.

12-inch net weight, 15 lbs. to 17 lbs., shipping weight 29 lbs. to 31 lbs.

16-inch net weight, 16 lbs. to 19 lbs., shipping weight 34 lbs. to 38 lbs.

### 12-Inch Oscillating

### Special Types

Twelve-inch fans with enclosed motors can be furnished on special order. These fans are for use in factories and industrial plants or other locations in which damp and dusty conditions prevail.

Special types of fans for marine and railway uses, or for places where impregnated windings or enclosed motors are necessary for protection from atmospheric conditions, can also be furnished. Such fans are built on special requisitions only and are furnished in oscillating and non-oscillating models.

Prices will be submitted on specifications.

## Graybar Ventilating Fans

### 6-Blade, 12-Inch and 16-Inch A.C. and D.C.

For removing fumes, odors and foul air. Mounted in walls or partitions to exhaust into free air. The 12-inch fan will displace about 1,000 cubic feet of air per minute; the 16-inch about 1,500 cubic feet per minute. The fans are supported in a ring frame complete and ready for mounting. Motors designed with light-weight drawn steel casings. Aluminum blades. Entire finish, motor, brackets, supporting ring and blades, black enamel.

Where it is necessary to install ventilating fans for vertical operation special bearings can be furnished at \$3.00 net extra (specify whether updraft or downdraft is wanted). Fans with these special bearings are not carried in stock.

Speed controllers with 4-position regulating switches providing three running speeds can be furnished when specified. Controllers are not necessary unless speed control is required.

Net weight, 11 lbs. to 15 lbs., shipping weight, 24 lbs. to 35 lbs.

Both 12-inch and 16-inch Ventilating Fans also available in other voltages and frequencies. Prices do not include cord or attachment plug.

Graybar Ceiling Fans

32-Inch Ceiling Fans

52-Inch Ceiling Fans

The 32-inch ceiling fans are symmetrical in shape and, because of their compactness and neat design, are especially adapted to installations not requiring the maximum of air circulation.

The a.c. fans have four metallic blades in unit assembly, finished in aluminum. The d.c. fans have hardwood blades finished in natural oak. All other parts are enameled in black.

D. C. fans are not equipped with switch and are single speed only. A pull cord two-speed is standard with a.c. fans.

Net weight, 24 lbs. to 27 lbs., shipping weight, 42 lbs. to 50 lbs.

146211G	44.00	220	D.C.	400	...	75

The 52-inch ceiling fans are ideal for heavy duty installations. They are quiet, efficient and durable. The a.c. fan with drawn steel motor frame affords a 20 per cent reduction in weight.

Metal parts, black enamel with hardwood blades finished in a dull, natural oak.

Unless otherwise ordered, blades are arranged for a downward discharge of air. Fans for upward discharge of air may be had on special order.

Both a.c. and d.c. have a three speed switch with pull cord. Net weight, 41 lbs. to 45 lbs., shipping weight, 68 lbs. to 74 lbs.

Prices shown are for standard fans in regular finish and include insulated hanger, canopy and two hooks, but do not include hanger pipe. Black enameled iron hanger pipe, threaded both ends, will be furnished when specified at a slight additional cost. Special finishes made to order. Specify desired finish of wooden blades, otherwise blades

will be finished to harmonize with metal parts, that is, the brass, nickel or light finishes. Blades of natural wood filled and varnished supplied with motors of darker finishes.

Quotations will be furnished on receipt of specifications stating number of fans required.

Lighting Combinations With Ceiling Fans

32-Inch and 52-Inch, A.C. Only

Graybar Ceiling Fans may be used in combination with popular commercial lighting fixtures. This makes possible an economical and simplified installation for fans and lights.

There is no additional charge for Ceiling Fans furnished with 4 or 6-inch shadeholders. Ceiling Fans furnished with extra switch for separate on and off control of light, add \$1.00 to list price.

Ceiling Fans furnished less speed coil, deduct \$1.00 from price. Ceiling Fans furnished less switch, deduct \$1.00 from price.

## Graybar-Crawford Electric Ranges

The features and design and construction of Graybar-Crawford Electric Ranges are not a matter of chance. They are the result of many years of close contact with the range buying public and dealers, and the interpretation of this contact by competent engineers and designers into terms of what the housewife wants in the way of a cooking device.

### Wiring—Switches

The standard wiring of all Graybar-Crawford Ranges is for use with 3 wire, 110-220 volt service and all switches are load balancing type.

### Colors

All Graybar-Crawford Ranges, except the four small apartment house models, are regularly furnished in a choice of gray and white, 2-tone ivory and pastel green and ivory full porcelain enamel.

### Cast Iron Construction

The parts which get the greatest wear and abuse—the legs, cooking top, unit rings, oven and oven door frames, front frame and all brackets, as well as many concealed parts are made of cast iron. This adds rigidity to the range and prevents weaving and warping which causes most enamel chippage. The door hinge construction is exceptionally sturdy. The pins are integral parts of the cast iron front frame and fit into bearings which are a part of the door frame casting. The door stop is heavy steel. Door balance is maintained by a heavy coil spring, the tension of which can be adjusted to suit the operator.

### Triple-Automatic Time Control

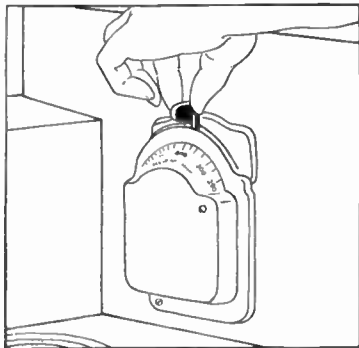

Triple-automatic time control triples the convenience of cooking with electricity. This unique feature makes it possible to automatically time control surface cooking, appliances plugged into the appliance outlet, or oven cookery.

Models 292, 290, 280 and 78 have the triple timer mechanism built in as a single unit, mounted under heat-resisting glass on shelf back and controlled by a Telechron movement electric clock. To the left of the clock dial is a selector switch that controls the unit which it is desired to time—the oven, top unit or appliance outlet—and in the case of the Epicure, the Speedwell cooker, which on this range can be time controlled by turning the selector switch to the "top unit" position. All other setting operations are done with two knobs at the right of the clock dial. Telechron timers are a.c. only, 60 cycles unless otherwise specified.

Other triple-automatic ranges are controlled by a timer clock—either hand wound No. 36 or electric wound No. 56, whichever is desired—which is plugged into a triple timer receptacle mounted in the step-back shelf. The unit which is to be controlled is selected by plugging the clock into the proper position in the receptacle.

### Temperature Control

A mercury switch type thermostat which works on a.c. or d.c. any cycle, and is non-radio interfering. Controls oven temperature assuring accurate cooking results without worry and maximum economy of oven operation through maintaining the temperature.

There are no delicate parts to give trouble and control is easy to calibrate.

### Timer Clock

Controls cooking operations in oven, on one surface unit or appliance outlet turning heat on and off at any desired time. Rigid contacts mounted on back eliminate cord and plug.

No. 36 with 24-hour movement, hand wound. No. 56 is electric motor wound, spring drive; for a.c., 60 cycles.

### Oven Indicator Light

A positive action indicator which tells when oven has reached the temperature at which thermostat has been set and is ready for use.

### Monel Wiring and Unit Terminals

All top unit lead wires are monel, assuring long life. No re-wiring of ranges is ever necessary because of wire fatigue. Unit terminal studs are monel, to prevent freezing of terminal connections. The use of nickel alloy metals for the three parts—leads, coils and studs—which are brought together at the unit terminals, eliminates loose connections and therefore burnouts at this point.

### Model Code

- R—Right-hand oven.
- L—Left-hand oven.
- S—High shelf.
- P—All enamel.
- A—Time and temperature control.
- X—Unit for warming compartment.
- T—Temperature Control

### Instructions for Ordering

State model number of range and add code letters, as shown, to indicate particulars and the equipment to be shipped with the range.

Specify colors desired—otherwise gray and white will be shipped.

Condiment sets, if desired, must be ordered separately unless listed as standard equipment.

Ranges desired with cookers should be so specified, i.e.—16-77 with cooker.

When ordering controls, specify whether a.c. or d.c. and cycles. Unless otherwise specified, heating units and controls will be furnished for connection to standard 3-wire 110-220 volt service, (115 volt units) a.c. 60 cycles. Special arrangements of units or voltages other than standard are furnished at an extra charge.

Specify whether shipment is to be by rail, water, express or parcel post; give routing and lines to be used.

No. EC-15 Everhot Electric Cookers

This cooker will satisfy the demand for a large capacity electric cooker.

A 7-pound roast and three vegetables may be prepared at the same time in this cooker.

Has chromium-plated body. The element is guaranteed against burnout.

Equipment: No. 271 three-quart covered utensil; No. 264 half round set, each utensil 1 3/4 pints; No. EC-26 baking rack with 2 pie tins; No. EC-395 special roasting rack; No. EC-35 utensil lifter; No. HC-15 heater cord; No. 304 cook book.

Overall dimensions: height, 15 inches; diameter, 12 inches. Compartment: diameter, 8 7/8 inches; depth, 10 inches. Liquid capacity, 10 quarts.

Wattage: 660 on high; 140 on low.

Shipping weight, 21 pounds.

No. EC-15.....each \$15.00

Everhot Broiler-Fryer Attachments

The Everhot Electric Cooker may be equipped with a broiler-fryer attachment, a reversible cover which has a built-in heating element that makes it possible to broil or fry steak or chops in the cooker; fry eggs and bacon, percolate coffee, etc.

No. 525, for No. EC-10 Cooker, Shipping Weight 3 Pounds.....each \$3.50

No. 530, for No. EC-15 Cooker, Shipping Weight 4 Pounds.....each 3.75

Special Model Everhot Hot Plates

A single heat hot plate; consumes 600 watts. Has heater cord attached. Nickel-plated body, black enameled legs. Special Model, Shipping Weight 3 Pounds.....each \$2.00

No. EC-10 Everhot Electric Cookers

A 4-pound roast, 8 whole potatoes, 1 quart of vegetables and 1 quart of extra vegetables may be cooked at one time in this cooker. Bakes pies and biscuits, browns like an oven. Popular for carrying hot or cold food on picnics and motor trips.

Waterless principle used. Has insulated body. Continuous cooking with current disconnected.

Body is chromium-plated and trimmed in dull ebony enamel. Has heavy seamless aluminum cooking compartment of 5-quart capacity. With strong bail and wooden handle.

Equipment: No. 161 two-quart covered utensil; No. 249 half rounds, each 1 1/2 pints; No. EC-27 rack and 2 pan set; No. EC-34 trivet; No. EC-35 utensil lifter; No. HC-14 heater cord; No. 303 cook book.

Overall size: height, 13 5/8 inches; diameter, 10 inches.

Wattage: high, 450; low, 100.

Shipping weight, 17 pounds.

No. EC-10.....each \$10.00

Everhot Electric Casseroles

No. 7

Capacity, 2 3/4 quarts. With No. EC-77 Pyrex baking glass cover, No. HC-14 six-foot heater cord, 3 point connector, rubber plug and No. 326 instruction folder.

Overall size: height, 8 inches; width, 11 1/2 inches. Inside diameter, 7 1/4 inches; inside height, 4 1/4 inches. Diameter glass cover, 8 inches.

Wattage at 115 volts: high, 360; low, 120.

Standard package, 6; shipping weight, 63 pounds. No. 7.....each \$5.50

No. 8

Equipped same as No. 7 and with pair of seamless aluminum half round utensils No. 249-B, with capacity of 1 1/2 pints each.

Shipping weight, 11 pounds.

No. 8.....each \$6.50

No. 9

Equipped same as No. 7 and with No. 525 electric broiler and fryer and broiling rack. Top element provides for broil-used separately as a hot plate.

Upright it may be used for any open burner purpose (frying, broiling, percolating); reversed (element side down) it is an efficient broiler for steaks, chops, etc. Broiler, 600 Watts. Shipping weight, 13 pounds.

No. 525 Broiler and Fryer

No. 9.....each \$8.50

## No. 625 Everhot Casserole-Hot Plate Combinations

The surface burner, combined with the casserole, makes a fairly complete outfit for the light housekeeper, the summer cottage and the kitchenette apartment. Dozens of different foods may be cooked in the insulated casserole compartment. Can be used for many kinds of baking and roasting.

The casserole has a capacity of 2¾ quarts, enough for a family of 8 persons. The seamless aluminum compartment is equipped with removable aluminum utensil insert and Pyrex glass cover. Controlled by a 3-heat range switch.

Body is vitreous enameled, light green speckled color; black trim; has ball feet.

Two range type switches; separate control of hot plate and casserole or work simultaneously.

Equipped with No. 265 aluminum insert and No. EC-77 glass cover.

Hot plate is 6½ inches in diameter; has 3 heats—700 high; 350 medium; 175 low.

Casserole wattage: 500 high; 250 medium; 125 low.

Shipping weight, 23 pounds.

No. 625 .....each \$13.85

## Everhot Kitchen Compacts

No. 630

Note the drawer. This is the broiling and baking section; contains a removable aluminum pan and a broiling rack.

Toasting is done on the square heating element above the drawer—4 slices—and also on the broiling rack, totaling 8 slices at one time when desired. Frying, coffee-making, etc., may also be done on the square burner. Has hinged cover.

Left-hand element is used for boiling, frying, etc.

Has two 3-heat switches.

Body is porcelain enameled in a delicate shade of green.

Oven lining is rust-resisting steel.

Equipped with No. 11 square oven roaster and HP-314 rack.

Length 20½ inches; width, 11½ inches; height to top of deck, 6¼ inches; height to top of splasher back, 9¼ inches.

Wattage: Left-hand burner, 550 high; 275 medium; 135 low; right-hand burner, 1100 high; 550 medium; 275 low. Total watts, 1650.

No. 630, Shipping Weight, 30 Pounds.....each \$19.95

No. 632

Same as No. 630 without the left-hand burner as illustrated above.

Dimen. 11½x12½x7 in. high. Wattage 1100 high, 350 low.

No. 632, Shipping Weight, 18½ Pounds.....each \$12.50

## Everhot Kitchen Compacts

No. 631

The casserole prepares escalloped dishes, cooks vegetables, bakes biscuits, etc. Has pyrex glass cover; capacity, 2¾ quarts.

The drawer section broils, bakes, toasts and fries. Each section controlled by a 3-heat range switch.

Body is porcelain enameled in a delicate shade of green.

Equipped with casserole, No. 265 aluminum inset; broiler-fryer, No.11 square oven roaster. HP314 rack.

Length, 22 inches; width, 11½ inches; height to top of deck, 6¼ inches; height to top of splasher back, 9¼ inches.

Wattage: Casserole, 500 high, 250 medium, 125 low; broiler-fryer section, 1100 high, 550 medium, 275 low. Total 1600 watts.

Shipping weight, 32½ pounds.

No. 631 .....each \$23.50

No. 627

Consists of one 2¾-quart and one 4-quart casserole. Each has removable aluminum insets and pyrex glass covers; fully insulated. Each casserole controlled by 3-heat range switch. The larger inset has a removable partition and false bottom so that two foods may be cooked at one time.

Body is porcelain enameled in a delicate shade of green.

Equipped with No. 265 and No. 274 insets.

Length 22¾ inches; width, 11 inches; height, 5¾ inches.

Wattage: Small casserole, 500 high, 250 medium, 125 low; larger casserole, 600 high, 300 medium, 150 low.

Shipping weight, 26 pounds.

No. 627 .....each \$21.00

## High Speed Hot Plates

No. 624

Has one 6⅝-inch and one 8-inch surface burner; Each burner controlled by 3-heat double pole range switch.

Body is porcelain enameled in a delicate shade of green.

Length, 18 inches; width, 10 inches; height, 5¼ inches.

Wattage: Small burner, 660 high, 330 medium, 165 low; large burner, 990 high, 495 medium, 248 low. Total, 1650 watts.

Shipping weight, 20 pounds.

No. 624 .....each \$12.50

No. 623

Has 6⅝-inch burners. Dimensions, finish and shipping weight same as No. 624. Two switch control.

Wattage: Each burner, 660 high, 330 medium, 165 low. Total, 1320 watts.

No. 623 .....each \$10.00

**Proctor Hotplates**

Capacity, 110 volts a.c. or d.c., 1500 watts. With two 750-watt elements in 6-inch refractory bases. Frame, 8½x18 inches; 16-gauge steel legs and handles, nicked.

Packed in individual cartons. Shipped in cases of 6.

**No. 402**

Twenty-gauge steel frame; cobalt blue-black vitreous enamel finish. Controlled by two 3-heat rotary switches. Weight, 12¾ pounds. Case shipping weight, 63 pounds.

No. 402, With Cord and 2-Piece Plug.....each \$8.45

**No. 404**

Twenty-gauge Armeo iron frame; blue-black skirt, white vitreous enamel top or marbled green with tinted refractories. Unless color is specified, white top will be furnished.

Controlled by two 3-heat reciprocating switches. Weight, 10½ pounds. Case shipping weight, 65 pounds. No. 404, With Cord and 2-Piece Plug.....each \$10.65

**Proctor Hotplates**

Frame and coaster legs are of 20-gauge steel, nicked. Furnished with genuine nickel chromium element. Equipped with suitable gauge silk-covered heating cord and 2-piece plug.

Packed in individual cartons. Shipped in cases of 12 to 24.

**No. 601**

Capacity, 110 volts a.c. or d.c., 660 watts. Element mounted in 5¼-inch special refractory base. Weight, 2¾ pounds. Shipping weight: 12 in case, 33 pounds; 24 in case, 70 pounds. No. 601, With Cord and 2-Piece Plug.....each \$2.85

**No. 701**

Capacity, 110 volts a.c. or d.c., 500 watts. Element mounted on thick composition heat and current insulator mat. Diameter, 7 inches; height, 4 inches. Weight, 2¼ pounds. Shipping weight: 12 in case, 30 pounds; 24 in case, 55 pounds. No. 701, With Cord and 2-Piece Plug.....each \$2.50

**Nesco Electric Casseroles**

Capacity, 2 liquid quarts. Has self seal waterless cooking feature and bakelite knob.

In cartons. Six cartons to a shipping container. Made in 110-120 volts.

**No. B50 Colonial Model**

Ivory and green finish. Wattage: high, 325; low, 100.

Shipping weight of 6 cartons, 50 pounds.

No. B50.....each \$5.50

**No. B45**

**Princess Model**

Has removable cooking well.

Modernistic chromium finish.

Wattage: high, 425; low, 130.

Shipping weight of 6 cartons, 60 pounds.

No. B45.....each \$8.50

**No. R95 Nesco Electric Roasters**

**Colonial Model**

Capacity, 6 liquid quarts.

Will accommodate a 6-pound fowl or a 10-pound ham. Cooks a complete meal.

With porcelain enameled cooking well, heating well and cover; japanned sides and base; bakelite handles; rubber feet.

Length of cooking well, 12 inches; width, 8½ inches; depth, 6 inches.

Has heating units on sides and bottom. Wattage at 115 volts: high, 635; low, 275. Made in 110-120 volts.

In individual cartons; weight, 15 pounds. No. R95, Ivory and Green Finish.....each \$10.50

**No. R3-95 Nesco Cooking Sets**

For cooking a whole meal this set is indispensable. Made of heavy gauge metal; enameled to match interior of roaster.

The two end pans are each of 1 quart capacity and the center pan of 2½ quart capacity.

In cartons. Six cartons to a shipping container; weight, 28 pounds. No. R3-95.....each \$1.75

**No. R5-95 Nesco Baking Sets**

Constructed of heavy tin plate. Fits into cooking well of roaster, which accommodates one pan at a time.

Pie and cake pans are 8 inches in diameter. Size of bread pan, 9¾x4½x3 inches.

In cartons. Six cartons to a shipping container; weight, 17 pounds. No. R5-95.....each \$.60

## M-B Electric Coffee Services

110-125 Volts, 350 Watts

The urns of these coffee services are protected from overheating by a fuse device which prevents damage to the urn if it is allowed to boil dry or is started without water. Faucets are dripless.

Sugar bowls and creamers are gold-lined.  
Chromium-plated finish.

### No. K4780/9—Canterbury Pattern

Has jet black handles with small contrasting bands of ivory.

Standard package, 2. Shipping weight each, 15 pounds.

## M-B Electric Percolators

110-125 Volts, 350 Watts

### No. K369/7—Bexley Pattern

Capacity, 7 cups.

Has heavy copper body, hinged cover, dripless spout, obscure terminal guard and ebonized handle.

Chromium-plated finish.

Height, 11 inches.

Standard package, 3. Shipping weight each, 5 pounds.

No. K369/7..... each **\$13.50**

### No. K28—Wrentham Pattern

Capacity, 7 cups.

Has heavy copper body, dripless spout and ebonized wood handle.

Chromium-plated finish.

Height, 11½ inches.

Standard package, 6. Shipping weight each, 5 pounds.

No. K28..... each **\$9.95**

### No. K379/7—Wickshire Pattern

Capacity, 7 cups.

Has heavy copper body, ebonized handle and dripless spout.

Chromium-plated finish.

Height, 10¾ inches.

Standard package, 6. Shipping weight each, 5 pounds.

No. K379/7..... each **\$6.95**

**Silex Glass Coffee Makers  
Combination Electric and Gas Models**

Made of non-tarnishing chrome. Knob on cover, the ring insulating the handles and holding lower decorator shell in place are ebony composition. Pyrex heatproof glass is used.

Regularly furnished for 110-120-volt circuits; special voltages can be supplied at 50 cents per element extra.

**Lido Model**

In 4, 6 and 8-cup sizes, taking UP and LP bowls. Metal decorator for lower bowl matches in motif the pattern of the 550-watt stove.

- No. LE42, 4-Cup Size...each \$8.95
- No. LE62, 6-Cup Size...each 9.45
- No. LE82, 8-Cup Size...each 9.95

May be purchased without decorative shells and tea cap stopper at \$1.00 less.

**Pinehurst Model**

Made in 6-cup and 8-cup sizes.

Supplied with decorative shell and cover similar to those supplied with Lido model. Takes LK6 and UK6 bowls. Tea cap is supplied.

- No. HE62, 6-Cup size...each \$7.95
- No. HE82, 8-Cup size...each 7.95

**Coronado Model**

This unit embodies all the features of the more expensive models and yet is low priced.

Available in 6-cup and 8-cup sizes.

Takes LK6 and UK6 bowls.

- No. KE6D, 6-Cup size each \$6.95
- No. KE8D, 8-Cup size each 6.95

**Coffee Maker May Also Be Used as Tea Maker**

The new stopper for the lower bowl may be used as a cover when serving coffee, or will allow the use of the Silex as a tea maker.

A slot is provided in the cover so that the string from the tea bag may be wound around the knob. Tea or coffee is poured with the stopper in place.

Furnished with Lido and Pinehurst models or may be bought separately at 50 cents.

**Silex Warming Stoves**

May be placed at strategic serving locations to keep a bowl of brewed coffee at drinking temperature indefinitely without boiling.

Stove is chrome plated.

Standard package, 3.

- No. SW80, 80 Watt...each \$3.45
- Model SUS, 660 Watt...each 4.45

**Silex Glass Coffee Makers**

**Model BE—4 Units**

This coffee maker has an operating capacity of approximately 225 to 300 cups per hour. Size, 27x7½x4½ inches. With 4 glass assemblies and 50 strainer cloths.

Range is stainless steel; unit reflectors chromium-plated. With 440-watt elements; 660-watt elements on special order. Pyrex heatproof glass is used. Necessity of removing glass from range is avoided with quick cooling units. Patented filter produces amber clear coffee.

Press button and out comes a cigarette. One puff—and it lights itself.

Holds a full package of cigarettes.

Black metal barrel with chrome trim and rich black ash-tray base.

Model 6, with Barrel on Side.....each \$3.50

Model 7, with Barrel Upright.....each 3.50

**M-B Electric Toasters**

**No. K63—Fernleigh Pattern**  
110-125 Volts, 550 Watts

This two-slice tip and turn toaster has a mica wound unit and because of its attractive design is a popular appliance.

Finished in chromium plate; handles and feet are of contrasting ebony.

Standard package, 6. Shipping weight each, 4 pounds.

No. K63.....each \$3.95

**No. K69—Stancliffe Pattern**

110-125 Volts, 550 Watts

Has an efficient mica wound unit and the tip and turn feature. Just lower the doors for toasting the two slices of bread on the other side.

Finished in chromium plate; ebonized mounts.

Standard package, 6. Shipping weight each, 4 pounds.

No. K69.....each \$3.95

**No. K76—Lyndhurst Pattern**

110-125 Volts, 550 Watts

Toasts two slices of bread at a time. Has mica wound unit and reversible feature. Lowering the doors turns the bread for toasting on the other side.

Finished in chromium plate with black Arinite base. Handles and feet are of the same material available in the following two-color combinations: red balls with black collars or ivory balls with black collars.

Standard package, 6. Shipping weight each, 4 pounds.  
No. K76, with Red or Ivory Handles and Feet...each \$6.75

**No. K105—Automatic Type**

110-125 Volts, 680 Watts

This toaster toasts two slices of bread, both sides, at once. By means of the adjustable heat control lever, toast is browned just the way desired, and current automatically clicks off, telling when toast is done.

Chromium-plated finish; ebonized mounts. Has crumb drawer to keep toaster clean.

Standard package, 3. Shipping weight each, 8 pounds.

No. K105.....each \$12.50

**No. K600 M-B Electric Chafing Dishes**

110-125 Volts, 550 Watts

For preparing rarebits, relishes, game dishes, candies and dozens of other recipes. Because of the special low heat unit, this dish can be used for keeping foods hot. Has two degrees of heat.

Finished in chromium plate with either red or jet black handles of gemlike Arinite.

Capacity of pans, 3 pints. Height, 9 1/4 inches; diameter of base, 11 1/2 inches.

Furnished with a complete recipe booklet giving most of the famous chafing dish recipes.

Standard package, 3. Shipping weight, each, 10 pounds.

No. K600, with Red or Black Handles.....each \$14.95

**M-B Combination Cooker and Waffle Iron**

**No. K5157**  
110-125 Volts, 800 Watts

Can be used as a double grid, or closed to cook both sides at once; bakes, broils, fries, toasts sandwiches and by interchanging the waffle grids, bakes waffles.

A simple device incorporated in hinge, holds cover in half open position. With grease drain on lower grid. Removable grids are easily washed.

Finished in chromium plate with ebonized handles.

Standard package, 3.

Shipping wt., ea., 15 lbs.

No. K5157 Combination Cooker-Waffle Iron...each \$14.95

No. K515 Cooker Only.....each 11.95

No. 7 Waffle Grids, Size 7x11 Inches.....each 3.00

**No. K508**

110-125 Volts, 660 Watts

May be used as an open grid or closed to cook both sides at once; bakes, broils, fries, toasts sandwiches and bakes waffles.

Interchangeable grids are pure aluminum, 7 inches in diameter. A special type hinge holds cover in half open position. Chromium-plated finish; ebonized wood handles.

Standard package, 6. Shipping weight, each, 10 pounds.

No. K508, Complete.....each \$8.75

**No. 1420 Proctor 2-Slice Automatic Glow-Cone Toasters**

**Turnover Type**

Toasts 2 slices of bread, one side at a time, the bread turning itself for toasting the other side as doors are flipped open and shut by a finger touch to the door handles.

Crystal glow cone, in crown of toaster, is lighted up by heating element when bread is toasting. When toasting is done, thermostat automatically shuts off current and glow-cone light goes out.

Pointed adjuster knob on control dial regulates setting of thermostat to give any degree of toasting from light to dark. Finished in chromium plate.

For use only with a.c., 110-120 volts, 500 watts.

Height, 7 1/2 inches. Table space, 7 3/4 x 4 3/4 inches.

Single package, 3 3/4 pounds. Standard carton of 6 packages; weight, 22 pounds.

No. 1420.....each \$6.75

**No. 25 M-B Disc Stoves**

110-125 Volts, 550 Watts

A 3-heat, nickel-plated disc stove which can be used for a variety of odd jobs about the house, workshop or factory.

Shipping Weight, 5 pounds.

No. 25.....each \$7.50

## M-B Electric Waffle Irons

**No. K1638—Fenway Pattern**  
110-125 Volts, 660 Watts

Heat indicator in cover gives correct baking temperature. Grids are 7 inches in diameter. Lower one is equipped with batter trough to catch any overflow.

Chromium-plated finish. Arinite handle mounts: black

balls with ivory collars or red balls with black collars. Overall diameter, 11¼ inches.

Standard package, 6. Shipping weight each, 6½ pounds. No. K1638, with Red or Black Handle Mounts... each \$7.95

**No. K1637—Chatham Pattern**  
110-125 Volts, 660 Watts

With aluminum grids; batter trough on lower one. Heat indicator gives correct baking temperature.

Chromium-plated finish; jet black moulded handles.

Diameter, 11¼ inches; height, 3¾ inches. Standard package, 6.

No. K1637, Shipping Weight 6½ Pounds.....each \$6.50

**No. K1641—Dunkirk Pattern—Automatic Type**  
110-125 Volts, 800 Watts—A.C. Only

By means of an adjustable level, waffles may be baked light or dark. Small red light in cover signals when waffle is done; automatic thermostat in base.

Finish and grids same as No. K1637. Diameter base, 11½ inches; diameter grids, 7 inches. Standard package, 6.

No. K1641, Shipping Weight, 7 Pounds.....each \$9.50

**No. K1640—Stanwick Pattern—Automatic Type**  
110-125 Volts, 800 Watts—A.C. Only

Small red light in cover flicks off when waffle is done; thermostat in base shuts off current. Adjustable bake control allows waffles to be baked light or dark.

Chromium-plated finish with black rings of baked enamel inlay on

cover and base; black and ivory Arinite handles. Aluminum grids with batter trough on lower one to catch any overflow.

Diameter base, 11½ inches; diameter grids, 7 inches. Standard package, 6.

No. K1640, Shipping Weight, 7 Pounds.....each \$10.50

**No. K1639—Fenley Pattern**  
110-125 Volts, 660 Watts

Heat indicator in cover gives baking temperature.

With aluminum grids; batter trough on lower one to catch any overflow.

Chromium-plated finish; ivory Arinite handles.

Diameter, 11½ inches; height 3¾ inches; diameter

grid, 7 inches. Standard package, 6.

No. K1639, Shipping Weight, 6½ Pounds.....each \$6.95

## No. 15102 Proctor Automatic Glow-Cone Waffle Irons

Makes a 7-inch waffle. Crystal glow cone set in lid, glows when heat is on. When light goes out, thermostat has automatically shut off heat. Proper temperatures for preheating grids or baking are selected by a turn of adjuster knob on control dial. Knob also serves to switch current off by hand.

Chromium plated finish.

Dimensions, 11½x4 inches. Capacity, 700 watts, 120 volts a.c. only.

With 6-foot cord and plug.

Weight, 6 pounds. Standard cartons of 6; weight, 50 pounds.

No. 15102.....each \$7.95

## No. 15101 Proctor Automatic Glow-Cone Waffle Irons

**DeLuxe Model**

A chromium-plated iron which makes a 7-inch waffle. Crystal glow cone set in lid, glows when heat is on. When light goes out, thermostat has automatically shut off heat. Proper temperatures are selected by a turn of adjuster knob on control dial. Knob also serves to switch current off by hand.

Chromium-plated iron which makes a 7-inch waffle. Crystal glow cone set in lid, glows when heat is on. When light goes out, thermostat has automatically shut off heat. Proper temperatures are selected by a turn of adjuster knob on control dial. Knob also serves to switch current off by hand.

Dimensions, 11½x4 inches. Capacity, 700 watts, 120 volts a.c.

With 6-foot cord and plug.

Weight, 6 pounds. Standard cartons of 6; weight, 50 pounds.

No. 15101.....each \$11.50

## No. F3 Waffle-Witch

A complete waffle unit with bowl, ladle and grids all in one. Ladle holds just enough for one waffle.

Chromium-plated finish.

No. F3.....each \$15.00

## Silex Hi-Speed Broilers

The extremely intense heat from a 2000 watt core type heating element, properly focused in the reflector, is reflected uniformly over the entire cooking area. Food is placed immediately below the reflector on a removable griddle which is ribbed on one side and flat on the other.

Broils ordinary steaks and chops on both sides in 4 to 7 minutes; hamburgers and frankfurters in 3 to 5 minutes. Broils chickens, fish and even small lobsters. Will shir eggs, toast bread cinnamon toast.

Capacity, 10 to 12 tenderloin steaks or approximately 125 to 140 per hour.

Each..... \$29.95

**Toastmaster Automatic Toasters**

This toaster toasts automatically. The bread is dropped into the oven slot, one lever is pressed down; the whole operation is controlled by pressing one lever. When toast is done it pops up and current is automatically turned off.

The degree of toasting is easily regulated. A perfect slice of toast is delivered in a little over a minute.

Finished in chromium plate.

**No. 673 Hankscraft Bottle Warmers**

**Junior Model**

The No. 673 bottle warmer heats bottles to the correct feeding temperature and then automatically shuts off.

Will heat all standard sizes of bottles.

Works on 110 volts a.c.

Furnished in blue or pink.

Standard package, 4.

No. 673.....each \$2.95

## Marion Electric Irons

### No. 111—Non-Automatic

A 6-pound fast-heating iron. Has beveled edges.

Can be used on 110 volts a.c. or d.c.

Furnished with 10000-cycle approved cord and heavy duty grip-all plug.

Wattage, 660.

Standard package, 6; shipping weight, 43 pounds.

No. 111, Nickel Finish.....each \$3.75  
No. 111, Chrome Finish.....each 3.95

### No. 111A—Automatic

A 6-pound iron which maintains a temperature at any selected degree; safeguards from overheating.

For use on a.c. only.

Equipped with 7-foot cord, retrieving coil, bakelite iron plug and rubber attachment plug.

Rating, 660 watts; standard voltages: 95, 110, 125, 220, 250; 60 cycles a.c. Shipping weight each 7 pounds.

No. 111A, Chrome Finish.....each \$5.95

## No. L3 Sunbeam Ironmaster Irons

For 110 Volts A.C. Only

A full size, perfectly balanced 1000-watt automatic electric iron weighing only 3½ pounds.

Has free-acting, trouble-proof thermostat control.

With tapered nose, pointed heel, heel rest and rosewood handle. Finished in chromium plate.

Packed in cartons of 6; shipping weight per carton, 30 pounds.

No. L3.....each \$6.95

## Proctor Automatic Heat-Adjusting Speed Irons

No. 930

This iron has a temperature control dial on which is marked the names of different fabrics, so that the placing of pointer on any name gives the correct temperature for that fabric.

Switch-off gives convenience of turning off current without removing plug from wall.

The attached cord removes all plug and terminal pin trouble.

Has a strong well-balanced heel rest and a cork insulated handle, air-cooled.

No. 930 has a magic stand. By pressing the thumb lever the stand swings under the iron. It may be placed anywhere, adds no weight and is never in the way.

No. 940

Over all dimensions: Length, 8¼ inches; width, 4½ inches; height, 5 inches.

No. 930, 1000-Watt, with Cord Support.....each \$8.95  
No. 940, 1000-Watt.....each 7.95  
No. 941, 800-Watt.....each 5.95

## American Beauty Irons

For domestic, laundry and industrial use.

Bottom, 6½x3¾ inches. Finished in chromium plate.

In standard voltage ranges: 100-109, 110-120, 121-130, 190-209, 220-240 and 241-260.

### Nos. 44-AB and 66-AB—Adjustable-Automatic For A.C. Only

Through increase of wattage and extra supply of heat units, same results can be obtained with No. 44-AB iron as with heavier irons. If work is properly dampened, extra heat supplied permits of less pressure on work. As thermostat switch controls overheating, it is possible to use higher wattage and gain these advantages. Through the control lever thermostat can be adjusted for low heats for lighter work and for delicate fabrics.

No. 66-AB in 1000-watt size has great heat capacity for heaviest work; lower heats are under perfect control.

Has separate stand, No. 880 cord set and No. 808 plug.

Packed 6 in a case; shipping weight, No. 44-AB, 43 pounds; No. 66-AB, 53 pounds.

No. 44-AB, 1000 Watts, Weight 4½ Pounds.....each \$8.95

No. 66-AB, 660 or 1000 Watts, Weight 6½ Pounds.....each 8.95

### Nos. 45-AB and 65-AB—Adjustable-Automatic For A.C. Only

With "on" and "off" switch which is operated by control lever. By turning control lever past "low" position to "off," current is turned off; reverse operation turns on current. Has attached heel stand, readily removable. Conductor cord is permanently attached to iron; connections enclosed in metal housing. With 6½-foot cord and attachment plug cap. In other respects same as No. 66-AB.

Packed 6 in a case; shipping weight, No. 45-AB, 37 pounds; No. 65-AB, 46½ pounds.

No. 45-AB, 1000 Watts, Weight 4½ Pounds.....each \$8.95

No. 65-AB, 1000 Watts, Weight 6½ Pounds.....each 8.95

### No. 6½-B and No. 3-B—Non-Automatic —For A.C. or D.C.

This iron has a cut-away nose and a comfortable handle. With heat-insulating stand and No. 830 cord set having No. 802 detachable composition plug and attachment plug. Elements, contacts, contact sleeves, etc., of nickel-chromium and nickel-copper alloys.

In standard voltage ranges: 100-109, 110-120, 121-130, 190-209, 219-240, and 241-260.

Packed 6 in a case; shipping weight, 52½ pounds.

No. 6½-B, 525 Watts, Weight 6½ Pounds.....each \$7.50

No. 3-B, 350 Watts, Weight 3 Pounds.....each 6.75

**American Beauty Pressing Irons**

**Type AA—Adjustable-Automatic—For A.C. Only**

Relative Bottom Shapes

These irons are used for all kinds of commercial and industrial work.

Temperature and heat are controlled. The use of rayon and other fabrics makes imperative the use of low temperatures. At the same time where heat requirements are heavy the automatic thermostatic control permits the use of higher temperature in heating elements and a greater supply of heat.

Equipped with No. 880 cord set, 6½-foot cord and No. 808 metal-sheathed plug.

Finished in chromium plate. Furnished with separate stands.

**Type DC—Adjustable-Automatic—For D.C. Only**

The d. c. iron has the same general performance-characteristics as the Type AA iron.

With separate automatic relay switch which turns on and off the main current supply; switch action controlled by thermostatic switch within iron. Connecting cord (3-conductor) is connected to 3 terminals on iron (protected by metal housing) and has 3-point terminal attachment plug that is plugged into receptacle on relay switch base. Current may be turned "on" or "off" at the iron. Adjustable control lever when swung past "low" position turns off current; reverse action, "on." With 8-foot cord.

Relay switch should be fastened to wall or support in vertical position; will not operate properly lying down.

**No. 100 Arvin Standard Fan-Forced Electric Heaters**

This heater heats the air and circulates it. Has induction type fan. Air intake is through louvres in back.

This heater has a black enamel grille and handle.

The cabinet is of heavy gauge steel with attractive and permanent green morocco finish.

Operates on 110-125 volts, 60 cycles a.c. Uses 9½ amperes at 110 volts.

Size at base, 9½x5 inches. Height, 11 inches.

Packed 6 to a case.

Shipping weight, 7 pounds.

No. 100.....each \$5.95

**No. 200 Arvin DeLuxe Fan-Forced Electric Heaters**

This heater heats the air and circulates it. Has induction type fan. Air intake is through louvres in back.

With heavy gauge steel cabinet; green morocco finish. Completely enclosed bottom; convenient switch in front. With rubber feet.

Operates on 110 or 125 volts a.c. 60 cycles; also on 110 volts 25 cycles. Uses 9½ amperes at 110 volts.

Size at base, 10x5½ inches. Height, 13 inches.

Packed 6 to a case.

Shipping weight, 9 pounds.

No. 200.....each \$7.95

**No. 1200 M-B Fan Type Auxiliary Heaters**

110-125 Volts, 1000 Watts

A small quietly-operating electric fan located directly in back of the suspended heating element throws a clean steady flow of heat almost instantly to all parts of a room.

The circular heat outlets in front and back are guarded by wire grills and the brown wood handle at top makes the heater easily portable.

Metal case is finished in beige enamel; base and outline of case are dark brown.

Overall height, 14 inches.

Standard package, 3. Shipping weight, each, 6½ pounds.

No. 1200.....each \$8.45

**No. 1110 Proctor Electric Radiators and Dryers**

Convactor Type

Serves as a quick dryer for small articles; equipped with telescoping rustproof racks.

Exposed surfaces kept at a maximum of 200° F. Made of heavy terne plate sheet metal; rust-resisting.

Separate circuit switches control two 660-watt elements; also with two 750-watt elements. For 110-120 volts a.c. or d.c.

Statuary bronze, pastel green or old ivory lacquer finish.

With 8-foot cord and plug.

Width, 9 inches; length, 21 inches; height, 23 inches.

No. 1110, Shipping Weight 24 Pounds.....each \$15.00

## Hewitt Electric Heating Pads

The flexible woven elements used in this pad free it from all feeling of ridges and stiff wires.

Each of the two woven elements in the pad covers its entire area, giving an even heat distribution at all times.

Ready to use in 2 or 3 minutes after being turned on.

Non-radio-interfering precision thermostats and low temperature heating elements insure an increased factor of safety in use.

Size, 12x15 inches. Wattage, 60; voltage, 110-125.

Each pad is wrapped in cellophane.

### No. 46—6 Heats—Wetproof

This pad has an outer cover of fine grade eiderdown—under this an inner covering made of a new permanently wetproofed fabric which permits the pad to be used for hot wet packs, etc., and also prevents damage through accidental wetting.

The label side always runs about 15° hotter than the reverse side, thus the user has the choice of 6 temperatures (two on each setting of the control switch).

Made in peach or lavender.

No. 46 ..... each \$6.50

### No. 44S—3 Heats—Wetproof

A popular new model of a newly developed fabric with a soft and woolly outside and a permanently wetproofed inner surface.

The cover is snap fastened and is removable and washable.

Made in blue only.

No. 44S ..... each \$4.45

### No. 44—3 Heats

A full-sized eiderdown pad with interior construction, thermostats, etc., identical to that of the No. 44S pad, but without the wetproof feature.

Made in brown only.

No. 44 ..... each \$3.95

## Hewitt Electric Heating Blankets

The warmth of this blanket is distributed evenly, leaving only a small unheated margin at sides and ends to permit tucking in.

Ten-foot cord has convenient on and off switch. Thermostats of low temperature setting are a positive protection against overheating, should blanket be folded up and covered over.

No. 173, 3 Heats, 120 Watts, 60x80 Inches. .... each \$17.50

No. 183, DeLuxe Model, 3 Heats, 120 Watts, 66x80

Inches, All wool ..... each 55.00

## No. 190 Hewitt Electric Sweat Blankets

This multiple heat wool blanket has a heating capacity to induce copious perspiration. It is intended for use in hospitals, electro-therapy studios or in the home under the direction of a physician or skilled attendant.

Rheostat heat control from mild to very hot. A rubber sheet is provided to protect blankets from moisture.

Size, 66x80 inches. Wattage, 220; voltage, 100-125.

No. 190 ..... each \$85.00

## No. 685 M-B Electric Heating Pads

110-125 Volts, 50 Watts

An outstanding feature of these pads is the sanitary washable velour cover. Simply slide back the zipper fastener, remove the unit, and wash the cover.

Furnished in three pastel shades: orchid, peach and apple green.

Full size, 12x15 inches.

A non-radio interfering unit.

With three heats (low, medium and high). Equipped with harmonizing 10-foot cord and pull plug.

Standard package, 3. Shipping weight, each, 2 pounds.

No. 685/2, Apple Green Cover ..... each \$6.95

No. 685/4, Orchid Cover ..... each 6.95

No. 685/5, Peach Cover ..... each 6.95

## No. 686 M-B Electric Heating Pads

110-125 Volts, 50 Watts

A permanently covered heating pad which meets the demand for a low-priced yet thoroughly dependable and guaranteed pad.

The eiderdown cover is light blue with a decorative white dot motif.

Full size, 12x15 inches.

With three heats (low, medium and high).

Equipped with 10-foot cord.

Standard package, 3. Shipping weight each, 2 pounds.

No. 686 ..... each \$3.95

## H-B Vibrator Applicators

H-B Applicators have been found to be the most practical to fill every need of every case where vibration is advisable. Each is fitted with a little threaded stem, which may be readily screwed into the end of the shaft and quickly taken off and changed when desired.

The first six applicators are included with every H-B Vibrator. Nos. 8, 9, and 10 are special, and may be had for the prices given below.

Cat. No.	Description	Price Each
1	Flat Disc made of Hard Rubber for Rubbing and Kneading the Muscles of the Body	\$ .50
2	Soft Rubber, Bell-Shaped Applicator, for Face, Neck, Arms and Bust	.50
3	Velvet Sponge for the Face, Especially Adapted to the Treatment of Eyes, Nose and Throat	.75
4	Round Ball made of Hard Rubber, the most Powerful Applicator made for Cases Requiring Vigorous Treatment	.50
6	Soft Rubber. A Favorite for Treating Skin and Scalp	.50
7	Soft Rubber, 12-prong, similar to No. 6, except it has fewer Prongs	.50
8	Bristle Brush. Wonderfully Effective for Scalp Treatment	1.00
9	Soft Rubber Rectal Applicator	1.50
10	Soft Rubber, similar to No. 2 but Larger	.50

**Type A Hamilton Beach Vibrators**

For home use. Consists of 1 vibrator, with cord and attachment plug for connecting to electric light fixture, and 6 applicators, all packed in a fibre-board fitted carrying case. The motor has a speed regulating switch.

The following applicators are furnished: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and

No. 7 soft rubber with 12 prongs. Revised edition, "Health and How to Get It," furnished free.

Type A Complete. . . . . each \$16.50

**Type C Hamilton Beach Vibrators**

Used by physicians, nurses and masseurs. Of heavier construction and has a more powerful motor than the vibrator for home use. For cases requiring energetic treatment. Packed in a black leatherette case, plush lined.

Following applicators are furnished with machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Type C Complete. . . . . each \$19.25

**Type D Hamilton Beach Vibrators**

For family use and for the professional hair dresser and masseur who calls on patrons at their homes. Has no speed regulator. Instantly stopped or started by button in handle. Motor is universal and operates on either a.c. or d.c. Following applicators furnished with machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for face; No. 3 velvet sponge for face; No. 6 soft rubber for head; and No. 7 soft rubber with

12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Type D Complete. . . . . each \$13.50

**Type F Hamilton Beach Vibrators**

Provided with a speed controlling device. It gives both the rubbing and percussion strokes and is guaranteed against electrical and mechanical defects. Packed in fibre board fitted carrying case.

Following applicators furnished with this machine: Nos. 1 and 4 hard rubber for body; No. 2 soft rubber for the face; No. 3 velvet sponge for face; No. 6 soft rubber for the head; and No. 7 soft rubber with 12 prongs. Revised edition, library bound book, "Health and How to Get It" furnished free with vibrator.

Type F Complete. . . . . each \$13.50

**Klenzairs**

Circulates, purifies and refreshes 6000 cubic feet of air an hour. A gallon or so of water is used in the machine. Water is taken to four monel metal discs revolving at high speed. Spray dashes off edges of discs. Temperature of water is reduced, air is cooled and partially de-humidified in hot weather; in winter, humidification takes place.

Has rust-resisting steel body; chromium-plated hardware. Upper structure, vitreous porcelain enamel, grain walnut finish; lower structure, walnut tone lacquer finish.

Has 10-foot cord with standard plug; 60-cycle, a.c. or d.c., standard type, fractional h.p. motor; standard 2-speed "on" and "off" toggle switch.

**No. 700, Floor Model**

Height, 40 inches. Shipped knocked down. No. 700, Ship. Wt., 35 Lbs. . . . ea. \$25.00

**No. 710, Wall Bracket Model**

Adjustable as to direction of draft. No. 710, Ship. Wt., 25 Lbs. . . . ea. \$25.00

**No. 720, Desk Model**

Height, 15 inches; width of base, 17 1/4 inches; depth of base, 11 inches. No. 720, Ship. Wt., 44 Lbs. . . . ea. \$32.50

**No. 725, Hay Fever Attachment**

Fits No. 700 only. Consists of fabric tunnel with felt air filter and adjustable metal window shield. No. 725. . . . . each \$10.00

No. 700

**No. B-182B Gilbert Standard Automatic Electric Humidifiers**

Humidifies 7500 cubic feet of air.

An inverted revolving cone submerged in water draws water onto disc above it, which, also revolving and synchronizing with cone, throws water outward by centrifugal force against shutter-like vanes by which it is broken up into tiny particles that are propelled by disc and rising are absorbed by atmosphere.

With metal pedestal and copper container. Finished in green.

A.c. or d.c. 110-volt motor. Height, 37 1/2 inches. Weight, 25 1/2 pounds.

No. B-182B, Capacity, 1 Gallon. . . each \$32.50

**No. B-185 Gilbert DeLuxe Automatic Electric Humidifiers**

Humidifies 7500 cubic feet of air.

An inverted revolving cone submerged in water draws water onto disc above it, which, also revolving and synchronizing with cone, throws water outward by centrifugal force against shutter-like vanes by which it is broken up into tiny particles that are propelled by disc and rising are absorbed by atmosphere.

With metal pedestal, Fleuron Art Pottery container; humidity control automatically measures moisture content of room at all times and switches humidifier on and off. Light green finish.

A.c. or d.c. 110-volt motor. Height, 37 3/4 inches. Weight 35 3/4 pounds.

No. B-185, Capacity 1 Gallon. . . . each \$49.50

## Mixmasters

## Model B Hamilton Beach Food Mixers

For all mixing, beating, whipping and mashing. Has plenty of power for cakes, icings, salad dressings, etc.

Has self-revolving bowls with control that regulates speed at which bowls turn. Motor may be lifted from stand and used for mixing

over the stove in a double boiler or any pan. Motor tips back so beaters drain into bowl. Beaters are easily removed for cleaning. Has single agitator for mixing malted milk in a glass.

Furnished with two opaque glass ivory bowls; small bowl holds one quart, large bowl holds three quarts. With 6-foot rubber cord. Has three speeds. The Hamilton Beach motor operates on a.c. or d.c., 105-120 volts, 25 to 60 cycles; worm gear drive.

Height, 13 inches. Length of base, 12½ inches; width of base, 7 inches.

Ivory and black baked enamel finish; cast iron base has rubber feet; chromium-plated steel beaters.

Packed one in a carton. Shipping weight, 19 pounds. Model B.....each \$18.75

## Attachments

### Juice Extractor Attachment

Extracts juice from oranges, lemons and small grapefruit. Sanitary; no metal parts connected to bowls; may be washed. Has ball thrust bearings. With removable strainer, Beeteware reamer, ivory bowl of opaque glass, and removable spout to guide juice into glass.

Packed one in a carton. Shipping weight, 4 pounds. Each..... \$2.75

### Potato Peeler Attachment

Removes peel by the abrasion method. Operation: Fill top container with water. Place 8 to 10 potatoes in peeling container. Run motor about 2 minutes or until water container is empty. Potatoes will then be peeled.

Height, 11¾ inches; diameter, 9¾ inches. Made of galvanized steel, ivory enamel finish. Abrasion liner and revolving disc lift out for easy cleaning. Packed one in a carton. Shipping weight, 12 pounds. Each..... \$8.00

### Coffee Grinder Attachment

Sets on motor where extractor lifts off. No power unit is needed. Top glass jar holds one pound. Adjustable; grinds coarse for boiling, medium for percolating and very fine for vacuum or drip coffee makers.

Packed one in a carton. Shipping weight, 5¼ pounds. Each..... \$3.00

### Slicer and Shredder Attachment

Cannot be used without power unit. Slicer cone with 6 knives revolves in housing and quickly slices potatoes, beets, turnips, cucumbers, apples and other fruits or vegetables. Slicer cone is easily replaced by shredder cone. Shreds practically all vegetables and fruits.

Packed one in a carton. Shipping weight, 2¾ pounds. Attachment without Power Unit.....each \$3.50

### Meat Grinder and Chopper Attachment

For grinding meat, chopping vegetables, fruits and nuts and for crumbing bread or crackers. Cannot be used without power unit. Has inside cutter for grinding meat without crushing it; also has coarse plate and two cutters for chopping vegetables. Furnished with wooden stomper.

Packed one in a carton. Shipping weight, 4¾ pounds. Each..... \$3.00

### Power Unit

For use with meat grinder and slicer-shredder attachment. Power unit is not connected to mixer, instead, motor is taken to power unit. Power unit stands on its own rigid base. Ball-bearing construction; drive attachments about 40 r.p.m.

Packed one in a carton. Shipping weight, 6½ pounds. Each..... \$4.50

For mashing, juicing, beating, whipping, stirring and blending. Enclosed motor tilts back; bowls are easily removed. Bowls revolve on ball-bearing platform. Base and upright is one die-cast unit; handle turns down on side, out of the way of juicer attachment.

Ivory enamel and chrome finish; jade green bowls. Model D, with Beaters and 2 Bowls,.....each \$18.25 Model K, with Beaters, Bowls, Juice Extractor and Strainer, Automatic Mayonnaise Oil-Dropper as Shown.....each \$21.00

## Attachments

### Food Chopper

Chops vegetables; grinds meat. With power transfer unit. Each..... \$6.25 Power Unit Only...ea. 2.50

### Can Opener

Turns can, opens it and holds it until removed. Uses same power unit as chopper. Without Power Unit...ea. \$2.00

### Drink Mixer

Operates at same high speed as commercial mixers. No power unit required. With Mixing Glass...ea. \$2.25

### Slicer-Shredder

For vegetables and fruit. No power unit required. Each... \$5.00 Grater Disc.....each 1.00

### Potato Peeler

Removes only surface skin. No power unit required. Each..... \$4.50

### Freezer

No power unit required. Each..... \$3.50

### Coffee Grinder

Grinds coffee coarse, medium or fine. Uses same power unit as chopper. Each..... \$2.50

### Knife Sharpener

Puts smooth edge on knife and scissor blades. Uses same power unit as chopper. Without Power Unit...ea. \$2.25

### Polisher-Buffer

For metal surfaces. No power unit required. With Sunbeam Polishing Compound.....each \$.75

**Hamilton Beach Hair Dryers**

115 Volts, A.C. or D.C.

Ideal for professional use in barber shops and beauty parlors, or for hard service in a large family.

Handy in a drafting room for quick-drying blue prints, in photograph galleries for all drying, and for medical heat treatment.

The case is of finest solid aluminum, triple-buffed and polished.

The convenient button in the handle controls the motor, as well as the cold and hot blasts, which are evenly distributed, by the improved high velocity muzzel.

Fan is fully enclosed.

Weight, packed, 5 pounds.

No. 2 .....each \$16.50

**No. 3 Hamilton Beach Hair Dryers**

110-120 Volts, A.C. or D.C.

Light, simple and powerful. Can be held in the hand or set in the stand at any desired angle, leaving hands free for scalp massage while hair is drying. Adjustment is instantaneous and automatic. Stays where it is put and stand is quickly detachable. Finished in ivory, old rose, orchid or robin's egg blue.

Fan is fully enclosed. Dries the heaviest head of hair in a few minutes.

Gives hot or cold blast by simply touching the switch.

No. 3, Without Stand .....each \$12.75

No. 3, With Stand .....each 14.00

**No. 5 Hamilton Beach Hair Dryers**

This dryer gives warm or cool blasts of air. Has a quiet, compact Hamilton Beach motor.

Ivory enamel finish. Gray silk cord.

Approximate shipping weight, 4 pounds.

No. 5 .....each \$7.95

**No. B-92 Gilbert Hair Dryers**

110 Volts A.C. or D.C.

Designed for home use, for drying hair, shoes, delicate fabrics, etc.

This is a motor-driven blower type dryer; throws hot air only. Operates on 110 volts a.c. or d.c. 60 cycles or less.

Has ivory colored handle; finished in ivory.

Equipped with toggle switch, green cord and plug cap.

Weight each, 2¾ pounds; carton of 6 weighs 18 pounds.

No. B-92 .....each \$5.95

**No. S2 Electric Scissors**

A fast, easy way to cut all kinds of cloth and fabrics.

Simple, compact and easily handled.

No. S2 .....each \$6.50

**No. 1 Gilbert Electric Mixers**

A portable type mixer for mixing drinks, whipping cream, beating eggs and other light mixtures.

With 110-volt induction motor; operates on a.c. 60 cycles only. Encased in chromium-plated shell.

Detachable agitators are nickel-plated heavy gauge steel wire securely fastened to motor spindle. With metal base and rubber feet. Curved-nickel-plated upright rod with extension supporting arm for motor. Adjustable at top and bottom for varying heights. Has large glass mixing receptacle.

Finished in chromium, blue and gray. Size, 5¾x8¾ in. Wt. each, 4 lbs. Packed 6 to a carton; wt., 38 lbs. No. 1 .....each \$2.95

**No. B-124 Sunkist Juniette Apartment Size Juice Extractors**

A compact, attractive juice extractor with useful glass and strainer.

Has toggle switch.

Operates on 110 volts, 60 cycles or less, a.c. or d.c.

Finished in ivory and nickel.

Height over all, 7½ inches; width over all, 7 inches.

Weight, 5 pounds.

Packed 6 in a carton; weight, 42 pounds.

No. B-124 .....each \$6.95

**No. B-123 Gilbert Sunkist Junior Electric Fruit Juice Extractors**

For home use. Quickly and efficiently extracts juice from oranges and lemons, leaving only the membranous tissue and the rind.

Universal motor operates on 110 volts, 60 cycles or less, a.c. or d.c. Motor protected from moisture.

With chromium-plated body, black base, removable bowl and reaming bulb, ivory.

Bowl 6¼ inches in diameter, 2¾ inches deep. Metal base with rubber feet. Toggle switch, standard cord with plug cap.

Height over all, 10 inches; width, 7 inches.

Packed 6 in a carton; weight, 64 pounds.

No. B-123 .....each \$12.50

**No. B-87 Gilbert Vibrators**

110 Volts A.C. or D.C.

A universal motor vibrator that operates on 110 volts a.c. or d.c., 60 cycles or less. Complete with 3 applicators—brush, button and cup. Circular vibration. Automatic oiling system. Used on either a.c. or d.c. socket rotator, spring friction relief. Two part drawn

steel shell and ivory colored wood handle, finished in ivory. Has toggle switch and green cord with plug cap.

Length of handle, 4¾ inches; length over all, handle and motor, 7 inches. Weight each, 2¾ pounds.

Packed 1 dozen to a carton; weight, 30 pounds.

No. B-87 .....each \$5.50

## Warren Telechron Self-Starting Electric Clocks

**Huntington Model**

A low-priced tambour model clock.

Has mahogany case with Spanish high-lighted finish and relief ornaments. Ivory enamel dial, 4½ inches.

Height, 7¾ inches; width, 17¼ inches; depth, 3¾ inches.

No. 563.....each \$8.95

**Maynard Model**

Has mahogany case with Spanish high-lighted finish; lacewood panels in front. Gold finished, etched dial, 4½ inches.

Height, 7¾ inches; width, 17¼ inches; depth, 3¾ inches.

No. 4FO1.....each \$9.95

**Norwood Model**

A large tambour model clock. Mahogany case has Spanish high-lighted finish and carved base. Gold finished, etched dial, 5½ inches.

Height, 8¼ inches; width, 20 inches; depth, 5 inches.

No. 5FO1.....each \$15.00

### Auxiliary Movement Household Clocks

The Telechron auxiliary movement is a simple mechanism which maintains correct time when electric current is interrupted. Should a current interruption occur, it immediately starts to work, and continues to operate for a period of about two hours—should an interruption last that long.

This movement automatically starts, stops and winds itself. Equipped with Telechron self-starting motors.

**Bullfinch Model**

A half size banjo wall model clock. Has mahogany case with colored glass panels. Early American clipper-ship scene.

Enameled dial. 3½ inches.

Height, 20¼ inches.

No. 694.....each \$17.50

**Renault Model—Directoire Style**

Has mahogany case, Spanish high-lighted, lacquer finish with inlaid border. Dial, 3½ inches.

Height, 6 inches; width, 4¾ inches; depth, 3¾ inches.

No. 3A51.....each \$16.00

**Consort Model**

A wall model clock for kitchens and bathrooms. Has chrome plated brass case with Beetle moulded bezel in green, ivory, white, black, blue and red. Size across, 5¾ inches.

No. 2FO1.....each \$4.95

Dura-alloy (silver color) case, non-tarnishing finish Moulded, black base.  
 Height, 5 inches; width, 4¼ inches; depth, 3 inches.  
 No. 711.....each \$9.95

**Signalette Alarm Clock**

The unusual visibility of this clock (4½-inch dial) is immediately discernible.

Gold or chrome finish metal frame; glossy black plastic base.  
 Height, 5½ inches; width, 6½ inches; depth, 3 inches.  
 No. 7F55A, Gold Finish.....each \$9.95  
 No. 7F55B, Chrome Finish.....each 9.95

**Autolarm Alarm Clock**

Has an illuminated dial. With 24-hour, automatic alarm feature.

Moulded walnut color Heppel white style case with gold finished handle and feet.  
 Height, 6½ inches; width, 4¾ inches; depth, 3½ inches.  
 No. 7B01.....each \$12.50

**Daphne Model**

Moulded Catalin (natural buffed finish) case in green, ivory, black, red or rose quartz.

Height, 3⅝ inches; width, 4⅜ inches; depth, 2⅜ inches.  
 No. 3F53.....each \$4.50

**Duke Model**

Black moulded plastic case with gold-plated bezel, base outline and feet.

Height, 4⅜ inches; width, 4 inches; depth, 2¼ inches.  
 No. 3F51.....each \$4.50

**Telart Model**

Gold or chrome finished metal frame; glossy black plastic base. Dial, 4½ inches.

Height, 5½ inches; width, 6¼ inches; depth, 3 inches.  
 No. 4F51A, Gold,each \$5.95  
 No. 4F51B, Chrome Finish.....each 5.95

**Newberry Model**

Polished lacquer finish case with relief ornament.

Height, 6½ inches; width, 6 inches; depth, 2¾ inches.  
 No. 3F55M, Mahogany Case.....each \$5.95  
 No. 3F55MP, Maple Case.....each 5.95

**Diana Model**

With translucent illuminated dial. Rheostat can regulate intensity of light.

Beetle black case; chrome finished metal feet and handle.

Height, 7½ inches; width, 4¾ inches; depth, 3⅝ inches.  
 No. 358..... each \$9.95

**Shelburne Model**

Has mahogany case with Spanish high-lighted finish; lacewood panels.

Gold finished etched dial, 4½ inches.  
 Height, 9 inches; width, 7 inches; depth, 4½ inches.  
 No. 532.....each \$9.95

**Minitman Model**

Brown mahogany case; matched satinwood ornamental front and top panels; statuary bronze escutcheon plate. Three drum type dials indicate hours and minutes.

Height, 6¼ inches; width, 4⅜ inches; depth, 3⅝ inches.  
 No. 8B03.....each \$9.95

**Minitmaster Model**

Time is indicated by numerals; seconds "pass in review" on a revolving disc. Has illuminated face.

Black plastic case; gold finished metal ornaments; etched design on crystal.  
 Height, 6⅝ inches; width, 4⅜ inches; depth, 3⅝ inches.  
 No. 8B01..... each \$10.95

## Revere Chiming Clocks

Telechron Motored Self-Starting Synchronous Movement

Westminster Chimes

Westminster chimes on all quarters on deep, resonant, silver-toned rods, with harmonious chord hour strike.

Chimes can be silenced.

**No. R-642** ..... each \$50.00

Honduras mahogany, lacquer finish; bird's-eye maple overlay. Metal feet, handle and corner ornaments.

Height, 12 inches; width, 8½ inches; depth, 5 inches.

Dial, 5 inches. Raised numerals.

**No. R-820** ..... each \$30.00

Honduras mahogany, lacquer finish.

Height, 11¾ inches.

Width, 7½ inches.

Depth, 5⅞ inches.

**No. R-802** ..... each \$35.00

Honduras mahogany, inlaid lines; lacquer finish.

Height, 7¾ inches; width, 18½ inches; depth, 5½ inches.

**No. R-603** ..... each \$37.00

Honduras mahogany, lacquer finish; bird's-eye maple overlay.

Height, 9 inches; width, 21 inches; depth, 6 inches; dial, 5 inches.

**No. R-822** ..... each \$40.00

Honduras mahogany, lacquer finish; burl overlay.

Height, 7¾ inches; width, 17½ inches; depth, 4⅞ inches.

Raised numerals.

**No. R-608** ..... each \$42.50

Honduras mahogany, lacquer finish; bird's-eye maple overlay.

Height, 9 inches; width, 20½ inches; depth, 6 inches.

Dial, 5 inches. Raised numerals.

**Revere Chiming Clocks**  
**Telechron Motored—Self-Starting Synchronous Movement**  
**Westminster Chimes**

Westminster chimes at all quarters on deep, resonant, silver-toned rods, with harmonious chord hour strike. Chimes can be silenced.

Floor model clocks are made in various models only two of which are shown. Special bulletins on other models gladly furnished on application.

**Vivienne Model Grandmother Clock**

Early American style.

Honduras mahogany; lacquer finish.

Height, 73 inches; width, 13 inches; depth, 8 inches.

Silver dial. Westminster chimes.

Each ..... \$110.00

**No. R-444** ..... each \$55.00

Honduras mahogany, lacquer finish; clear maple end. Cast metal decorations.

Height, 10¾ inches; width, 22½ inches; depth, 6 inches. Six-inch gold dial. Raised numerals.

**No. R-442** ..... each \$70.00

Honduras mahogany, lacquer finish; matched grain mahogany front. Hand carved decorations.

Height, 11 inches; width, 21 inches; depth, 7¼ inches. Gold dial six-inch. Raised numerals.

**Hour and Half-Hour Strike**

Strikes on hour and half hour on rich tone spiral silver-toned rod.

**No. R-934** ..... each \$27.00

Honduras mahogany, lacquer finish; crotch mahogany panels.

Height, 11¾ inches; width, 7½ inches; depth, 4¼ inches.

**No. R-932** ..... each \$21.50

Honduras mahogany, lacquer finish bird's-eye maple overlay.

Height, 7¾ inches; width, 17¼ inches; depth, 4½ inches.

**Roxbury Model**

Colonial style.

Honduras mahogany, lacquer finish; burl panels, gold dial.

Height, 72½ inches; width, 17¼ inches; depth, 12 inches.

3 Chimes on 9 Tubular Bells, Movement A. ea. \$340.00

2 Chimes on 7 Tubular Bells, Movement B. ea. \$300.00

1 Chime on 5 Tubular Bells, Movement C. ea. \$270.00

**No. R-930** ..... each \$21.50

Oak or mahogany; raked grain, dove color finish.

Height, 9¼ inches; width, 6¾ inches; depth, 4 inches.

## Hubbard Forged Steel Pins

With 1-Inch Lead Thread for Low Voltage Insulators

Hot Galvanized

For lighting, telephone and telegraph lines on which insulators with 1-inch pin holes are used. Eliminates danger of extreme temperature changes causing rupture of porcelain due to expansion.

Pins can be driven into crossarms or poles without injury to thread, although driving is not recommended.

### Long Shank Type—For Wood Crossarms

Furnished with lock nuts.

No. 981S

No.	Per 100	Diam.		LENGTH, INCHES			Ship. Wt. Lb. per 100

**Peirce Pole Top Pins**  
Hot Galvanized

For higher voltage lines, extra heavy pipe pins are often used because of their high strength and light weight. They offer a considerable extension above the pole top.

Mounting holes are 1/16 inch in diameter.

If it is desired to mount these pins by means of the pipe supporting fixtures listed below, specify pins with bottom mounting hole only.

## Peirce 1-Inch Drop-Forged Clamp Pins

Hot Galvanized

May be used at angles in the line when assembled with a crossarm reinforcing plate.

On straight line runs the pin is used without the plate and is prevented from canting by two 1/4-inch lugs. Mounting slots are for 1/2-inch diameter crossarm straps.

Has 1-inch lead thread.

Size of crossarm, 4x5 inches and smaller.

Pin height above arm, 4 3/4 inches.

No. ....	4420
Per 100 .....	\$82.21
Shipping Weight per 100 .....	175 pounds

## Peirce Wide Base Clamp Pins

For 1-Inch Pin Hole

Hot Galvanized

Designed for angle and corner construction.

Each pin is forged from a single piece of hot rolled open hearth steel. The broad base rests evenly on the arm and prevents pin from cutting into the wood, while the four lugs hold the pin from twisting on the crossarm.

Pins are used with 5/8-inch crossarm straps.

Pin height above arm, 5 3/4 inches.

With Lead Threads

Flat Base No.	Curved Base No.	Per 100	Size of Crossarm Inches	Ship. Wt. Lb. per 100

## Peirce Crossarm Reinforcing Plates

Hot Galvanized

No. 5072

Used on angles and corners of lines as a reinforcement to clamp pins.

Holds the pin rigid under strains of 1200 pounds in any direction.

Used in connection with crossarm straps as listed in table.

Flat Top Arm No.	Roofed Top Arm No.	Per 100	Size of Arm Inches	Use Cross-Arm Strap No.	Ship. Wt. Lb. per 100

**No. 5008—Malleable Iron Type**

Crossarm is made in all widths. Diameter of pin hole, 1 3/16 inch. Shipping weight per 100, 109 pounds. No. 5008 . . . . per 100 \$55.88

**Hubbard Centering Washers**

Hot Galvanized

Used on stock cross arms which have been drilled for wood pins, to adopt washer to smaller shanks of steel pins. Top centering washer designed to draw down into pin hole when pin is tightened on arm, leaving top surface clear for pin base. May be used on either flat or roofed arms.

Top centering washer may also be used on bottom of arm if a standard flat washer is placed between it and nut.

## Hubbard Insulated Clevises

Hot Galvanized

Nos. 1342 and 1333

A standard, flat steel type clevis for mounting on a through bolt or an insulator bolt. Designed for  $\frac{5}{8}$ -inch bolts. Uses the standard No. 355 dry process insulator for low voltage lines. Oval mounting hole,  $\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight, 253 pounds per 100.

No. 1342, with Insulators (No. 355 Dry).....per 100 \$66.67  
 No. 1333, with Insulators (No. 455 Wet).....per 100 69.83

No. 1341

Uses the No. 1606 dry process insulator.

These clevises are similar except for the attachment hole. No. 1341 has oval hole for  $\frac{5}{8}$ -inch bolts; No. 1343 has round hole for  $\frac{1}{2}$ -inch bolts.

Shipping weight, 154 pounds per 100.

No. 1341.....per 100 \$50.23  
 With Insulators.....per 100 \$50.23  
 Mounting Hole.....inches  $\frac{1}{16} \times \frac{3}{4}$  Oval

No. 1339

Popular for rural construction. Has sufficient conductor clearance for low or medium voltage lines.

Uses No. 1608 wet process insulator. Oval mounting hole,  $\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight 165 pounds per 100.

No. 1339, with Insulators.....per 100 \$56.82

No. 1340

This clevis has a higher flash-over rating than the No. 1339. Used where high mechanical strength is desirable as well as electrical efficiency.

Furnished in  $\frac{3}{16} \times \frac{1}{2}$ -inch steel with  $\frac{5}{8}$ -inch diameter cotter bolt. Uses No. 1609 wet process insulator. Oval mounting hole,  $\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight, 288 pounds per 100.

No. 1340, with Insulators.....per 100 \$73.53

No. 1330

Used extensively on medium voltage lines for corner or dead-end attachments. Especially for 4000-volt primaries.

The  $\frac{5}{8}$ -inch attachment bolt is designed for fastening on eye or hook bolts. Pole mounting bolts not included. With lead sleeve on insulator bolt at extra cost.

Uses No. 1613 wet process insulator. Machine mounting bolt,  $\frac{5}{8} \times 2\frac{3}{8}$  inches.

Shipping weight, 572 pounds per 100

No. 1330, with Insulators.....per 100 \$187.54

No. 1344

Designed for through bolt or crossarm bolt mounting. Similar to No. 1330 clevis shown above.

Mounting bolts are not included. With lead sleeve on insulator at extra cost.

Uses No. 1613 wet process insulator.

Oval mounting hole,  $\frac{1}{16} \times \frac{3}{4}$  inches.

Shipping weight, 550 lbs. per 100.

No. 1344, with Insulators.....per 100 \$167.64

## Hubbard Standard Thimble Clevises

Hot Galvanized

No. 673

Used for dead-ending lines to suspension insulators.

Formed by combining a special wire rope thimble with a pressed steel attachment clevis.

Thimble has a 2-inch diameter for the conductor loop and a groove for  $\frac{3}{4}$ -inch strand or smaller.

Freedom of the thimble allows enough swing for a desirable flexibility.

No.	Per 100	Steel Gage	DIMENSIONS, INCHES		Approx. Ship. Wt. Lb. per 100
			Cotter Bolt Diam.	Strand or Wire Size	
673	\$67.60	9	$\frac{5}{8}$	$\frac{3}{4}$ or Under	95

## Hubbard Hi-Tension Thimble Clevises

Hot Galvanized

Designed for dead-ending lines of high voltage. A  $3\frac{1}{2}$ -inch diameter makes it especially desirable for aluminum and copper conductors.

Pressed in a single piece with a wire groove suitable for  $\frac{3}{4}$ -inch or smaller conductors.

There is ample clearance for armor rods or tape.

No.	Per 100	Steel Gage	DIMENSIONS, INCHES		Approx. Ship. Wt. Lb. per 100
			Cotter Bolt Diam.	Strand or Wire Size	
675	\$89.73	12	$\frac{5}{8}$	$\frac{3}{4}$ or Under	95

## No. 674 Hubbard Open Side Thimble Clevises

Designed to eliminate the difficulties of line threading. Intended for angle work from 30° to 60°; can be used for lesser angles if desired.

Tie-wires can be used safely without danger of crystallization.

Side wire groove,  $\frac{3}{4}$  inch; diameter of thimble,  $3\frac{3}{4}$  inches. Length overall,  $6\frac{5}{8}$  inches.

No. 674, Shipping Weight 145 Pounds.....per 100 \$94.72

## Hubbard Insulated Clevises

Hot Galvanized

No. 561

Formed of  $1\frac{1}{2} \times \frac{3}{16}$ -inch channel steel. A sturdy dead-end or corner attachment.

Used with No. 355 dry process insulator for low voltage lines.

Oval mounting hole,  $\frac{1}{16} \times 2\frac{3}{32}$  inches. Shipping weight, 242 pounds per 100.

No. 561, with Insulators.....per 100 \$84.25

No. 8820

Formed of flat steel. Has  $\frac{1}{16}$ -inch round mounting hole for  $\frac{5}{8}$ -inch mounting bolts.

Uses No. 357 dry process insulator. Shipping weight, 131 pounds per 100.

No. 8820, with Insulators.....per 100 \$46.13

## Peirce Crossarm Clevises

Hot Galvanized

For dead-ending line wires on single arms.

No.	Per 100	Cross-Arm In.	Diam. Steel In.	Steel Plates In.	Ship. Wt. Lb. per 100

**Peirce Porcelain Strain Insulators**

Standard Type—Dry Process

No. 506

Ordinarily used for dead-ending secondary circuits or guying.

Made with dimensions in accordance with recommended specifications of the Edison Electric Institute. Sharp corners and edges have been eliminated.

The radius of bolt or wire hole gives maximum bearing surface on clevis bolt. It may be used with guy strand or insulated wire.

When ordering insulators and clevises not listed as being applicable to each other, or when fitting different makes of insulators on

clevises, make certain that proper clearances are allowed. Clevises are not included with insulators.

**Hubbard Strain Insulator Clevises**

Barmack Drop-Forged Type (Patented)

Hot Galvanized

Designed to provide a strong and adjustable means for dead-ending wires. Will fit many sizes and types of strain insulators. Well adapted to dead-ending on steel work where the size of the attaching hole is too small to permit the use of the ordinary steel clevis. Also used to assemble two strain insulators in series.

To assemble the split clevis place the two members into opposite grooves of insulator and estimate the spacing between parallel flat flanges of clevis. Insert curved bolt and screw nut on until above spacing is obtained. Then

securely fasten assembly to eyelet or steel structure with the 1/2-inch bolt.

## No. 655 Peirce Forged Steel Thimble Clevises Hot Galvanized

For dead-ending lines to suspension insulators. With  $\frac{5}{8}$ -inch cotter bolt; will develop an ultimate strength of 20,000 pounds. A  $\frac{1}{2}$ -inch cotter bolt may be substituted for the  $\frac{5}{8}$ -inch size if fittings require.

Diameter wire groove,  $1\frac{1}{4}$  inches.  
Shipping weight 122 pounds.  
No. 655.....per 100 \$57.62

## No. 9245 Hubbard Guard Arm Hooks Hot Galvanized

Used on guard arms as dead-ends for telephone services. Fastened by bolting through the arm.

Diameter steel,  $\frac{1}{2}$  inch. Overall length,  $5\frac{7}{8}$  inches.  
Diameter eye,  $\frac{7}{8}$  inch.  
A. T. & T. Co. Std.  
Shipping weight 45 pounds.  
No. 9245.....per 100 \$22.97

## Hubbard Standard Transposition Brackets Hot Galvanized

Nos. 9252 and 9255 furnished in heavy stock for use with pins having transposition insulators.

Except for No. 9255 all have  $\frac{3}{8}$ -inch hole for a wood screw and holes for  $\frac{3}{8}$ -inch carriage bolt. No. 9255 has  $\frac{7}{16}$ -inch wood screw hole and  $\frac{9}{16}$ -inch carriage bolt hole.

## No. 9270 Hubbard Transposition Brace Plates Hot Galvanized

This brace plate is designed to prevent the transposition bracket from being pulled out of vertical, on slight angles in the line, because of the constant strain in one direction.

Holds the bracket in perfect alignment under excessive side pull.

Used with Nos. 9262 and 9275 on R.S.A. roofed cross arms.

No. 9270, Ship. Wt. 58 Pounds.....per 100 \$48.93

## No. 3144 Hubbard Pole Top Brackets Hot Galvanized

No. 3144

Made of  $\frac{3}{4}$ -inch round steel braced with  $\frac{1}{4} \times 1\frac{1}{4}$ -inch flat steel.

Lead thread is standard 1-inch Allen type.  
All joints are solidly welded.

No. ....	3144

**No. 9275 Hubbard Transposition Brackets**

**For Phantom Circuits**

**Hot Galvanized**

Furnished in two pieces.

Pin holes are for 1/2-inch short shank pins.

Assembly on arm is accomplished with 1/2-inch machine bolts.

Size steel, 1 1/2 x 3/8 inches. Any size crossarm can be used.

Pins and bolts are not included.

Western Union Std.

No. 9275, Ship. Wt. 797 Lb.  
..... per 100 \$276.72

**No. 9265 Hubbard Transposition Brackets**

**Hot Galvanized**

No. 9265 is bolted to the pole by 1/2-inch machine bolts.

Uses two No. 8015 pins and glass insulators.

A special bridging washer is used in attaching the top pin.

Pin hole size, 1/16 inches. Pole mounting hole size, 3/16 inches.

Channel size, 1 1/2 x 3/16 x 3/16 inches.

Approx. shipping weight, per 100, 250 pounds.

No. 9265..... per 100 \$72.79

**Peirce Single Point Type Transposition Brackets**

**Hot Galvanized**

Made of channel steel and fitted for one insulator.

Threads are standard 1-inch diameter.

No. 20110 is used for normal spans and No. 20111 is used for long spans.

Unless otherwise specified, cross-arm U-bolt No. 1021, for 3/4 x 4 1/2-inch arms, will be furnished.

Furnished punched and slotted.

**Hubbard Point Type Transposition Brackets**

**Hot Galvanized**

L—On Insulator = Low Point  
M—On Insulator = High Point  
L—On Bracket Base = Left Hand  
R—On Bracket Base = Right Hand

Hubbard point type right and left hand transposition brackets are attached on standard crossarms through adjacent pin holes with 1/2 x 6-inch crossarm bolts fitted with a clipped washer. Both attachment holes are slotted to provide a total of two inches of adjustment.

Mounting hole spacing, 10 to 12 inches.

Line spacing, 6 3/4 inches.

Base steel size, 1/4 x 3 x 1 3/16 inches.

Point steel size, 3/4-inch round.

**System of Transposition**

PATENTED

In establishing a transposition of the right and left hand point type, a pair of brackets is employed as shown by the illustration in which one wire is black to distinguish it from the other.

Assuming that a complete transposition is the crossing of one wire over the other and then eventually back to its original position in relation to the other wire, two complete transpositions are shown by the illustration. Note that the first one is black over white and the second is black under white, maintaining perfect balance. No cutting is necessary, and no tangles result when arms or poles are wrecked as is the case with the spiral type of transposing on the average bracket.

Mounting slots fit standard drilled arms with a 2-inch adjustment range.

Mounting bolts are furnished.

Lead thread or wood cobs are available.

Hubbard point type brackets listed were designed specifically for use with this system. The purchaser of Hubbard brackets is assured a license permitting the transposing of wires as covered by the above patent.

If further details are desired, communicate with the nearest Hubbard factory office.

## Hubbard Dead-Ending Shackles

Hot Galvanized

Used by signal and railroad companies for dead-ending or breaking bare signal wires. Made to clamp around crossarm.

Square holes for  $\frac{1}{2}$ -inch carriage bolt, running vertically through arm;  $\frac{3}{8}$ -inch lag screw at side of arm.

Size crossarm,  $3\frac{1}{4}$ x $1\frac{1}{4}$  inches. Size steel,  $\frac{3}{16}$ x $1\frac{1}{16}$  inches.

## Hubbard Hub-Rak Secondary Racks

Hot Galvanized

Designed with a heavy pressed steel back and forged points.

**Line Type** racks are made with both extended and non-extended backs. Numbers for non-extended back racks are obtained by suffixing the letter A to the standard number. For example, a 3-wire Hub-Rak with 8-inch spacing and extended back would be 30648; non-extended back would be 30648-A.

**Service Type** is made with extended backs only.

## Peirce Secondary Racks

Standard Type

Hot Galvanized

Rack points are of No. 9 gage steel with rounded tops so that wire insulation will not be harmed while stringing. Play between points and insulator is sufficient to eliminate jammed wires. Mounting may be accomplished at any point through the back with through bolts, using the No. 3350 mounting washers furnished. With or without insulators. Side mounting slots are for  $\frac{3}{8}$ -inch lag screws.

No. 1358

## Hubbard Rural Type Secondary Racks

No. 2428

Light weight rack using standard spool insulators Nos. 355 or 455 and furnished in standard spacings.

No. 2438-A has an extended back. All others have non-extended backs.

Rack back has a slight curve to fit the pole surface.

**Hubbard Wireholders**

Hot Galvanized

Will accommodate all normal sized service wires or cables which formerly needed a special sized wire hole.

Screws are smooth, sharp pointed for easy starting and full threaded so they will hold any normal loading even when attached through timbers thinner than the length of the screw.

Size of wire hole, 3/8x1 inch.

## Peirce Extension Brackets

For Secondary Racks

Hot Galvanized

Used for mounting secondary racks when a greater extension from the supporting structure is desired than the rack itself offers.

Made in two styles, with flat and curved backs, for wall and pole use respectively. Both styles have one 1 1/16-inch hole and two 9/16-inch holes for mounting.

Made of No. 9 gage steel to provide a 6-inch extension, and a 4-inch bearing on the pole or wall.

Equipped with one 5/8x2-inch carriage bolt.

Also has two 3/8-inch holes in bottom (one at each end) to allow water to drain out.

**Plastic Tree Wire Guard**

For auxiliary protection on power and light conductor or telephone drop wire where it is impracticable to obtain adequate clearance from trees making it necessary to protect conductor or wire from abrasion. Particularly useful where conditions require protection on a considerable length of wire.

Can be thread over an end of the drop wire at the time of installation or can be spiralled on the wire after it is already in place. It is held in position by an S clamp placed at each end of the guard, or series of guards, or can be fastened at each end with friction tape.

Made from a flat strip of clear Tenite II (cellulose acetate butyrate) which is wound into a close helix to form a guard three feet long.

Available in five sizes; 3/8, 5/8, 3/4, 1, and 1 1/4 inches (inside diameter).

Packed 10 in a carton.

**Premax Embossed Aluminum Letters and Figures**

Made of 99% pure aluminum rolled especially for this purpose, will neither rust, tarnish nor corrode. Plain finish. Being perfectly smooth, letters and figures do not catch or hold dirt.

Standard packing, 100 per carton.

## Reliable Solderless Connectors

Reliable Connectors are available for use with all types of conductors. Tap connectors for copper, copperweld, aluminum and steel conductors and for guy strand are designed with precision threads to maintain high pressure solderless connections.

Made of 90% copper high strength bronze. The bronze connectors resist corrosion and are not subject to season cracking.

Chance Perma-Grip Tap Off Clamps

Carefully, scientifically proportioned to give proper electrical conductivity, maximum mechanical strength, and symmetrical appearance. Current carrying capacity is in proportion to that of the maximum jumper wire for which each clamp is designed.

Tests reveal a minimum yield point of 165 inch-pounds and an ultimate strength in excess of 260 to 500 inch-pounds (depending on size) applied torque on eye screw.

Gripper is designed for three-point contact with the conductor.

U.S.S. threads on the high strength bronze eye screw permit quick, easy application, and a tight positive grip with greatly minimized danger of sticking due to corrosion.

Clamps with S.A.E. threads available on request. If hex screws are wanted, specify on order.

- TYPE CC. Copper to copper connection.
- TYPE CA. Copper to aluminum connection.
- TYPE GP. General purpose connection.
- TYPE AA. Aluminum to aluminum connection.
- TYPE AC. Aluminum to copper connection.

Chance Fused Tap Clamps

50-Ampere Capacity

Used where a fused protective device is required for transformer installations or branch line taps on 2300 to 15,000-volt lines. Provides protection for rural line tap-offs. Easily installed and removed with a clamp stick.

Has high rupturing capacity, ample flashover value, and positive vibrationproof contact. Designed to extract fuse links and thus reduce arcing with its charring effect inside fuse tube.

Tapper is provided with a Tips Snap Clamp. The fuse tube is a lightweight, corrosion-resisting, waterproof, laminated plastic of great mechanical strength. Fiber lining quenches arc.

Type of connection: No. S1630-CC, copper to copper; No. S1630-AC, aluminum to copper.

## Reliable Concentric Cable Clamps

### Flexible Bail Type

The concentric cable clamp is a low cost clamp that holds the cable securely under all conditions without bending or snubbing or otherwise damaging the insulation.

It is made of non-corrosive metals and has a large margin of strength over field requirements. It is easy to install and neat in appearance.

No.	Per 100	Cable No.	Con- ductors	CLAMP RANGE, IN. Max.	Min.	Width Inches	Bail Lgth. In.	Std. Pkg.	Ship. Wt. Lb. per 100

## Reliable Telephone Drop Wire Clamps

An ideal device for attaching No. 17 B.&S. twisted pair or parallel drop wire to poles and buildings.

The clamp makes a very neat appearing installation. It is easy and quick to install. Two of them can be used to make an angular turn. Slack in drop wires can be taken up quickly without leaving any weak spots.

**The P Clamp** is wedge-shaped, with a copper wire loop at one end for hooking over a common drive hook, masonry hook or porcelain knob. When using twisted pair wire, it is essential to parallel the wires through the clamp.

**The R Clamp** for resistance braid (heavy duty drop wire) is the same design as the P clamp but is slightly larger.

No.	Per 100	Cable	CLAMP RANGE, IN. Max.	Min.	Width In.	Bail Lgth. In.	Std. Pkg.	Ship. Wt. Lb. per 100
P	\$7.00	Twisted Pair or Parallel	.160	.140	.250	4	25	14

**National Nicopress Splicing Sleeves**

The Nicopress sleeves, for the splicing of copper, copper-weld, steel, and A.C.S.R. conductors, are easily installed, and the resultant splice, which is of permanently high conductivity, exceeds the rated strength of the conductor.

**Stock Number—Nicopress Sleeves**

Every Nicopress sleeve has a stock number. This is of value to the customer as well as the manufacturer, in that the stock number, which consists of three parts, alludes to the material of which the sleeve is made, the diameter of the wire on which the sleeve is used, and the proper tool groove for compressing the sleeve.

The first section of the stock number identifies the metal of which the sleeve is made by means of any one of the numerals from 1 to 5. Numeral 1 designates copper sleeves, 2 designates galvanized copper sleeves, 3 designates bronze sleeves, 4 designates galvanized bronze sleeves, and 5 designates galvanized steel sleeves.

The middle section or next three numerals of the sleeve stock number denotes the decimal equivalent of the diameter of the wire for which the sleeve is suitable.

The third part, or letter, at the end of the sleeve stock number indicates the Nicopress tool groove required to properly compress the sleeve. The several Nicopress tool grooves or dies are identified and marked by a letter and any Nicopress sleeve whose stock number ends with that letter can be compressed in that particular tool groove.

**For Example: (Sleeve No. 1-162J)**

- 1 Indicates Copper
- .162 Indicates Diameter of 6B & S Copper
- J Indicates Proper Tool Groove

**Stock Number—Nicopress Dead-Ends**

The stock numbers of Nicopress dead-ends are practically the same as for the splicing sleeves except that they have a prefix of either 7 or 9. The figure 7 indicates that it is a suspension dead-end, and the figure 9 indicates that it is an offset type dead-end; thus 71-162J and 91-162J, respectively, are the stock numbers of the suspension and offset dead-ends.

## Nicopress Repair Sleeves

### For Replacing Defective Line Wire Joints

When cutting out defective joints in line wire, the ideal way to re-splice is with the Nicopress repair sleeve. The length and the design of this sleeve allows the wire to be re-spliced without having to change the initial line wire sag and eliminates the cutting in of a new section of wire.

## For Copper Wire

**Nicopress Split Repair and Reinforcing Sleeves**

By applying the Nicopress split repair sleeves or reinforcing sleeves to the damaged strands of A.C.S.R. or copperweld, conductivity and strength are re-established without the bother of cutting and re-splicing the conductor at the damaged point.

**For Aluminum Cable Steel Reinforced—A.C.S.R.**

## Nicopress Suspension Dead-Ends

Completed Suspension Dead-End

Conductor is inserted straight through the shouldered sleeve and compressions are then made with the same Nicopress tool groove that is used for the splicing of that size wire. No bending, bolting of, or damage to the conductor occurs.

## Nicopress Tools

For Telephone, Telegraph, and Signal Work

In making the splice the tool must be of a size that is convenient and practical for the lineman to handle either in the air or on the ground. It must be so efficient in use that pressure can be applied with a certainty that each compression made will be exactly as required.

No. 17

No. 17-2. For splicing drop, bridle, and inside wire. Length, 8 inches. Weight, 9 ounces.

No. 31

No. 31. For communication line wire. Available in groove combinations, DC, DJ, CE, DE, CJ and EJ. Also available with single grooves. Length, 11½ inches. Weight, 2 pounds.

No. 41

No. 41. Available in groove combination MJ. Length, 15 inches. Weight, 3½ pounds.

No. 51

No. 51. For copper and copperweld power conductors. Available in groove combinations PJ, TJ and XJ. Tools for A.C.S.R. are 51-Apple for 6 and 5 A.C.S.R.; 51-Orange for 4 A.C.S.R.; 51-Peach for 2 A.C.S.R.; and 51-Plum for 1/0 A.C.S.R. Length, 18 inches. Weight, 4 pounds.

No. 3

No. 3. Single groove only for W, G3, E5, S and L. In two-groove combination F6 and E8.

Hand operated and arc similar in design to tools above except that the length is 35 inches and the weight 12 pounds.

## No. 635 Nicopress Hydraulic Tools

For splicing large conductors and high tensile overhead ground wires. Interchangeable dies cover a wide range of sleeves for copper, A.C.S.R., copperweld, and steel strand. Approximate weight, 50 pounds.

**National Twist Sleeves  
National Double Tube Copper Sleeves**

Made from the best grade of pure copper, exact to size.

**National Galvanized Cable Rings  
With Tension Grip  
For Hanging Cable**

Quickly and easily placed on the messenger, and once in position, will not slip along or jump off, remaining rigid in position because of the tension grip design. Use of these rings enables pulling the cable from either direction and eliminates necessity of reriding the messenger to replace or respace rings. Made from flat, high carbon steel wire with rounded edges. Hot-dip galvanized, with an even deep coating of zinc assuring smoothness and long life.

Gathered in Handy-Five Clusters for convenience in handling. This simple method of gathering, prevents hooking together of rings and does away with all ground litter.

3 1/2	..	8	200	270

Can also be furnished in copperweld and calsun bronze.

\*Made in all strand sizes. Specify size desired.

**National Cable Ring Saddles**

Furnished in aluminum, galvanized steel, and bronze. Made in sizes 1 1/2, 2, 2 1/2, 3, and 3 1/2 inches.

## Diamond Aerial Cable Supports

The purpose of aerial cable supports is to supply flexible supports at each side of the pole to prevent ring out. The strap is wrapped around the cable three times over itself, passing through the hinge member. Adjustable to any height. Provides a flat bearing which will not injure the cable sheath.

The supports are placed two on each side of each pole. They are placed 20 inches apart.

The aerial cable support is composed of a zinc strip, a hinge joint member which holds the free end of the zinc strip in position on a soft galvanized U-shaped wire, 5 inches long.

No.	Per 1000	Length Strap Inches	Maximum Diameter of Cable or Sleeve Inches	Maximum Circumference of Cable or Sleeve Inches	Standard Carton	Weight per 1000 Pounds
891	\$75.00	10	3/4	2 5/16	500	84

*898	264.00	64	†6 1/2 S	20 1/2	200	350

\*No. 8 is exactly the same as No. 7 except No. 8 has 10-inch long U-shaped wire on end instead of 5-inch long wire as on regular supports.

†Maximum diameter of sleeve.

## Reliable Cable Hangers

Cable hangers have proved that wear on cable sheath can be eliminated. Entire sheath is grounded solidly to messenger and grade clamp is not needed as cable does not creep on steepest grade.

Hanger is rust-proof and unusually neat in appearance. Maintenance cost of aerial cable is materially reduced and enclosure of entire cable and messenger with cable molding in trees is facilitated.

Zinc hangers are used for supporting lead-covered cable sheath to steel strand. Copper hangers are used for supporting insulated wires or cable to Copperweld strand.

## National Aerial Cable Supports

Broad, flat smooth zinc strap of support, wrapped 3 times around cable in installation, assures maximum strength and permanence. Support wires applied so that they do not bind but slide easily, to assure flexibility as cable vibrates, expands, contracts or sways.

MAXIMUM SIZE CABLE, INCHES		Length Strap Inches	Lgth. Wire Support Inches	Stock No.	Approx. Ship. Wt. Lb. per 100
Diameter	Circum.

6 1/2 Sleeve	20 7/16	64	10	8	30 1/2

## National Zinc Cable Clips

The broad flat zinc strap of the assembly provides a wide surface for the cable to rest on and the hooks are so constructed that they move on the strand allowing the necessary play as the cable vibrates, expands, and contracts.

Specify length of strap when ordering.

Strap Length... in.	4-5	6-7-8	9-10-11	12-14	Over 14 to 20
Approx. Ship. Wt. per 100..... lbs.	7	8 1/2	10	11	14

## National Marline Cable Hangers

Specify length of loop.

## National Marline Twine

Furnished in 1-pound balls.

No.....	415	416
Ply.....	2	3

## American Brand Tarred Marline

A 2 or 3-yarn tarred jute twine used principally by power and light companies, contractors, telephone companies and by manufacturers of conduits and cables.

Put up in 1-pound balls. Prices upon application.

**National Angle Screws**

Designed for use with porcelain knobs in dead ending drop wires on building, where angle between drop and building is 30° or more.

Hot-dip galvanized.

Made to A.T.&T. standard.

Size.....	inches	5/16
Approx. Shipping Weight per 100.....	pounds	12

**Diamond Angle Screw Fixtures**

For attaching knobs for drop wiring on wood or stone structures. Price does not include porcelain knobs.

No.....	840	841
Per 100.....	\$5.50	9.00
Size.....	5/16	3/8
Length Screw End.....	1 3/4	2
Length Shank.....	2 1/4	3 1/2
Size Anchor.....	16-18x1"	20-24x1 3/4"
Weight per 100.....	12	20

**Diamond Insulated Screw Eyes**

Hot galvanized by the Diamond process.

Porcelain ring has a diagonal opening which allows the

easy insertion of wires and when pulled taut they cannot become released from the ring.

Size steel, 1/4 inch. Opening size, 5/8 inch. Packed 100 in a container.

No.....	830	831	832	833
Per 1000.....	\$76.67	83.34	100.00	103.34
Type.....	5/8"S	5/8"L	1"S	1"L
Eye.....	5/8	5/8	1	1
Shank.....	1	2	1 1/8	2 1/8
Weight per 1000.....	85	95	180	190

**National C-B Knobs for Drop Wires**

For use on buildings and in trees, C-B Knobs offer many advantages over the rigid knob or insulator.

The knob is hooked into the bridle ring and the drop is dead ended on the knob. When used in trees to prevent abrasion, the drop wire

is simply carried over the knob with a simple tie.

It makes no difference at what angle the drop wire approaches, as the knob provides a flexible and self-adjusting support, equalizing the strain and taking up all vibration.

No.....	190	191
Style.....	Single Groove	Double Groove
Shipping Wt. per 1000.....	250	250

**National Galvanized Bridle Rings**

These rings are hot-dip galvanized, giving them high rust resistance.

They are a screw type ring, made to A.T.&T. standard, for running twisted pair, bridle, or parallel drop wire on building walls, fences, and poles.

Style.....	A	C	E	F
Eye Size.....	1 5/8	1 1/4	5/8	3
Approx. Shipping Wt. per 1000.....	115	75	30	300

**Diamond Bridle Rings  
Wood and Machine Screw Thread**

Wood Screw

Machine Screw

For pole line and interior block distribution.

When using Style A, C, E, or F in masonry installations, use the size anchor shown.

**Diamond Drive Rings**

Hot galvanized by the Diamond process.

Accomplishes the same purpose as the screw threaded pigtail bridle ring, but is designed for driving instead of screwing into structures. When attached to wood, drive as an ordinary wire nail. When attached to hard substances, brick, stone, or concrete, use the 1/2-inch size with the 3/16x5/8-inch Diamond Hammer drive

anchors, and the 5/8 and 7/8-inch size with 1/4x1-inch Diamond hammer drive anchor. Packed 100 to a box.

## No. 865 Diamond Style A Span Clamps For Suspended Cable

Used for taking off drop wire leads along the span.  
Also used for pull-offs to hold the cable away from trees, thus avoiding the use of tree guards.  
Can only be used with suspended cable.  
Plate is made of 1/8-inch steel. Hooks are made of 5/16-inch round, high tensile strength steel.  
All parts are hot-dipped galvanized after fabrication.  
Packed 100 to a carton.  
Shipping weight, 47 pounds.

No. 865.....per 100 \$25.00

## Hubbard High Tension Hardware

Conversion of Steel Tower Arms to Hubbard Dual-Member Wood Arms

## No. 866 Diamond Style B Span Clamps For Lashed Cable

Used for taking off drop wire leads along the span.  
Also used for pulloffs to hold the cable away from trees, thus avoiding the use of tree guards.  
Can be used for both lashed and suspended cable.  
Plate is made of 1/8-inch steel. Hooks are made of 5/16-inch round, high tensile strength steel. All parts are hot-dipped galvanized after fabrication. Packed 100 to carton.  
No. 866, Shipping Weight, 41 Pounds.....per 100 \$25.00

River Crossing Structure

## National Drive Rings

Low cost, efficient, hammer drive rings for use where only a few pairs of wire are being run. Hot-dip galvanized. Made to A.T.&T. standard. Eye size, 1/2 inch. Length, 2 inches. Approximate shipping weight per 1000, 17 pounds.

## Armstrong's Glass Insulators

Made by the Armstrong Cork Company

Armstrong's No. 1 meets the Bell System's standards for "DP", No. 2 for "Toll Line," No. 3 for "Exchange Line," and "TW" for "Transposition."

Western Union and the country's leading railroads use Armstrong's No. 1.

## O-B Neutral Clamps

Patented

### For Distribution and Farm Lines

Has a seat for holding the neutral conductor, an eye on each side for dead-ending service wires, and a groove on the upper edge of the keeper piece for a ground wire or neutral secondary wire.

The portion of the main clamp casting through which the bolt passes is threaded.

No.	Description	Ship. Wt. Lb. per 100

O-B Hook Bolt Strain Clamps

Figure 1

Figure 2

Designed primarily for use with copper conductors. Will develop slip strength in excess of the elastic limit of most cables which it will accommodate. Hook bolts need not be removed to install conductor. Merely turn out of the way before slipping cable into the conductor groove.

Body and fittings are made of O-B Flecto-processed malleable iron. Bolts and nuts are steel. All ferrous parts are hot-dip galvanized. Not furnished with liners.

Fittings for attaching yokes to structures and strain clamps are furnished as part of each set.

**Conductor Accessories**  
**Armor Rod Clip (V-Bolt Type)**

Made of strong aluminum alloy. Can be placed over armor rods by removing only one nut from the V-bolt.

**No. 422 Reliable Flip-On Loop Clamps**

For use in secondary deadending. Fastens Nos. 2 or 4 ACSR around spool or thimble. Easily installed, only one screw to tighten. Made of all-aluminum alloy. A long bell-mouthed contacting surface of soft aluminum grips the wire to its breaking strength without damage to the conductor.

Weight, 4 ounces.

**No. 420 Reliable Snub Dead Ends**

Accommodates Nos. 2 or 4 ACSR. Made of high strength, non-corrosive aluminum alloy. Spiral form carries the snub principle to full advantage to develop, approximately, the full strength of the conductor and to distribute the strain equally on all strands. It does not damage the conductor.

Easily installed. Light weight of clamp minimizes vibration fatigue strains, prolonging the life of the conductor. Weight, 3/4 pound.

No. 420.....each

**Twisting Joints for ACSR Cable**

Each joint consists of two sleeves. The number specifies complete joint, i.e., two sleeves. For making this joint two twisting wrenches are required. In ordering them specify same number as joint. Joints are made of aluminum.

**Matthews Cable Clamps**

Galvanized cable clamp for use on all copper power cables from 000 to 1,500,000 C.M. inclusive. Designed to do away with the need for costly splices, hazardous soldering operations and waste of costly cable, where power cable is used in industrial plants or on transmission cables, where strains do not exceed 1200 pounds. For a.c. cables, the No. 3 clamp has two of the carriage bolts, C, on one side, made of Everdur to break the magnetic field. When used on cables carrying d.c., the four carriage bolts, C, are made of hot galvanized steel. Steel clamping plates, A, B, and D, and the steel strain insulator bolt, E, are hot galvanized.

No. 2, Shipping Weight per 100, 400 Pounds....each \$3.60  
No. 3, Shipping Weight per 100, 400 Pounds....each 4.60

Prices quoted are for small quantities. Write for quotations on large quantities.

**FWD Light Duty Earth Boring Units**

Complete construction-maintenance unit equipped with roomy platform body, single drum winch, earth boring machine with integral type derrick, fully enclosed drive, attractive coupe type cab, and other accessory equipment.

Ideal for large or small utility. Bores holes 16 to 20 inches in diameter, 7-feet deep.

Handles poles up to 45 feet in length.

**Specifications**

Gross vehicle weight, 17,000 pounds. Brake horsepower, 95 at 2800 revolutions per minute. Wheelbase, 144 inches. Tread, 69 inches. Tires, 8:25x20; duals rear.

Complete specifications and information furnished upon request.

**FWD Heavy Duty Earth Boring and Pole Setting Machines  
For Power Line Construction**

For boring holes up to 56 inches in diameter, 12-feet deep through ice, frost, sandstone, shale, or any soil that can be dug by hand without blasting.

Features 180° turntable, derrick integral with borer, and power elevated boring tower. Write for Bulletin No. 452 for complete information.

**FWD All Steel Pick-Up Bodies**

For large and small utilities. Ruggedly built to render years of satisfactory service.

**Model B6**

For Mounting on Any 1/2-Ton Chassis with Cab-to-Axle Dimension of Approximately 38 Inches.

Left Side View of Model B6 Body Showing Spacious Compartments and Ladder Racks in Forward Position

**Model B7**

For mounting on All 3/4-Ton Chassis with Cab-to-Axle Dimension of Approximately 50 Inches.

Right Side of Model B7 Body Showing Dust and Moisture Proof Compartments. All-Steel, Compact, and Practical

Rear View of Model B6 Body Showing Corrugated Floor Which Is Double Thick in Center to Insure Maximum Strength

Rear View. Body Has 30 Square Feet of Floor Space

Right Side of Model B6 Body. All Compartments are Weather Stripped; Dust and Moisture-proof

Left Side. Ladder Racks Shown in Forward Resting Position

**Specifications**

Model B6 is of durable construction, built for long, economical service.  
 Length, 74 inches. Width, 67 inches. Floor width between compartments, 42 inches.  
 Weight, approximately 600 pounds.

**Specifications**

Length, 84 inches. Width, 67 inches. Floor width between compartments, 42 inches.  
 Weight, approximately, 975 pounds.

**Complete Information and Prices Furnished upon Request**

## FWD Line Construction and Maintenance Units

With Utility Model U-10 All Steel Body

Model U-10 all steel body designed for large and small utility companies is highly adaptable for mounting winch, derrick, boring machine and other accessories. For mounting on all makes of trucks with a cab-to-axle dimension of approximately 84 inches.

This line construction and maintenance unit is furnished complete as shown.

### Body Specifications

Dimensions: length, 123½ inches; height, 78 inches; and width, 90 inches.

Winch compartment is 62 inches wide, and 20 inches high, and 24 inches deep.

Write for complete information and prices.

### Model 1417 Towing Hooks

For trucks up to 3½-ton capacity.

Attaches to frame of truck with braces to the side bars.

Has coil spring to cushion starting and stopping shocks.

Positive locking latch eliminates danger of uncoupling.

Weight, 48 pounds.

Prices upon request.

### Type L Draw Bars

For use with pole dinkey and light trucks. Attaches to wood pole and forms link for connecting to pintle hook on truck. Inside diameter of pintle eye ring, 2⅝ inches.

Weight, 31 pounds.

Prices upon request.

**No. L-12 Single Drum Winches**  
10,000-Pound Capacity

Modified version of the single drum winch, furnished without clutch or brake as winch must be power driven when pulling, raising or lowering load. Ideal for every purpose requiring pulling rope on a drum.

Automatic winch worm brake is standard equipment. Drum measures 12 inches between flanges; holds 600 feet of 1/2-inch steel cable. Weight, approximately 430 pounds.

**Model L-12-CD Single Drum Winches**  
10,000-Pound Capacity

Basically the same as Model L-12 winch except that it is equipped with clutch and brake and free spooling drum.

Automatic winch worm brake is standard. Drum measures 12 inches between flanges; holds 600 feet of 1/2-inch steel cable. Weight, approximately 516 pounds.

**Double Drum Winches**  
Models WD-126 and WD-186

An exceptionally sturdy double drum winch. Large drum measures 18 inches between flanges; holds 909 feet of 1/2-inch steel cable, and is furnished with clutch and brake.

Small drum, which may be operated independently, is available in 6-inch size. Large drum on Model WD-126 measures 12 inches; small drum measures 6 inches.

Automatic winch worm brake standard on both units. Weight, approximately 880 pounds.

**Model CR Collapsible Power Reels**

Picks up loose wire in neat, compact roll. Attaches to winch by means of pin type socket.

Cast of aluminum.

**Pole Binders**

A small winch with a ratchet type holding attachment. For all bulky loads.

Furnished with 18 feet of 5/16-inch steel cable, carried on drum.

Weight, 18 1/2 pounds.

**Model S Cable Splicer's Carts**  
1000-Pound Capacity

An all steel, compact, rugged, and theft-proof cart. Compartments provide a place for every tool within easy reach of the splicer. A folding leg supports the front end of the cart when parked.

Dimensions: overall length, 74 inches; height, 41 inches; axle, 1 1/4-inch square; tread, 34 inches.

Has steel disc wheels; Timken bearings; tires 4:00x18, 4-ply.

Weight, 480 pounds.

**Model 1775 Pole Dinkies**  
1-Ton Capacity

For light construction or repair work.

Triangular shaped tongue is two 3-inch, 5-pound channel beams. Bolsters are cast steel. Overall length, 104 inches. Axle is heat treated, high carbon steel 2 inches square.

Tires, 6.00x16 singles 6-ply or 6.00x20 singles 6-ply. Tread, 56 inches.

Weight, 390 pounds.

**Winch Line Hooks**

For attaching two wire rope lines as used on truck winches.

It attaches easily and quickly to a line or loop and holds firmly until the pole is set. Slack in the line then permits detaching from ground with pike pole.

As line must be threaded through derrick sheave a hook that detaches easily increases the efficiency of the line crew.

Weight, 4 1/2 pounds.

**Safety Hooks**

Used with derrick and truck winch when raising derrick to operating position. Line is passed over spindle bar and threaded through the derrick sheave then attached to the safety hook. Winch power will then raise the derrick so it can be bolted in place by the linemen.

Hook is forged steel, designed so that the heaviest load is carried on the heavy section of the hook.

Weight, 3 1/2 pounds.

Prices upon Request

## Utility Derricks Middle Type

Models M-35, M-40, M-45, and M-2870

Utility derricks have kept pace with modern telephone, telegraph, and electric light and power line construction and maintenance methods. Designed by A.T. & T., the world's largest user of pole derricks, their specifications are adhered to in every detail of manufacture. Utility derricks are standard equipment on the majority of Bell system line construction trucks.

**Model P8T Combination Cargo and Pole Trailers**

The most complete combination, dual purpose trailer thus far developed.

Available with or without fenders, side boards, pole carrying bolsters, load binders, brakes, or extension tongue.

Capacity from 4200 to 9800 pounds depending on tire size.

**Models M and H Heavy Duty Pole Trailers**

**3 and 5-Ton Capacities**

Exceptionally rugged. Built for hard usage and long trailer life.

Construction features include extension type tongue, adjustable cam locking uprights, heavy duty wheel bearings, and overall safety factors 50 per cent in excess of actual rated capacity.

**Combination Cable Reel and Pole Trailers**

**Models PCP and W-PCP**

An easily convertible cable reel and pole trailer. Converted by using simple hand tools.

Ideal for the utility whose requirements do not demand full-time use of two separate units. Model PCP handles cable reels from 34 to 38 inches and Model W-PCP, reels from 44 to 48 inches in width.

Furnished complete with set of bolsters, cam locking uprights, and cable reel saddles.

**No. 1485 Pole Dinkies**

All steel especially constructed for the exceptionally hard service of hauling poles. Wide tread permits high speed hauling when empty, without danger of it turning over. Tubular type axle gives maximum strength with least possible weight. Capacity, 3 to 4 tons.

**No. 1485-A Pole Dinkies**

For high speed hauling and rugged service. Has tubular tongue and axle to insure the greatest strength with a minimum of weight. Rear bunk balances trailer. Permits easier handling when empty. Capacity, 3 to 4 tons.

**Write for Complete Information and Prices**

## Powers Truck Bodies For Construction and General Maintenance Series 600

**Series 600C Line Construction and General Maintenance Body**

Designed for efficiency and crew comfort. Powers' engineering and experience in building line bodies for utilities is the assurance of well-designed, well-balanced equipment, properly arranged to carry all tools and supplies for construction and maintenance. In the Series 600C model, special attention has been given to crew accommodations. A roomy compartment in the forward part of the body seats 4 men, while 3 more ride in the truck cab.

Line construction bodies and all accessories are available as a complete package unit.

**Series 500**

Powers' makes a complete line of standardized bodies for construction and general maintenance service, each model designed and constructed to meet the most exacting requirements.

Series 500 embodies the latest improvements and conveniences suggested by utility engineers and operators. Standard equipment includes a winch and pole derrick. Body comes with either telescopic steel roof or open top with tarpaulin. Models available for all conventional or C.O.E. chassis.

All equipment is carried inside of body.

**Series 500 Line Construction and General Maintenance Body**

Ideal for all types of general service utility work—electric, gas, water, street light maintenance, and telephone. Standardized models also available for plumbing, heating, and other service contractors.

All models of the general service line are available with a 24-foot, two section extension ladder and hinged ladder rack assembly.

Cast aluminum fittings on ladder rack reduce overall weight and permit easy adjustment to fit equipment carried.

### General Service Bodies

**Series 25-M General Service Body**

- Series 25M.** For 1/2-ton chassis.
- Series 35M.** For 3/4-ton chassis.
- Series 50M.** For 1 1/2-ton chassis.
- Series 55M.** For 1 1/2-ton chassis.
- Series 60M.** For 3/4-ton chassis.
- Series 65M.** For 3/4-ton chassis.

**Complete Bulletins Furnished on Request**

**Powers Trailers  
For Utility Operation**

Model AP-30

Designed to give long, trouble-free service under all conditions. Nos. A-20 (2-ton), A-30 (3-ton), and A-50 (5-ton), have their forward frame ends tapered to a forged

drawbar eye. This type trailer employs the center pole of the load as a tongue by attaching a drawbar clamp to the pole. The drawbar eye is used for pulling trailer when unloaded.

Models AP-30 (3-ton) and AP-50 (5-ton), have an adjustable tubular steel tongue which eliminates use of drawbar. The 5-ton unit, in both models (A-50 and AP-50), is equipped with 6-leaf helper springs. The total load of poles is carried on the trailer in all models, thus permitting loaded trailer to be handled behind any type of line construction body.

Each of the wide double channel bolsters is equipped with two tension type, adjustable slide cam locking stanchions, and center pole saddle.

The spring suspension and mounting of axle is designed to carry maximum loads and to take care of the added stresses of power brake application. Has 10-leaf main springs.

Cab controlled electric or hydraulic brakes are available.

**Duff-Norton Hy-Power Hydraulic Jacks  
3 to 50-Ton Capacities**

No. 3H9

Used for industrial and railroad service. Operates in both vertical and horizontal positions.

**3 to 12-Ton Sizes.** With extension screw which can be run up quickly by hand to load height, lifting starts with the first stroke of the lever bar. Heavily ribbed base is of one piece malleable iron with integral pump barrel.

**20 to 50-Ton Sizes.** With dual pumps. Speed pump brings head up to load position instantly, switchover to power pump is automatic without changing or missing a lever stroke. Base is of special alloy steel with armor plate steel guards to protect pump barrels.

Ram and cylinder are high carbon seamless steel tubing, accurately machined and ground to gages for close sliding fit. Lowering of load safely controlled at any speed.

**Duff-Norton Genuine Barrett Ratchet Reel Jacks**

Single Acting — Automatic Lowering—5, 10 and 15-Ton Capacities

Used to handle reels of cable, wire, etc. Hooks will seat 2-inch spindles.

**Nos. 516-MCR and 524-MCR** equipped with adjustable hook lifts for handling reels of different diameters.

Furnished with double round sockets and steel operating lever, 1x30 in. long. No. 516-MCR for reels 15 to 40 in. in diameter. No. 524-MCR for reels 20 to 60 in. in diameter—has reinforced solid oak base for use outdoors.

**Nos. 1022-CR and 1522-CR** equipped with extra long lifting racks with hooks placed at various heights for handling reels of different sizes. Furnished with single round socket and steel operating lever, 1 1/4 x 62 inches long. No. 1022-CR, hooks located 12, 22 1/2, 33 and 38 inches from ground level for handling reels from 25 to 90 inches in diameter; housing bolted to solid oak base. No. 1522-CR, hooks located 18, 26, 34 and 39 inches from ground level for handling reels from 38 to 90 inches in diameter; reinforced oak base has quick detachable clamps.

## No. 55 Duff-Norton Pinion Pullers

Used to pull pinions, remove pulleys, small flywheels, etc. from shafts.

Also used for servicing bridge wheels and bearings of overhead cranes.

Pull is uniform around the entire periphery of the pinion. Worm and screw action effects a strong force.

Housing and jaws are electric-steel castings. Worm and screw are case hardened steel. Ball bearings throughout.

No. 55, Weight 50 pounds..... each \$120.00

### Extra Jaws

†Maximum outside diameter of pinion that can be pulled.

‡Maximum allowable distance of inner edge of pinion from end of shaft.

## No. 500 Duff-Norton Genuine Barrett Pole Jacks

Capacity, 15 Tons

For lifting, straightening or moving poles of all kinds. Eliminates the necessity of digging around stumps before moving or straightening.

Height, 37½ inches.

Raise, 23 inches.

Furnished complete with operating lever, 10 feet of ¾-inch chain and channel base.

Weight, 250 pounds.

No. 500, With Chain..... each \$110.00

No. 500, Without Chain..... each 99.50

## No. 529 Duff-Norton Small Pole Pulling Jacks

Capacity, 5 Tons

Designed especially for lifting or moving small poles, such as are found on rural lines, quickly and easily. Has top lift and chain lift.

Poles are handled by means of the sling, which consists of a forged steel chain and hook. Chain fits into slot in top of jack.

Height, 28 inches. Raise, 18 inches.

Weight, 91 pounds.

No. 529, with Chain..... each \$68.00

No. 529, without Chain.... each 65.75

Deduct \$1.00 for lever bar if not required.

## No. 1030-CR Duff-Norton Automatic Lowering Cable Reel Jacks

With T Base—10-Ton Capacity

For heavy cable reels 20 to 84 inches in diameter, and for outside work where uneven ground conditions are encountered.

Attached to a T-frame base which has been sectioned to prevent warping. Top hook is for 3-inch diameter spindles, the two lower hooks for 2½-inch diameter spindles.

Height 30 inches. Raise, 14 inches.

Weight, 110 pounds  
No. 1030-CR... each \$92.00

## Duff-Norton Screw Type Cable Reel Jacks

5-Ton Capacity

Used by utility companies. Reliable and efficient. To operate, lift the curved cap to the reel spindle, spin the 3-way nut down to the frame, and insert a ¾-inch steel bar in the 3-way nut and turn.

Lifting hook will accommodate up to 2¼-inch diameter spindles.

**Simplex Reel or Drum Jacks**  
5 and 10-Ton Capacities  
Ratchet Lowering

No. 320A

No. 322

Equipped with laminated, oil treated, oak bases.

**No. 320A (5 Tons), Single Acting**—For warehouse and shop service. Handles reels from 20 to 60-inch diameters. Has 3 lifting hooks: 1 for 2½-inch and 2 for 2-inch spindles.

**No. 321 (10 Tons), Single Acting**—Also for warehouse and shop service, but handles reels from 20 to 96-inch diameters. Has 5 lifting hooks: 1 for 3½-inch, 1 for 3-inch, and 3 for 2½-inch spindles.

**No. 322 (10 Tons), Double Acting**—T shaped base with the 3-threaded and adjustable steel rods insures a non-rocking foundation for heavy outdoor service. Built with right and left hand bases; base area, 319 square inches. Handles reels from 36 to 84-inch diameters. Has 3 lifting hooks: 1 for 3-inch and 2 for 2½-inch spindles.

No.	Each	Height Inches	Lift Inches	Length Lever	Weight Pounds

322	92.00	29	13¾	60"	104

**Simplex Pole Pulling and Pole Straightening Jacks**

For pulling or straightening telephone, telegraph, electric power and trolley poles quickly, without digging, and regardless of size or depth in the ground.

One or two men can pull or straighten poles, pull butts or move loaded poles without interrupting service.

Nos. 325 and 329 are single acting and ratchet lowering.

No. 325 is a 5-ton jack, light, and durable, for pulling 25 and 30-foot poles, straightening poles, and for tightening guy lines. No. 329 is a 15-ton jack.

No. 329

Standard equipment of the No. 325: a 4-foot steel pinch bar lever; 5-foot steel chain; an 8x15-inch steel channel base; 8-foot pike pole, equipped with a malleable iron forked cap for biting into wood for straightening poles. Standard equipment of the No. 329: an 8-foot scarf-welded BBB steel chain, fitted with pear-shaped link; a 10x24-inch I-beam base with hand hole; and a 5-foot steel lever bar.

## Simplex Util-A-Tools

This tool pushes objects apart on the drop forged and corrugated nut ends, or on pipes inserted in nut wells or on the spreading lugs.

It pulls together, using chains with the sky hooks, which are inserted in the nut holes, or on clamping lugs.

It lifts when the triangular snap-on base is attached. Pulls spoked or solid center wheels and gears by attaching the three-way chain base, centering the live center in the shaft after removing the nut and connecting the three chains with the base and object to be pulled.

Util-A-Tool clamps parts for welding or assembly; straightens bent objects; bends pipe and structural steel members; loosens and pulls frozen objects; tensions guy wires; holds down portable machines, etc.

Complete Set with Tool Box; Weight, 78 Pounds.....	each	56.00

\*The Nos. 612, 614, 616 or 618 may be substituted in the maintenance set (see prices above). The jacks may be purchased with any of the equipment.

Stud links (3), drop forged steel, heat treated, \$3.30.

## Simplex-Jenny Center Hole Hydraulic Pullers

Used for pulling stern tubes of ships, cylinder liners, pistons, valve seats, wrist pins, bushings, wheels, gears, propellers, boiler tubes, shafts, etc. Used in shipyards for pulling-in coupling bolts through propeller shaft flanges, assuring a tight fit. Also pushes, lifts, and can easily be rigged up to press.

Will stretch or part any mild steel rod that can fit through the center hole; alloy steel pull rods or puller stems are recommended.

Operates straight, vertically or horizontally without side thrust or self-binding friction and without need for any other equipment or rigging. Is its own back-up and is self-supporting because of its center hole construction.

Tubular ram is raised or pushed out by operating the pump. It is a self-contained unit made of tough, heat-treated steel throughout. Self-retracting when the release valve is opened reducing set-up time.

Drilled and tapped for pressure gauge which can be furnished when specified. This gauge accurately shows the tonnage developed and is useful in testing tensile strength.

**No. 303.** Single pump type used to pull cylinder liners, to form ship and boiler plates and to straighten out bulges in plates. Pulls bulkheads together, structural members or double bottoms for welding or riveting; eliminates use of impact wrenches, air hose. Pulls off bolts, pins, etc.

**No. 606.** Double pump type, high and low speed, can be operated separately, alternately or together. Designed for long and heavy pulls. Used in shipyards, mines, railroad shops, oil fields, construction and general industry. Also used for pulling in utility service pipe.

**No. 803 and No. 1003.** Single pump type. Used to pull bushings, cutless bearings, cylinder liners, pistons, wrist pins, valve seats, keys, wheels, sprockets, gears, boiler tubes, pipes, etc. In shipyards, used for pressing on and pulling off propellers. Length of lever, 19 inches.

Use only Simplex-Jenny Hydraulic Oil. (De-waxed—pour test minus 5°F.)

### No. 10010 Simplex-Jenny Center Hole Hydraulic Pullers

**Heavy Duty, 100 ton,** double pump unit is especially designed for pulling in the stern tubes of all types of ships. Is also used for heavy bushing jobs. Valve gears and pistons can be pulled from the largest sump or slush pumps in a fraction of the time required by old methods. Stern tubes are installed in hulls using two Simplex-Jenny center hole hydraulic pullers, with two 2-inch diameter alloy steel pull rods. Tonnage developed on these jobs ranges from 75 to 200 tons.

Length of lever, 19 inches. A pressure gauge, calibrated in tons for direct reading, is furnished as standard equipment.

Lifting cap available. Use only Simplex-Jenny Hydraulic Oil. (De-waxed—pour test minus 5°F.)

No. 10010.....	each	\$405.00

**Simplex Double Leverage Pipe Pushing and Pulling Jacks**

15 and 25-Ton Capacities

This jack is constructed with reversible carriages which eliminate the necessity of reversing the complete pipe pusher to pull pipe. Double levers and double track insure accurate and powerful pushing of pipe under paved streets, alleys, tracks, sidewalks, etc. Pipe can be pulled for lead pipe and duct installations, etc.

Equipment: one set of tapered jaws, one pilot, two 4-foot steel lever bars and two steel pipes for extending lever bars. Specify size of jaws and pilot required.

No.	R-332R	R-334R
Each	\$240.00	\$320.00
Extra Jaws..... per set	38.00	49.50

**No. 125 Duff-Norton Pipe Forcing Jacks**  
15-Ton Capacity

Used by many public service companies and contractors for laying water, gas, and other pipe in places difficult of access. Made of high carbon steel and steel castings. Will force pipe, from 3/4 to 4 inches, through favorable ground conditions from 60 to 300 feet. Trench, 9 feet long, required for operation of jack at starting point. Total length, 8 feet. Travel of cage, 7 feet.  
No. 125; Weight, 292 Pounds.....each \$150.00

**No. 790 Greenlee Hydraulic Pipe Pushers**

For underground installation in gas, electric, waterworks, telephone and other fields.

Eliminates tunneling, extensive trenching, back-filling and tamping, tearing up lawns, streets, sidewalks, railroad tracks, repaving.

Hydraulic unit does actual pushing, developing up to 75 tons piston pressure in large model.

One or two men can easily develop pressure needed to push pipe.

Unit is compact and simple to handle. Easy to carry and set up.

For 3/4 to 4-inch pipe, inclusive. Has six different operating speeds to match varying soil conditions, with pushing pressures ranging from 6,500 to 40,000 pounds. Greater speed for light soil, sufficient power for difficult soil conditions.

Power unit travels on notched steel base, supplied in 5 1/2, 6 1/2, 7 1/2 and 8 1/2-foot lengths, permitting pushes of from 4 to 7 feet between changes of the pipe clamp. Each base is equipped with one backing plate and two pipe supports.

Weight of power unit only, 160 pounds.

No. 790, Power Unit Only.....each \$185.00

**Oshkosh Diggers**

No. 2051

The blades are made of special alloy steel. Welding is used for attaching the blades instead of riveting, making a durable joint. The fulcrum members are of heavily constructed, channel-shaped, steel forgings.

There are two pivot points for the blades, one on each side. This gives much stronger leverage and greater durability.

Made in two types, with split handles or with two solid handles. The handles are made of straight grained hard wood, 8 feet long.

Measurement marks are placed on the handles so that the workman can easily determine the exact depth of the hole.

The diameter of the circle circumscribed by the digger blades is 6 inches.

No. 2050, Split Handle Type, Wt., 13 Pounds...each \$10.45  
No. 2051, Two Solid Handle Type, Wt., 14 1/2 Lb. each 10.45

## Oshkosh Straight Handle Shovels

BLADE—Black finish; unpolished. Strap length, 22 inches.  
HANDLE—Lacquered; straight from end to end. Diameter, 1 3/16 inches. Packed 6 to a bundle.

**No. 852 Oshkosh Digging Spuds with Tamper**

A light, evenly balanced digging tool. Handle is made of steel tubing with a tamping head of malleable iron, and the blade and socket are of one piece of forged high carbon steel. Blade measures 3 1/2 inches wide.

Length, 9 feet. Weight, 20 pounds.

No. 852.....each \$12.50

**Oshkosh Pike Poles**

Handle is of old growth yellow Washington fir; only straight, close-grained fir is used.

Pike is of special steel made of one piece with upset face, which takes end thrust and distributes it over the entire end of the handle. Pike is set in oil and a rivet runs through malleable iron ferrule, handle, and pike to further secure them. Pike projects 4 inches.

\*Diameter at center; tapers to 2 inches at both ends.

**No. 10 Oshkosh Pike Pole Guards**

For guarding the hazardous point on pike poles. Will fit either the 2-inch or 2 1/2-inch pike poles.

The guard works easily and fastens securely in either the guarded or open position. When in the unguarded position, the guard is completely out of the way, snugly fitted around the pole. When in the guarded position, it automatically locks in place and provides complete protection from the pike point.

Shipping weight, 3/4 pound.

No. 10.....each \$2.10

**Oshkosh Special Pike Pole Coating**

Oshkosh Pike Poles finished with this specially developed coating prevent loss of time caused by splinters and splinters.

It gives a smooth, hard, transparent coating.

This coating keeps the grain from raising.

It is a non-conductor of electricity.

Can be applied at a slight additional charge.

**No. 740 Oshkosh Fir Deadman Wood Pole Supports**

Of clear, straight grained fir. Measures 3x3 inches square, 8 1/2 feet over all. Steel fork has three prongs.

No. 740, Weight, 40 Pounds.....each \$24.10

**Oshkosh Wood Mule Pole Supports**

Made of Washington fir; 4 inches in diameter, tapers slightly to each end. Ends banded; with forged crucible steel fork in one end, pike in other end.

## Leach E-Z-Up Pole Cradles

For lifting poles in position for framing.

Operated by one man without any lifting strain.

Uses the simple cam principle of rocking the pole off the ground and up.

Made of malleable iron.

To operate, place the cradle against the pole and drop the point of a cant hook or peavey between the two rockers. Then catch the hook in the opposite side of the pole, pull back on the handle.

The pole can be rotated in the saddle of the cradle by using the cant hook.

Each, Weight, approximately 26 pounds. \$25.00

## Oshkosh Malleable Socket Peavies

Socket, clamp, and toe ring of malleable iron. Duck bill hook and pike hammered out of crucible steel. Stop prevents hook from falling back onto handle.

## No. 902 Oshkosh Plain Pay-Out Reels

For gang mounting on a wagon when paying out several wires at one time.

Made of hardwood, braced and reinforced with sheet steel.

Reel pins adjustable for 12, 18, and 24-inch coils.

No. 902, Wt. 40 Lb. .... each \$21.50

**Oshkosh Combination Pay-Out and Take-Up Reels**

As a Pay-Out Reel

A pay-out and take-up reel, all in one. It is lightweight, yet strong and durably constructed. The frame is made of tubing. Easy portability; the guide pins fold flat so that the whole reel is compact and easy to carry or slide in truck.

The guide pins are easily and quickly adjustable to take any size coil of wire from 13 to 27 inches inside diameter, to 34 inches outside diameter.

The automatic brake is another feature. As the wire is pulled the brake releases and the wire pays out freely. The instant tension is released, the brake sets and any possibility of back-lashing is prevented.

For converting into a take-up reel 2 braces are furnished which hold the reel in an upright position. Hand crank attached for ease in taking up wire.

The carrier frame is removable so that the reel can be bolted to a truck. A thumb screw terminal is provided for grounding the reel.

Length overall, 63 inches; width, 34 inches; height overall (guides up), 13 1/4 inches; height overall (guides down) 8 3/4 inches.

Weight, 75 pounds.

Reel, Complete.....each \$100.00  
Reel, less Carrier Frame.....each 80.00

**No. 900 Oshkosh Barrow Reels  
Heavy Western Union Type—With Guards**

Used for heavy wire and heavy work.

Made of hardwood, braced and reinforced with steel. A wide bearing, together with a long pivot and sleeve, allow the reel to turn easily. Rests on strong, steel legs.

Reel pins adjustable for 12, 18, and 24-inch coils.

No. 900, Weight 80 Pounds.....each \$41.75  
No. 901, Extra Pins, Weight 4 Pounds...per set of 4 4.50

**No. 897 Oshkosh Folding Take-Up Reels**

The reel part collapses and automatically throws off the coil at the same time and in an instant is ready for another coil. The frame, made of heavy hardwood, is strong and heavily reinforced throughout and folds up like a hinge.

Reel is made of malleable iron and steel.

It can be taken down in a moment merely pulling the pin out of the shaft, throwing off the coil and folding up the frame.

Take-up, 21 inches. Weight, 42 pounds.

No. 897.....each \$30.35

**Hubbard Wire Stringing Pulleys**

Cadmium Plated

**No. 1240 Pin Type**

Designed to slip over the top of a 1 3/8-inch pin thread for pulling in and sagging conductors.

Sheave wheels are equipped with oil retaining bronze bushings.

Cast malleable with cadmium plate.

All surfaces are designed to prevent injury to pin threads or conductors.

No.	Style	Clearance for Conductor Inches	Attach Bolt Size Inches	Approx. Ship. Wt. Lb. per 100
1240	Pin	1 5/32	5/8	335

**No. 1243 Angle Type**

Serves the same purpose as the pin type except that it is designed for attachment to disc or suspension insulators.

Clevis clearance is 7/8-inch and wire capacity is 1 1/2 inch.

No.	Style	Clearance for Conductor Inches	Attach Bolt Size Inches	Approx. Ship. Wt. Lb. per 100
1243	Suspension	1 5/32	5/8	335

Prices upon application.

**Oshkosh Warning Signs**

This warning sign is light in weight, yet durable. Legs are of 1/2-inch high carbon steel. Has 1 1/4-inch flange around edge of lettered side.

Has two hollow handles for adjusting angle of the legs. These handles also serve as flag sockets, and each is equipped with a lantern lock.

Black letters, 5 1/2 inches high, on traffic yellow background.

Height, 43 inches.

Width, 28 inches.

Thickness, 1 1/4 inches.

Size folded, 28x28x1 1/4 inches.

Weight, 23 pounds.

Warning Sign.....each \$11.60

**Coffing Flag Holders and Flags**

Flag Holder is designed to fit all poles. Main body casting and locking handle are made of certified malleable iron. The chain wraps around the pole and hooks into main body of clamp.

Strong coil spring between chain and main body assures tension on locking chain.

Flag is made of 6-ounce army duck. Size, 12x16 inches. Has a 1x18-inch hardwood staff.

Flag.....	each	1.15
Flag Holder and Flag.....	each	2.55

## Leach Portable Folding Barricade

A strong, substantial barricade, exceptionally neat in appearance and efficient in operation. Easily and quickly taken down and folded into a small, compact bundle. Stacks easily and safely and takes up only a small space in truck or warehouse.

To quickly set up, open the legs, latch the cross-piece, put in the cross-rail and turn the handle.

The cross-rail is held like a piece of wood in a vise which allows the use of various thicknesses of wood from 1 to 3 inches.

Jaws are not equipped with teeth, thus, they do not chew up the wood cross-rails.

Equipped with extension swivel which is used to erect a square barricade.

Features a flag socket in the screw handle which is 4½ inches deep to hold a danger or warning flag.

Furnished with a latern lock welded to the screw handle. Orange finish.

## Central Linemen's Red Flare Lights

Used for quick general illumination and as warning signal in case of highway accidents or breakdowns. Also used for parades, rallies, and outdoor celebrations.

Burns with a brilliant red light.

Equipped with spike point and friction cap ignition.

No. 2720, packed in case of 72 (Spike Point), weight, 50 pounds.

No. 2730, packed in case of 36 (Spike Point), weight, 34 pounds.

No. 2720, Burns for 20 Minutes.....per case \$12.25

No. 2730, Burns for 30 Minutes.....per case 7.50

## Central Linemen's Yellow Flare Lights

Used as an emergency light and as a warning signal in case of truck breakdowns or when power lines are down on highway.

Burns with a brilliant silvery yellow light.

Not effected by wind, rain or snow.

Equipped with friction cap ignition, spike point, and removable handle.

No. 3020, packed in case of 72 (12 cartons), weight, 62 pounds.

No. 3030, packed in case of 36 (6 cartons), weight 45 pounds.

No. 3020, Burns for 20 Minutes.....per case \$13.50

No. 3030, Burns for 30 Minutes.....per case 9.75

## Amco All Weather Manila Rope

This is the very best manila rope. It is made entirely of select long fiber Phillipine Hemp by the American Manufacturing Company, Brooklyn, New York, one of the world's largest cordage mills. Amco All Weather Manila Rope is treated with a special waterproofing and rotproofing solution to insure long life and serviceability. It is made in a full range of sizes for all utility and industrial uses.

Also available American Brand Pure Manila Rope—Regular No. 1 Rope.

Larger size specifications upon request.

Four-strand weights about 7 per cent more than 3 strand.

**Oshkosh Safety Extension Ladders**

A lightweight, safety extension ladder designed expressly for public utilities.

Equipped with an automatic safety lock or latch. This lock is so arranged that when pulling on the raising rope, the lock is lifted out of position. The instant the strain on the rope is slackened, the lock drops in place. In lowering, the extension must be lowered slowly. It cannot accidentally drop.

The side rails are made from straight grained, properly seasoned aeroplane spruce.

The rungs are made from tough mountain hickory, straight grained. Each rung has a shouldered tenon joint which is pressed tightly into the side rails, assuring a safe, tight fit. The side rails of each section are connected at top, middle, and bottom with steel tie-rods. This combination makes a rugged, durable construction. Either section can be used separately as an individual ladder, both being equipped with safety tips and pikes.

Other safety features include corrugated rubber tips, transparent safety finish, safety pole-grippers, and rubber guarded safety pikes. All metal parts are parkerized. Furnished in full range of lengths in multiples of 2 feet.

Weight, 2 pounds per foot, average.

Lgth. Feet	Each	Lgth. Feet	Each
16	\$29.60	32	\$59.20
18	33.30	34	62.90

24	44.40	40	74.00
26	48.10	42	77.70
28	51.80	44	81.40
30	55.50	46	85.10

**Oshkosh Sectional Ladders**

Each section is 6 feet long, making a handy ladder to have around for miscellaneous uses where a long extension ladder is larger than the need requires.

For small service trucks, one or two of these sections can be hooked on and carried around all the time so that a ladder is always handy for emergency use.

The sections join together interchangeably, lapping 1 foot. One section fits into the other at either end as shown in the illustration. The joint is stiff, solid and secure.

Outside width of top, 16½ inches; inside width of bottom, 17 inches; rungs diameter, 1½ inches; size rails, 1½x2¾ inches.

Side rails are selected aeroplane spruce; rungs are straight grained mountain hickory; metals, Parkerized steel.

Special transparent finish.

Rubber pikes at bottom, on special order.

Weight per running foot, 2 pounds.

Per Section .....\$9.30

Section Which Fits Into End

**Babcock Mechanics' Step Ladders**

Used by mechanics, electricians, carpenters, painters and masons.

Each step is reinforced by a strong steel rod under step with block in center, forming a truss rod and equipped with strong and durable hinges or ears, securely riveted.

Made of clear stock: 1½-inch hickory rungs. Front, 7⁄8x3 inches; back legs, 1½x2¼ inches; steps, 7⁄8x3¾ inches.

Furnished with bucket shelf.

Lengths, 4, 5, 6, 7, 8, 10, 12, 14 and 16 feet.

Prices upon application.

**Safety Step Ladders**

Especially designed for heavy work. Made from 1¼-inch stock, well braced, every step reinforced. All parts heavily riveted. The back is equipped with oval oak bars. The hinges and spreaders are of 1¼-inch iron.

Front, 1½x3¾ inches; back bars, 7⁄8x1¾ inches; back legs, 1½x2½ inches; steps, 1x3¾ inches.

Made of air dried stock in lengths of 4 to 22 feet.

## No. 777 Bartlett Two-Hand Pruners

Due to the fact that the majority of men are right-handed, the blade has been placed on the opposite side than is the general custom. This permits the blade to be placed next to the body or main limb of the tree with the hook handle held in left hand, while the right hand operates the blade.

Hook remains stationary while blade closes, instead of blade being held stationary while hook closes by twisting around the branch, wounding the bark.

Blade positively will not cut or dig into the hook. By dropping the hook considerably below the center line, a superior positive draw cut has been produced, with an opening between blade and hook, allowing a straight thrust at the branch.

Both blade and hook are hardened drop forged crucible tool steel. Has white ash handle.

26-Inch Handle with 10-Inch Strap Ferrule..... each \$5.00  
 26-Inch Handle with 4½-Inch Plain Ferrule..... each 4.75

### Porter Foresters

No. 2 is recommended as a forestry tool for pine pruning and rust control.

No. 3 cuts hardwood such as oak, maple and beech; for reforestation work such as brush cutting, trail clearing, etc.

Has slide shift 3-power slot which provides great extra power in the middle of a difficult cut. Edges are protected when handles are closed. All parts heat treated; fully interchangeable. Cuts clean, no damage to bark.

**No. 1-W Bartlett Pulley Type Tree Trimmers**

A very powerful cutting tool.

It not only has the compound lever, but it also has double leverage due to the pulley which is attached to the curved lever.

Will sever any branch up to 1 1/4-inch diameter, and the pulley enables the operator to pull the rope at any angle. A special coil spring positively returns the blade to a full cutting position.

An important feature of this tree trimmer is the light weight, the head complete weighing only 1 1/4 pounds.

All poles have two coats of waterproof shellac to prevent moisture absorption.

Furnished with 1 1/4x1 1/8-inch rectangular poles, one piece poles or short sections joined together with No. 156 brass sleeves which have a positive locking device.

**With Rectangular Pole and No. P156-2 Ferrule**

4-Foot Length.....	each	\$8.85

4-Foot Length.....	each	\$3.50
6-Foot Length.....	each	4.20
8-Foot Length.....	each	4.90
10-Foot Length.....	each	5.60

Six and 8-foot octagon poles with round sleeves are obtainable if desired.

**No. 44 Bartlett Pole Saws**

For large limbs.

Has 16-inch peg tooth blade with 7 teeth per inch. Saw is securely held by the head, which is stamped from stiff cold rolled steel and fastened to the pole by three bolts.

Head is made of two strips of steel riveted together so as to secure a truss shaped support for the blade, which is fastened between the two sides. Hook serves as a means for hanging the tool on a limb when not in use.

Saw can be adjusted to three angles to suit operator's position and the blade is ground for clearance, which prevents binding.

File blade with No. 395 cant file.

Furnished without ferrule.

Size pole, 1 1/4x1 1/8 inches.

4-Foot Length.....	each	\$6.20
6-Foot Length.....	each	6.60
8-Foot Length.....	each	7.00
10-Foot Length.....	each	7.40

14-Foot Length.....	each	8.20
16-Foot Length.....	each	8.60

Paint brush clip will be attached to side of pole near head at 50 cents extra when desired.

No. P156-2 ferrule attached at 50 cents each, when extra sections are ordered.

**Bartlett Combination Pruners and Saws**

**Octagon Poles**

This combination has two separate tools for head sections, mounted on short pieces of 1 1/4-inch octagon sitka spruce poles, with No. 146-2 round ferrule attached to the lower end and extra 6 or 8-foot octagon section fitted with round brass sleeve body which engages the ferrule and locks securely.

Combination makes it possible to use either head with same handle section, and several intermediate lengths can be added if desired.

For convenience in shipping, head sections may be ordered without extra sections if desired.

No. 1-WE, 30-Inch Head Section, Wt., 2 3/4 Lb....	each	\$6.90

No. 146-1 Sleeve Body, Complete.....	each	1.45
No. 146-2 Sleeve Ferrule.....	each	.65

**No. 50 Bartlett Safety Back Pole Saws**

Constructed to give the maximum amount of safety possible in hazardous work.

Bent wood back tapers from standard size pole to a narrow point which enables the user to operate the saw in close crotches.

In order to make the cutting most effective the cutting head has been designed so that the blade can be turned to three positions by simply loosening the thumb nut and turning the knurled holder until the pin drops into the desired position, then again tightening the thumb nut with the lower pin in a position corresponding to the upper end.

Steel blade is 36 inches long and 7/8 inch wide, having a draw cut of 5 points per inch, and will cut with great rapidity.

Saw has a cutting capacity of 5 inches.

File blade with No. 390 slim file.

5-Ft. Top Section with Blade and No. 156-2 Ferrule.....	each	\$9.40
4-Ft. Section with Sleeve Body.....	each	2.85

10-Ft. Section with Sleeve Body.....	each	4.95

**Newman Curved Type Tree Saws**

Designed for cutting limbs over 1 1/2 inches in diameter, and where blade with slight curve is required.

Adjustable to three angles.

Blade is long and is ground for clearance to prevent binding.

Separate extension handles may be used or the extension handles on Nos. 700, 800, and 900 trimmers may be used.

Overall length of saw and ferrule equipped handle, 6 1/2 feet. Weight, 3 3/4 pounds.

No. 1300, for 1 1/2-Inch Pole.....	each	\$7.20
No. 1300A, for 1 1/4-Inch Pole.....	each	7.20

## Newman Swedish Steel Tree Saws

Designed for cutting limbs up to 4 inches in diameter. By undercutting, limbs up to 8 inches in diameter can be cut. Saw cuts on the draw, thus giving maximum ease of operation. Long blade, 35½ in. in length. Overall length, 4 ft. No. 1200, for 1½-Inch Pole.....each \$10.50  
No. 1200A, for 1¼-Inch Pole.....each 10.50

## Newman Heavy Duty Tree Trimmers

Will cut 1½-inch tree limbs because the knife shears down from the top. Gravity spreads the cut behind the knife; and wedging or choking is eliminated.

Trimmer is hung on the limb and the cut made by pulling the rope. High-powered leverage is provided by compound toggle lever and double pulleys. A broad ½-inch anvil base, against which the blade cuts, holds the tool in alignment with the limb so there is no side stress on the cutter.

Cutter head parts is aluminum heat treated alloy casting. The cutting blade itself is made of high chrome, high carbon tool steel carefully tempered for maximum strength. Metal parts are rust resistant plated.

No. 900, with 1½-Inch Pole and Multiple Pulley Action; Complete with Two 5-Foot Sections, 10 Feet Overall; Weight, 6½ Pounds.....each \$13.45

No. 975, Additional Center Section; 5 Feet Long; ½ Inches Diameter; Weight 2 Pounds.....each 2.75

## No. 915 Oshkosh Tree Trimmers

This trimmer has positive locking ferrules.

Head is made of two pieces of light forged steel, reinforced and riveted together. These sides act as a guide for the thin saw steel cutting blade. Blade is pivoted and starts cutting with a slicing motion the moment the rope is pulled. Cuts limbs up to 1½ inches in diameter.

Handle is made in three sections of 1½-inch diameter straight-grained, clear Washington fir. One 6-foot section is attached to head and two 7-foot lengths; all equipped with couplings. Furnished complete with handle and a short section of rope to which can easily be attached any kind and size of rope. One-half-inch rope is suggested for best results.

No. 915, Trimmer, less Rope. Wt. 13 Lb.....each \$17.95

No. 915B, Extra Blade. Wt. 10 Oz.....each 4.75

No. 915S, Extra Spring. Wt. 2 Oz.....each .85

No. 915EM, Extra 7-Ft. Middle Ext. Wt. 4 Lb. each 5.45

No. 915EE, Extra 7-Ft. End Extension. Wt. 4 Lb. each 4.00

No. 915R, 20-Foot Rope with Connector. Wt. 4 Oz.....each 3.30

## No. 916 Oshkosh Tree Saws

Saw blade is strong, thin, and has fine teeth. It cuts clean. Blade is fastened in the frame.

Steel frame has hook for hanging saw in tree. The 6-inch handle has a ferrule on bottom to which can be connected the regular extensions of the trimmer.

No. 916, Saw. Weight 5 Pounds.....each \$10.90

No. 916B, Extra Blade. Weight 4 Ounces.....each 2.65

No. 916T, Extra Tightener. Weight 4 Ounces.....each 2.15

## No. 1000 Newman Longrange Wire Cutters

For Overhead Wires

Used to cut wires overhead where manual applied energy is at a minimum and where the operator must dodge a falling wire after it has been cut.

Cuts energized or cold lines and cables by the hot stick method with extensions.

Ideal for holding, leading or wrapping hot lines overhead at a safe distance.

Jaw opening of 1½ inches permits cutting or cleaning of wire in conduit.

Circular cutting action of jaw gives a smooth cut.

Handles are tested for 75,000 volts as is operating rope.

Insulating materials will not gum jaws.

Overall length, 4 feet.

Additional 4-foot extensions are available.

Weight, 6 pounds.

No. 1000.....each \$25.00

No. 1050, Replacement Blade, Wt., ½ Lb.....each 5.00

No. 925, Replacement Spring. Wt., 2 Ounces.....each .30

No. 1085, 5-Foot End Ext. Handle, Wt. 1¼ Lb. each 5.00

## No. 700 Newman Featherweight Tree Trimmers

Used for topping or work in the tree.

Cuts limbs and branches up to 1 inch in diameter.

Has single action pulley design.

All pulleys are ball bearing for easier operation.

Overall length, 10 feet.

Handle diameter, 1¼ inches.

No. 700, Weight, 4¾ Pounds.....each \$9.50

### Accessories

No. 750, Replacement Blade.....each \$2.75

No. 875, Center Extension Handle.....each 2.75

No. 885, End Extension Handle.....each 2.75

## No. 800 Newman Bantamweight Tree Trimmers

For trimming limbs and branches from trees. Also light enough for horizontal use in the tree.

Cutting capacity, 1 inch.

Overall length, 10 feet consisting of a 5-foot head or cutting section, 5-foot end extension. For longer use, a 5-foot center extension is available.

All pulleys are ball bearing for easier operation.

Handle diameter, 1¼ inches.

No. 800, Weight, 5¼ Pounds.....each \$12.50

### Accessories

No. 750, Replacement Blade.....each \$2.75

No. 875, Center Extension Handle.....each 2.75

No. 855, End Extension Handle.....each 2.75

**No. 12035 M.S.A. 10-Unit All Weather First Aid Kits**

Contains complete assortment of first aid materials in standard Type D packages of unit size or multiples of unit size.

Kit case is weatherproof, dustproof, and is strongly made of welded heavy gage steel.

Each dressing is complete in itself, sterilized and sealed, with sufficient material for a single treatment.

Liquids are hermetically sealed in ampoules or vials to prevent leakage. Unit packages fit like blocks in case to simplify refilling.

Furnished with mounting brackets.

**Contents:** 1 package, 4-inch compress bandage; 1 package 2-inch compress bandage; 2 packages 1-inch adhesive bandage; 1 package Foille for burns; 1 package Iodine brushes; 1 package Ammonia inhalants; 1 package 40-inch triangular bandage; 1 package tourniquet and forceps.

**No. 12037 M.S.A. 24-Unit All Weather First Aid Kits**

Contains complete assortment of first aid materials in standard Type D packages in unit size or multiples of unit size.

Kit case is weatherproof, dustproof, and is strongly made of welded heavy gage steel.

Each dressing is complete in itself, sterilized and sealed, with sufficient material for a single treatment.

Liquids are hermetically sealed in ampoules or vials to prevent leakage. Unit packages

fit like blocks in case to simplify refilling.

Furnished with mounting brackets.

**Contents:** 3 packages 4-inch compress bandage; 3 packages 2-inch compress bandage; 3 packages 1-inch adhesive compresses; 2 packages 40-inch triangular bandage; 2 packages Foille for burns; 2 packages absorbent gauze compress; 2 packages Iodine brushes; 1 package Ammonia inhalants; 1 package Ammonia ampoules; 1 package wire splint; 1 package 4-inch gauze bandage; 1 package paper cups; 1 package tourniquet and forceps.

**No. FA-2294 M.S.A. Pocket First Aid Packets**

Contains a handy assortment of first aid materials for minor injuries, arranged in a metal box small enough to fit in the pocket.

Contents include ammonia inhalants, iodine applicator, adhesive compresses, compress bandages, and Foille for burns.

**No. FA-12619 M.S.A. Snake Bite Outfits**

Consists of a plastic suction syringe for removing venom by suction, lancet for enlarging wound, U. S. Army tourniquet, Iodine ampoule for painting wound, Ammonia inhalant, and paper cup. All contained in a sturdy plastic case.

Furnished in 1½-unit Type D package with instructions.

**No. FA-2682 M.S.A. Poison Ivy Wash**

Type D package of six 4 c.c. vials.

When applied in early stages, effectively relieves irritation and dries up inflammation.

**No. FA-2604 Creosote-Burn Wash**

Type D package of six 4 c.c. vials for effective treatment of burns or irritations of the skin caused by contact with creosote from line poles, ties, and creosoted timber.

**No. FB-12560 Foille for Burns**

Modern burn treatment for emergency and hospital use.

May be applied directly to injured area at scene of accident; does not require removal when treatment is continued by physician. Provides quicker emergency aid with marked control of pain and resultant shock.

Rapidly anesthetizes injured tissues with characteristic absence of infection.

Aids rapid healing, lessens contractures, and reduces scarring.

Type D package contains two 5/8-ounce tubes with instructions on package.

Available in emulsion or ointment. Also available in larger packages.

**Dillon Temperometers**

Used for obtaining temperatures of paraffin, compounds, wiping solder, impregnation wax, cable damming waxes, etc. Has large, easy to read dial and convenient handle.

Dimensions: dial diameter, 2½ inches; length of handle, 5½ inches; size of tube, 3/4 inches; overall length, 9 inches. Weight, 11 ounces.

Each..... \$6.00

**Dillon Bisectors**

Used to locate correct anchor positions for poles and to read the pull needed. Registers interior corner angle degrees.  
 Dimensions: length, 8 $\frac{3}{4}$  inches; width,  $\frac{5}{8}$  inches; depth 1 $\frac{3}{8}$  inches. Weight, 5 ounces. Shipping weight, 14 ounces. Each..... \$4.95

**Type CW Matthews Teleheights**

Used by central stations, telephone and telegraph companies to secure height of poles, trees, etc. Used for figuring cubical contents of buildings, clearance of bridges, highlines, etc.

To find height A, stand away from A until bubble and line cross each other. Then measure off distance CD and add distance CB. The sum will equal DA.

Furnished with leather carrying case. Length, 5 inches. Type CW.....each \$24.00

**Type L Matthews Woodpecker Telefaults**

Used on telephone, telegraph, signal and certain other cables.

A self-contained instrument that will locate water, shorts of all kinds, crosses, grounds, split pairs—every kind of cable trouble except opens.

Uses one dry cell battery. Maximum voltage, under 5. No batteries furnished.

Cannot be confused with other inductive noises—has a tone like a woodpecker on a pole.

Type L, Complete with Coil, Cord, and Receiver, Weight 9 Pounds.....each \$130.00  
 Extra Exploring Coils.....each 32.00  
 Extra Receivers.....each 14.00

**Model A Dillon Cable Testers and Locators**

**Combined**

Used to locate where a cable or pipe is buried at and to determine at which depth cable or pipe is buried.

Locates the exact path that a service pipe or cable takes to reach any building and position of a water main in street or alley.

Has a lamp circuit for checking all connections after the test has been set up.

Especially valuable for checking depth of cable at river crossings or for determining whether or not a service pipe is below frost line after a street has been lowered or regraded.

Furnished with detector coil and neutral exploring coil. Built-in level in level enables the operator to maintain absolute level for accuracy.

Dimensions: 11 $\frac{1}{4}$ x7 $\frac{1}{2}$ x12 $\frac{1}{2}$  inches.

Weight, 21 $\frac{1}{2}$  pounds.

Shipping weight, 23 pounds.

Model A.....each \$76.00

**Dillon Model AN Dynamometers**

An instrument of the traction type which is used for the determination of strain and adapted for a wide variety of uses where traction or pull is to be measured.

The force of the pull, passed through the instrument causes a deformation which is indirectly proportional to the load and which is measured by mechanical means.

Operates on the basic scientific principle of the bending of a beam from a true straight line. The beam in this case consists of a solid bar of special alloy steel, heat treated and properly aged to prevent later "growth". Drilled slightly off axial center at each end of the beam is a hole through which shackle is passed. As load is applied to these off center holes, the beam is slightly deformed. This deformation is accurately indicated by a gage movement and amounts to only forty-thousandths of an inch for a full scale 360 degree reading.

Readings are direct for the exerted force is translated directly into pounds on the face of the dial.  
 Dimensions: 8 $\frac{1}{4}$ x6 $\frac{1}{4}$ x3 inches.  
 Weight: with shackles, and carrying case, 11 $\frac{1}{16}$  pounds; without shackles and carrying case, 5 $\frac{5}{8}$  pounds; shipping weight, 14 pounds.

20,000-Pound Capacity (250-Pound Divisions)...each \$175.00

15,000-Pound Capacity (125-Pound Divisions)...each 146.00

**B & L Star Brand Aluminum Shell Conductor Stringing Snatch Blocks**

For Aluminum Cable  
Drop Forged Flatted Swivel Hooks, Heads and Links

No. PU2341-A Drop Link Pattern      No. PU2342 Safety Locking Pattern

Furnished in drop link or safety locking pattern.

Lynite roller bearing sheaves with polished scores.

This snatch block is made almost entirely of high-grade aluminum, combining lightness with strength, and is used in stringing aluminum conductors.

The main strain is taken through the drop forged swivel hook

attached to the drop forged steel straps which never come in contact with the conductor.

The PU 2341 drop link pattern furnished unless otherwise specified. When ordering specify number, size of sheave with size of cable to be used.

**Cable Spinning Equipment**

The following list of equipment was designed to support and maintain aerial cable and wires to steel supporting strand by the spinner method, which consists of spiraling a wire of suitable size and material around the wires or cable to be supported and the supporting strand. This method has proved its worth and has been adopted as standard practice.

**No. 300 Neale Model D Spinners and Chests Pull Type**

Designed for use by a construction gang to place and spin new cable or maintenance spinning of existing cable.

Operates on 10 ball bearing surfaces.

Adjustable to take cable from 11 pair, 26 gage to the maximum size 909 pair, 24 gage, sheath diameter 2¼ inches.

Ring pusher is removable. Wire supply is always visible.

Will operate with either .091 or .061-inch spinning wire.

A ratchet on the strand wheel prevents slack in the spinning wire when pull on tow line is released.

Length, 24 in. Diameter, 10 in. Weight, 42 pounds.

Furnished with one lashing wire clamp.

Packed in a durable chest made of ½-inch plywood reinforced with metal on all edges and corners. Weight of chest empty, 33 pounds.

**No. 100 Neale Model B Spinners and Chests**

A one-man machine to place and spin new cable or for maintenance spinning of existing cable. Operated either by a hand crank or may be pulled along the supporting strand by a man on the ground. A dead weight of 50 to 100 pounds can be substituted for a rider in order to prevent slippage.

The two supporting trolley wheels are connected together by means of a bicycle chain. A removable gate is provided in the spinner head, which permits the spinner to be placed over strand and cable at the beginning of a span and readily removed when the next pole is reached. Has ball bearings at all points of wear. Frame is made of steel tubing. Chain drive is geared for upgrades.

Wire is carried on an aluminum reel which holds approximately 325 feet of wire.

Furnished with three sets of rollers to accommodate different sizes of cable. Equipment includes spinner chest, seat and safety belt, one tube of grease, and one spinning wire clamp. All metal parts not aluminum or bronze are cadmium plated.

Packed in a durable chest made of ½-inch plywood reinforced with metal on all edges and corners. Weight of chest empty, 53 pounds.

## Cable Spinning Equipment

**No. HB3 S&S Hand Line Block** is a tool especially designed for spun cable but is also used on cable supported by other methods. It clamps on the strand without damage to the cable and will not slip on a grade. No wrench is needed. Made of bronze alloy. Length, 10 inches. Weight, 4 pounds.

No. HB3

**No. LC5 Neale Spinning Wire Clamp** is a positive action clamp to hold the spinning wire in place when terminating at the pole and to keep the slack from running back when repairing cable. Made of bronze alloy with cadmium plated screw. Length closed, 3 1/4 inches. Length open, 4 1/2 inches. Weight, 1 pound.

No. LC5

## No. 27 Chance Rubber Wheel Flexible Safety Cable Car

This car can be collapsed, strapped or tied for convenient transportation. Adjustable up or down, by snaps and chain. Chain is made of steel, electric welded on sides of links to guard against weld opening. Snaps used are linemen's snaps of drop forged, galvanized steel.

Holes are provided in open side of car frame for snapping on safety belt.

Car is equipped with hand brake to hold chair stationary.

Seat is made of high grade fir lumber, reinforced with

strap steel imbedded in wood.

Width, 21 inches. Weight packed, 27 pounds.

No. 27.....each .....

## No. 600 Peirce Lineman's Safety Platforms

PATENTED

Used for connecting transformers, making up cable joints, replacing and washing hi-line insulators, and soldering joints.

Width, 9 5/8 inches. Length, 71 inches.

No. 600. Ship. Wt. Each, 50 Pounds. . . . per 100 \$11,494.31

## Hubbard Pole Seats

Hot Galvanized

Will support more than three fourths of a tonsafely.

The frames and braces of all sizes are of 1 1/2 inch channel steel, except No. 9030, which is constructed of 7/8-inch round steel.

The wood seats are 1 1/8-inch cypress, boiled in creosote. The bars of the all-steel seats are 3/8-inch square steel, secured to frame in such a manner as to leave no projecting ends. There is no strain on riveted joints. Bars are placed with corners up to prevent slipping.

## Hubbard Pole Balconies

Hot Galvanized

No. 9035

Used for convenience and comfort in telephone terminal box work and serves as switching platform with power companies.

Frame, braces and guard rails of No. 9035 are made of open hearth steel, galvanized by hot-dip process. Wooden platform is of thoroughly seasoned oak, painted with two coats of standard green pole paint.

Nos. 9035 and 9045 are identical except that the railing on No. 9035 fastens to a telephone terminal box and the railing on No. 9045 fastens to the pole.

Upright braces are 1 1/2x1 1/2x3/8 inch steel; the platform supports, 1 3/4x1 3/4x3/8 inch angle steel; and the guard rail of 1 1/4 inch flat steel.

The complete balcony includes all bolts for fastening parts together but not the bolts for attaching to pole.

**Chance Economy Platforms**

Used wherever a board of 24 or 30 inches in length is required or where maximum economy is desired.

Easily attached to pole by a single chain tightener. There is no brace pole, the board being fully supported by its mounting bracket.

Recommended for use where working space is limited.

Will support the weight of one man. Has been tested to loads up to 850 pounds.

On towers, blocks should be placed under the chain on the inside of the tower leg angle in order to give the chain a firm grip.

Top of board finished with grip tread.

Nos. ATG, FTG

No. ZG

A safe and fast ratchet lever hoist. Equipped with a dual ratchet and pawl assembly, independent of each other, therefore the load is always under control. There is no clutch to slip and the hoist cannot drop its load.

Because of its adaptability to all types of work where a full stroke of the handle is permitted this single pawl hoist is the choice of most light and power and telephone construction and maintenance crews. Can be used for lifting or pulling.

Has side lever for positive up or down and a neutral position for automatic safety control, making hoist easy to operate. Has free chain feature, that is, when there is no load on hoist a slight pressure on thumb latch on side of lever allows load chain to be pulled through hoist, either up or down, without operating lever.

Malleable iron safety-valve handle will bend at maximum overload before chain will break or hooks will straighten out. Reversible handle. Safety stops prevent handle from spinning in case operator's hand should slip off handle.

All Safety Pull hoists are factory tested at 100 percent over their rated capacity.

Nos. ATG, FTG and ZG hoists are readily converted by unsnapping the special snap hook from connecting link at bottom of hoist and allowing snap hook to act as a lug, preventing end of chain from passing through the super block.

No.	Each	Extra Lift per Foot	Rated between Cap. Tons	Min. Lift Speed per Hooks In.	Lift Min. In.	Lb. on Lever to Lift Rated Cap.	Std. Lift Inches	Wt. Lb.

WG15	330.00	18.00	15	30	6	124	60	150

\*If wanted with intermediate locking pawl, add \$5.50 to list.

NOTE. By attaching a special iron block, called a super attachment, to Nos. AG or FG along with 5 feet of chain, to keep the standard 5-foot lift, they can be converted into double their rated lifting capacities. Super attachment for No. AG, \$5.55; for No. FG, \$7.20.

## Coffing Quik-Lift Electric Hoists

Standard Lift, 8 Feet

With Hook Suspension

With Trolley Suspension

Heavy duty motor, ball bearing, high starting torque. Can be plugged into any a-c or d-c circuit. Fool-proof safety limit switches automatically stop operation of hoist.

Hoist with trolley suspension has Hyatt roller bearings. Furnished with lubri-seal ball bearings throughout. Gears and pinions made of special alloy steel, heat-treated cut teeth. Gear system sealed and running in oil. Hooks made of drop-forged alloy steel, heat-treated to stand 200 per cent over rated capacity.

Extra heavy load chain is made of special alloy steel. Will not kink or bend. Sheave is extra heavy steel casting.

Sensitive pendant rope control permits load to be raised or lowered a fractional part of an inch.

When ordering, state voltage, phase and cycle, lifting speed, and whether for a.c. or d.c.

The letter D signifies that hoist has a double chain.

Motor specifications, other than above, furnished upon application.

## Model YC Coffing Ball Bearing Spur-Geared Chain Hoists

Top hooks and load hooks are made of drop forged heat treated steel and are tested at more than 100 per cent over their rated capacity without any signs of yielding.

Extra heavy certified malleable iron cross-head assures maximum strength and permits rocking motion of hoist.

Heavy suspension plates provide support between top hook crosshead and load sheave. Also support the malleable iron saddle for double chain hookup. On double chain hoists, these plates eliminate the use of a top yoke, reducing weight and headroom and permitting hoist to hang evenly at all times.

Weston automatic load brake securely holds load at any desired position. A slight pull on hand chain is required to lower load. Dust guard protects brake from dust and dirt.

Load sheave is large and heavy and is a special Zee metal casting with pockets formed to fit steel links of load chain.

Driving pinion is made of special alloy steel to resist breaking, twisting and bending.

The load sheave is mounted on two heavy precision ball bearings, enclosed and protected from dust and grit, eliminating friction.

Load chain is made of high grade steel, electric welded, heat treated and at the proper pitch to fit the sheave pockets perfectly. At a maximum overload this chain will stretch before breaking.

Planetary spur-geared type gear system. Gears are mounted on bronze bushings and enclosed in a pressed steel cover. The gear pressure is so balanced that practically all friction is eliminated and efficiency increased.

Sturdy malleable iron hand chain guide prevents snagging and fouling of hand chain.

A heavy steel anti-friction Timken thrust bearing permits free swiveling of the load hook.

Highly polished steel hand chain fits perfectly into the pockets of the hand chain wheel.

**Coffing Power Pike Poles**

This pole is built of two pieces of galvanized pipe, one telescoping the other. Power is obtained through the use of a Coffing Load Binder or Safety-Pull Hoist.

For straightening leaning poles one man, with this tool, can do the work of from two to six men.

Pole has a heavy steel base. Top cannot slip off pole.

Load binder or hoist can be used for many other purposes.

Height: minimum, 8 feet 2 inches; maximum, 11 feet 7 inches.

Weight 32 pounds.

Complete with Model A Load Binder.....each **\$35.45**  
 Pole Only.....each **18.20**

**Coffing Midget Light Line Pullers**

A tool for pulling telephone and light wires, and for many other uses. Puilt on the ratchet and/or crank principle.

Equipped with roller chain, five feet long.

Rated capacity, 600 pounds. Handle so constructed with a safety feature that it will bend at 100 per cent overload.

Each, Wt. 6 lbs. .... **\$24.95**  
 Extra Chain.....per foot **.60**

**Coffing Load Binders**

Drop-forged steel hooks with swivels on both ends. The take-up is 5/8 inch to each stroke of the handle.

If load becomes loose, it can be bound tight simply by drawing on lever. After load is taken off chain, both levers can be tripped at once and chain can be pulled through binder free.

Can also be used as a hoist and for stretching wire or cable.

**Coffing Temporary Cross Arms**

Built to stand hard usage. Weighs much less than a standard cross arm, and no line truck should be without at least one set.

No. 10-A

For electric work. Hooks are self-locking, made of certified malleable iron, large enough to hold line hose to prevent current from arcing.

No. 10-A.....each **\$17.55**

No. 10-C

For changing cross arms on corners.

No. 10-C.....each **\$14.95**

**Coffing Temporary Guy Clamps**

Built on the vise principle, with vise screw enclosed in a steel magazine. Has a powerful grip, is easy to handle and indispensable for necking guys.

Prevents driving 3-bolt clamp on neck and thus stripping off the protective coating.

An automatic grip placed on one end permits necking as close to the pole as desired without slipping.

Weight, 3 1/2 pounds.  
 Each..... **\$3.50**

**Coffing Transformer Gins**

Model ST

Model OST

Model WT

Tested to more than 3000 pounds without yielding.

Clamps on side of pole. Malleable iron and steel.  
 Model ST, Weight, 28 Pounds.....each **\$16.10**

Clamps securely to top of any size pole. Made of special spring steel, angle iron legs and malleable iron clamp.  
 Model OST, Weight, 33 Pounds.....each **\$16.10**

Main body and legs made of seasoned hickory, bolted to malleable iron clamp. Non-conductor of electricity.  
 Model WT, Weight, 28 Pounds.....each **\$16.10**

## Chance Transformer Gins

Heat treated aluminum castings and wooden mast make the Chance Insulated Transformer Gin light in weight, easy to handle, and exceptionally strong. It is designed primarily for hoisting small distribution and rural line transformers, circuit breakers, and reclosers for pole mounting. Gin is applied to pole quickly by the safety locking Chance Chain Tightener. Eye of gin extends out 8½ inches from pole, allowing adequate clearance for hoisting. Rated for 1500 pounds maximum load. Every gin is factory tested before shipment.

No.	Description	Approx. Wt., Lb.
30TG	24-Inch Gin Complete	10 <sup>5</sup> / <sub>8</sub>
30TG-1	36-Inch Gin Complete	11 <sup>1</sup> / <sub>2</sub>

## No. 325 Chance Pole Unloaders

The Chance Safety Trip Pole Unloader features a safety lock pin plus a toggle trip arrangement which prevents release of the load until the lever is pulled by hand line to shift the toggle past dead center. Using this safety trip method, only two men are needed for unloading poles instead of an entire crew. A once hazardous job is made safe.

Safety Pole Unloader Set Complete consists of: 2 safety trips with bolts and large washers; 2 steel rope cables, 25'x<sup>3</sup>/<sub>8</sub>"; 2 thimbleye bolts, <sup>3</sup>/<sub>4</sub>x12 inches with large washers; 4 Crosby wire rope clamps for <sup>3</sup>/<sub>8</sub>-inch wire rope.

Approximate weight, 58½ pounds.

**No. 102-1 Klein Splicing Clamps**

Arranged with 5 round holes for bare wire. For copper wire Nos. 8, 10, 12, 14, 16, B & S. For iron wire Nos. 10, 12, 14, 16, 18, B.W.G. Length, 8 inches.

No. 102-1.....each \$5.70

**No. 102-3 Klein's Splicing Clamps**

Large hole can be used for guy wire or messenger strand. Copper wire Nos. 2, 4, 6, 8, 10 and 12 A. W. G. Iron wire Nos. 4, 6, 8, 10 and 12 B. W. G.

No. 102-3, 10 3/4-Inch. Wt. per Doz., 16 3/4 lbs. ....each \$7.40

**No. 102-30 Klein's Splicing Clamps**

Holes reversed for those who prefer this arrangement

Copper wire Nos. 2, 4, 6, 8, 10, 12 A. W. G. Iron wire Nos. 4, 6, 8, 10, 12, 14 B. W. G. No. 102-30, 10 3/4-Inch. Wt., per Doz., 15 lbs. ....each \$7.40

**No. 102-48 Klein's Splicing Clamps**

Largest hole convenient to bring together guy strand before applying a three bolt clamp.

Copper wire Nos. 0, 2, 4, 6, 8 A. W. G. No. 102-48, 10 3/4-Inch. Wt., per Doz., 15 lbs. ....each \$7.40

**No. 105-15 Klein's Splicing Clamps For Twisting Double Tube Sleeves**

For copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. No. 105-15, Size 8-inch.....each \$6.10

**No. 105-17 Klein's Splicing Clamps**

Has five sets of chamber for twisting double tube sleeves. For copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. No. 105-17, Size 10 1/4-inch.....each \$7.40

**No. 105-31 Klein's Splicing Clamps**

Three double chambers for twisting Nos. 10 and 12 A. W. G. sleeves, Nos. 12, 14, and 17 N. B. S. sleeves. No. 105-31, 8 1/4-Inch. Wt. per Doz., 5 3/4 lb. ....each \$6.10

**No. 132-15 Klein Combination Wire and Sleeve Clamps**

Used for telegraph, telephone and power line work. Has an unusual range of wire and sleeve sizes. Made with 5 round holes for twisting bare wire and an oval opening for guy wire or messenger strand. Copper wires No. 4, 6, 8, 10, 12, A.W.G. Iron wire Nos. 6, 8, 10, 12, 14, B.W.G. Strand opening, .437x.624.

Reverse side has 5 chambers for twisting double tube sleeves. Copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B.W.G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles.

Size, 11 1/4 inches. Weight per dozen, 18 pounds.

No. 132-15.....each \$10.50

**No. 132-46 Klein Wire and Sleeve Clamps**

One side for double tube copper sleeves Nos. 4, 6, 8, 10, and 12 B. W. G. Other side for copper wire Nos. 4, 6, 8, 10, and 12 B. W. G.

Weight per dozen, 17 3/4 pounds.

No. 132-46.....each \$10.50

**No. 132-12 Klein's Combination Wire and Sleeve Clamps**

For telephone and telegraph general line and trouble work. This clamp has four round holes for twisting bare wire.

Copper wire Nos. 6, 8, 10, 12, B. & S.

Iron wire Nos. 8, 10, 12, 14, B. W. G.

The reverse side has four double chambers for twisting sleeves.

Copper sleeves Nos. 8, 10, 12, 14, 17, B. & S.

Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G.

Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle.

Weight per dozen, 11 pounds.

No. 132-12, Size, 9 Inches.....each \$7.70

**No. 132-30 Klein's Combination Wire and Sleeve Clamps**

Sleeve openings are for N.B.S. and B.W.G. sizes 9 and 8 respectively. Remaining five openings cover range of wire sizes used on railroad signal and telegraph work.

No. 132-30, Size, 11 1/4 In., Wt. per Doz., 18 Lb. ....each \$10.50

**No. 132-48 Klein's Copperweld Sleeve Clamps**

This clamp has four chambers for twisting single tube (oval) sleeves used for making joints on copperweld conductors sizes 4A, 6A, 8A, and 3 No. 12. These chambers also accommodate single tube (oval) sleeves as in following table:

Copperweld Size No.	Solid B&S Copper No.	Strand B&S Copper No.	Copperweld Size No.	Solid B&S Copper No.	Strand B&S Copper No.
4A	1	2	8A	4	5
6A	3	4	3 No. 12	5	6

Swing latch holds head securely closed while joint is twisted preventing slippage or burning which might develop otherwise from bowing of handles when twisting larger sleeves.

No. 132-48, Size, 11 1/2 In., Wt. per Doz., 18 Lb. ....each \$12.20

## No. 132-39 Klein's Strand and Wire Holding Tools

This tool serves as a temporary clamp to hold together two sections of strand or wire while placing permanent clamps or splicing and serving.

Openings will fit: 1/16-inch strand (16000-lb. Bell System); 1/8-inch strand (10000-lb. Bell System); 3/16-inch strand (6000-lb. Bell System); 1/4-inch strand (2200-lb. Bell System); 3/4-inch solid No. 12 B.W.G. iron or No. 10 B. & S. copper wire; and 1/2-inch solid No. 13 B.W.G. iron or No. 11 B. & S. copper wire.

Hammer forged from high grade tool steel. Polished head and handles temper blued.

Weight per dozen, 18 pounds.  
No. 132-39, Size, 11 1/4 Inches. . . . . each \$10.50

## No. 132-47 Klein's Wire and Sleeve Clamps

For single tube or oval copper sleeves. Nos. 2, 4, 6, 8, and .104.

Hinge has stop to prevent handles from opening beyond point convenient for clamping on sleeve.

No. 132-47, Weight per Doz., 18 Lbs. . . . . each \$12.20

## No. 132-74 Klein's Wire and Sleeve Clamps

Has three special chambers for twisting single tube or oval (Memco) sleeves Nos. 2, 4, and 6; also an oval (hog) hole .437x.624 for guy strand.

Chambers or openings are a modified figure eight shape, giving a secure hold which prevents burning sleeve when joint is twisted. Swing latch overcomes any spring in handle which might otherwise develop when used on larger sleeves. Stop in hinge prevents handles from opening beyond the point convenient for clamping onto the sleeve.

Hammer forged from high grade tool steel, polished head, temper blued handles. Size, 11 1/2 inches.

No. 132-74, Weight per Dozen, 16 Pounds. . . . . each \$12.20

## No. 107-20 Klein's Di-Stock Sleeve Twisters

For all types of oval or double tube copper or aluminum sleeves from No. 4 B&S solid to No. 3/0 B&S strand. Tubular handles, 7/8-

inch diameter, threaded onto head. Readily attached or removed. Space between yokes, 3 inches, usually sufficient for three sleeve openings.

Head readily and securely tightened onto sleeve by thumb nut operating in hinged yoke. Central position of head makes for ease in keeping sleeve straight while twisting joint and provides ample leverage. Held in blank and finished with sleeve openings as ordered.

Length overall, 23 1/2 inches. Weight, 3 1/4 pounds.

No. 107-20. . . . . each \$23.00

## No. 107-34 Klein's Di-Stock Sleeve Twister

Head forged from high grade tool steel and heat treated for maximum toughness and wear. A hand operated cam lever closes the head securely on the sleeve—no thumb screws to bother with.

Tubular handles are furnished.  
No. 107-34, Weight, 9 Pounds. . . . . each \$40.20

## Klein's Chicago Grips

Main body piece and lever are forged steel. Draw parts are wrought steel. Gripping jaws are machined smooth.

### No. 1613—For Bare Wire

Bronze lining of jaws prevents slippage and consequent surface abrasion of conductor or strand.

No.	Each	B. & S. WIRE SIZE		Approx. Max. Open. In.	Wt. Lb.
		Maximum	Minimum		
1613-30	\$5.20	6 Solid (.162")	12 Solid (.081")	.22	1 1/2

**Klein's Chicago Grips With Bronze Lined Jaws**

Construction engineers are demanding grips that will not slip under heavy loads and which will not damage the conductor or strand. These requirements are met by welding a lining of bronze into the jaws of standard Chicago Grips, indicated by "B" following catalog number.

**Klein Haven's Steel Grips**

All parts are solid steel drop forgings, heat treated. Eye is pear shaped, and a roller fitted to body yoke makes motion free and allows load to come on smoothly. Instantaneous hold, yet a shake on tackle rope releases grip. Will not slip due to hand cut serration in face of eccentric. Galvanized finish.

No.	1604-10	1604-20

Weight per Dozen	12	28 1/2

**No. 1625-20 Klein's Improved Haven's Grips**

For wires 3/4 inch to No. 2 B. & S. For use on solid or strand wires. Swing latch engages stud on lower jaw, preventing any distortion of body or cross bolt under load. For use on trolley wire; is weatherproof. Can be readily adapted, at slight extra cost, for hot line work on weatherproof (insulated) conductors.

Approximate maximum opening, 25/64 inch (.78); approximate minimum opening, 1/2 inch (.22). Parts are alloy steel drop forgings properly heat treated. Swing latch holds tool on line in position for pull. Eye is pear shaped 1 1/4 inch wide. Hand cut serration in face of eccentric assures a hold that cannot slip. Galvanized finish.

No. 1625-20, Weight per Dozen, 45 Pounds... each \$16.10

**No. 1700-30 Klein's Chicago Linemen's Tools**

This tool is a combination of No. 1613-30 Chicago Grip and No. 1702-20 Howes Wire Tool. It is largely used by telephone companies.

Swivel hook, main body piece and lever of grip are forged steel. Draw parts are wrought steel gripping. Jaws are machined smooth. Rivets machine turned.

For No. 6 wire and smaller down to No. 13. Other sizes of grips can be furnished in this combination to order only.

Weight, 4 pounds.

No. 1700-30.....each \$16.80  
Strap for No. 1700-30, 1 1/4 In. x 7 Ft.....each 4.90

**No. 1702-20 Klein's Howes Wire Tools**

The strap is harness leather 1 1/4 inches wide and 7 feet long. At one end a forged steel swivel hook is provided with opening to permit anchoring round insulator pin. The forward end has a locking device to hold the load at any distance and is so arranged that a wire grip can be readily attached.

The metal parts are galvanized.

Weight per set, 2 1/2 pounds.

No. 1702-20.....each \$12.30  
Extra Strap, 1 1/4 Inches x 7 Feet.....each 4.90

## No. 1802 Klein's Heavy Block Tackles

### Drop Forged Hooks and Eye

Consist of two special double sheave blocks. Spring guarded snap hooks do away with taping. Pulleys are bronze bushed and self lubricating.

Furnished with 30 feet best quality Manila rope, 4 strand.

No. ....	1802-40	1802-50	1802-60
Each.....	\$30.50	33.70	35.00
Size Rope.....inches	1/2	5/8	3/4
Weight Each..... pounds	15 1/2	18	19

## No. 1803 Klein's Hand Lines

Best quality manila rope which will not twist. Spliced to eye of snap hook with galvanized steel thimble. Snap hook is drop forged with round eye, opens to 3/4 inch.

Complete with 3/8-inch, 4-strand manila rope and No. 443-A snap.

No. 1803-60, With 75-Foot Rope, Weight Each, 3 1/2 Pounds.....	each \$9.20
No. 1803-120, With 120-Foot Rope, Weight Each, 5 1/4 Pounds.....	each 12.40

## No. 1802-30 Klein Self-Locking Block Tackles

Consists of light steel galvanized shell block, fitted with a snubbing hook to lock load in any position. Block is arranged with spring guard snap hooks.

When pulling up wire to make a splice it may be used with two grips attached to the snaps, or with one grip and hook No. 258 to anchor to an insulator pin or other convenient anchorage. Hook is specially shaped to fit under double petticoat insulator on cross arm.

Furnished with 25 feet of 3/8-inch, 4-strand manila rope and detachable anchor hook. Shipped unassembled

Weight each, 3 pounds.

No. 1802-30.....each \$10.20

## No. 443-A Klein's Snaps For Hand Lines and Light Hoists

Can be used on all light hoisting, for roofers, etc. Drop forged with galvanized finish. Hook and eye are integral drop forging. Duck bill nose closes around latch.

Will carry loads up to 2000 pounds. When fitted to a 4-inch tackle block, it provides an ideal means for connecting with come-along; no taping is necessary.

Opening will take up to 3/4 inch. Eye, 1 1/16 inches. Length overall, 5 1/2 inches.

Weight per dozen, 6 1/2 pounds.

No. 443-A.....each \$2.90

## No. 258 Klein's Anchor Hooks for Tackles

Solid steel drop forging. Overall length, 5 1/2 inches x 3 1/4 inches across the hook. Size opening, 2 inches; inside diameter of eye, 5/8-inch.

Galvanized finish.

Weight per dozen, 4 pounds.

No. 258.....each \$1.70

## No. 455 Klein Heavy Duty Utility Snap Hooks

Will not come loose on a slacked line.

Made of drop forged steel and will carry a working load of 8000 pounds with an adequate safety factor.

May be used on any conventional steel block 4 inches or smaller, or on pulling tackle or snatch blocks by simply replacing the open hook with the Klein snap hook.

Length, 4 1/2 inches.

Weight, 1 pound.

No. 455.....each \$4.00

## No. 324 Simplex Aerial Cable and Wire Tensioning Jacks

Capacity, 2 Tons

Sufficiently powerful to easily pull overhead and underground cables and take up slack in trolley, guy and transport wires.

The speed trigger permits instant slack take up at any point when the jack is not under load. Steel lever furnished with safety spring clip that prevents it from falling.

Easy to set up because of its non-flexible rack bar. Exerts a direct line pull.

For tensioning bare wire, use two bare wire grips and two wire slings. When used for splicing overhead cable, special equipment consisting of two double eye split cable grips, two 3-bolt clamps and two wire slings, are required.

No. ....	324
Each.....	\$32.00
Capacity.....	2 tons
Travel.....	20 1/4 inches
Weight.....	13 pounds

## No. 869 Diamond Slack Pullers

Sufficient slack can be temporarily taken up in messenger strand for making splices or repairs in aerial cable.

Steel rollers in each end of tool for support on messenger strand. Lifting screw is equipped with a removable grooved roller. Tension is applied by tightening standard nut on upper end.

Weight, 10 pounds.

No. 869 Black Finish.....each \$15.00

**Matthews Quick Release Slack Pullers**

No. 730

No. 732

Enables one man to do the work of four when taking the slack out of guy strand, messenger wire or changing strain insulators, or for splicing trolley wire, telephone or power cable under tension; also used for pulling back underground cable. Takes the place of block and tackle. One man can easily pull 3000 pounds with the No. 730, and 6000 pounds with the Nos. 731 or 732. No slack is lost in dead ending as strain is held to the exact point pulled.

With the new quick release feature, when the entire take-up has been used, the wire is temporarily dead ended and the lock released. This permits the slack puller to be immediately extended to its maximum or any intervening length.

No.	Description	Ship. Wt. Lb.	Each
730	Maximum Take-Up, 19 Inches	17	\$56.00
731	Same as No. 730, Except That Clevis is Substituted for Hook	17	60.00
732	Same as No. 731, Except That it Also Has Quick Take-Up Feature	17	66.00

The 730 and 731 do not have the quick take-up feature.

**No. 765 Greenlee Cable Pullers**

Cable Puller Set up for Pulling into a Box from a Vertical Section of Conduit

Cable Puller Set up for Pulling from the End of a Horizontal Section of Conduit

Machine will exert a maximum pull of 7500 pounds. Has two speeds. Dog on back gear prevents unwinding of cable. Shaft extends from both sides of machine for one or two operators. Two cranks supplied, but ratchet wrenches can be used. Electric power unit can be used for driving.

The 6½-inch diameter tension drum clamps to extension on roller bracket where it can be swiveled in complete circle. Cut steel gears. Cast parts are of semi-steel. Base is provided on drum for bolting. Roller bracket has two roller positions. Roller has 5-inch diameter and 3-inch width to clear basket connection and electric cable.

Frame is formed from two 36-inch sections of channel iron. In exposed work, clamping is done directly on to conduit through which cable is to be pulled. Clamping device consists of a bracket on frame and two lengths of pipe wrench chain. Rated for conduit from 2 to 5 inches.

For pulling cable into concealed conduit, a flexible elbow can be furnished. This attachment consists of a flexible elbow, 4-inch master sleeve, bushings for 2, 2½, 3 and 3½-inch conduit, two unions for small bushings to permit using them in close quarters and a 4 to 2-inch reducer.

A ½-inch 6-19 strand cable is recommended.  
 No. 765 Cable Puller with 2 Cranks, without Cable, Wt., 225 Lb. .... each \$160.00  
 Flexible Elbow Attachment Comp., Wt., 86 Lb. ea. 40.00

For electricians, telephone men and switchboard builders.

No. 245-5, 5-Inch, Weight per Doz., 3 Lbs....each \$5.00

## No. 245-5-W Klein's Oblique Pliers

For removing acetate cellulose insulation from .050 and .058 wires.  
Has two W shaped notches at back of cutting knives.  
Length, 5 inches.

No. 245-5-W, Weight per Dozen, 3 Pounds.....each \$5.50

## No. 240-S Klein's Oblique Cutting Pliers

With Wire Stripping Notch and Sleeve Openings

For the use of electricians, telephone men, and switchboard builders. Stripping notch provides a means for crimping on .032-.025-inch single tube

copper sleeves often used in telephone work for splicing .032-inch bridle wire and .025-inch inside wire.

Size, 5 inches. Polished head, handle temper blued.

Weight per dozen, 3 3/4 pounds.

No. 240-5-S.....each \$5.40

## No. 240 Klein's Oblique Cutting Pliers

With Wire Stripping Notch

Has a notch in the cutting knives for stripping small wires. Notch is placed 3/16 inch from hinge and has diameter of .052 inch. Can be used for crimping single tube copper sleeves.

Polished head and temper blued handles.  
Packed 6 in box.

No. ....	240-5	240-6

## No. 202-SW Klein's Oblique Cutting Pliers

With W Stripping Notches, Sleeve Openings and Skinning Hole—Bell System Type

An all-purpose cutting tool for telephone installation and maintenance work. The W notches will slit acetate cellulose and other insulations from wires up to .058-inch o.d. A stripping

hole .052-inch diameter is provided in blades which also provides means to crimp on .032 and .025 single tube copper sleeves. Sleeve openings in handles.

Size, 5 1/2 inches. Polished head, handle temper blued.

Weight per dozen, 3 3/4 pounds.

No. 202-5SW.....each \$5.80

## No. 242-6 Klein Oblique Cutting Pliers

For use where it is not necessary to reach into confined spaces.

Polished head, handles blued.  
Size, 6 inches,  
Packed 6 in box.

No. 242-6, Weight per Dozen, 4 1/4 Pounds.....each \$5.50

## No. 220-7 Klein's Oblique Cutting Pliers With Handform Handles

A 7-inch plier made especially for automotive mechanics.

Useful for pulling cotter pins, for

choke wires, etc.

Hammer forged from high grade tool steel of special analysis. Knives are close cutting and carefully matched for their full length.

Individually fitted, tempered, adjusted and tested.

Handform handles provide full leverage and comfort for continual use.

Polished head, handle temper blued.

Packed 6 in a standard package.

Weight per dozen, 7 pounds.

No. 220-7.....each \$6.50

## No. 301 Klein's Long Nose Pliers

Without Cutters

For stripping insulated wire ends. Point, 3/32 inch round.

Extra long nose, 2 3/4 in.

No. 301-5, 5-Inch Size; Wt. per Doz., 3 1/4 Lb...each \$4.80

No. 301-6, 6-Inch Size; Wt. per Doz., 3 3/4 Lb...each 4.90

\*No. 301-7, 7-Inch Size; Wt. per Doz., 4 1/4 Lb...each 5.00

## No. 203 Klein Long Nose Side Cutting Pliers

With Cutting Knives

For stripping insulated wire ends. Point, 3/32-inch round.

\*Extra long nose, 2 3/4 in.

No. 203-5, 5-Inch Size; Wt. per Doz., 3 1/4 Lb...each \$4.80

No. 203-6, 6-Inch Size; Wt. per Doz., 3 3/4 Lb...each 4.90

\*No. 203-7, 7-Inch Size; Wt. per Doz., 4 1/4 Lb...each 5.00

## No. 303-6 Klein's Long Needle Nose Pliers

Long nose permits use in confined spaces. Has polished head and handles temper blued.

Weight per dozen, 3 3/4 pounds.

No. 303-6, Length, 6 Inches.....each \$4.90

## No. 317 Klein's Chain Nose Pliers

Without Cutters

For general use. Size, 6 inches.

Hammer forged from high grade tool steel. Polished head, handles temper blued.

No. 317-6, Weight per Dozen, 3 1/2 Pounds.....each \$4.90

**No. 217 Klein's Chain Nose Pliers**  
Side Cutting

With side cutting knives. Size, 6 in. Polished head, handles temper blued. Weight per dozen, 3½ pounds. No. 217-6 ea. \$5.50

**No. 313 Klein's Heat-Coil Pliers**

Particularly adapted for the removing of heat coils from switchboards and telephone terminals, as the points of the

nose are shaped to fit the coils. This tool is also serviceable in removing caps from batteries or from binding posts, as well as holding any cylindrical object.

Size, 6 inches.

Polished head, handles temper blued.

Packed 6 in a standard package.

Weight per dozen, 3¾ pounds.

No. 313-6.....each \$5.00

**No. 305-6 Klein's Long Flat Nose Pliers**

Has long wide flat nose. Inside of jaws left smooth if desired. Has polished head and

handles temper blued. Weight per dozen, 3½ pounds.

No. 305-6, Length, 6 Inches.....each \$4.70

**No. 206-6 Klein Side Cutting Pliers**  
Long Flat Nose

Long wide cutting knives. Smooth jaws if desired. Has polished head, handles temper

blued. Length, 6 inches. Packed 6 in a box. No. 206-6, Weight per Dozen, 3½ Pounds.....each \$5.50

**Klein's Long Flat Nose Spring Adjusting Pliers**

Hollow ground on outside of jaws to reach between and grasp springs easily.

No. 311-5½, 5½ Inch, Weight per Doz., ¾ Lbs. each \$4.90

**No. 304-6 Klein Long Duck Bill Pliers**

For general use. Jaws are wider and heavier than those of flat nose pliers. Has polished head and handles temper blued.

Length, 6 inches. Weight per dozen, 3½ pounds. No. 304-6.....each \$4.90

**No. 205-6 Long Duck Bill Side Cutting Pliers**

General use. Jaws are wider and heavier than those of flat nose plier. Has polished head and handles

temper blued. Weight per dozen, 3 pounds.

No. 205-6, Length, 6 inches.....each \$5.50

**No. 302-6 Klein Long Curved Nose Pliers**

Angle gives full clearance. Length, 6 inches.

Weight per dozen, 3 pounds.

No. 302-6

...each \$5.50

**No. 316-S Klein's Long Nose Sleeve Pliers**  
Bell System Type

Sleeve openings permit twisting No. 17 N.B.S. and smaller copper sleeves. Point, ½ inch round.

No. 316-S, 6-Inch Size; Wt. per Doz., ¾ Lb....each \$4.90

**No. 301-C Klein's Long Nose Cord Crimping Pliers**

For telephone switchboard work; oval groove for crimping telephone cords. Point, ½ inch round.

No. 301-C, 6-Inch Size; Wt. per Doz., ¾ Lb....each \$4.90

**No. 039 Klein's Cord Tip Closing Pliers**

The jaws of this tool are designed to permit its use as a hand press for closing cord tips such as W.E. 101 and 102. The circular opening in the jaws is correctly

sized to insure a perfect connection when the closure is completed.

Size, 5 inches.

Polished head, handles temper blued.

Packed 6 in a standard package.

Weight per dozen, 3 pounds.

No. 039.....each \$6.00

**No. 202-5-AV Klein's Oblique Cutting Pliers**  
Narrow Head

For heavy cutting. Hammer forged from high grade tool steel. With volute spring for bench work.

No. 202-5-AV, 5½-Inch, Weight per Doz., 4 Lb. each \$6.50

**No. 245-5-V Klein's Oblique Cutting Pliers**

For electricians, telephone men, etc. Hammer forged from high grade tool steel. With volute spring for bench work.

No. 245-5-V, 5-inch, Weight per Doz., 3 Lb....each \$6.50

### No. 301-5-V Klein's Long Nose Pliers

**Without Cutting Knives**

Hammer forged from high grade tool steel. With volute spring for bench work.

No. 301-5-V, 5-Inch, Weight per Doz., 3½ Lb. . . each \$6.50

### No. 203-5-V Klein's Long Nose Cutting Pliers

For production bench work where a combination of long jaws with cutting knives is required. Fitted with volute spring.

Length, 5¾ ins.

No. 203-5-V, Weight per Dozen, 2¾ Pounds . . . each \$7.50

### No. 1550-2 Klein's Xela Electricians' Knives

A handy combination for the electrician, combining an emergency screwdriver, a knife blade for cutting or stripping wire; safely locked so that it cannot close during use.

Has a well-tempered cutlery steel blade, a strong joint, a solid well-proportioned hand fitting cocobola handle.

Screwdriver blade is locked when open; to unlock a slight side pressure of the thumb releases the lock and permits the blade to be closed readily.

No. 1550-2, Double Blade. . . . . each \$3.20

### Xela Electrician's Scissors

Made of high grade steel properly tempered.

Has screw hinge.

Nickel plated finish.

Size, 5 in.

Weight per dozen, 2 pounds.

No. 2100-5 . . . . . each \$3.30

### No. 1305-2 Klein's Inspectors' Tool Kits

Solid black leather strongly stitched, reinforced back. Fitted with one each of the following tools: No. 201-6 side-cutting plier; No. 301-5 long nose plier; No. 1550-2 Xela electricians' knife; 1 pair electricians' tweezers; 1 special file; 1 special screwdriver.

A handy assortment to fit the pocket. Weight, 1½ pounds.

No. 1305-2. . . . . each \$18.00

### No. 5139 Klein's Canvas Tool-Packs

Made of sturdy, brown canvas. A heavy zipper instantly closes or opens the full length mouth. Especially useful for a selection of frequently used small tools.

Weight per dozen, 3 pounds.

No. 5139, Size, 6x12 Inches. . . . . each \$1.70

### Klein Tool-Kits

Designed for mechanics, service men and electricians.

Contains long nose plier, special side cutting plier, diagonal cutting plier, electrician's knife, a pair of electrician's tempered tweezers,

4½-inch file and a screw driver with insulated handle. All contained in a Keratol roll fastened with a strong strap and buckle.

No. 1305-33A. . . . . each \$23.00

### No. 5116 Klein's Detachable Plier Holsters

Made of heavy harness leather with loop to slip over belt.

Carries 7, 8 or 9-inch side cutting pliers.

Mouth of pocket is framed to hold open position permanently.

Length, 10 inches.

Weight per dozen, 6 pounds.

Price, No. 5116. . . . . each \$3.50

### Leather Plier Pockets

No. 5107

No. 5112

Made of good quality leather. Has slits for belt.

No. 5107, Weight per Dozen, 2½ Pounds. . . . . each \$2.00

No. 5112, Weight per Dozen, 2½ Pounds. . . . . each 2.80

### Klein Combination Tool Pockets

No. 5118-K

Made of heavy harness leather. Opening at bottom prevents accumulation of dirt or water. Top flap of double thickness leather is for riveting to belt.

Space provided for pliers fits 6, 7, 8 and 9-inch side cutting pliers.

**No. 5118-K For Pliers and Knife**

Weight per dozen, 7½ pounds.

No. 5118-K, Size, 4¾x8 In. . . . . each \$3.30

**No. 5118-S For Pliers and Screwdriver**

Weight per dozen, 5½ pounds.

No. 5118-S, Size, 4x8 In. . . . . each \$2.80

**No. 5118-R For Pliers and 6-Foot Rule**

Weight per dozen, 7½ pounds.

No. 5118-R, Size, 4¾x8 Inches. . . . . each \$3.30

**No. 5111 Klein's Hip Pocket Tool Cases**

Suitable for carrying pliers or other tools in hip pocket. Prevents cutting of clothes, or possible injury to the person. Made of black leather, 5x7 inches. Weight per dozen, 5½ pounds.

No. 5111.....each \$2.80

**Klein's Rubber Glove Pouches**

Scotch chrome leather pocket for carrying rubber gloves. Comes equipped with snap and D ring, ready to attach to body belt.

No.....	5120-9	5120-15
Each.....	\$5.00	6.80
Size.....in.	7½x9	7½x15
Weight per Doz.....lb.	4½	7

**No. 1515-1 Klein's Cable Sheath Splitting Knives**

Cutlery steel blade, oil tempered. Riveted, harness leather handle.

Weight per dozen, 12 pounds.

No. 1515-1.....each \$4.90

**No. 1560-3 Klein Linemen's Skinning Knives**

In constructing this knife, the shape of the blade has been considered to make it a safety tool.

Half hard rubber handle is molded on securely and provides adequate insulation and a positive grip.

Hole in handle is through the solid rubber. Length of blade, 3 inches; overall length, 8 inches. Weight per dozen, 4¼ pounds.

No. 1560-3.....each \$3.50

**No. 5163 Klein Skinning Knife Sheaths For No. 1560-3 Knife**

Can be riveted to belt or carried in hip pocket. Opening at bottom to prevent collection of dirt and permit escape of water.

Size, 3x9 inches. Weight per dozen, 4 pounds.

No. 5163.....each \$2.20

**No. 45-079 BX Armor Cutters**

A lightweight pocket tool that cuts armor perfectly in one operation. For use on either two or three-wire, No. 14 or No. 12 cable. Eliminates nicked wires or shorts.

No. 45-079.....each \$3.83

**Ideal Wire Strippers**

For Solid or Stranded Wire

**Standard Model**

Cutting edges are shielded. Blind centers of the V-notches on blades prevent cutting or scarring of wire.

**Automatic Model**

Lever stops return of arms until wire is removed after stripping, then they are quickly snapped back to normal.

Lever will not operate unless wire with insulation .050 inch or larger is inserted between grippers. When no wire is inserted, lower gripper moves upward when handles are squeezed, pushing trigger and lever up and out of action.

No.	Standard Each	Automatic Each	Extra Blades per Set	Strips Wire Gage	Shipping Weight Pounds

3	4.71	5.65	1.18	8-14	1½

**No. 45-018 Ideal Cable Rippers**

For use on non-metallic sheathed duplex cable or lead covered cable. Ripper is squeezed onto the cable and pulled, ripping the cable with one simple operation. Can also be used for ripping the outer sheathing of other cords, lead cables, etc., where outside diameter is not greater than 5/8 inch. Weight, 2 ounces.

No. 45-018.....each \$3.35

**No. 779 Diamond B Braid Stripper**

With 3 Grooves for 3 Sizes of Drop Wire

Used to remove braided covering from drop wire.

Sliding guard protects thumb and forces wire down on cutting blade. Blade can be rotated to new position when used section becomes dull.

Handle is equipped with steel wrench plate with hexagonal openings of 3/8, 1/6, and 5/8 inches for bridging connectors, nuts or heads.

Made of die-cast aluminum with natural finish. Packed 12 to a carton. Weight, 1¼-pound.

## Porter Rigid and Swivel Type Clipper Cut Bolt Clippers

### Rigid Type

Ball and socket joints and positioning spring permit swivel type flexible bolt clipper to cut at any angle. The cutting jaws of rigid type are firmly fixed in line with the handles and are beveled almost entirely from one side for close cutting, such as clipping of bolts, and are generally specified where a tool is required for all around work in softer metals.

### Swivel Type

Swivel type is recommended for the same close cutting requirements, but also has the added utility of the 180° arc wrist action.

### Rigid Type

## Porter Rigid and Swivel Type Center Cut Bolt Clippers

### Rigid Type

Ball and socket joints and positioning spring permit swivel type flexible bolt clipper to cut at any angle. Cutting jaws of rigid type firmly fixed in line with handles and are beveled equally, bringing cutting edge at center of jaw. Recommended where close cutting is not a requirement. Cuts materials up to 300 Brinell hardness.

### Swivel Type

Swivel type used for same type of work. Permits ready application of full operating pressure in close quarters. Recommended for building construction.

Specify center cut round edge type for cutting reinforcing rods and for use in steel and wire mills.

## Lenox Hackmaster High Speed Hacksaw Blades

### Unbreakable Hand Blades

A saw made of high speed steel that has the back of the blade annealed so as to give it flexibility, and the tooth edge hardened for durability. Has all the cutting qualities of the standard high speed steel blade.

Inasmuch as this is a truly flexible blade, it will withstand hard usage, even misuse, without breaking. Sharp twists and kinks, which are the main reason for saw breakage, are absorbed without damaging this blade.

Packed 1/2 gross in a box.

**No. 36-001 Ideal Joist Boring Machines**

The Ideal Boring Machine is operated from the floor, and bores holes at any angle through rafters, joists or studdings. Used on new or old floor and ceiling construction.

The bit eats right into the wood with a light pull on the chain. Reversing the pull backs the bit out without bending or breaking knurled collar—no tools required. Bits are solid point type, with special lip construction for fast and easy boring. Available in 1/16 and 1/8-inch diameters.

Weight, 17 pounds.

No. 36-001, with 1 Bit.....each \$23.53

**Greenlee Bit Extensions**

No. 900, is made to drive a bit up to 1-inch diameter but small enough to follow a 5/8-inch bit. This is due to the thin outer shell, which does not drive the bit, the driving coming from the bit chuck within. There are 5 major parts, all exposed surfaces of which are nickel-plated except the square, which is lacquered. The positive lock prevents the loosening of the holding sleeve. This lock consists of a sleeve with a spring tension, which engages the screw sleeve when released, and two 1/8-inch pins prevent it turning.

No. 925, bit extension is similar in design to No. 900 except it is made extra heavy to follow a 1 3/16-inch auger bit and drive tools up to 2-inch diameter.

Packed 1 in a leatherette case.

Marked in feet, inches and 16ths at 5 per cent extra.

## Michigan Chain Tapes

Especially popular in railroad and highway work. Line is detachable from reel, has heavy brass end clips, and is furnished with a pair of leather thongs.

Markings are on babbitt metal. Marked on one side only, feet only every foot, with end feet in 10ths. Blank space on each end.

Width, 5/16 inch. Approximate thickness, .015 inch. Length, 100 feet.

- No. 3100, Tape Complete with Reel.....each \$17.60
- No. 03100 Line Only, without Reel, with Thongs.....each 11.60

## Klein's Linemen's Pole Climbers

(Also Called Spurs or Hooks)

Safety is the first and vital point in considering linemen's pole climbers. The lineman going up a pole depends entirely upon his spurs.

To assure utmost dependability Klein's Climbers are forged from special steels and are individually tempered. Shanks and gaffs are tested to insure perfect riveting and temper.

Leg iron or shank is made of spring steel; gaff or spur is forged from tool steel.

The shape of Klein's Climbers has been carefully considered. It is the result of many years' experience and much practical suggestion from linemen. Klein's Climbers have flexible shanks and yield readily to pressure of leg; they do not chafe. Gaff or spur is correct in shape, set of angle and temper. It is hand riveted to leg iron in secure manner.

## No. 1939 Klein Streamlined Linemen's Climbers

A newly designed climber in which the use of any unnecessary metal has been carefully avoided. Leg irons are flexible and tapered in width and thickness. The "critical" section from 3 inches above the gaff to half way across the stirrup has been designed for ample strength. The gaffs are slender type, preferred on treated (Black Jack) poles. A detachable wrought ring carries the ankle strap. Gaffs 3 1/2 inches long measured on the outside. Riveted top loop.

Each climber individually tested. Size is measured from instep to end of shank. Special sizes on order.

Average weight per pair, 2 1/2 pounds. Made in sizes, 15, 15 1/2, 16, 16 1/2, 17, 17 1/2 and 18 inches.

No. 1939.....per pair \$12.70

## Klein's Eastern Climbers

Has riveted strap loops. Tested before leaving factory. Standard sizes, 15, 15 1/2, 16, 16 1/2, 17, 17 1/2, and 18 inches. Other than standard sizes to order.

When ordering, specify length of shank desired. Measure from instep to extreme end.

Packed 1 pair in a carton.

No.	1901-M	1903-M
Per Pair.....	\$9.50	10.50
Weight.....pounds	3 3/8	2 7/8

## No. 1907 Klein's Tree Climbers

This is the standard tree climber used by forest rangers, top loggers, fire wardens, surveyors, etc. Tested before leaving factory.

Has riveted strap loop. Gaffs, or spurs, are 5 1/2 inches long measured on the outside and 3 1/2 inches long measured on the underside. They are set high in the leg iron so that points clear the ground.

When ordering, specify length of shank desired. Measure from instep to extreme end.

Packed 1 pair in a carton. Weight 4 pounds.

No. 1907.....per pair \$10.40

**Klein Linemen's Climber Straps and Pads**

All leather used is first quality harness leather. All sewing is lock stitched with genuine linen thread hot waxed. Buckles and buckle tongues are Klein standard solid steel drop forgings, tested to 1500 pounds.

**With Square Pads—Straps 1 1/4-Inches Wide**

This set consists of 2 upper or calf straps and two lower or ankle straps; and two square pads. Size straps, 1 1/4x22 inches. Size pads, 4x4 inches.

Pads made of select leather, arranged with loops for climber straps and climber. Tapering 3/4 inch to 2 3/4x6 1/4 inch deep.

**No. 5204-KK Klein-Kord Tool Belts**

Made of multiply Klein-Kord—specially woven, long staple cotton, with each ply laid in rubber and vulcanized—a material that is extremely flexible, water-proof and has a tensile strength many times that re-

quired in actual operation.

Belt is fitted with a Klein-Kord plier pocket, knife snap, tape thong, glove pouch loop, and lag wrench keeper.

Made in 36, 38, 40, 42, 44 and 46-inch sizes. Weight per dozen, 45 pounds.

No. 5204-KK, with Standard D Rings..... each \$22.00

**No. 1901-MG Klein's Linemen's Climber**

**Gaff Guards**

Made of harness leather. The wings of the guard fit around leg iron of climber just above the gaff and snap on.

The gaff is covered and protected by the leather fold with fiber stop.

Weight per dozen pairs, 1 1/4 pounds.

Set consists of one pair, 2 pieces.

No. 1901-MG..... per pair \$1.20

**Klein Safety Snaps**

A solid steel snap used on body belts, safety straps, etc. Each piece integral, no joints or welds. There are three patterns as illustrated below, individually tested to 1500 pounds. Galvanized finish.

**Standard Snaps**

Has wide nose covering spring latch protecting it from accidentally twisting out of Dee Ring. Can be used with any Dee.

Straps listed with plain catalog numbers have Standard Snaps.

**Hank's Snaps**

Of special construction and must be used in conjunction with Hank's Dee Rings on belt.

Straps listed with "H" prefixing catalog numbers have Hank's Snaps.

**Klein-Lok Snaps**

Has a twin latch arrangement. Both latches must be pressed simultaneously to release. Full factor of safety. Can be used with any Dee.

Straps listed with "KL" prefixing catalog numbers have Klein-Lok Snaps.

**Klein Ankle Straps**

For Ring Attachment on No. 1939 Klein Linemen's Climbers

Made in two pieces and furnished with rivets and burrs. Punched ready for quick attachment.

Weight per dozen pairs, 10 pounds.

## Klein's Tool Belts

All Klein Belts are made of first quality vegetable tanned harness leather. Sewing is with genuine linen thread, hot waxed, lock stitched. Rivets are solid copper, hand set with burrs. Buckles, including tongues, and Dee Rings are steel drop forgings tested to 1500 lbs.

Catalog numbers prefixed by the letter "H" indicate belts fitted with Hank's Dee Rings which must be used with Hank's Safety Straps. All other makes are fitted with Standard Double or Single Bar Dees.

To insure proper fit select size that allows heel of Dee Rings to come about 1 inch in front of hip bones as per following table.

Distance Between Dee Rings, In. . . . .	20	22	22	24	26	28
Belt Size, In. . . . .	36	38	40	42	44	46

### No. 5228 Klein's Leather Tool Belts

Made of one piece of soft pliable, tough russet latigo leather, doubled to form comfortable rolled edges and returned at each end. Cushion is 4½ inches wide at the center of the back and tapers to 3½ inches wide at the front. Body strap is first quality russet harness leather, 2 inches wide, stitched to the cushion at back and passing through loops at end of cushion as well as through the dee rings. A russet harness leather tool strap, 1¾ inches wide with five loops in the 1¼-inch loop strap is carried on leather hangers from the body strap to which it is looped at the ends. This keeps the tool loops from contracting when belt is buckled on.

Constructed so that no rivets come through to inside of belt. Dee rings and buckle are single bar type solid steel drop forgings. All hardware tested to 1500 pounds. Galvanized finish. Fitted with leather pliers pocket, knife snap and tape thong, complete. Weight per dozen, 45 pounds.

## No. 5204-TSO Klein Texas Belts

Lined throughout with soft latigo leather. With standard dees.

Made 4 inches wide at center of back for full support, tapering to 2¼ inches wide at hips to permit free bend to body of wearer.

Weight, 36 pounds per dozen.

No. 5204-TSO . . . . . each \$24.70

## No. 5211 Klein Leather Tool Belts

Used by linemen, electricians, and mechanics.

Made of harness leather. Inner or cushion layer, 3 inches in width, is narrowed at each end to carry the D rings. Body strap, 2 inches in width, is riveted and stitched to the cushion and also passes through the D rings. Two tool straps are provided and formed into two loops at each side of the belt by riveting through the belt.

D rings and buckle are solid steel drop forgings galvanized to prevent rust, and are tested to 1500 pounds.

Belt surfaces taking wear of D rings are protected by copper safety liners riveted through the full thickness of the belt. Rivets are solid copper, hand set with burrs.

Sewing is with linen thread, hot waxed and lock stitched.

Available in sizes 36, 38, 40, 42, 44, and 46 inches. Other sizes on request. Weight per dozen, 34 pounds.

No. 5211, With Standard D Rings (Double Bar) .each \$16.50

## No. 5212 Klein's Derrick Belts

For oil derrickmen or structural workers.

Made to stand load of 250 pounds with a dead fall of five feet.

One three inch Forged Dee Ring at back for life line.

Double tongue buckle.

No. 5212, Weight, 42 Lbs. . . . . each \$17.00

## Neatsfoot Oil

**No. 5214 Klein's Steel Workers' Belts**

Three forged Dee rings for attachment of line in most convenient position. Leather loop for wrench. Main belt passes through rings held in place by backing

pieces of latigo leather stitched and riveted to belt proper. Two-inch buckle, double tongue type with solid forged frame. One-piece belt of harness leather, two inches wide.

Distance between outer Dee rings 24 inches. Adjustable from 36 to 44 inches. Made in one size.

No. 5214, Weight per Dozen, 28 Pounds.....each \$12.80  
 No. 5214-O, Without Wrench Loop, Weight per Dozen, 27½ Pounds.....each 12.50

**No. 5209 Klein's Safety Harnesses**

Back

Front

Meets requirements of various safety commissions for use where danger from gassing is present. Working in gassy manholes, gas tanks, oil tanks and even boilers, men are frequently overcome and an emergency arises instantly. This harness provides a sure means by which patient can be brought to safety and danger overcome. Design is such that it slings wearer in a perpendicular position so that he can be readily hauled through an ordinary manhole opening. A solid harness leather back plate 2¼x10 inches is stitched and riveted around the 1¼-inch adjustable belt strap. Back plate also carries a tested drop forged D ring to which the ¾-inch manila life line, 25 feet in length is permanently attached. Shoulder straps are ¾ inch and made adjustable and riveted to belt at single ends. These straps hold belt in position around chest so as not to encumber wearer while working. Weight per dozen, 75 pounds.

No. 5209, with Life Line.....each \$17.40

**No. 5206-1A Klein Leather Belts and Safety Straps**

Made of harness leather. Belt has cushion 2¼ inches wide which carries the D rings. The outer or loop layer is 1½ inches wide formed into tool loops by riveting to the cushion. Also passes through the D rings.

The safety strap is 1¾ inches wide and 68 inches long. Has standard snaps and stainless clips.

All snaps, D rings, and buckles are solid steel drop forgings tested to 1500 pounds, and are galvanized finished.

The strap may be adjusted to any length by means of a

buckle or can be removed entirely from belt. Sewing is with hot waxed linen thread, locked stitched. Available in sizes 36, 38, 40, 42, 44, and 46 inches.

No. 5206-1A Weight per dozen, 62 pounds.... each \$26.80

## No. 5233 Klein Klein-Kord Safety Straps

Has standard snaps, stainless clips.

Takes a load of 2400 pounds before

ripping. Red center fabric made of 6 plies of long staple cotton of special weave, each ply laid in rubber and vulcanized. Size, 1 3/4 in. by 5 3/8 feet. Other lengths on order. No. 5233, Weight per Dozen, 36 Pounds.....each \$13.70

## Klein Klein-Kord Extension Snaps

Used in conjunction with a fixed length safety strap. Provides the extra length necessary when working on large diameter poles.

Dimensions: length, 15 inches; width, 1 3/4 inches.

Weight per dozen, 16 1/2 pounds.

No. 5236, With Standard D and Snap.....each \$6.30

No. KL-5236, With Standard D and Klein-Lok Snap.....each \$7.20

## No. 5215 Klein's Extension Straps

This strap is 1 3/4 inches wide, made of first quality harness leather and fitted with special forged D ring and buckle. It is worn attached to D ring on main body belt and used when large diameter poles necessitate a longer safety strap than the regular. By engaging snap of the regulation safety strap to the special D ring on the extension strap the lineman can immediately adapt his outfit so that he has no difficulty in working conveniently. No matter how large the pole—can be lengthened or shortened.

Size, 1 3/4 x 15 inches.

Weight per dozen, 14 pounds.

No. 5215, Forged D Ring.....each \$7.20

## No. K.K.D.-025 Klein-Kord Dressing

For use with Klein-Kord.

Put in 1/4-pint cans.

Weight per dozen, 4 1/16 pounds.

No. K.K.D.-025.....per can \$6.60

## Salisbury Non-Spillable P.B. Paint Pots

This is a rubber container for carrying insulating and weather-proofing compounds that do not have an oil base.

Provides a safe and convenient means to carry both compound and brush, eliminating use of metal containers, glass bottles, and other makeshift devices.

Flange extends inward at junction of the neck preventing contents from spilling or splashing out during rough handling. Equipped with tapered cork through which a rubber-set brush is securely inserted.

Single compartment pot is for insulating only; double compartment pot is made with an extra receptacle to hold soldering paste.

## No. 5108 Klein's Inspectors' Harness Leather Tool Bags

This bag is made of harness leather and will stand rough and hard usage. The leather does not absorb moisture.

Bag has a shoulder strap combined with a pad and hand strap. The bottom is three-ply and is protected with steel studs. Retaining straps

pass clear around the bag so that it may be loaded to the limit of its capacity and be securely held intact. All seams are sewed with hot waxed linen thread, lock stitched.

## Klein's Linemen's Canvas Tool Bags With Leather Bottoms

This bag is made of one piece of white duck reinforced all around the bottom with heavy bag leather. The bottom is made of heavy leather outside and duck inside, lock stitched all around. The bottom is protected with strong steel studs. Bottom and sides are joined together with lock stitched leather welt seams.

Mouth of the bag is formed by a 12-gage steel frame. The canvas is clinched between this frame and an inside secondary steel frame.

Bag has harness leather handles and two retaining straps with buckles.

Linemen's bags can be furnished with lock and key, and shoulder strap at slight additional cost.

## No. 30 Salisbury Non-Metallic Tool Bags With Inside Utility Pocket

Recommended as an essential part of line crew equipment. Provides an efficient method of raising tools, supplies and materials to the pole top.

Bag is collapsible, of sturdy construction, amply reinforced and designed throughout for heavy duty service.

Equipped with a utility pocket on the inside to accommodate small tools, bolts, washers, etc.

Made of duck with a single side seam together with top and bottom fastenings strongly sewed. The heavy leather bottom extends 3 inches up the sides.

A 1/2-inch rope handle is firmly spliced to the bag through leather reinforcements.

Diameter, 12 inches. Height, 16 inches.

Weight, 2 1/4 pounds.

**Salisbury Line Hose**

A convenient device for protecting linemen from accidental contact with energized lines. By completely

surrounding the wire with a substantial wall of voltage-resisting rubber more than ample insulation is provided.

The self-locking lip prevents the hose from being accidentally detached. Short bends can be made without exposing the conductor it covers.

Furnished in ¼, ⅜, ½, 1, 1¼ and 1½-inch sizes, inside diameter; in standard lengths of 3, 4½ and 6-foot pieces.

**Salisbury Connector End Line Hose**

Standard line hose with the additional feature of an integral built-on connector end which overlaps and securely holds the end of an adjoining piece of hose when longer spans of line are to be covered. Increases standard lengths by 8 inches.

The connector end is also useful in covering connectors, bulky tap joints, and leads on stud type transformers.

The connector end does not interfere with the application of the hose in normal uses and it is recommended that a portion of the hose on each truck be of this connector end type.

Furnished in ⅜, 1, 1¼, and 1½-inch inside diameters and in standard hose lengths of 3, 4½, and 6-foot pieces.

**Salisbury Line Hose Connectors**

Used where two or more pieces of straight line hose are employed on one wire to prevent the pieces from slipping apart and to eliminate the possibility of the conductor being exposed between adjoining ends. Also used to overlap the ends of line hose separated by a bulky joint.

Shaped to fit the outside contour of the hose, the walls being extra thick to provide the necessary grip. A series of ribs placed on the inside surface give the connector a tight hold.

Length, 12 inches. Available in two sizes to fit over either ⅝ or 1-inch line hose. When ordering specify hose size.

**Salisbury Linemen's Blanket Canisters**

Used to protect linemen's rubber blankets from puncture or other injury when not in use and provide a safe and convenient container for blankets while being carried on the trucks or service cars and while retained in stations.

Constructed of strong galvanized iron. Equipped with caps permanently fastened to the container by a chain. Canister and cap are made with beaded edges.

Available in the following sizes:  
 No. 1 4-In. Diam. 37-In. Long, 1 Blanket, Wt. 4½ Lb.  
 No. 2 5-In. Diam. 37-In. Long, 2 Blankets, Wt. 6 Lb.  
 No. 3 6-In. Diam. 37-In. Long, 3 Blankets, Wt. 7 Lb.  
 No. 4 7-In. Diam. 37-In. Long, 4 Blankets, Wt. 8½ Lb.  
 No. 5 8-In. Diam. 37-In. Long, 5 Blankets, Wt. 9¾ Lb.  
 No. 6 9-In. Diam. 37-In. Long, 6 Blankets, Wt. 11¾ Lb.

**Salisbury Rubber Insulator Hoods  
Universal Type**

Used in conjunction with line hose to cover tie-wires and conductors as they pass the insulators. Completely covers this point of hazard in a close fitting and positive manner. Can be used on double arm as well as single arm construction. The extending arms of the hood overlap the ends of the line hose.

Compounded to secure high insulating qualities over a long period of time. Vulcanized in steel molds while under great pressure, in heavy duty presses; retains its shape and flexibility. Thick walls of solid rubber give it ability to stand up under severe conditions of use.

Requires no attachments to hold it in place. Securely locks itself to the under side of the insulator and cannot open, turn, slide or become accidentally dislodged.

Solid rubber flanges extending inwardly from under sides of the body portion serve to grip the under side of the insulators. Exterior ribs are placed to reinforce the side walls and to increase the grip.

Inside dimensions arranged so hood properly fits all popular types of pin insulators in distribution service.

Length, 14¼ inches. Height, 6¼ inches.

Weight, 4 pounds. Packed one to a carton.

Telephone and telegraph companies use a special hood shaped to fit telephone style insulators. As it is used on single arm poles only both extending arms of hood are of the same diameter and will snugly grip the ¼-inch size line hose. In ordering, specify Telephone Type.

**Salisbury Snap-On Blankets and Jackets**

Snap-On Jacket is especially useful in covering dead ends, pot heads, cutouts, arrestors, and like equipment which does not require the full size blanket.

Equipped with eight reinforced eyelet holes along each side and twelve hard rubber buttons. When folded over or wrapped around the apparatus to be covered, the edges are held closed by snapping the small heads of the buttons through the opposite eyelets. This self-contained method of fastening has been thoroughly tried and found practical.

Guaranteed to resist 20,000 volts on acceptance tests for 3 minutes.

Size blanket, 36x36x¼ inches.

Size jacket, 22x22x¼ inches.

**Salisbury Rubber Protective Blankets**

**All Rubber—Black**

Will fold, wrap or hang suspended in any position to provide an insulating barrier between electrical workers and hazards adjacent to their working position.

Bead molded on all four sides to prevent tearing.

Guaranteed on acceptance tests to resist 20,000 volts for 3 minutes.

Plain		With Eyelets	
No.	Size, Inches	No.	Size, Inches
300	36x36x¼	300-E	36x36x¼
400	27x36x¼	400-E	27x36x¼

Prices upon application.

## Salisbury Electric All-Rubber Coats

Made of strong durable material, coated on the outside surface with high grade rubber and a frictioned coating on the inside. No metal is used in its construction.

The inner cuff of the double-storm cuff is made of pure gum rubber. The collar is of standard lay-down type. Reinforced at hips to protect coat from tool belt abrasion. Has raglan shoulders, all rubber fasteners and storm fly front.

Length, 46 inches.

Furnished in sizes 36 to 46.

Prices upon application.

## Salisbury Rubbercuff Protector Gloves

Gives complete protection with its rubbercuff protector and not only gives greater safety but allows a substantial reduction in glove expense.

Most rubber gloves are destroyed through reason of snags occurring on the upper ends of the gauntlets. Ordinary protector gloves made of leather cannot extend to the rim of the rubber gloves because leather is a conductor of electrical current.

Cuff is made from light but strong fabric reinforced, voltage resisting rubber. Tests prove that current creepage over it is no greater than over gauntlets themselves. Hand part is made from high quality leather.

### For Use with Straight Finger Rubber Gloves

## Salisbury Linemen's Protector Gloves Full Gauntlet, 4-Inch Style

Designed to wear over Linemen's Rubber Gloves to protect them from snagging, tearing or abrasive wear. Made expressly for this work and should not be confused with the ordinary work gloves.

Made of specially tanned Grade A buffed horsehide, maroon color, and from selected weights.

Remains soft and pliable under all conditions and will not become

slippery when wet. Resists wire puncture to a great degree.

## Salisbury Static-Resisting Line Coats

The special construction of this coat retards static tingling at the neck or wrists when the garment is used during wet weather on work that is adjacent to energized conductors.

Special features: Inside double back; special rubber fasteners; reinforced at belt; all seams sewed and cemented; insulating skirt collar; roomy raglan shoulders; insulating storm cuffs; storm fly front.

Guaranteed to be free from all defects in material or workmanship.

The all rubber collar is standard. Corduroy faced collar can be furnished if desired.

Furnished in sizes 36 to 46 inclusive. Length, 47 inches.

Packed one to a carton.

## Salisbury Cable Bandages

For general use as temporary insulation. Made of highest grade pure gum rubber. Unusually strong, very flexible, with excellent ageing qualities. Acceptance tests prove that a single thickness can withstand 10,000 volts.

In rolls 14 feet long, 3 or 4 inches wide, ½ inch thick.

Net weight per 3-inch roll, 10 ounces; 4-inch, 12 ounces.

## Salisbury Switchboard Rubber Matting

A non-slip corrugated surface matting of high dielectric strength and long aging qualities.

Meets requirements of all standard specifications.

Guaranteed to resist 50000 volts for 3 minutes on acceptance tests.

Furnished in ¼-inch thickness; 24, 30, 36 and 48-inch widths; lengths up to 75 feet. Other

widths and thicknesses can be furnished.

**Salisbury Steam Cured Linemen's Rubber Gloves**

No. 90  
Straight Finger Style

No. 100  
Curved Finger Style

Qualities of high insulation, low leakage, strength, flexibility and long life are evenly balanced. Each of these essentials is raised to the highest possible value without lowering the standard of some other property.

All gloves are seamless, form fitting, accurate to size, with finger lengths and widths adjusted to best meet average conditions.

Both Nos. 90 and 100 are furnished in 10,000, 15,000, and 20,000-volt ratings. Class B, 10,000-volt, 14-inch gloves are standard; Class A, 10,000-volt, heavier weight gloves are available.

Guaranteed to pass the most thorough inspection and to meet the A.S.T.M. specifications. Replacement made or return accepted of any which fail under initial tests at their rated voltage or otherwise prove unsatisfactory at time of delivery.

Furnished in sizes, 9, 9½, 10, 10½, 11, and 12.

Packed 1 pair to a box.

**Salisbury Protective Rubber Sleeves**

Formed and Vulcanized in Chromium Plated Molds  
Full Length

Used to protect the arms and shoulders from accidental contact with energized equipment. Fastened across the shoulders by an adjustable rubber strap and rubber buttons. New chest strap feature prevents top of sleeves from sliding back and is so positioned that it does not interfere in any way.

Guaranteed to resist 10,000 volts for three minutes on initial tests. Chocolate color.

No. 40-R, standard size, is usually found suitable. No. 50-L, large size, is for men of large build or for use over heavy clothing.

Packed 1 pair to a carton.

No.	40-R	50-L
Outside Arm Length.....	inches 25	27
Inside Arm Length.....	inches 17½	18
Wrist Opening.....	inches 5½	6
Arm Opening.....	inches 11	12
Shipping Weight.....	pounds 3	3¾

**Elbow Length**

Fits fairly close around forearm but permits free arm movement. Very flexible. Molded in one seamless piece.

Combination of short sleeves with standard length gloves is economical, for if either are damaged it is only necessary to replace the unserviceable glove or sleeve.

Guaranteed to resist application of 10,000 volts for three minutes between water electrodes. Chocolate color.

Packed 1 pair to a carton.

No.	60-R	70-L

**No. G4767-2 Chance Temporary Jumper Clamps**

This clamp, equipped with 5000-volt rubber-covered extra-flexible cable, is recommended for extra protection to linemen doing general low voltage maintenance work. Has large, positive, gripping surface.

Handle is of corrugated, medium hard rubber; will not break or crack if dropped from pole. Cable is easily and securely attached. Handle will accommodate 1-inch maximum overall diameter grounding cable.

No cable furnished.

Main line contact: maximum wire size, 750,000 CM stranded copper; minimum wire size, No. 10 solid copper. Jumper wire size: maximum, No. 2/0, 5000-volt flexible grounding cable. Length, 9 inches.

Weight each, 1¾ pounds.

**Chance Grip-All Clamp Sticks**

This clamp stick is safe and easy to handle.

To open jaws it is necessary to release the safety catch. Safety catch closes automatically when jaws are closed.

Full universal action is obtainable; eye screw may be turned with clamp stick at 0° to 90° angle to screw axis.

Hardwood pole is 1½ inches in diameter; tested to withstand 75,000 volts per foot for five minutes.

Castings are aluminum and bronze.

No.	M1865-4	M1865-6	M1865-8
Length Pole.....	feet 4	6	8
Overall Length.....	4'6¾"	6'6¾"	8'6¾"
Net Weight.....	pounds 4½	5¼	6

**No. G1710-5 Chance 3-Wire Standard Grounding Sets**

Has eye screw for use with clamp stick, no cable.

Cluster shown at right is made for grounding on any 3-wire construction. Also with clamps mounted on poles, single clamps mounted or unmounted. Clamps and cluster are bronze.

Main line contact: maximum wire size, 4/0 stranded copper, 3/0 ACSR. Jumper contact: maximum wire size, No. 2 ground cable. Overall length, 8 in. Weight, 4½ pounds.

## No. 4800-15 Chance Hot Line Maintenance Tool Sets

Aluminum Fitted for Light Weight, Efficiency

Complete Set for Two or Three Phase Lines

These Chance Hot Line Maintenance Tools represent the latest developments in equipment for making repairs on high voltage lines. The metal fittings are cast of heat treated aluminum alloy which makes them lightweight for ease in handling and has made possible many mechanical improvements.

The tool set shown above has been developed for making insulator changes, cross arm changes or pole changes on two or three phase straight line construction. The auxiliary arm may be used either as a side arm or as a lifting arm to lift the conductors above the structure. The set is available complete as shown or in parts as listed. Poles are laminated spruce tested to withstand 75,000 volts per foot.

No.	Reference	Description	Approx. Wt., Lb.

No. 4800-10 Chance Standard Hot Line Tool Sets

Minimum essentials for working straight line construction have been selected for this set of Chance Hot Line Tools. The auxiliary arm is designed for use as a side arm but also may be used as a lifting arm by changing the position of the brace and mounting the arm on the wire tong for lifting. Wire tongs and saddles are generally used for laying conductors out into the wire holders on the auxiliary arm and for holding the conductor, on the opposite side of the pole, in the clear.

This tool set may be used for two or three phase lines. Metal fittings are heat treated aluminum alloy. Poles are laminated spruce, tested to withstand 75,000 volts per foot.

## Chance Wire Tongs

Use of heat treated aluminum castings has made possible several improvements in design and operation of Chance Wire Tongs without increasing their weight. Width of jaws has been increased to handle larger conductors. New actuating screw is faster and easier to operate, only 6 turns from fully open to fully closed on the 2-inch size being needed as compared with 12 $\frac{7}{8}$  turns with the former design. Poles are laminated spruce and are tested to withstand 75,000 volts per foot for five minutes.

No.	Pole Diameter Inches	Pole Length Feet	Overall Length	Maximum Wire Size Inches	APPROX. WEIGHT

## Chance Rigid Auxiliary Arms

The Chance Rigid Auxiliary Arm can be used as either a lifting arm or side arm. Safety brackets at each end prevent the conductor from slipping off accidentally during the change over. The arm is fastened to the pole by the quick action, safety locking Chance Chain Tightener and braced by a laminated pole. Ratings are 200 pounds per conductor holder on 7 and 8-foot arms and 150 pounds per conductor holder on 10-foot arm. Use of heat treated aluminum alloy fittings has reduced weight of 7-foot arm from 35 pounds to 28 $\frac{3}{4}$  pounds. Weight reduction in other sizes is comparable.

No.	Description	Weight Pounds
M4800	7-Foot Rigid Auxiliary Arm Complete with Two Wire Holders.....	28 $\frac{3}{4}$
M4800-1	8-Foot Rigid Auxiliary Arm Complete with Three Wire Holders.....	31 $\frac{1}{8}$
M4800-2	10-Foot Rigid Auxiliary Arm Complete with Three Wire Holders.....	33 $\frac{1}{8}$

## No. M4800-35 Chance Temporary Distribution Cross Arms

This lightweight Chance Temporary Distribution Cross Arm is designed for changing four or six pin arms or insulators on voltages up to 4 kv. in urban areas where spans are short.

Folding arms permit it to be lifted by hand line through phases to position on pole.

Bottom of cross arm pole is applied with Chance Chain Tightener, top with adjustable strap arrangement.

This unit is rated for 100 pounds per hook, using six lines at once. Hooks are spaced 14 inches apart for sufficient insulation.

Lift pole, 8 feet by 2 $\frac{1}{2}$  inches.

Hinged arms, 4 feet by 2 inches.

Weight, 30 pounds.

Chance Adjustable Platforms  
With Attachments

The use of heat treated aluminum alloy fittings has made possible the addition of twin braces and a reinforcing keel piece to the Chance Adjustable Platform with little increase in weight. Other special features include attachments for converting this platform for tower use or for changing it into a pivot type platform which will rotate through 180 degrees on pole or tower. These pivot attachments—both pole and tower—eliminate the necessity for buying a separate platform. Platforms are equipped with the lightweight, safe locking Chance Chain Tightener. Rope railings 24 inches high may be ordered separately.

No.	Description	Length of Platform Feet	Working Load, End of Platform Pounds	Approx. Weight Pounds

Chance Universal Poles

Chance Universal Poles are designed for attaching a variety of fittings making one tool do the work of several, eliminating the need for carrying a pole for each tool. Notches on heads dovetail with those on individual fittings and connections are easily tightened by hand with the wing screw. Standard lengths are 8 feet or two 4-foot sections spliced. Longer poles may be obtained if desired.

No.	Description	Pole Diameter Inches	Pole Length	Weight Pounds
M1760	With Tie Wire Assistant, One Head	1 <sup>1</sup> / <sub>4</sub>	8'	3
M1760-1	With Cotter Key Assistant, One Head	1 <sup>1</sup> / <sub>4</sub>	8'	3

M1760-6	Tie Wire, Cotter Key Assistant, Splice and Two Heads	1 <sup>1</sup> / <sub>4</sub>	Two 4' Lengths	5 <sup>7</sup> / <sub>8</sub>

Chance Universal Emergency Storm Tools

The Chance Universal Storm Tool is a short length of pole equipped with special insulator skirts. Pole has a universal head on one end and a universal spline fitting on the other for attaching to a standard universal pole. Its purpose is to do hot line work when rain, sleet, or heavy snow make the use of regular tools hazardous. Hoods prevent water stream from running down pole. Tool should be used for a limited time and considered an emergency tool.

No.	Description	For Working on Voltages
M4455-64	Two Insulator Skirt Tool	23 kv.
M4455-65	Three Insulator Skirt Tool	34 kv.

Chance Wire Tong Saddle and Clamp

This pole attachment for wire tongs used in hot line work is made of heat treated aluminum alloy. It is quickly attached and securely held with the Chance Safety Chain Tightener. A clevis attachment for blocks eliminates binding, for the blocks swing with the wire tong. Clamp has stainless steel liner.

No.	Size Inches	Approx. Weight Pounds

M4740-4	2	8 <sup>3</sup> / <sub>16</sub>
M4740-5	2 <sup>1</sup> / <sub>2</sub>	8 <sup>5</sup> / <sub>8</sub>
M4740-9	3	8 <sup>9</sup> / <sub>16</sub>

## Chance Prong and Blade Type Tie Sticks

Fixed 2 Prong with Universal Head

Fixed 3 Prong with Universal Head

Fixed Blade with Universal Head

Rotary Blade with Universal Head

Rotary Prong with Universal Head

Fixed Two and Three Prong Tie Sticks with \*Universal Heads on the opposite end are used for manipulating tie wires. They are especially desirable for ties with looped ends and may also be used for pulling disconnects, installing cumalongs, etc. The third prong is a short, stubby finger which aids in making short bends with tie wire.

Fixed Blade Tie Stick with \*Universal Head on the opposite end is primarily used for removing insulator ties which do not have looped ends. Recommended for replacing ties which have had their looped ends kinked or burned off.

Rotary Blade Tie Stick with \*Universal Head on opposite

end handles tie wires with or without looped ends speedily and easily. Swivel action permits full turn on tie wire without releasing contact. A tie wire assistant is attached to the pole for prying up tie wires which do not have looped ends.

Rotary Prong Tie Stick with \*Universal Head on opposite end is used for replacing or removing insulator ties with looped ends. Hook swivels freely to aid in maneuvering tie wire.

\*Universal head on opposite end of pole is used for attaching other line tools making this two tools in one. Available also without universal head.

No.	Description	Pole Length Feet	Weight Pounds
M1855-17	Fixed 2-Prong Tie Stick with Universal Head	8	3 <sup>3</sup> / <sub>4</sub>

M1855-19	Rotary Prong Tie Stick with Universal Head	8	2 <sup>7</sup> / <sub>8</sub>

## Chance Lever Type Wire Cutters

Use of aluminum alloy fittings has made it possible to reduce the weight of the 4-foot Chance Lever Type Wire Cutter by two pounds and yet change from spruce to hardwood in the pole for greater strength and rigidity.

Operator is insulated from cutting head by fiber operating rod.

No.	Pole Length Feet	Recommendations	Weight Pounds
M1871-4	4	Cutting Maximum of 2/0 Hard Drawn Copper or ACSR Wire	6 <sup>1</sup> / <sub>4</sub>

M1873-6	6		

## Chance Rural Dead End Strain Carriers

This strain carrier simplifies and speeds up changing dead end insulators on transmission lines up to and including 23 kv.

Handles insulators up to 10 inches in diameter.

Semi-corner fitting with clevis at the back for engaging conductor clamps on semi-corner construction may be ordered separately.

No.	Description	Take-Up Inches	SPAN BETWEEN ROCKER — ARM AND BRACKET, IN. — Minimum      Maximum		Maximum Working Load Pounds	Approx. Weight Pounds

**Diamond Steel Spring Toggle Bolts**

Made with two wings that engage a trunion nut and a spring which forces the wings outward when the head has passed through the wall. One end of the spring is extended to prevent rotation of the head while turning in the screw.

Each wing is a complete toggle in itself and forms a bridge with bearing on both sides of the hole.

This construction gives great strength and distributes the load over a maximum of wall area.

All toggle threads are National Standard Thread. Head and bolts packed 100 in a box.

TYPE R—with round head screws. TYPE F—with flat head screws and TYPE M with mushroom head screws furnished in 1/8-inch diameter only. TYPE N—reverse R or F screw and add nut. TYPE P—reverse R or F screw and add acorn nut. Cap nuts extra.

For prices on brass bolts and brass toggle heads, multiply the list by 2.8.

**Diamond Crimp-Nuts**

Meets the need for a secure means of attachment which may be quickly placed in position on a partially or wholly completed sheet metal structure even though the back or interior of structure is not readily accessible.

It may be used in a hollow section where space is closely confined. Usually 1/2-inch of space is sufficient.

Holding capacity equals that of a standard bolt.

No tool is required for making ordinary attachments. When many uniform attachments are to be made, use of the attaching tool is recommended.

Prices do not include screws.

Packed 100 per box.

**No. 730 Diamond N Drill Points**

Made of steel.

Drills are carefully tempered to insure sufficient hardness at the point to withstand the wear of cutting and the temper is drawn away toward the shank, so as to produce a softer steel where it enters the handle to prevent its breaking off at that point.

May be used with Diamond Drill Holders Styles A, B and C and Diamond Hammer Drills.

**No. 745 Style A Diamond Drill Holders**

Forged from solid bar of Vanadium tool steel. Has a rubber guard.

Fits Di-Forge and Diamond N points. Shipping weight per dozen, 9 pounds.

No. 745.....per dozen \$27.00

**No. 750 Style B Diamond Drill Holders**

A hand drilling tool made of steel. Either Diamond N or Di-Forge drill points may be used. Weight per dozen, 8 1/2 pounds.

No. 750, without Points.....each \$2.00

**No. 755 Diamond Rubber Grip Drill Holders Style C**

Overall length, 6 1/4 inches. Weight per dozen, 10 1/2 pounds.

No. 755.....per dozen \$48.00

## Peirce Lead Sleeve Expansion Bolts

Galvanized

Consists of a steel bolt with a wedge or cone shaped head, tapering toward shank and provided with a lead sleeve.

## No. 31 Peirce Expansion Shields

Used with wood or lag screws for masonry attachments.

Size screw, Nos. 20 and 22. Shield: diameter, 1/2 inch; length 2 inches.

Shipping weight per 100, 12 pounds.

No. 31	per 100	\$18.70
--------	---------	---------

## Peirce Hammer Drills

Holes may be drilled in masonry with this drill in about one quarter of the time required by ordinary methods. The hazard of injured hands is also completely eliminated. Jammed drill points are quickly removed and most important, holes are neatly and quickly drilled. The outer end of the hammer drill is hollow for tamping lead sleeves. Chuck takes all sizes of drills.

No.	50	53
Per 100	\$2608.53	2778.28
For Tamping Bolt	1/4	3/8
Ship. Weight per 100	825	880

## Peirce Drill Points

Made of fine tool steel, carefully tempered to the proper hardness and toughness. Two inches of the point is contained in the chuck.

Special sizes up to 1-inch diameter and any length can be furnished to fit Peirce Hammer Drill Chucks.

**Unique Gasoline and Kerosene Blow Torches**

No. 3

No. 7

For heavy duty hard service under severe weather conditions and applications requiring large volume of flame and extra heat.

Flame, 1½x12 inches, 2000°F. Flame can be regulated to small jet.

Closing the valve forces slender cleaning needle through orifice, keeping it clean and full size.

Has replaceable, threaded needle and orifice block, and removable channel plugs for cleaning, and powerful, dependable pump.

No. ....	Gasoline		Kerosene	
	3-L	7	3-K	7-K
Each .....	\$13.33	16.66	16.66	20.00
Tank Capacity.....quarts	1	2	1	2
Weight.....lb.	4½	5½	4½	5½

**No. 0 Unique Gasoline Blow Torches**

1-Pint Capacity

A compact torch for the tool kit; for use in places hard to get at. Produces an intense heat of 1900°F. plus. Burns in any position. Fine flame control. Closing fuel valve forces the steel cleaning needle through orifice, clearing it of foreign particles. The needle, threaded orifice block and all other parts are replaceable. Channels fitted with removable threaded plugs for cleaning.

Steel tank, brazed fittings, and welded construction for safety. Top filler opening. Oval tank is 2¾

inches through center; 5-inch circle. Size flame, 1x6 inches. Weight, 3 pounds. Generator wind-shield included.

No. 0..... each \$7.33

**No. 1 Unique Gasoline Blow Torches**

1-Quart Capacity

A medium, small flame torch. Produces an intense heat of 1900°F. plus. Burns in any position. Fine flame control. Closing fuel valve forces steel cleaning needle through the orifice, clearing it of foreign particles. Cleaning needle, orifice block and all parts replaceable at small cost. Channels are fitted with removable threaded plugs for cleaning.

Steel tank, powerful pump, brazed fittings, and welded bottom for safety. Filled through bottom funnel filler. Size flame, 1x6 inches.

Weight, 3¾ pounds.

No. 1..... each \$7.33

**No. 50 Unique Heavy Duty Gasoline Public Utility Furnace**

With Style A Hood

Melts 50 pounds of solder in 10 minutes. Flame, 2000°F, ½x12-inch length. Extra fine flame control which holds steady without change.

Generator is made of bronze alloy casting, fitted with replaceable orifice block and removable channel plugs.

Tank is made of heavy steel, welded throughout.

Top-Plate has ample support for large kettles and solder pots up to 8-inch size. Handle locks to support solder iron.

Hood. Style A is standard and has open top. Style B hood (for solder irons) may be substituted and accommodates irons up to 12 pounds per pair. Heating time, 4 minutes. Style A hood is furnished as standard.

Tank capacity, 1½ gallons. Dimensions, 9½x13 inches. No. 50, Weight 15 Pounds.....each \$22.33

No. 50 Generator

**No. 58 Unique Kerosene Heavy Duty Public Utility Furnaces**

Melts 50 pounds of solder in 10 minutes. The figure 8 generator burns the fuel without carbon formation, producing a clean flame of 2000°F.

Orifice is cleared of foreign particles by turning flame control valve while furnace is burning.

Tank is made of heavy steel, welded throughout.

Top-Plate has ample support for large kettles and solder pots up to 8-inch size. Handle locks to support solder iron.

Hood. Style A hood is standard and has open top. Style B hood (for solder irons) may be substituted and accommodates irons up to 12 pounds per pair. Heating time, four minutes.

Tank capacity, 1½ gallons. Dimensions, 9½x13 inches. No. 58, Weight 15 Pounds.....each \$22.33

Figure 8 Generator and Orifice Scraper

**No. 3420 Klein's Staysalite Linemen's Torches**

This torch burns alcohol without odor or noise and stays lit in a wind.

Light and small and is lit or extinguished in a moment, as wanted. Has no adjusting parts.

The Staysalite is carried in the lineman's belt and eliminates the ground man; can be hung directly on the wire under joint to be soldered.

Provided with a cup for holding soldering paste. Can be used as a small heater or for soldering iron.

Weight, 1¼ pounds.

No. 3420.....each \$13.30

## Unique Safety Folding Shields

For Furnaces and Firepots

No. 50

No. 50-C

Protects workers and by-standers from hot materials and shields furnace from wind. Affords a protective spot for tools and accessories.

Galvanized iron with edges rolled around 1/4-inch rod. Rust proofed. No sharp corners. Folds flat for carrying and storing.

No. 50 is a four-panel shield with welded steel grate and supporting brackets for large pots and kettles. Grate hooks on bracket to hold shield in open position.

No. 50-C is a three-panel shield without grate

No. 50 Weight, 15 pounds..... each \$16.66  
 No. 50-C Weight, 27 pounds..... each 8.00

## Unique Air Cooled Balanced Ladles

Wood Handle (Round, 1 3/4-Inch Diameter)  
 Cut Away to Show Method of Attaching

Comfortable insulated, "close to the bowl" grip eliminates strain, and makes it easy to direct and control the flow of molten metal.

Made of pressed steel and treated so that solder cannot stick.

Wood handle can be easily and inexpensively replaced.

Bowl Diameter.....inches	2 1/2	3	3 1/2	4
Each.....	\$1.40	1.50	1.70	1.80
Capacity.....pints	1/8	1/4	3/8	1/2
Weight.....ounces	10	12	14	16

## Unique Air-Cooled Solder-Copper Handles

Shank contact with wood is minimized. This safe handle won't let go—the piano wire grip contracts and expands with the shank—a tight grip always. Simply drive the handle over the pointed shank—no special tools required.

No.....	1	2

## Soldering Coppers

Made of drawn copper bolts of the best quality and

shaped like a hammer. By this method they are as solid as metal can be made, are better heat retainers and should not be compared with such as are cast from copper ingots.

Weight, per Pair.....lbs.	3/4	1	1 1/4	1 1/2
Soldering Coppers.....each				

## Ideal Commutator and Slip Ring Resurfacers

### Commutator Resurfacers

**Extra Coarse.** Exceptionally fast cutting. For "hogging" off excessive copper or other metals.

**Coarse.** Fast cutting. For use where a fair amount of copper or other material is to be removed.

**Medium.** For general utility, high mica, small ridges and burns.

**Finish.** For use after three grades above, bringing the surface to a velvet which quickly becomes a gloss after the brushes have been lowered. Used particularly for periodic application, and for the removal of small burns and ridges, immediately after their appearance.

**Polish.** An excellent grade, which gives a burnished finish. Made of an exceedingly fine, 220-grain aggregate.

### No. 81 Slip Ring Resurfacers

Designed especially for grinding steel and cast iron slip rings. This resurfacer is a slight conductor and should be used with the current off and no load on machine.

**Coarse No. 81.** For rapid grinding and for removing large quantities of material.

**Medium No. 81.** For general utility and removing small pits and burns.

**Finish No. 81.** For final application after Coarse No. 81 or Medium No. 81 has been used.

### Pencil Type (No Handle)

For fans or signal motors, auto generators, locomotive headlight motors and other fractional horse power motors.

### Straight Handle Type

Used primarily on inaccessible types of commutators on small or enclosed motors.

There are four standard sizes, but other larger sizes can be made to order.

### Vertical Adjustable, Tramway and Railway Handle Types

These three types of resurfacers are for use on medium size motors and small generators.

**Vertical Adjustable Handle.** The knob handle is fastened permanently. The extra rod handle makes this type universal to meet practically all conditions. The knob is drilled on two sides, also on the top, so that the rod handle can be adjusted to any one of three positions.

**Tramway Handle.** This is a stout handle with a good grip, permanently mounted at a 45° angle.

**Railway Handle.** This is a stout handle with a good grip, permanently mounted in a vertical position.

### Wood Block Handle or Tool Type

For use in Ideal Precision Grinders or any type of lathe truing device. Equipped with wood block handle for clamping rigidly into the grinder.

### U Handle and Saw Handle Types

These types are for use on large motors, small rotary converters, motor-generator sets, telephone generators, etc.

**U Handle.** Preferred when the stone is to be used with the handle parallel to the brush arm.

**Saw Handle.** Desirable when the stone is to be used with the handle at right angles to the brush arm.

Double U Handle and Double Saw Handle Types are also available.

### Slip Ring Types

To secure the most efficient grinding results, specify material from which rings are made, such as iron, steel, bronze, or brass. When space permits, use a resurfacer, about 1 inch wider than the ring, bridging over the entire width. Resurfacer should be three times as long as the flat spots as bridging over them assures a perfect job.

### "2-in-1" Pocket Type

For all-around shop practice. Made up in any combination of the five grades, two grades being cemented together.

Prices and Complete Information Sent on Request

Condensed Listing of Ideal Commutator Motor Winding and Repair Shop Tools

**Brush Seaters**

For seating carbon, graphite or metal-composition brushes. Standard size: length, 4¾ inches; face, 1½x5½ ineh. Per Dozen..... \$6.00

**Portable Precision Grinders**

**No. 24-004 Perfect Model.** A high grade precision tool for use with Ideal Tool-Type Resurfacers. Adaptable to all open type commutators and rings. Furnished in any one of fifteen different lengths, ranging from 6 to 36 inches inclusive by 2-inch variations.

Shipping weight, 12-inch size, 45 pounds. No. 24-004, with 12-Inch Bed Plate, Including Brush Arm Supports.....each \$110.00

**No. 24-020 Ideal Model.** Designed especially for use in close quarters or on machines with outboard fans, large bearing pedestals, or close end frames. Furnished in the same lengths as the No. 6 Perfect Model.

Shipping weight, 12-inch size, 45 pounds. No. 24-020, with 12-Inch Bed Plate, Including Brush Arm Supports.....each \$140.00

**No. 24-033 Midget Model.** Designed especially for use on small commutators having a face width of 8 inches or less, as well as for use on medium-sized slip rings. For use with Ideal Tool-Type Resurfacers. Compact design allows working in small spaces.

Shipping weight, 20 pounds. No. 24-033, with Brush Arm Supports.....each \$72.50

**Commutator Turning Tool Heads**

An excellent tool for removing the bead or ridge of copper left on the inside of the commutator next to the riser. Net weight, 7 pounds.

No. 24-045, for Perfect and Ideal Model Precision Grinders.....each \$31.50  
No. 24-046, for Midget Model Precision Grinders.....each 27.50

**No. 25-029 Universal Power Mica Undercutters**

Cuts smoothly without vibrations. May be used in space only 2¾ inches wide.

Weight, including motor, 52 pounds. Complete with Standard 115 Volt A.C. 60 Cycle Motor.....each \$140.00

Complete, but without Motor; with Motor Shaft Connection.....each 120.00  
If desired, other voltages and cycles can be furnished at extra charge; also undercutters for d.c.

**No. 25-023 Shop Type Undercutters**

This undercutter is light enough for easy handling, and sturdy enough for continual heavy duty undercutting. Net weight of head only, 2¾ pounds.

No. 25-023, without Motor.....each \$120.00

**Direct Drive Undercutters**

Intended primarily for field use, but the rugged, sturdy design makes this undercutter suitable also for shop use.

Weight, with 8-foot cord, 5¾ pounds. No. 25-001, with 115V. Universal Motor.....each \$90.00  
No. 25-002, with 230V. (Also 250-Volt) Universal Motor.....each 98.00

**Commutator Saws and Milling Cutters**

Made of Special No. 1 High Speed Steel. Available in all types and sizes, not only for the Ideal Undercutter, but any type of undercutter. Available in outside diameters from ¼ to 1½ inches inclusive. Prices on application.

**Slotting Files**

Specially designed and constructed for commutator use. Weight per dozen, 1 pound.

No. 20-007, Large 8-Inch Type.....each \$1.06  
No. 20-009, 9½-Inch Single End Type (Specify Draw-Cut or Double-Cut).....each .89

**No. 20-006 Hand Type Commutator Mica Slotters and Scrapers**

Designed for use on small commutators, and for plants which do not have sufficient work for a power driven unit. No. 20-006.....each \$2.95

**Balancing Ways**

Indispensable for the static balancing of motor armatures, crank shafts, pulleys, fly wheels, etc.

No.....	19-006	19-007	19-008
Each.....	\$48.83	55.89	37.36
Capacity.....pounds	1000	1000	400
Approximate Shipping Weight.....pounds	13	48	108

Longer shafts can be furnished at slight extra charge.

**Growlers**

Used to quickly locate grounds and shorts.

**Type U-2.** Used as an external growler for armatures and as an internal growler for stators.

**Type S.** Contained in oblong cases; made in two sizes, with and without meters.

**Type F.** Made with a built-in feeler, and shaped to test armatures and stators.

Specifications and prices will be furnished on request.

**No. 41-001 Insulation Testers**

Indicates in a second whether or not there is a short, ground or broken wire. Suitable for testing insulation of low voltage equipment. Capacity, 500 to 2500 volts.

For 115 volts, 50-60 cycles. Weight, 15 pounds. No. 41-001..... \$55.89

**No. 16-003 Armature Winding Heads**

Winds small universal, shaded pole, two pole d.c. or repulsion induction motor armatures. Net weight of head, 2 pounds.

No. 16-003.....each \$60.00

**Coil Winder Heads**

**No. 16-002 Midget Model.** For making coils 4x1½ inches minimum up to 8½x6½ inches maximum.

Weight, 10 pounds. No. 16-002.....each \$61.77

**No. 16-001 Universal Model.** Winds coils up to 13x16½ inches. Weight, 35 pounds.

No. 16-001.....each \$75.89

**No. 15-028 Coil Winder Drives**

Gives an infinite number of driving speeds between 120 and 650 rpm. by moving control lever.

Weight, approximately 180 pounds. No. 15-028, Complete, 115V. 60 Cycles.....each \$464.71

**No. 16-004 Armature Winding Yokes**

Winds any type armature with a shaft 9 to 19 inches long. Weight, 28 pounds.

No. 16-004.....each \$85.29

**No. 16-006 Armature and Stator Holders**

Ideally suited for holding work while soldering commutator leads, inserting insulation, inserting wedges, banding armatures, rewinding, removing and inserting coils on stators or armatures, etc.

Approximate shipping weight, 40 pounds. No. 16-006.....each \$40.59

**No. 45-070 Brush Type Wire Strippers**

Cleans enamel wire rapidly. Cleanly strips cotton and enamel, silk and enamel, string asbestos and similar types of light insulation from round wire, flat or rectangular wire, or solid or stranded wire.

Net weight, approximately 50 pounds. No. 45-070 Complete, 115V., 60 Cycles.....each \$223.53

**No. 45-009 Rotary Type Wire Strippers**

This powerful, motor-driven wire stripper is needed wherever volume stripping is done. Strips wire up to ½-inch outside diameter. Net weight, 45 pounds.

No. 45-009 Complete.....each \$147.06  
No. L-2440, Extra Blades.....per set 3.95

## National Carbon Brush Assortments

### For Fractional Horsepower Motors

Brushes for vacuum cleaners, fans, vibrators, electric ironers, washing machines, sewing machines, food and drink mixers, heat regulators, pumps, electric tools, cash registers, and office appliances.

Container is designed for effective counter or store display.

All brushes and springs are of the finest quality and will take care of replacement

ments on fractional horsepower motors (a.c., d.c., and Universal) used on the popular makes of home, office and shop appliances and equipment.

Sizes range between  $\frac{5}{32}$  and  $\frac{5}{16}$ -inch square with 10 intermediate sizes of round and rectangular brushes including three types of brushes with shunts, springs and terminals. Springs are made of the best phosphor bronze wire.

**No. 40 Assortment.** Contains 102 brushes of 17 types and sizes (3 sizes complete with shunts, springs, and terminals) and 55 springs in 3 sizes.

No. 40 Assortment Complete.....each **\$8.50**

**No. 55 Assortment.** Contains 198 brushes of 17 types and sizes (3 sizes complete with shunts, springs, and terminals) and 100 springs in 3 sizes.

No. 55 Assortment Complete.....each **\$14.50**

## No. 2560 Lyon Portable Work Benches

Used by maintenance men, millwrights, mechanics, and supervisors of mobile assembly and production lines. All the features of Lyon steel top work benches are contained in portable benches and all standard accessories may be used.

Bench casters are stationary type. Wheelbarrow type handles slide under bench top and out of the way when not in use. Green baked-on enamel finish. Length, 72 inches. Depth, 34 inches.

No. 2560, Weight, 218 Pounds.....each .....

## No. 3020 Lyon Tool Cabinets

Designed to hang on a wall or be used on a bench. Back and sides punched on 1-inch centers for  $2\frac{1}{2}$ -inch pegs.

Tamper proof hinges. Strong three point latching device.

Complete with shelf, socket tray and ten adjustable pegs.

## Lyon Tool Stands

No. 3107

Used in machine shops, printing plants, assembly lines, stock rooms, repair shops, garages, toolrooms, service stations, maintenance departments, laboratories, restaurants and vocational schools.

In factories, used as work stands around production machines, mountings for small tools, parts containers for assembly lines, etc.

In restaurants, used as salad tables; in laboratories, as portable work centers; in printing plants, as ink stands; in garages, as tool and part carriers, etc.

Available in stationary and portable models.

Trays attach at each corner with four bolts, all are interchangeable and punched for attachment of drawers. Legs are formed from band steel, curled at bottom to hold glide feet or swivel type casters.

Drawers have padlock attachment, padlock not furnished and a sliding tool tray.

Green baked-on enamel finish.

For further information on  
 the complete line of  
**LYON SHOP EQUIPMENT**  
 consult your nearby Graybar office.

**No. 3160 Lyon Tool Toters**

Used in machine shops, power plants, plumbing shops, electrical shops, toolrooms, printing plants, welding shops, and maintenance departments.

Built-in drawers operate in a closed case that strengthens entire toter and assures continued drawer alignment. Padlock hasp on cross piece locks both drawers at one time, padlock not furnished. Top and bottom trays have 1½ inch flange. Steel swivel casters. Riveted construction. Width, 18 inches. Depth, 24 inches. Height, 34½

inches. Drawer size, 15x23x4½ inches. Green baked-on enamel finish. Weight, 78 pounds. No. 3160.....each **\$16.65**

**Style H Lyon Steel Stacking Boxes**

For heavy loads from 75 to 125 pounds and to withstand hard usage.

Made of 18-gage steel. Shallow V shaped runners make it ideal for gravity conveyor use. Tapered for efficient stacking. Stacking rail at each end strengthens entire box.

No.....	<b>3600</b>	<b>3601</b>	<b>3602</b>	<b>3603</b>

## Lyon Steel Lockers

Single Tier

Double Tier

Used in factories, offices, shops, printing plants, and hospitals. Has positive latch, full length pre-locking lock bar. Rigid frame, vertical members extend to floor to form legs. Vertical and horizontal members rabbetted and welded. Bulb edge adds strength and beauty. No bolt heads on locker fronts. Trouble-free hinges, projection welded to frame. Butt of hinge is recessed in door frame. Pin cannot be forced out. Door may be removed and replaced and still retain perfect alignment. Recessed handle, satin chrome finish. Number plate fits in handle and cannot be removed. No protruding parts to snag clothing. Used with padlock or built-in lock. Lockers 12 inches wide have one double prong and three single prong coat hooks. Lockers over 12 inches wide have one double and four single hooks. Number plate extra. Green baked-on enamel finish. Also available in brown finish.

### Single Tier

Full length clothing storage. Shelf 9 inches from top for hats, lunches, etc. Single tier doors have 3-point locking device (top, bottom and center).

Sizes shown are per locker opening, add 6 inches to height for legs.

### Double Tier

Satisfactory for a great many uses, particularly for short period occupancy and where long coats are not worn. Double tier lockers have no shelves. Double tier doors have 2-point locking device (top and bottom).

Sizes shown are per locker opening, add 6 inches to height for legs.

### No. 5840 Lyon Locker Racks

Open coat rack having 10 compartments with perforated doors above rack. Locking door secures coat by means of chain attachment. Built in lock, 2 keys. Width, 50 inches. Height, 76 inches. Depth, 18 inches. Green baked-on enamel finish, tan doors.

No. 5840 ..... each \$50.00

**Orangeburg Fibre Conduit**

Taper Sleeve Joint

Orangeburg Conduit has been used as a raceway for underground communications and power circuits since 1893.

Manufactured by the Fibre Conduit Company, Orangeburg, New York, where continuing research and development insures a high standard of both workmanship and product improvement.

**Permanence and Low Cost**

Orangeburg Conduit has proven its ability to give maximum, permanent, low maintenance service under conditions that expose ducts to attack from ground waters and chemical wastes—both acid and alkaline.

Installations running back over forty years are still providing clear, usable raceways.

Low in first cost, light in weight yet amply strong to resist breakage, it can be transported to the job in large truckloads.

The material is easy to cut or work. Angle couplings, bends, and other fittings make installation simple and economical. Long lengths and readily assembled Taper Sleeve Joints make for labor saving and low installed cost.

**Protection From Cable Sheath Abrasion**

Scoring or abrasion of the cable sheath weakens its resistance to corrosive elements and shortens its life. Because of the smooth bore and relatively soft nature of their materials, Orangeburg ducts do not score or abrade the lead-sheath cable.

**Protection From Pulling Tension**

Pulling tension on cable tends to set up strains in the sheath. The coefficient of friction in Orangeburg Conduit is lower than in other types of duct material. Published data by one large utility reveal the following coefficient of friction for a large actual installation recently made in which oil-filled cable was used:

Size of Cable	Size of Cut	Coefficient
300,000 C.M.	2 1/4-In. O.D.	3 1/2 Inches .25-30
650,000 C.M.	2 1/2-In. O.D.	4 Inches .25-30

**General Properties**

Composed of 25 per cent fibre and 75 per cent coal tar pitch with wall sections homogeneous and impregnation uniform throughout.

**Specifications**

- Federal Specification: WC-581,
- A.T. & T. (Bell Laboratories): AT-7047,
- U.S. Navy: 9YE,
- I.M.S.A.: 104-1942,
- Civil Aeronautics Authority: CAA-606,
- Association of American Railroads: XVIII-A-21 1929.
- And many Public Utilities specifications.

**Orangeburg Standard Conduit (Type I)  
For Installation with Concrete Encasement**

For main distribution, high tension, and downtown locations.

Orangeburg Standard (Encased in Concrete), is the most economical where duct banks of four or more ducts are involved.

Interchangeable taperjoint couplings are furnished with each length of conduit without extra charge.

A mating 2-degree factory machined taper is provided on each length of conduit and assures a watertight joint.

**Orangeburg NOCRETE Conduit (Type II)  
For Installation Without Concrete Encasement**

Conduit for underground without concrete encasement must have three prime characteristics: (1) mechanical strength; (2) ability to endure permanently; (3) offer lasting cable protection.

For house connections, laterals and extensions; airport, street and parkway lighting, fire alarm and signal systems; industrial and institutional grounds.

**How to Lay Orangeburg NOCRETE Conduit**

Trench and backfill. The trench bottom should be graded true and free from stones or soft spots. Backfill should be free of stones, and should be firmly tamped around the side of the conduit to develop maximum supporting strength. Tamping on top of the conduit is not recommended.

1. Best results are obtained if a cradle is made for the conduit in the undisturbed subgrade. In rocky soil, where this is not possible, a bedding of selected backfill should be put down and tamped before laying conduit.
2. Sidefill up to near the top of the conduit should be firmly tamped.
3. Selected backfill (not tamped) at least 6 inches over the top of the conduit is recommended.
4. Final backfill may now be placed. Tamping may now be employed to finish grade.

## Fittings for *Standard* and NCRETE Conduit 5° Angle Couplings

Available to permit the laying of offsets, long radius bends, etc., to get around obstructions and other services which may be encountered.

The Taper Joint is provided, and a mark on the coupling shows the direction in which the angle will point.

Reducers

Reducers from one size conduit to another are available in all combinations from 1 to 6 inches inclusive. The standard reducer is Taper Sleeve Joint at both ends. Sizes

and types of conduit, joints, etc. to be connected must be specified in detail.

Adapters

Adapters from metal pipe to fibre conduit are available in all combinations from 1 to 6 inches inclusive.

The standard adapter is Taper Sleeve Joint at the fibre end threaded for metal pipe size specified, at the other end. Can be supplied straight bore for threadless metal pipe. Sizes and types of connections desired must be specified.

Fibre Plugs

Fibre Bushings

Solid

Split

For temporarily closing ends of ducts during concreting, etc.

Available for all conduit sizes 2 to 5 inches inclusive.

Available for 2 to 6-inch size conduits inclusive.

Fibre Caps

For sealing spare ducts or exposed conduit ends, etc. Taper Sleeve Joint is standard; socket joint or sleeve fit if specified.

Made for conduit sizes 1 to 6 inches inclusive.

Orangeburg Fibre Conduit Accessories  
Spacers (Bridges or Separators)

For built-up fibre conduit installations, grooved spacers are available for one, two, three or four conduit wide assemblies. These spacers are cast for conduit sizes from 2 to 4½ inches inclusive.

As the general practice is to allow a separation of 1 inch between conduits, this is the standard separation provided. However, for special applications, spacers can be supplied for 1½, 2 or 3-inch separation between ducts.

Orangeburg Conduit Spacers are handled as a service item. Although built for minimum weight with adequate strength, transportation cost may make it more economical for the large user at distant points to make his own spacers. Complete information as to mix employed will be furnished upon request.

Dimension, Inches, of Conduit Spacers

Dimensions I, II, III and IV indicate overall length of spacer for 1, 2, 3 or 4 conduits laterally spaced.

## Orangeburg Field Tooling Lathe

For 1 to 6-Inch **Standard** and **NOCRETE** Conduit

Orangeburg field tooling lathes are made of hardened steel alloy with needle bearings in the cutting handle.

With reasonable care, they maintain accuracy for many years.

No. 0902 is designed for 1-inch conduit only.

No. 0904 is designed for 2-inch conduit only.

No. 0905 is adjustable for 3 to 6-inch conduit only.

### Parts List

No.	Description	Quantity

*428	Socket Joint Cutter, 3 to 6-Inch Standard	
*429	Socket Joint Cutter, 3 to 4-Inch NOCRETE	

\*Furnished only when specified.

### Shipping Weights and Data

**Economical Transportation.** Orangeburg Conduit is transported by rail or truck most economically because it combines light weight with ample strength to resist breakage. The largest truck bodies can be loaded to maximum cubic carrying capacity, reducing trips and hourly costs to an almost negligible cost per foot.

Orangeburg price schedules are based on total weight of material involved, including all bends, elbows and items classified as fittings **Standard** and **NOCRETE**; excluding items classified as accessories (spacers, etc.)

**Shorts.** The right is reserved to include 15 per cent of lengths shorter than standard. All shorts included are packed separately in any shipment to facilitate identification and easy count. Shorts are cut to even lengths six or twelve inches less than standard.

**Class A Orders:** 30,000 pounds (minimum car) or over.

**Class B Orders:** 10,000 to 29,999 pounds.\*

**Class C Orders:** 9,999 pounds or less.

**Crating.** There is an extra charge for crating Class A and B orders, if crating is desired and specified. Class C orders are usually packaged for less than carload handling.

Weights of bends and other fiber items are included in figuring minimum weights; consequently such items on an order will decrease footage in the conduit weight tables.

The weights listed below are used for pricing computations only (approximate shipping weights).

### Orangeburg Standard Conduit

Conduit Size.....inches	1	2	3	4	4½	5	6

**Natco Standard Single Duct Conduit**

Adapted for high tension power lines, single cable terminals or for low tension laterals, as in telephone or signal lines.

In building up duct banks, this conduit provides two heavy insulating walls between adjacent cables, and permits breaking or staggering of all joints throughout the duct bank.

Permits the splaying or separation of individual duct lines in approaches to manholes.

Conduit is scarified lengthwise on the four outer sides, to provide anchorage for bedding mortar.

The inner edges of the duct entrances are properly bevelled and smoothed to eliminate projections and to make safe the pulling of cables.

Certain square single duct shapes are provided with through dowel holes in the corners, permitting the use of steel dowel pins for assembling, centering and aligning such duct lines.

Nominal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size of Hole In.	Approx. Out-side Dimen. In.	Short Lgths. In.	Min. Car-load Duct Ft.

Length.....inches	18	18
Radius.....inches	36, 60, 72 or 96	36, 60, 72 or 96

Bends also supplied that are scored for splitting apart.

**Natco Socket Joint Single Duct Conduit**

Natco Single Duct Conduit is also manufactured in a new socket joint type, which is supplied in 3 1/2, 4 and 4 1/2-inch round bore and in either 18 or 24-inch standard lengths. This new type of duct is self-centering, provides positive alignment, lays up fast and can be installed by ordinary labor. If desired, the joints may be readily troweled or sealed with cement mortar. This new type of conduit is especially adapted for single duct lateral lines, also equally suitable for duct bank construction where this type of joint is preferred.

Nominal Bore.....inches	3 1/2 Rd.	4 Rd.	4 1/2 Rd.
Length.....inches	18 and 24	24	24
Actual Size of Duct Holes.....inches	3 5/8	4 1/8	4 5/8

Also furnished in bends and mitred sections.

**Natco Standard Multiple Duct Conduit**

Particularly adapted for telephone, telegraph, railway signal, fire alarm and low tension light and power service. The large units are economical and quick to install, due to their longer lengths and multiplicity of duct holes.

At the extreme ends of each piece of conduit, a smooth surface is left to permit wrapping each joint with tape or fabric to exclude joint mortar from the ducts.

Supplied in either 3 1/4, 3 1/2 or 4 1/4-inch square bore shapes and in 2, 3, 4, 6, 8 and 9-way multiple shapes.

The 3 1/4 inch is the standard bore, while 4 1/4 inch is the over-size bore, for most telephone service and for certain low tension power and lighting systems, while the 3 1/2 inch bore is frequently specified for certain municipal installation.

Nominal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size of Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.

**Natco Split Conduit**

Natco Conduit in both single and multiple duct shapes and in all standard bores is supplied, scored or knifed, for splitting apart on the job, for repairing or replacing duct lines, without the necessity of removing cables.

These split sections may be also used to enclose cable joints or splices in place of building manholes.

Bore Inches	No. of Duct Holes	Standard Length Inches	Short Lengths Inches
3 1/4, 3 1/2 or 4 1/4 Rd.	Sgl. Duct	18	6, 9, 12
3 1/4, 3 1/2 or 4 1/4 Sq.	Sgl. Duct	18	6, 9, 12

4 1/4 Sq.	4 or 6-Way	18	6
4 1/4 Sq.	9-Way	18	6

## Natco Mitred Conduit

For Curve Construction

Natco Conduit, both single and multiple duct, in all standard bores, is supplied in mitred shapes, for building either simple or intricate curves in lines of clay conduit, for transposing narrow duct banks into wide ones or vice versa, or for splaying duct lines to enter manholes or service points.

Natco Mitred Conduit is made in one standard cut—3 degree and 10-foot radius. The radius of curves built of these sections, is varied simply by interposing straight short pieces between the mitred sections, and the arc of such curves is governed simply by the total number of pieces used.

True and easy curves from 10 to 30 foot radius, and ranging from 3 to 90 degrees, can thus be built.

In the 2, 3 and 6-way multiple conduit, the mitred sections are supplied in either a flat or edge position.

Mitred conduit also supplied scored for splitting apart.

Approximate length, 6x6 $\frac{5}{8}$  inches. Number of pieces in 90° curve, 30.

Bore Inches	No. of Duct Holes	Position
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$	Round	Single Duct
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$	Square	Single Duct
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$	Square	2, 3, or 6-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ , or 4 $\frac{1}{4}$	Square	4-Way
3 $\frac{1}{4}$	Square	8-Way
3 $\frac{1}{4}$ or 4 $\frac{1}{4}$	Square	9-Way

## Natco Branch Conduit

For Dividing Multiple Duct Main Lines

Natco Multiple Duct Conduit is supplied in branch shapes in all standard bores.

Natco Branch Conduit is a new shape, one end of which is the same shape and size as standard conduit, while at the opposite end, certain ducts are more widely separated by means of double webs, so as to permit alignment with abutting branch lines.

Branch conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line. Such a division is highly advantageous in splaying main duct lines into central office buildings, manholes or cable vaults, or for turning laterals or service connections. It frequently saves the necessity of manholes.

Also supplied scored for splitting apart.

Length, 24 inches.

Bore Inches	No. of Duct Holes	Type	For Branching Into
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	2-Way	1-1	2 Single Duct
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	3-Way	1-2	1 Single and 1 Two-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	3-Way	1-1-1	3 Single Duct
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	4-Way	2-2	2 Two-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	2-4	1 Two-Way and 1 Four-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	2-2-2	3 Two-Way
3 $\frac{1}{4}$ , 3 $\frac{1}{2}$ or 4 $\frac{1}{4}$	6-Way	3-3	2 Three-Way
3 $\frac{1}{4}$ Sq.	8-Way	4-4	2 Four-Way
3 $\frac{1}{4}$ Sq.	8-Way	2-6	1 Two-Way and 1 Six-Way
3 $\frac{1}{4}$ , or 4 $\frac{1}{4}$	9-Way	3-6	1 Three-Way and 1 Six-Way

## Natco Transposition Conduit

For Transposing or Twisting 2, 3 and 6-Way Conduit Lines

Natco Multiple Duct Conduit is also supplied in transposition shapes in 2, 3, 6 and 8-way multiples, with right or left-hand twist. The degree or angle of twist is 22 $\frac{1}{2}$ ° for 3 $\frac{1}{4}$ -inch bore shapes, 18° for 3 $\frac{1}{2}$ -inch bore shapes and 15° for 4 $\frac{1}{4}$ -inch bore shapes, and the standard length is 24 inches.

The number of pieces required to effect a quarter turn of 90° from a flat to an edge position, or vice versa, is four pieces in the 3 $\frac{1}{4}$ -inch bore, five pieces in 3 $\frac{1}{2}$ -inch bore or six pieces in the 4 $\frac{1}{4}$ -inch bore sizes.

These transposition shapes are of considerable advantage in changing the position of height of conduit lines, in order to avoid certain street obstructions, or to cross viaducts or bridges, or to change the position of cables on their approach to manholes or cable vaults, all of which frequently eliminates the need of manholes.

Direction of twist, right or left hand.

Bore.....inches	3 $\frac{1}{4}$	3 $\frac{1}{2}$	4 $\frac{1}{4}$
Twist.....	22 $\frac{1}{2}$ °	18°	15°
No. of Pieces in $\frac{1}{4}$ Turn.....	4	5	6

## Natco Pipe Connectors

Single Duct Connector

2-Way Connector

3-Way Connector

Rear View of Connector Ready to Receive Conduit

For the purpose of connecting clay conduit lines to iron pipe lines as in pole risers or to enter buildings, Natco Pipe Connectors are available in the sizes shown below.

These connectors are made of cast iron, one end is shaped to receive the end of the clay conduit line, while the opposite end of the connector is reamed to receive the iron pipe lines.

### Single Duct Connector

For 3 $\frac{1}{4}$ -inch bore conduit and 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit and 4-inch pipe.

### 2-Way Connector

For 3 $\frac{1}{4}$ -inch bore conduit and 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit and 4-inch pipe.

### 3-Way Connector

For 3 $\frac{1}{4}$ -inch bore conduit and 3-inch pipe or 4 $\frac{1}{4}$ -inch bore conduit and 4-inch pipe.

**No. 106 Natco Conduit**

Illustrating the conversion of a 4-way multiple duct line into two 2-way multiple duct lines in an edge position, one of which is flexed or curved to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted 90° from an edge to a flat position in a distance of 8 feet and then continued straight on in the form of standard 2-way multiple duct conduit—in a flat position.

**Specifications**

**B**—One-piece 4-way type 2-2 branch conduit, 2 feet long (for dividing the 4-way line into two 2-way lines).

**E**—Six pieces 2-way mitred conduit—edge position—3° 10-inch radius—6¼ inches long, (for flexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is 18° but any angle of flexure divisible by 3, may be attained by varying the number of mitred pieces).

**H**—One-piece 2-way standard conduit, 2 feet long (laid in edge position—to extend the flexed 2-way line on towards pole).

**R**—One cast iron 2-way connector for 3-inch wrought iron pipe.

**P**—Four pieces 2-way left-hand transposition conduit, 22½°, 2 feet long (for transposing the other 2-way line 90° from an edge to a flat position).

**Dowel Pins**

Pressed steel pins, 5/8x3 inches, with an integral central flange or collar, are generally used for joining or aligning individual sections of multiple duct, also certain sizes of square bore single duct conduit together.

Two pins are used at each joint or for each piece of conduit.

**Joint Tape**

An especially prepared tape is frequently used for wrapping the joints of multiple duct conduit prior to the application of the joint mortar, also occasionally used for wrapping joints of single duct conduit in trench, subway or masonry structures, prior to the pouring of the concrete encasement.

This tape has an adhesive waterproof coating on one side, and is supplied in 4 and 6-inch widths, and put up in rolls of 25 linear yards.

Tape adheres closely and firmly to the glazed surface of the conduit and aids in sealing the joints.

In ordering, specify total number of linear yards required.

**Minerallac Insulating Compound**

For Use in Cable Joints, Potheads and Terminal Bells

**High Voltage Compound**

**No. 1.** A compound having the consistency of molasses. Not affected by moisture. Especially effective in drying out tape and cloth, and between layers of such materials when wound on high-voltage electrical apparatus.

**No. 2A.** Cable joint or pothead compound. Melting point, 82°C. One of the most important characteristics of this compound is its ability to adhere to metal or porcelain. Suitable for use in warm climates.

**No. 64.** A compound suitable for use in mild climates where there is no great variation in temperature. A hard compound with a melting point of approximately 93°C.

**No. 78.** Cable joint or pothead compound. Dense and adhesive with little shrinkage. Recommended as an all-purpose insulating material. Low moisture absorption; pliable. Recommended for voltages 600 and up. Melting point, 90°C. Dielectric strength 940 volts per mil at 30°C.

**No. 80.** Pothead compound. A hard compound for use on 600 volts and over. Melting point, 130°C. Tests 990 volts per mil at 30°C.

**No. 104.** A semi-solid compound for use in cable joints on high voltage lines over 600. Melting point, 50°C. Dielectric strength averages 800 volts per mil at 30°C.

**No. 104A.** A semi-solid compound with the same general characteristics as No. 104, except that it has a lower melting point (35°C). Average viscosity, 800 seconds at 100°C. For use on high voltage potheads and cable joints where a low melting point compound is required.

## G & W Telephone Cable Splicing Kits

For 2-way straight joints for all sizes and numbers of conductors, paper-wrapped, wood pulp and silk insulated, lead covered, plain and armored cables.

Kit contains: paraffin, for boiling out the core; Stearine, flux for wiping joints; dry cotton tape, for protecting the individual conductors at the ends of the lead sheaths; muslin tape, for wrapping the spliced conductors; paper pasters, for limiting the wipes; lead sleeve, 1/8-inch thick, for housing the joint; and wiping solder, for wiping lead sleeve to cable sheaths.

## Ozite B Filling Compounds

Ozite B is a black asphaltic compound recommended for filling joints, terminals and junction boxes operated at normal temperatures.

This compound is manufactured under an improved process which results in a product with a low carbon content. Formulated by expert cable engineers with many years of experience, this compound combines all of the desirable characteristics that a jointing or filling compound should have.

Prices and complete information upon application.

## No. 2769 McGill Crescent Chatterton Compound

Domestic Brand

A para rubber compound for insulating 75% pure rubber. Gives complete assurance against danger of open contacts and terminals; can also be used for waterproofing. Used on all high grade electrical work. Formed in 1/4-pound sticks, 1 inch in diameter and 8 inches long.

Put up 10 sticks in a package; weight, 2 1/2 pounds.  
No. 2769..... per pound \$2.00

## No. 150 Minerallac Cable Pulling Compound

Minerallac Cable Pulling Compound is applied to the cable at the entrance of the cable feeder with a stiff brush. The properties of this compound cause it to cling to and lubricate the full length of the cable and conduit. The compound will follow through curves and bends in the conduit, eliminating damage to the cable sheath. No. 150 Cable Pulling Compound has the following features:

Chemically inert—no deterioration to either cable or conduit, including fiber conduit.

Economical—a comparatively small quantity is sufficient to pull a cable into the conduit: 5 to 7 pounds to pull a 2.83-inch diameter cable into approximately 400 feet of 3 1/2-inch tile conduit.

Not affected by temperature—cables may be pulled at temperatures as low as 10° above zero (F.).

Size Can..... pounds 12 25 60 \*600  
No. 150..... per pound \$ .14 .13 .12 .10

\*Steel drum weighing approximately 600 pounds.

## No. 100 Minerallac Pull-In Compound

Used to lubricate rubber covered wire and cable that is to be pulled through conduit.

Reduces pulling tension and injury to wires and cables.

Furnished in 2-gallon cans.

No. 100..... per can \$3.25

## O.Z. Insulating Compound

For 750 to 2500 volt terminators

Approximate shipping weight, 10 pounds per gallon.

Prices on compound in steel drums upon request.

## Cope Safety Compound Kettles

Capacity, 3 Gallons

The double flue extending through the kettle bottom and up and out to the sides, conducts the heat to every part of the compound. This insures a uniform melting, thereby preventing all danger of explosion.

The short lip spout eliminates clogging and allows free pouring. The wide kettle opening provides ease in filling and also in dipping tubes and socks.

Made of heavy steel, welded throughout. Has an extra heavy bottom which is inset 1 inch from the base. Tight fitting lid prevents loss of compound. Diameter, 10 inches; height, 12 inches.

Each..... \$16.90

## Ruberoid Rapid Asphalt Paint

(Formerly P & B Rapid Asphalt Paint)

Dries quickly to a hard, glossy coating, exceedingly tough and durable and with high insulating properties. Adapted for cables, switchboards, battery boxes, shelving, conduit joints and all insulating requirements.

Made in medium brushing consistency.

**Reliable Bronze Cable Grips**

Used for permanent fastenings and supports for cables. Bronze cable grips can be furnished in all standard designs and sizes specified for steel.

To obtain prices, add 20 per cent to steel prices for sizes 1/2-inch diameter to 1 7/8-inch diameter. For sizes 2 inches in diameter and larger, add 30 per cent. Example: No. 1023, steel price, \$4.60; bronze price, \$5.52.

## Perfection Flat Tape Conduit Rods

In general use by power, electric light, telephone, city fire alarm systems, street railway companies, and contractors in general.

This rod will handle laterals easily. One man can rod 300 feet, using the patent grip handle.

The factor of broken rods has been eliminated. The average time required to rod 500 feet with two men is about twenty minutes, at an average cost of about  $\frac{1}{4}$  cent a running duct foot.

**$\frac{1}{4} \times \frac{1}{16}$ -Inch Size.** Will take right angles in  $1\frac{1}{2}$ -inch conduits. With flexible cleanout leader, ball roller, and adjustable hand grip. On safety holding frame.

In 100 to 500-foot lengths.  
Per 100 Feet..... **\$6.00**

**$\frac{1}{2} \times \frac{1}{16}$ -Inch Size.** For 2 to 4-inch ducts. Flexible; will take laterals; will rod over another cable in ducts. Has ball roller and sliding rodding hand grip. On safety holding frame.

In 100 to 400-foot lengths.  
Per 100 Feet..... **\$11.25**

**$\frac{1}{2} \times \frac{1}{8}$ -Inch Size.** For 2 to 4-inch ducts. Rigid; for long runs; flexible enough to take laterals. Has ball roller which indicates clearance in duct where one or more cables are in and more cable is desired. Furnished with adjustable hand grip. On safety holding frame.

In 100 to 400-foot lengths.  
Per 100 Feet..... **\$15.75**

**$\frac{3}{4} \times \frac{1}{16}$ -Inch Size.** For 2 to 4-inch ducts. This size is more flexible than the  $\frac{1}{2} \times \frac{1}{16}$ -inch size. Has ball roller and adjustable hand grip. On safety holding frame.

In 100 to 400-foot lengths.  
Per 100 Feet..... **\$12.75**

**$\frac{3}{4} \times \frac{1}{8}$ -Inch Standard Size.** A standard duct size for long runs. For 3 to 4-inch ducts. This rod replaces the old type wooden rod.

Tensile strength, 225,000 pounds per square inch. Breaking strength, 21,000 pounds. On galvanized safety holding frame.

In 100 to 500-foot lengths.  
Net Weight per 100 feet, 33 pounds.  
Per 100 Feet..... **\$22.00**

**$1 \times \frac{1}{8}$ -Inch Special Size.** A rigid, yet sufficiently flexible rod to take laterals. On safety holding frame.

In 100 to 500-foot lengths.  
Per 100 Feet..... **\$28.00**

### Parts

- \*†Large Ball Feeding Rollers.....each **\$2.00**
- \*†Small Ball Feeding Rollers.....each **2.00**
- \*Revolving Spear Heads, Large.....each **5.00**
- Revolving Spear Heads, Small.....each **4.00**

\*Take laterals easily and slide rod through ducts rapidly.

†For 2 to 4-inch ducts.

‡For small ducts or where rodding is done over another cable in ducts.

## Cope Underground Conduit Tools

### Jar Hammers

Used in connection with all types of cutters for removal of stubborn obstructions such as heavy silt, cement, etc.

Made of 2-inch diameter steel tubing with heavy piston and hammer working inside the cylinder.

Size Stroke.....inches **8**  
Each..... **\$22.80**

### Laying Mandrels

Body is of well seasoned maple. Rear end is equipped with a leather wiping washer and the forward end with a counter-sunk steel hoop and tool steel cutting edge.

Length, 36 inches. In diameters to fit any size conduit.

Size.....inches **3 3½ 4 6**  
Each..... **\$15.00 17.20 19.00 27.60**

### Test Mandrels

Round

Square

Made to exact size for testing conduits after laying. Has tool steel cutting ends to remove concrete or other light obstructions. Length, 12 inches.

Size.....inches **3 3½ 4**  
Round.....each **\$9.50 10.50 11.50**  
Square.....each **11.50 12.50 13.50**

### Flexible Mandrels

For testing conduits having bends through which a rigid mandrel would not pass. Constructed of tool steel discs, mounted on a flexible wire rope, securely babbitted to the heavy socket eyes. Will withstand a pull of over 5000 pounds.

Size.....inches **3 3½ 4**  
Each..... **\$30.50 34.30 38.30**

### Pickups

Used to recover rods or tools lost in the conduit. Can also be used on long pulls where it is desirable to work from both ends.

Pickup has two steel shutters with beveled notches and spring action, so that it will recover and catch firmly no matter what position it may be in within the conduit.

Each..... **\$28.80**

### Rod Grapples

Used where long lines of conduit are to be rodded. Permits rodding from both ends of conduit and provides positive connection where they meet. Several hooks engage opposite ends

Each..... **\$14.50**

### Sand Scoops

For removing loose sand and silt which may enter the conduit and prove harmful to lead sheathed cables.

Made of light weight tubing.

Size.....inches **3x15 3½x18 4x20**  
Each..... **\$11.40 13.30 15.20**

**Cope Wire Brush Cleaners**

Single End

Double End

Brush has a flat tempered steel bristle which will remove all sand and other light obstructions.

Made for all size conduits with either a rod connection or socket eyes on both ends.

Diameter.....inches	3	3½	4	5
Single End.....each	\$4.80	\$5.30	\$5.80	\$6.60
Double End.....each	5.30	5.80	6.50	7.30

**Diamond Empire Conduit and Sewer Rods**

Straight sticks are furnished of uniform diameter 1 inch throughout.

Couplings are malleable iron. Ends are interchangeable. Axles are machined from brass rod, solid head and shouldered on coupling. Wheels are machined at hub to fit axle and shaped to conform to curve of duct. The rod is made of best selected straight grain well seasoned hickory, tapering to 1 inch at opening.

Length.....feet	3	4
With Wheels.....each	\$1.80	\$2.00
Without Wheels.....each	1.55	1.75

**Diamond Screw Duct Rods**

Couplings are made of government bronze. The hickory used in the shaft is selected stock, well seasoned. Threads are accurately cut to ¾-inch U.S.S., 10 threads per inch. Rivets are countersunk. Hickory shafts are ¾ inch in diameter.

No. 855, 3-Foot Length.....each	\$1.65
No. 856, 4-Foot Length.....each	1.80

**Cope Quick Coupling Conduit Rods**

Made from annealed malleable iron. Power-driven and securely riveted on the stick.

Stick is made of hickory.

Available in 2, 3, and 4-foot lengths with a straight shaft of 1-inch diameter. The 3 and 4-foot lengths are also made with a swell center stick, having a diameter of 1¼ inches in the center, tapering to 1-inch diameter.

Description	Each	Wt. Lb. per 100
2-Foot Rod, Straight Stick.....	105	
3-Foot Rod, Straight Stick.....	205	
4-Foot Rod, Straight Stick.....	245	
3-Foot Rod, Swell Center Stick.....	230	
4-Foot Rod, Swell Center Stick.....	275	

**Cope Rod Adapters**

Designed to make the Quick coupling rod available for use with any conduit tool equipped for screw coupling or vice versa.

Weight, 2 pounds.

Each..... \$3.00

**Cope Screw Coupling Conduit Rods**

Furnished in 3 or 4-foot lengths.

Coupling is made of cast bronze, octagon-shaped, with a ¾-inch U.S. standard thread.

Stick is made of hickory, and is available with either a ¾ or 1-inch diameter. Also furnished with swell center, 1-inch diameter stick.

Diam. In.	Description	Each	Wt. Lb. per 100
¾	3-Foot Rod, Straight Stick.....	155	
¾	4-Foot Rod, Straight Stick.....	185	
1	3-Foot Rod, Straight Stick.....	195	
1	4-Foot Rod, Straight Stick.....	235	
1	3-Foot Rod, Swell Center Stick.....	220	
1	4-Foot Rod, Swell Center Stick.....	265	

**Cope Iron Cable Dressers**

Used to produce a smooth finish on splices or sleeves when placed over any unevenness in the splice. Made of 2x¼-inch carbon steel. Handle is movable.

Available in two sizes: No. 1 for cable up to 3½ inches in diameter; No. 2 for 4½-inch cable. Weight, 1 pound.

No.....	1	2
Each.....	\$3.25	3.75

**Cope Criss Cross Cleaners**

Cleans conduit. Has a multitude of edges at right angles to the surface of the conduit to assure a thorough cleaning.

Flexible spring formation makes it self-conforming. Adjusting nuts on each end permit nominal adjustments in the outside diameter. Furnished in any diameter. Weight, 5 pounds.

Size.....inches	3	3½	4
Each.....	\$11.50	12.50	13.50

**Cope Washer Duct Cleaners**

For a final wiping and cleaning of the conduit. Consists of a flexible wire rope with tube spacers separating leather washers of graduated sizes, faced with steel. Has heavy socket eyes fastened on both ends. Size, 3 inches.

Furnished in any diameter. Weight, 8 pounds. Each..... \$22.70

**Cope Sag Gages**

Used when stringing open wire.

A sag gage is hung on the cross arm at each end of the span and the target is set at a pre-determined height on the calibrated slot in the gage.

The sag in the line is conditional upon the size of wire and length of span.

The target folds when not in use, and when open presents a face 12x2 inches, painted bright yellow.

Calibrations, 4 to 18 inches.

Weight, 1½ pounds.

Each..... \$3.80

### Cope Rod Puller

Used for rodding long conduit lines where the weight of the rod becomes a controlling factor.

Made of malleable iron.

Can be placed on the rod at any point and can be used for either pulling or pushing by reversing the tool.

It exerts a firm pressure on the stick without cutting or otherwise injuring the rod.

Weight, 2½ pounds.

Each..... \$4.70

### Cope Push-Pull Jacks

Used for additional slack in a manhole or to take up slack in overhead cable installation. Converted into a pusher by reversing the drawbar.

Made of high carbon, heat treated steel.

Leverage, 30 to 1. Safe capacity, 4000 pounds. Double action makes a secure lock every half inch. Furnished with drop-forged clevis and bronze double shackle swivel.

Weight, 12 pounds.

Each..... \$40.00

### Type C Cope Cable Benders

Designed to form and bend large cable in underground construction.

May also be used for straightening cable.

Adjustable yoke provides seven positions of handle and permits work in close quarters.

Simply pulling back on sleeve releases ratchet and permits handle to be moved in any position.

Yoke and arm are alloy steel castings with extension handle of steel tubing.

Wide bearing surface and rounded edges of shoes prevent injury or deformation of cable sheath.

Overall dimension, 36 inches.

Weight, 14 pounds.

Type C..... each \$28.40

### Cope Cable Puller

Used with the reel turner and reel brake in pulling out 2½ to 3-inch cable.

The grips or clamps are alloy steel castings designed to exert a positive grip on the cable when in the pulling position. Slackening of the winch or hoist permits it to be released and slid back on the cable for another pull. The grips will not cut or deform the cable. Weight, 30 pounds.

Each..... \$50.00

### Cope Cable Pulling Equipment

#### Safety Reel Brake

Used in the removal of cable to eliminate back-lash.

One man, while handling the turning bar can manage the re-reeling operation.

Adjustable to different sizes of reels. Rings are provided on the base plate for tying to the jack.

Weight, 90 pounds.

Each..... \$72.50

#### Reel Turner

Used to re-reel cable.

One man can safely and easily handle the turning of the reel, taking up the cable as it is pulled from the conduit.

Adjustable to any standard size reel. Weight, 23 pounds.

Each..... \$50.00

### Cope Aerial Tents

For protection of aerial cable during installation or repair.

Made of 10-ounce U. S. Army duck double hemmed at each seam

Framework is made of steel and pipe sections which fold into a compact bundle.

Open dimensions, 52x48 inches.

Length of 104 inches gives plenty of headroom and extends well below the working platform.

Tent is lashed to working platform with ropes provided on each corner of frame. A locking device securely fastens tent frame to the messenger strand.

Weight, with frame, 40 lb.

Each..... \$70.00

**Cope Cable Pulling Rigging**

Type B

Designed to provide a direct pull through the conduit. When in the manhole, the lower sheave is located opposite the conduit with the upper sheave above the street line to lead to the winch.

Constructed of 6-inch 8.2-pound channel, welded. The two sheaves with 10-inch minimum diameter have large, well finished grooves to prevent injury to the cable. Each sheave is mounted on a 1-inch steel shaft.

Length.....feet	9	10	12
Type B.....each	\$60.50	64.75	72.00

**B & L Star Brand Pulling-In Frames**

No. PU 26

The pulling-in frame is constructed to help install cable in underground ducts.

The sheave support consists of two 13-foot sections of 6-inch steel channels, fastened together at each end by two sections of 4-inch steel channels. Each 13-foot section is provided with 24 holes on 6-inch centers in order to allow the two sheaves to be adjusted to the proper position on the sheave support for any cable installation.

Two aluminum sheaves are used with each sheave support; one large sheave and one small sheave which have diameters of 20 and 5 3/4 inches respectively. The diameter and groove of large sheave are of sufficient size to allow a cable to be pulled over it without harming the cable sheath, when this procedure is necessary to obtain sufficient cable in the manhole for splicing. An important feature is that each sheave is provided with Graphite Bronze self-lubricating bushing which makes the use of lubricant unnecessary.

Shipping weight, 260 pounds.  
No. PU26, Complete.....

**Cope Ground Tents**

Gives full protection to men working in a manhole under adverse weather conditions.

Made of 10-ounce U.S. Army duck.

Framework is made of 1/2-inch heavy pipe, welded, and has hot dipped galvanized finish.

Open dimensions, 82 1/2 inches square and 77 inches high.

15 1/2 inches wide, extends around the tent on the ground. Legs of tent fold up in two sections inside the framework to form a compact package approximately 38x38x9 inches.

Weight: frame, 45 pounds; cover, 25 pounds.

Frames and Covers, Complete.....each \$72.50

Frames and covers may be purchased individually.

**Cope Aerial Cable Feeders and Straighteners**

For pulling in aerial cable.

The wide mouth aluminum bells and flexible steel tubing prevent danger to cable or sheath. Holding clamps which securely grip messenger wire can also be used for dead-ending and splicing work. Interior surfaces are smoothly finished to accommodate up to 3-inch cables.

Complete with 6-Foot Tube, 2 Pairs Malleable Iron Clamps.....each	\$38.25
Extra Lengths of Tubing.....per foot	1.50
Holding and Splicing Clamps.....per pair	9.00

**Cope Pull-In-Guide or Cable Feeders**

Used to lead the cable from the street reel into the mouth of the conduit without injury.

Constructed with heavy brass bell, completely finished, securely fixed to a length of heavy steel tubing. The conduit end has a steel sleeve which will accommodate various size brass nozzles to fit the several sizes of conduit.

Guides, Length.....feet	9	12	16	20			
Each.....	\$86.00	95.00	106.25	118.75

**No. 860 Diamond Manhole Cover Hooks**

This is a useful tool for the subway construction force. It is designed to easily raise a heavy manhole cover by prying the wedged point end of the hook under the groove provided in the cover for the purpose.

The hook is made of an excellent quality of electric tool steel suitably hardened at and adjacent to the hook to prevent its bending, and at the same time sufficiently tough to prevent breaking off.

No. 860.....each \$1.50

## Cope Pneumatic Fish Lines

For rodding long run conduit ranging in size from 3 to 5 inches.

### Reel Unit

The reel is equipped with crank and gear for re-reeling. Contains 1000 feet of  $\frac{3}{8}$ -inch stranded steel cable having a tensile strength of 920 pounds. Only one reel unit is required for use in any size conduit.

### Conduit Seal

Faced with rubber which is expanded to grip the interior surface of the conduit to prevent the loss of air and to support the reel during operation. Expansion range, 1 inch. Two sizes: No. 3, 3 to 4-inch; No. 4, 4 to 5-inch conduit.

### Projectile

Consists of a pair of rubber cups fastened together. When compressed air is introduced, the projectile progresses 100 feet per minute with a pressure of less than 10 pounds. Since rubber cups must have a snug fit, each projectile will fit only one size conduit. Furnished with one projectile for any one size ranging from 3 to 5 inches.

Furnished with carrying case.

Weight, 100 pounds.

Complete.....each **\$205.00**  
 Additional Seals.....each **72.50**  
 Additional Projectiles.....each **20.00**

Up to 2000 feet of reel cable can be furnished at additional cost.

## No. 220 Simplex Manhole Sheaves

For pulling cable or carrying the winch line at right angles. Used on end of a truck or over edge of manhole in connection with a snatch block in the manhole, eliminating use of manhole skids.

Will handle cable up to 3 inches in diameter, or any size winch line.

Furnished with a  $\frac{1}{4}$ -inch chain, 24 inches long, with special hook for anchoring.

No.....**220**  
 Each.....**\$106.00**  
 Large Sheave Diameter.....inches **7 $\frac{3}{4}$**   
 Large Sheave Width.....inches **3**  
 Small Sheave Diameter.....inches **4 $\frac{3}{4}$**   
 Small Sheave Width.....inches **3**  
 Weight.....pounds **100**

## No. PU 27 B & L Star Brand Cable Sheaves and Shackles

The cable sheave and shackle may be used in place of the pulling-in frame when it is possible or advisable to locate the rear of the truck directly over the manhole. The device is attached to the manhole pulling iron and the winch line goes over a roller or sheave at the rear of the truck then down and under the cable sheave and shackle and thus into the duct. The sheave is made of special aluminum alloy for light weight, 20 inches in diameter, with a groove large enough to take a  $2\frac{5}{8}$ -inch cable. The hook is drop-forged.

Complete, Approximate Weight, 65 Pounds..... **\$180.00**  
 Frame, Complete, less Sheave, Approx. Wt., 37 lb. ea. **35.00**  
 20-Inch Diam. Aluminum Sheave, Approx. Wt., 28  
 Lb.....each **145.00**

## Cope Manhole Guard Rails

Made of  $\frac{3}{4}$ -inch standard black steel pipe with seamless steel tubing sleeves. Made with a completely welded construction.

Unless otherwise ordered, all rails are painted with two coats of Signal Red Enamel.

### Type 264

This guard closely follows the design of the American Telephone and Telegraph Company's standard. The bow-shaped wing brace holds the rail absolutely rigid against collapse when in place, leaving the open side entirely free for work. The chains allow this rail to be padlocked to pole, etc. Can be supplied with or without "men working" panels.

Open 32x32x42 inches high, folded 32x2x42 inches.

Weight, 49 pounds.

Type 264.....each **\$30.75**

### Type 110

This is somewhat lighter construction than the Type 264 while still holding to the same material.

It is equipped with flag holder and steel hook for holding it rigid while open.

Open 32x32x42 inches high, closed 32x3x42 inches.

Weight 40 pounds.

Type 110.....each **\$23.75**

**Peirce Underground Cable Racks**

Hot Galvanized

Rack section is made in three lengths which can be combined into almost any desired length. Section is made from 1½x¾x¾-inch open hearth steel channel, amply strong to support the heaviest cable. Should be fastened to manhole wall with ½x4-inch Peirce Expansion Bolts.

Hook is cut from open hearth steel T section and has a smooth, well rounded top surface 1½ inches wide which will not injure the sheaths of cable. Steel size, 1½x1½x¾ inches. Easily attached and with the weight of the cable on it, holds securely to the channel back.

**Hubbard Underground Cable Racks**

Hot Galvanized

Furnished to accommodate from one to four hooks. Combinations may be used for a greater number of hooks if desired.

Hook furnished in three lengths made from certified malleable iron, hot galvanized. Hook is placed in position by raising the outer end slightly above horizontal so that the supporting lug will engage the opening in the rack. It is then moved to alignment and allowed to drop into place where it is held against side movement by web braces which engage the back on both sides.

Insulator No. 2215

No. 2215 Insulator Installed

Hooks are held rigidly in a horizontal position.

No. 2291 hook accommodates one insulator, No. 2292 takes two insulators, No. 2293 takes three insulators, and No. 2294 takes four insulators.

The same number of either size insulator listed will fit on any hook. When more than one insulator is used, they are generally spaced an inch or more apart to give mechanical and electrical clearance.

A stop is furnished on each hook to prevent the insulators from sliding off the end.

## No. 2225 Peirce Heavy Cable Racks

Hot Galvanized

The rack section is  $2\frac{1}{4} \times 2\frac{1}{4} \times \frac{1}{4}$ -inch steel T section and is offset at the lower end for overlapping when combining two racks together. Any desired length of cable rack can be made in this manner.

Rack is provided with  $\frac{1}{16}$ -inch mounting hole at top and bottom and is fastened to manhole walls with  $\frac{1}{2} \times 4$ -inch expansion bolts. Anchor bolt No. 2246 is also used for this purpose. It consists of hook head which is cemented in masonry, opposite end being threaded and equipped with nut for attachment.

Number of holes, 14. Hook hole spacing,  $1\frac{1}{2}$  inches; bolt hole spacing,  $25\frac{1}{2}$  inches. Length

overall,  $27\frac{1}{2}$  inches.

No. 2225, Ship. Wt. 800 Pounds . . . per 100 \$223.63

No. 2246, Anchor Bolt,  $\frac{5}{8} \times 6$  Inches, Ship. Wt. 193 Pounds . . . per 100 26.93

## Peirce Underground Heavy Cable Rack Hooks

Hot Galvanized

Made of one-piece  $\frac{3}{16}$ -inch steel pressed to channel shape. Edges are rounded, and there is a smooth surface for cable to rest upon. Width,  $2\frac{1}{2}$  inches.

Used with or without an insulator.

No.	2231	2232	2233
Per 100	\$122.17	156.19	222.24
Extension . . . . . inches	6	$10\frac{1}{2}$	15
Shipping Weight per 100 . . . pounds	180	308	489

## Peirce White Glaze Insulators

Insulator fits snugly on cable hooks. Weight of cable holds it in place. Width,  $3\frac{3}{4}$  inches.

No.	2117	2118	2121
Per 100	\$70.87	78.66	86.28

## No. 9145 Hubbard Plain Dowel Pins

For Clay Conduit

Used in the ends of multiple duct clay conduit for preserving alignment of adjacent sections. Made of  $\frac{3}{16}$ -inch diameter steel with a shoulder in the center. Overall length,  $3\frac{3}{4}$  inches. Collar diameter,  $\frac{9}{16}$  inch.

No. 9145, Ship. Wt. 9 Pounds . . . . . per 100 \$3.39

## Hubbard Pulling-In Irons

For Manholes

Hot Galvanized

This iron is set into the concrete or brick walls of street vaults opposite duct entrances to provide a convenient and strong attachment for block and tackle when installing or removing cables.

## Hubbard Cable Rack Extensions

Hot Galvanized

Used for mounting racks away from the wall because of obstructions, limited space or to escape water seepage. If used away from wall, racks can be mounted on approximately  $4\frac{1}{2}$  inches less wall space than is needed for the rack. If extension is turned around and mounted, it will occupy 10 to 13 inches more wall space than the length of rack.

Mounting is generally accomplished by means of two No. 13,  $\frac{1}{2} \times 4$ -inch Peirce Expansion Bolts. Furnished 1 and  $1\frac{1}{4}$  inches wide in  $\frac{1}{2}$ -inch stock. Mounting holes are for  $\frac{1}{2}$ -inch bolts. Order two for each rack mounting.

S <sub>WF</sub>	Weatherproof Fused Switch.

Special Outlets

Any Standard Symbol As Given Above with the Addition of a Lower Case Subscript Letter May Be Used to Designate Some Special Variation of Standard Equipment of Particular Interest In a Specific Set of Architectural Plans.

When Used They Must Be Listed In the Key of Symbols On Each Drawing and If Necessary Further Described In the Specifications.

These symbols have been prepared by a technical sub-committee of ASA, Committee Z32, Standardization of Graphical Symbols and Abbreviations for use on Drawings, and have been submitted for approval as an American Standard to replace the symbols shown in ASA C10-1924.

The electrical symbols for architectural plans as finally approved by the ASA as an American Standard will be announced by that body in due course of time.

Panels, Circuits and Miscellaneous

Symbol	Description
	Lighting Panel.
	Power Panel.
	Branch Circuit—Concealed in Ceiling or Wall.
	Branch Circuit—Concealed in Floor.
	Branch Circuit Exposed.
	Home Run to Panel Board. Indicate Number of Circuits by Number of Arrows. Note: Any Circuit without Further Designation Indicates a Two-Wire Circuit. For a Greater Number of Wires Indicate As Follows:  (3 Wires),  (4 Wires), Etc.
	Feeders. Note: Use Heavy Lines and Designate by Number Corresponding to Listing in Feeder Schedule.
	Underfloor Duct & Junction Box—Triple System. Note: For Double or Single Systems Eliminate One or Two Lines. This Symbol Is Equally Adaptable to Auxiliary System Layouts.
	Generator.
	Motor.
	Instrument.
	Power (Or Draw to Scale) Transformer.
	Controller.
	Isolating Switch.

Auxiliary Systems

	Push Button.
	Buzzer.
	Bell.
	Annunciator.
	Outside Telephone.
	Interconnecting Telephone.
	Telephone Switchboard.
	Bell-Ringing Transformer.
	Electric Door Opener.
	Fire Alarm Bell.
	Fire Alarm Station.
	City Fire Alarm Station.
	Fire Alarm Central Station.
	Automatic Fire Alarm Device.
	Watchman's Station.
	Watchman's Central Station.
	Horn.
	Nurse's Signal Plug.
	Maid's Signal Plug.
	Radio Outlet.
	Signal Central Station.
	Interconnection Box.
	Battery.
	Auxiliary System Circuits.

Note: Any Line without Further Designation Indicates a 2-Wire Circuit. For a Greater Number of Wires Designate with Numerals in Manner Similar to - - - 12-No. 18W-3/4"-C., or Designated by Number Corresponding to Listing in Schedule.

Special Auxiliary Outlets.  
Sub-Script Letters Refer to Notes on Plans or Detailed Description in Specifications.

 abc

## Definitions of Electrical Terms

**Air Gap.** Air space in a magnetic circuit through which the magnetic flux must pass. It should be as short as possible as the reluctance of air is very high.

**Ampere.** The unit of current flow of electricity. It means the same with reference to electricity, as does the number of gallons per minute, when referring to the flow of water through a pipe. A 60-watt, 110-volt tungsten lamp takes 0.545 ampere to make it give the proper light.

**Ampere-Hour.** This expression is used to describe the capacity of a storage battery and corresponds to the number of gallons a tank will hold when talking about water. Ampere-hours are obtained by multiplying the number of amperes flowing by the length of time in hours which they flow. Example: How many ampere-hours are required to light four 60-watt, 110-volt tungsten lamps for 3 hours. As stated above one lamp takes 0.545 ampere, so four lamps takes 4 times 0.545 or 2.18 amperes; 2.18 times 3 equals 6.54 ampere-hours.

**Ampere-Turns.** Turns of wire in a coil times the ampere current flowing. It is used as a measure of magnetizing force, which varies directly as the number of ampere-turns.

**Apparent Load or Apparent Power.** Current in amperes times electromotive force in volts gives apparent load in watts. Used for alternating current circuits because the current flow is not in phase with the electromotive force, hence, amperes times volts does not give the real energy load.

**Automatic Battery-Charging Switch.** An automatic switch for opening the circuit between the battery and the generator when for any reason the generator voltage drops below battery voltage. This switch also closes automatically when the generator voltage is at the proper value for charging the battery or lighting the lamps.

**Candlepower.** The unit for measuring strength of a source of light. The usual practical standard is a carefully standardized incandescent lamp, comparison being made by means of a photometer. Ordinary tallow candle gives about 1 c.p.; flat wick oil lamp, 6 c.p.; 60-watt tungsten bulb, 40 c.p.

**Foot-Candle.** Same as candle-foot. The illumination produced at 1 foot from a light of 1 candlepower; illumination varies as the strength of the light source and inversely as the square of the distance from that light source.

**Circular-Mil.** The area of a circle 0.001 in diameter. The circular mils area of a wire varies as the square of the diameter: For No. 36 B & S wire, the diameter is 0.0005 in. and the area 25 circular-mils. For No. 14 wire, the diameter is 0.06408 in. or 64.08 mils and the area is 64.08<sup>2</sup> or 4107 cir. mils.

**Coil Wound Motor.** One in which the armature winding is made up in formed coils then placed on the core and the coil leads connected in proper order.

**Commutating Pole.** A small pole piece on motor generator, usually placed midway between the main pole pieces and provided with a winding to neutralize the magnetic effect of the armature current so as to avoid distortion of the magnetic field with change of load.

**Compensating Winding.** A winding placed on the field poles either to increase voltage as load increases, thus making up for loss of potential in armature and transmission lines, or on one tip of the poles to offset the magnetic effect of armature current and prevent distortion of the magnetic field. The term is also used for alternating-current machines where the compensating current is rectified from alternating, as distinguished from compound winding for direct-current machines.

Continued

## Definitions of Electrical Terms

**Compound-Wound.** Applied to direct-current machines having a series field coil to vary the field magnetism as the load varies, in addition to a shunt field coil for main excitation. The compound coil may be proportioned to add just enough voltage to make up for drop in potential through the armature, (flat compounded), or it may increase the voltage as load increases so as to make up for line drop, (over compounded).

**Condenser.** An electrical device for storing a charge of electricity and returning it to the line. It is used to balance the inductance of a circuit, since its action is opposite in phase to that of inductive apparatus, i.e., it throws the current ahead of the e.m.f. in phase. It is made of alternate plates of tinfoil and insulating material, the size of plates and thickness of insulation determining the capacity for holding electric charge. Capacity is measured, practically, in microfarads or millionths of a farad.

**Dielectric.** A non-conducting or insulating material. The dielectric value of a material is measured by comparing it with that of a like thickness of air taken as unity. Glass is 3 to 8; porcelain, 4.4; treated paper, 2 to 4; paraffin and various forms of rubber, 2.2 to 2.5; mica, 6; water, 80.

**Electro-Magnet.** A core of iron or steel, solid or laminated, surrounded by a coil of wire through which electric current is passed. The coil, carrying current, produces a magnetic field and the core becomes a magnet. Without the core, the coil is known as a solenoid.

**Electrolyte.** The liquid used in a storage battery. It consists of a small portion of sulphuric acid mixed with pure distilled water.

**Exciting Current.** Current used for energizing the field coils of a motor or generator to create magnetic flux in the pole pieces.

**Hysteresis.** The quality of iron which causes lagging of the induced magnetism behind the magnetizing force. When the magnetic field is reversed, this causes a loss varying with the number of reversals per second, with the 1.6 power of the maximum value of magnetic density in the iron and with the volume of iron in the magnetic field.

**Induction Motor.** One in which rotor current is set up by transformer action from alternating currents supplied to the stator windings. The rotor currents are induced by those in the stator, hence the name—induction motor.

**Inductance.** The coefficient of self-induction of a circuit. The effect is to cause current to lag behind electromotive force in phase. It depends on the size and shape of the circuit, cross-section and shape of conductor, magnetic properties of the conductor and the surrounding medium and on the frequency of the current reversal and resistance of the conductor. It is, therefore, difficult to compute except for simple wire circuits suspended in air. The unit for measurement is the henry, or the millihenry (1/1000 of a henry).

**Line Loss.** Energy used up in overcoming the resistance of the transmission line to flow of electric current. Its result is drop in voltage, which varies with resistance of the line and as the square of the current flowing. Also known as I<sup>2</sup>R loss.

**Magnetic Density.** Magnetic lines per unit of area of cross-section of the magnetic circuit, also known as magnetic induction. One magnetic line per square of the centimeter is known as a *gauss* and the magnetic density, B, in gaussés is equal to the magnetizing force, H, times the permeability of the material at the point considered. Permeability of air is 1.

Continued

Definitions of Electrical Terms

Equivalent Values in Different Units

Concluded

**Magnetic Flux.** Total of magnetic lines in a circuit. One line is known as a maxwell and the magnetic flux is equal to the average magnetic density times the area of cross-section of the magnetic circuit. Except for leakage, the magnetic flux will be the same at all parts of a magnetic circuit but the magnetic density will vary with the area of cross-section of different parts. The symbol is F.

**Magnetizing Force.** The force per unit of length of solenoid. It depends on the number of turns and the current flowing. The symbol is H.

**Magnetomotive Force.** The total magnetizing force developed by a solenoid, or required to set up a given density through a magnetic circuit or part of a circuit. The magnetomotive force for each part of a circuit will depend on the material in that part of the circuit and the length of the magnetic path through it. The unit in the C.G.S. system is the gilbert but it is customary to express magnetomotive force in ampere-turns either per inch of length of the magnetic path or total for the circuit.

**Mil.** 1/1000 of an inch.

**Ohm.** The unit of electrical resistance about equivalent to the resistance of 400 feet of common iron telegraph wire.

**Phase.** The relative time of change in values of current or electromotive force. Values which change exactly together are in phase. Difference in phase is expressed in degrees, a complete cycle or double reversal being taken as 360 degrees. A 180-degree phase difference is complete opposition in phase.

**Permeability.** The ratio of magnetic induction or density in a magnetic circuit to the magnetizing force. It is the opposite of reluctivity and is denoted by symbol  $\mu$ .

**Phase Advancer.** A synchronous motor used as a condenser to advance the phase of the lagging current in a circuit and bring it more nearly in phase with the electromotive force.

**Photometer.** An apparatus for measuring the intensity of a source of light by comparison with a known standard source. Various methods of comparison are employed to compare the illumination from two sources.

**Potential.** Voltage, or difference in electric pressure between two parts of a circuit or between a circuit and an outside point.

**Power Factor.** The relation of real to apparent power in an alternating-current circuit. It depends on the difference in phase between current and electromotive force and is equal to the cosine of the angle of phase lag or lead of the current.

**Primary Cell.** A battery cell which generates electromotive force by direct chemical action of the electrolyte on a metal, the metal usually being destroyed in the process.

**Real Power or Actual Power** in an alternating current circuit is that which is measured only with a wattmeter.

**Regulation.** Steadiness of maintaining the value of electromotive force or current. Controlled by generator or transformer action or by a special regulator. Good regulation should hold voltage variation within 3 per cent of normal.

**Repulsion Motor.** An a.c. motor which operates by repulsion of armature conductors by the stator field. It has low starting torque on full load, tendency to spark and rather low efficiency.

**Reluctance.** Magnetic resistance or opposition to the passage of magnetic lines of force. Unit reluctance, the oersted, is that of a cubic centimeter of air. It is the ratio of magnetomotive force to magnetic flux. It is practically the same for all non-magnetic materials but, for iron and steel, it increases with the increase of magnetic density although not in direct proportion.

**Resistivity.** The specific resistance of a substance; the resistance in ohms of a centimeter cube of the material to flow of current between opposite faces.

Wiring Formula

Ohm's law is practically the basis for the various formulae in general use for determining the proper size of wire to use to carry various currents. It is essential to know the amount of current expressed in amperes, the distance, and to decide upon the loss to allow in transmission; the best rule is as follows:

The cross section (CM) of the necessary wire is found by multiplying twice the distance one way (2D) by the amount of current expressed in amperes (C) and this by the resistance of one mil-foot (10.7) and dividing by the loss in transmission expressed in volts (v).

$$\text{or, CM} = \frac{2D \times C \times 10.7}{v} \text{ or, CM} = \frac{D \times C \times 21.4}{v}$$

		0.2909 watt hours.
1 Watt =	{	44.236 foot-pounds per minute
		2,654.16 foot-pounds per hour

Latent heat of evaporation of water = 966 BTU.

Latent heat of melting of water = 142 BTU.

To evaporate 1 lb. water from and at 212° = 16.859 Kw. minutes

To evaporate 1 lb. water from and at 212° = 0.281 Kw. hours

Weight per cu. ft. of water = 62.42 lb.

Weight per gallon of water = 8.33 lb.

## Tables

### Units of Measure

The electrical units are derived from the following mechanical units of the metric system:

**METER.**—A unit of length equal, approximately, to one ten-millionth part of a quadrant of a meridian of the earth taken through Paris; or, approximately, to 39.37 inches.

**GRAMME.**—Unit of weight. Weight of a cubic centimeter of water at a temperature of 4 degrees centigrade.

**SECOND.**—Unit of time. The time of one swing of a pendulum making 86,400 swings in a solar day.

### Electrical Units

**VOLT.**—Such an electromotive force as would cause a current of one ampere to flow against a resistance of one ohm. Such an electromotive force as would charge a condenser of the capacity of one farad with a quantity of electricity equal to one coulomb.

**OHM.**—The practical unit of electric resistance. Such a resistance as would limit the flow of electricity under an electromotive force of one volt, to a current of one ampere, or one-coulomb-per-second.

**MEG OHM.**—1,000,000 ohms.

**AMPERE.**—The practical unit of electric current. A rate of flow of electricity transmitting one coulomb per second. The current of electricity which would pass through a circuit whose resistance is one ohm, under an electromotive force of one volt.

**COULOMB.**—The practical unit of electric quantity. Such a quantity of electricity as would pass in one second through a circuit conveying one ampere. The quantity of electricity contained in a condenser of one farad capacity, when subjected to the E. M. F. of one volt.

**FARAD.**—The practical unit of electric capacity. Such a capacity of a conductor or condenser that one coulomb of electricity is required to produce therein a difference of potential of one volt.

**MICROFARAD (MFD).**—One-millionth of a farad.

**WATT.**—A unit of electric power. A volt-ampere. The power developed when 44.25 foot-pounds of work are done in a minute, or 0.7375 foot-pound of work is done in a second.

**JOULE.**—A volt-coulomb or unit of electric energy or work. The amount of electric work required to raise the potential of one coulomb of electricity one volt. Ten million ergs.

### Ohm's Law

Ohm's law is a method of expressing relationship existing between the electromotive force, current and resistance, and is practically the basis of most electrical computations. It is expressed in various forms, as follows:

$$\text{Current Flow} = \frac{\text{Electromotive Force}}{\text{Resistance}} \text{ or, } I = \frac{E}{R}$$

Electromotive force equals the current flow multiplied by resistance.

Electromotive Force = Current Flow  $\times$  Resistance, or  $E = I \times R$ .

Resistance equals the electromotive force divided by the current flow.

$$\text{Resistance} = \frac{\text{Electromotive Force}}{\text{Current Flow}} \text{ or, } R = \frac{E}{I}$$

$$I = \text{Amperes. } E = \text{Volts. } R = \text{Ohms.}$$

Electromotive force varies directly as the current and resistance.

Resistance varies directly with the electromotive force and inversely as the current.

Current varies directly with the electromotive force and inversely as the resistance.

### Mil

The "mil," whose expressed value is  $\frac{\text{One}}{\text{One-Thousandth}}$  (.001) of an inch, is the practical basis for determining the diameters and thereby the area of all wires used as electric conductors. The diameters being given, the area is obtained by the well-known rule, "the area of a circle, in circular units, is equal to the square of its diameter;" hence the square of the diameter of a wire expressed in mils equals the area of its cross section.

$D^2 = A$ , which area is expressed in Circular Mils or CM.; hence  $D^2 = \text{CM.}$

### Electrical Formula for Determining Amperes, Horsepower, Kilowatts and Kilovolt-Amperes

Desired Data	Alternating Current	
	Single Phase	Two-Phase Four-Wire
Kilowatts	$I \times E \times P.F.$	$I \times E \times 2 \times P.F.$
Kva.	$\frac{1000}{I \times E}$	$\frac{1000}{I \times E \times 2}$
Horsepower Output	$\frac{1000}{I \times E \times \% \text{Eff.} \times P.F.} \times 746$	$\frac{1000}{I \times E \times 2 \times \% \text{Eff.} \times P.F.} \times 746$
Amperes when Hp. is Known	$\frac{Hp. \times 746}{E \times \% \text{Eff.} \times P.F.}$	$\frac{Hp. \times 746}{2 \times E \times \% \text{Eff.} \times P.F.}$
Amperes when Kilowatts is Known	$\frac{Kw. \times 1000}{E \times P.F.}$	$\frac{Kw. \times 1000}{2 \times E \times P.F.}$
Amperes when Kva. is Known	$\frac{Kva. \times 1000}{E}$	$\frac{Kva. \times 1000}{2 \times E}$
Desired Data	A.C. Three-Phase	D.C.
Kilowatts	$I \times E \times 1.73 \times P.F.$	$I \times E$
Kva.	$\frac{1000}{I \times E \times 1.73}$	$\frac{1000}{I \times E}$
Horsepower Output	$\frac{1000}{I \times E \times 1.73 \times \% \text{Eff.} \times P.F.} \times 746$	$\frac{1000}{I \times E \times \% \text{Eff.}} \times 746$
Amperes when Hp. is Known	$\frac{Hp. \times 746}{1.73 \times E \times \% \text{Eff.} \times P.F.}$	$\frac{Hp. \times 746}{E \times \% \text{Eff.}}$
Amperes when Kilowatts is Known	$\frac{Kw. \times 1000}{1.73 \times E \times P.F.}$	$\frac{Kw. \times 1000}{E}$
Amperes when Kva. is Known	$\frac{Kva. \times 1000}{1.73 \times E}$	.....

\*In three-wire, two-phase circuits the current in the common conductor is 1.41 times that in either other conductor.  
 NOTE.—E=Volts; I=Amperes; %Eff.=Per Cent Efficiency; P.F.=Power Factor.

### Transmission Losses

The following table shows the approximate average 1,000-cycle transmission loss for several types of open wire lines and lead-covered cables. Wet weather and also the approximate maximum length of non-loaded circuit corresponding to about 30 db. loss.

Kind of Circuit	Diameter Inches	Approximate Average 1,000 Cycles Loss Db. per mile	Approx. Miles at 8130 Transmission Cycles (B Carrier) at Voice Frequency	Approx. Max. Length Miles for Commercial

\*Where a service run of conduit or electrical metallic tubing does not exceed 50 feet in length and does not contain more than the equivalent of two quarter-bends from end to end; two No. 4 insulated and one No. 4 bare conductors may be installed in 1-inch conduit or tubing.

The above applies only to complete conduit systems, and does not apply to short sections of conduit used for the protection of exposed wiring from mechanical injury.

### Dimensions of Rubber-Covered and Thermoplastic Covered Conductors

\*Area given is that of a circle having a diameter equal to the overall diameter of a stranded conductor.

The resistance values given in the last two columns are applicable only to direct current.

## Combination of Conductors

N.E.C. Table 11

For groups or combinations of conductors not included in the preceding tables, it is recommended that the conduit or tubing be of such size that the sum of the cross-sectional areas of the individual conductors will not be more than the percentage of the interior cross-sectional area of the conduit or tubing than as shown in the following table:

### Per Cent Area of Conduit or Tubing

Description	No. of Conductors				
	1	2	3	4	Over 4
Conductors (Not Lead-Covered)...	53	31	43	40	40
Lead-Covered Conductors.....	55	30	40	38	35
*For Rewiring Existing Raceways..	60	40	50	50	50

\*For increased load where it is impracticable to increase the size of the raceway due to structural conditions.

**Aluminum Conductors.** For aluminum conductors, the allowable current-carrying capacities shall be taken as 84 per cent of those given in the table for the respective sizes of copper conductor with the same kind of insulation.

**Bare Conductors.** If bare conductors are used with insulated conductors, their allowable current-carrying capacity shall be limited to that permitted for the insulated conductor with which they are used.

**Application of Table.** For open wiring on insulators and for concealed knob-and-tube work, the allowable current-carrying capacities of Table 2 shall be used. For all other recognized wiring methods, the allowable current-carrying capacities of Table 1 shall be used.

**More Than Three Conductors in a Raceway.** Table 1 gives the allowable current-carrying capacity for not more than three conductors in a raceway or cable. If the number of conductors in a raceway or cable is from 4 to 6, the allowable current-carrying capacity of each conductor shall be reduced to 80 per cent of the values in Table 1. If the number of conductors in a raceway or cable is from 7 to 9, the allowable current-carrying capacity of each conductor shall be reduced 70 per cent of the values in Table 1.

**Neutral Conductor.** A neutral conductor which carries only the unbalanced current from other conductors, as in the case of normally balanced circuits of three or more conductors, shall not be counted in determining current-carrying capacities as provided for in the preceding paragraph. (In a 3-wire circuit consisting of two phase wires and the neutral of a 4-

wire, 3-phase system, a common conductor carries approximately the same current as the other conductors and is not therefore considered as a neutral conductor.)

**Ultimate Insulation Temperature.** In no case shall conductors be associated together in such a way with respect to the kind of circuit, the wiring method employed, or the number of conductors, that the limiting temperature of the conductors will be exceeded.

**Use of Conductors with Higher Operating Temperatures.** If the room temperature is within 10°C. of the maximum allowable operating temperature of the insulation, it is desirable to use an insulation with a higher maximum allowable operating temperature; although insulation can be used in a room temperature approaching its maximum allowable operating temperature limit if the current is reduced in accordance with the table of correction factors for different room temperatures.

**Voltage Drop.** The allowable current-carrying capacities in Tables 1 and 2 are based on temperature alone and do not take voltage drop into consideration.

**Overcurrent Protection.** If the standard ratings and settings of overcurrent devices do not correspond with the ratings and settings allowed for conductors, the next higher standard rating and setting may be used, but not exceeding 150 per cent of the allowable carrying capacity of the conductor.

**Deterioration of Insulation.** It should be noted that even the best grades of rubber insulation will deteriorate in time, so eventually will need to be replaced.

**National Electrical Code Types of Insulation, Temperature Rating and Use of Various Wires and Cables for Use in Buildings**

Trade Name	Type Letter	Max. Oper. Temp.	Insulation	Outer Cover	Special Provisions and Use
Rubber-Covered Fixture Wire	RF-64	60°C. 140°F.	Code Rubber	Cotton	Fixture wiring limited to 300 volts.

For full-load currents of 208 and 200-volt motors, increase the corresponding 220-volt motor full-load current by 6 and 10 per cent respectively.

\*Currents are for motors running at speeds usual for belted motors and motors with normal torque characteristics. Motors built for especially low speeds or high torques may require more running current, in which case the nameplate current rating should be used.

†For 90 and 80 per cent power factor, the above figures should be multiplied by 1.1 and 1.25 respectively.

Current in common conductor of 2-Phase, 3-wire system will be 1.41 times value given.

## Motor Characteristics

### Direct-Current Motors

Direct-current motors are divided into three classes, designated according to the method of connecting the armature and field windings as shunt-series and compound-wound.

Alternating-current motors are divided into two general classes, induction and synchronous, while induction motors are of two types, designated according to the type of rotor winding as the squirrel-cage type and as the wound-rotor or slip-ring, type.

### Shunt-Wound D.C. Motors

This type of motor runs at practically constant speed, regardless of the load. It is the type most generally used in commercial practice and is usually recommended where starting conditions are not unusually severe.

Speed of shunt-wound motors may be regulated in two ways, first, by inserting resistance in series with the armature, thus decreasing the speed; and second, by inserting resistance in the field circuit, thereby increasing the speed. In the former case, the speed will vary with each change in load; in the latter, the speed is practically constant for any setting of the controller. The latter is most generally used for adjustable-speed service, as in the case of machine tools.

### Series-Wound D.C. Motors

This type of motor speed varies automatically with the load, increasing as the load decreases. Use of series motors is generally limited to cases where a heavy power demand is necessary to bring the machine up to speed, as in the case of certain elevator and hoist installations, for streetcars, etc. Series-wound motors should never be used where the motor can be started without load, since they will race to a dangerous degree.

### Compound-Wound D.C. Motors

A combination of the shunt-wound and series-wound types combines the characteristics of both. Characteristics may be varied by varying the combination of the two windings.

Generally used where severe starting conditions are met and constant speed is required at the same time.

### Squirrel-Cage Induction Motors

The most simple and reliable of all electric motors. Essentially a constant speed machine, which is adaptable for uses under all but the most severe starting conditions. Requires little attention as there are no commutator or slip rings, yet operates with good efficiency.

### Wound-Rotor (Slip-Ring) Induction Motors

Used for constant-speed service requiring a heavier starting torque than is obtainable with the squirrel-cage type. Because of its lower starting current, this type is frequently used instead of the squirrel-cage type in the larger sizes.

Wound-rotor motors are also used for varying-speed service. Speed varies with this load, so that they should not be used where constant speed at each adjustment is required, as for machine tools.

### Single-Phase Induction Motors

This motor is used, mostly in small sizes, where polyphase current is not available. Characteristics are not as good as the polyphase motor and for sizes larger than 10 hp., the line disturbance is likely to be objectionable. Are commonly used for light starting and for running loads up to 1/2 hp. Capacitor and repulsion types provide greater torque and are built in sizes up to 10 hp.

### Synchronous Motors

Run at a constant speed fixed by frequency of the system.

Require direct current for excitation and have low starting torque. For large motor-generator sets, frequency changers, air compressors, and similar apparatus which permits starting under a light load, for which they are generally used.

Are used with considerable advantage, particularly on large power systems, because of their inherent ability to improve the power factor of the system.

Wiring for D.C. Motor Services

Comparison of Wire Gauges

Carrying Capacity Copper Wire

Size B. & S.	Diameter Inches	Pounds Bare Copper per 1000 Feet	Carrying Capacity Rubber Insulation Amperes

000	.410	507	177
0000	.460	640	210

OWING to the different systems of gauge numbers used in connection with the various materials that we handle, we deem it of prime importance to give a table showing the values (or thicknesses) of the gauges most commonly referred to. While material can usually be made according to any gauge system, custom has dictated usages, a few of which are mentioned below.

Band and hoop iron or steel and tank steel plates are rolled to Birmingham Wire Gauge.

Sheet steel is rolled to U. S. Standard Gauge.

Steel wire (except telephone and telegraph) is drawn to Washburn & Moen Gauge, but is used by most wire makers under their own name.

Steel or iron telephone and telegraph wire is generally drawn to Birmingham Wire Gauge.

Copper wire is drawn to Brown & Sharpe's Gauge.

Sheet copper, brass, bronze and German silver are rolled to Brown & Sharpe's Gauge.

Sheet zinc is rolled according to a "zinc gauge," and is used by sheet zinc manufacturers under their own names.

38	.003965	...	.080	...	.0060	101

This table was calculated on a basis of 483.84 pounds per cubic foot for steel wire. Iron wire is a trifle lighter.

The breaking strengths are calculated for 100,000 pounds per square inch throughout, simply for convenience, so that the breaking strength of wires of any strength per square inch may be quickly determined by multiplying the values given in the tables by the ratio between the strength per square inch and 100,000. Thus, a No. 15 wire, with a strength per square inch of 150,000 pounds, has a breaking strength of

$$407 \times \frac{150,000}{100,000} = 610.5 \text{ pounds.}$$

# ALPHABETICAL INDEX

A	Page
A Batteries, Eveready . . . . .	679-681
A-B Batteries, Eveready . . . . .	680, 681
Packs, Mini-Max, Eveready . . . . .	680, 681
A.B.C. Armored Bushed Cable . . . . .	40, 41
Armored Lamp Cord . . . . .	41
A.C. Selector Sets, Telephone	
System, Train Dispatching,	
Western Electric . . . . .	705
A.V.C. Cable, Habirshaw . . . . .	9, 10
Absorbers, Shock, Thompson . . . . .	556
Accessories—	
Belt, Klein . . . . .	1004
Channel, Wiring, CurtiStrip . . . . .	471
Circuit Breaker, G-E . . . . .	813, 814, 816
Conductor . . . . .	958
Conduit, Fibre, Orangeburg . . . . .	1026
Condulet, G-H Series . . . . .	221, 222
Condulet, GS Series . . . . .	223, 224
Condulet, Lighting Fixture . . . . .	506
Condulet, V Series . . . . .	228, 229
Condulet, VH Series . . . . .	228, 229
Fixture, Lighting,	
Fluorescent . . . . .	495, 501, 503-506
Floor Box . . . . .	185-189
Hand Lamp, Portable,	
Big Beam . . . . .	675
Hanger, Disconnecting and	
Lowering, Thompson . . . . .	557
Insulator Support, Steel City . . . . .	85
Inter-Communication Phone	
System . . . . .	652-654
Lamp, Hand, Vaportight . . . . .	230
Lighting Fixture, Vaportight . . . . .	228, 229
Motor Transportation Equipment . . . . .	966
Photoelectric, G-E . . . . .	795
Pipe Hanger, Appleton . . . . .	117
Pole Band, Peirce . . . . .	916, 917
Portable Instrument, G-E . . . . .	834
Raceway, CurtiStrip . . . . .	471
Reflector, Curtis . . . . .	523
Switch, Reversing Magnetic, G-E . . . . .	787
Switchgear, G-E . . . . .	804, 805
Telephone, Western Electric . . . . .	698-702
Telephone Cable, Underground . . . . .	46
Wiring, Street Lighting, G-E . . . . .	595
Acid-Core Solder . . . . .	70
Acid-Filled Solder . . . . .	71
Acorn Receptacles, Hubbell . . . . .	335
Switches, Toggle, Hubbell . . . . .	364
Wiring Devices, Hubbell . . . . .	298
Acousti-Booths, Burgess . . . . .	707
Adaptabels, Vibrating, Edwards . . . . .	633
Adapter Sockets, Adjustable Angle,	
Hubbell . . . . .	300
Sub-Plates, Receptacle, R & S . . . . .	274
Adapters—	
Angle, Adjustable, Lamp,	
Bryant . . . . .	292
Angle, Adjustable, Lamp, H & H . . . . .	301
Attachment Plug, Bryant . . . . .	314
Conduit, Appleton . . . . .	95
Conduit, Orangeburg . . . . .	1026
Conduit, T & B . . . . .	103
Condulet, AR Series . . . . .	232
Condulet, GUA Series . . . . .	249
Condulet, Obround Series . . . . .	208
Condulet, Type AJX . . . . .	233
Condulet, Type UCT . . . . .	245
Hook, Street Lighting, Hubbard . . . . .	600
Medium to Intermediate,	
Bryant . . . . .	290
Plug, Hubbell . . . . .	331
Receptacle, H & H . . . . .	303
Rod, Cope . . . . .	1034
Screw Base, Hubbell . . . . .	335
Socket, H & H . . . . .	303
