## Section 1—LINE EQUIPMENT

PAGE	
7	Poles, Crossarms
28	Pole Line Hardware
36	Pins and Brackets
53	Glass and Porcelain High Voltage Insulators
62	Line Construction Tools and Equipment
100	Underground Construction Material
113	Street Lighting Equipment

## Section 2—POWER APPARATUS

143	Transformers
153	Arrestors and High Voltage Equipment
158	Watt-hour Meters and Instruments
172	Switchgear
180	Motors and Controllers
202	Power Pumps, Tools, and Ventilating Equipment
217	Industrial Heating Equipment

## Section 3—INSIDE WIRING MATERIAL

223	Wire, Cable, and Cord
252	Tape, Soldering Material, Lugs, and Connectors
266	Porcelain Knobs, Cleats and Tubes
270	Conduit, Molding, Fittings, Boxes
305	Condulets
367	Sockets, Receptacles
391	Plugs, Receptacles, Convenience Outlets
420	Surface and Flush Switches
443	Safety, Knife and Time Switches
474	Cutouts and Fuses
488	Panels and Cabinets

## Section 4—LAMPS AND LIGHTING EQUIPMENT

523	Lamps and Guards
533	Industrial and Commercial Lighting Equipment
590	Floodlights and Airport Lighting
598	Flashlights, Batteries, Rectifiers, Small Transformers

## Section 5—SIGNALLING EQUIPMENT

612	Annunciators, Alarm Equipment
626	Bells, Buzzers, Push Buttons
645	Interphones
654	Telephone Switchboards
657	Magneto Telephones
668	Telephone Cable

## Section 6—RESEARCH PRODUCTS

672	Scientific Equipment, Audiphones
673	Broadcasting Equipment
674	Public Address and Radio Systems

## Section 7—RADIO AND APPLIANCES

675	Radio Receivers and Tubes
677	Graybar Distributed Appliances

# Graybar's Creed

## AS A DISTRIBUTOR

*The Graybar Electric Company Believes:*

1. That it performs an economic service for the wholesale buyer of electrical goods by maintaining adequate, well-selected, and convenient stocks of quality materials, thus relieving him of the burdens of handling, storage, investment, and obsolescence.
2. That likewise it performs an economic service for the maker of electrical goods by providing immediate nation-wide distribution without duplication of warehousing, selling, and credit operations; and,
3. That in performing these services, it lowers the cost of distribution to the benefit of the entire Industry; and,
4. That, consequently, it has a recognized place in the economic structure of the Industry and that it need not and should not engage in any activity detrimental to the Industry;
5. That finally, since its own success will follow the success of the Industry, it should endeavor in its publicity to bring about a greater public appreciation of Electricity; and that it should pursue and encourage sound merchandising and credit practices and in every way possible contribute to the advancement of the Electrical Industry.

## *The Story of 65 Years*

**W**AY back in 1869 two energetic and ambitious young men started a modest workshop to make electrical bells, buzzers and pushbuttons.

These men were Elisha Gray and Enos M. Barton and they called their little business Gray and Barton. This business, started before the telephone or electric light had taken their place in the scheme of things, later grew to be the company now known as Graybar.

Elisha Gray and Enos Barton were men of vision but even in their most ambitious moments, they could not have visualized the tremendous growth of the industry in which they were pioneers or of the company they founded. Gray and Barton in 1872 became the Western

Electric Manufacturing Company and on January 1, 1926, Graybar Electric Company. It is highly appropriate that the names of these two electrical pioneers should be perpetuated in the name of the largest distributor of things electrical.

Matching the growth of the electrical industry and keeping pace with its development, Graybar Electric Company has had an active part in this industry during all these sixty-five years. Today, Graybar stands ready to intelligently serve those who need things electrical.

Graybar offers electrical buyers a wide selection of quality electrical items from warehouse stocks in 73 cities, strategically located in relation to trading centers from coast to

# and Barton Graybar

coast. Graybar offers an assurance of satisfaction to all its customers, backed by a sixty-five year reputation for fair dealing. Graybar offers the experience of all these years in help-

ing you to select the proper electrical equipment for your needs and in getting this equipment where you want it, when you want and as you want it.

**8 YEARS OLD**  
Graybar  
**65 YEARS IN BUSINESS**

In 1869, Gray and Barton; in 1872, Western Electric Manufacturing Company; in 1881, Western Electric Company; in 1926, Graybar Electric Company.

## PRICES

PRICES found in this catalogue are revised to agree with the latest lists at the time of issue. It is understood that they are subject to change without notice and are, therefore, not offered by us as a quotation. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified, except such goods as are shipped regularly direct from factories, in which cases prices are for factory delivery unless otherwise specifically agreed upon.

## ORDERS

WHEN possible, we have placed opposite each article a list number. When ordering material, kindly order by the list number and give a description of the article required.

You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra drayage expenses at destination.

## TERMS

OUR terms are 30 days net from date of invoice.

Payments may be made by check, bank draft, postal or express money order, drawn to the order of or endorsed to the order of the Graybar Electric Company, Inc.

Payments in currency through the mails even if registered are not recommended and are at sender's risk. We are not responsible for loss or miscarriage of the mails.

Receipts are not issued for remittances

unless requested. Our endorsement on remittance is acknowledgment of the receipt of the funds.

We solicit new accounts on a credit basis, and in order to give prompt service, request that where you are not rated by the Commercial Agencies, references or other information of a credit character be forwarded with the order. These will be immediately acted upon, and the results held in strict confidence for our sole use and, when reasonably satisfactory, shipment will follow with all possible dispatch.

To avoid the delay incidental to communicating with references, etc., it would be mutually convenient, when immediate shipment is desired, to instruct us to ship C. O. D. by express, or parcel post (insured if so instructed) or by freight subject to sight draft through a local bank against bill of lading.

We shall advise the terms on future orders promptly after communications from references are received.

## RETURNED GOODS

TO save transportation charges, and to facilitate the handling of goods upon receipt, you are requested not to return goods without having obtained shipping instructions from us.

## SHIPMENTS

AS experienced packers are employed, and as reasonable care is used in packing, we cannot be held responsible for breakage in packages which are delivered in "good order" by the carrier.

Shipments of glassware are made at your risk.

Goods ordered to be shipped by parcel post will be sent only at the purchaser's risk of loss or damage.

## Wood Pole Specifications

Values for the ultimate fibre stresses of wood poles were approved by the American Standards Association November, 1930. These values are as follows:

Southern Yellow Pine Creosoted	7,400 lbs. per sq. in.
Western Red Cedar	5,600 lbs. per sq. in.
Northern White Cedar	3,600 lbs. per sq. in.
Chestnut	6,000 lbs. per sq. in.

This Association adopted the principles given below as a working plan for the development of the specification circumference table in which table Classes 1 to 7 are defined primarily by their circumferences at 6 ft. from the butt and designed to meet the following breaking loads under the conditions imposed in Principle 4. Classes 8, 9 and 10, having no butt requirement, were defined by minimum permitted top circumferences only.

Class	1	2	3	4	5	6	7
Lb. Sq. In.	4500	3700	3000	2400	1900	1500	1200

These principles are:

- 1.—All tables shall be based on standard fibre strengths, for the respective species.
- 2.—The tables shall specify dimensions in terms of circumference in inches at six feet from the butt, except for classes of "No Butt Requirement," and circumference in inches at the top for poles of the respective lengths and classes.
- 3.—All poles of the same length and class shall have when new approximately equal strength, or in more precise terms, equal moments of resistance at the ground line.
- 4.—All poles of different lengths within the same class shall be of suitable size to withstand approximately the same breaking load, assuming that the load is applied two feet from the top and that the break would occur at the ground line.
- 5.—The smallest class for which butt measurements shall be specified shall have a breaking load under the conditions stated in Principle 4 of approximately 1200 pounds.

6.—The largest class for which butt measurements shall be specified shall have a breaking load under the conditions stated in Principle 4 of approximately 4500 pounds.

7.—The classes from the lowest to the highest shall be arranged in geometric progression, the increments between classes, measured in terms of breaking load, to be approximately 25 per cent.

ASA Specification dimension tables will be found in this catalogue under each species of timber we discuss.

The breaking loads of the various classes previously mentioned are translated into terms of moments of resistance at the ground line and the required ground line circumferences were calculated by using beam formula  $M_r = .000264 \cdot f \cdot c^3$ .

$M_r$  is moment of resistance  
 $f$  is the standard fibre stress  
 $c$  is circumference in inches

In all classes and lengths the 6-foot circumference is usually larger than the minimums given in the table. Stating this in another way, the average 6-foot circumference for all lengths in any class is greater than one-half the difference between the class and the minimum of the next higher class. In general, too, the average pole of a given class will be considerably stronger than the rating for the class.

The basic principles upon which ASA Specification tables have been worked out conform to and are consistent with the accepted engineering practice of the larger transmission and communication utilities.

While these simplifications and standardizations on a national scale are of great interest to our customers, we still retain a belief that they cannot replace our individual specialization of method, developed over twenty-five and more years in this particular field.

## Western Red and Northern White Cedar Poles

The National Pole & Treating Company supplier of Graybar Northern and Western Cedar Poles for more than 25 years has a well earned reputation for furnishing a quality product.

It maintains at the treating plants both a graduate chemist and a graduate timber pathologist who are charged with treating operations, oil analyses, yard sanitation and research, all important essentials in the manufacture of quality poles.

### Pole Quality

Poles sold by the Graybar Electric Company conform to nationally accepted standards. Inspections are thorough.

Cedar presents the following qualities:

- |                  |                  |
|------------------|------------------|
| 1.—Strength.     | 6.—Appearance.   |
| 2.—Durability.   | 7.—Cleanliness.  |
| 3.—Stability.    | 8.—Availability. |
| 4.—Light weight. | 9.—Safety.       |
| 5.—Adaptability. |                  |

### Processed Cedar Poles

The National Pole & Treating Company maintains at its concentrating yards trained workmen who, for a small extra charge, roof, gaen and stain poles to specifications.

### Cedar Pole Service

At Minneapolis, and Everett, Washington, cedar poles are concentrated, handled by steam equipment, etc. The stock runs 100,000 poles and more.

Emergency service is always available.

### Preservative Treatment for Cedar Poles

One of the Butt Treating Vats Showing View of 130,000 Gallon Reserve Creosote Tank at Minneapolis Plant

### Description

Years of scientific observation by engineers of the largest pole users in the United States has demonstrated that the life of cedar poles can be increased by proper open tank butt-treatment. If a satisfactory permeation is obtained in the ground line area, the life of a pole, butt-treated in creosote, will depend upon the mechanical wear of the pole above.

Unless there is a thorough and even permeation, decay will occur in small pockets and in checks through the treated wood.

Proper treatment more than doubles cedar pole value, as the original factor of safety is maintained far beyond the replacement date of the untreated pole.

### Incised Treatment

#### Permeth Method Worth More Money

The incised treatment of cedar poles is the logical development of the open-tank process.

The preservative value of creosote has been recognized for many years and, as a treatment for cedar poles, was first applied with a brush. However, it was found that the painting did not get the creosote into the smaller and deeper season checks and cracks, so the poles were dipped into the creosote. This treatment was named AA and was specified as a continuous immersion for fifteen minutes in creosote heated to not less than 212° F., and not more than 230° F. We are still prepared to furnish AA treatment, at some initial price saving if that is in special cases what our customers wish to buy.

The penetration secured by the AA treatment was so shallow and unreliable that the time of treatment was lengthened to a period of from four to six hours in creosote ranging from 212° F. to 230° F. and an immediately succeeding bath in cold creosote for two hours at not more than 110° F. This treatment was called B. (We will on special request quote and furnish B treatment.) By this process a deeper penetration was secured and better results in service were obtained, but it was found that the absorption was irregular. In fact, in seasoned timber of apparently the same condition, some poles absorbed the creosote readily and showed a good penetration while others gave evidence of one surface treatment. Likewise, in the same pole there might be a full sapwood penetration at one point, whereas, in an area but a few inches away there might be little penetration. This uneven absorption naturally led to very uncertain results in service because, after the poles were set in line and were subjected to the various conditions of the seasons with the resultant checking and parting of the fibres, the cracks descending from the upper untreated portion of the pole entered the treated area and where they ran through the shallow treatment they opened up and exposed untreated timber. This permitted the fungi to come in direct contact with the untreated fibres with the resultant infection and rotting of the wood within the pole behind the layer of treated timber. This action proved that any treatment was only as effective as the protection given by the shallowest penetration at any point in the ground line area.

This conclusion necessitated the development of a uniformly deep permeation. Much research and experimental work was done to develop a treating process which would give this result.

Permeth Machine with Pole in Position Ready for Puncturing. The Oil Lift that Raises the Lower Carriage into the Head of the Machine and Acts as a Cushion while the Machine is in Operation

A microscopic study of cedar shows the wood to be very porous. It is made up of long, hollow longitudinal fibres which are spindle shaped cells, arranged in rings from the pith to the bark. These rings of cells form the annular rings. These fibres, besides furnishing support for the tree, provide means for the movement of the sap. Other than the longitudinal fibres are the medullary rays or cells which extend radially from the pith into the bark. There are no passages in the timber other than the cells within these longitudinal fibres and medullary rays and the sap moves from cell to cell through minute pits or pores which connect adjoining cells at their points of contact.

## Western Red and Northern White Cedar Poles

Continued

Although cedar fibre will absorb from 12 per cent to 15 per cent of its oven dry weight in water it will not absorb creosote. Examination under the microscope, of treated cedar discloses creosote within the cells but shows no absorption in the fibre. Consequently, in order to obtain penetration in cedar the movement of creosote must be by means of the openings in the cells and not through the cell fibre.

If the conditions within the timber remained unchanged after being cut, not so much difficulty would be experienced in treating it, but such is not the case. The sap is a watery solution of sugars, starches, resins, etc., and, while the tree is alive, it is constantly in solution and circulating, but, when the timber is cut, peeled and begins to season, some of the water from the sap evaporated and concentrates the sugars and resins which seal up most, if not all, of the minute pits or pores between the adjoining cells.

Average Penetration of Punctured Section,  $\frac{2}{32}$ -Inch, by our Permex Method

Average Penetration,  $\frac{1}{32}$ -Inch, Unscientific Hand Punctured Treatment

### Incised Method of Treatment for Cedar Poles Permex for Permanency

In our Permex treatment no external pressure is applied. The movement of creosote in the cells is entirely dependent on the action of capillary attraction. This is created by first applying heated creosote ranging from 212° to 223° F. for a continuous period of eight hours, thereby vaporizing the moisture in the sapwood, causing it to expand  $\frac{1}{273}$  times its volume for every degree of heat through which it passes and partially expelling it from the timber, and then applying an immediately succeeding bath in cold creosote from 110° to 150° F. The cold treatment contracts the vapors, forms a partial vacuum within the cells and draws the surrounding creosote into the timber. This action creates an appreciable longitudinal creep or movement but does not produce much penetration radially or tangentially.

The loss in strength to a pole through incising has been determined to be in direct proportion to the percentage of the circumference cut away in a horizontal plane and to the depth of the incision.

A scientific machine for incising, therefore, must meet the existing structural conditions in cedar. Ours was designed to cut radial passages through the fibre just to the depth of the required penetration. The incisions cut the fibres and open the ends of the longitudinal cells, providing passage for the movement of creosote so that with the least amount of timber cut in a horizontal plane and with perforations only to the depth of the required penetration, a complete saturation of the fibre is obtained between all incisions.

There are many other incising machines in operation, but they have been designed with no consideration of the structure of cedar with the result that their perforations are made deeper than necessary and may be spaced so closely that the timber is weakened to a great extent, or the sapwood may be so mutilated that it is made no more than a loosely adhering shell. Even though such perforating may produce the required penetration, it is detrimental to the pole, inasmuch as the strength of the pole may be reduced and the sapwood may become a weakened shell which will not withstand the abuses of service.

Some apply incising by means of a studded belt or plate. These belts or plates are about eighteen inches long by six inches wide and contain from seventy-five to one hundred and twenty-five teeth. A mallet is used to pound the teeth into the timber. When the plate is removed, the teeth, which are binding the timber between them, tear the fibres and in some cases loosen the outer sapwood from the heartwood. It is practically impossible to obtain uniform depth of perforation and impregnation by using belts or plates because the body holding the teeth is not flexible and cannot follow the crevices and irregularities of the timber. On the other hand, the teeth of our machine are operated by automatic adjusting cams and inserted into the timber in such a way as to insure a uniform depth of perforation regardless of the uneven surface over which it has to work.

### Incised Method Prevents Season Checking at Ground Line

It was thought at first that if the same penetration could be obtained in a cedar pole without perforating as with perforating, that better service results could be obtained. Experience has proven the contrary to be true. If creosote were not volatile, and if its preservative value were of indefinite existence, and if the layer or treated timber around the outside of the pole were never broken, then a creosoted area on the surface, regardless of depth of penetration, would be sufficient to preserve the pole indefinitely. It has been found, however, in green and even in seasoned poles that season checking occurs after the poles are set in line. But in perforated poles, these checks descending from the upper untreated section run out when they reach the treated perforated area. Thus the perforating protects the poles, not only in securing a deeper, more uniform impregnation, but also in providing means of relieving the stresses which cause checking in treated ground line section thereby insuring constant and complete protection against infection of the timber.

### Incising Machines at Minnesota Transfer, Minn. and Everett, Washington

Two of these proper incising Permex machines are at the Minneapolis Transfer yard where the National Pole & Treating Company maintains an adequate stock of poles. A third machine is operated by the National Pole & Treating Company at Everett, Washington. These machines handle this work for us.

It is felt that studies by means of an increment borer could well be made by pole users. One large Central Station, whose engineers make such studies independent of the operating department, report informally that our Permex treatment was 30 per cent more efficient than some others.

**Specification for Preservative Treatment Cedar Poles**

**Incised Process—A Guaranteed Penetration**

**A.—Seasoning**

Poles shall be satisfactorily air seasoned under proper sanitary conditions.

**B.—Shaving**

All inner bark shall be removed from the groundline area of the pole; i.e., that portion of the pole surface terminating one foot above and two feet below the standard groundline indicated in Paragraph F. The amount of wood shaved off in the removal of the inner bark shall be limited to a minimum.

**C.—Incising**

All poles shall be incised throughout that portion of the pole surface terminating one foot above and two feet below the standard groundline indicated in Paragraph F. The depth of incisions shall be 1/2 inch. A variation of 1/2 of an inch in the depth of the incisions shall be allowed. The sapwood shall not be splintered nor loosened by the incising operation. The pattern and spacing of the incisions shall be such as to insure a uniform depth of penetration of the preservative throughout the incised area.

**D.—Preservative**

The preservative used shall be a distillate of coal-tar or coke-oven tar. It shall comply with the following requirements:

- 1.—It shall not contain more than 3% water.
- 2.—It shall not contain more than .5% of matter insoluble in benzol.
- 3.—The specific gravity of the oil at 38 degrees C. compared with water at 15.5 degrees C. shall not be less than 1.03.
- 4.—The distillate, based on water free oil, shall be within the following limits:  
Up to 210 degrees C.—Not more than 5%.  
Up to 235 degrees C.—Not more than 25%.
- 5.—The residue above 355 degrees C., if it exceeds 5%, shall have a float test of not more than fifty seconds at 70 degrees C.
- 6.—The oil shall yield not more than 2% of coke residue.
- 7.—The foregoing test shall be made in accordance with the standard methods of the American Wood Preservers' Association.

**Treating Operations**

**E.—Plant Equipment**

Treating plants shall be equipped with thermometers to indicate and record accurately the temperature of the preservative during all stages of treatment. The apparatus and chemicals for making necessary analyses and tests shall be available for use by the purchaser or purchaser's representative. All equipment shall be maintained in good working order.

**F.—Length of Treated Sections**

Poles shall be immersed in the preservative so as to completely cover the groundline area. The depth of immersion shall not exceed by more than two feet the height of treatment given in the table below. The following table shows the relationship between the height of groundline and the height of treatment from the butt end of the pole:

Length Pole Ft.	Height Groundline Ft.	Height Treatment Ft.	Length Pole Ft.	Height Groundline Ft.	Height Treatment Ft.
16	3 1/2	4 1/2	45	6 1/2	7 1/2
18	3 1/2	4 1/2	50	7	8
20	4	5	55	7 1/2	8 1/2
22	4	5	60	8	9
25	5	6	65	8 1/2	9 1/2
30	5 1/2	6 1/2	70	9	10
35	6	7	75	9 1/2	10 1/2
40	6	7	80	10	11

**G.—Manner of Treatment**

The treatment shall consist of two immersions; first, the hot immersion; second, the cold or cooling immersion.

**Temperature and Duration of Hot Immersion**

Poles shall be continuously immersed in the preservative at a temperature of 230 degrees F. plus or minus five degrees for not less than eight (8) hours and such period in addition thereto as will insure impregnation of the sapwood of the incised area with preservative to a depth of 1/2 inch. In case the sapwood of the incised area is less than 1/2 inch thick, the impregnation shall be to the full depth of the sapwood.

**Temperature and Duration of Cold or Cooling Immersion**

The preservative of the hot immersion may be allowed to cool in the treating tank or it may be replaced with cold preservative. When the preservative of the hot immersion is replaced with cold preservative, the exchange must be complete within ten minutes.

When the preservative of the hot immersion is replaced with cold preservative, the poles shall be continuously immersed in the cold preservative for a period of not less than two hours, and the temperature of the preservative for the entire period shall be between 150 degrees F. and the temperature at which solids form in the preservative.

When the preservative of the hot immersion is allowed to cool in the treating tank, the poles shall be continuously immersed in the cooling preservative at least two hours and until the temperature of the preservative has been reduced to a point between 150 degrees F. and the temperature at which solids form in the preservative. The poles shall remain immersed at this temperature for a period of not less than ten minutes.

The height of the preservative in the hot, cold, or cooling immersion shall be maintained at the same levels required in paragraph F.

**H.—Impregnation**

The results obtained under this specification shall be a uniform impregnation of the incised area with preservative to a depth of 1/2 inch, except where the thickness of the sapwood is less than 1/2 inch, in which case the impregnation shall be to the full depth of the sapwood. The depth of the impregnation shall be determined by testing with an increment borer at any point within the incised area. All such holes shall be filled with tight-fitting, thoroughly creosoted plugs.

Adherence to this specification results in not only the stipulated depth of impregnation, but also in a very large volume of preservative in the sapwood of the incised area, thus affording maximum protection against decay. No specific preservative content is mentioned owing to the difficulty of accurately making volume tests in the field. The presence of a large volume of preservative can be determined by observing the borings taken for penetration tests.

**I.—Handling**

The use of any tools which might puncture the treated wood shall not be applied within one foot above or one foot below the groundline area. See Paragraph B.

**J.—Storing**

Treated poles held in storage shall be piled upon treated or other non-decaying skids in a clean, well ventilated location free from vegetation and decaying wood. Skids shall be of such strength as to support the poles without producing injurious distortion of any of them, and of such height that no part of any pole shall be less than one foot above the surface of the soil.

## American Standard Specifications for Western Red Cedar Poles

### O—Introduction

These specifications cover western red cedar poles. The poles are to be classified in accordance with the American Standard Dimensions of Western Red Cedar Poles (05c2—1931), which is part of these specifications.

The length and class of the poles wanted shall be stated in the orders.

Poles furnished under these specifications may be either seasoned or unseasoned. If seasoned poles are specifically called for in an order, the purchaser shall specify the seasoning requirements to be met.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

### 1.—Material Requirements

#### 1.1—Species

All poles shall be of western red cedar (*Thuja plicata*) cut from live timber.

#### 1.2—Prohibited Defects

All poles shall be free from sap rot, cracks, bird holes, plugged holes and injurious checks; from splits, shakes, hollow and decay in the tops; and from damage by marine borers. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

#### 1.3—Limited Defects

**1.31 DEAD STREAKS.**—All poles shall be free from dead streaks that are wider than one-fourth ( $\frac{1}{4}$ ) of the circumference of the pole at the point of measurement.

**1.32 DECAY.**—Poles shall be free from decay and from visible evidence of the presence of wood-rotting fungi except as permitted under Defective Butts.

**1.33 DEFECTIVE BUTTS.**—No poles shall have in the butt surface splits or checks extending from one point on the periphery to another point on the periphery and thence upward more than two (2) feet.

No pole shall have hollow heart, the diameter of which exceeds one-third ( $\frac{1}{3}$ ) the butt diameter or the depth of which exceeds two (2) feet. The depth of hollow heart shall be measured from the butt surface.

Rot is permitted in the butt surface provided the aggregate area of rot and hollow heart does not exceed ten (10) per cent of the entire butt surface.

Complete circular shakes may be present on the butt surface provided the diameter of the ring which they follow is not more than one-third ( $\frac{1}{3}$ ) of the diameter of the butt.

**1.34 GRAIN.**—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

**1.35 INSECT DAMAGE.**—All poles shall be free from insect damage, except that pin holes circular in outline, not more than one-sixteenth ( $\frac{1}{16}$ ) of an inch in diameter, and not greater in number than fifteen (15) in an area of four (4) square inches, are permitted.

**1.36 KNOTS.**—All poles shall be free from unsound knots.

The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section, between the top and two (2) feet below the ground line, shall not exceed the limits set up in the following table. Knots and knot cavities one-half ( $\frac{1}{2}$ ) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

#### Limitations of Knot Size

##### MAXIMUM SIZES PERMITTED, INCHES

Length of Pole	Diameter of any Single Knot or Knot Cavity	Sum of Diameters of All Knots and Knot Cavities in any One (1) Foot Section
All lengths	3	10

**1.37—SCARS.**—No part of a scar shall appear on the upper one-fourth ( $\frac{1}{4}$ ) of the length of a pole or within two (2) feet of the ground line.

Sound scars and cat faces are permitted elsewhere provided the width of the scar or cat face at its widest point is not more than one-fifth ( $\frac{1}{5}$ ) of the circumference of the pole at that point, nor in any case more than five (5) inches.

**1.38 SHAPE.**—Poles shall be free from short crooks.

A pole may have sweep in the section above the ground line subject to the following limitations:

(a) Where sweep is in one (1) plane and (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

A pole may have offset in the section below ground line, provided that the projection of a straight line joining the mid-point at the top and the mid-point at the ground line does not fall outside the butt surface.

### 2.—Dimensions

#### 2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

#### 2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Western Red Cedar Poles. This standard gives the minimum allowable circumference at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top for each length and class of pole listed, but does not preclude the acceptance of poles having greater circumference at these points of measurement than those shown. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

### 3.—Manufacturing Requirements

#### 3.1—Bark Removal

Outer bark shall be completely removed from all poles.

#### 3.2—Sawing

All poles shall be neatly sawed at the butt and top along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth ( $\frac{1}{12}$ ) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

#### 3.3—Shaving

Shaved poles shall not be furnished under these specifications unless specifically called for by the purchaser.

#### 3.4—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

### 4.—Definitions of Terms

The following definitions shall apply in these specifications:

#### 4.1—Fungous Defects

**4.11 DECAY.**—Decay<sup>1</sup> is disintegration of wood substance due to the action of wood destroying fungi. *Rot* and *Dote* mean the same as *Decay*.

**4.12 HOLLOW HEART.**—Hollow heart is a cavity in the heart of the pole resulting from decay.

<sup>1</sup>NOTE: The terms "sound" and "unsound" are used in these specifications to imply that "sound" fiber is unaffected by decay and that "unsound" fiber is or has been affected by decay.

American Standard Specifications for Western Red Cedar Poles

Continued

4.—Definitions of Terms—Continued

4.34 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

4.35 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

4.36 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

4.2—Insect Defects

4.21 INSECT DAMAGE.—Insect damage is the result of boring in the poles by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

4.3—Timber Defects

4.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

4.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

4.33 DEAD STREAK.<sup>2</sup>—A dead streak is any portion of the sapwood in which the life process had ended prior to the cutting of the tree.

<sup>2</sup>NOTE: A dead streak starts from the butt and differs therein from a wound, such as a cat face or scar, where the growth of new wood shows that life processes are still acting to repair the injured part.

4.4—Shape

4.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half (½) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

4.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See Diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

4.5—Miscellaneous

4.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

4.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

5.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

6.—Subsidiary Standard

The following standard is subsidiary to the text of these specifications:

American Standard Dimensions of Western Red Cedar Poles (05c2—1931).

Official Manufacturing Specifications for Northern White Cedar Poles

16 Feet and Longer

1.—Live Timber

All poles must be manufactured from live, growing cedar timber in territory adjacent to the Great Lakes.

NOTE: The test of live timber is to cut into the sapwood. If the sapwood is white, the timber was alive when cut.

2.—Manufacture

All poles shall be peeled their entire length, knots trimmed close and butt and top sawed square. No poles with chopped or beveled butts will be accepted.

3.—Lengths

The length shall be measured between the extreme ends of the pole. No pole shall be over 3 inches shorter or 6 inches longer than its specified length.

4.—Top Measurements

Designated Size	CIRCUMFERENCE	
	Green & Watersoaked	Seasoned
4-inch top	12½ inches	12 inches
5-inch top	16 inches	15 inches
6-inch top	19½ inches	18½ inches
7-inch top	23 inches	22 inches
8-inch top	25 inches	24 inches

5.—Defects

A—Rot

Decay in the butt within three inches of the surface of the pole shall not exceed one (1) square inch in area.

Butt rot shall not exceed 5% of the area of the butt, which approximates ⅓ the diameter, in all poles 5-inch top 25 foot long and smaller and shall not exceed 8% of the area of the butt, which approximates ¼ the diameter, in all poles six inch top 25 foot long and larger.

Complete circular shakes in the butt may be present provided the area encircled by the shake does not exceed ten (10) per cent of the total butt area.

B—Top

Tops must be sound.

C—Crook

No pole shall have a short crook or bend, a crook or bend in two planes or a reverse curve. The maximum amount of sweep measured between the ground line and the top shall not be in excess of one (1) inch for each five feet of the length of the pole.

D—Knots

All poles shall be free from unsound knots. The diameter of any single knot or knot cavity or the sum of the diameters of all knots and knot cavities in any one foot section between the top of the pole and two feet below the ground line shall not exceed the limits set up in the following table. Knots or knot cavities ½ inch or under in diameter shall be ignored in applying the limitations for sum of diameters. The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

Limitations of Knot Sizes

Length of Pole	Diameter of any single knot or knot cavity	Max. sizes permitted, inches
		Sum of diameters of all knots and knot cavities in any one-foot section
35 feet and under	2.5 inches	9 inches
40 feet and over	4.5 inches	11 inches

E—Miscellaneous Defects

All poles shall be free from sap rot, bird holes, plugged holes, injurious checks and splits. No poles showing evidence of having been eaten by ants, worms or other insects shall be accepted, except that poles containing surface worm or insect marks below the ground line may be accepted.

F—Cat Faces and Scars

No part of a scar or cat face shall appear on the upper one-fourth (¼) of the length of a pole or within two (2) feet of the ground line. Sound scars and cat faces are permitted elsewhere provided the width of the scar or cat face at its widest point is not more than one-fifth of the circumference of the pole at that point nor in any case more than five (5) inches.

G—Twist

Winding twist permitted unless unsightly and exaggerated except that there shall not be more than one complete twist of grain in any 20 feet of length.

H—Maximum Defects

No poles shall contain both the maximum crook and maximum butt rot.

## International Creosoted Pine Poles

Old Lines of International Creosoted Pine Poles—25 Years In Service  
In Above Lines—6712 Poles— $\frac{1}{2}$  of 1 Per Cent Replaced to Date (1933)

### General

Graybar Electric Company brings to the utility trade the highest quality in creosoted pine poles and offers for support of this statement the fact that its supplier has more long-time service records of poles without failures than any creosoting concern. Low annual cost, reliability, the fact that in times of financial stress or weather hazard the utility company needs lines that will stand without failure, all of these have dominated us in our creosoted pine pole policy.

### International As A Supplier

Our supplier, International Creosoting and Construction Company, organized in 1875 and one of the largest commercial creosoting concerns in the business, has an outstanding record and a dominant place in the treating industry. We call special attention to the records of old and new lines cited in this concern's photographs here shown. They are typical, and a few of the many available.

Operating in one of the finest timber-producing areas in the South-West, International has added to its advantages of location and natural resources the skill of graduate chemical engineers and treating operators whose work is conducted in modern plants and well equipped laboratories. Pioneered and trained by a background of 58 years experience, International timbermen select the cream of the timber area (surpassing even the quality of the lumber logging operations) for the manufacture of Graybar-International poles. This production moves to conditioning yards at the treating plants by means of a highly developed and well organized concentrating system. The yards themselves have been built in conformity with Government seasoning recommendations.

Always using only one grade, and that the best grade of creosote in the treatment of its poles, and standing against every tendency towards departures in quality or reduction in quantity of the preservative that would make of the user's line an experimental laboratory, Graybar-International creosoted pine poles have gone to almost every state of the Union and without exception have given outstanding service.

### Reasons For The Standing Of The International Pine Pole

- |                    |                     |
|--------------------|---------------------|
| 1—Long Life        | 5—Cleanliness       |
| 2—Low Annual Cost  | 6—Fire Resistant    |
| 3—Great Strength   | 7—Bird Resistant    |
| 4—Lasting Strength | 8—Termite Resistant |

The utilities of the United States use more creosoted pine than all other treated poles put together. Only briefly need their qualifications be given to account for this preference. The tall straight pine trees of the South are natural poles. They grow with a gradually tapering stem, practically without branches, and when sheared of their bark and browned as the result of treatment, they present a stately appearance in the line. Their wood is the strongest of the poles commonly used in line construction. Fortunately pine is a wood into which creosote goes very deeply during the course of scientifically controlled and proper treating operation, and the depth of this protection is the reason for the exceedingly long life of the pine pole. It is the explanation also of pine's resistance to termite attacks, for the checks which open in

every wood and expose it to the ravages of these insects do not go past the deep creosote penetration in the pine pole. Modern methods and advances in the science of wood preservation now makes available the creosoted pine pole so well manufactured in appearance, and with surface so clean that they are in use on the streets of New York, Detroit, Los Angeles, St. Louis, Baltimore, Boston, San Francisco, and thousands of other cities.

### American Standards Association Specifications for Southern Pine Poles

Approved June 20, 1931

#### Introduction

These specifications cover southern pine poles which are to be given a preservative treatment. The poles are to be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931), which is a part of these specifications.

The length and class of poles wanted and full details of the framing desired shall be stated in the orders.

The details of any marking, including length and class marks, to be placed on the poles shall be in accordance with instructions from the purchaser.

Complete detailed instructions shall be given the supplier in all cases where modifications are to be made in these specifications to meet special requirements.

#### 1.—Material Requirements

##### 1.1—Species

All poles shall be cut from live southern pine timber: Longleaf Pine (*Pinus palustris*), Shortleaf pine (*Pinus echinata*), Loblolly Pine (*Pinus taeda*), Slash Pine (*Pinus caribaea*), and Pond Pine (*Pinus rigida serotina*).

##### 1.2—Prohibited Defects

All poles shall be free from decay, red heart, cracks, plugged holes, and bird holes. Nails, spikes, and other metal shall not be present in the poles unless specifically authorized by the purchaser.

##### 1.3—Permitted Defects

1.31 BLUE SAP STAIN.—Blue sap stain that is not accompanied by softening or other disintegration of the wood (decay) is permitted under these specifications.

1.32 HOLLOW PITH CENTERS.—Hollow pith centers in the tops or butts of poles and in knots are permitted.

##### 1.4—Limited Defects

1.41 CHECKS.—The top and side surfaces of poles shall be free from injurious checks.

1.42 SHAKES.—Shakes in the butt surface extending over not more than one-quarter ( $\frac{1}{4}$ ) of the circumference are permitted provided they are at least one (1) inch distant from the edge of the butt. Shakes extending over more than one-quarter ( $\frac{1}{4}$ ) of the circumference are permitted when they are inside of a circle whose center corresponds to the center of the butt surface and whose diameter equals one-half ( $\frac{1}{2}$ ) of the average butt diameter.

## International Creosoted Pine Poles

New Lines of International Creosoted Pine Poles—10 Years in Service  
In Above Lines—4026 Poles—No Replacements to Date (1933)

### Specifications for Southern Pine Poles

Continued

Shakes in the top surface whose width does not exceed one-sixteenth ( $\frac{1}{16}$ ) of an inch are permitted provided they do not extend over more than one-half ( $\frac{1}{2}$ ) of the top circumference.

1.43 SPLITS.—Splits are prohibited in the top surfaces of poles. Splits in butt surfaces are permitted provided that their height from the butt along the side surfaces does not exceed two (2) feet.

1.44 GRAIN.—No pole shall have more than one (1) complete twist of grain in any twenty (20) feet of length.

1.45 INSECT DAMAGE.—Insect damage consisting of holes less than one sixteenth ( $\frac{1}{16}$ ) of an inch in diameter is permitted.

1.46 KNOTS.—The diameter of any single knot or knot cavity, or the sum of the diameters of all knots and knot cavities in any one (1) foot section shall not exceed the limits set up in the following table. Knots and knot cavities one-half ( $\frac{1}{2}$ ) of an inch or under in diameter shall be ignored in applying the limitations for sum of diameters.

Limitations of Knot Size

Length of Pole	MAXIMUM SIZES PERMITTED, INCHES		
	DIAMETER OF ANY SINGLE KNOT OR KNOT CAVITY		Sum of Diameters of All Knots and Knot Cavities in Any 1 Foot Section
	Classes 1-3	Classes 4-10	All Classes
45 Ft. and Under	4	3	8
50 Ft. and Over	5	5	10

Knots one (1) inch or over in diameter, showing discoloration or softness of fibre, indicating possible decay, shall be neatly gouged to a depth of not more than one-fifth ( $\frac{1}{5}$ ) of the diameter of the pole at the point where the knot is located, to permit determination of the character and extent of decay. The gouging shall be done without unnecessary removal of sound wood, and in such a manner as to insure drainage of water from the hole when the pole is set. Where such gouging does not completely remove the decay (heart rot), the pole shall be rejected.

Knots under one (1) inch in diameter need not be gouged unless after trimming the presence of decay is revealed and upon further examination the decay is found to extend to a depth of more than two (2) inches.

When more than one (1) cavity is present in a pole, the sum of the depths of all cavities in the same six (6) inch longitudinal section of the pole shall not exceed one-third ( $\frac{1}{3}$ ) of the mean diameter of that section.

1.47 SCARS.—No pole shall have a turpentine face or other scar located within two (2) feet of the ground line.

In other sections of the pole, scars which have been smoothly trimmed so as to remove all bark and all surrounding or overhanging wood that is not completely intergrown with the wood of the body of the pole are permitted, provided

(a) that such trimming does not result in abrupt changes in the contour of the pole surface and that trimmed scar does not have a depth of more than one (1) inch, except that where the diameter of the pole at the location of the scar is more than ten (10) inches the depth may be one-tenth ( $\frac{1}{10}$ ) of the diameter; and

(b) that the circumference of the pole at any point on trimmed surfaces located between the butt and a point two (2) feet below the ground line is not less than the circumference of the pole at the ground line.

1.48 SHAPE.—Poles shall be free from short crooks.

A pole may have sweep subject to the following limitations:

(a) Where sweep is in one (1) plane and one (1) direction only, a straight line joining the surface of the pole at the ground line and the edge of the pole at the top shall not be distant from the surface of the pole at any point by an amount greater than one (1) inch for each six (6) feet of length between these points.

(b) Where sweep is in two (2) planes (double sweep) or in two (2) directions in one (1) plane (reverse sweep), a straight line connecting the mid-point at the ground line with the mid-point at the top shall not at any intermediate point pass through the external surface of the pole.

## 2.—Dimensions

### 2.1—Length

Poles under fifty (50) feet in length shall not be over three (3) inches shorter or six (6) inches longer than nominal length. Poles fifty (50) feet or over in length shall not be over six (6) inches shorter or twelve (12) inches longer than nominal length.

Length shall be measured between the extreme ends of the pole.

### 2.2—Circumference

Poles shall be classified in accordance with the American Standard Dimensions of Creosoted Southern Pine Poles. Minimum allowable circumferences at six (6) feet from the butt (except for Classes 8, 9, and 10), and at the top, for each length and class of pole listed, are shown in this standard. Poles having circumferences which are greater, at the same points of measurement, than those shown for the length and class desired, shall be acceptable, provided that the six (6) foot from butt circumference is less than the minimum given for the second larger class pole of the same length. The top dimensional requirement shall apply at a point corresponding to the minimum length permitted for the pole.

\*No butt requirement on Classes 8, 9 and 10.

3.—Manufacturing Requirements

3.1—Bark Removal

Outer bark shall be completely removed from all poles. No patch of inner bark left on the pole surface shall be more than one quarter (1/4) of an inch in width or more than four (4) inches long.

3.2—Sawing

All poles shall be neatly sawed at the butt along a plane which shall not be out of square with the axis of the pole by more than two (2) inches per foot of diameter of the sawed surface. Beveling at the edge of the sawed butt surface not more than one-twelfth (1/12) of the butt diameter in width, or an equivalent area unsymmetrically located, is permitted.

3.3—Trimming

Branch stubs, partially overgrown knots, and completely overgrown knots rising more than one (1) inch above the pole surface shall be trimmed close. Completely overgrown knots less than one (1) inch high need not be trimmed.

3.4—Framing

All poles shall be framed in accordance with the terms of the order before they are subjected to the preservative treatment.

Gains on poles showing sweep or curvature shall be located on the concave side in the plane of the greatest curvature.

All gains on the same pole shall be cut so that their flat surfaces are approximately parallel. Conformance to this requirement may be tested by placing straight edges thirty (30) inches long on the faces of the finished gains so that the ends of the straight edges extend fifteen (15) inches on either side of the center line of the pole. The straight edges in any two (2) gains, when sighted in the direction of the longitudinal axis of the pole, shall not be out of parallel at their ends by more than one-sixteenth (1/16) of an inch. Bolt holes shall be bored perpendicular to the faces of the gains.

4.—Storage and Handling

4.1—Storage

When it is necessary for any reason to hold in storage poles offered under these specifications, they shall be stacked on creosoted or non-decaying skids of such dimensions and so arranged as to support the poles without producing noticeable distortion of any of them. Poles shall be piled in such a manner as to permit free circulation of air and they shall be supported at all points at least one (1) foot above the general ground level, or any vegetation growing thereon. No decayed or decaying wood shall be permitted to remain underneath stored poles.

4.2—Handling

Pole tongs, cant hooks, and other pointed tools capable of producing indentations of more than one (1) inch in depth shall not be used on poles furnished under these specifications.

5.—Definitions of Terms

The following definitions shall apply in these specifications:

5.1—Fungous Defects

5.11 BLUE SAP STAIN.—Blue sap stain is a bluish coloration in the sapwood, caused by the action of certain molds and fungi, that is not accompanied by softening or other disintegration of the wood.

5.12 DECAY.—Decay is disintegration of wood substance due to the action of wood-destroying fungi. Rot and Dote mean the same as Decay.

5.13 RED HEART.—Red heart is the incipient stage of a destructive heart rot caused by *Trametes pini* that occurs in the living tree. It is characterized by a reddish or brownish color in the heartwood.

5.2—Insect Defects

5.21 INSECT DAMAGE.—Insect damage is the result of boring in the pole by insects or their larvae. Scoring or channeling of the pole surface is not classed as insect damage.

5.3—Timber Defects

5.31 CHECKS.—Checks are lengthwise separations of the wood in a generally radial direction.

Heart checks are checks which extend from the pith center of the pole toward but not to the periphery of the pole.

5.32 CRACKS.—Cracks are breaks or fractures across the grain of the wood.

5.33 SCARS.—Scars or cat faces are depressions in the surface of the pole, generally elliptical in shape, resulting from wounds where healing has not re-established the normal cross section of the pole.

5.34 SHAKES.—Shakes are separations of the wood, generally parallel with the annual rings.

5.35 SPLITS.—Splits are separations between the fibers of the wood extending from surface to surface through the pole.

5.4—Shape

5.41 SHORT CROOK.—A short crook is a localized deviation from straightness which, within any section of five (5) feet or less in length, is more than one-half (1/2) the mean diameter of the crooked section. (See Diagram 3 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

5.42 SWEEP.—Sweep is the deviation of a pole from straightness. (See diagrams 1 and 2 of the subsidiary drawing entitled "Measurement of Sweep and Short Crook in Poles.")

5.5—Miscellaneous

5.51 KNOT DIAMETER.—The diameter of a knot is its diameter on the surface of the pole measured in a direction at right angles to the lengthwise axis of the pole.

5.52 LIVE TIMBER.—Live timber is that cut from a tree which was standing and living at the time of cutting.

6.—Subsidiary Drawing

The following drawing is subsidiary to the text of these specifications:

Measurement of Sweep and Short Crook in Poles.

7.—Subsidiary Standard

The foregoing dimension table is subsidiary to the text of these specifications: It is designated as:

American Standard Dimensions of Creosoted Southern Pine Poles (05e2-1931).

## International Creosoted Pine Poles

### Measurement of Sweep and Short Crook in Poles

Diagram 1—Measurement of Sweep in One Plane and One Direction

Diagram 2—Measurement of Sweep in 2 Planes (Double Sweep) or in 2 Directions in One Plane (Reverse Sweep)

NOTE: Diagram No. 2 applies to the measurement of double sweep in Western Red Cedar and Southern Pine

Poles. For measurement of double sweep in Northern White Cedar and Chestnut Poles, see text.

Diagram 3—Measurement of Short Crook (Three Cases Shown)

Case 2—Where Axes of Sections above and below the Crook Coincide or are Practically Coincident

Case 3—Where Axis of Section above Short Crook is not Parallel or Coincident with Axis below the Crook

NOTE: The three cases shown under Diagram 3 are typical and are intended to establish the principle of meas-

uring short crooks. There may be other cases not exactly like those illustrated.

International Pine Poles have the Straightness and Symmetry of a Machined Product

International Creosoted Pine Poles

Stacks Such as Here Shown on One of International's Conditioning Yards Make Possible Our Quick Shipment of Quality Creosoted Pine Poles

Top Dimension Poles

Top dimension poles conform in all respects to American Standards Association Specification poles, with the sole difference that top diameter poles specify minimum top diameter only; whereas A. S. A. Specification poles specify both minimum top circumference and circumference six feet from the butt.

Length Feet	TOP DIAMETER IN INCHES*

\*Note: Top diameter is determined by placing a tape around the circumference of the pole at the base of the roof.

What an Order Should Show

To avoid delays and prevent the possibility of error, an inquiry or an order for International poles should contain the following information:

- 1.—Name of consignee.
- 2.—Destination of shipment.
- 3.—Date shipment is desired.
- 4.—Number of poles required.
- 5.—Length and minimum top diameter.
- 6.—Number of pounds of creosote required per cubic foot of wood.
- 7.—Type of framing desired. A blue print or sketch is preferable. Poles can be framed more economically at a treating plant than in the field at point of installation. Insofar as possible therefore complete framing instructions are desirable.

\*Specification for the Preservative Treatment of Southern Yellow Pine Poles

Rueping Empty Cell Process

\*Note: A descriptive specification only. It must be recognized that specifications do not guarantee quality, and should not be regarded as adequate protection to the buyer. In any treated wood, the all important factor is the source of supply.

General

The following specification is intended to obtain an empty cell treatment for the poles; and if the material to be treated is in a different condition as to moisture and seasoning, material for each retort charge shall be selected as to condition of moisture so that there will be no great difference in degree of seasoning in any one charge. Only perfectly sound poles shall be treated. The treating plant shall be equipped with indicating and recording gauges and other necessary apparatus for accurately observing and recording the treating process. Above the level of the creosoting cylinder there shall be an overhead drum for the purpose of determining that the cylinder is full of preservative and free from air and the gauge reading indicating a full cylinder shall not be taken until the preservative is seen to overflow through the valve on top of this drum; there shall also be a sap drum below the level of the cylinder by means of which sap and condensation shall be removed regularly. The treating plant must have all the necessary chemicals, a laboratory and laboratory apparatus to enable the quality of preservative to be determined.

Seasoning

Air-Seasoning

In air-seasoning, the poles shall be stacked in such a manner as to provide free air circulation and minimum contact between individual pieces in each stack. These stacks shall be placed on treated or otherwise permanent skids at least six inches above the ground on a well drained storage yard free from vegetation and decaying wood, so located that prevailing winds strike it freely, and each layer shall be separated by creosoted strips. Alleys between the stacks shall be wide, continuous and straight. The material shall remain until in the judgment of the inspector it is sufficiently seasoned to obtain the maximum benefit from the treatment.

Seasoning By Steam

When time for air-seasoning is not available, steam seasoning shall be used. Live, saturated steam shall be admitted to the treating cylinder taking care that all air is swept from the cylinder before the outlet valve is closed. Pressure shall then be raised gradually to the maximum temperature desired, this maximum being determined by the treating inspector. It should not be less than 259° F., not more than 270° F. The duration of the steaming process is dependent upon the degree of seasoning of the poles in the cylinder charge but shall in no case be carried to such an extent as to injure the timber.

Initial Vacuum

After the steaming process has been completed the steam shall be blown off and the treating cylinder exhausted as quickly as possible to as high a vacuum as possible, which must be at least twenty-four inches at sea level or proportionately less at higher altitudes. This vacuum shall be maintained for at least one hour or for whatever longer period is necessary, so that the wood may be as dry and free from air as practicable. During the exhaustion process the temperature within the treating cylinder shall be maintained by means of steam under pressure in the closed coils. The cylinder shall be relieved of sap and condensation continuously.

## International Creosoted Pine Poles

### Specification for the Preservative Treatment of Southern Yellow Pine Poles

#### Seasoning—Continued

##### Initial Air Pressure

In the case of air-seasoned poles, Initial Air Pressure is the first step in the treating process. With steam-seasoned poles this step immediately follows the Initial Vacuum.

The poles shall be subjected to air pressure of sufficient intensity and duration (usually 40 lbs. to 70 lbs.) to provide under a quick high vacuum the ejection of surplus preservative, and to insure a retention and proper distribution of the stipulated number of pounds of preservative per cubic foot of wood.

##### Treatment

The creosote shall be introduced between 170° F. and 210° F., the cylinder pressure being maintained constant until the cylinder is filled. The oil must be seen by the inspector to flow from the overhead drum on top of the treating cylinder, thus assuring him that the cylinder is completely filled with the preservative. The pressure shall then be gradually raised to and maintained at a minimum of 150 lbs. per square inch until there is obtained the largest gross absorption that can be reduced to the stipulated final retention, calculation being based on readings of the working tank gauges and the weight of the creosote at 100° F. The quantity of oil for final retention shall be based on the cubic content of wood in the treating cylinder as determined by actual measurement of the top and butt of each pole in each charge. Under no conditions may shortage of oil in one charge be offset by overage in another; the minimum final retention in each case must be 100 per cent of the quantity of creosote specified.

##### Final Vacuum

After pressure is completed and the cylinder is emptied of oil a sufficient vacuum shall be promptly created and maintained until the timber can be removed from the cylinder free from dripping oil.

##### Preservative

For preservative see Creosote Specification.

**NOTE:** A final retention of 8, 10 or 12 pounds of creosote per cubic foot are most frequently used. Of these, the 8-pound treatment is specified in the great majority of cases.

### Standard Specifications for Creosote Oil American Wood Preservers Association

#### Grade 1

- 1.—The oil shall be a distillate of coal-gas tar or coke-oven tar.<sup>1</sup> It shall comply with the following requirements:
- 2.—It shall not contain more than three per cent of water.
- 3.—It shall not contain more than 0.5 per cent of matter insoluble in benzol.<sup>2</sup>
- 4.—The specific gravity of the oil at 38° C., compared with water at 15.5° C., shall be not less than 1.03.
- 5.—The distillate, based on water-free oil, shall be within the following limits:  
Up to 210° C., not more than 5 per cent.  
Up to 235° C., not more than 25 per cent.
- 6.—The residue above 355° C., if it exceeds 5 per cent shall have a float test of not more than 50 seconds at 70° C.
- 7.—The oil shall yield not more than 2 per cent of coke residue.
- 8.—The foregoing tests shall be made in accordance with the standard methods of the American Wood-Preservers' Association. (See Manual—Creosote, Analysis.)

<sup>1</sup>Owing to the complexity of the chemical composition and physical properties of coal-tar creosote oil, and to the fact that some of the same compounds and properties which characterize coal-tar creosote are found in certain petroleum derivatives, the determination of the purity of creosote oil is difficult. When there is not certain assurance that the oil is a pure product, the following tests will aid in arriving at an opinion as to its coal-tar origin:

A.—Fraction distilling between 210° and 235° C. is usually solid or contains some solids when cooled to 25° C.

B.—All of the fractions up to 315° C. contain tar acids in varying amounts, usually at least 1 per cent calculated on the amount of the fraction tested. (See Manual—Creosote, Analysis, Tar Acids.)

C.—The specific gravity of the fraction between 235° and 315° C. is usually not lower than 1.025 and specific gravity of the fraction between 315° and 355° C. is usually not lower than 1.085 at 38° C. compared with water at 15.5° C. However, some pure coal-tar distillates fall slightly below these limits.

If the oil does not comply with at least one of the foregoing tests it is undoubtedly not a pure coal-tar creosote.

<sup>2</sup>Samples of oil taken from working tanks may show an increase in matter insoluble in benzol due to treating operations. Such increases provided they do not exceed by 1 per cent the specification limits should not serve to cause rejection of the oil for non-conformity with specifications if it can be shown that the original fresh oil was of specified quality.

#### Depth of Creosote Penetration

Increment Borer

The increment borer shown here is used for extracting sections of wood from poles to determine how deeply the preservative has penetrated into the wood.

The use of this instrument is recommended as one means by which the buyer can gauge the quality of the product he receives. It does not damage the pole and the only precaution is that a creosoted wood plug be driven into the hole after the boring has been extracted.

For adequate protection it is essential that creosote penetrates wood deeply (see discussion on penetration later in this section).

Prices for increment borers, on request.

Characteristics of Quality Pine Poles

Status of Pine Poles

During a period covering the last several years, more treated pine poles have been used than all other treated poles put together. The utility that uses this commodity therefore is using the most generally accepted pole of the utility field. Important lines that must stand up under greatest stress and for the longest period of time are well built when built with quality-creosoted pine poles. Every sleet storm brings a further degree of proof of this fact. Bearing in mind the salvage value even of an abandoned line of creosoted pine poles, the costliness of individual pole failures, and creosoted pine's comparatively low annual cost, it seems difficult to think of any line not sufficiently important to justify their use.

Life of Creosoted Pine Poles

Whole lines of creosoted pine poles furnished by our supplier 25 and 30 years ago are still in use with practically no replacements, and are obviously good for many years to come. Many estimates have been made of the life to expect, and the Pennsylvania Electric Association, as the result of a study, estimated 35 years. This figure seems conservative with so many International creosoted pine lines now approaching that age and still in good condition. The

oldest lines still standing, and differences in climatic conditions, make it impossible to forecast definitely just what life to expect from the creosoted pine pole.

Section of the Chemistry Laboratory  
Scientific Control Is Essential

## International Creosoted Pine Poles Characteristics of Quality Pine Poles

Continued

### Value of Penetration

**Uniform Penetration  
Is a Criterion of Good  
Treatment**

**Deep Penetration  
Means Long Life  
For the Poles**

While several factors are important, and particularly the grade of preservative is important, no single factor has such bearing on the life and the quality of creosoted pine poles as the depth of creosote penetration and the uniformity of creosote penetration. Untreated wood of any kind commonly used for poles will decay eventually, and the only preventive is to have the penetration of the preservative deep and uniform and of proper grade. This is accomplished only when skilled technicians analyze the creosote and apply the treating process.

### Strength

The standard for ultimate fiber stresses for the commonly used pole woods has been developed by the Sectional Committee on Wood Poles under the sponsorship of the Telephone Group, American Standards Association. These ultimate fiber stresses quoted verbatim are tabulated below.

Northern White Cedar.....	3600 lbs. per sq. in.
Western Red Cedar.....	5600 lbs. per sq. in.
Chestnut.....	6000 lbs. per sq. in.
Southern Yellow Pine (Creosoted)....	7400 lbs. per sq. in.

### Fire Resistance

Fires that rage across the dry cane fields of Cuba crack insulators, melt steel, and burn untreated wood to ashes, but creosoted pine poles stand the flames. Such is the actual experience. Along almost every railroad right-of-way fire gangs burn the weeds each fall and it is a matter of common record that while untreated posts burn completely, creosoted pine poles are undamaged. Under these severe conditions the creosoted pine pole may take fire and smolder and smoke for a while, but finally the fire smothers itself out, leaving a practically undamaged pole. The action is analogous to a burning oil lamp wherein the wick though it forms the support for the flame is itself consumed very slowly.

The International Creosoted Pine Pole is a clean pole and is widely used in such service as is here shown.

### Appearance and Cleanliness

Early in the history of the development of creosoted pine poles some question was raised as to their use on city streets. It was feared that the bleeding of some of the poles might cause trouble if the clothing of pedestrians rubbed against them. No longer are these objections heard either in protest or propaganda. International's care in timber selection, the skill of its production and manufacturing forces, and advances in the science of timber treatment all have contributed to relegate these objections to the background, and to give to the business district and the residential street the security and economy of the creosoted pine pole. Graybar-International poles are in use in the business and residential districts of the largest cities of the United States, and in thousands of the smaller ones. The present-day pole is a clean pole. It is smooth and shapely and stands with the appearance of tapered wrought-iron pipe, rather than that of processed trees.

### Termites

Termites are attracting more and more attention because of their attacks on poles. Formerly termites lived in the forests, but as the forests become depleted they seek shelter elsewhere and find their way into untreated structural wood. Untreated pole lines have been accused of acting as termite highways by means of which they could fly from pole to pole and then to residence; infesting new areas. It is a fact that termites have now been found in all but three states of the United States.

Creosoted pine poles are practically immune to termite attack. Even though checks in the wood may form, they do not go deep enough to expose untreated interior wood that would afford shelter for these insects.

### Improved Roof

The illustration shows a new type of pole roof that many of the utility companies are standardizing upon. It is a one-way roof, cut at an angle of 15°. It is to be recommended.

The advantages of this roof are:

#### 1. Reduces Checking

A roof cut in this  manner leaves a minimum of wood along the center line, the natural cleavage point of the pole. This invites checking. The one-way roof eliminates this disadvantage.

#### 2. Provides Better Drainage

As the roof of a pole weathers, the springwood rings of any species being softer than the summerwood, weather faster, causing the summerwood to stand out in ridges. On the two-way roof these ridges form retaining cups for rain water while on the one-way roof they drain.

#### 3. Conserves the Preservative

Evaporation is a surface phenomenon. There is less surface on a one-way than on a two-way roof.

### Marked Poles

Below is the mark by which Graybar-International poles are identified wherever found. This appears as a date-brand on the side ten feet from the butt of the pole; and is supplemented by an identifying brand on the top and the butt of each pole. These marks are conclusive evidence of our confidence in the quality of the product and the desire to be permanently identified with it.

Beware of unmarked poles. If in a few years they begin to fail, the experience is that it is impossible to tie them definitely to the source of supply. On the other hand when a company consistently uses high grade materials and good preservative treatment which result in long-time dependable service, the company willingly and permanently attaches its name to the product.

## Union Metal Monotube Poles

Monotube Poles are used for the support of trolley strain wires, distribution and transmission lines, traffic signals or any combination of these. For any use wherever a general service pole is required.

Made of high grade open hearth steel, the structure of which is improved by the steel mill operation and still further by the Union Metal Cold-Rolling process. Will not corrode with a heavy loose scale. If oxidation should occur it will develop a fine, dense powder which tends to retard further corrosion.

Monotube Poles have no horizontal joints. Shafts are one continuous tapered tube, with one electric welded vertical seam. One piece construction insures uniform quality, longer life and better appearance.

Before Monotube Poles are painted they are thoroughly cleaned both inside and out to remove scale and other foreign matter. Cleaning the steel prior to painting allows the paint to bond with the steel, materially lengthening the life of the pole. As an added protection, they are painted inside and out.

Either of two methods of anchorage can be employed. The pole may be embedded directly in the ground or concrete or the Union Metal anchor rod construction can be used. Both types of anchorage have their places and with the engineering features of the installation in mind, the customer will choose the proper type.

Embedded poles can be furnished with or without the heavy steel ground sleeve. Where ground sleeves are required, location of sleeve with reference to pole butt must be specified. The ground sleeve is two feet in length and is made from open hearth steel. With this material embodied in the protective collar, maximum safety against corrosion is obtained.

Anchor rod construction follows the methods used in setting heavy machinery and steel frame work for large buildings or towers. No forms are required for the concrete foundation. Customary practice requires a hole of diameter and depth in accordance with the load to be carried.

For the purpose of ornamentation, four ornamental leaves are attached to the base to conceal the projecting foundation bolts and nuts. Removal of the screw holding the leaf in position gives immediate access to the foundation bolt.

Lighter and smaller types of Monotube Poles are manufactured as well as poles of different strengths and height up to and including 75 feet. Complete information on these poles may be obtained by giving strength and height pole required.

Semi-Ornamental Steel Base

With Ground Collar

## Sozol for Wood Preservation

### Brush Treatment

Brush treatment of poles consists in applying hot preservative to the ground line surface of a pole with a brush. This method is not in general use among pole dealers, but is used by operating companies for local treatment.

For effective brush treatment the highest boiling point

coal tar distillate obtainable is recommended. High boiling creosote oils penetrate more readily and are free from black and sticky tars that do not penetrate but concentrate on the outer wood cells. Graybar Electric Sozol has been developed for this work.

### Sozol

Sozol is for brush application for poles and all construction wood. It is a pure high boiling distillate of coal tar, that is, it is a product obtained in a distillation process through the elimination of volatile products of coal tar and this pure coal tar distillate is not adulterated by adding any other substances. It is not a byproduct, that is, the distillation process is primarily for the purpose of securing this particular oil—not for some other distillate of coal tar in which this oil or a modification of it would come off in the distilling process. All creosote wood preserving oils have two faults in a greater or less degree. Either they are so thin and volatile that when applied with a brush or by open tank method, they partially evaporate or leach out and their pre-

servative qualities are thus impaired; or they are adulterated with heavier coal tar oils and these heavier constituents clog up outer cells of the wood and prevent the penetration required for effective treatment.

Sozol is of high specific gravity and greater body and in consequence, is more stable than ordinary pure creosote oils sold for wood preserving. It is not as volatile as these oils; at the same time, it has absolutely no viscous properties which interfere with effective penetration as in the case of mixed oils. In short, it has permanency and so affords the greatest possible continued protection. It is more than a creosote oil, it is a special wood preservative of stability.

Sozol is supplied in drums, barrels and cans.

## Rainier Wood Pin Specifications

**MATERIAL.**—Pins shall be sound, reasonably straight grained, yellow or black locust (or Oak, as called for), free from knots, checks, sap wood, brash-wood, cracks, etc., except as hereinafter specified.

**SAP WOOD.**—Sap wood is permitted on the shoulder of the pin provided it does not extend into the tenon.

**CHECKS.**—Season checks not over 1/8 inch deep are permitted provided they do not appear elsewhere than in the shoulder and lower half of the tenon.

**KNOTS.**—Pins shall be free from loose or unsound knots. Sound knots not exceeding 1/4 inch in diameter are permitted on the shoulder and lower half of the tenon.

**GRAIN.**—The grain of the wood shall be reasonably parallel to the axis of the pin. Irregularities in grain which are wholly confined to the section within one inch of the bottom of the tenon shall be permitted.

**WORM HOLES.**—Worm holes and channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread or the placing of the nail in the pin, and provided that they shall not appear in over 10 per cent of pins in any shipment.

**DIMENSIONS.**—Pins are usually made from unseasoned wood due to difficulty of securing and manufacturing seasoned timber. Pins after seasoning shall be of the dimensions shown in drawing, or as ordered (with allowable variations as shown).

**FLAT SHOULDERS.**—One flat surface is permitted, provided the wood is not cut away to the depth of the shoulder at any point of the circumference; in the bottom one-fourth of the tenon irregularities in shape which do not involve the removal of more than one-quarter of the cross-section called for in the drawing are permitted; provided these defects do not occur in more than 10 per cent of the pins furnished.

**THREADS.**—All pins shall have four threads per inch. The thread shall be smooth and of uniform pitch and shall taper 1/16 inch in diameter to 1 inch in length.

## Rainier Bracket and Pole Step Specifications

**MATERIAL.**—Sound, reasonably straight grained, Oak, free from knots, checks, sap wood, etc., except as hereinafter specified.

**SAP WOOD.**—Permitted up to 25 per cent of volume of bracket.

**CHECKS.**—Season checks not over 1/8 inch deep are permitted provided they do not appear within two inches of the thread.

**KNOTS.**—Brackets shall be free from loose or unsound knots. Sound knots not exceeding 1/2 inch in diameter permitted below the shoulder but not in lower 3-inch section of bracket.

**GRAIN.**—Grain of the wood shall be reasonably parallel to the axis of the bracket.

**WORM HOLES.**—And channels not over 1/8 inch diameter are permitted provided they do not impair the holding power of the thread, or the nail holes; and provided that they shall not appear in over 10 per cent of the brackets furnished in any shipment.

**DIMENSIONS.**—After seasoning, dimensions with allowable variations shall be as shown; Wane allowed in body of bracket not exceeding 1/4 inch; irregularities in body of bracket not to exceed 10 per cent of volume.

**THREADS.**—All brackets shall have four threads per inch. The thread shall be smooth and of uniform pitch, and shall taper 1/16 inch in diameter to 1 inch in length.

**MANUFACTURE.**—All workmanship shall be of best commercial grade.

**STANDARD PACKAGE.**—Nos. 1, 3, 4 and 5, 25 per bundle. Nos. 2 and 6, 20 per bundle.

**CREOSOTE OIL DIP TREATMENT.**—It is the practice to furnish oak pins and brackets "dipped in red paint," without extra charge. This treatment is of little or no protective value, and we recommend instead a dipping in hot Creosote Oil, at a slight additional charge. Not only does this make a clean bracket, but gives a preservative value and a lasting effect.

L=Length Bracket	As ordered	1/4
D=Diameter Thread	63/64	1/64
C=Length Thread	2 1/2	1/4
W=Width	As ordered	1/8
S=Height at Shoulder	As ordered	1/8

## Rainier Wood Crossarms

The prime requisites in a crossarm are lightness, strength and durability. Some engineers stress one quality and some another, but Rainier Fir is the best answer for all sorts of uses and conditions. However, we are equally able to furnish long leaf yellow pine crossarms, and creosoted arms, in either fir or yellow pine.

Rainier fir crossarms do not require painting or the use of any preservative; are more than double the necessary strength with a large "factor of safety"; they live in actual service for many years.

### Treatment of Rainier Arms

In some localities it is occasionally found necessary to color crossarms so as to distinguish them from arms used for other purposes. If a color is necessary the arms should be dipped in the proper stain, which our mills are prepared to do.

We recommend, however, that a Rainier arm be dipped in a hot solution of pure distillate creosote oil, if that will answer the purpose of color. This treatment tends to prevent an arm from checking and to protect it from woodpeckers, and from the inroads of termites, etc. Unless color is demanded, this expense is usually not warranted.

Short-leaf yellow pine (and long-leaf sapwood) crossarms, should be creosoted (pressure treatment) before being put into service; this treatment prolongs the life of the arms for many years, but great care should be exercised that only pure distillate oil is used and the treatment given by a reliable creosoting company.

### Arms of Special Size and Manufacture

A good many public utilities require from time to time small lots of arms of special size and manufacture, that is, other than those hereinafter listed as standard. We will be glad at any time to stock any special arm for a customer under a special contract arrangement, and any of our representatives will be glad to go into this matter fully on request. We have also at Chicago, Minneapolis, Kansas City, Mo., Texarkana, Tex., Wilmington, N. C., New Orleans, La., Centralia, Wash., and Newark, N. J., large stocks of blank arms, which can be cut to length and bored according to your special requirements. This is merely another link in the chain of Graybar Electric service on crossarms.

All arms bored for one  $\frac{5}{8}$ -inch center bolt and  $\frac{3}{8}$ -inch brace bolts unless otherwise specified, except as shown in "Standard" table.

### Minimum Carload Weight

Fir from Pacific Coast Mills, 38,000 pounds. Small cars are scarce and weight of at least 50,000 pounds should be figured on. Cars to contain as high as 90,000 pounds can be had. Smaller cars are available in the Southern Yellow Pine Regions—minimum weight, 34,000 pounds.

All dimensions are subject to the usual manufacturing variations; crossarms long in stock show some shrinkage from original dimensions.

## Rainier Crossarm and Conduit Specifications

### Rainier Fir Crossarms

Material shall be sound, live, yellow Douglas fir; close-grained (at least eight rings per inch); straight grained (not out of parallel to edge of arm in central section more than five degrees).

Free from rot, dote, loose heart, loose or rotten knots, shakes and splits.

Warp up to  $\frac{1}{8}$ -inch off-set per lineal foot is allowed; also sound knots up to 1-inch diameter, but not at pin holes or in clusters. Pitch pockets up to 8 inches in length, season checks up to 1 inch in depth, and sap wood up to 25 per cent of volume of arm is also allowed.

Manufacture of best commercial practice. Kiln dried in sizes up to 4x5 inches finished; planed on all four sides; pin holes accurately centered, smooth, and not badly broken out by bits in boring; dimensions as shown, with commercial variations.

### Western Standard Grade Fir

This grade covers all crossarms up to 4x5 inches, inclusive, finished size either way.

The arms shall be: reasonably straight grained, well manufactured from sound, live seasoned lumber (green lumber prohibited) 75 per cent heart, by volume; free from rot, dote, loose-heart, loose or unsound knots, shakes, splits, boxed heart, warp in excess of  $\frac{1}{8}$ -inch off-set per foot, sound knots in clusters or larger than  $1\frac{1}{4}$  inches in diameter, pitch-pockets more than 8 inches long, season checks more than 1 inch deep and any other defect that seriously impairs strength.

### Standard Transmission Grade Fir

For arms larger than 4x5 inches, either way: reasonably straight grained and well manufactured from sound, live lumber, of medium rate of growth, boxed heart excluded.

Free from shakes and wormholes; and sap wood in excess of 30 per cent in volume of arm.

Sound knots admitted, not clustered, up to  $1\frac{1}{2}$  inches in diameter, and pitch pockets not over 8 inches long.

### Long Leaf Yellow Pine

Genuine Long-Leaf Yellow Pine, guaranteed every arm at least  $\frac{1}{2}$  heart in volume, and free from knots (except small, sound knots, not over one inch in diameter), or other defects that would impair the strength of the arm.

### Creosoted Crossarms and Conduit

Free from large, unsound or loose knots, or other defects which would impair strength; creosoted steam and vacuum treatment—dead oil of coal tar under pressure—either 12 lbs. per cu. ft. (full cell) or 8 lbs. per cu. ft. (empty cell) as ordered.

### How to Describe a Crossarm (In Placing Your Order)

NOTE.—C, S, E—center spacing of pin holes.

STATE—1—Quantity wanted.

2—Material and quality (or grade).

3—Treatment (if any).

4—Width, in inches (and fraction).

5—Height, in inches (and fraction).

6—Length, in feet and inches.

7—Number of pin holes.

8—Size of pin holes.

9—Spacing between pin holes (center-side-end).

10—Size center bolt hole.

11—Size brace bolt holes.

12—Space between brace bolt holes.

For example, the Standard N.E.L.A. 6-pin crossarm is described—“Rainier Fir, unpainted,  $3\frac{1}{2}$ "x $4\frac{1}{2}$ "x8", bored for six  $1\frac{1}{16}$ " pin holes, spaced 30" center,  $14\frac{1}{2}$ " sides, 4" end, one  $1\frac{1}{16}$ " center bolt hole, two  $\frac{3}{8}$ " brace bolt holes 38" apart.”

### Important

In ordering crossarms, be very careful to specify just what is wanted, and, if other than standard boring, send sketch or blue print with order. Arms specially made are of no use for general stock, and cannot be taken back if mistake is made in ordering.

Orders for special arms are not subject to cancellation.

**Rainier Spacer Blocks**

The Rainier Spacer Block insures a more rigid and stronger structure where double-arming is necessary.

Has a bearing surface of its entire cross-section as compared with the width of washer used in other methods.

Stops the use of make-shifts, and the insertion of part-life material in a full-life structure.

Only two bolts to tighten, not four.

In two sizes to accommodate large or small pole tops— $3\frac{1}{4} \times 4\frac{1}{4} \times 10$  inches and  $3\frac{1}{4} \times 4\frac{1}{4} \times 16$  inches.

**Rainier Kicker Arms**

Stops sawing up new crossarms. No gains to cut; no holes to bore in the pole. Just drive two lag screws to install.

Distance between front and back of bracket,  $3\frac{1}{4}$  inches.

Size,  $3\frac{1}{4} \times 4\frac{1}{4} \times 15$  inches.

Weight, 3.6 pounds each.

**Rainier Reversible Tree Moulding**

Rainier Reversible Tree Moulding is made from kiln dried fir and then impregnated in high pressure retorts with a moisture resisting preservative.

Comes in 2 to 10-foot lengths.

No.	DIMENSIONS, INCHES		No.	DIMENSIONS, INCHES	
	A	B		A	B
1	2	$\frac{1}{4}$	5	$2\frac{1}{16}$	$\frac{9}{16}$
2	$2\frac{1}{16}$	$\frac{5}{16}$	6	$2\frac{1}{2}$	$\frac{3}{4}$
3	$2\frac{1}{8}$	$\frac{3}{8}$	7	$2\frac{3}{4}$	1
4	$2\frac{1}{4}$	$\frac{1}{2}$	...	...	...

**Rainier Fir Moulding For Ground Wires**

Furnished unpainted, painted green, or dipped in hot creosote oil as ordered. Furnished without fittings.

In 8-foot lengths; 200 feet to a bundle.

No. 1, weight per 1000 feet, 120 pounds.

No. 2, weight per 1000 feet, 180 pounds.

No. 3, weight per 1000 feet, 310 pounds.

**Rainier Pass-Over Blocks**

Prevents electrical contact between wrapped guy strand and ground wire, and gives a full inch separation at all points. No metal strap is needed as it is nailed in place.

Dimensions,  $2\frac{1}{16} \times 3 \times 8$  inches. Packed 10 in a bundle.

Shipping weight per 100, 100 pounds.

Prices Upon Application

**Hubbard U-Cable Guards and Straps**

Hot Galvanized

When telephone or power cables enter the ground at the base of a pole or side of a building they should be protected by U-cable guards.

The U-cable guards are made from No. 14 gauge sheet steel and are formed into a U shape. This shape provides the additional strength necessary against collision and the rounded surface protects the pedestrian.

The straps are made from flat steel and are shaped to fit the U-cable guards.

**U-Cable Guards**

## Spaulding Universal Tree Wire Guards

Guard Ready to Wrap Around Wire

Guard Installed on Wire

These guards are made of 2 materials. For the inside of the tube a flexible bakelized fabric is provided, of high dielectric strength, affording perfect electrical protection. This is an inert material which will not oxidize nor deteriorate after long-time exposure.

Several turns of the flexible insulating material enclose the wire. Overlying this inner protection is a tough outside shell of glass-hard finish. This shell is built up of strong, tough fabric, bonded with phenolic varnish for density and resistance to abrasion. Will not abrade or wear through.

Economical in that it is not necessary to cover the wire from one pole to another in order to protect a section of it. Also has the constant gripping action which maintains the tightness of the convolutions and prevents any longitudinal displacement.

### For Insulation and Abrasion For 2600 Volts

Type	Per 100	Size Wire	DIMENSIONS, INCHES		
			Outside Shell	Flex. Sec.	Lgth.
A	\$70.00	No. 6 to No. 2 W. P. 3-Brd.	4½	6	38

		No. 8 to No. 00 Sol. Bare .13 to .42-Inch Diam.			

### For Abrasion Only

Provides approximately 2 wraps around the wire. Furnished in 1½, 2 and 10-foot lengths.

Type	LENGTH, FEET			Approx. I.D. Inches
	1½	2	10	
Tm	\$17.00	\$20.00	\$90.00	5/16
Tn	20.00	24.00	99.00	1/2
Tp	23.00	28.00	130.00	5/8
Tr	26.00	32.00	150.00	3/4
Ts	29.00	36.00	170.00	1

In ordering, specify type and length required.

Intermediate length guards will be charged at the price for the next higher standard lengths.

### Accessories

Double faced adhesive tape is furnished with each order of tree wire guards to secure guard to wire for easiest installation. A set of installation directions is wrapped with each guard.

### Fibre Installation Tool

A special tool of insulating fibre for installation of Spaulding Tree Wire Guards (Types A to K inclusive). The installation of these guards should not be attempted without the use of this tool.

With the use of this tool, these guards can be completely installed in 5 minutes or less, even in extremely cold weather.

Each..... \$ .60

For installing abrasion guards in 10-foot lengths, a special tool is made for opening the guard and applying it to the wire.

## Hubbard Guy Wire Protectors

Hot Galvanized

The protector illustrated is practically full-round and provides maximum visibility, safety and protection to the guy wire and the public. Complete drainage and ventilation give long life.

Simply and permanently installed with 2 bolts. Easy access to all guy fastenings at all times.

Nos. 7597-7598 protectors have many advantages over former styles 7557, 7558, 7559, included in the listing and which can still be furnished.

Cat. No.	Per 100	Lgth. Ft.	Ship. Wt. Lbs. per 100

7598	135.00	8	1100

No. 7598

## Rainier Jiffy Guy Wire Guards

Lineman Opens Guard and Slips It Over the Guy Strand. Fastening Wires Act as Hinges

Correct Method to Wrap Fastening Wires. The Twist Will Be at the Safety Groove

These guards assembled are hollow wooden cylinders, reinforced mechanically by the strand itself. The built-up construction adds to natural resilience of the wood. Held firm and compact by double wrapped, copperweld tie wires.

Made from clear, straight grained Douglas Fir.

Covered with aluminum paint which catches the eye and makes them highly visible at night.

Hollow wooden cylinder forms a chimney around the strand. At practically all times there is a natural draft of air which will dry both the strand and the inner wall of the guard.

These guards insulate the strand. There is no metallic contact even with the tie wires. This is of importance where line accidents cross the strand with conductor.

Guards can be included in carloads with crossarms; tie wires will not be affixed but will be sent parcel post.

Packed in standard bundles of 6.

7-Foot Length, Weight, 6½ Pounds.....each .....  
8-Foot Length, Weight, 7½ Pounds.....each .....

**Hubbard Copperweld Ground Rods**

Briefly, the advantages derived from the use of Copperweld Ground Rods are:

Smaller diameter, less earth displaced, easier to drive—a 4-pound hammer, with light blows, will drive the rod.

Long life, protection from rusting, welded copper.

Little time and field labor are required for installing Copperweld Rods and attaching the grounding wire.

These ground rods are listed as standard by the Underwriter's Laboratories.

\*I.D. pipe.

Standard package: †100; †50.

**Hubbard Ground Rod Moulds**

Hubbard Ground Rod Moulds are used for making cast solder connections on ground rods. Both solid and stranded grounding wires can be attached to the ground rod by this method.

The moulds are drawn from sheet brass and are tinned for easy soldering. The collar fits snugly to the ground rod and prevents solder leakage.

Cat. No.	Per 100	DIAMETER, INCHES		Std. Pkg.	Wt., Lbs. per 100

## Hubbard Guy Shims

Hot Galvanized

Keeps guy wire strand from cutting into pole.

Six or more are required per pole.

Cat. No.	Per 100	Dimensions Inches	Std. Pkg.	Wt., Lbs. per 100
7570	\$9.50	1 1/32 x 1 1/32 x 8	500	53

## No. 7575 Hubbard Strain Plates

Hot Galvanized

Serves the same purpose as the guy shim but gives better protection and is cheaper to install. From 2 to 4 are required per pole.

Cat. No.	Per 100	Dimen. In.	Std. Pkg.	Wt., Lbs. per 100
7575	\$17.10	4x8x14-Ga. 250	84	

## Hubbard Guy Hooks

Hot Galvanized

The No. 7584 guy hook is the N. E. L. A. and A. T. & T. Company's standard and is in general use, although the 2-bolt type is preferred by some construction men. For lighter work, the 3 1/2-inch hook gives satisfactory results. Made of half oval steel, bent with the flat side to the pole, except No. 7583 1/2 which is formed from flat steel.

Cat. No.	Size Steel Inches	Length Inches	Diameter Holes, In.	Std. Pkg.	Wt., Lbs. per 100	Price per 100
7583 1/2	1 1/4 x 1 1/4	3 1/4	9/16	450	40	\$8.27

7586	1 1/2 x 3/8	6	9/16	175	89	17.81

## Hubbard Pole Reinforcing Material

Hot Galvanized

Band

The Hubbard Reinforcement Band makes a strong and reliable method for attaching a stub when the butt of a pole is rotted. This arrangement saves the expense of installing a new pole and provides a reinforcement which adds years of life to the pole.

Bolts and lag screws to complete this construction should be ordered separately.

Pipe Cat. No.	Per 100	Description	Size	Std. Pkg.	Wt., Lbs. per 100
7850	\$44.70	Reinforcement Band	12-Ga. x 2" x 68 1/2"	10	410

7856	96.20	Reinforcement Band	10-Ga. x 2" x 120"	10	1010

## Hubbard Guy Clamps

Hot Galvanized

No. 7461

Nos. 7447, 7448, 7449 and 7450 for strands 3/16 to 3/8 inch; made of hot rolled steel sections 1 1/8 inches wide by 3/8 inch thick; 1/2 inch bolts.

No. 7450, W. U. Std.

Nos. 7461, 7462 and 7464, heavier types, for strands 5/16 to 3/8 inch, clamp section 1 1/2 inches wide by 3/8 inch thick, have 5/8 inch bolts. No. 7461 is A. T. & T. Co. standard.

No. 7460 for strands 3/8 to 5/8 inch; is a drop-forged steel section 2 1/8 inches wide by 1/2 inch thick; with 5/8 inch bolts. Clamp sections are so punched that all bolts are reversible in assembly.

Cat. No.	Per 100	No. Bolts	Type	Size Strand Inches	Std. Pkg.	Wt. Lbs. per 100

7483	45.00	7/16	70
7484	45.00	1/2	70
7485	55.00	5/8	100
7486	65.00	3/4	150
7487	75.00	7/8	245
7488	85.00	1	260

## Hubbard ServiSleeves

For Guy Strand

Hot Galvanized

For effectively and uniformly serving strand.

ServiSleeves overcome objections of cutting, clipping and crimping and prevent finger pinching. Easily and quickly installed, retain original shape and maintain rigid grip at all times. Just slips on and stays put. No special tools are needed.

Cat. No.	Per 100	Size Strand Inches	Length Inches	Std. Pkg.	Wt., Lbs. per 100
7451	\$4.50	3/16	1 1/4	100	2

	Diameter	Length			
7129	5/8	9 1/16	175	105	18.69

## Hubbard Detachable Pole Steps

Hot Galvanized

Lag Screw Type

Lag screw type is installed by slipping the plate over the lag and screwing lag in pole until plate bites into wood.

Step slides down in a groove on each side of head of lag. When step is removed nothing but the head of the lag extends from pole. Prevents mischievous ascents of pole and accidents.

Cat. No.	Per 100	Description	Ext. from Pole, In.	Std. Pkg.	Wt., Lbs. Per 100
7236	26.70	Step	5 1/8	400	50

## Hubbard Drop Forged Guyeye Nuts

Hot Galvanized

Used extensively on the threaded end of machine bolts passed vertically through the cross arm for attaching suspension type insulators. Also useful for dead ending lines. By their use an eye may be added to either end of a double arming bolt or a second eye to an eye bolt.

The guyeye nut is designed exclusively for use with guy strand and eliminates the guy thimble. It is well rounded with a generous radius, so that the strand will not be sharply kinked.

Cat. No.	Diam. Bolt Inches	INSIDE DIMENSIONS EYE, INCHES		Std. Pkg.	Wt., Lbs. per 100	Price per 100
		Width	Length

## Hubbard Drop-Forged Eye Nuts

Hot Galvanized

No. 7502

Drop-forged eye nuts were designed for use on the threaded ends of machine bolts passed vertically through cross arms for attaching suspension type insulators. They are also useful for dead ending lines. By their use a second eye may be added to the eye bolts, which permits the attachment of a back guy to the same bolt that supports the insulators to dead ended wire.

Cat. No.	Diam. Bolt Inches	EYE DIMENSIONS, IN.		Std. Pkg.	Wt., Lbs. per 100	Price per 100

7503	3/4	1 1/2	1 11/16	300	59	41.40

## Hubbard Drop Forged Bolt Eyes

Hot Galvanized

No. 7514

Used on either head or nut end of a machine bolt. Standard bolt eye may be used for attaching suspension insulators with clevis type cap to cross arm. Long type is for supporting suspension insulators with hook in cap of upper unit.

Cat. No.	Diam. Bolt In.	INSIDE DIMEN. EYE, IN.		Std. Pkg.	Wt., Lbs. per 100	Price per 100

\*Has standard eye. All others have long eye.

Nos. 7515 to 7518

## Hubbard Stubbing and Guying Washers

Hot Galvanized

Used effectively in stubbing old poles, both serving to draw together the wires wrapped around the pole and stub or at both ends of the stubbing bolt to draw together the pole and stub.

Cat. No.	Per 100	Washer Size Inches	Bolt Size Inches	Hole Size Inches	Wt. Lbs. per 100	Ship. per 100

7825	...	3 1/4 x 3 1/8 x 1/4	5/8	3/4	75	

## Peirce Presteel Pole Gains

Hot Galvanized

For attaching cross arms to poles without the need for gaining the pole. The design provides a saddle for the cross arm, a springy saddle for the pole and four points for holding the gain in a fixed position.

Its construction allows for easy installation and ready adjustment for alignment of the cross arm. It spaces the cross arm away from the pole so drainage and ventilation overcome decay.

Cat. No.	Size Arm Inches	Diam. Hole Inches	Size Steel Gauge	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
5091	3 1/4 x 4 1/4	1 3/16	9	25	268	\$48.30

5094	4 x 5	1 3/16	9	10	285	48.30

## Peirce Cross Arm Reinforcing Plates

Hot Galvanized

Designed to give greater effectiveness than the standard square washer and provide a means for preventing checking and splitting of the cross arm at the point of attachment to the pole.

Made from flat steel 3 7/8 inches wide. A 1 1/16-inch rib is pressed vertically on the plate to give greater strength.

Cat. No.	Size Arm Inches	Diam. Hole Inches	Size Steel Gauge	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
5042	3 1/4 x 4 1/4	1 3/16	7	100	117	\$19.60

## Hubbard Alley Arm Braces

Hot Galvanized

Where it is necessary for lines to be run adjacent to buildings or trees the Hubbard Alley Arm Brace furnishes an exceptionally rigid and economical construction. Angle is bent at each end to 45 degrees. Brace is pierced at each end with 5/16-inch holes in both legs of the angle, permitting installation as desired, underneath or on the side of the crossarm. Each brace is furnished with a sturdy step which is firmly riveted in place at the mid-point.

7996	1 3/4 x 1 3/4 x 3/16	6	5	1560	\$263.30
7998	Steel Angle	8	5	2000	337.50

## Rainier Crossarm Braces

Made Entirely of Wood  
Patent Pending

Provides all advantages of all-wood construction without reducing strength or life of pole structure or increasing its cost. Withstands greater stresses than balance of the pole structure; adequately survives shock and abuse.

Treated with 10 pounds of coal tar creosote per cubic foot of timber. Especially suitable near salt water or under corrosive atmospheric conditions.

The right and left-hand members are identical. The bolt holes fit and only three bolts are required to install a pair. They are interchangeable with double span steel braces.

This brace complies with crossarm freight classifications. Rainier Braces and Crossarms can be shipped in mixed carloads without sacrificing the carload freight rate.

No.	Each	Size Inches	Span Inches	Drop Inches	Wt., Lbs. per Pair

## Hubbard 2-Piece Wood Crossarm Braces

Made of hickory, 1 1/2 inch square, treated with creosote and fitted with hot galvanized steel fittings. Has high insulating properties. Mounted to crossarm with 1/2-inch bolts and to pole with 5/8-inch machine bolts.

Also supplied in dip-treated fir or creosoted yellow pine. Other types of standard single and hinged braces also available.

## Hubbard Pole Seats Hot Galvanized

The frames and braces of all styles are of 1½-inch channel steel. The wood seats are 1½-inch cypress, boiled in creosote. The bars of the all steel seats are ¾-inch square steel, let

into the frame in such manner as to leave no projecting ends. There is no strain on the riveted joints. The bars are placed with corners up to prevent slipping.

They are shipped completely assembled in bundles of five.

## Hubbard Cable Suspension Clamps Hot Galvanized

These are the standard A. T. & T. Company's Cable suspension clamps, the one-bolt type being used for light cables and on cable arms, and the three-bolt clamp for heavy cables and long spans. The one-bolt clamp is furnished without a bolt, as the 5/8-inch through bolt is used both for attaching the clamp to the pole and tightening the clamp on the stand. The three-bolt clamp is furnished with two 1/2-inch high carbon steel guy clamp bolts.

Cat. No.	Type	Length In.	Size Strand In.	Std. Pkg.	Wt., Lbs. per 100	Price per 100

## Hubbard Reinforcing and Safety Straps

### For Suspension Clamps

Hot Galvanized

No. 8905 is used to support the messenger bolt at points of extreme stress, such as long spans. No. 8906 is a Safety Strap to prevent the cable's falling if the hangers give way. No. 8907 is a combination of Nos. 8905 and 8906.

### Reinforcing Straps

Cat. No.	Size Steel Inches	Wt., Lbs. per 100	Price per 100
8905	1 1/2 x 1/8	36	\$27.20
8906	1 3/4 x 1/8	76	39.13
8907	1 3/4 x 1/8	116	66.33

## Hubbard Telephone Corner Brackets

Hot Galvanized

Used where the lead from the pole comes to the building at an angle.

Mounting and insulator holes on Nos. 9204 and 9205 are 1 1/2 inch. Mounting holes on Nos. 9206 and 9207 are 1 1/2 inch, insulator mounting holes, 1 3/32 inch.

Porcelain knobs and bolts listed below are used on these brackets but are not included in the price.

Cat. No.	Size Steel Inches	Length Legs Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100

## Hubbard Telephone Knob Screw Insulators

Hot Galvanized

No. 2920 knob and screw. The screw is 3/8-inch in diameter and threaded for 1 1/2 inches.

No. 2927 knob is used with No. 2920 screw. It is made of brown glazed dry process porcelain and is 1 1/2 inches high and 1 3/4 inches in diameter. Wire groove is 1/2-inch wide. Hole, 1/2-inch in diameter, is well rounded on outer edges to prevent cutting insulation of wire.

Cat. No.	Per 100	Standard Package	Wt., Lbs. per 100
2920	\$13.60	500	48
2927	8.40	100	29

## Peirce Telephone Wireholders

### All-Porcelain Type

Combines a wall bracket, insulator and screw all in one. Used as a corner bracket where the lead from the pole comes to the building at an angle and as a standard house bracket for carrying the pairs on a straight run along the building or for dead-ending.

The double groove on the top makes an ideal arrangement for tying in twisted telephone pairs.

No metal is exposed after installation. The wireholder is not affected by atmospheric conditions and will not make rust stains on the house.

Cat. No.	Equipped with	Wire Hole Inches	Std. Wt., Lbs. Pkg. per 100	Price per 100
1622	No. 20x2-In. Galv. Screw	$\frac{9}{16} \times \frac{3}{4}$	50 60	\$15.80
1632	No. 20x2-In. Brass Screw	$\frac{9}{16} \times \frac{3}{4}$	50 60	18.80

## No. 8918 Hubbard Span Clamps

Hot Galvanized

Used when service connections are made at points between poles. Equipped with No. 8901 suspension

clamp and bolt. Insulator spacing,  $5\frac{3}{4}$  inches.

Standard package, 125. Weight per 100. 138 pounds.

Price, No. 8918.....per 100 \$77.50

## No. 9214 Peirce Porcelain Knobs for Telephone Racks

Made of brown glazed dry process porcelain. The wire groove is divided by a fin which keeps the two wires of the twisted pair separated.

Cat. No.	DIMENSIONS, IN.			Bolt Hole	Ship. Wt., Lbs. per 100	Price per 100
	Height	Diameter	Wire Groove			
9214	$1\frac{1}{2}$	$1\frac{3}{4}$	$\frac{3}{4}$	$2\frac{5}{8}$	22.7	\$9.00

## Peirce Distributing Knob Racks

Hot Galvanized

### For Telephone Wires

These racks furnish a secure but inexpensive means for distributing twisted pair telephone wires from cable poles. Nos. 2900, 2901 and 2902 are made with  $1\frac{3}{4}$ -inch channel steel back. The holes take a  $\frac{1}{2}$ -inch lag screw.

Cat. No.	Length Inches	No. of Knobs	Wt., Lbs. per 100	Price per 100
2900	$10\frac{5}{8}$	4	328	\$83.40
2901	$13\frac{3}{4}$	6	440	110.40
2902	$16\frac{7}{8}$	8	805	137.50

The above prices are for racks complete with knobs.

## Hubbard Dead-Ending Shackles

Hot Galvanized

Used for dead-ending or breaking bare signal wires. Shackle clamps around cross arm, which gives it greater holding power than pin construction. A  $\frac{3}{8}$ -inch lag screw is used to prevent displacement by creeping.

A lead washer and sleeve prevent glass insulator from coming into contact with the steel cotter bolt, eliminating breakage of insulator due to expansion and contraction.

Size,  $\frac{3}{16} \times 1\frac{1}{16}$  inches. Shackle is for  $3\frac{1}{4} \times 4\frac{1}{4}$ -inch cross arm.

Cat. No.	Description	Std. Wt., Lbs. Pkg. per 100	Price per 100
9290	Shackle Complete less Insulator	75 241	\$67.10
9291	Glass Insulator	100 175	44.90
9292	Wet Process Porcelain Insulator	50 175	58.30

## Hubbard Drop Forged Turnbuckles

Hot Galvanized

Eye and Eye

Eye and Hook

All Hubbard Turnbuckles including bodies, hooks, eyes and clevises are drop forged steel, insuring reliability and strength.

The sizes listed below are carried in stock. However, special assemblies can be made.

## No. 561 Hubbard Insulated Forks

Hot Galvanized

Made of  $1\frac{1}{4} \times \frac{1}{2}$ -inch channel. Equipped with insulator No. 355. Oval hole  $1\frac{1}{16} \times \frac{3}{4}$ -inch in back permits through bolt to be assembled to clevis without removing insulator. Standard package, 50. Weight per 100, 182 pounds.

Price, No. 561.....per 100 \$42.10

## Hubbard Insulated Forks

Hot Galvanized

No. 8820

No. 641

By the addition of a standard  $\frac{5}{8}$ -inch through bolt, lag screw or carriage bolt, the insulated forks illustrated may be converted into fork bolts, which simplifies considerably the keeping of stocks.

Fork No. 8820 is made of  $1\frac{1}{2} \times \frac{1}{4}$ -inch flat steel, formed so that the head of the through bolt keeps it from turning. It is equipped with insulator No. 357, which is attached by a  $\frac{3}{8}$ -inch bolt.

No. 641 is made of  $1\frac{1}{4} \times \frac{1}{2}$ -inch channel steel and is provided with a square bolt hole, into which the square shoulders of a carriage bolt fits, preventing the fork from turning around on the bolt. Insulator No. 357 is also furnished with this fork.

Cat. No.	Type	Kind of Bolt	Std. Wt., Lbs. Pkg. per 100	Approx. Ship. Wt., Lbs. per 100	Price per 100

**Peirce Short Shank Forged Steel Pins with 1-Inch Spring Thread**

For Steel Cross Arms and Brackets

Hot Galvanized

For electric light, telephone and telegraph lines, on which insulators with 1-inch pin holes are used, this pin possesses all the advantages of the well known Western Union type of pin.

The method of fastening the spring thread to the pin allows for expansion and contraction of the insulator but does not lock the insulator to the pin.

## Hubbard-OB Crossarm Pins

Hot Galvanized

## Peirce Broad Base Forged Steel Pins

Hot Galvanized

Designed for supporting heavy primary and secondary lines on wood cross arms. Base is 2 1/2 inches wide and made in two styles, for flat top arms and for roofed arms.

Shank, 5/8 inch in diameter, is provided with 2 1/2-inch cut thread.

Spring Thread for 1-In. Pin Hole  
Std. Pkg. No. 1081, 75; No. 1080, 100.

Cat. No.	Base	Above Arm In.	Length Shank In.	Ship. Wt., Lbs. per 100	Price per 100
1080	Curved	4 1/2	5 1/2	178	63.00

Flat Base Curved Base

1090	Curved	4 1/2	5 1/2	205	63.00

Pins have bases designed to give 100 per cent contact area with the top of the arm, developing the full strength of the wood area involved, and extra strength in the shanks which pass through the cross-arm.

The body portion is made of high grade cold drawn steel. A conical section fits into a corresponding socket in the forged steel base, as illustrated by the cut-away view, the two parts acting as a unit under load. Obtainable with permanent bond lead threads and separable cut steel thimbles.

Complete tabulations covering pins for roofed and flat top arms and flat steel arms sent upon request.

## Peirce Lag Screw Type Forged Steel Transformer Pins

Hot Galvanized

The Peirce Screw Type Pins are in popular use as transformer pins for running leads from the line cross arm to the transformer arm, also for pole work such as running leads from the lighting circuit down the pole to the lighting fixtures.

Spring Thread

125	Above Shoulder 5 Over All 7	2	175	77	\$28.40

## Peirce Forged Steel Corner Pins

Hot Galvanized

A solid 1-piece forging with 8-inch base and cross arm clamping arrangement. Will withstand 4000 pounds side strain for corner and angle construction. Tapered shank and wings provide a wedge-lock of the pin to cross arm; broad flat cross arm plate assists in reinforcing cross arm. Made for 4x5-inch flat top cross arms. Standard package, 10

**Peirce Drop Forged Clamp Pins and Corner Plates**  
Hot Galvanized

This pin has all the advantages of the Presteel and channel-type clamp pins and in addition an assembly for angles and corners in the line. The reinforcing plate for corner construction holds the pin rigid against strains of 1200 pounds in any direction. On straight lines the pin is used without the plate and is prevented from shifting by two 1/4-inch lugs.

Made for flat and roofed top arms from 3/4x4 1/4 to 4x5 inches.

**Peirce Clamp Pins**

Hot Galvanized

Designed for angle and corner construction and will withstand strains of 2500 pounds without deflection. Each pin is forged from a single piece of new hot rolled open hearth steel and is so constructed that the greatest amount of metal is at the point where the strain is the hardest. Broad base rests evenly on arm, 4 lugs hold pin from turning on the cross arm.

**No. 5008 Peirce Malleable Crossarm Saddles**

Hot Galvanized

Solid malleable iron with 1/16-inch pin hole and 4/8-inch radius, adaptable to all sizes of crowned crossarms and provides 100 per cent surface contact.

Grooved for drainage. Holds pin shanks in firm alignment. Fills the void between flat base pins and crossarm crown. Gives pins 35 to 45 per cent more holding strength, proven by actual tests.

Standard package, 100. Weight per 100, 82 pounds.

No. 5008.....per 100 \$13.80

**Hubbard Spring Lock Washers**

## Peirce Forged Steel Pins for Wood Arms

The Peirce Pin is a solid forging from a single bar of special treated high carbon steel and has neither welds nor joints. Its strength is uniform in all directions. There are no flanges or webs which must be placed in line with the strain. There are no projections to concentrate electrostatic stresses. The full strength of the pin is carried up to the top of the insulator bore. There is no weakness at the base of the thimble as with malleable pins.

## Peirce Forged Steel Pins for Steel Arms

The separable thimble which is a part of the standard pin is drawn from sheet zinc, and the threads are rolled.

The lead thread pin is made the same as the standard, and in addition is notched and so prepared that when the lead thread is cast, it actually becomes a part of the pin.

The malleable thimble pin is also made similar to the standard pin except that the top is threaded with a standard 3/4-inch thread 1 5/8-inch long so that it may be used with any separable malleable thimble. Unless otherwise specified, pin is furnished complete with malleable iron thimbles for cementing into insulators with a 1 3/8-inch hole.

## No. 5018 Peirce Lead Thread Thimbles

### Malleable Thimble Type

This thimble is made by casting lead threads on the No. 5019 thimble adapter and is used with pins having a standard 3/4-inch center bolt or with Peirce No. 4100 series pin.

The lead thread is made to screw directly into an insulator having a 1 3/8-inch pin hole.

Cat. No.	For Insulator Pin Hole In.	Hole in Thimble In.	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
5018	1 3/8	3/4	200	130	\$32.50

## Peirce Lead Thread Separable Thimbles Drawn Thimble Type

While the cementing of thimbles into the insulators is recommended as being the most dependable method, there are cases, for instance, where wood pins are being replaced with forged steel pins, in which the cost and trouble of cementing the thimbles are too great.

For such conditions standard Peirce drawn zinc thimbles are furnished with lead threads cast on them, so that insulators can be screwed on the thimbles mounted on the pins instead of having the thimbles cemented into the insulators and then screwed on the pins. These thimbles may be used on No. 5600 series forged steel pins, high voltage clamp pins, and pole top pins.

Cat. No.	For Insulator Pin Hole, In.	Size of Thimble, In.	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
5020	1	27/32	500	24	\$20.90
5025	1 3/8	1 1/32	250	47	25.00

## No. 5019 Peirce Thimble Adapters

Hot Galvanized

Provides a method for using insulators, in which Peirce Drawn Thimbles are cemented, on old lines equipped with cast iron separable thimbles.

Cat. No.	DIMEN., IN.			Ship. Wt., Lbs. per 100	Price per 100
	Outside Thread	Inside Thread	Height		
5019	1 1/32	3/4	3	56	\$20.90

## Peirce Presteel Centering Washers

Hot Galvanized

Used on the lower end of Peirce Forged Steel Pins to center the pin when used on arms bored for wood pins.

Cat. No.	To Fit Hole Inches	Pin Hole Inches	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
5030	1 1/4	1 3/16	500	28	\$9.30

5032	1 1/2	1 3/16	500	31	9.30
5033	1 1/2	1 1/16	500	29	9.30

## Peirce Solid Steel Pole Top Pins

Hot Galvanized

### No. 3120

This type of pole top pin is made of a solid bar of special stiff steel. The two bolt holes at right angles permit the lining up of the wire groove of the insulator.

## Peirce Pipe Pole Top Pins

For  $\frac{1}{8}$ -inch Pin Hole

For the higher voltage lines the extra heavy pipe pins are in general use, because of their strength and light weight.

Mounting holes are  $\frac{1}{16}$ -inch.

## Hubbard Strain Insulator Clevises

Hewlett Suspension Type

Hot Galvanized

This clevis is made from  $\frac{1}{2}$ -inch round steel with drop-forged eyes that accommodate the  $\frac{3}{8}$ -inch curved clevis bolt.

Fits the 6, 7  $\frac{1}{2}$  and 10-inch Hewlett Insulators. Ultimate strength, 5000 pounds. Should be used only for light strains.

Cat. No.	DIMENSIONS, INCHES				Width Eye	Std. Pkg.	Weight Pounds per 100	Price per 100

## Hubbard High Tension Crossarm Hardware Fittings

High Tension Crossarm Hardware Fittings for double-plank H-frame and wishbone crossarm construction are obtainable to meet various specifications.

Inquiries and designs for estimates are invited.

**Hubbard Angle Steel Cross Arms**

Hot Galvanized

Steel arms of a given cross section are uniform in strength, and when protected by hot-dip galvanizing, their strength remains uniform throughout the life of the zinc coating, probably thirty years.

Unless otherwise specified, holes will be of the following sizes: for through bolts, 1/16 inch; for brace bolts, 3/16 inch for flat braces and 1/8 inch for angle braces; and for pins, 13/16 inch. Quotations on special arms will be given promptly.

**Hubbard-OB Wood Strain Insulators**

Metal Parts Hot Galvanized

Wood strain insulators with special yokes, straps, wedge plates, friction plates and arcing horns, provide permanently tight mechanical guys and electrically correct insulators for the structure. Qualifications of Hubbard-OB Wood Strain Insulators are:

The wood fibres are in compression, not in shear with the grain of the wood.

The self-tightening wedge grip automatically maintains the original ultimate strength of the assembly even though the wood shrinks.

The constantly tight connection between end casting and wood surface reduces electrical resistance at point of contact and prevents burning.

Arcing horns provide a discharge gap for passing of excess voltages without shattering the wood.

Pole band attachments are obtainable for mounting insulators close to the pole and save the use of two clamps and a length of strand.

**Peirce Strain Insulators**

Standard Type—Dry Process

The Peirce Standard Type Strain Insulators are made in accordance with the specifications of the National Electric Light Association.

They are produced from the highest grade of dry process porcelain and are designed so that all sharp corners and edges have been eliminated.

An exclusive feature of the Peirce Strain Insulator is the radius of the wire groove, which is so designed that it gives a maximum bearing surface on the clevis bolt and may be used equally as well with guy strand or insulated wire.

Peirce Dry Process Insulators are ordinarily used for dead-ending secondary circuits and for guying.

No. 502 is used with clevis No. 805, light type, No. 825, heavy type or No. 845, eye type. No. 504 is used with clevis No. 807, light type, No. 827, heavy type or No. 847, eye type. No. 506 is used with No. 811, light type, No. 831, heavy type or No. 851, eye type.

506	13/16	3 3/8	2 3/8	25	276	55.00

**Peirce Strain Insulators**

Multi-Fin Type—Wet Process

For dead-ending primary circuits and guying of high tension lines Peirce Multi-Fin Strain Insulators possess every feature required for dependable, continuous service.

They are made from thoroughly vitrified wet process porcelain and are designed with rugged fins and well rounded edges, which eliminate the possibility of chipping due to rough handling or abuse after installation.

The radius of the wire groove is so designed that it gives a maximum bearing surface on the clevis bolt and may be used equally as well with guy strand or insulated wire.

No. 512 is used with clevis No. 805, light type, No. 825, heavy type or No. 845, eye type. No. 514 is used with clevis No. 807, light type, No. 827, heavy type or No. 847, eye type. No. 516 is used with clevis No. 811, light type, No. 831, heavy type or No. 851 eye type.

## Hubbard Strain Insulator Clevises

Hot Galvanized

Light Type

No. 803

The light type clevis is drop-forged from 7/16-inch diameter open hearth steel. Has an ultimate strength of 8000 pounds and is equipped with a 3/8-inch bolt. An eye 1-inch inside diameter is required to accommodate this clevis.

Eye Type

No. 843

The eye type clevis is similar to the heavy type, except that it has a drop-forged eye in the croch of the clevis which is provided with an 1/16-inch hole. This hole permits the clevis to be attached to the head end of a through bolt, nut end of a through bolt, double arming bolt, eye bolt, or double arming eye bolt.

## Hubbard Strain Insulator Clevises

Drop-Forged Double Type

Hot Galvanized

With this type of clevis two strain insulators can be assembled in a series.

The light type is made from 7/16-inch round steel and equipped with 3/8-inch curved bolts.

The heavy type is drop-forged from 1/2-inch diameter open hearth steel. It is equipped with 1/2-inch bolt.

## Hubbard Strain Insulator Clevises

Copper Bale Single Type

Hot Galvanized

Has a bale made of soft metal (copper) to equalize the strains over the entire bearing surface of the insulator.

The drop-forged yoke may be used through the eye of a standard 3/4-inch eye bolt, No. 7502 eye nut or No. 7515 Bolt Eye. The head of the copper bale is 3/4-inch diameter. Ultimate strength, 8000 pounds.

Cat. No.	Inside Length Inches	Inside Width Inches	Std. Pkg.	Weight Pounds per 100	Price per 100
1535	5 3/8	2 3/4	150	97	\$80.80

**Hubbard Flexible Bail Strain Insulator Clevises**

This clevis develops the maximum strength of porcelain strain insulators by means of the form-fitting bail which eliminates concentrated stresses. Can be used with eyebolts, machine and double-arming bolts and also interlocked for series combination.

Clevis has galvanized drop-forged universal mounting yoke and 1/8-inch flexible strand bail with 1/2-inch diameter threaded steel studs. Bail is galvanized steel strand or copperweld strand and can be set at 2 1/4 and 3-inch spacing. Inside width of bail loops, 1 3/4 to 2 1/2 inches. Hexagon nuts are trapped in the yoke.

Length Inside Loop Inches	GALVANIZED BAIL		COPPERWELD BAIL		Std. Pkg.	Weight Pounds per 100

*5 1/2	1556	59.10	1566	81.60	75	155

\*Sizes vary according to insulator used and nut-setting.

**Peirce Thimble Clevises**

Hot Galvanized

Peirce Thimble Clevises dead-end lines 3/4 inch or under to suspension insulators. Both clevises are developed from the same size of drop-forging and have a minimum radius of 5/8 inch.

Cat. No.	Per 100	Diameter Bolt Inches	Ultimate Strength Pounds	Std. Pkg.	Wt. Lbs. per 100
654	\$22.20	1/2	15000	150	105
655	25.80	5/8	20000	150	111

**Klauber Universal Dead Ending Clevises**

Hot Galvanized

No. 555 Clevis

Eye Connection

This clevis is the only one made that will anchor a metal cap strain insulator with any one of the three types of connections—eye, clevis and hook—on the end of a bolt through the side of a cross arm or building. Where a variety of insulators are used, the universal clevis is a necessity. Forged from flat steel 3/16x1 1/2 in., and fits both 1/2 and 5/8-inch bolts. Weight, 87 pounds per hundred.

Price, No. 555 Clevises.....per 100 \$25.00

**Peirce Cross Arm Clevises**

Hot Galvanized

For dead ending wires on wood arms.

Cat. No.	Size Arm Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100
549	3 1/4 x 1 1/4	100	160	\$43.40

551	3 3/4 x 1 3/4	100	160	52.20
552	4 x 5	100	160	54.30

**Peirce Corner and Dead End Clevises**

Hot Galvanized

No. 1330, Open Type

No. 1344, Closed Type

Strong, durable and efficient fixtures for corner attachment and dead-end services on medium voltage lines. Also adaptable to series street lighting circuits. For pole and crossarm installation. The insulator is wet process, having a high flashover rating.

Open type is equipped with 5/8-inch insulator and fastening bolts; closed type has 5/8-inch insulator, bolt and 1/16-inch hole for fastening bolt.

Cat. No.	Per 100	Material Size Steel Inches	Clevis Wet Flashover Volts	Mechanical Strength Lbs.	Std. Pkg.	Wt. Lbs. per 100

1344	108.30	1/4 x 1 1/2	8000	4500	30	530

**Peirce Insulated Clevises With Wet and Dry Process Insulators**

Hot Galvanized

No. 1340

No. 1342

For primary and secondary lines. Nos. 1339 and 1340 have wet process insulators for use on primary circuits up to 4000 and 6000 volts, respectively. Nos. 1341 and 1342 have dry process insulators for use on secondary lines.

Clevis yokes for all clevises are No. 11 gauge by 1 1/2-inch steel, have 1/16-inch mounting holes; equipped with 5/8-inch cotter bolts and brass cotters.

Cat. No.	Per 100	Style of Insulator	Length to Center of Bolt, In.	Std. Pkg.	Wt. Lbs. per 100

**Peirce Secondary Racks**

Chicago Type

Hot Galvanized

Chicago type racks consist of presteel U-shaped points made of No. 12 gauge steel securely riveted to a 1/4x1 1/4-inch flat steel back. The insulators are attached to the rack with a 5/8-inch button head bolt. Pole mounting holes are 1 1/16x1-inch for use with either 5/8-inch through bolts or lag screws. No. 355 insulators are standard equipment. Nos. 356, 455, 456 and 465 insulators can be used.

Cat. No.	No. of Line Wires	DIMEN., IN. Wire Spacing	Over All Length	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100

544	5	4	20 1/2	5	1110	194.80

## Peirce Heavy Presteel Secondary Racks

Hot Galvanized

No. 278

Of sufficient weight and strength for general secondary work; however, for long spans and cable construction Standard Pierce Racks are recommended.

Made of a presteel channel back; presteel channel U-shaped points inserted through and riveted to the back, and a 5/8-inch through rod for attaching No. 355 insulators to points.

The Nos. 278, 374, 378 and 478 are furnished with straps so that they may be used on buildings for making heavy service connections. When used on poles, the straps should be hammered flat against the pole, increasing the bearing surface. The Nos. 1278, 1374, 1378 and 1478 may be used in connection with Peirce Rack Bands for attaching the racks to tubular steel poles.

Cat. No.	No. of Line Wires	DIMENSIONS, INCHES		Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
		Wire Spacing	Length Over All

1478	4	8, without Straps	32 1/2	10	1250	232.70

## Peirce Light Presteel Secondary Racks

Hot Galvanized

These racks were designed for light secondary work. They are especially adaptable, on account of their strength and low cost, for running extensions from secondary mains; for lines where future development is limited; and for house service connections.

The light presteel racks have a presteel channel back 1 1/2 x 3/16-inch; No. 12 gauge channel U-shaped points, which are inserted through and riveted to the back, and a 1/2-inch insulator bolt for attaching the No. 1606 insulators to the points.

When 4-inch spacing racks are specified, a shield for attaching over the upper edges of the points, is furnished to prevent injury to the insulation when stringing the wire.

## Peirce Light Presteel House Racks

Hot Galvanized

For use as house brackets. Sometimes used for carrying secondary wires vertically on the poles where the wire is lighter than No. 3 wire. Made with 3/4-inch channel back and presteel points. Mounting slots are 7/16 x 1/2-inch, both in the back and straps. Insulator through bolt is 3/8-inch diameter. Racks assembled with No. 1603 insulator.

## Peirce Secondary Racks

Hot Galvanized  
Standard Type

No. 358

Strong enough for the heaviest work, with an ample factor of safety. Equipped with No. 355 insulators, although Nos. 356, 455 and 456 insulators can be furnished if desired. The insulators are packed in corrugated paper boxes and the racks are wired in bundles of ten.

The width of the back of the rack is 2 3/4 inches with a slot 3/4 inch wide between the two angles, which allows the use of 5/8-inch through or lag bolts for fastening the rack to the pole.

Cat. No.	No. of Line Wires	DIMEN. IN. Wire Spacing	Length Over All	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100
258	2	8	13 1/2	10	588	140.80

540	5	4	21 1/2	5	1360	233.30
3058	3	8	13 1/2	5	760	161.70

Extended Back Type

Similar in all respects to the standard rack except that the angles forming the back are extended to accommodate through bolts for attaching the rack. Some construction men like this feature as the insulators can be assembled on the rack in the storeroom and attached to the pole without removing them.

Cat. No.	No. of Line Wires	DIMEN. IN. Wire Spacing	Length Over All	Std. Pkg.	Ship. Wt., Lbs. per 100	Price per 100

3158	3	8	17 3/16	5	1300	161.70

## Insulators for Peirce Secondary Racks

Standard Type

No. 355 brown glazed insulator is the most popular secondary rack insulator and is furnished on all heavy type racks unless otherwise specified. For marking the neutral wire of a secondary circuit, some construction men use the No. 355 white glazed insulator.

No. 355

Where high mechanical strength is required, such as for dead-ending heavy lines, the No. 455 is used by many companies.

Cat. No.	Color of Glaze	Kind of Porcelain	Ship Wt., Lbs. per 100	Price per 100
355	Brown or White	Dry Process	100	\$12.60
455	Brown	Wet Process	100	17.40

Double Groove Type

Has 2 grooves, one for tying in the main circuit and the other for the service wires.

No. 356

356	Brown	Dry Process	102	\$18.30
456	Brown	Wet Process	102	20.90

No. 1606 Light Rack Type

Insulators for the light racks are furnished with either brown or white glaze, both of which are made of dry process porcelain. The brown glazed insulator is also used on the No. 1341 clevis, on spreader racks, light racks, and on sister hook and tree fixtures.

No. 1606

1606	Brown	Dry Process	40	\$8.60
1606	White	Dry Process	40	8.60

No. 1603 House Rack Type

Used with house racks. Also used on the No. 2925 swinging knob fixture.

No. 1603

1603	Brown	Dry Process	45	\$7.40
------	-------	-------------	----	--------

**Peirce Electroweld Secondary Racks**

**No. 3848  
Extended  
Back**

**Hot Galvanized  
Heavy Service Type**

The heavy service type rack has uniform strength to resist all strains—dead-end, side pull and dead load.

No sharp edges, rivets, no pockets nor lapping joints to hold moisture.

Wide extended or non-extended backs for pole and building.

Equipped with No. 355 insulator.

The back bearing surface is 3 1/8 inches.

**No. 3838  
Non-Extended  
Back**

**Light Service Type**

Especially adapted for running extensions from secondary mains, for lines where future development is limited and for house service connections.

Made in extended back type only.

The mounting holes on these racks are exactly the same spacing as the heavy service type. This feature permits installing a light service and heavy service rack back to back on a pole using the same through bolt. Equipped with No. 1606 insulators. Back bearing surface, 2 3/4 inches.

**Hubbard Insulated Lamp Hanging Attachments**

**Hot Galvanized  
Suspension Insulator Type**

No. 1504 is a metal cap suspension insulator and has a safety hook for an arc lamp. The No. 1514 is similar to No. 1504, except that it has a metal cap tapped for 3/4-inch pipe thread for screwing to the mast arm stud and a pig tail hook for supporting the arc lamp. The No. 1524 is similar to the No. 1514 except that it has a 3/4-inch pipe thread stud instead of a pig tail hook for fastening the arc lamp.

Cat. No.	Overall Length Inches	Working Voltage	Std. Pkg.	Weight Pounds per 100	Price per 100
1504	6 3/4	6600	50	330	\$520.00
1514	7 5/8	6600	50	330	520.00
1524	5 1/16	6600	50	295	520.00

**Suspension Insulator Type with Insulated Spreader Arm**

No. 1534 is similar to the No. 1504, except that it has an extended pig tail hook for supporting the arc lamp and an insulated spreader arm for attaching the lamp leads.

Cat. No.	Wire Spacing Inches	Working Voltage	Std. Pkg.	Weight Pounds per 100	Price per 100
1534	12	6600	25	525	\$720.00

**Insulated Lamp Hanger Type**

The No. 1591 consists of a special 6600 volt pin type insulator, a cap for attaching to the mast arm and a stud for attaching the lamp. Both stud and cap are threaded with standard 3/4-inch pipe threads. No. 1592 is similar to No. 1591 except that the pig tail hook is cemented into insulator instead of stud.

1591	6 1/2	6600	50	324	\$300.00
1592	8 3/4	6600	50	336	300.00

**Peirce Spreader Brackets**

**Hot Galvanized**

Used where great strength is needed.

These brackets are pressed to shape from No. 9 gauge open hearth steel and are equipped with Peirce 1-inch spring threads which prevent insulator breakage.

Standard package, 10.

**No. 217**

Cat. No.	Wiring Spacing Inches	Wt., Lbs. per 100	Price per 100
217	13	300	\$105.00
317	6 1/2	350	147.60

**No. 317**

**Peirce Dead-Ending Straps For Secondary Racks**

**Hot Galvanized**

Used to temporarily dead-end a line. Provided with a 1/8-inch hole for 1/2-inch lag screw.

1000	Heavy	3/16	1/2 x 1 1/4	100	15.90

## Peirce Wireholders Standard Type Hot Galvanized

## Peirce Wireholders All-Porcelain Type

The standard type of wireholders have been designed on scientific principles, namely, metal parts in tension and porcelain in compression each developing its greatest strength. The No. 1602 insulator used on these wireholders is designed with well rounded edges almost entirely eliminating chipping or breakage and it is secured to the bracket by a complete band of metal.

This wireholder is not affected by temperature changes or by the difference in the coefficient of expansion of its various parts.

The No. 190 wireholder is in use for making house service connections and when in use the brass cotter pin interlocks the insulator with the metal portion of the wireholder eliminating falling wire hazard should the insulator become broken.

Peirce wireholders are also made in multi-point types. They are provided with ample mounting holes spaced away from the insulator eliminating the possibility of breaking the insulator when driving the screw.

The corner iron No. 501 is used for attaching multi-point wireholders to the corner of a building when occasion demands this type of construction.

The screw type All-Porcelain Wireholder combines a wall bracket, insulator and screw all in one. A jab and a few turns is all that is necessary to install it. This type of wireholder has been designed so that no metal is exposed after installation.

The insulator is small and fits the hand. The wire hole grooves are well rounded so that they will not injure the insulation of the line wire. The insulators have an ample factor of safety for all secondary voltages.

The special wood screw which is a part of this wireholder has a clean cut thread and a point which starts into the wood under very little pressure. The cement used in attaching the screws is non-porous; weather does not affect it.

No. 31 expansion shields are used for mounting the screw type wireholders into brick, stone or concrete buildings.

Nos. 1607, 1614, 1621 and 1625 are equipped with galvanized screw; Nos. 1617, 1624, 1631 and 1635 with brass screw; Nos. 1627, 1634, 1641 and 1645 with toggle bolt; Nos. 1637, 1644, 1651 and 1655 with carriage bolt.

## Peirce Wireholders All-Porcelain Multi-Point Type Hot Galvanized

Equipped with No. 1654 All Porcelain Insulators which have a 3/8-inch bolt and cork washer. Insulators can be installed after back has been mounted to building and can be easily removed or installed to make various spacing wireholders. Base is No. 12 gauge presteel channel 2 3/8 inches wide with 1/2-inch flanges. Mounting slots are 5/16 x 1 1/2-inch with 7/16-inch center punch. Cork washer prevents breakage of insulators when assembling.

## Peirce Dead-End Brackets For Railway Signal Circuits Hot Galvanized

Equipped with a 3/8 x 4 1/2-inch carriage bolt with sufficient thread to make it suitable for use on cross arms 3/4 x 1/4 to 4 x 5 inches.

An important feature of this type bracket is the method of attaching insulator, which places the porcelain in compression, developing its full strength. In the case of a broken insulator it holds the wire in its original position eliminating possibility of a false signal due to a short.

**Hubbard Pole Plates for Pipe Attachments**  
One-Piece Presteel and Malleable Types

No. 3901

No. 4752

For mounting pipe mast arms, but may be put to a variety of uses for attaching pipe fixtures to poles. Top mounting holes are 1 1/16 inch diameter, side holes are 3/8 inch diameter.

No. 3701 is used with 3/4-inch pipe and goose-neck brackets.

No. 3900 Series are one-piece presteel, used with 1 1/4-inch pipe and mast arms; furnished either plain or insulated for internal wiring and with pulleys for internal or external chain operation.

Nos. 4752 and 4755 certified malleable plates with special gripping arrangement for 1 1/4 and 2-inch pipe, respectively, are insulated for internal wiring when used with mast arms.

Pipe used with them must be swaged with an indentation deep enough and properly placed to assure free passage of clamp bolts to fasten pipe.

**Hubbard Lamp Lead Brackets**

Closed and Split Types

Hot Galvanized

No. 173

No. 164

No. 1660

Used for supporting vertical leads of duplex cable or twisted single wires between the cross-arm and the lighting fixture.

Split type facilitates installation, repair and replacement of lamp lead cables. All split type parts secured against accidental dropping. Metal brackets provide 5-inch extensions

and are furnished with base plates having 1/16-inch mounting holes or with lag screw threads and machine threads for use with Peirce Adjustable Pole Bands and as mast arm attachments. No. 1660, with pin cemented into insulator, has a 1-inch wire hole and provides 5 7/16-inch extension.

**Hubbard Street Hood Brackets**

Hot Galvanized

These brackets are made of 1 1/4-inch pipe and are obtainable in straight and bent styles for either internal or external wiring. Standard lamp attachment threads are 1 1/4-inch, but lamps tapped for 3/4-inch fittings can be attached by using Hubbard reducing bushing No. 3381, specified separately.

No. 3714

No. 3700 Series, with one-piece presteel pole plate, is mounted with one 5/8-inch machine bolt and two 1/2-inch lag screws.

No. 4934

Nos. 4924 and 4934 have a malleable pole plate, with two 1/2-inch lag screws.

Lamps are not included in prices.

## Hubbard Presteel Trolley Mast Arms Rod Type Hot Galvanized

A safe, simple trolley arm. Long swinging loops of wire are eliminated. Lamp is out of reach of children, and cannot fall to street. Lamp trimmer climbs pole, pulls lamp in by rod attached to lamp hanger and pushes it back to place by the same rod.

Has 1/2-inch round eye rod, channel steel back brace, channel spreader arm, and operating rod with a trolley which has 3/4-inch pipe-threaded connection for lamps.

Size of section, 1 1/16 x 2 5/16 inches. Standard package, 2.

## Hubbard Presteel Trolley Mast Arms Chain Type Hot Galvanized

The latest development for street lighting. Carriage is operated by a continuous chain which is completely protected. All movable parts are equipped with brass bushings, permitting free, easy movement. Idler and sprocket are non-rusting alloy. Chain mechanism cannot join.

The arm is safe and simple; long swinging loops of wire are eliminated. Lamp trimmer climbs pole, unlocks handle and by revolving it pulls lamp toward him. Handle locking device will not freeze nor hinder quick operation.

Size of section, 1 1/16 x 2 5/16 inches. Standard package, 2.

## Hubbard Truss Type Mast Arms Hot Galvanized

No. 3526 Series

Arms are made of 1 1/2 x 3/4 x 1/8-inch channel steel, trussed with 1 x 3/8-inch flat steel strips. Reliable, strong, sturdy reinforced structures supported by 1/2-inch rods. Braced against sway and uplift. Obtainable in four practical, efficient styles, in flexible and rigid studs and for chain operation. Chain ordered separately.

No. 3506 Series, with two standard No. 1520 sleet-proof pulleys and one spreader arm, operates with chain.

No. 3526 Series, with No. 1520 sleet-proof pole pulley, No. 1525 sleet-proof end pulley and one spreader, operates with chain.

No. 3546 Series, with flexible stud and two spreaders, provides a fixed semi-rigid installation.

No. 3566 Series, with rigid stud and two spreader arms provides a fixed rigid installation.

## No. 3790 Hubbard Street Hood Brackets

Double Bend Type  
Hot Galvanized

Standard 1 1/4-inch pipe is formed to a double curve supported by an attractive scroll. Attached to pole by certified malleable iron pole plate No. 4759, threaded to receive pipe. Mounting holes are for a 5/8-inch through bolt at top and 1/2-inch lag screws at sides. A porcelain insulator bushing is provided for internal wiring. The scroll support is attached to pole by means of a 1/2-inch lag screw and to pipe by positive clamping arrangement.

Extension, 48 inches. Vertical pole space, 34 inches.  
 No. 3790, Weight Each, 32 Pounds.....each \$11.65

**Hubbard Adjustable Pole Bands**  
Hot Galvanized

The Hubbard Cup, a feature of this new band, is pressed to a shape which provides maximum strength to resist strains applied from any direction. Shoulders are formed for absolute rigidity and provide a maximum gripping surface on the pole. Tightening of bolts to the utmost cannot deform the band. Standard 5/8-inch bolt heads fit inside the cup and cannot turn. Special 1/2-inch bolt No. 8390 fitted with an oversize head can be had for 1/2-inch fittings. Hole is 1/16-inch diameter. Band is 12-gauge by 2-inch pressed steel.

\*Carriage bolts must be ordered separately.

**Peirce Swinging Knob Fixtures**

Hot Galvanized

These fixtures are used for making house service connections. The sister hook arrangement permits the removal of the insulator, for driving the screw, without the use of tools.

The No. 2928 is equipped with a Peirce No. 1606 insulator. The No. 2929 with a Peirce No. 355 insulator.

Price, No. 2928, Wt. 141 Lbs. per 100.....per 100 \$40.10  
Price, No. 2929 Wt. 262 Lbs. per 100.....per 100 66.60

**Extra Double Galvanized Telephone and Telegraph Wire**

Extra Best Best (E. B. B.) is highest in electrical conductivity, having a range of electrical resistance of 4700 to 5000 mile ohms.

Best Best (B. B.). Slightly higher in resistance than E.B.B. but combines conductivity with tensile strength to make a popular grade, having a maximum electrical resistance of 5600 mile ohms.

Steel is designed for short-line service, where electrical conductivity can be sacrificed for tensile strength. Maximum resistance 6500 mile ohms.

All grades galvanized under the same improved process.

**Oshkosh Diggers**

The blades are made of special alloy steel. Welding is used for attaching the blades instead of riveting, making a durable joint. The fulcrum members are of heavily constructed, channel-shaped, steel forgings.

There are two pivot points for the blades, one on each side. This gives much stronger leverage and greater durability.

Made in two types, with split handles or with two solid handles. The handles are made of straight grained hard wood, 8 feet long.

Measurement marks are placed on the handles so that the workman can easily determine the exact depth of the hole. The diameter of the circle circumscribed by the digger blades is 6 inches.

No. 2051 Two Solid Handle Type, Wt., 14 1/2 Lbs. each 7.66  
No. 2050, Split Handle Type, Wt., 13 Lbs. each \$7.66

## Never-Creep Anchors

The Never-Creep Anchor consists of a 1-piece rod and 1-piece malleable iron plate that pulls against the solid undisturbed earth.

It possesses all the merits of the dead-man hut eliminates the necessity of digging a pit and cutting a channel.

To install, simply bore the hole, drive the rod and hang on the plate.

Cat. No.	Per 100	Size Plate In.	Wt. Lbs. per 100

## Wej-Lock Expanding Anchors

The Wej-Lock Balanced Anchor may be used as an expanding anchor, a cone anchor or as a dead man. When spread or partially spread, it is cone shaped, developing equalized strain which is responsible for its exceptional holding power. It is the only malleable iron expanding anchor with a nut retainer.

## Chance Screw Anchors

This socket type screw anchor is made of semi-steel. Improvements include a wide spiral correctly pitched for ease of installation, a wide helix and sharp blades.

May be installed with a standard screw anchor wrench with adapter attachment which will be sent on request.

To obtain anchor with thimbleye, drop A from catalog number.

**Everstick Expanding Anchors**

Ease of installation, ease of expansion, maximum power and long life are the result of years of experience and improvements in these anchors.

The exclusive Everstick guides hold the plates in perfect alignment during expansion of the anchor.

Anchors are made of certified malleable iron.

Expanded

**2-Way Anchors**

This anchor can be depended upon to give outstanding service in comparison to any anchor of like size and capacity.

For many uses in pole line construction.

**Hubbard Steelwing Swamp Anchors**

Hot Galvanized

These anchors have enormous holding power when embedded the proper depth in swampy soil.

Anchor unit consists of solid steelwing, short solid steel shaft threaded to take 1 1/4-inch pipe coupling and 1 1/4-inch pipe cap with forged eye to screw onto pipe extension shaft. Pipe is cut to meet anchor requirements but is not furnished as part of anchor.

Over all length, length of pipe used plus 10 inches. Size strand, 1/2 inch or under.

**3-Way Anchors**

An ideal guy anchor for all around use. Built to hold strains 100 per cent greater than rated holding power for ordinary soils.

A 6 and 10-inch anchor can be furnished proportionately designed for minimum and maximum strain requirements.

Expanded

**No. 7546 Hubbard Rock Guy Bolts**

Hot Galvanized

Used where solid rock extends to surface or in stone or concrete walls. Of 1" round steel, 18" long, with drop forged eye (1 1/2 x 2" inside). Std. pkg., 20. Ship. wt., 600 lbs. per 100.

Price, No. 7546 ..... per 100 \$95.00

(Similar to Hemingray-14 and 19)

Used for electric light wiring on local lighting circuits.

Recommended for 4400-volt distribution.

Weight, Each . . . . . oz. 17  
No. in Carton . . . . . 50  
Ship. Wt., Carton . . . . . lbs. 55  
Weight, per 1000 . . . . . lbs. 1100

**No. 5, Extra Deep Groove Double Petticoat**

(Similar to Hemingray-20)

Used on electric light and power circuits. Diameter groove, 3/4 inch; takes care of standard rubber-covered or weatherproof electric light and power wire. Has a capacity of 4400-volt distribution.

Weight, Each . . . . . oz. 16 1/2  
No. in Carton . . . . . 50  
Ship. Wt., Carton . . . . . lbs. 54  
Weight, per 1000 . . . . . lbs. 1080

**No. 9, Pony**

(Similar to Hemingray-9)

A telephone line insulator with rectangular side groove, preventing wire from slipping even though tie wires become loosened.

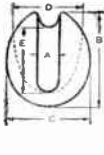

Weight, Each . . . . . oz. 9 3/8  
No. in Carton . . . . . 50  
Ship. Wt., Carton . . . . . lbs. 31  
Weight, per 1000 . . . . . lbs. 620

Prices upon Application

## Thomas Porcelain Guy Strain Insulators

Dry process porcelain; brown glaze.

Gross Wt. per 100.....lbs.	114	360	360	1085	470

## Thomas Porcelain Assembled Strain Insulators

Wet process porcelain; bronze glaze.

A high grade type of assembled strain insulator. Used for dead-ending.

The insulator units used in these assemblies are taken from the 510 Series. The connecting links are similar in design to those used in the Thomas Link-Type Hewlett Insulator, and are made of soft copper, a material which readily shapes itself to the exact contour of the cableway under tension. Terminal fittings are steel forgings, hot dip galvanized.

While this type of insulator is most commonly used in single unit assemblies (Type 1) there are occasions when higher potentials or severe service make multi-unit assemblies desirable. Type 2 (2 unit strings) and 3 unit assemblies (Type 3) can also be furnished.

Special assemblies using strain hooks, strain eyes or standard cable-thimble can be made up promptly.

Insulators are shipped completely assembled.

The mechanical strength of any assembly is 8000 pounds.

### Porcelain Units Used

Assembly No.	Insulator No.	Assembly No.	Insulator No.	Assembly No.	Insulator No.

## Kiley Truck Bodies

## Type GU General Utility Bodies

For Mounting on Any 1/2-Ton Commercial Chassis

A new design in light, duty line, meter installation, trouble shooter or general utility body. Made of special pressed steel construction, which insures strength and light weight, this unit has replaced, in some instances, 1 1/2-ton units with satisfactory operation.

The body complete weighs less than 500 pounds.

The unit consists of:

Two side cabinets, 9x28x60 inches, with full size metal doors opening to outside of body.

The right cabinet is regularly equipped with two adjustable partition trays and eight permanent compartments, while the rear section contains complete set of tool holders for all standard line tools.

Left side cabinet contains no standard equipment; may be arranged for electric meter trays, test meters, etc.

The center loading space, 28x60 inches, can be readily used in emergency work for carrying reels, transformers, or in general use for carrying electric refrigerators, etc.

The floor of this body is about 26 inches above ground.

Tailgate—all steel construction—slam type.

Tarpaulin—heavy waterproof cover with spring steel tarpaulin bows securely fastened in same.

Ladder irons conform to latest approved method for carrying ladders. The ladder rests on the lower rail and is steadied by bracket under top rail. A spring clamp is provided to hold ladder securely yet it is readily dismounted.

A special line construction body which is light and durable. The cabinets, compartments, and equipment have been modified for power company use. The bodies can be supplied of all metal construction if desired.

Standard body consists of:

Oak floor platform, protected by steel plates bolted securely to pressed steel bearers.

The lower section of ladder brackets provides space for sectional tree trimmers, lamp pickers, or ground rods. Write for details.

## Standard Line Construction Bodies

Rear-I-Beam so arranged that winch and derrick equipment could be added in future if necessity demanded it. Information regarding equipment necessary for use with winch and derrick furnished upon application.

Heavy rear fenders.

Rear steps.

Upper side boxes on right and left with full set of tool holders and material compartments. The material bins for small goods are made adjustable to meet variable requirements. Covers have continuous steel hinges with 1/4-inch steel pin.

Lower side boxes on right and left.

Thru cant hook box with doors on each side of body.

Weatherproof rubber goods cabinet with doors on each side of body.

Digging bar box.

Overhead structure complete with racks for ladder, pike poles, material chains, snatch block rail, straps, etc.

Top bows and bow carrier.

Formed 3-piece tarpaulin with stationary bellows type section between cab and body.

Tarpaulin carrier.

Standard body sizes, 8'6", 10 and 12 feet.

## Type LI Standard Installation Bodies

For maintenance and troubleman's service.

Body, size 60x46x28 inches, consists of:

Front compartment, size 46x25 1/2 x 28 inches, has large door opening on right side and one horizontal and one vertical partition.

Rear compartment, size 46x34 1/2 x 28 inches, has double rear door opening.

Right section rear has two stationary shelves and five sliding trays.

Left section rear has one horizontal and one vertical partition.

Rear doors contain racks for tools and insulator tubes.

This unit has an all steel under body.

A complete set of ladder irons, including ladder clamp and rack, is mounted on left side.

Can be mounted on any 1/2-ton commercial chassis.

It can be modified and equipped for almost any special service.

## Graybar Earth Boring Equipment International Earth Boring Machines Mounted on FWD Trucks

The truck used to haul the International Earth Boring Machine is a 3½-ton FWD. This truck is powered on all four wheels. Superior traction enables it to reach places which would otherwise be inaccessible.

Under favorable conditions, the boring machine will bore a 24-inch hole 7 feet in 2 minutes. Under average conditions holes can be bored and poles set in them at an average of 60 per 8-hour day. Machine is mounted on a turntable.

The Central Station Type Machine is equipped with one 24-inch and one 30-inch auger and a 9-foot tower. It bores holes 10 feet deep on absolutely level ground. Sets poles up to 65 feet in length. Total weight, 15,000 pounds.

Telephone Type Machine is equipped with 6-foot tower and will bore 7-foot holes on absolutely level ground. Sets poles up to 35 feet in length. Augers furnished are one 20-inch and one 24-inch. Total weight, 14,300 pounds.

## Graybar Equipped Line Construction Trucks

The Enclosed Gear Boring Machine is mounted on the FWD Line Construction Truck, which has a wide range of speeds, 7 forward and 2 in reverse. The boring machine is readily detachable from the truck body.

This machine will bore any pole hole and set the pole in any location where hand digging is possible and where it is at all practicable to place a truck. Power is delivered to the boring machine by a special transmission counter shaft which permits full engine torque and the use of any desired

speed of the truck transmission for every phase of boring machine operation.

The earth auger with its standard 13-foot rack will dig a 6-foot hole anywhere and on strictly level ground a 7-foot hole. One 20-inch and one 24-inch auger are supplied as standard equipment.

There are two models of Enclosed Gear Boring Machines: the Model C for the usual light work, and the Model HC, which is used for heavy work.

Ask for Bulletin Giving Complete Information

No. 1233 Graybar Single Drum Winches

10,000-Pound Capacity

This standard Graybar Single Drum Winch is an exceptionally flexible unit. It is equipped with a positive 3-jaw type clutch. When the clutch is disengaged, the winch drum rotates freely. For certain kinds of work this feature is very valuable.

A heavy manually operated brake is provided as an added safety. However, inasmuch as the winch is irreversible, the brake is seldom used.

This winch is furnished with a 23-inch drum which has a capacity of 1400 feet of 3/16-inch rope. The pulling capacity is 10,000 pounds.

The arrangement of the driving sprockets is provided to suit the user's needs. They are furnished on right or left hand sides, front or rear.

Nos. 1292 and 1355 Graybar Double Drum Winches

10,000-Pound Capacity

No. 1292 (Type WD-300) is similar to No. 1233 Winch but it is equipped with an independently operated smaller winch drum. The 23-inch drum, which has a rope capacity of 1400 feet of 3/16-inch cable, is equipped with a clutch and brake. This drum will rotate as a free spool by disengaging the clutch.

The small independent drum is 4 inches wide and has a capacity of 240 feet of 3/16-inch cable. This smaller drum has no clutch or brake. A 6-inch drum with capacity of 360 feet of 3/16-inch cable is furnished at a slight additional cost.

Drive sprockets are furnished on front or rear side of winch, as desired.

The No. 1355 Winch (Type WD-235) is identical in construction to No. 1292, except the smaller drum is 6 inches wide and has a rope capacity of 360 feet of 3/16-inch cable. Also the worm housing and drive sprocket of the 23-inch drum is located on the left hand side rather than on the right hand side of the winch. Drive sprockets are furnished on front or rear side of winch, as desired.

The shaft extending beyond the bearing supports on the right usually carries a nigger-head or collapsible wire reel. Additional nigger-heads are not usually furnished with double-drum winches, but can be so equipped if desired.

## No. 1227 Graybar Double Drum Winches 10,000-Pound Capacity

The No. 1227 Double Drum Winch (Type FD) offers the use of two independent winch drums. One drum can be used for raising the derrick and the other used for raising the pole. Neither brake nor clutch is used in this winch.

It is furnished with one 12-inch drum with a rope capacity of 720 feet of 1/16-inch cable, and one 6-inch drum with a capacity of 360 feet of cable. Other available drum combinations are one 12-inch and one 9-inch drum, and a combination of two 12-inch drums.

### Worm Wheel

This is the heavy phosphor bronze worm wheel and special alloy hardened steel worm used in all Graybar Winches. The heavy-duty roller bearings carry the radial load, and the steel and bronze plain bearings carry the end thrust.

## Graybar Utility Automobile Pole Derricks

Middle Type Derricks which are used for general derrick work, center over the middle of the rear of the trucks. Only two men are required to operate this type of derrick; one man operates the winch and the other guides the pole. The middle type derrick is raised and adjusted with the winch. When used as a stiff leg assembly an old pole may be removed from the ground without preliminary digging unless it is firmly embedded or has an abnormal flare. When not in use, the derrick may be disassembled and carried on the side of the truck body, where it is out of the way.

The Corner Type Derrick which works at the right rear corner of the truck body facilitates derrick work in alleys and other restricted places where it is not possible to use the middle type to good advantage. Operating characteristics are practically the same as the middle type.

A complete derrick assembly includes:

- |                                 |   |
|---------------------------------|---|
| Derrick Proper                  | 2 Connecting Pins, Key, Snap and Chain  |
| 1 Right Hand Side Leg           | 1 Rear Spindle and Sheave               |
| 1 Left-Hand Side Leg            | (Length to Suit Truck Body)             |

HC	....	22 1/2	55	570
2870	....	28	70	750
T	....	21	45	595

†Length of poles handled depends on the balance point of each pole.

‡Weight does not include the weight of boxing nor body parts such as tail bolt assembly, spindle and sheave.

### Adjustable Type

The standard types are provided with a foot piece for lower end of middle leg, which fixes the position of the derrick head and overhang at rear of truck.

Many times a bank on which a pole is placed or to be placed, or a hedge or deep gutter has prevented the truck being so placed as to be of service.

The Adjustable Type Derrick can be changed from one extreme position to the other without the telescoping center leg becoming disengaged. All positions are fixed by the use of pins.

 B=Same as Standard Derrick and Varies with Position of Truck

**T Type (Above)**  
 Has a Lift of 21 Feet  
 Handles Poles up to  
 45 Feet in Length  
 Weighs 595 Pounds

## No. 1354 Graybar Single Drum Winches 10,000-Pound Capacity

The No. 1354 (Type L-12) Graybar Winch is a modification of the regular standard single drum winch and is used for every purpose which requires pulling rope on a drum, operating cranes, pole setting derricks and for hoisting and hauling. This type winch is particularly popular for use on light model trucks where the use of a large winch-drum is not required and not much space is available for mounting.

No brake nor clutch is required on this winch, for the winch cannot run free; the winch is driven when pulling and also when lowering.

This winch embodies all of the best features of the more expensive Graybar Winches. It is flexible, light in weight, and built for hard service. To keep the weight to a minimum and assure a greater factor of safety, only high grade heat treated alloy steels and electric steel castings are used in its construction.

Intermittent Capacity, Single Line.....pounds	10,000
Continuous Capacity, Single Line.....pounds	5,000
Diameter of Drum.....inches	8
Diameter of Drum Flange.....inches	19
Approximate Space Required Back of Cab...inches	20
Weight, Winch Only.....pounds	430

### Niggerheads

Graybar Winches can be furnished with niggerheads on one or both sides. Simply by the use of a longer shaft and auxiliary supporting bearings, Graybar Winches can be equipped with niggerheads to meet practically every demand.

Standard niggerheads furnished are 8-inch; 12-inch niggerheads can also be furnished if desired.

Niggerheads are especially popular on the single drum models and are furnished at a slight additional cost. Ordinarily, when one niggerhead is wanted the standard winch is supplied with the niggerhead mounted on shaft extension, on right hand side. If desired, shafts long enough to place niggerheads beyond cab-line are furnished. In that case, out-board bearings are provided.

## Type P Graybar Propeller Shaft Power Take-Off

This power take-off is installed back of the truck transmission and the power to the wheels passes through it, making it a part of the truck drive.

By means of a single shifting gear and a progressive shift shaft, the engine power may be delivered direct to the rear wheels or to the winch, or both at the same time.

Placing the power take-off back of the truck transmission permits the use of all the truck transmission speeds for operating the winch.

A reverse is provided in the power take-off, which has a slightly higher speed than the forward or pulling position. This feature adds to the cost of the power take-off, but in the long run is a good investment.

When the reverse in the truck transmission is depended on to lower the load, the operator usually races the engine, as the standard truck reverse is slower than any forward speed. Most reputable truck manufacturers list this practice under the 'Don't' column, because of its destructive effects on the motor.

With the Graybar Propeller Shaft Power Take-Off, the operator selects the speed best adapted to the job, and then uses the power take-off reverse, which is always slightly faster.

If this reverse were omitted, the operator would have to go through the selective gate of the transmission shaft lever and on some trucks release a reverse lock. With the Graybar Propeller Shaft Power Take-Off, the shift from forward to reverse is with one lever straight forward or back.

This feature is appreciated on a cable removing job where it is necessary to take a new grip every four to six feet, requiring a reversal of the winch each time.

This unit comprises a high quality of material and workmanship.

The gears are of chrome nickel steel carefully heat treated, and all shafts and gears are mounted on antifric-tion bearings.

**Type CR Graybar Collapsible Power Reels**

The Type CR Collapsible Power Reel is designed to pick up loose wire in a neat coil. It is light in weight, but sturdy in construction, and is attached to the winch in a short time. The reel arms and the spiders supporting them are made of aluminum alloy castings which insure light weight as well as strength. The spindle to which the spider is attached is made of seamless steel tubing fitted with a bayonet socket lock for attaching to the winch shaft.

The CR Collapsible Power Reel is simple in operation. All Graybar Winches have a hole drilled through the extended end of the shaft into which a pin is driven, leaving one end protruding from the shaft over which the reel spindle is pushed in place and locked by a quarter turn of the reel. The lever on the outside of the reel is turned to the right expanding reel to working position. When the wire is ready for removal, the lever is turned to the left, contracting the reel arms and allowing the wire to be taken off in a neat compact roll.

**Graybar 3 to 7-Ton 2-Wheel Trailers**

These trailers are equipped with extension tongues, which enable them to handle poles of any length. The tongue is fitted with a pintle eye, which fits into the pintle hook at the rear of the truck. It telescopes within itself to accommodate either long or short poles, and can be adjusted to balance the trailer for easy hand moving when the trailer is empty.

All trailers of this series are equipped with two stationary bolsters on which are sliding up-rights. These up-rights, which facilitate the proper placing of large or small loads on the trailer, are positively locked into position by quick acting cams. At the rear of the trailer is the small hand winch which is used for tightening the cable which binds the load.

Models C-1 and C-3 have Timken taper roller bearings; Model 1369 has New Departure bearings.

**Graybar Cable Reel Trailers**

The Model D Cable Reel Trailer affords a means of quickly transporting reels of cable. It has the low center of gravity which is essential to safe transportation of heavy objects at high speed. When the trailer is uncoupled from the truck, the cable can be paid out from the reel without unloading from the trailer.

**Specifications**

Model	D	WD-1	WD-2

This unit has electric steel spoke wheels of integral hub type, Timken roller bearings, and special heat treated chrome vanadium steel springs. All castings are electric steel cast. Axle material is 40-45 carbon steel, especially heat treated. The main frame and cross member is a 4-inch, 9½-pound I-beam.

## Graybar Combination Cable Reel and Pole Trailers

This trailer, as the name indicates, is one which can be used for hauling poles at one time and by making a change-over, it can be used for hauling cable reels. Through this combination there are really two trailers purchased at 50 per cent less than would have to be paid for separate cable reel and pole trailers.

### Specifications

## Graybar Cable Splicer's Carts

This is an all steel, compact, movable workshop. While parked, the cart is kept in a rigid, horizontal position by a support which folds up beneath the body of the cart while traveling. The underslung spring construction eliminates slung and tipping at high speeds. Other features are the drop forged pintle hook, a 7-foot length of safety chain and convenient hand grips for use in moving the trailer about by hand.

Contents consist of:

1. Solder, paraffin dipper, test set, condenser, wooden cable dresser.
2. First aid kit.
3. Lashing wire and paster box.
4. Shave hook, furnace wrench, sleeve punches, drill holder, iron cable dresser 216-B tool, steel figures, chipping knife, furnace cleaner, pliers, test pick, test point.
5. Small materials.
6. Cotton sleeving, cotton tape, stearine, rubber bandages, hand test set, test cords, splicer's mirror and muslin.
7. Furnace shield.
8. Splicer's personal effects and specifications.
9. Cable saw.
10. Manhole shovel, solder ladle.
11. Kerosene can.
12. Kerosene furnace.
13. File, rasp, drills, soldering coppers, screw driver, wrench, hammers, paraffin thermometer.
14. All other tools and materials.
15. Tarpaulins and paraffin.

### Specifications

Capacity, 1000 pounds.  
 Length overall, 74 inches; height overall, 41 inches.  
 Size of axle, 1¼ inches square; clearance, 11¼ inches.  
 Springs, 7 leaves, 32x1½ inches.  
 Tires, 24x3 inches, solid. Tread, 34 inches.  
 Electric steel spoke wheels with Timken roller bearings.  
 Length of safety chain, 84 inches.  
 Size of tool box, 42¼ inches long, 22 inches high, and 27 inches wide. Lower compartment is 14½ inches long, 7 inches high, and 20 inches wide.  
 Weight, 480 pounds.

## Graybar Sure-Binders

A winch and ratchet arrangement with a 1-piece cast steel base which carries the pawl, lever and ratchet winch drum. The base fits over a pole and has two heavy spurs which cut into the pole when tension is put on, thus holding the binder firmly in place.

The binder is equipped with 18½ feet of 5/16-inch trulay plow steel wire rope breaking strength, 5,000 pounds.  
 Weight complete, 18½ pounds.

**Graybar Low-Bed Trailers**

The heavily constructed frame of the Low-Bed Trailer is made of angle and channel steel, electrically welded and riveted. The cross members are steel. The trailing eye can be adjusted from 17 to 34 inches from the ground, making the trailer usable with trucks, tractors, or pleasure cars.

Wheel spindle is 2 1/2 inches round heat treated. Lower axle is 3 inches square, hollow. Dayton steel hollow spoke wheels, with Timken taper roller bearings.

A 4-inch double channel tongue, with trailer eye of chrome nickel steel casting. Stake pockets are standard equipment.

**Optional Equipment**

Stake racks of hardwood construction, securely bolted, furnished in heights of 3 or 5 feet.

Stakes only, of select straight grain hardwood, furnished in heights of 3 or 5 feet (10 stakes required per set).

All steel hand winch; two speeds, 4 to 1 and 24 to 1. Capacity, 5-ton straight line pull. Drum capacity, 160 feet, 5/8-inch cable; 250 feet, 1/2-inch cable; 325 feet, 7/16-inch cable. Size, 16x17x13 inches. Positive internal brakes. Installed on front of trailer. Easily detached.

**Pintle Hooks**

The Model B Pintle Hook has positive locking arrangement, preventing the eye of the hook from opening when trailing. The hook is always kept in perpendicular position. Complete assembly weighs approximately 65 pounds.

The Model 1417 is used on trucks up to 3 1/2-ton capacity. Long braces are attached to frame side members. The latch is of the positive lock type.

**Salisbury Line Hose**

A convenient device for protecting linemen from accidental contact with energized lines. By completely surrounding the wire with a substantial wall of voltage resisting rubber more than ample insulation is provided.

Made of high grade, clean, fresh crude rubber, combined with the proper non-metallic materials which give high dielectric strength, toughness, durability and long age.

The self-locking lip prevents the hose from being accidentally detached. Short bends can be made without exposing the conductor it covers.

Its flexibility makes its use adaptable to various conditions of service. Readily follows the bends of taps, jumpers or leads.

Simple to place, slides on wire from either above or below. Can be removed easily. Being relatively small in diameter, light and complete, it is conveniently transported, raised and handled aloft.

Most companies have adopted the 1-inch diameter size as standard as it will cover practically all lines in distribution service. The 1/4 and 3/8-inch sizes are used by telephone and telegraph companies where lines run parallel to high tension power lines and are in danger of becoming energized to a high voltage by induction.

Furnished in 1/4, 3/8, 5/8, 1, 1 1/4 and 1 1/2-inch sizes, inside diameter; in standard lengths of 3, 4 1/2 and 6-foot pieces.

**Salisbury Line Hose Connectors**

For use where two or more pieces of line hose are employed on one wire. Prevents the hose from slipping apart and thereby eliminates the possibility of the conductor being exposed between the adjoining ends.

Shaped to snugly fit the outside contour of the hose. Walls are of extra thickness to provide the necessary grip. A series of ribs, designed to grip the hose are placed on the inside surface to give connector a tight hold.

Made in 2 sizes to fit over 5/8 or 1-inch line hose.

In ordering specify hose size.

**Salisbury Linemen's Glove Bags**

Used to protect linemen's rubber gloves when not in use. Made of heavy, tightly woven, waterproof 42-ounce white duck with non-raveling edges.

Special features: Snap back and D ring for attaching to belt; double head reinforcing rivets; sewed with linen thread, lock stitched; gusset sides and bottom, carrier flat when empty; flat lying cover; strong snap fastener; waterproof; ventilating eyelets in bottom gusset.

No. ....	35	25
Length..... inches	15	9
Width..... inches	8	8

## Salisbury Rubber Insulator Hoods

Used in conjunction with line hose to cover tie-wires and conductors as they pass the insulators. Completely covers this point of hazard in a close fitting and positive manner. Can be used on double arm as well as single arm construction. The extending arms of the hood over-lap the ends of the line hose.

Compounded to secure high insulating qualities over a long period of time. Vulcanized in steel molds while under great pressure, in heavy duty presses; retains its shape and flexibility. Thick walls of solid rubber give it ability to stand up under severe conditions of use.

Requires no attachments to hold it in place. Securely locks itself to the under side of the insulator and cannot open, turn, slide or become accidentally dislodged.

Solid rubber flanges extending inwardly from under sides of the body portion serve to grip the under side of the insulators. Exterior ribs are placed to reinforce the side walls and to increase the grip.

Inside dimensions arranged so hood properly fits all popular types of pin insulators in distribution service.

Length, 14 3/4 inches. Height, 6 1/4 inches.

Weight, 4 pounds. Packed one to a carton.

Telephone and telegraph companies use a special hood shaped to fit telephone style insulators. As it is used on single arm poles only both extending arms of hood are of the same diameter and will snugly grip the 1/4-inch size line hose. In ordering, specify Telephone Type.

## Salisbury Rubber Protective Blankets

Particularly useful in covering secondary racks, dead ends, cut-outs, pot heads, arresters, and similar equipment. Also useful in station and underground work.

Will fold, wrap or hang suspended in any position to provide an insulating barrier between electrical workers and hazards adjacent to their working position.

Bead molded on all four sides to prevent tearing.

### Duck Inserted—Black

Recommended for hardest service conditions. Has ample flexibility. Guaranteed on acceptance tests to resist 20000 volts for 3 minutes.

Plain		With Eyelets	
No.	Size, Inches	No.	Size, Inches
100	36x36x1/8	100-E	36x36x1/8
200	27x36x1/8	200-E	27x36x1/8

### All Rubber—Black

More pliable than the duck inserted type. Guaranteed on acceptance tests to resist 20000 volts for 3 minutes.

Plain		With Eyelets	
No.	Size, Inches	No.	Size, Inches
300	36x36x1/8	300-E	36x36x1/8
400	27x36x1/8	400-E	27x36x1/8

### Pure Gum Center—Maroon

For classes of work requiring extreme flexibility and lightness in weight. Desirable for close wrap around work. Guaranteed on acceptance tests to resist 30000 volts for 3 minutes.

Plain		With Eyelets	
No.	Size, Inches	No.	Size, Inches
500	36x36x1/8	500-E	36x36x1/8
600	27x36x1/8	600-E	27x36x1/8

## Salisbury Protective Rubber Sleeves

Formed and Vulcanized in Chromium Plated Molds  
Full Length

Used to protect the arms and shoulders from accidental contact with energized equipment. The lower ends fit under the gauntlets of rubber gloves.

Amplly reinforced around the eyelet hole and the openings are protected with a substantial bead.

Fastened across the shoulders by an adjustable rubber strap and rubber buttons. A fastener is furnished with each pair of sleeves.

Guaranteed on initial tests to resist 10000 volts for 3 minutes with water electrodes.

Outside arm length, 25 inches. Inside arm length, 17 1/2 inches. Wrist opening, 5 1/2 inches. Arm opening, 11 inches.

Packed one pair to a carton.

### Elbow Length

Fit fairly close around the forearm but permit free arm movement as they are very flexible. Molded in one seamless piece.

The combination of short sleeves with standard length gloves is economical for if either are damaged it is only necessary to replace the unserviceable glove or sleeve.

Guaranteed on acceptance tests to resist application of 10000 volts for 3 minutes between water electrodes.

Outside arm length, 16 1/4 inches. Inside arm length, 13 1/2 inches. Wrist opening, 4 1/4 inches. Arm opening, 6 3/4 inches.

Packed one pair to a carton.

## Salisbury Static-Resisting Line Coats

The special construction of this coat retards static tingling at the neck or wrists when the garment is used during wet weather on work that is adjacent to energized conductors.

Special features: Inside double back; special rubber fasteners; reinforced at belt; all seams sewed and cemented; insulating skirt collar; roomy raglan shoulders; insulating storm cuffs; storm fly front.

Guaranteed to be free from all defects in material or workmanship.

The all rubber collar is standard. Corduroy faced collar can be furnished if desired.

Furnished in sizes 36 to 46 inclusive. Length, 47 inches.

Packed one to a carton.

## Salisbury Electric All-Rubber Coats

For the class of service that does not require the additional features and protection offered by a static-resisting line coat.

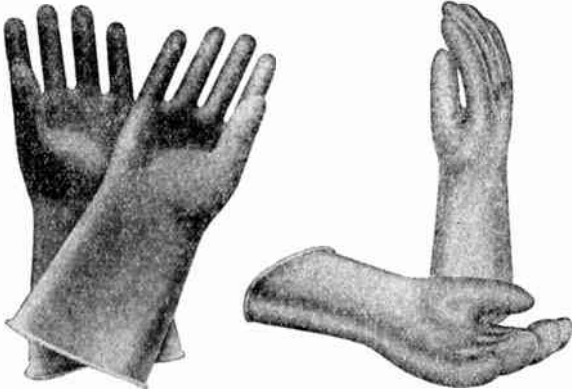

Made of strong durable material, coated on the outside surface with high grade rubber and a frictioned coating on the inside. No metal is used in its construction.

The inner cuff of the double-storm cuff is made of pure gum rubber. The collar is of standard lay-down type. Reinforced at hips to protect coat from tool belt abrasion. Has raglan shoulders, all rubber fasteners and storm fly front.

Furnished in sizes 36 to 46.

Length, 46 inches.

**Salisbury Steam Cured Linemen's Rubber Gloves**

No. 90  
Straight Finger Style

No. 100  
Curved Finger Style

With the realization that rubber gloves are the most important article in a lineman's equipment and that strength and durability are imperative for safety, Salisbury's Gloves are most conscientiously made.

Only the best materials are used and all operations from mixing to final inspection are carefully conducted. Investigation and experiment in laboratory, factory and field are constantly made to discover possible improvements in either material or manufacturing operations.

Qualities of high insulation, low leakage, strength, flexibility and long life are evenly balanced. Each of these essentials is raised to the highest possible value without lowering the standard of some other property.

To satisfy all demands, Salisbury's Gloves are furnished in either the No. 90 standard straight finger or the No. 100 curved finger styles. Both types are furnished in 10000, 15000 and 20000-volt ratings. There is also a choice of gloves that are vulcanized by either the steam or acid process.

All gloves are seamless, form fitting, accurate to size, with finger lengths and widths adjusted to best meet average conditions.

Salisbury Rubber Gloves are guaranteed to pass the most thorough inspection and to meet the A.S.T.M. and N.E.L.A. specifications.

Replacement will be made, or return accepted, of all gloves which fail under initial tests at their rated voltage or otherwise prove unsatisfactory at the time of delivery.

Class B—10000-volt, 14-inch gloves are standard.  
Class A—10000-volt, heavier weight gloves are available.  
Furnished in sizes 9, 9½, 10, 10½, 11 and 12.  
Packed one pair to a box.

**Salisbury Linemen's Protector Gloves Full Gauntlet 4-Inch Style**

Designed to wear over Linemen's Rubber Gloves to protect them from snagging, tearing or abrasive wear. Made expressly for this work and should not be confused with the ordinary work gloves.

Made of specially tanned grade A buffed horsehide, maroon color, and from selected weights.

Remains soft and pliable under all conditions and will not become slippery when wet. Resists

wire puncture to a great degree.

All outside seams are lock stitched. Finger seams sewed at back away from wearing surface. Extra wide reinforcement at thumb seam, making double leather thickness at this point of hardest wear. Finger tips are semi-moccasin style. Equipped with leather pull straps and self engaging buckle to tighten at wrist. Gauntlet does not flare; has a firm back and soft leather front.

Available with either closed or open backs, and also with long thumb crotches for straight finger rubber gloves or short thumb crotches for curved finger gloves.

**Salisbury Insulating Stools**

A low platform on which workmen can stand while performing hazardous tasks in sub-stations, power plants, underground vaults, etc. Has corrugated rubber top and double petticoat rubber insulators for legs. The stool is non-tipping and non-slipping. Dry test flashover, 82,000 volts. Wet test flashover, 19,000 volts.

Size, 18x12 inches, 8 inches high. Weight, 15 pounds.

**Salisbury Switchboard Rubber Matting**

A non-slip corrugated surface matting of high dielectric strength and long aging qualities.

Meets requirements of all standard specifications.

Guaranteed to resist 50000 volts for 3 minutes on acceptance tests.

Furnished in ¼-inch thickness; 24, 30 and 36-inch widths; lengths up to 75 feet. Other

widths and thicknesses can be furnished.

## No. 30 Salisbury Non-Metallic Tool Bags

The tool bag is an essential part of line crew equipment as it is an efficient method of raising tools, supplies and material to the pole top.

This bag is of sturdy construction, amply reinforced and designed throughout for heavy duty service.

Made of duck with a single side seam together with top and bottom fastenings strongly sewed. The heavy leather bottom extends 3 inches up the sides. The top is held open, in round form, by a stout non-metallic ring. A 3/8-inch rope handle is firmly spliced to the bag through leather reinforcements. Equipped with a utility pocket on the inside to accommodate small tools, bolts, washers, etc. Bag is collapsible.

Diameter, 12 inches. Height, 15 inches.

## Salisbury Non-Spillable P.B. Paint Pots

This is a rubber container for insulating compound, soldering flux and brushes.

The pot is made of semi-hard, durable rubber and has high insulating qualities. Compound or paste will not affect the container.

A flange extending inward at the junction of the neck prevents the contents from splashing or spilling during rough handling. Compound and paste receptacles are equipped with tapered corks through which rubber-set brushes are securely inserted. When the brushes are in use these stoppers serve as guards to prevent the paint from flowing back

to soil the gloves or hands of the operator.

## Salisbury Separators and Test Caps

Cable end test caps and separators are used as a protective covering for cable ends when cable is cut for tests or during temporary repairs. They serve a double purpose by eliminating the possibility of man touching the exposed ends and protecting the cable from moisture. In covering single conductor cable ends, test caps alone are used.

Guaranteed to resist 10000 volts under the wet method of testing.

## No. 329 Simplex Pole Pulling Jacks

Single acting; automatic in raising and lowering, will not trip. For pulling and straightening telephone, telegraph, electric light and trolley poles any depth in the ground without digging around them.

With 8-foot steel chain, 5-foot steel pinch bar and steel I-beam base.

No.	329
Capacity	15 tons
Height	37 1/2 inches
Lift	21 inches
Wt., Complete	193 lbs.
Price	each \$70.00

Illustrating the pivoting feature of the Simplex Pole Pulling and Pole Straightening Jack

## No. 325 Simplex Pole Jacks

A combination pushing and pulling jack. Light and sturdy. Furnished with pike pole, steel chains, detachable base and steel lever pole.

No.	325
Capacity	5 tons
Height	48 inches
Lift	36 inches
Weight, without Equipment	33 lbs.
Weight, with Equipment	100 lbs.
Price, with Equipment	each \$45.00
Price, without Equipment, with Lever Box	each 29.00

## No. 324 Simplex Aerial Cable Jack and Slack Puller

Designed for pulling both overhead and underground power and telephone cables. Also for taking up slack in guy wires. Made from the best grade of steels and all parts are heat-treated and hardened. Single acting and automatic operation.

No.	324
Capacity	4000 pounds
Travel	20 inches
Weight, Complete with Handle	14 pounds
Price	each \$25.00

## Simplex Screw Type Cable Reel Jacks

Jacks will handle any standard weight reel with the use of the 3-way nuts.

No. 1 jack handles reels from 42 to 60 inches in diameter; No. 2 handles reels from 60 to 90 inches in diameter.

Size of screw, 1 1/8 inches in diameter.

**Simplex Cable Reel Jacks**  
Automatic Lowering

No. 321

No. 322

Nos. 320 and 321 are recommended for warehouse service in handling cable, wire rope and belting reels. No. 320 is single acting for reels from 20 to 60 inches in diameter. No. 321 is single acting for reels from 20 to 96 inches in diameter.

No. 322 is generally used for heavy outdoor service. It is double acting for cable reels ranging from 36 to 84 inches in diameter. The T-shaped base provides a firm foundation. Furnished in pairs, one right and one left hand, for uniform operation on each side of the reel.

These jacks are furnished with steel lever bars.

**Simplex Portable Cable Reel Jacks**

No. 41

No. 81

Jack held on oak base by taper wedged brackets—can be quickly removed and packed in tool box. Made single acting, raising the load on the downward stroke only, and double acting, raising the load on both the downward and upward strokes.

Designed to lift small, but heavy cable reels from 24 inches to 48 inches diameter, and can readily be used for any work, where 1 to 2-ton loads are to be handled.

**No. 310 Simplex Emergency Single Acting Jacks**

A single acting, 15-ton jack of extraordinary utility and efficiency. Its pivoting base enables jack to be operated at full capacity, at any angle from horizontal to vertical, as well as vertically.

An all-around jack for use anywhere and everywhere heavy objects are to be pushed or lifted.

The steel detachable shoe and 5-foot special chain attachment permit grappling and engaging loads in awkward or difficult positions, and where the ordinary lifting jack could not operate at all. Heavy calks on base prevent slipping.

Provided with four lifting and pushing points—rotating cap, lower lift, steel adjustable shoe and steel chain, enabling jack to meet every emergency condition.

## Simplex Track and Ballast Jacks Single Acting—Tripping Type

No. 217

No. 217 is recommended for track work only. Operates on downward stroke of lever. Its manpower and strength have been approved by the Underwriter's Laboratories.

The rack bar and retaining pawl are of alloy steel, heat-treated; the lifting pawl is high carbon steel, heat-treated; the socket is a steel casting; the base is arched to prevent bending or slipping.

Piano wire coil spring and plunger back of retaining pawl forces it into holding position with a sharp click.

Nos. 216 and 218 are identical with No. 217 except for the heights of the standards and rack bars.

## Joyce Air-Motor-Driven Jack Hoists Ball-Bearing Geared Screw Type

For Locomotives, Coaches and Cars

With this hoist compressed air replaces man power for jacking. One man controls the speed of operation of a pair of hoists from a Y valve in the air line, or each hoist may be operated by means of its control lever. This lever opens and closes the throttle valve to the reversible Ingersoll-Rand motor which is a part of the hoist. The control lever governs the direction of operation (up or down) as well as the speed which ranges from 0 to 8 inches per minute for coach model. Changes in gearing make possible special hoists with  $\frac{1}{3}$  the capacity and 3 times the speed.

The hoist lowers by reversing the motor. It is not self-lowering. There is no chance of running down or dropping for any reason whatever, such as a broken air hose, etc.

There is an automatic shut-off at both upper and lower limits of the ram. The hoist is so powerful that a reduction of air pressure does not affect the operation any more than a slight slowing down of the motor.

The large wheels which are 10 inches in diameter, facilitate movement. Hoist is equipped for alemite lubrication.

A hand operated 12-inch adjustable ram feature is provided in Nos. 17713 and 17413. This eliminates blocking and permits full raise under load. No. 17718 has telescoping screws and rams which provide a high rise.

**No. 10 Oshkosh Pike Pole Guards**

For guarding the hazardous point on pike poles.

The guard works easily and fastens securely in either the guarded or open position. When in the unguarded position, the guard is completely out of the way, snugly fitted around the pole. When in the guarded position, it automatically locks in place and provides complete protection from the pike point.

This guard will fit either the 2-inch or 2 1/2-inch pike poles. It is light in weight, adding only 7 ounces to the pike pole.

Shipping weight, 7 ounces.

No. 10.....each \$1.34

**Oshkosh Plain Pike Poles**

Handles of old growth yellow Washington Fir, straight grained, and free from defects. Pike is of crucible steel with upset shoulder, which distributes the thrust on the entire top of the pole. The pike is driven in and fastened with a rivet running through ferrule, pike and pole.

**Standard Small Size**

Handle is 2 inches even diameter no taper.

## No. 920 Oshkosh Brush Hooks

For clearing right of ways for power lines or for clearing land of brush. It takes the place of an axe and scythe. It cuts small seedlings, bushes, and small trees easily.

Made of a crucible steel particularly suitable for this tool. The eye or socket is securely welded to blade. The back strap eliminates the necessity of wedging the handle in the eye and holds the handle to the blade tightly. The handle is a high quality axe handle.

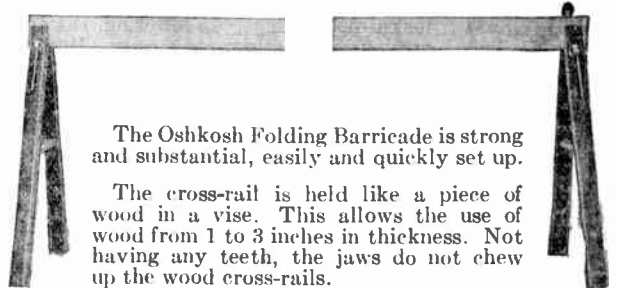

Weight, 4½ pounds.

No. 920 .....each .....

## Oshkosh Folding Barricades

Folded

The Oshkosh Folding Barricade is strong and substantial, easily and quickly set up.

The cross-rail is held like a piece of wood in a vise. This allows the use of wood from 1 to 3 inches in thickness. Not having any teeth, the jaws do not chew up the wood cross-rails.

It is easily and quickly taken down and folded into a small, compact bundle which stacks easily and safely.

The screw handle is made of pipe and forms a socket for holding a danger flag. The socket is 4 inches deep.

A lantern lock is welded to the screw handle of each barricade. The lock itself is a set screw which is screwed outward to release the lantern and screwed to lock the lantern.

Orange finish.

Size .....	inches	32	42

## No. 897 Oshkosh Folding Take-Up Reels

The reel part collapses and automatically throws off the coil at the same time and in an instant is ready for another coil. The frame, made of heavy hardwood, is strong and heavily reinforced throughout and folds up like a hinge.

It can be taken down in a moment merely pulling the pin out of the shaft, throwing off the coil and folding up the frame.

Take-up, 21 inches. Weight, 41 pounds.

Price, No. 897.....each \$42.30

## Oshkosh Barrow Reels

Made of hard rock maple strongly reinforced with angle iron braces. Rests on strong steel legs. Has a large diameter pivot and is made for heavy work.

Cat. No.	Description	Wt., Lbs. Each	Price Each
900	Barrow Reel Only .....	80	\$46.40
901	Extra Pins, per Set of 4 .....	4	5.60

## Oshkosh Pay-out Reels

Made of hard maple, well constructed and re-enforced throughout.

Cat. No.	Wt., Lbs. Each	Price Each
902	40	\$27.80

## Oshkosh Warning Signs

This warning sign is light in weight, yet durable. Legs are of ½-inch high carbon steel. Has 1¼-inch flange around edge of lettered side.

Has two hollow handles for adjusting angle of the legs. These handles also serve as flag sockets, and each is equipped with a lantern lock.

Black letters, 5½ inches high, on traffic yellow background.

Height, 43 inches.  
Width, 28 inches.  
Thickness, 1¼ inches.  
Size folded, 28x28x1¼ inches.  
Weight, 23 pounds.  
Warning Sign.....each \$6.00

## Oshkosh Metal Flags

This metal flag is light and strong. It is made of 16-gauge steel welded to a 5/8-inch hollow iron staff. The flag is painted bright red and the staff black. The little peg hole near the top is for conveniently hanging it up in the truck.

The Oshkosh Warning Sign and the Oshkosh Folding Barricade have handy sockets to accommodate this flag.

Staff, 20 inches high.

Size of flag, 12x10 inches.  
Metal Flag.....each \$6.7

**Oshkosh Safety Extension Ladders**

A light weight, safety extension ladder designed expressly for public utilities.

Equipped with an automatic safety lock or latch. This lock is so arranged that when pulling on the raising rope, the lock is lifted out of position. The instant the strain on the rope is slackened, the lock drops in place. In lowering, the extension must be lowered slowly. It cannot accidentally drop.

The side rails are made from straight grained, properly seasoned aeroplane spruce.

The rungs are made from tough mountain hickory, straight grained. Each rung has a shouldered tenon joint which is pressed tightly into the side rails, assuring a safe, tight fit. The side rails of each section are connected at top, middle, and bottom with steel tie-rods. This combination makes a rugged, durable construction. Either section can be used separately as an individual ladder, both being equipped with safety tips and pikes.

Other safety features include rubber faced tips, transparent safety finish, safety pole-grippers, and rubber guarded safety pikes. All metal parts are par-kerized.

Furnished in full range of lengths.

Weight, 2 pounds per foot, average.

Safety Extension Ladder... per ft. \$1.14

**No. 915 Oshkosh Tree Trimmers**

The Oshkosh Tree Trimmer is light and strong. The head is made of two pieces of light forged steel reinforced and riveted together. These sides act as a guide for the thin saw steel cutting blade.

The blade is pivoted and starts cutting with a slicing motion the moment the rope is pulled. It cuts limbs up to 1 1/2 inches in diameter.

The handle is made in three sections of 1 1/2-inch straight grained, clear Washington Fir. One 6-foot section is attached to head, and two 7-foot lengths equipped with positive couplings of rigid construction, yet easily dismantled.

Furnished complete with handle and short section of rope.  
 No. 915, Trimmer Complete, wt., 13 pounds... each \$10.68  
 No. 915B, Blade, wt., 10 ounces... each 2.67  
 No. 915S, Spring, wt., 2 ounces... each .47  
 No. 915EM, Middle Extension, wt., 4 pounds... each 2.96  
 No. 915EE, End Extension, wt., 4 pounds... each 1.92  
 No. 915R, 20 Feet of Rope, wt., 1/4 pound... each 1.54

**No. 916 Oshkosh Tree Saws**

The saw blade is a strong, thin, fine tooth blade. It cuts fast and clean and leaves a good smooth cut.

The steel frame has a hook for hanging saw in tree or pulling cut branches out that have caught. The 6-foot handle has a ferrule on bottom to which can be connected the regular extensions of the Oshkosh Tree Trimmer.

No. 916, Tree Saw, weight, 5 pounds... each \$8.38  
 No. 916B, Saw Blade, weight, 1/4 pound... each .67  
 No. 916T, Saw Tightener, weight, 1/4 pound... each 1.54

**No. 3600 Klein's Favorite Tree Trimmer**

Will sever a one inch branch.

Knife is held open by a flat steel spring and is operated by a rope attached to the end of the lever.

Head is one piece and comprises the hook portion with which the knife engages and the socket into which the handle is inserted. This socket is straight, eliminating the necessity of tapering the end of the handle.

Knife forged from tool steel and is integral with lever.

No.	Each	Size Over All, In.	Wt.
3600-20	\$8.50	17, without saw	3 1/2
3600-21	11.00	23, with saw	4

**Tree Trimmer Handles**

Length, 18 feet, brass ferrules.

No. 3601-6, Wt., 10 1/2 Lbs., 3 Sections	each \$9.00
No. 3601-9, Wt., 9 3/4 Lbs., 2 Sections	each 7.50

**No. 3628 Klein Tree Trimmers**

The entire head of this tool, comprising hook and socket into which handle fits, is sturdily constructed of pressed steel. The knife, made of tempered tool steel, is round in shape and arranged to rotate slightly with each cut, thus providing the entire circumference of the blade for cutting and giving an edge more than 3 times the length of that on the ordinary blade.

The leverage makes this trimmer cut the heavier branches quite easily. Knife may be readily removed for sharpening or renewal. Two threaded holes are provided for attaching saw.

Size over all, 12 1/2 inches. Weight, 3 1/2 pounds.  
 Price, No. 3628, Trimmer... each \$8.50

**No. 913-15 Klein Tree Trimmer Saws**

No. 913-15

No. 913-12

913-15	Curved Blade	1/2	\$2.50
913-12	Straight Blade	3/8	2.50

## B & L Star Brand Public Utility Star Metal Blocks for Manila Rope

Malleable Iron Shells—Loose Side Hooks and Becketts

Hooks are drop-forged of special steel and of extra large size and strength. The shell is certified malleable iron—carefully rounded and without sharp projection and constructed to prevent rope jamming between the shell and sheaves.

Double blocks of all sizes have full center straps, and all straps extend through the entire length of the block so all becket strain is borne by the straps not the shell.

Pin ends are entirely covered by recess in sides of the shell, allowing the block to be used on the ground or to pass any protruding object, when raising or lowering without interference.

Sheaves are of standard tackle block dimensions, and can be supplied japanned or galvanized, with any style bushing.

Blocks can be supplied promptly in all sizes. Supplied with any connection, including safety link.

Sheaves in 8-inch blocks and smaller are same sizes as in regular mortise wood blocks. Sheaves in 9-inch blocks and larger are same sizes as in wide mortise wood blocks.

## B & L Star Brand Public Utility Snatch Blocks

Wrought Iron Shell—For Manila Rope, Boston Pattern

No. 2356

Has malleable iron shell, extra heavy drop-forged flattened stiff swivel hooks, wrought iron straps, safety-locking link and smooth rounded edges to prevent chafing rope.

Blocks furnished with sheaves for wire rope if desired.

**B & L Star Brand Stringing Snatch Blocks**  
**With Drop Link or Boston Self-Locking Links**  
**Aluminum Conductor**

Made almost entirely of aluminum. Used in stringing aluminum conductors, as a harder metal might result in abrasion of the expensive conductor.

PU-32

The main strain is taken through the drop-forged swivel hook attached to the drop-forged steel strap with the self-locking latch, but these parts are far enough from the conductors so they never come in contact.

Made in several sizes and fitted with special Lynite 6-roller bearing sheaves.

- 7-Inch Sheave Blocks for Nos. 2/0 to 300,000 C.M. Aluminum Cable, Weight 13 1/2 Lbs... each **\$8.50**
- 10-Inch Sheave Blocks for 336,400 to 500,000 C.M. Aluminum Cable, Wt. 18 Lbs... each **12.50**
- 14-Inch Sheave Blocks for 500,000 C.M. Aluminum Cable, and larger. Wt. 37 Lbs... each **21.25**

Other sizes made to specification; prices upon application.

**B & L Star Brand Public Utility Snatch Blocks**

**Eastern Pattern—Malleable Shells**  
**For Manila Rope**

No. 2357  
Closed

No. 2358  
Open

Has malleable iron shell, extra heavy drop-forged flattened stiff swivel hooks, wrought iron straps, safety-locking link and smooth rounded edges to prevent chafing rope.

Blocks furnished with sheaves for wire rope if desired.

**B & L Star Brand Stringing Snatch Blocks**  
**Wood Shell**

PU-38

Equipped with specially designed 6-roller bearing sheaves to insure freedom of action, as any failure would create a dangerous abrasion of the conductors.

This method may be carried out with standard commercial snatch blocks, but one block jamming would cause damage to the conductor, even though the remaining blocks were functioning properly.

These blocks are made with special wide throats when so desired, so as to accommodate any large splicing that may run over the sheave.

- 7-Inch Sheave Blocks for Nos. 2/0 to 300,000 C.M. Aluminum Cable.
- 7-Inch Sheave Blocks for 1 to 188,700 Copper Cable
- 10-Inch Sheave Blocks for 336,400 to 500,000 C.M. Aluminum Cable.
- 10-Inch Sheave Blocks for 4/0 to 314,500 Copper Cable.

Other sizes to specification; prices on application.

**B & L Star Brand Public Utility Snatch Blocks for Wire Rope**

**Drop Forged Flatted Stiff**

**Swivel Hooks, Heads and Links**

This block is designed especially for truck winch work. Built rugged to stand hard service and heavy loads, and light enough to be easily handled by the screw.

It is all galvanized.

Larger and smaller sizes of this block can be furnished if desired.

**Improved B & L Star Chain Hoists**

The principle of the B & L Hoist operation is extremely simple and the points of contact of the scroll on hand wheel and load gear teeth are machined to an accurate fit.

Improved construction methods eliminate the possibility of spreading the load gear teeth being engaged at exact depth by scroll, even after long wear, and with overload.

It is fully equipped with radial and thrust ball bearings. It has only 2 moving parts. It holds its load securely at any point without a brake. All parts are interchangeable, being built and assembled by precision methods. It is light, safe and portable. It is compact with low head room. The drop-forged steel hooks are proof-tested. It is automatically lubricated and operates with perfect smoothness. Chains are the finest obtainable and fit the wheels correctly.

Hoist is tested to twice its rated capacity before shipment. In efficiency of operation the B & L Improved Star Chain Hoist compares favorably with the most expensive geared hoists.

Capacity Hoist Pounds	Power Required to Lift Full Load Pounds	Regular Lift Feet	Weight Pounds Hoist Complete	Price Each
500	30	8	38	<b>\$45.00</b>

12000	200	12	341	<b>230.00</b>

The 6000-pound capacity and larger sizes have foot blocks.

### B & L Star Brand Aerial Cable Guide and Straightener

PU-29

For straightening lead covered cable while pulling into rings.  
Standard size is for 2 $\frac{5}{8}$ -inch diameter cable; other sizes made up for larger diameter cable. Weight, 24 pounds.

Each ..... \$21.40

### B & L Star Brand Aerial Cable Guides With Wood Rollers

No. PU-39

For pulling lead covered cable into supporting rings.  
Each, Weight 32 Pounds..... \$24.00

### B & L Star Brand Aerial Cable Cars

PU-36

Weight, 21 $\frac{1}{4}$  pounds..... Each \$15.00

### B & L Star Brand Aerial Hand Lines

PU-37

Consists of one 3-inch single roller bushed galvanized hollow steel block, 2 snap hooks, ring and rope.

- Blocks Only without Rope..... each \$3.20
- Complete with 60 Feet of  $\frac{3}{8}$ -Inch Manila Rope..... each 5.00
- Complete with 75 Feet of  $\frac{3}{8}$ -Inch Manila Rope..... each 5.45
- Complete with 60 Feet of  $\frac{1}{2}$ -Inch Manila Rope..... each 6.00
- Complete with 75 Feet of  $\frac{1}{2}$ -Inch Manila Rope..... each 6.65

### B & L Star Brand Single Sheave Cable Blocks

Closed

No. PU-30

Open

For guiding winch lines in conjunction with aerial cable guides.

Standard for 2 $\frac{5}{8}$ -inch diameter cable. Other sizes made up for larger diameter cable.  
Each, Weight 11 Pounds..... \$6.45

### B & L Star Brand Booster Hooks

No. PU-31

For relieving load on rings when pulling long spans.  
Each, Weight 3 Pounds..... \$2.15

### B & L Star Brand C Hooks

No. PU-28

Steel forging for connecting load to winch line.  
Each, Weight 2 $\frac{1}{2}$  Pounds..... \$2.00

**No. 102-1 Klein's Splicing Clamps**

This clamp is arranged with five round holes for bare wire. For copper wire Nos. 8, 10, 12, 14, 16, A.W.G. For iron wire Nos. 10, 12, 14, 16, 18, B. W. G. Length 8 inches. Price, No. 102-1.....each \$5.20

**No. 102-3 Klein's Splicing Clamps**

Large hole can be used for guy wire or messenger strand. Copper wire Nos. 2, 4, 6, 8, 10 and 12 A. W. G. Iron wire Nos. 4, 6, 8, 10 and 12 B. W. G. No. 102-3, 10 3/4-Inch. Wt. per Doz., 15 lbs.....each \$6.70

**No. 102-30 Klein's Splicing Clamps**

Holes reversed for those who prefer this arrangement. Copper wire Nos. 2, 4, 6, 8, 10, 12 A. W. G. Iron wire Nos. 4, 6, 8, 10, 12, 14 B. W. G. No. 102-30, 10 3/4-Inch. Wt., per Doz., 15 lbs.....each \$6.70

**No. 102-48 Klein's Splicing Clamps**

Largest hole convenient to bring together guy strand before applying a three bolt clamp. Copper wire Nos. 0, 2, 4, 6, 8 A. W. G. No. 102-48, 10 3/4-Inch. Wt., per Doz., 15 lbs.....each \$6.70

**No. 105-15 Klein's Splicing Clamps For Twisting Double Tube Sleeves**

For copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. Price, No. 105-15, Size 8-inch.....each \$5.50

**No. 105-17 Klein's Splicing Clamps**

Has five sets of chamber for twisting double tube sleeves. For copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. For iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. Price, No. 105-17, Size 10 3/4-inch.....each \$6.70

**No. 105-31 Klein's Splicing Clamps**

Three double chambers for twisting Nos. 10 and 12 A. W. G. sleeves, Nos. 12, 14, and 17 N. B. S. sleeves. No. 105-31, 8 1/2-Inch. Wt. per Doz., 10 lbs.....each \$5.50

**No. 107-34 Klein's Di-Stock Sleeve Twister**

A hand operated cam lever closes the head securely on the sleeve--no thumb screws to bother with. Tubular handles are furnished. No. 107-34, weight each, 9 Lbs.....each \$40.00

**No. 132-12 Klein's Combination Wire and Sleeve Clamps**

For telephone and telegraph general line and trouble work. This clamp has four round holes for twisting bare wire. Copper wire Nos. 6, 8, 10, 12, A.W.G. Iron wire Nos. 8, 10, 12, 14, B. W. G. The reverse side has four double chambers for twisting sleeves.

Copper sleeves Nos. 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handle. Weight per dozen, 10 pounds. Price, No. 132-12, Size, 9 inches.....each \$7.00

**No. 132-47 Klein's Wire and Sleeve Clamps**

For single tube or oval copper sleeves. Nos. 2, 4, 6, 8, and 104. Hinge has stop to prevent handles from opening beyond point convenient for clamping on sleeve. No. 132-47, Weight per Doz., 17 Lbs.....each \$11.00

**No. 132-15 Klein's Combination Wire and Sleeve Clamps**

The unusual range of wire and sleeve sizes covered by this clamp makes it practically a universal tool for telegraph, telephone and power line work. Has 5 round holes for twisting bare wire and an oval opening for guy wire or messenger strand. Copper wire Nos. 4, 6, 8, 10, 12, A.W.G. Iron wire Nos. 6, 8, 10, 12, 14, B. W. G. Strand opening .437x.624.

Reverse side has 5 chambers for twisting double tube sleeves. Copper sleeves Nos. 6, 8, 10, 12, 14, 17, A.W.G. Iron sleeves Nos. 8, 10, 12, 14, 16, 19, B. W. G. Hammer forged from high grade crucible tool steel. Oil tempered, polished head and black handles. Weight, per dozen, 16 pounds. Price No. 132-15, Size 11 1/4 inches.....each \$9.50

**No. 132-46 Klein's Wire and Sleeve Clamps**

One side for double tube copper sleeves Nos. 4, 6, 8, 10, and 12 A. W. G. Other side for copper wire Nos. 4, 6, 8, 10, and 12 A. W. G. No. 132-46, Weight per Doz., 15 1/2 Lbs.....each \$9.50

**No. 107 Klein's Di-Stock Sleeve Twisters**

This tool has ample leverage for use on heavy wires beyond the capacity of standard splicing clamps or connectors. The illustration above shows the Di-Stock fitted for making double tube joints.

Forged from high grade crucible steel. Has swing latch provided with thumb nut to fit over reverse jaw to hold both jaws securely in place. Open to Receive Wire

Special prices on any combination upon application. Specify sizes of sleeve tool is intended for. Tools are made to order only. Weight, 4 pounds. Price, No. 107-2, for Sleeves.....each \$26.00

## Klein's Chicago Grips

Main body piece and lever are forged steel. Draw parts are wrought steel. Gripping jaws are machined.

### No. 1613 With Plain Jaw for Bare Wire

1628-16B	60.00	With bronze lined jaws	15,000	.625	14

## Klein's Chicago Grips With Bronze Lined Jaws

Construction engineers are demanding grips that will not slip under heavy loads and which will not damage the conductor or strand. These requirements are met by welding a lining of bronze into the jaws of standard Chicago Grips, indicated by "B" following catalog number.

In order to make standard grips available for conductors of larger diameters they can be further modified by plating the lower jaws to required additional width and fitting an upper jaw of corresponding width, but in one piece, indicated by "BP" following catalog number.

Whether for copper, copper-weld, aluminum or aluminum cable steel reinforced (ACSR) or steel strand these grips will answer the problem.

Ascertain the maximum tension anticipated and the overall diameter of the conductor or strand to be used and consult the table below. All orders must state maximum tension load and overall diameter of conductor or strand.

These tools are made to order only. Parts are held in blank at factory and shipment can usually be made in from 14 to 21 days.

No.	Each	Max. Diam. Conductor	Max. Safe Load, Lbs.	Wt. Lbs. Each
1613-30B	\$6.00	1875	1,500	1 1/2
1613-40B	12.00	3125	2,250	2 3/4
1613-50B	20.00	50	1,000	7 1/2
1611-20B	13.00	50	2,200	2 1/2
1626-39B	27.00	75	3,750	7 3/4
1626-40B	27.00	9375	3,750	7 3/4
*1626AB	34.00	8125	6,000	7 3/4
*1628-5B	27.00	375	6,000	5
*1628-6B	34.00	50	8,000	8 1/2
†*1628-6BP	47.30	75	8,000	9 1/2

*1628-30B	123.00	1 5/8	20,000	23 1/2

\*Forged from tough alloy steel, all parts heat treated so as to get maximum strength without excess weight.

†These grips are also plated to accommodate the larger diameter cables.

## No. 1700-30 Klein's Chicago Linemen's Tools

Set is combination of Chicago Grip No. 1613-30 with Howes Wire Tool No. 1702-20.

For No. 6 wire and smaller down to No. 13. No. 1700-30, Weight, 4 lbs.....each \$14.10

**Haven's Steel Grips**

Almost automatic in action. Handle and eccentric allow instantaneous hold. A shake of the rope on the tackle disengages the grip.

Price, No. 1604-10, for No. 8 Wire and Finer... each \$4.00  
 Price, No. 1604-20, for 1/2-inch Wire and Finer... each 6.00

**Improved Haven's Grips**

For plain or stranded wire No. 6 to 3/4-inch diameter. Made with swing latch which engages stud on lower jaw.

No. 1625-20..... each \$14.00

**No. 1802-30 Klein's Self-locking Troublemens' Blocks**

Especially for use with Klein's Wire Grips. No. 1802-30 is furnished with 25 feet 3/8-inch Manila rope, 2 1/2 pounds. Consists of light steel shell blocks galvanized, fitted with snubbing hook to lock load in any position. To lock load, pull luff rope under hook. To release, simply pull rope. Blocks are arranged with spring guard snap hooks. When pulling up wire to make a splice, it may be used with two grips attached to snaps or with hook to anchor to an insulator-pin or other convenient anchorage.

Cat. No.	Description	Wt. Lbs. per Set	Price per Set
1802-30	Galv., with 25 Ft. 3/8-inch Rope.....	2 1/2	\$7.20

**No. 1702-20 Klein's Howes Wire Tools**

The strap is harness leather 1 1/4 inches wide and 7 feet long. At one end a forged steel swivel hook is provided with opening to permit anchoring round insulator pin. The forward end has a locking device to hold the load at any distance and is so arranged that a wire grip can be readily attached.

The metal parts are galvanized.

Weight per set, 2 pounds.

Price, No. 1702-20, Single Purchase . . . . . per set \$10.00

**Chance Capstan Pulley Blocks and Detachable Capstans**

**Capstan Pulley Blocks**

Chance Capstan Pulley Blocks have aluminum sheaves and capstan for lightness.

**No. 1802 Klein's Heavy Block Tackles**

**Drop Forged Hooks and Eye**

Consist of two special double sheave blocks.

Spring guarded snap hooks do away with taping.

Pulleys are bronze bushed and self lubricating.

Furnished with best quality Manila rope, 4 strand.

No. 1802-40, 30 Ft. of 1/2 In. Rope.....	each	\$18.50
No. 1802-50, 30 Ft. of 5/8 In. Rope.....	each	20.50
No. 1802-60, 30 Ft. of 3/4 In. Rope.....	each	21.50

**No. 1803 Klein's Hand Lines**

Rope is best quality Manila and does not twist. Spliced to eye of snap hook with galvanized steel thimble.

Snap hook is drop forged and similar to those used on safety straps except that it has round eye.

No. 1803-60, 75 Ft. of 3/8 In. Rope.....	each	\$8.50
No. 1803-120, 120 Ft. of 3/8 In. Rope.....	each	11.20

**Klein's Snap for Hand Lines**

Is used on hand lines, 1803 series.

No. 443A, Forged Snap, Eye 1 1/8 In. I. D.....	each	\$2.50
--	------	--------

**Matthews Quick Release Slack Pullers**

No. 730

No. 732

Enables one man to do the work of four when taking the slack out of guy strand, messenger wire or changing strain insulators, or for splicing trolley wire, telephone or power cable under tension; also used for pulling back underground cable. Takes the place of block and tackle. One man can easily pull 3000 pounds with the No. 730, 6000 pounds with the Nos. 731 or 732, and 10000 pounds with the Nos. 7100 or 7110. No slack is lost in dead ending as strain is held to the exact point pulled.

With the new quick release feature, when the entire take-up has been used, the wire is temporarily dead ended and the lock released. This permits the slack puller to be immediately extended to its maximum or any intervening length.

No.	Description	Ship. Wt. Lbs.	Price Each
730	Maximum Take-Up, 19 Inches.....	17	\$50.00
731	Same as No. 730, Except That Clevis is Substituted for Hook.....	17	54.00
732	Same as No. 731, Except That it Also Has Quick Take-Up Feature.....	17	58.00
7100	Maximum Take-Up, 27 Inches.....	45	95.00
7110	Same as No. 7100, Except That it Also Has Quick Take-Up Feature.....	45	112.00

The 730, 731 and 7100 do not have the quick take-up feature.

## No. 201 Klein's Side Cutting Pliers

Diamond Special for use on bare and insulated wire.

Cat. No.	201-5	201-6	201-7	201-8	201-9
Size	5 inches	6	7	8	9
Price	\$4.20	4.50	5.30	5.80	7.10

## No. 242-6 Klein's Oblique Cutting Pliers

Heavy pattern.

For use where it is not necessary to reach into confined spaces.

No. 242-6, 6 Inch, Weight per Doz., 4 1/4 Lbs. each \$4.10

## No. 232 Klein's End Cutting Pliers

Stout jaws and broad cutting knives.

No.	Each
232-5 1/2	\$6.00
232-7	6.70

## No. 212 Klein's Side Cutting Pliers

With Sleeve Joint Twisters

Diamond Special for use on bare and insulated wire, with sleeve joint twister.

Cat. No.	212-6	212-7	212-8
Size	6 inches	7	8
Price	\$5.30	6.00	7.10

## No. 201 Klein's Side Cutting Pliers

Nose and all edges rounded and shoulder of head removed.

No.	201-6NE	201-7NE	201-8NE	201-9NE
Each	\$4.50	\$5.30	\$5.80	\$7.10
Wt. Lbs. per Doz.	5	7 1/2	12	12 1/2

## No. 202 Klein's Oblique Cutting Pliers

Cuts close, the narrow head permitting its use in confined places.

Knives are perfectly fitted. Lap joint type.

No. 202-5, Length, 5 Inches	each \$3.60
No. 202-6, Length, 6 Inches	each 4.00

## No. 245 Klein's Oblique Cutting Pliers

Can easily be carried in vest pocket.

For electricians, telephone men and switchboard builders.

No. 245-5, 5-Inch, Weight per Doz., 4 Lbs. each \$3.60

## No. 202 Klein's Narrow Nosed Oblique Pliers

This plier has narrow hinge and pointed nose. For telephone and radio work.

No. 202-5A, 5-Inch, Weight per Doz., 4 Lbs.	each \$3.60
No. 202-6A, 6-Inch, Weight per Doz., 4 1/4 Lbs.	each 4.00

## No. 240 Klein's Oblique Cutting Pliers

With Wire Stripping Notch

Has notch for stripping small wires placed 3/16 inch from hinge and has diameter of .052 inch.

No. 240-5, 5-Inch, Weight per Doz., 4 Lbs.	each \$4.00
No. 240-6, 6-Inch, Weight per Doz., 4 1/4 Lbs.	each 4.60

## No. 235-6 Klein's Diagonal Cutting Pliers

Has long cutting knives. Head is narrow to permit use in confined spaces.

Has polished head, handles tempered blue.

No. 235-6, 6 Inch, Weight per Doz., 4 1/2 Lbs. each \$6.00

## No. 301 Klein's Long Nose Pliers, without Cutters

Adapted for stripping the ends of insulated wire, and for work in confined spaces.

Price, No. 301-5, Length, 5 Inches	each \$3.20
" " 301-6 " 6 " "	3.50

## No. 203 Klein's Long Nose Side Cutting Pliers

Designed for work in restricted spaces.

Equipped with cutting knives.

Price, No. 203-5, Length 5 Inches	each \$3.80
" " 203-6 " 6 " "	4.20

## No. 203-8 Klein's Long Nose Cutting Pliers

Made for use with heavier gauge insulated wire.

The round nose is for forming loops and a flat space is provided ahead of the knife for holding objects securely or for cracking insulation.

No. 203-8, Weight per Doz., 8 Lbs. each \$5.80

## No. 203-8N Klein's Long Nose Cutting Pliers

This plier is same as 203-8 but is fitted with stripping notch in knife. Notch is

regularly furnished to take No. 12 A. W. G. insulated wire but can be varied for other sizes to order.

No. 203-8N, Weight per Doz., 8 Lbs. each \$6.00

## No. 316 Klein's Long Nose Pliers

Particularly adapted for telephone work. Jaws are 2 inches long with 1/16 - inch point. Handles are 4 inches long, tempered blue. Polished head and jaws.

Size, 6 inches. Price, No. 316-6 Weight per Dozen, 2 3/4 Pounds. each \$3.50

**No. 316-S Klein's Long Nose Pliers**

**With Sleeve Opening**

Jaws are 2 inches long with  $\frac{1}{16}$ -inch point. Has openings for No. 17 B.&S. double tube copper sleeves. Handles 4 inches long, tempered blue; polished head and jaws. Price, No. 316-S, Size 6 Inches.....each \$4.00

**No. 301-C Klein's Long Nose Cord Crimping Pliers**

This plier is a long nose type with special opening for crimping switch-board cords to make them fit into the plugs more easily. Size, 6 inches. Price, No. 301-C, Weight per Dozen,  $2\frac{3}{4}$  Pounds... each \$4.00

**No. 303-6 Klein's Long Needle Nose Pliers**

Long nose permits use in confined spaces. Has polished head and handles temper blue. Weight per dozen, 3 pounds. Price, No. 303-6, Length 6 Inches.....each \$3.50

**No. 302 Klein's Long Curved Nose Pliers**

Angle is arranged to give full clearance and prevent skinning of knuckles. Price, No. 302-6, Length, 6 inches.....each \$4.50

**No. 305-6 Klein's Long Flat Nose Pliers**

Has long wide flat nose. Inside of jaws left smooth if desired. Has polished head and handles temper blue. Weight per dozen,  $3\frac{1}{2}$  pounds. Price, No. 305-6, Length 6 Inches.....each \$3.80

**No. 206-6 Klein's Long Flat Nose Side Cutting Pliers**

Has long wide flat nose and cutting knives. Smooth jaws if desired. Has polished head and handles temper blue. Weight per dozen,  $3\frac{1}{2}$  pounds. Price, No. 206-6, Length 6 Inches.....each \$4.00

**Klein's Long Flat Nose Spring Adjusting Pliers**

Hollow ground on outside of jaws to reach between and grasp springs easily. Price, No. 311- $5\frac{1}{2}$ ,  $5\frac{1}{2}$  Inch, Weight per Doz.,  $3\frac{1}{4}$  Lbs. each \$3.80

**No. 304-6 Klein's Long Duck Bill Pliers**

For general use. Jaws are wider and heavier than those of flat nose pliers. Has polished head and handles temper blue. Weight per dozen,  $3\frac{3}{4}$  pounds. Price, No. 304-6, Length, 6 Inches.....each \$3.80

**No. 205-6 Long Duck Bill Side Cutting Pliers**

General use. Jaws are wider and heavier than those of flat nose plier. Has polished head and handles temper blue. Weight per dozen, 3 pounds. Price, No. 205-6, Length, 6 Inches.....each \$4.20

**No. 406-6 $\frac{1}{2}$  Klein's Slip Joint Pliers**

This plier embodies all the advantages offered by a tool of this type. Has a wire cutter and a screwdriver handle. Has polished head and handles temper blue. Weight per dozen, 7 pounds. Price, No. 406-6 $\frac{1}{2}$ , Length, 6 $\frac{1}{2}$  Inches.....each \$2.00

**No. 407-7 Klein's Utility Slip Joint Pliers**

Heavy duty type. Adaptable as pipe wrench or wire cutter. Has sure grip jaws for irregular shapes. Polished head and handles temper blue. Weight per dozen, 7 $\frac{1}{2}$  pounds. Price, No. 407-7, Length, 7 Inches.....each \$2.50

**No. 408-8 Klein's Bent Nose Slip Joint Pliers**

For use in difficult places. An excellent general purpose tool. Has polished head and handles temper blue. No. 408-8, 8 Inch, Weight per Doz., 8 Lbs.....each \$3.00

**Nos. 5107 and 5112 Leather Plier Pockets**

Made of good quality leather. Has slits through which belt is inserted. No. 5112 is the same as No. 5107 except that plier does not protrude. Price, No. 5107, Weight per Dozen, 2 $\frac{1}{2}$  Pounds...each \$1.30  
" " 5112 " " 2 $\frac{1}{2}$  " " " 1.40

**No. 5116 Klein's Detachable Plier Holsters**

Made of heavy harness leather with loop to slip over belt.

Carries 7, 8 or 9-inch side cutting pliers.

Mouth of pocket is framed to hold open position permanently.

Length, 10 inches.

Weight per dozen, 6 pounds.

Price, No. 5116.....each \$3.00

## No. 1305-2 Klein's Inspectors' Tool Kits

Solid black leather folding case strongly stitched, reinforced back. Fitted with one each of the following tools: No. 201-6 side-cutting plier; No. 301-5 long nose plier; No. 1550-2 Xela electricians' knife; 1 pair electricians' tweezers; 1 special file; 1 special screwdriver.

A handy assortment to fit the pocket. Weight, 1½ pounds.

Price, No. 1305-2.....each \$15.00

## Klein Tool-Kits

Designed for mechanics, service men and electricians.

Contains long nose plier, special side cutting plier, diagonal cutting plier, electrician's knife, a pair of electrician's tempered tweezers,

¼-inch file and a screw driver with insulated handle. All contained in a Keratol roll fastened with a strong strap and buckle.

No. 1305-3A.....each \$15.30

## Klein's Rubber Glove Pouches

Scotch chrome leather pocket for carrying rubber gloves. Comes equipped with snap and Dee ring, ready to attach to body belt.

No. ....	5120-9	5120-15
Each .....	\$4.00	\$5.00
Size, In. ....	7½x9	7½x15
Weight per Doz. ....	4½	6½

## No. 5111 Klein's Hip Pocket Tool Cases

This case is suitable for carrying pliers or other tools in hip pocket.

Prevents cutting of clothes, or possible injury to the person.

Made of black leather. Weight per dozen, 2½ pounds.

Price, No. 5111. Size, 5x7 Inches....each \$2.00

## Neatsfoot Oil

Keeps leather soft and pliable. Prolongs its life.

Supplied in cans with full directions for use.

Pint Can.....	each \$ .75
Quart Can.....	each 1.25
Half Gallon Can.....	each 2.25

## Xela Electrician's Scissors

Made of high grade steel properly tempered.

Has screw hinge.

Nickel plated finish.

Size, 5 in.

Weight per dozen, 2 pounds.

No. 2100-5.....each \$1.70

## Electricians' Knives

A handy combination for the electrician, combining an emergency screwdriver, a knife blade for cutting or stripping wire; safely locked so that it cannot close during use. The commendable features are a well-tempered blade, a strong joint, a solid well-proportioned hand fitting handle and a lock to keep the blade safely open, yet promptly releasable when it is desired to close the blades.

Screwdriver blade is locked when open; to unlock, press down on large blade.

Price, No. 1550-2, Double Blade.....each \$2.70

## Ideal E-Z Wire Strippers

Requires no cocking or setting.

Triplicate action of clamping wire, cutting insulation and stripping is automatically timed and performed with one squeeze of the handles. When pressure

is released, handles open, resetting stripper for next snip. Cutting edges are shielded and blind centers of blades prevent cutting or scarring of the wire.

No. ....	For Stripping Solid or Stranded Wires	Each
1 Nos. 22, 20, 18, 16, 15, 14 and 12.....		\$5.00
2 Nos. 18, 16, 15, 14, 12 and 10.....		5.00
3 Nos. 8 to 5 (Provided Insulation Does Not Exceed ⅜-Inch Diameter).....		5.00

## No. 1515-1 Klein's Cable Sheath Splitting Knives

Extra heavy.

Knife edge is tempered and ground to a keen edge. Handle is made of leather. Weight per dozen, 12 pounds.

Price, No. 1515-1.....each \$5.50

## Klein's Skinning Knife for Linemen

Shape of blade has been carefully considered to make it a real safety tool.

Half hard rubber handle is molded on securely and provides adequate insulation and a positive grip.

Hole in handle is through the solid rubber.

Blade, 3 inches long, 8 inches long overall.

Weight.....pounds 4¼  
No. 1560-3.....each \$3.00

## Skinning Knife Sheath

For No. 1560-3 Knife

Can be riveted to belt or carried in hip pocket. Opening at bottom to prevent collection of dirt and permit escape of water.

Weight per dozen, 2½ pounds Size, 3x9 inches  
No. 5163.....each \$1.60

**No. 3109-20 Klein's Combination Steel Lag Screw Wrenches**

This wrench is forged from select bar steel. The slot is formed in a cross shape and will fit machine bolts, nuts or lag screws from 3/8 inch to 1/2 inch. The small end of the wrench is arranged for 3/8-inch machine bolts or lag screws. The round hole allows the end of a bolt to come through as the nut is run on.

The jaw is wider at its upper portion and when this wrench is put on a nut or bolt the tendency is to draw the bolthead or nut into the wrench and prevent slipping off. Weight, per dozen, 20 pounds.

Price, Nos. 3109-20, Length, 13 1/2 Inches . . . . . each \$5.00

**Klein's Lineman's Wrenches**

**Bell System Type**

This wrench is forged from selected bar steel and is of the open end type with 2 openings of different size at each end. A hole is also provided for turning in pole steps, etc.

Weight per dozen, 21 pounds.

Price, No. 3146, for 5/8-Inch Hardware . . . . . each \$5.00  
Price, No. 3146-A, for 3/4-Inch Hardware . . . . . each 5.00

**Porter New Easy Bolt Clippers**

Has japanned malleable iron handles, rubber buffers, and tempered tool steel jaws. The jaws can be dressed when necessary with a mill file. Furnished with clipper cut or center cut jaws.

**Klein's Linemen's Pole Climbers**

**Also Called Spurs or Hooks**

Safety is the first and vital point in considering linemen's pole climbers. The lineman going up a pole depends entirely upon his spurs.

To assure utmost dependability Klein Climbers are forged from special steels and are individually tempered. Shanks and gaffs are tested to insure perfect riveting and temper.

**Klein's Eastern Climbers**

When ordering specify length of shank desired. Measure from instep to extreme end. Other than stock sizes to order. Tested before leaving factory.

**No. 1901**

Stock sizes, 15, 15 1/2, 16, 16 1/2, 17, 17 1/2 and 18 inches. Has punched strap loops. Packed 1 pair in a carton. No. 1901, Wt. 3 5/8 Lbs. . . . . per pair \$8.20

**No. 1900**

Same and same sizes as No. 1901 but has riveted strap loops. Packed 1 pair in a carton. No. 1900, Wt. 3 5/8 Lbs. . . . . per pair \$8.20

**No. 1903**

Light weight pattern with riveted strap loops. Packed 1 pair in a carton. No. 1903, Wt. 2 7/8 Lbs. . . . . per pair \$8.20

**No. 1907**

This is the standard tree climber used by forest rangers, top loggers, fire wardens, surveyors, etc. Made in all standard sizes.

Has punched strap loop. Gaffs, or spurs, are 5 1/2 inches long measured on the outside and 3 inches long measured on the underside. They are set high in the leg iron so that points clear the ground.

Packed 1 pair in a carton. No. 1907 . . . . . per pair \$9.00

**Klein's Climber Straps and Pads**

Set consists of 2 calf straps 1 1/4 x 22 in. with 4x4 in. pads and 2 ankle straps 1 1/4 x 22 in. Leather is first quality harness leather. Buckles drop forged, fitted with roller.

## No. 5212 Klein's Derrick Belts

For oil derrickmen or structural workers.

Made to stand load of 250 pounds with a dead fall of five feet.

One three inch Forged Dee Ring at back for life line.

Double tongue buckle.

No. 5212, Weight, 42 Lbs.....each \$11.00

**Klein Safety Straps**

Klein Safety Straps are made in various patterns in a choice of two materials.

First quality back stock vegetable tanned harness leather. The new Klein-Kord fabric especially made for this purpose.

In all cases sewing is with genuine linen thread, hot waxed and lock stitched. Riveted by hand with solid copper rivets.

All buckles, including tongues, are drop forged, tested to 1500 pounds. There are three patterns of drop forged, tested snaps available as illustrated below.

**Standard Snaps**

Have wide nose covering spring latch protecting it from accidentally twisting out of Dee Ring, and can be used with any Dee.

Straps listed with plain catalog numbers have Standard Snaps.

**Hank's Snaps**

Are of special construction and must be used in conjunction with Hank's Dee Rings on belt.

Straps listed with "H" prefixing catalog numbers have Hank's Snaps.

**Klein-Lok Snaps**

Have a twin latch arrangement. Both latches must be pressed simultaneously to release. Full factor of safety. Can be used with any Dee.

Straps listed with "KL" prefixing catalog numbers have Klein-Lok Snaps.

**No. 5215 Klein's Extension Straps**

This strap is 1 3/4 inches wide, made of first quality harness leather and fitted with special forged D ring and buckle. It is worn attached to D ring on main body belt and used when large diameter poles necessitate a longer safety strap than the regular. By engaging snap of the regulation safety strap to the special D ring on the extension strap the lineman can immediately adapt his outfit so that he has no difficulty in working conveniently. No matter how large the pole—can be lengthened or shortened.

Size, 1 3/4x15 inches.

Weight per dozen, 14 pounds.

Price, No. 5215 ..... each \$4.00

**No. 5209 Klein's Safety Harnesses**

Back

Front

Meets requirements of various safety commissions for use where danger from gassing is present. Working in gassy manholes, gas tanks, oil tanks and even boilers, men are frequently overcome and an emergency arises instantly. This harness provides a sure means by which patient can be brought to safety and danger overcome. Design is such that it slings wearer in a perpendicular position so that he can be readily hauled through an ordinary manhole opening. A solid harness leather back plate 2 1/4x10 inches is stitched and riveted around the 1 1/2-inch adjustable belt strap. Back plate also carries a tested drop forged D ring to which the 3/4-inch manila life line, 25 feet in length is permanently attached. Shoulder straps are 3/4 inch and made adjustable and riveted to belt at single ends. These straps hold belt in position around chest so as not to encumber wearer while working. Weight per dozen, 30 pounds.

Price, No. 5209, with Life Line ..... each \$13.40

## No. 13 Graybar Lineman's Double Faced Hammers

Bell System Type

Drop forged oil tempered head with special short neck designed to strike a heavy accurate blow in a confined space. Length over all, 15 inches. Weight of head, 2 1/4 pounds. Weight of hammer complete, per dozen, 35 pounds. Price, No. 13.....each \$5.80

## No. 4638 Graybar Lineman's Chipping Hammers

Bell System Type

Drop forged oil tempered, specially made for line construction work. The face is suitable for general use and the pein is suitable for chipping brick work, concrete, stone, etc., or for riveting. Length over all, 16 inches. Weight of head, 3 1/2 pounds. Weight of hammer complete, per dozen, 48 pounds. Price, No. 4638.....each \$4.50

## Keystone Interlocking Expansion Shields

Prevents the nut being drawn out of the shield when heavy loads are applied. Guides the mechanic in determining when to stop tightening up the bolt. Prevents the nut being drawn past the point of maximum expansion. Locks the two sides and the nut into a unit of resistance against the load. Made of malleable iron for durability and strength.

**Diamond Multi-Size Screw Anchors**

Diamond Multi-Size Screw Anchors are designed to accommodate in one anchor several diameters of wood screws. The purpose is to reduce the number of anchors required to accommodate all sizes of screws. They are made in several lengths covering the majority of uses. For instance, the No. 10 to 14x1-inch anchor will work successfully with all sizes of wood screws ranging from No. 10 to No. 14 inclusive.

The high projecting interior ribs support and centrally locate a small No. 10 wood screw causing the shield to expand and giving ample holding capacity for that size of screw.

In this same size of anchor larger screws up to and including No. 14 may be used equally well. This is accomplished by the flexible interior ribbing.

Where the larger screw is used, the ribs are pressed down and the valleys at the exterior are forced outward to permit the greater diameter of the screw to enter the shield. The improved Multi-Size Screw Anchor has two advantages over the original Multi-Size; the screw enters the shield more easily without danger of marring the head of the screw and relieves the strain applied to the screw when inserted. It will also sustain a greater load.

Packed 100 to a box.

Designating Sizes	Per 100	For Wood Screws No.	Lgth. In.	Drill Size Inches	Weight per 100

## Diamond Tenax Expansion Shields For Machine Bolts

Tenax is cast in one piece of malleable iron. It has breakage connections between the nut and expansion shell. When the bolt is tightened the connections between the nut and shell break down and the nut telescopes into the shell and is guided by the slides in perfect alignment into the shell. A 4 way expansion with 4 ways to use. Smallest diameter of hole of any Malleable Iron expansion of equal bolt diameter. Has extremely high holding capacity. Prices do not include bolts.

## Diamond N Drills

4-Point or Star Drill

Diamond or Single Point Drill

Made of high grade octagon drill rod. Quality of steel is tested for uniformity. Heat treatment is scientifically conducted; heats for hardening and drawing the temper are determined by pyrometer and thermometer.

## Diamond Di-Forge Twist Drills and Drill Holders

Style B Holder

Style C Holder

The drill is forged from a solid bar of vanadium tool steel. This process produces a tougher and more durable drill than can be had by the machine process. It is intended to be used with a hand or electric hammer and not as a rotating drill.

Drill holders are made of vanadium steel. Type C drill holder is made with a soft rubber grip with flange to protect the hand of the operator.

Diameter of Drill Inches	Length Over All Inches	Depth of Hole Inches	Weight Pounds per Dozen	Price per Dozen
3/16	2 5/8	1 1/4	1/2	\$10.80

 Price, Style C Drill Holders.....per dozen 48.00

## Diamond N Drill Holders and Points

Drill holder and loose points is a combination which is convenient for electricians and in other lines of industry where numerous small holes must be drilled for fastening up small fixtures.

Holder will take drill points from 1/4 to 1 inch.

Weight, 8 1/2 pounds.

Per Dozen..... \$24.00

### Drill Points

The drills are carefully tempered to insure sufficient hardness at the point to withstand the wear of cutting and the temper is drawn away toward the shank so as to produce a softer steel where it enters the handle to prevent breaking off at that point.

**Nos. 50 and 53 Peirce Hammer Drills**

The Peirce Hammer Drill is a double-ended tool designed for drilling holes easily in brick, stone and concrete. It drills the hole and swages the lead sleeve of the bolt. Holds all sizes of drill points.

The drill cannot become wedged in the hole while drilling as a backward stroke of the hammer instantly releases it.

Injury to the hands of the operator is impossible.

The chuck has a quick release whereby a drill-point may be instantly removed and a sharp one inserted.

Price, No. 50 for Tamping 1/4-Inch Bolts.....each \$11.12  
 Price, No. 53 for Tamping 3/8-Inch Bolts.....each 11.84

**Peirce Drill Points**

Made of fine tool steel and machined to exact size. The length of drill point depends on the length of bolt used. Two inches of the drill point are held inside the chuck. All drill points are measured overall. Special drill points of any diameter up to 1 inch, and any length, can be furnished to fit the hammer drill chuck. For 1/4-inch expansion bolt use 1/2-inch drill; for 3/8-inch bolt, 5/8-inch drill; for 1/2-inch bolt, 7/8-inch drill.

Cat. No.	Size Inches	Wt., Lbs. per 100	Price per 100	Cat. No.	Size Inches	Wt., Lbs. per 100	Price per 100

**Peirce Hand Chucks**

Permits the use of Peirce Drill Points with the old method of hand-and-hammer drilling.

Cat. No.	Description	Std. Pkg.	Wt., Lbs. Each	Price per 100
55	For All Sizes of Drills	5	2.60	\$150.00

**Peirce Tamping Tools**

Cat. No.	Diameter of Bolt, Inches	Std. Pkg.	Wt., Lbs. Each	Price per 100
67	1/4	5	3.4	\$43.70
68	3/8	5	4.9	43.70
69	1/2	5	10.2	43.70

**Peirce Expansion Shields**

For attaching multi-point brackets to brick or stone buildings. Size of screw, Nos. 20 and 22; diameter of shield, 1/2 inch; length of shield, 2 inches. Standard package, 100. Weight per 100 pieces, 9.5 pounds.  
 Price, No. 31.....per 100 \$9.90

**No. 3428 Klein's Torches  
 1-Quart Capacity  
 For Gasoline**

Double length generating channels which quickly vaporize the fuel are a patented feature. Produces an intensely hot flame which can be regulated from minimum to full blast. Will not back generate. Cleaning plugs at all angles. Needle has positive shoulder stop preventing damage to burner by enlarging orifice.

Pump is well made and sturdy.

Tank is heavy gauge copper, capacity, 1 quart.

Weight, 4 1/2 pounds.

Price, No. 3428.....each \$25.30

U.S. PAT. NO. 1676.352

**Klein's 1-Quart Copper Tank Gasoline Torch**

Has a generator coil. Intense heat around this coil completely vaporizes the fuel so that it burns as a dry gas, giving a hot, but easily controlled flame. Generator coil can be replaced in a few minutes at small expense by backing off two nuts. Burner tip is replaceable.

No. 3428C. each \$25.30

If torch head assembly to attach to present tank is wanted, order No. 808C.

No. 808C...each \$8.00

**No. 3420 Klein's Staysalite Linemen's Torches**

This torch burns alcohol without odor or noise and stays lit in a wind.

Light and small and is lit or extinguished in a moment, as wanted. Has no adjusting parts.

The Staysalite is carried in the lineman's belt and eliminates the ground man; can be hung directly on the wire under joint to be soldered.

Provided with a cup for holding soldering paste. Can be used as a small heater or for soldering iron.

Weight, 1 1/4 pounds.

Price, No. 3420.....each \$10.00

**Soldering Coppers**

Furnished without handle but having an iron rod fastened to the head, ready to be driven into a wooden handle. Supplied in all sizes. Prices upon application.

**Bar Solder**

An alloy of tin and lead, made up in the form of bars for convenience in handling, for making soldered joints in metals, such as lead piping systems, for cable splices and other heavy work.

Price, Solder in Regular Bars.....per pound \$1.00

**Nos. 1 and 11 India Micanite Plate  
For Molding**

No. 1 India Micanite Plate has a smooth surface which does not show any detrimental amount of loose laminations. It softens sufficiently at 140 degrees C. or 284 degrees F. to be readily molded to ordinary shapes without chipping, cracking or breaking.

It is carefully milled to specified thickness, allowing a variation of .002-inch in isolated spots on the thin sizes below .060-inch, and from .003-inch to .005-inch on sizes .060-inch and up.

Average puncture voltage per .001-inch runs from 900 volts on the thinner sizes to 800 volts on the thicker sizes. It must not be used for insulation between copper bars of commutators.

No. 11 India Micanite Plate is made of the same quality of mica films and cement that are used in our No. 1 Plate, but it is not as exact to thickness, and is not made in as many thicknesses. It varies in thickness from plus or minus .003-inch in the case of the .010-inch thick; .005-inch in the case of the  $\frac{3}{32}$ -inch; to plus or minus .010-inch in the case of the  $\frac{1}{8}$ -inch thick.

It becomes flexible when heated, is readily formed into shapes, and is suitable for all general purposes where a variation in thickness is permissible, except for commutator segments, for which it is not intended.

Average puncture voltage, 800 to 900 volts per .001-inch.

Nos. 1 and 11 Micanite Plate furnished in special thicknesses, sizes and patterns. Prices quoted upon application.

**No. 2 India Micanite Plate  
For Commutator Segment Insulation**

No. 2 Micanite Plate is made of India Mica, as this variety is recognized as standard for electrical insulation where muscovite mica is used.

It is closely milled and the average thickness will not vary more than .0005-inch from specified thickness. Individual plates will not vary more than .001-inch above or .0015-inch below thickness specified in isolated spots. It cannot be molded.

Its average puncture voltage per .001-inch runs from 900 volts on the thinner sizes, to 800 volts on the thicker sizes.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.

1249	$\frac{1}{8}$	1.58	3.8	1.90

No. 2 Micanite Plate can be furnished in special thicknesses, sizes, or patterns. Prices quoted upon application.

**No. 3 Amber Micanite Plate  
For Commutator Segment Insulation**

No. 3 Amber Micanite Plate is made of phlogopite or amber mica, which is softer than the muscovite and presents less liability of failure to wear down evenly with the copper bars.

It is closely milled and the average thickness will not vary more than .0005-inch from the specified thickness. Individual plates will not vary in isolated spots more than .001-inch above or .0015-in. below thickness specified. It cannot be molded.

Its average puncture voltage per .001-inch runs from 850 volts on the thinner sizes to 700 volts on the thicker sizes.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.		
1272	.020	0.508	1.2	\$4.75

1280	.050	1.27	3.	4.00
1282	.060	1.524	3.6	4.00
1283	$\frac{1}{8}$	1.58	3.8	4.00

No. 3 Micanite Plate can be furnished in special thicknesses, sizes and patterns.

Prices quoted on application.

**No. 4 Micanite Plate  
For Flat Work**

This plate is made for flat work and for purposes where accuracy of thickness is not important. It is not milled or surfaced and therefore has a considerable variation in thickness.

It is suitable for all kinds of bases, round or square washers, and for all kinds of apparatus not subject to high heat.

Its non-liability to fracture under extreme vibration is a valuable feature for marine work. It does not take a screw thread, but can be drilled and turned.

Average puncture voltage, approximately 800 volts per .001-inch.

No. 4 plate is not furnished thinner than  $\frac{1}{16}$ -inch.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.		
1296	$\frac{1}{16}$	1.58	3.25	\$1.25

1301	$\frac{3}{8}$	9.52	19.5	1.25
1302	$\frac{1}{2}$	12.69	26.	1.25

Prices on sheets of No. 4 Micanite Plate, of special size and pattern quoted upon application.

**No. 5 Flexible Micanite Plate  
For Cold Forming**

No. 5 Flexible Micanite is made of very thin films of muscovite mica cemented together with a special insulating cement of great flexibility and adhesiveness. This article in many ways presents mica in its most convenient and economical form for electrical insulation. It can be formed or bent to shape without application of heat.

It is an excellent insulator for armature slots, armature, magnet and commutator cores, transformers, field coils, etc.

No. 5 Flexible Micanite Plate cannot be surfaced like No. 1 No. 2, or No. 3 plate. It is therefore subject to some variation in thickness, running from .002-inch to .003-inch on the thinner sizes; from .005-inch to .007-inch on the  $\frac{3}{32}$ -inch thickness, and from .010-inch to .015-inch on the  $\frac{1}{8}$ -inch thickness.

Its average puncture is approximately 600 volts per .001-inch.

Cat. No.	THICKNESS		Approx. Lbs. per Sheet	Price per Lb.
	Inches	MM.		
1303	.005	0.127	.55	\$3.15

A1 4	to 5	7	to 9	\$5.00	
1 3	to 6	5	to 7	3.25	
2 1½	to 3½	4½	to 6	2.50	
3 1½	to 3	3	to 4	1.80	
4 1½	to 2½	2½	to 3	1.25	
5 1	to 2	2	to 2½	.65	

## No. 20 Micanite Cloth

No. 20 Micanite Cloth is made with 1, 2 or 3 layers of high-grade India Mica films, cemented together with overlapping edges into sheet form, the sheet being faced on one side with cotton cloth and the other side with Japanese paper.

It is an excellent composite insulation, the cloth adding mechanical strength, and is often used in conjunction with Empire Cloth and Paper, fish paper, etc., for transformers, field magnets and armature cores. In strip or tape form No. 20 Micanite Cloth is an efficient insulation for wrapping all sorts of conductors, and can be furnished any width from ½ to 36 inches, in rolls approximately 3¾ inches in diameter.

Cat. No.	THICKNESS		Layers of Mica	Approx. Lbs. per Roll	Price per Lb.
	Inches	MM.			
1315	.008	0.203	1	3.3	\$3.50
1316	.011	0.279	2	5.2	3.00
1317	.014	0.356	3	7	2.40

## No. 24 Micanite Paper

No. 24 Micanite paper is of the same nature as No. 20 Micanite Cloth except that the material is faced on both sides with Japanese tissue paper instead of cotton cloth, the object being to supply an insulation thinner than Micanite Cloth, but retaining the same thickness of mica film.

Cat. No.	THICKNESS		Layers of Mica	Approx. Lbs. per Roll	Price per Lb.
	Inches	MM.			
1321	.005	0.127	1	2.4	\$3.50
1322	.008	0.203	2	4.2	3.00
1323	.011	0.279	3	6.	2.50

## Super-Micanite Plate

Super-Micanite is made with a synthetic cement or binding material, whereas Micanite, and in fact all other similar mica installations, are made with a cement of shellac.

The use of this synthetic cement as a binder has resulted in a superior mica insulation. Super-Micanite means less trouble in the manufacture of commutators, longer life for electrical apparatus, added dependability, fewer break-downs, reduced maintenance. Its specific advantages will be furnished on request.

Super-Micanite is particularly recommended for commutator insulation work, armatures, field magnets, electric heating units and for high tension work in general.

Prices are approximately 10 per cent higher than prices of Standard Micanite.

## Empire Seamless Bias Varnished Tape

Price per Gross (144) Yards

Empire Varnished Tape (Seamless Bias) is the trade name under which is sold Empire Insulating Cloths in tape form. It provides in convenient form for such uses as coils, cables and bus bar insulations.

This tape insures a smooth, uniformly protected insulated tape. Can be hand or machine applied, and special length coils are supplied for coil winding machines. Saves both time and money in application, as every inch is usable, and in service gives a better job, doing away with plain woven tapes, thus eliminating need of impregnation.

Standard rolls are 36 and 72 yards long.

Size Inches	No. 72 Yellow No. 763 Black .007 in. Thick		No. 71 Yellow No. 74 Black .007 in. Thick		No. 10 Yellow No. 99 Black .010 in. Thick

1½	5.64	4.76	5.92	5.02	6.34	5.44

Additional charges are to be added to gross yard price for rolls other than standard rolls.

Can be supplied packed in oil; prices on application.

**Orangeburg Fibre Conduit**

**Harrington (Sleeve) Joint Type**

Orangeburg Fibre Conduit is manufactured by The Fibre Conduit Company at Orangeburg, New York and Richmond, Indiana. These two plants are equipped with the most modern machinery for the manufacture of fibre conduit and are devoted to the manufacture of this product.

Orangeburg Fibre Conduit is made from wood fibre. The conduits are dried in automatic driers and then thoroughly impregnated with a preserving compound. The ends of the conduits are accurately machined to insure tight joints.

During the entire process of manufacture many inspections are made to insure that the finished product meets the most exacting specifications.

During the past 41 years many millions of feet of Orangeburg Fibre Conduit have been installed in underground systems under all conditions of soil and climate.

Recent improvements in manufacturing processes have resulted in an even better Orangeburg Conduit. This improved conduit has the following outstanding advantages:

1. Extremely high resistance to water absorption.
2. Higher crushing strength.
3. Higher bending strength.
4. Higher impact resistance.
5. Greater resistance to flattening.

Standard conduit length in all sizes from 1 to 6 inches inclusive is 5 feet; 8-foot lengths are also standard in sizes 2½ to 4½ inches inclusive.

One coupling is supplied with each length.

Inside Diameter Inches	Wt., Lbs. per Foot	Approx. No. Feet *Minimum Carload
1	.60	50000
1½	.85	35300
2	1.05	28575

Socket joint type bends and elbows will be supplied upon special request.

**Orangeburg Fittings**

Fittings such as manhole bells, plugs, fibre conduit to metal conduit adapters and reducers, fibre to fibre adapters and reducers, etc., are available. Information regarding such fittings and specialties gladly furnished on request.

**Orangeburg Fibre Conduit Field Tooling Machines**

A light weight, readily portable field tooling machine selling at a nominal price is available for use in milling joints on the job. This machine permits of satisfactory joints being in the field with a minimum expenditure of time and labor. Price information and further details of this machine furnished on request.

## Natco Standard Single Duct Conduit

Adapted for high tension power lines, single cable terminals or for low tension laterals, as in telephone or signal lines.

In building up duct banks, this conduit provides two heavy insulating walls between adjacent cables, and permits breaking or staggering of all joints throughout the duct bank.

Permits the splaying or separation of individual duct lines in approaches to manholes.

Conduit is scarified lengthwise on the four outer sides, to provide anchorage for bedding mortar.

The inner edges of the duct entrances are properly bevelled and smoothed to eliminate projections and to make safe the pulling of cables.

Certain square single duct shapes are provided with through dowel holes in the corners, permitting the use of steel dowel pins for assembling, centering and aligning such duct lines.

Standard length, 18 inches, except in the 5 1/4-inch round bore shape which is 24 inches long. Short lengths as shown in table, are available for staggering joints.

Nom-inal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.

Bends also supplied that are scored for splitting apart.

## Natco Socket Joint Single Duct Conduit

Natco Single Duct Conduit is also manufactured in a new socket joint type, which is supplied in 3 1/2, 4 and 4 1/2-inch round bore and in either 18 or 24-inch standard lengths. This new type of duct is self-centering, provides positive alignment, lays up fast and can be installed by ordinary labor. If desired, the joints may be readily troweled or sealed with cement mortar. This new type of conduit is especially adapted for single duct lateral lines, also equally suitable for duct bank construction where this type of joint is preferred.

Nominal Bore.....inches	3 1/2 Rd.	4 Rd.	4 1/2 Rd.
Length.....inches	18 and 24	24	24
Actual Size of Duct Holes.....inches	3 5/8	4 1/8	4 5/8

Also furnished in bends and mitred sections.

## Natco Standard Multiple Duct Conduit

Particularly adapted for telephone, telegraph, railway signal, fire alarm and low tension light and power service. The large units are economical and quick to install, due to their longer lengths and multiplicity of duct holes.

At the extreme ends of each piece of conduit, a smooth surface is left to permit wrapping each joint with tape or fabric to exclude joint mortar from the ducts.

Supplied in either 3 1/4, 3 1/2 or 4 1/4-inch square bore shapes and in 2, 3, 4, 6 and 9-way multiple shapes.

The 3 1/4 inch is the standard bore, while 4 1/4 inch is the over-size bore, for most telephone service and for certain low tension power and lighting systems, while the 3 1/2 inch bore is frequently specified for certain municipal installation.

Nom-inal Bore In.	No. Duct Holes	Std. Lgth. In.	Duct Ft. per Pc.	Actual Size Duct Hole In.	Approx. Out-side Dimen. In.	Made in Short Lgths. In.	Min. Car-load Duct Ft.

4 1/4 Sq.	9	24	18	4 3/8	16 1/16 x 16 1/16	6, 8, 12	6800

## Natco Split Conduit

Natco Conduit in both single and multiple duct shapes and in all standard bores is supplied, scored or knifed, for splitting apart on the job, for repairing or replacing duct lines, without the necessity of removing cables.

These split sections may be also used to enclose cable joints or splices in place of building manholes.

'Bore Inches	No. of Duct Holes	Standard Length Inches	Short Lengths Inches
3 1/4, 3 1/2 or 4 1/4 Rd.	Sgl. Duct	18	6, 9, 12
3 1/4, 3 1/2 or 4 1/4 Sq.	Sgl. Duct	18	6, 9, 12
3 1/4 Sq.	2 or 3-Way	18 and 24	6, 9, 12
3 1/4 Sq.	4 or 6-Way	18 and 36	6, 9, 12
3 1/4 Sq.	9-Way	18	6, 9, 12
3 1/2 Sq.	2 or 3-Way	18 and 24	6, 9, 12
3 1/2 Sq.	4 or 6-Way	18 and 36	6, 9, 12
4 1/4 Sq.	2 or 3-Way	18	6
4 1/4 Sq.	4 or 6-Way	18	6
4 1/4 Sq.	9-Way	18	6

**Natco Mitred Conduit**

For Curve Construction

Natco Conduit, both single and multiple duct, in all standard bores, is supplied in mitred shapes, for building either simple or intricate curves in lines of clay conduit, for transposing narrow duct banks into wide ones or vice versa, or for splaying duct lines to enter manholes or service points.

Natco Mitred Conduit is made in one standard cut—3 degree and 10-foot radius. The radius of curves built of these sections, is varied simply by interposing straight short pieces between the mitred sections, and the arc of such curves is governed simply by the total number of pieces used.

True and easy curves from 10 to 30 foot radius, and ranging from 3 to 90 degrees, can thus be built.

In the 2, 3 and 6-way multiple conduit, the mitred sections are supplied in either a flat or edge position.

Mitred conduit also supplied scored for splitting apart.

Approximate length, 6x6<sup>5</sup>/<sub>8</sub> inches. Number of pieces in 90° curve, 30.

Bore Inches	No. of Duct Holes	Position
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> , or 4 <sup>1</sup> / <sub>4</sub>	Round	.....
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> , or 4 <sup>1</sup> / <sub>4</sub>	Square	.....

3 <sup>1</sup> / <sub>4</sub> or 4 <sup>1</sup> / <sub>4</sub>	Square	.....

**Natco Branch Conduit**

For Dividing Multiple Duct Main Lines

Natco Multiple Duct Conduit is supplied in branch shapes in all standard bores.

Natco Branch Conduit is a new shape, one end of which is the same shape and size as standard conduit, while at the opposite end, certain ducts are more widely separated by means of double webs, so as to permit alignment with abutting branch lines.

Branch conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line. Such a division is highly advantageous in splaying main duct lines into central office buildings, manholes or cable vaults, or for turning laterals or service connections. It frequently saves the necessity of manholes.

Also supplied scored for splitting apart.

Length, 24 inches.

Bore Inches	No. of Duct Holes	Type	For Branching Into
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	2-Way	1-1	2 Single Duct
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	3-Way	1-2	1 Single and 1 Two-Way
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	3-Way	1-1-1	3 Single Duct
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	4-Way	2-2	2 Two-Way
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	6-Way	2-4	1 Two-Way and 1 Four-Way
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	6-Way	2-2-2	3 Two-Way
3 <sup>1</sup> / <sub>4</sub> , 3 <sup>1</sup> / <sub>2</sub> or 4 <sup>1</sup> / <sub>4</sub>	6-Way	3-3	2 Three-Way
3 <sup>1</sup> / <sub>4</sub> , or 4 <sup>1</sup> / <sub>4</sub>	9-Way	3-6	1 Three-Way and 1 Six-Way

**Natco Transposition Conduit**

For Transposing or Twisting 2, 3 and 6-Way Conduit Lines

Natco Multiple Duct Conduit is also supplied in transposition shapes in 2, 3 and 6-way multiples, with right or left-hand twist. The degree or angle of twist is 22<sup>1</sup>/<sub>2</sub>° for 3<sup>1</sup>/<sub>4</sub>-inch bore shapes, 18° for 3<sup>1</sup>/<sub>2</sub>-inch bore shapes and 15° for 4<sup>1</sup>/<sub>4</sub>-inch bore shapes, and the standard length is 24 inches.

The number of pieces required to effect a quarter turn of 90° from a flat to an edge position, or vice versa, is four pieces in the 3<sup>1</sup>/<sub>4</sub>-inch bore, five pieces in 3<sup>1</sup>/<sub>2</sub>-inch bore or six pieces in the 4<sup>1</sup>/<sub>4</sub>-inch bore sizes.

These transposition shapes are of considerable advantage in changing the position or height of conduit lines, in order to avoid certain street obstructions, or to cross viaducts or bridges, or to change the position of cables on their approach to manholes or cable vaults, all of which frequently eliminates the need of manholes.

Bore .....	inches	3 <sup>1</sup> / <sub>4</sub>	3 <sup>1</sup> / <sub>2</sub>	4 <sup>1</sup> / <sub>4</sub>
Twist .....		22 <sup>1</sup> / <sub>2</sub> °	18°	15°
No. of Pieces in 1/4 Turn .....		4	5	6

Direction of twist, right or left hand.

**Natco Pipe Connectors**

Rear View of Connector Ready to Receive Conduit

For the purpose of connecting clay conduit lines to iron pipe lines as in pole risers or to enter buildings, Natco Pipe Connectors are available in the sizes shown below.

These connectors are made of cast iron, one end is shaped to receive the end of the clay conduit line, while the opposite end of the connector is tapped and threaded to receive the iron pipe lines.

For connecting to smaller sizes of pipe, ordinary pipe bushings can be screwed into these connectors to accommodate any standard size pipe.

**Single Duct Connector**

For 3<sup>1</sup>/<sub>4</sub>-inch bore conduit 3-inch pipe or 4<sup>1</sup>/<sub>4</sub>-inch bore conduit 4-inch pipe.

**2-Way Connector**

For 3<sup>1</sup>/<sub>4</sub>-inch bore conduit 3-inch pipe or 4<sup>1</sup>/<sub>4</sub>-inch bore conduit 4-inch pipe.

**3-Way Connector**

For 3<sup>1</sup>/<sub>4</sub>-inch bore conduit 3-inch pipe or 4<sup>1</sup>/<sub>4</sub>-inch bore conduit 4-inch pipe.

## No. 106 Natco Conduit

Illustrating the conversion of a 4-way multiple duct line into two 2-way multiple duct lines in an edge position, one of which is flexed or curved to one side in the direction of a pole and terminated in two riser iron pipe lines, ascending the pole, while the other 2-way line is transposed or twisted 90° from an edge to a flat position in a distance of 8 feet and then continued straight on in the form of standard 2-way multiple duct conduit—in a flat position.

### Specifications

**B**—One-piece 4-way type 2-2 branch conduit, 2 feet long (for dividing the 4-way line into two 2-way lines).

**E**—Six pieces 2-way mitred conduit—edge position—3° 10-inch radius—6¼ inches long, (for flexing or curving one of the 2-way lines to one side in the direction of the pole. The angle of flexure shown is 18° but any angle of flexure divisible by 3, may be attained by varying the number of mitred pieces).

**H**—One-piece 2-way standard conduit, 2 feet long (laid in edge position—to extend the flexed 2-way line on towards pole).

**R**—One cast iron 2-way connector for 3-inch wrought iron pipe.

**P**—Four pieces 2-way left-hand transposition conduit, 22½°, 2 feet long (for transposing the other 2-way line 90° from an edge to a flat position).

### Dowel Pins

Pressed steel pins, 5/16x3 inches, with an integral central flange or collar, are generally used for joining or aligning individual sections of multiple duct, also certain sizes of square bore single duct conduit together.

Two pins are used at each joint or for each piece of conduit.

### Joint Tape

An especially prepared tape is frequently used for wrapping the joints of multiple duct conduit prior to the application of the joint mortar, also occasionally used for wrapping joints of single duct conduit in trench, subway or masonry structures, prior to the pouring of the concrete encasement.

This tape has an adhesive waterproof coating on one side, and is supplied in 4 and 6-inch widths, and put up in rolls of 25 linear yards.

Tape adheres closely and firmly to the glazed surface of the conduit and aids in sealing the joints.

In ordering, specify total number of linear yards required.

## Rainier Wood Conduit

This conduit is manufactured from yellow pine at the plant at Wilmington, North Carolina, and from Douglas fir at our plant at Centralia, Washington. An economical and satisfactory conduit for the carrying of all forms of lead cable and wires.

Comes in random lengths.

Outside Measurement... inches	5½x5½	5x5	4½x4½	3½x3½
Diameter Bore..... inches	4	3½	3	2

Each piece has a mortise at one end and a tenon on the other end.

It is in general use by the large telegraph companies and telephone companies all over the country and by many railroads.

Uses for which it is adapted:

**RAILROADS.**—Trunking, underground signal wires, high tension transmission lines, yard drainage where clay conduit is easily broken through, and system is usually placed on the surface of the ground.

**TELEPHONE COMPANIES.**—All underground work.

**TELEGRAPH COMPANIES.**—All underground work.

**POLICE AND FIRE ALARM SYSTEMS.**—For carrying wires, either high or low tension under ground.

**CENTRAL STATIONS.**—For distribution mains and services.

**SPECIFICATION CREOSOTED CONDUIT.**—Free from large, unsound or loose knots, or other defects which would impair strength. Creosoted steam and vacuum treatment, dead oil of coal tar under pressure either 12 pounds per cubic foot (full cell) or 8 pounds per cubic foot (empty cell) as ordered.

Any additional information regarding the practicability of installing this conduit will be furnished upon request.

Prices on application.

**General Cable Terminals**

Herewith are illustrated a few of the typical models of cable terminals made by the General Cable Corporation.

In addition to the types illustrated we offer a complete line of terminals for every type of cable installation. All

cable terminals are furnished in single conductor style. Multi-conductor terminals can be furnished in all styles except bolted gasket style. Various styles of cable entrances can be furnished, as illustrated.

We welcome inquiries regarding cable problems.

**Indoor and Outdoor Hoodnut Single Conductor (Outdoor Shown)**

**Bolted Gasket Indoor and Outdoor Hoodnut Single Conductor (Outdoor Shown)**

**Flat Straightaway Disconnecting 2-Conductor**

**Flat Straightaway, Open End Insulator 2-Conductor (For Indoor Use)**

**Flat Straightaway Outdoor Closed Hoodnut 3-Conductor**

**Flat Straightaway Indoor Closed Hoodnut 3-Conductor**

**Flat Straightaway Disconnecting 4-Conductor**

**Flat Straightaway, Open End Insulator 4-Conductor (For Indoor Use)**

**Flat Edgewise 3-Conductor**

**Right or Left Elbow 3-Conductor**

**45° Angular 3-Conductor**

**Round 3-Conductor**

The Above Shapes Available in 2, 3 and 4 Conductors

**Molded Cap with Taping Cones—Type A Bell (Wiping) 600-Volt Control Terminal**

**Flat Cap—Type B Bell (Stuffing Box) 600-Volt Control Terminal**

**Flat Cap—Type C Bell (Pipe Connected) 600-Volt Control Terminal**

**Bell Fitted with Pipe Connection on Both Ends 600-Volt Control Terminal**

**Cable Entrances**

These terminals are furnished in 3 types of cable entrances as shown above. In the case of the single conductor terminals, the entrances are integral with and really form the bell. In the multi-conductor terminals, they are separate and are bolted to the bell. They are interchangeable. As all types of entrances are drilled for the cable size, at the factory, it is necessary to fully specify the cable data when ordering.

Type A cable connection consists of plumber's wiped joint between cable sheath and terminal bell or wiping nipple.

Complete Information gladly furnished on request.

Type B cable connection consists of a stuffing joint between cable and terminal. This joint is made tight by compressing suitable packing material around cable, between a gland and a gland nut. It can be used with either leaded or non-leaded cable, lead wool being used as the packing in the first case and jute in the second.

Type C connection consists of the Type B stuffing box joint, plus a conduit fitting which clamps around the conduit. This conduit fitting requires no thread on the conduit but can also be used on a conduit which has already been threaded.

## G & W Potheads

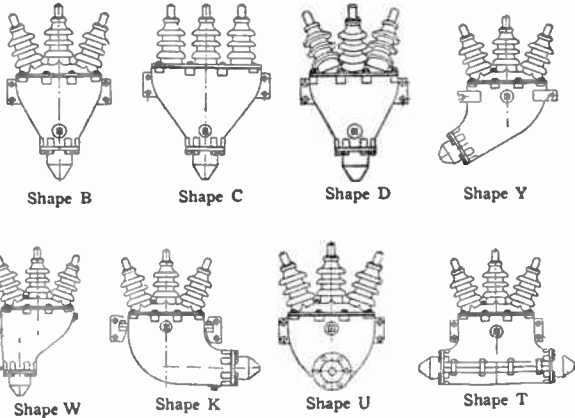

Designs of these potheads are the result of the co-operative effort of experienced distribution engineers.

The wide machined flanges on body and lid are firmly clamped together with oil seal gasket between, using cap-screws evenly spaced all around. Suitable for upright or inverted installation. The interior of the potheads has been studied with the idea of proper balance of design, yet to provide generous creepage distances and spacings, and a large bending radius for multiple conductors. Holes for compounding are extra large and are closed with flanged and gasketed pipe plugs.

General use of porcelain of the counterbore design with gasketed flanges has proved successful in providing oil tightness. Porcelains are made by the vacuum process and are glazed inside and outside. Larger petticoats and relatively high percentage of wet to dry flashover are distinctive features.

### Pothead Shapes

### Typical Applications of G & W Potheads in Overhead Distribution Systems

## G & W Type T Capnut Terminals

Definitely Oil-Tight Construction

Modern cables are more highly impregnated with oil. The G & W Type T Outdoor, and Type NT Indoor Potheads are the ideal terminator for these cables as they provide a definitely oil tight seal.

Capnut terminals are extremely simple and effective. There are only 3 main parts. Non-rusting screws are used. Hoodnuts are locked and no threads are exposed. Several styles of interchangeable aerial lugs are available.

## Type N Indoor Potheads

Without Connections

Type N Potheads are suitable for indoor use only. Standardized parts are used. Cable conductors are usually brought through the pothead without cutting and connected to devices beyond, which obviates the use of connectors.

There are several types of indoor potheads to fit various indoor installation requirements.

## G & W Disconnecting Potheads

With Porcelain Caps Enclosing Connectors

These disconnecting potheads are a simple means of giving a layout flexibility.

Disconnects and changes are made without cable cutting. Easy isolation is possible by simply lifting off the porcelain cap. No live parts exposed.

**Cable Entrance Fittings**

**Completely Interchangeable Wiping Sleeve**

The wiping sleeve is of cast brass, suitable for making an ordinary wiped joint to lead sheathed cable.

The bottom part is conical shaped and is sawed off on the cone to fit the cable used.

**Combination Clamping Ring and Stuffing Box**

The combination clamping ring and stuffing box gives the protective features of a wiped joint without requiring the time and skilled labor involved in wiping a joint.

It also provides a simpler installation when conduit couplings or armor clamps are used.

**Conduit Coupling**

G & W conduit couplings are usually threaded to screw into standard steel or brass pipe.

They can be supplied reamed out to slip over fiber duct with set screws to hold in place.

**Armor Clamp**

The armor clamp is bolted to the pothead beneath the cable entrance.

The two halves are bolted together to firmly clamp the armored cable. Cannot be used with wiping sleeve unless specially arranged.

**Stuffing Box**

The plain stuffing box is cast with conical box and gland nut.

These parts are drilled for the cable.

This entrance is ordinarily supplied when cable diameter is not known and when couplings are used.

Also applicable to braided cable. Easily drilled out on the job.

**Plain Bushing**

The plain bushing essentially consists of a flanged plate and washer.

It can be used with multiple conductor cables or drilled with two or more separate holes for single conductor cables installed in a multiple conductor pothead.

For lead covered cables, the sheath is belled over and clamped on the plate with the washer.

For braid covered cables the holes are countersunk and provided with individual stuffing boxes for the single conductor cables.

**Three E Cable End Bells**

Three E Cable End Bells, both indoor and outdoor, non-disconnecting and disconnecting, can be furnished in practically any shape and size to meet any installation condition.

When ordering, always specify the voltage of circuit, number of conductors, gauge of cable, exact overall diameter of cable, and type of joint required.

Ask for Bulletin Giving Complete Information

## General Cable Unit Package Splicing and Jointing Materials

For convenience of customers, the complete materials required for splices and joints on all types of cable are put up in handy unit package form. By purchasing splicing and jointing materials in this manner, an accumulation of dead stock in the store room is prevented and the time and expense of buying the various items required for the work from more than one source is saved.

When ordering, specify number and size of conductors, thickness of insulation and lead sheath and voltage rating.

### Ozite B Filling Compounds

Ozite B is a black asphaltic compound recommended for filling joints, terminals and junction boxes operated at normal temperatures, and up to and including 25000 volts.

This compound is manufactured under an improved process which results in a product with a low carbon content. Formulated by expert cable engineers with many years of experience, this compound combines all of the desirable characteristics that a jointing or filling compound should have.

Prices and complete information upon application.

### No. 9145 Hubbard Dowel Pins

In laying multiple duct clay conduit, these dowel pins are inserted in holes provided in the ends of the lengths and thus keep adjacent lengths in proper alignment and insure the smoothness of the ducts. Made of 3/8-inch round steel, 3 inches long.

Cat. No.	Size Inches	Ship. Wt., Lbs. per 100	Price per 100
9145	5/16x3	8	\$1.30

### Diamond Screw Duct Rods

Couplings are made of government bronze. The hickory used in the shaft is selected stock, well seasoned. Threads are accurately cut to 3/4-inch U.S.S., 10 threads per inch. Rivets are countersunk. Hickory shafts are 7/8 inch in diameter.

3-Foot Length	each \$1.65
4-Foot Length	each 1.80

## National Split Tinned Copper Connectors

For Splicing Underground Power Transmission Cables

N.E.L.A. Specification

These sleeves are split their entire length to enable the hot solder to flow evenly around the cable and are covered with a coating of tin to permit easy soldering. The ends are beveled so that there will not be the possibility of the building up of a high potential occasioned by sharp corners.

### Empire Duct Rods

Furnished in 2 styles, tapered and straight. Tapered sticks are furnished when not otherwise

specified. They measure 1 1/4 inches at the middle of the rod and taper to 1 inch at coupling. Straight sticks are furnished of uniform diameter 1 inch throughout.

Couplings are malleable iron. Ends are interchangeable. Axles are machined from brass rod, solid head and shouldered on coupling. Wheels are machined at hub to fit axle and shaped to conform to curve of duct. The rod is made of best selected straight grain well seasoned hickory, tapering to 1 inch at coupling.

Length	..... feet	3	4
Price, with Wheels	..... each	\$1.45	\$1.60
Price, without Wheels	..... each	1.25	1.40

Simplex Pipe Pushing Jacks

Designed for pushing pipe through the most unfavorable soil conditions without crushing or distorting it. Can be operated by 2 or 4 men, depending upon soil conditions. When solid cribbing or blocking is difficult to obtain, it is then possible to hold the jack against the back pressure with one lever, while the other lever is being operated.

The duplex levers or sockets can be operated singly, alternately or together, depending on size of pipe, soil conditions and cribbing.

Each size of pipe requires a set of tapered jaws, as perfect gripping is necessary to avoid crushing the pipe.

Furnished complete with one set of tapered jaws, two 1 1/4 x 42-inch steel lever bars and two 2-inch steel pipes for extending lever bars (5 feet long for No. 332 and 7 feet long for No. 334). Specify size tapered jaws required.

No. 790 Greenlee Hydraulic Pipe Pushers

Eight operating speeds are available by changing location of rear pin in each lever. This gives various pressures, ranging from 6500 to 40000 pounds. One man can exert maximum pressure by pumping left-hand lever slow speed position. The other pressures and speeds are obtained by various combinations, using right or left-hand lever or both together.

Pipe can be pushed faster with this machine because it is only necessary to change pipe clamps every 4 to 7 feet, depending on length of rail used. Once

rail has been set in position, after being bolted to cross skids or long plank and supported by wood cross member to prevent creeping, setting is complete. Pusher can be run up and down rail as many times as necessary without changing setting.

Can be converted from a pipe pusher into a pipe puller by reversing it on the rail.

Capacity, 3 inch and smaller pipe. Equipment, in addition to rail, consists of a clamp for 1 1/4, 1 1/2, 2, 2 1/2 and 3-inch pipe, backing plate and pipe support casting.

Weight, exclusive of rail, 150 pounds.

No. 790, with 5 1/2-Foot Rail for 4-Foot Push...	each	\$275.00
No. 790, with 6 1/2-Foot Rail for 5-Foot Push...	each	280.00
No. 790, with 7 1/2-Foot Rail for 6-Foot Push...	each	285.00
No. 790, with 8 1/2-Foot Rail for 7-Foot Push...	each	290.00

For shorter or longer rails than standard deduct or add \$5.00 per foot.

Simplex Steel Trench Braces

Simplex Trench Braces provide a safe, practical and economical bracing on all trench jobs. Ball and socket joints at each end permit quick adjustment and tight gripping at all angles. Once placed, a few turns of the screw handle fasten the brace tightly against the sheeting. In trenches that contain sandy soil or water, there is a tendency for sheeting to become loose and a few additional turns of the screw handle secure again a firm bracing.

Screws are steel and fittings malleable iron.

Can be unscrewed and used over and over. Adapted to any width of trench by substituting a different size tubing or pipe for that furnished and drilling a hole at one end for the insertion of a cotter pin.

No.	Pipe and Screw Diam.	DIMENSIONS, INCHES			Safe Extension of Screw	Weight Pounds per Dozen	Price per Dozen

14	2	18	60	70	50	10	604	110.00

Simplex Trench Brace Fittings

Simplex Trench Brace Fittings are furnished to contractors who wish to put on pipe to suit conditions. The addition of a piece of standard gas pipe, cut to the required length, with a small hole drilled in one end to receive a cotter pin, completes the brace.

The cotter pin may be removed and shorter or longer pipe substituted, to make the brace suit any width of trench desired.

In close quarters, where the regular lever nut cannot be used to advantage, a special lever nut with 3 holes to fit a 1-inch rod can be furnished at no extra charge.

Screw is steel and fittings malleable iron.

No pipe is furnished.

## Reliable Double Eye Split Cable Grips

Used for pulling slack in working cables. Can be attached and removed without cutting cables. Strong hooks which are easily fastened and unfastened eliminate trouble of lacing grip with rawhide. Designed so that less than half as many hooking operations are necessary to connect the two sides of grips as if a conventional hooking scheme were used.

## Klein's Furnaces

1-Gallon Capacity

Burns Gasoline or Kerosene

Sturdy construction made especially for field use.

Quick starting is ensured by multi-coil burner which is economical and vaporizes the fuel thoroughly, producing an intensely hot fire. Simple cleaning device to remove carbon deposit without taking burner apart.

Weight, 12 1/2 pounds.

No. 3010 Windshield, extra, is shipped with furnace unless otherwise ordered.

No. 3529, Pump Built in.....each \$33.50

## Shields for Klein Furnaces

Made of heavy gauge sheet steel. Top edge is rolled and bottom is reinforced with a heavy ring.

All joints welded.

Weight, 3 pounds.

For furnace No. 3529.

No. 3010.....each \$4.00

## No. 3000 Pumps for Klein Furnaces and Torches

Has brass barrel and plunger.

Weight, 1/2 pounds.

No. 3000.....each \$2.50

## Klein's Folding Windshields

Made of heavy galvanized sheet steel in four leaves each 24 inches high and 18 inches wide hinged together. Hinges are securely riveted. Grate made of 3/16 x 3/4 inch steel, welded and swings on one leaf of the shield.

Grate designed so that it can be used with melting pot or the larger sizes of wax kettles.

Weight each, 40 pounds.

No. 3020, With Welded Grate.....each \$25.00

**B & L Star Brand Pulling-In Frames**

The pulling-in frame is constructed to help install cable in underground ducts.

The sheave support consists of two 13-foot sections of 6-inch steel channels, fastened together at each end by two sections of 4-inch steel channels. Each 13-foot section is provided with 24 holes on 6-inch centers in order to allow the two sheaves to be adjusted to the proper position on the sheave support for any cable installation.

Two sheaves are used with each sheave support, one large aluminum sheave and a small steel sheave which have diameters of 20 inches and 5 3/4 inches respectively. The diameter and groove of the large sheave are of sufficient size to allow a cable to be pulled over it, without harming the cable sheath, when this procedure is necessary to obtain sufficient cable in the manhole for splicing. An important feature is that each sheave is provided with a Metaline bushing which makes the use of a lubricant unnecessary.

Approximate weight, 260 pounds.

Prices and further information upon application.

**B & L Star Brand Cable Feeders**

Designed to protect and guide underground cables into ducts particularly in congested manholes.

Feeder consists of a 7-foot and a 3-foot length of 4-inch galvanized flexible metal hose which may be joined to make an uninterrupted length. Standard feeder will fit 3 1/4-inch ducts.

A nozzle extension is provided to reduce the opening sufficiently to enter the end of smaller ducts. Special nozzles can be furnished for various size ducts. Extra 3-foot lengths of hose may be obtained for increasing the length of the cable feeder for use in large or deep manholes.

Approximate weight, 100 pounds.

**Cable Sheave and Shackle**

The cable sheave and shackle may be used in place of the pulling-in frame when it is possible or advisable to locate the rear of the truck directly over the manhole. The device is attached to the manhole pulling iron and the winch line goes over a roller or sheave at the rear of the truck then down and under the cable sheave and shackle and thus into the duct. The sheave is made of special aluminum alloy for light weight, 20 inches in diameter, with a groove large enough to take a 3 1/2-inch cable. The hook is drop-forged.

Approximate weight, 51 pounds.

Prices and further information upon application.

**Manhole Guards**

Open, 50x50x42 in.; closed, 3 1/2x50x42 in.

Ship. wt., 43 lbs.

Price, Manhole Guards... each \$25.00

**Manhole Skids and Sheaves**

Price, 9-foot... per set \$60.00

Extra lengths, \$3.00 per foot.

**Manhole Frames and Covers**

**Square**

**Diamond Manhole Cover Hooks**

This is a useful tool for the subway construction force. It is designed to easily raise a heavy manhole cover by prying the wedged point end of the hook under the groove provided in the cover for the purpose.

The hook is made of an excellent quality of electric tool steel suitably hardened at and adjacent to the hook to prevent its bending, and at the same time sufficiently tough to prevent breaking off.

Price... each \$1.50

**Hubbard Cable Duct Shields**

Zinc and Hot Galvanized Steel

Used to protect cable sheaths at entrance of ducts. As cable expands and contracts the wear comes on the shield rather than on the lead sheath. May be installed, if desired, after the cable is pulled in.

Cat. No.	Per 100	Material	Size, Inches		Std. Pkg.	Wt., Lbs. per 100

## Hubbard Manhole Ladders

Hot Galvanized

The 6½, 8, 10 and 12-foot lengths have sides of 1½x¾x¾-inch channel and rungs of ½-inch round open hearth steel. The 14-foot ladder is made of channel 2½x½x¾-inch sides. The rungs pass through the sides and are riveted over on the outside. They are 12 inches apart spaced from the bottom rung which is placed 12 inches from the bottom of the ladder.

Standard package, 5.

Cat. No.	Length Feet	No. of Rungs	Rung Spacing Inches	Width Inside Inches	Shp. Wt., Lbs. Each	Price per 100

## Hubbard Pulling-In Irons for Manholes

Hot Galvanized

Pulling-in irons are set into the concrete or brick walls of street vaults opposite all duct entrances to provide a convenient and strong attachment for the pulling-in blocks for installing or removing cables. They are made of ½-inch steel in accordance with the A. T. & T. Company's specifications, and are so designed as to straddle the brick.

Cat. No.	Size Steel Inches	Extension from Wall Inches	Std. Pkg.	Wt., Lbs. per 100	Price per 100
9119	¾	9	5	500	\$83.30
9120	¾	12	5	600	96.60

## Hubbard Locktype Cable Racks

Hot Galvanized

Racks are made of 1¾x¾-inch flat steel, with 7/8x¾-inch mounting holes, in lengths to accommodate 1 to 4 of the hooks listed.

The certified malleable iron hooks have rack attachment lugs and overlaps which prevent wobbly fits and insure minimum movement. High grade dry process grooved porcelain insulators with smooth glazed surfaces lock to the hooks.

## Hubbard Presteel Cable Racks

Hot Galvanized

For manhole and interior cable work.

The rack sections are made in three lengths which can be combined into almost any desired length.

These sections are made from 1½x¾x¾-inch open hearth steel channel, with ample strength to support the heaviest cables. They should be fastened to manhole walls with ½x4-inch Peirce Expansion Bolts.

## No. 2120 Hubbard Cable Rack Insulators

Standard Type

These insulators, used on Hubbard cable rack hooks, provide a smooth, well rounded surface which permits cable creepage without injury to lead sheaths. Also provide insulation between cable and rack. Width, 2¾ inches. Std. pkg., 50. Weight per 100, 100 pounds. Price, No. 2120, for 1½-Inch Cable.....per 100 \$19.80

## Hubbard Underground Cable Racks, Hooks and Insulators

For Heavy Cable Work

Hot Galvanized

Rack section is 2¼x2¼x¼-inch steel T section, offset at lower end for overlapping when combining two racks. Any desired length of cable racks can be made in this manner. Racks have ½-inch mounting hole at top and bottom and are fastened to new manhole walls with No. 2246 anchor bolt which is cemented into the wall. ½x4-inch Peirce expansion bolts are used for attaching to manholes not provided with anchor bolts.

Hooks are one-piece ¾-inch steel pressed to a channel shape, insuring uniform strength throughout. All edges are rounded and there is a smooth flat surface for the cable to rest upon. Hooks can be used with or without an insulator.

Insulators fit snugly on the cable hooks and the weight of the cable holds them in place.

THERMOSTATS

VALVES: Electrically Operated

WIRE: Deltabeston

## American Concrete Lighting Standards

American Concrete Lighting Standards are manufactured by the centrifugally-spun process.

### Curing

Spun-crete standards are cured for 28 days by a steam process.

During curing the most favorable conditions are obtained by maintaining the correct temperature in the curing room and regulating the amounts of water taken up by the product.

Careful curing insures the ultimate in strength, wear-resistance, bond-strength, and water-tightness.

When emergency shipment of less than 30 days is required, Spun-crete standards of equal strength may be obtained in 7 days by the use of a high early strength cement at an increased cost.

### Core

When desired, a 2-inch galvanized pipe core may be

obtained in the finished standard at a nominal increase in cost.

### Finish and Aggregate

Flat surfaced standards are water-polished giving a glossy smooth surface showing the beauty of the granite aggregate.

Standards having round, fluted or irregular surfaces can not be water-polished but are acid-etched.

Flat surfaced standards may also be acid-etched at no increased cost.

Spun-crete standards are furnished in black and white aggregate as standard.

Red and white aggregate can be furnished at no increase cost upon request.

Green and white aggregate can be furnished at a slightly increased cost.

Complete Information and Prices Furnished on Receipt of Specifications

Union Metal Steel Lighting Standards

Sectional View of Union Metal Fluted Steel Pole Showing Method of Anchorage for Heavy Gauge Shaft Construction

Light Weight Shaft Construction

Union Metal lamp standards are built like a modern skyscraper. Three sturdy anchor rods extend from the top of the ornamental base into the concrete sub-base and securely anchor the lower section of the standard to the ground.

Likewise every standard is provided with three steel tie rods, passing from the base through the shaft and into the topmost part of the capital or head.

The scientific tripod or steel truss construction coupled with the pressed metal shaft provides the important engineering requirements of great strength, light weight, and low center gravity. In case of severe impact they will bend but will not break and fall heavily to the ground.

Standards are made with shafts of two or three thicknesses of No. 22 U. S. gauge copper bearing steel. Double lock-seams. Plies pressed firmly together with no solder or

rivets. Seams rolled on the inside so that both inside and outside of pole are smooth. Galvanized with lead and zinc spelter both inside and out. Painted inside and out with best grade of metallastic paint.

Shafts available with outer lamination of 16 ounce cold rolled sheet copper, fluted and pressed into place at an increased cost.

Available in natural copper, verd-antique, oxidized copper or statuary bronze finish. Standards available with bronze castings at an increased cost.

Anchor rods, galvanized steel, vary from 5/8 inch to 1 1/4 inches depending upon size of standard. Tie rods vary from 1/2 to 5/8 inch depending upon size of standard. Lock washers are used to prevent loosening of nuts due to service vibration.

Heavy Gauge Shaft Construction

Union Metal steel standards are also furnished employing heavy gauge steel shafts, fabricated from highest grade open hearth steel.

The thickness depends upon the strength requirements. A heavy cast steel base of special analysis is attached to the lower end of the shaft with a double electric weld.

## King Ferronite Cast Iron Lighting Standards

Designs available in groups of similar designs to meet all requirements in one locality.

#### Construction

Made from aluminum patterns in iron flasks.

Ferronite is a special composition of greater strength than ordinary cast iron.

Ferronite insures all delicate details of design to be smooth, clean cut, deep and perfect. The inside of standards is as smooth as the outside which prevents damage to cable insulation.

Wall thickness of standards is uniform and weight is distributed uniformly which increases strength of standards.

Standards are given a shop priming coat of special hard skin paint. Final finish is to be put on by customer after installation.

Door in base of standard permits ready access for anchoring, making electrical connections, installing transformers, testing and inspecting.

#### Safety Spiders

Used to prevent and limit the fall of standard on violent impact.

Recommended on heavily traveled thoroughfares.

Provided at increased cost on special order only, where not listed.

Pipe reinforcement furnished on some designs.

Safety spider available to permit use of transformers in base of standard.

**G-E Holophane Refractors**

These refractors conserve the light in the upper hemisphere, which for some classes of lighting is not required, and redirects it to the street where it will be useful.

**Band Refractors**

For use where a totally enclosed unit is not desired.

**Sym-etric Dome Refractors**

**Dome Refractor with Light Shield on House Side**

For use within an enclosing globe. Light shields for attaching to all types of dome refractors are available. These shields reduce the light on the house side.

**A-Sym-etric Dome Refractors**

Designed for units mounted at the side of the street. An A-Sym-etric Dome Refractor reduces the light on the house side which is an advantage in residential districts.

**G-E B-Sym-etric Holophane Dome Refractors**

Conserves the light in the upper hemisphere, which for some classes of lighting is not required, and redirects it to the street where it will be useful.

For units mounted at the side of the street. Reduces the light on the house side, which is an advantage in residential districts.

**Street-Lighting Ball Globes**

**With Plain Collar**

**With Spun Aluminum Protector**

Snow-white is a pure white diffusing glass. It does not show any lamp filament nor bright spot on the globe surface. Inlite is a fine semi-translucent glass and very white for this character of glass.

Inland C. R. I. (crystal roughed inside) is a clear glass sand-blasted inside. Inland ruby and green are solid and true colored.

Furnished in snow-white, C. R. I., Inlite and with plain collar spun aluminum protector as illustrated.

2492	8 1/2 x20	15.40	30.80	1.00	1	16

An additional charge of 30 cents per globe is made when equipped with spun aluminum protector ring.

## G-E Form 8 Novalux Ornamental Luminaires

**Cross-Section of Globe and Canopy Showing Internal Canopy and Refractor Holder**

Recommended for whiteway lighting for towns and villages and ornamental lighting on boulevards, parkways, residential streets and less important business streets of larger cities.

This luminaire has been designed particularly for use with 1000 to 6000-lumen, 6.6-ampere series or 200 to 500-watt multiple Mazda C lamps. Since the Form 8 casing will not contain an auto-transformer, high-current series lamps in 4000, 6000 and 10000-lumen sizes operated at currents of 15 or 20 amperes can be used in this unit only in connection with a Type II transformer in the base of the standard.

Casing is of cast iron and has two cast lugs to support a porcelain receptacle or supports for a multiple socket. Globe seat is embodied in casing and drip holes are drilled in globe seat to drain off rain water.

Two types of casings can be furnished having the same external appearance and differing only in method of attachment to pole. Type F and 3 casings rest upon top of pole and are bolted in place; K and 2-K casings slip over shaft and are fastened by set screws.

Internal canopy holder for glass canopy is fastened to upper lip of globe by set screws. Canopy holder has a swinging arm which projects through hole in glass canopy and is drilled on end for combined pinnacle and weather shield.

Design of casing is architecturally constructed for use with fluted poles. Internal canopy holder with swinging arm holds canopy securely to globe and acts as a support for canopy during cleaning.

Alabaster rippled glassware diffuses light and has high transmission characteristics.

## G-E Form 9 Novalux Ornamental Luminaires

**Cross-Section of Complete Luminaire Showing Auto-Transformer and Internal Parts**

Recommended for whiteway lighting, main boulevards and secondary business streets.

Straight series, straight multiple, or high-current series lamps can be used with this fixture. The high-current lamps can be operated from Type II transformers or auto-transformers. The 6000, 10000 or 15000-lumen lamps are recommended for best results.

The standard dome or A-Symmetric dome refractors can also be used with rippled glassware.

The luminaire consists of a cast iron casing, a porcelain receptacle which acts as a support for the series socket, a globe, and canopy. The casing is designed to accommodate an auto-transformer which, when used, is mounted on the under side of porcelain insulating plate. The globe seats in a groove on the top of the casing

and is held firmly in place by three clips. The casing is fastened to the pole by three screws.

The architectural design of the casing enables it to be used on fluted poles.

On account of the short casing, this makes a good luminaire for bracket mounting.

The internal canopy holders with swinging arms hold the canopy securely to the globe and act as a support for the canopy during cleaning.

G-E Form 12 Novalux Ornamental Luminaires

G-E Novalux Ornamental Luminaires

With No. 118 Alabaster Rippled Globe, No. 1118 Alabaster Rippled Glass Canopy, Form N Casing

With No. 123 Alabaster Rippled Globe, No. 1123 Alabaster Rippled Canopy and External Straps

Form 13—With No. 109 Alabaster Rippled Globe and No. 1109 Alabaster Rippled Canopy

Made for use on octagonal poles with 4-inch top. The 2500, 4000, 6000 or 10000-lumen series and 300 or 500-watt multiple Mazda C lamps can be used in this fixture.

With No. 123 Alabaster Rippled Globe, No. 1123 Alabaster Rippled Glass Canopy Form O Casing

Designed for use with 4000 and 6000-lumen, 6.6-ampere series; 4000, 6000, 10000, 15000 and 25000-lumen high-current lamps or 300 to 2000-watt multiple Mazda C lamps. High-current series lamps, except 25000-lumen size, can be operated from self-contained auto-transformers or Type II transformers.

The 1500 or 2000-watt and 25000-lumen sizes can be only used with 126 globe and 1126 canopy.

Cast iron casing, standard with green paint finish, has been designed for a slender pole having a 5-inch top diameter. For the No. 103 and 123 globe, a 7" adapter is used, forming the O casing. For No. 104 and 124 globe, an 8" adapter is used, forming the M casing. For No. 118 globe, a 10" adapter is used forming the N casing. For 126 globe an 11" adapter is used.

Canopies for Nos. 103, 104, 123, 124 and 126 globes are held by an internal support which fastens to casing.

Form 16—With No. 118 Alabaster Rippled Globe and No. 1118 Alabaster Rippled Glass Canopy

A replica of the Form 13 luminaire on a larger scale. For use with 6000 to 10000-lumen, 6.6-ampere series; 6000 to 15000-lumen, 20-ampere series; 300 to 1000-watt multiple Mazda C lamps.

## G-E Form 18 Novalux Ornamental Lantern Luminaires

The Form 18 Novalux lanterns are available in two sizes which meet every requirement of ornamental street lighting besides being useful for the ornamental lighting of certain types of buildings.

The Form 18A small size is for use with 300 and 500-watt, 2500, 4000 and 6000-lumen, 6.6-ampere series or 4000, 6000 and 10000-lumen high-current series lamps.

The Form 18B large size is made for use with 300, 500, 750 and 1000-watt, 4000 or 6000-lumen, 6.6-ampere series or 4000, 6000, 10000 and

15000-lumen high-current series lamps. These high-current series lamps can be operated from Type 1L transformers in the small lantern and auto-transformers or Type 1L transformers in the larger lantern.

## G-E Form 19 Novalux Ornamental Lantern Luminaires

Designed for suspension from ornamental bracket arms. Useful for parkways, boulevards and residential streets.

Form 19A small size is used with a 300 or 500-watt Mazda C lamp.

Form 19B large size is used with a 750 or 1000-watt Mazda C lamp.

Made of grey cast iron. The different members are held together with brass screws, nuts and lock washers, thus eliminating any chance of corrosion of tapped holes and screws.

Bottom is a grid casting which carries a flat octagonal glass panel

to provide light directly underneath unit.

## G-E Form 33 Novalux Luminaires Suitable for Use with Concrete Standards

With No. 109 Globe and No. 1109 Canopy

With No. 124 Globe and No. 1124 Canopy with Ornamental Side Arms

For ornamental lighting on boulevards, parkways, residential streets and less important business streets of the larger cities.

## G-E Form 27 Novalux Ornamental Luminaires

Cross-Section of Globe and Canopy Showing Internal Canopy and Refractor Holder

Form 27 luminaire is ideal for whiteway lighting in small towns or villages or for the minor business streets of larger cities.

For use with 1000 to 6000-lumen 6.6-ampere series, or 200 to 1000-watt multiple Mazda C lamp and, since the casing does not permit the use of an auto-transformer, a Type 1L series transformer is mounted in the base of the standard.

Holophane Sym-etric dome, A-Sym-etric and B-Sym-etric dome refractors redirect a portion of the upward light to the street surface. They can be used with Form 27 luminaires and are often desirable along boulevards and parkways where the amount of upward light is of less importance.

Consists of a cast iron casing, a porcelain receptacle which acts as a support for the series socket, a globe and canopy. Casing slips over shaft of pole and is held by three set screws. Globe seats in a groove on top of casing and is held firmly in place by four clamps. Canopy is held to globe by an internal canopy holder with three lugs which set over lip of globe and which is held fast by three screws that go under inside of upper globe fitter.

Small Lantern Luminaire

For use with Mazda C lamps, 1000 to 6000-lumen, 6.6-ampere series lamps, or 200 to 500-watt multiple lamps. Casing will not contain an auto-transformer, therefore, high-current series Mazda lamps in 4000, 6000, 10000 and 15000-lumen sizes, operated at currents of 15 or 20 amperes, can be used in this unit only in connection with a Type 1L transformer in the base of the metal standard, or in concrete vaults for use with concrete standards.

The Sym-etric, A-Sym-etric or B-Sym-etric dome refractors can be used with rippled glass-ware.

Casing consists of a globe fitter and a pole adapter.

For all but the Nos. 1123 and 1124 canopies, the internal canopy holder for the glass canopy is fastened to the upper lip of the globe by set screws. Canopy holder has a swinging arm which projects through hole in glass canopy and is threaded on end for combined pinnacle and weather shield.

### G-E Form 25 Novalux Suspension Luminaires

Form 25

Form 25 with Globe Open

Designed for residential districts where surroundings justify ornamental treatment, where wide streets require curb mounting rather than center suspension, where long spacing and high mounting are needed to economize in the number of units.

The construction of these units involves only a one-piece rippled glass globe supported by a basket formed of copper bands.

Top of luminaire is a single iron casting, painted green, which supports socket and porcelain enameled reflector and to which the copper basket is hinged. Reflector also serves as a holder for holophane dome refractor.

Top casting of luminaire is tapped to screw on end of a 1¼-inch pipe. Bracket consists of standard pole plates, pipes and scrolls used with street-system brackets.

#### Form 25-A

No. 116 light alabaster rippled globe, Sym-etric or A-Sym-etric dome refractor. Mounting height, 16 feet approximately. Spacing, 250 to 300 feet. Lamps—100, 150 or 200-watt multiple or 1000-lumen straight series.

#### Form 25-B

No. 108 light alabaster rippled globe, dome or A-Sym-etric dome refractor. Mounting height, 20 feet approximately. Spacing, 300 to 400 feet. Lamps—300 or 500-watt multiple or 4000, 5000 and 10000-lumen straight series or Type IL transformer types.

#### Form 25-C

An ornamental suspension fixture in which lamps up to 500-watt multiple and 15000-lumen series may be used. Applicable on boulevards, highways and any other place requiring a pendent unit with excellent appearance and high efficiency.

No. 193 alabaster rippled globe, Sym-etric, A-Sym-etric or B-Sym-etric dome refractor.

May be installed on 6.6-ampere series systems using lamps from 2500 to 15000 lumens. Since the 4000 to 15000-lumen lamps operate more efficiently on 15 and 20-ampere circuits, the use of Type

IL transformers to provide higher current is recommended.

The efficiency of the luminaire is increased by the use of a steel internal reflector with reflecting surface of white porcelain enamel.

### G-E Form 32 Novalux Suspension Luminaires

Bracket Suspension—Green Finish

With No. 146 Alabaster Rippled Globe

The Form 32 Novalux suspension luminaire is recommended for ornamental lighting, with lighting standards and with ornamental brackets for installation with underground wiring.

With different shapes of rippled globes, with and without dome refractors and with the various types of bowl refractors, this luminaire may be recommended for main thoroughfares, secondary business streets, residential streets and park roadways where high intensity illumination is required.

This luminaire is designed for use with Mazda C incandescent lamp. The straight series lamp of 2500, 4000 or 6000-lumen, 6.6-ampere rating and the multiple lamp of 300 or 500 watts are most commonly used with the glass-ware listed, except the No. 146 globe. The 6000, 10000 or 15000-lumen series and 750 or 1000-watt multiple lamps are best suited for use with the large No. 146 globe. The 15000-lumen, 15 or 20-ampere series or 750 and 1000-watt multiple lamps may be used with the No. 162 globe without refractors, or for 10000-lumen series, 300 or 500-watt multiple lamps with refractors. This globe is rectangular in shape and has been designed for use with a light shield to keep light on the house side from being objectionable to residential owners.

Since the 4000, 6000 and 10000-lumen lamps operate more efficiently on 15 or 20 amperes than on 6.6-ampere circuits, the use of an auto-transformer or Type IL transformer, for the purpose of stepping up the current, is recommended in these instances. Provision is made for mounting an auto-transformer within the casing of the luminaire. The IL transformer type of installation is particularly desirable because of its protection, which allows low-voltage wiring to the luminaire. When the Type IL transformer is used, it is usually mounted on the wood pole, in the base of the ornamental standard, or buried in the ground.

## G-E Novalux Suspension Luminaires For Use on All Series Circuits

Sectional View of Form 45-H with Sheet Metal Reflector

Suitable for installation in residential sections and on secondary business streets.

All parts are interchangeable. Changes in lamps and glassware accommodations are readily accomplished to meet all requirements that may develop in the community served.

A flexible and serviceable arrangement is provided for supporting sheet metal or cast iron reflectors with glassware to insulator without the use of adapters. Three heavy brass supporting and positioning screws, mounted in a bronze ring, impinge against a concentrically grooved copper collar on sheet metal reflector, or against conical depressions in lugs of cast iron reflector. This clamping arrangement forms a firm support for the reflector and acts as a protection for the insulator, as the possibility of radial stress on insulator is eliminated.

Reflector is made of high grade enameling steel and is finished in white fired vitreous enamel on the reflecting surface and green fired vitreous enamel on the outside surfaces. A concentrically grooved copper collar is provided, against which supporting screws impinge, relieving the enameled surface from undue strain.

An ornate cast iron reflector is available which can be furnished either with green paint, hot-dip galvanized, or green fire-enameled finish. The vitreous fire-enameled finish provides a lustrous surface of high efficiency, long life, low maintenance, and excellent appearance. This reflector also serves as a support for glassware by the addition of non-ferrous hinge and latch fittings.

Cast iron hood is tapped for a 1 1/4-inch pipe.

Overhanging skirt on wet-process porcelain insulator increases creepage distance and provides additional dry surface.

Binding post passes through tie lug, insulator and receptacle clip supports. Light centers are adjusted by changing supports on binding posts. Copper collar relieves enamel surface from undue strain.

Water dripping from overhang on cast iron hood strikes insulator just above skirt. This feature greatly increases wet flashover voltage.

Clamping ring with three set screws holds reflector without radial pressure on porcelain. Contour of sheet metal reflector greatly increases strength and prevents flexing and consequent chipping of enamel.

### Form 45-H

Consists of a cast iron hood, wet-process porcelain insulator, series socket, sheet metal fire-enameled, radial-wave reflector, or a cast iron reflector with refractor holder and refractor, a globe holder and globe as required.

Main insulator is made of wet-process porcelain, finished in green glaze, provides high mechanical and dielectric strength, is non-hygroscopic and is equipped with non-ferrous contact parts and supporting elements.

### Form 45-M

Form 45-M1 is similar to Form 45-H4 fixture with all the combinations of reflectors and glassware except that the insulator is of dry-process porcelain.

## G-E Form 45-H4 Novalux Suspension Luminaires

With Wet-Process Porcelain Insulator for Use on All Series Circuits

With 20-Inch Flat Radial-Wave Reflector

With 20-Inch Concentrating Asy-Radial-Wave Reflector, with Long Collar

**G-E Form 45-L Novalux Suspension  
Luminares**

**Sectional View**

Recommended for installation in residential sections, on main thoroughfares and on secondary business streets or highways. Suitable for use on any overhead lighting circuit of less than 5000 volts; readily adapted for series, multiple or Type IL transformer distribution.

Consists of a cast iron hood, reflector, series or multiple socket, and refractor or enclosing globe.

Four cast iron hoods are provided, one with a straight 1 1/4-inch pipe tap, one with a right angle 1 1/4-inch pipe tap, and two similar hoods with bushings for external wiring. Hoods finished in green fire enamel, hot-dip galvanized or green paint.

The sheet metal, radial-wave reflectors are made of high grade enameling steel finished in white and green, fired, vitreous enamel.

Cast iron reflectors, both shallow and deep, can be furnished with fire enamel, hot-dip galvanized or painted finish.

On series circuits up to 5000 volts, a receptacle is furnished for necessary insulation and to receive series socket. When used with a hood and sheet metal or shallow, cast iron reflector, the receptacle is mounted in the hood on a small non-adjustable support and when used in the deep cast iron reflector, an adjustable support provides adjustment for 5 3/8, 7 or 9 1/2-inch light center lamps.

On multiple circuits, a medium screw base socket on an adjustable support is mounted in hood and used with sheet metal or shallow cast iron reflector, permitting operation of multiple lamps up to and including 200 watts. For 300 to 500-watt lamps a Mogul screw base socket is mounted on an adjustable support in deep cast iron reflector.

Bowl and band refractor holders consist of a cast aluminum ring, with rigid hinge and latch fittings. Nos. 166 and 176 globes have a holder similar to refractor holder and with all the advantages of a refractor holder. It is of sufficient diameter to allow the globe to swing by the dome refractor.

If a dome refractor is required, a holder is provided and may be attached to cast iron reflector by screws that hold hinge and latch fitting. With the new design of rigid hinge and snap-latch fittings, it is possible to relamp luminaire from ground with a lamp picker.

With No. 176 Alabaster Globe and Sym-etric, A-Sym-etric or B-Sym-etric Dome Refractor

## G-E Form 52 Novalux Suspension Luminaires

For Operation on Multiple and Series Circuits Up to 5000 Volts

Luminaire with 11-Inch Refractor

Designed particularly to utilize the increased efficiency obtained by using the new 11-inch refractor. This unit may be applied to good advantage on boulevards, main thoroughfares, highways and any other place where a pendent unit with excellent appearance and high efficiency is required.

May be installed on series systems using 2500, 4000 or 6000-lumen lamps for operation on 6.6-ampere circuit; since the 4000, 6000 and 10000-lumen lamps operate more efficiently on 15 and 20 amperes than on 6.6-ampere circuits, the use of IL type transformers for the purpose of stepping up the current is recommended in these instances. Lamps rated as high as 15000 lumens may be used in this unit on series circuits. On multiple-circuits, lamps rated as high as 500 watts may be used. The fact that these large size lamps are applicable in this unit puts it in step with the present trend of good lighting practice.

The hood or casing is a casting which may be furnished in cast iron, painted green or in galvanized or cast aluminum in natural finish or painted.

Hood is also equipped with an external adjusting mechanism which permits the adjustment of the lamp to the proper light center with respect to the refractor—a consideration that is essential for correct distribution. The new rigid hinge and latch refractor holder is incorporated in the design of this fixture. This holder insures an insect-tight fit for the refractor against the casing. It is also notched, which prevents the refractor from slipping out of position because of vibration or relamping. The new hinge and latch permits relamping from the ground with the assistance of a lamp replacer. The 11-inch refractor with peephole is an essential feature of this fixture. It is highly efficient and the peephole makes possible positive adjustment.

**G-E Novalux Brackets**  
For Novalux Suspension Luminaires

Pipe is steel and not conduit.  
Angle of bracket with pole is adjustable on Bishop's Crook, right-angle-bend and straight pipe brackets.  
Pole plates are malleable iron.

The 1 1/4-inch brackets are available with either 2 or 3-hole pole plates.  
Scroll clamps and set screws are galvanized. On painted brackets, clamps are painted over galvanizing.

**G-E Form F-100-B Novalux Pothead Cutouts  
For Ornamental Street-Lighting Units**

Cat. No. 3732073G1

For use with ornamental series street-lighting circuits for mounting in the base of the smaller lighting standards.

Consists of two sections, the box and plug, both made of special process porcelain. Plug is equipped with flat contact strips, insulated from each other. Provision is made at top part of plug so that insulating compound can be poured in round the leads. Box contains four flat phosphor-bronze springs. Contacts are assembled within an air expulsion chamber.

If it is desired to use cutout for disconnecting several lamps, this chamber may be filled with G-E No. 21 Oil.

At the top of box, a hole is provided through which insulating compound can be poured. Two holes are provided in bottom of contact of cutout for parkway cable.

Cutout with Spade Bracket and Cable Clamp, Cat. No. 3732073G2

**G-E Non-Automatic Station Type  
RV-2 Novalux  
Constant-Current Transformers  
For Operating A.C. 6.6-Ampere Series Lighting  
Loads**

2300 Volts (with 80 Per Cent Load Tap)—60 Cycles

A non-automatic, station type, constant-current transformer designed for use in central stations or substations where an operator is in attendance.

Because of the general adoption of the series system for street lighting installations, it is necessary to have a transformer that will convert constant potential energy to a constant-current energy. This requires a regulating device with a floating coil.

In many instances it is desirable to install a constant-current transformer in a station that is always attended. The Type RV-2 transformer is non-automatic and admirably serves this purpose.

Transformers are built in standard sizes ranging from 5 to 70 kw. output, or in special sizes for any commercial secondary current or frequency, or for any primary potential up to and including 13200 volts. The standard rating is 60 cycles, 2300 volts on the primary, and 6.6 amperes on the secondary.

The exceptionally fine regulation of the constant-current transformers insures rated lumen output, and full life of lamp. The transformer will maintain the secondary current within 1 per cent above or below normal from full load to short circuit, provided the primary potential and frequency remain at rated values.

\*Built with multi-circuit secondary. Can be operated either single or multi-circuit.

## G-E Plug Switch Panels

For Non-Automatic Station Type RV-2 Novalux Constant-Current Transformers  
6.6 or 7.5 Secondary Amperes, 2300 Volts

For 1 Transformer and 1 Lamp Circuit

For 1 Transformer and 2 Lamp Circuits

The panels and subbase are asbestos-ebony, 1½ inches thick with ¼-inch bevel, and are mounted on a self-supporting framework of 1¼-inch pipe 64 inches high. Blue Vermont marble may be substituted for asbestos-ebony at a slight increase in price.

Instruments and meters have the G-E Company's standard dull-black finish, while the supporting framework is black japanned.

Lightning arresters are recommended for each lamp circuit. They are not included with these panels and must be ordered separately.

Each panel Cat. No. includes one panel with framework, a 5-ampere Type AD ammeter with 10-ampere scale, current transformer, fused primary plug switches, secondary plug switches, necessary plugs, plug racks, card holders and nameplate.

Each wathour meter Cat. No. includes one subbase with pipe fittings, 110-volt, 5-ampere Type IS-8 single-phase wathour meter, current transformer, and potential transformer with fuses and supports.

## G-E FK-41 Oil Circuit Breaker Panels

For Non-Automatic Station Type RV-2 Novalux Constant Current Transformers  
6.6 or 7.5 Secondary Amperes, 2300 Volts

For 1 Transformer and 1 Lamp Circuit

For 1 Transformer and 2 Lamp Circuits

For 2 Transformers with 1 Lamp Circuit per Transformer

Designed for the control of one single-circuit secondary or multi-circuit secondary constant current transformer and either one or two lamp circuits per transformer. Lamp circuits may be either arc or incandescent. Panels are for separate installation near the transformers they are to control and are not suitable for assembly in a switchboard.

Each panel Cat. No. includes panel with framework, 5-amp. Type AD ammeter with 10-amp. scale, current transformer, necessary oil circuit breakers mounted on back of panel, enclosed primary fuses, card holders and name plate.

Each wathour meter Cat. No. includes 110-volt, 5-amp. Type IS-4 single-phase wathour meter, current transformer and potential transformer with fuses and supports. Wathour meter is mounted on front of main panel and instrument transformers and fuses on the back.

**G-E Automatic Station Type RF Novalux Constant-Current Transformers**

For Operating A.C. 6.6-Ampere Series Lighting Loads  
 †2300 Volts (No Taps)—60 Cycles

Type RF with Cage

Designed for use in an unattended substation. Can be used for any indoor installation.

Built in practically any capacity and for any commercial voltage, frequency and secondary current; but it is recommended that, on account of the high secondary voltage, capacities not exceeding 20 kw. be operated with single-circuit secondary. Sizes from 25 to 70 kw. are furnished with multi-circuit secondary.

Can be started up automatically with coil together and with only one lamp on circuit, regardless of capacity of transformer. Current surge not sufficient to destroy lamp.

Transformers are not provided with any taps, either for voltage or for partial load operation. Because constant voltage is maintained in the stations, no primary voltage tap is necessary. Because of high inherent reactance of transformers, if a partial load tap is furnished, operating characteristic will be impaired.

Equipped with protective screening of expanded metal. Balancing mechanism supported on ball bearings.

*3200509	3080.00	70	42	96.6	10600	14500	3000	2500

\*Built with multi-circuit secondary. Can be operated either single or multi-circuit.

†All of these transformers will operate from 2200 to 2400 volts. No primary voltage tap or partial load tap provided. If 80 per cent load tap is desired, add 10 per cent.

**G-E Pole Type RO Novalux Constant-Current Transformers**

For Operating 6.6-Amp. Series Lighting Loads  
 \*2300 Volts (with 2000-Volt Tap)—60 Cycles

The Type RO is a constant current transformer which operates automatically. It can be mounted on poles in remote districts or where subdivided downtown lighting circuits are desired. It can be controlled by Novalux controllers, time switch, or main oil switch at the station.

Built in sizes ranging from 1 to 30 kw., to operate at any commercial primary voltage and frequency or secondary current, but the standard transformer is for 60 cycles, 2300 volts on the primary and 6.6 amperes on the secondary. The 2300-volt transformer will operate satisfactorily on from 2200

to 2400 volts and a tap is provided on the primary for operation at 2000 volts without reduction of output.

The RO Transformer is positive and automatic in action, requiring no attendant or substitution for starting or shutting down. A Novalux controller or similar remote control device can be used for operating the transformer. These features are combined with the same current regulation through as wide a range as offered by the best station-type-constant-current transformer. This feature alone practically guarantees the normal life of the Mazda lamps operating on a circuit controlled by such a transformer. The efficiency is almost the same as for the station-type transformer and the power-factor is 80 per cent at maximum load.

The high internal reactance of the transformer serves to protect the lamps at starting and acts instantaneously to check surges on the line which would otherwise tend to shorten the life of the lamps.

The moving secondary coil with its high repulsion gives almost perfect regulation from full load to dead short circuit. This feature not only protects the lamps from changes in current, because of changes in secondary load, but also protects the lamps from fluctuations in primary voltage.

Prices include oil.

Lightning arresters must be used on transformers on both primary and secondary for protection.

## G-E Subway Type RO Novalux Constant-Current Transformers

For A.C. 6.6-Ampere Series Lighting Circuits  
Single-Circuit Secondaries

A constant-current transformer designed to operate automatically and be mounted in subways or manholes. It can be controlled by Novalux controllers or by any of the present methods of remote control.

Since poles carrying circuits overhead are being removed from many of the city streets, it was found desirable to use some type of transformer which could be mounted underground and thereby connected directly to the underground feeder circuits and to the underground street lighting circuits. This requirement resulted in the development of a subway type RO transformer.

This transformer is almost identical with the pole type, except that it is enclosed in a specially designed cast iron water-proof tank. It is necessary on the 25

and 30-kw. size subway transformer to construct it in a double-deck type, because of the necessity for the transformers to be narrow enough to be lowered and installed in a manhole, the cover of which is only 32 inches in diameter, maximum. The four leads are each brought out at a separate terminal.

Subway transformers are equipped with oil indicating plugs installed in the tanks to indicate the oil level without requiring the removal of the cover. The tanks should be filled with the top oil plug open until the oil runs out and then the plug should be closed. To test for oil level at any time the lower indicating plug should be opened. In case the oil does not flow out, this plug should be closed again and the top plug opened, additional oil being poured in until it flows therefrom. The plug should then be closed again.

If the primary circuit leads into the subway from overhead, pole-type cutouts can be used. If, however, the primary circuit is entirely underground, the D and W subway fuse cutouts must be used.

Prices include oil and hanger hooks.

For special voltages other than 2300, information upon application.

For special frequency only (25, 30 or 40 cycles) in ratings up to and including 20 kw., add 30 per cent.

For 50 cycles, use 60-cycle prices.

For special frequency and special voltage, information upon application. For special secondary current only (from 5.5 to 20 amperes) use 6.6-ampere prices.

Fuses and cutouts not included in Cat. No. or price.

Lightning arresters must be used on all transformers for protection, if supply and load circuits are not entirely underground.

No. 10-C oil included in price: \*20 gallons; \*\*50 gallons; \*\*\*65 gallons; †95 gallons; ‡90 gallons.

§Weight of oil not included; add 7 pounds per gallon.

2300-volt tap is good for operation from 2200 to 2400 volts; extra tap provided for operation at 2000 volts.

(A) single deck. (B) double deck.

## G-E Type RO Pellet Lightning Arresters

Pole and Subway Type—Outdoor Service Only

Recommended for protection of both the primary and secondary sides of constant-current transformers.

Pellet arresters are single-pole, for outdoor use on both the constant potential side and the load side of constant-current transformers. Each design has a minimum and maximum voltage rating and under no circumstances should it be applied to a circuit the voltage of which can exceed the arrester's maximum rating as shown in the table. Where selection of arresters for the protection of the load side of the transformer is to be made, the arresters should never be applied to a transformer of a larger kilowatt rating than shown in the table.

### For Protection of Primary Side of Transformers

Where Transformer Is Connected to a System, the Neutral of Which is Not Grounded

\*Only for installations at altitudes below 6000 feet. For altitudes above 6000 feet, obtain special recommendations.

\*\*Secondary amperes 6.6 and 7.5.

†Compression chamber type.

‡where transformer is connected between an outside wire and neutral, use one pellet arrester on outside wire. Use also on neutral wire a compression arrester, Cat. No. 146187 (\$3.50 each, shipping weight 1.3 pounds; standard package 24) if voltage to ground is not over 300 volts; if, because of unbalancing, voltage is between 300 and 750 volts, use Cat. No. 2906822G3 (\$6.00 each, shipping weight 4 pounds; standard package 24). Use two arresters at an installation made between outside wires.

## G-E Novalux Protectors

## G-E Type CR7841-C Novalux Remote-Control Apparatus

For Use with Type RO Transformers and Novalux Controller

Open circuits in series street lighting systems are unavoidable, especially on aerial circuits, and it is desirable from the standpoint of "safety first", that when an open circuit does occur, the primary of the main transformer be de-energized. This Novalux protector has been developed to operate in conjunction with a CR7841 Novalux controller, and its function is to open up the switch in the controller as soon as an open circuit takes place.

The mechanism of the Novalux protector consists of two relay contactors with armatures connected together through a horizontal dashpot. One of the relays is energized by the controlling circuit, the other by the load circuit to be protected. Under operating conditions, the contacts of the series control type are open and the contacts on the multiple control type are closed. When an "open" occurs in the load circuit, the relay in the load circuit becomes de-energized and the control relay contacts are closed on the series type (opened on the multiple type) thus de-energizing the operating coil of the controller. This allows the controller contacts to open, de-energizing the primary of the constant-current transformer.

After the "open" in the load circuit has been repaired, the protector can be reset (reconnecting the transformer to the main system) by means of a push rod conveniently located at the top of the protector.

The protector is housed in a cast iron casing. The working parts are submersed in oil for insulating and dampening purposes.

Cat. No.	Each	COIL RATING			*Ship. Wt. Lbs.

3045296	132.00	110 Volts	7.5	Multiple	60

\*Less Oil.

Pole Type Without Top

Designed to control Type RO pole or subway transformers by means of an adjacent series circuit or a multiple pilot-wire control circuit. With either series operating coil rated from 2.5 to 20 amperes at any frequency or with shunt operating coil at 110, 220, 440 volts, 50 or 60 cycles or 110, 220 volts, 25 cycles; in three types—normally operated, normally closed, latched-in. Also furnished for subway mounting when necessary. Switch is for use on any voltage up to and including 7500 volts and the most popular voltages with current ratings are as follows: At 7500 volts switch will break 15 amperes; 6600 volts, 25 amperes; 4500 volts, 35 amperes; 2300 volts, 50 amperes or 220 volts, 100 amperes. Operates at any frequency.

Subway Type

The wattage of operation coil is such that enough heat is generated to overcome any congealing effect and switch may be used in almost any weather condition which will be encountered in the northern hemisphere, without sluggish operation. The high-potential test on this controller is 25000 volts from power to control from power to ground, or from control to ground.

Pole type switch is mounted in pressed metal casing with cast iron cover which is not connected to switch mechanism.

Three moving parts—two readily replaceable contact tips and solenoid, together with necessary levers.

Subway design switch is same as pole type in respect to electrical characteristics. Tank and cover are cast iron. All connectors are arranged for wiped joints.

## All-Night Latch Type

Identical with the CR7841-C rated 7500 volts, 15 amperes, except that it is equipped with a special latch with following operation: When control circuit, either series or multiple, is first turned on, controller will engage and lock in. If control circuit fails or is disconnected, controller still remains engaged. If control circuit is again energized, controller still remains engaged but will be unlatched. When control circuit is again de-energized, controller will drop out. This is designated as the all-night latch type, CR7841-C5-11 (with series operating coil) and CR7841-C6-12 (with shunt operating coil).

The hand lever may be used to close the controller manually, and the controller may be disconnected by operating the control coil by means of the hand lever.

## G-E Type CR7505-H5 Novalux Photoelectric Controllers

For controlling sign lights, floodlights, street lighting circuits, airway and airport lighting. An efficient master of the lighting circuits which it controls by responding to changes in daylight intensity.

Cover has a window of clear glass which allows light to fall on phototube.

The device consists of phototube, Pliotron amplifying tube with associated apparatus, sensitive relay, thermal timer, CR2820-1713 relay and CR2810-1265 contactor. Controlling element is the phototube. With a voltage of proper magnitude and polarity applied between the two elements, the device passes a current proportional to the amount of light falling on it. The current (a few micro-amperes) which is set up in the phototube is amplified by a tube of the G-E Pliotron type. A sensitive relay is connected in plate current circuit of Pliotron, and is energized or de-energized in accordance with amount of light on phototube. Contactor is picked up and dropped out only when sensitive relay is in extreme "in" or "out" position, and then only after a few seconds time delay caused by thermal timer. With two adjustments, one of which controls intensity at which unit picks up in evening; the other controls intensity at which unit drops out in morning.

Contact ratings of 1265 relay: 15 amperes rating at 110 volts a.c.; 15 amperes, 220 volts a.c.; 10 amperes, 125 volts, d.c.; 5 amperes, 250 volts d.c.; 2.4 amperes, inductive load, 125 volts d.c.; 1.2 amperes, inductive load, 250 volts d.c. Rating of 1265 contactor would be 4 amperes at 110 volts a.c. with a lamp load.

Complete information and prices on application.

## G-E Type SL Novalux Series Transformers Subway and Aerial Types Protective Device and Film Cutouts

For 60-Cycle, 6.6-Ampere Constant-Current Circuits

Pole Type

The Type SL Transformer is an insulating transformer, the primary winding of which is energized from a long series circuit and the secondary of which is used for supplying current to a small number of lamps connected in series and located where the high potential of the ordinary current series circuit would be objectionable.

Certain classes of lighting require a lower potential than is found on long series lighting circuits, and yet as they function similarly, it is desirable to control them simultaneously with the street lights.

The Type SL Transformer affords an ideal method for this control as the low-voltage series circuit is turned on and off with the closing or opening of the main constant current transformer circuit.

Fixtures with series sockets and film cutouts must be used on these transformers.

The 0.04 to 1-kw. sizes contain no compound; 1 to 5-kw. sizes are compound filled; both are air-cooled. The 5, 7.5 and 10-kw. sizes are oil-filled.

Suspension hooks are furnished with all Type SL Transformers which have a capacity of over 4 kw. If cross arm suspension is required, specify hanger brackets.

Protective devices are included with the transformers except as noted. On subway-type transformers of 0.25 to 4-kw. capacity, the protective device is assembled in the cap of the transformer.

**G-E Novalux Cutouts**

For Type SL Transformers and Loop Sectionalizing Application

Cutout with Thyrite By-Pass

Disconnecting switch for Type SL transformers rated up to 10 kw., 6.6 to 20 amperes primary; 7.5 kw., 5 amperes primary.

For loops not exceeding 1500 volts (load voltage) 4 to 20 amperes.

Surge voltage by-pass when new Thyrite by-pass is included.

Open circuit shunt, short circuiting transformer or loop in case of sustained open circuit (as from broken line or burnt-out transformer) when Thyrite by-pass or film cutout is used.

Use on any series constant-current circuit up to 10000 volts (operating voltage) to ground, up to 20 amperes normal current.

Thyrite by-pass (or film cutout) must be used in all cases except where connected load consists of Type SL transformer with secondary protective device. If Novalux cutout with Thyrite by-pass or film cutout is used, secondary protective device can be omitted.

Standard package, 2; shipping weight, 27 pounds.

Cat. No. and price do not include Thyrite by-pass or film cutout.

Cat. No. 2991604G1,

Cutout with Cross-Arm Hanger ..... each \$23.00

Cat. No. 2991604G2,

Cutout with Channel Hanger ..... each 23.00

**Thyrite By-Pass**

Consists of small Thyrite cylinder, two metal end-caps with electrodes forming enclosed spark gap, and one fusible washer pressed on gap electrode.

Thyrite has a negative resistance characteristic, the resistance decreasing as applied voltage is increased.

The Thyrite cylinder is designed so that the rated maximum normal operating voltage produces negligible loss—in the order of 1 watt. A high voltage surge traveling on the line finds in it a low resistance path across the transformer or loop, however, and is therefore by-passed.

Extra heavy surges arc over the spark gaps without damage to cutout or connected apparatus. Power current flows only until end of first half cycle.

Sustained overvoltage due to open circuit in load greatly increases heating in Thyrite cylinder, melting fusible washer, mechanically completing circuit between end caps, short circuiting load. Time: approximately 1½ minutes, depending on voltage applied.

**G-E Type IL Novalux Series Transformers**

For Use on 60-Cycle, 6.6-Ampere Constant-Current Circuits

Pole-Base Type

Allow the use of high efficiency series lamps where high potential is impracticable and unsafe. No film cutout is required; each lamp is independent of the others in circuit. In case of an accident to one or more, remainder of lamps on circuit burn without interruption.

For use with pendent units, transformers can be mounted on the cross arms of poles.

When lamp wattage varies between 8% above and 20% below normal, secondary current will not vary more than 1.0% with normal primary current and frequency.

**Single Light**

For operating one 6.6, 15, or 20-ampere series lamps from 6.6-ampere constant-current circuit.

Special transformers can be furnished for any commercial current, frequency, or lumen lamps. \*Can be furnished in vault type.

†1000/2500-lumen transformers are 1:1 ratio and secondary leads supply 6.6 amperes for both 1000 and 2500-lumen lamps. 2500/4000-lumen transformers have secondary leads supplying 6.6 amperes for 2500-lumen lamps and 15 amperes for 4000-lumen lamps. 4000/6000-lumen sizes also have leads which furnish 15 amperes for 4000-lumen lamps and 20 amperes for 6000-lumen lamps. 6000/10000, 10000/15000 and 15000/25000-lumen sizes have one set of secondary leads only supplying 20 amperes since the current required on all the leads is the same.

‡Maximum voltage which can be obtained by means of a voltmeter.

§Series sockets with film cutouts must be used with these transformers.

## G-E Type H Distribution Transformers Single-Phase, 60 Cycles, Self-Cooled

G-E Single-Phase Distribution Transformers are built on the distributed core, which has been found best adapted both electrically and mechanically to this type of transformer.

Various coil constructions have been developed to meet the particular requirements of designs depending upon unit size and voltage rating. In the larger sizes, circular coils of either disk or cylindrical form are used on account of their greatly superior mechanical qualities, and the facilities they give for rigid mechanical support.

The windings of these G-E Distribution Transformers are carefully dried and filled under

pressure with an insulating compound. This process not only removes all moisture from the insulation and seals the windings against the entrance of moisture, but also makes the winding a solid mass, thus giving it greater mechanical strength and heat conductivity. In the core-wound transformers this treatment is applied to the complete unit, consisting of core and coils. In the form-wound transformers the complete winding is treated as a unit before assembly on the core.

### For Nominal 440 or 550-Volt Circuits

**APPLICATION.**—By connection of the low voltage leads outside the tank, transformers are arranged for series, multiple or three-wire service.

**SERVICE.**—Suitable for outdoor or indoor installation.

**SUSPENSION HOOKS.**—Hooks are provided with, and included in the weight of all sizes up to 100 kv.-a., inclusive.

**For Nominal 4000-Volt Circuits**

These transformers are to provide service where it is more economical or desirable to connect transformers across phases than between line and neutral on 2300-4000-volt Y circuits. The use of these transformers give the same service voltages as 10:1 ratio transformers connected between line and neutral.

APPLICATION.—Transformers listed below are also suitable for operation as follows:

High Voltage Rating—4330/4114/3898

Low Voltage Rating—125/250

By connection of low-voltage leads outside the tank, transformers are arranged for series, multiple or 3-wire service.

SERVICE.—Suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Hooks are provided with, and included in weight of all sizes up to 100 kv-a., inclusive.

## G-E Type H Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled  
For Nominal 6600 and 11000Y-Volt Circuits

APPLICATION.—For operation on 6600-volt circuits and for supplying 2300 or 4000-volt distribution and motors.

Transformers having voltage rating of 6600/11430Y to 2300 are, when operated in bank, suitable for transforming from 6600 to 2300; from 6600 to 4000Y or from 11430Y to 2300. They should not be used connected in Y on both high- and low-voltage sides simultaneously to transform from 11430Y to 4000Y as this connection may result in the presence of excessive stresses in the windings due to harmonic voltages.

SERVICE.—All sizes are suitable for outdoor or indoor installation.

SUSPENSION HOOKS.—Suspension hooks are provided with and included in the weight of all sizes up to 50 kv-a., inclusive.

**Name Plate Voltage Rating:**  
6600/11430Y/6270/5940 to 2300

## G-E Type H Distribution Transformers

Single-Phase, 60 Cycles, Self-Cooled  
For Nominal 13200-Volt Circuits

APPLICATION.—For 13200-volt circuits and for supplying service voltages 600 and below. Transformers in Line 1 are also suitable for operation as follows:

High Voltage Rating—13750/13060/12375 to

Low Voltage Rating—125/250

By connection of low-voltage leads outside the tank, transformers having low-voltage rating of 120/240 are arranged for series, multiple or 3-wire service. Transformers having low-voltage rating of 240/480 are suitable for series and multiple service only.

SERVICE.—Suitable for outdoor or indoor installations.

SUSPENSION HOOKS.—Provided with and included in weights of all sizes up to 50 kv-a., inclusive.

**Name Plate Voltage Rating:**

**G-E Air-Cooled Transformers**

Type M—For Indoor and Outdoor Service

Type D—For Indoor Service Only

G-E Air-Cooled Transformers have a wide range of applications on circuits 600 volts and below. Such applications include supplying the proper voltage for special lamps, tools, bells, buzzers, airport lights, brazing, welding, testing and industrial heating equipment. They are also used for insulating circuits to promote safety, operating lights and portable tools from power circuits, boosting voltage, phase changing and many other unusual applications.

Type M Transformer

In transformers rated 10 kv-a. and below, as well as auto-transformers of equivalent physical size, the Type M construction is used. It forms a solid, compact unit which dissipates heat from its external surfaces by radiation. In the larger sizes, the Type D, natural-draft construction is used. The transformer is effectively cooled by air currents which enter ventilating holes in the housing and circulate around the core and coils.

The transformer is effectively cooled by air currents which enter ventilating holes in the housing and circulate around the core and coils.

These transformers are built in standard ratings up to 50 kv-a. and 600 volts, 60 cycles. Special transformers, up to 200 kv-a. for 60-cycle circuits, are built from an extensive line of standardized parts, economically and for quick delivery. They are applicable to circuits of 600 volts and below.

Type D Transformer

Type M transformers, with the exception of the larger sign-lighting and boosting transformers, may be adapted to enclosed wiring installations through the addition of a junction box directly over the leads and bushing. The junction box can readily be attached to units already installed as well as to new transformers.

Small Type M Transformer with Junction Box

The 90-degree junction boxes can be provided for Type D transformers. These facilitate conduit connections, as they can be mounted on the cover plate in four different positions. The use of this box is optional with standard Type D single-phase units, as conduit may be run directly into the side plates. However in phase-changing and special units, the leads of which are brought through the cover these junction boxes must be used for conduit connection. In all Type D transformers separate boxes are required for primary and secondary leads.

## G-E Transformers Used as Auto-Transformers for Boosting Voltage

Air Cooled, Single or 3-Phase, 60 Cycles

Transformers for sign lighting are extensively used for boosting single or 3-phase circuits by connecting them as auto-transformers. They are particularly adapted for boosting the 3-phase voltage of a secondary network system.

As they can be connected in series or in multiple, a 5, 10 or 20 per cent boost is possible as shown in the tabulation below. Because of the small voltage change required in such applications, the output of these small transformers is exceedingly large in comparison with their physical size.

The kv-a. output of one single-phase unit, connected as an auto-transformer, is one-third of the bank output.

Unit Kv-a. of Transformer	Kv-a. BANK OUTPUT—3 UNITS Y CONNECTED AS AUTO-TRANSFORMERS—WHEN CONNECTED FOR THESE RATIOS			
	199Y to 220Y	199Y to 239Y	398Y to 420Y	398Y to 440Y
.100	3.3	1.8	6.3	3.3
.250	8.25	4.5	15.75	8.25
.500	16.5	9	31.7	16.5
.750	24.75	13.5	47.25	24.75
1	33	18	63	33
1.5	49.5	27	94.5	49.5
2	66	36	126	66
3	99	54	189	99
5	165	90	315	165

## 3-Phase Y-Connected Auto-Transformers Type M—For Indoor or Outdoor Service

The Y-connected auto-transformers listed below are designed primarily to boost the voltage of a 3-phase secondary network system. They give the desired voltage at the minimum cost. Because of the small physical size as compared to the kv-a. output of the bank, an installation very compact and neat in appearance is obtained.

Auto-transformers of the ratings listed consist of three units with three leads brought out of each unit. In banks with a rated output of 50 kv-a. and below, the three units are mounted side by side on a metal plate. The larger banks consist of three separate units to be individually mounted.

Although the 208 to 230-volt transformation is most common, a great many special ratios are required such as 199 to 230 volts, or 208 to 230 and 240 volts. Auto-transformers of all these special ratios can be furnished quickly and economically as the same parts and construction are used as on the listed ratings.

Care should be exercised in ordering auto-transformers that the installation will meet local electrical inspector's requirements.

Because of the heavy secondary leads and complications in connections, standard junction boxes are not recommended. When enclosed wiring is desired, a modified design can be furnished.

Primary 199Y 208Y Volts—Secondary 220Y 230Y Volts

## G-E Transformers and Auto-Transformers for Phase Changing

Air-Cooled, 3 to 2, or 2 to 3-Phase, 50 or 60 Cycles

### Type M—For Indoor or Outdoor Service

### Type D—For Indoor Service Only

Phase-changing transformers and auto-transformers are primarily of use when a phase change is made on a distribution system. They permit the economical use of motors and other polyphase equipment which would otherwise become obsolete.

The two lines of auto-transformers are not interchangeable and it is necessary to determine whether the 2-phase circuit is 3-wire or 4-wire in order to select the proper unit. These auto-transformers cannot be used on a 4-wire circuit having the mid-points of the two phases connected together. For this application, the 2-winding transformer is recommended, although especially designed auto-transformers can be furnished.

**G-E Type M Service Transformers**

To Supply or Insulate 115 or 230-Volt Circuits

Air-Cooled, Single-Phase, 60 Cycles

For Indoor or Outdoor Service

For Oil Well, Mine and Pump-House Service

These transformers are designed especially to be used at the end of long lines such as are generally used to supply oil well, mine and pump-house service. Because of the wide voltage variation likely to be encountered at such locations, these transformers are designed to operate satisfactorily from 440 to 525 volts and may be used on either a 50 or 60-cycle circuit. The secondary voltages will vary accordingly. They are arranged to be connected directly into a conduit system and are supplied with 3/4-inch pipe nipples and 12-inch leads as shown in illustration.

Primary 440 Volts—Secondary 110 Volts

Cat. No.	Each	Kv-a. Output Cont. 55° C. Rise	Depth In.	Wall Space Inches	*Junction Box Cat. No.	Approx. Ship. Wt. Lbs.
9TM852A	\$27.00	.100	3 7/8	4 7/8 x11	Conduit	17
9TM853A	31.00	.250	3 7/8	4 7/8 x12 1/4	Connection	23
9TM854A	42.00	.500	4 1/2	5 1/2 x10 7/8	Only	35

\*Supplied with 3/4-inch pipe nipple.

These transformers are also suitable for 50-cycle operation.

**For General Light and Power Service**

These transformers are designed to reduce the voltage of 230, 460 or 575-volt power circuits to either 115 or 230 volts for supplying lights and other equipment. Some of the ratings are also suitable for insulating one circuit from another without change in voltage. In addition to the many single-phase applications, they can be used in banks on poly-phase circuits.

The classification "service" is applied to transformers used to supply a standard utilization voltage from another standard utilization voltage.

## G-E Type M Service Auto-Transformers

To Supply 115 and 230-Volt Circuits  
For Indoor or Outdoor Service  
For General Light and Power Service

	220	110, 115, 120	
Primary	230 Volts—Secondary	220/110	Volts
	230	230/115	
		240/120	
		3-Wire	
		2-Wire or	
		60 Cycles	

Air-Cooled, Single-Phase, 60 Cycles

Auto-transformers are more economical and smaller than a transformer designed to carry the same load. Within their voltage limitations, they will perform the same function as service transformers with the exception of insulating two circuits. They may be used to obtain 115 volts from a 230-volt circuit, to derive a neutral on a 230-volt 2-wire circuit, or to balance a 115/230-volt 3-wire circuit. They also may be used in banks on polyphase circuits.

Care should be exercised in ordering auto-transformers that the installation will meet local electrical inspector's requirements.

## G-E Type M Air-Cooled Transformers

For 32-Volt Applications  
For Indoor or Outdoor Service

	110/220	30.6
Primary	115/230 Volts—Secondary	32 Volts
	120/240	33.4

Single-Phase, 60 Cycles

These transformers derive 32-volt circuits from 115 or 230-volt lighting or power circuits; 32-volt portable lamps and portable tools are frequently used in mines, steel plants, neat packing plants and in damp locations to prevent injury in case of accidental grounding of the circuit through the operator's body. The 32-volt lamps are often more economical and have longer life than those rated at higher voltages.

These transformers can also be used as auto-transformers to boost the voltage of circuits. When so connected, the kv-a. output of each transformer will equal the kv-a. output listed below, multiplied by  $\left(\frac{H.V.}{H.V.-L.V.}\right)$  and the kv-a. output of a 3-phase bank will be three times that of each unit.

## G-E Type M Sign-Lighting Transformers

For 11 1/2 or 23-Volt Applications  
For Indoor or Outdoor Service

	110/220	11/22
Primary	115/230 Volts—Secondary	11 1/2/23 Volts
	120/240	12/24

Air-Cooled, Single Phase, 60 Cycles

Designed primarily for sign lighting. As these transformers are compact, light in weight, and weatherproof, they can be mounted in any convenient location such as the back of the sign.

These transformers have a wide range of application, as both the primary and secondary windings are arranged for series-multiple connections. They may be connected as a transformer with the secondary supplying 11 1/2 or 23 volts, 2-wire or a 23/11 1/2 volts, 3-wire; also as an auto-transformer to deliver 126 1/2 or 138 volts from a 115-volt supply, or 241 1/2 or 253 volts from a 230-volt supply. Two or more units may be used in various combinations to obtain many other special voltages.

One of the many special applications is pipe thawing. Two transformers are used, the primaries being connected in multiple and the secondaries in series to give 46 volts. This gives sufficient capacity for thawing pipes up to 1-inch diameter. The current can be controlled to some extent by looping the secondary cables.

**G-E D & W Type Oil Fuse Cutouts**

**Subway Type**  
100-200 Amperes

Should not be installed to give overload protection.

These cutouts are particularly advantageous for the following applications: where short-circuit currents are extremely heavy; where very high-speed operation is essential; all subway installations; where protection and switching are required for replacement of potheads; where quiet operation is desirable; where cutouts are exposed to smoke, corrosive fumes, salt air, explosive gases or inflammable dust; all indoor installations; where it is desired to have no exposed live parts, whether cutout is in the open or the closed position.

**Pole Type**  
100-300 Amperes

**RELIABILITY.**—Fuse link is under oil, which prevents deterioration from oxidation or electrolysis. Gases are released, but oil is confined. Subway fuse cutouts have operated for years while submerged in water.

**SIMPLICITY.**—Fuse links are quickly and easily replaced. Oil level can be maintained without removing cutouts from service.

**OPENING UNDER LOAD.**—Heavy, self-aligning contacts make possible repeated opening under load.

**WIDE RANGE OF PROTECTION AFFORDED.**—Cutouts may be fused closely to load, providing simultaneously, protection against overload and heavy short circuits.

Used on distribution systems at tap-offs, sectionalizing points and outdoor installations of distribution transformers, constant current transformers, capacitors and industrial equipment such as hoists, etc. Used either indoor or outdoor; because of inverse-time blowing characteristics, afford best protection against short circuits for motors and control. These characteristics will assure the blowing of fuse link before destructive burning occurs in the copper of the motor or control.

Cutouts have the following operating advantages:

**SAFETY IN FUSE LINK RENEWAL.**—Fuse link is surrounded by a Textolite sleeve, which prevents mechanical damage or accidental electric contact, while carrier is being inserted in cutout. All live parts are enclosed. Fuse carrier is locked in place before circuit is closed.

**SAFETY IN OPERATION.**—Flame from arc is confined within housing, thus preventing ignition of explosive gases and external damage.

**G-E Fuse Links**

For D & W Type Oil Fuse Cutouts

**Plain Type**

A carton consists of 10 links.

\*The bushings on Cat. No. 9F2A9 and 9F2A15 cutouts are not the separable-sleeve type but are designed for connection to the cables using standard splicing material.

The 2500-volt cutouts are suitable for operation on 4000-volt Y-connected circuits with dead grounded neutral. In all cases two cutouts are required between lines.

†The plain type links for 100 amperes and below listed for these cutouts will operate satisfactorily on 5000 volts.

‡When these cutouts are used on 5000-volt circuits where reactive type fuse links are required, use links Cat. Nos. 295601 to 295605. Links Cat. Nos. 295591 to 295600 are only good for 2500-volt circuits.

## G-E Expulsion Type Distribution Fuse Cutouts

Cat. No. 6X2433

The design of these cutouts embodies the following features:

**SAFETY.**—Fuse holder is removed from circuit when door is opened—door closes upward, protecting lineman should cutout be closed on a short circuit—door can be opened or closed by a switch hook; cutout hangs low on the cross-arm.

**RELIABILITY.**—Expulsion principle of operation—gases are expelled outside housing—interlocking barriers prevent conducting gas

from short-circuiting terminals—high interrupting capacity. Heavy clips insure good contact and prevent overheating.

**SIMPLICITY.**—Cutouts are suitable for right or left-hand entrance leads. Link holder can be removed and replaced with one hand; cannot be replaced upside down. Hanger adjustable for 2 3/4 to 4-inch crossarm.

**DURABILITY.**—Glazed porcelain housing with molded compound door and galvanized hanger.

### 60 Amperes, 0 to 5000 Volts

#### Interrupting Capacity, 1500 Amperes at 60 Cycles

Cat. No. 6X2433 is a primary cutout complete with link holder in porcelain box. Arranged for both right and left hand entrance. No fuse links.

Cat. No. 6X2433 ..... each \$10.80

Cat. No. 9F4A3, Link Holders ..... each 3.40

Cat. No. 29X843, Disconnecting Blade ..... each 1.40

## G-E Transformer Fuse Cutouts Tables for Selecting Proper Fuse Cutouts

Cutouts are so chosen that full-load current of transformer will never exceed 65% of fuse link rating for expulsion cutouts, and 75% of rating for oil-filled cutouts. It is imperative that the maximum short-circuit current at the point of installation shall not exceed the interrupting rating of the cutout. When two or more cutouts of the same type are shown, they all meet the voltage and current requirements but have different interrupting-capacity ratings. See cutout listing for these ratings.

**Table I—Distribution Fuse Cutouts for Single-Phase Transformer Installations (Except Subway)**

The cutouts given for Y ratings can be used only when the neutral is grounded.

Transformer Kv.-a.	Type of Cutout	RATED VOLTAGE OF TRANSFORMER

**G-E Magnetic Blow-Out Lightning Arresters For Electric Railway Circuits MD-3, D.C.**

**For Indoor Service**

Std. pkg., 12.  
 Ship. wt., 12 lbs.  
 Cat. No. Circuit Voltage Each  
 164403 0-350 \$13.50  
 164405 350-750 13.50

**For Outdoor Service**

Std. pkg., 12.  
 Ship. wt., 20 lbs.  
 164404 0-350 \$27.00  
 164406 350-750 27.00  
 2516587 350-750 33.00

Prices on arresters for voltages higher than 350-750 quoted on request.

**No. 9LA7A11 G-E Aluminum Lightning Arresters D.C.**

Arresters should be installed on each car and at the stations and substations; on each feeder and each generator or synchronous converter.

Suitable for either indoor or outdoor installations. Mounted in a wooden box.

Circuit volts, 500-750. Standard package, 4.

Shipping weight, 45 pounds.

No. 9LA7A11.....each \$50.00

Prices on arresters for voltages higher than 500-750, quoted on request.

**G-E Open Type Fuse Cutouts with Drop-Out Fuse Holders**

Cutout gives a positive indication that circuit is open whenever a fuse link is blown, by causing the fuse holder to drop to a horizontal position.

Fuse holder tube is weather-resistant and mechanically strong; will not warp or split. Can be easily replaced without renewing metal parts of fuse holder.

A cone on fuse holder cap maintains contact for sufficient time after fuse link melts to assure complete interruption of short

circuit current within holder tube.

An automatic latch, incorporated in toggle mechanism, prevents fuse holder from falling out of support, curing the recoil resulting from expulsion action. A switch hook socket permits the use of any standard switch hook.

**1-100 Amperes, 5000 Volts**

Interrupting Capacity, 2000 Amperes at 60 Cycles  
 Flashover Values—Dry, 43 Kv.; Wet, 26 Kv.

## G-E Thyrite Lightning Arresters

Station Type—For Indoor or Outdoor Service

### Single-Pole Units

Thyrite, the active element of the Thyrite arrester, has no time lag, has definite characteristics that remain unchanged in use, acting as a virtual insulator at low voltage, but a good conductor at high voltages. For the first time, accurate predictions can be made of arrester performance under various operating conditions.

Thyrite arresters can be installed indoors or outdoors on any voltage. They are built of self-contained units, each having the necessary gap structure and Thyrite elements enclosed in a wet process porcelain container, sealed at each end by heat-treated aluminum castings. Small size, economical, simple and easy assembly, result from the interchangeable unit system used.

The following information applies to single-pole arresters; for 3-phase circuits, use three single-pole arresters.

Cat. No. 9LA1D8

Arresters rated 73 kv. and below are suitable for application up to 6000 feet altitude.

## G-E Distribution Lightning Arresters

\*Altitude: Arresters except Cat. Nos. 2981437G5 and 2981437G7 can be used at these ratings up to 6000 feet altitude, but when arrester Cat. No. 2981437G4 is to be used between 4000 and 6000 feet, the purchaser should state the approximate altitude at which it is to be installed so that it can be furnished with the correct gap setting. For altitudes above 6000 feet, the purchaser should obtain special recommendations for all arresters. Cat. Nos 2981437G5 and 2981437G7 can be used only up to 4000 feet.

Pellet Type

9LA10A1. Use two arresters at a single-phase installation between outside wires. A system is considered solidly grounded when no resistance or reactance is used in grounding the neutral. †Cat. No. of arrester does not include any form of mounting. Refer to Table 4.

‡Compression-chamber type, others are pellet type except those marked †, which are Thyrite type.

§These compression-chamber arresters are also suitable for grounded-neutral circuits of ratings up to 750 volts. The following table shows how they differ.

Cat. No.	Poles	LENGTH LEAD, INCHES	
		Line	Ground
2906822G1	Single	36	18
2906822G2	Single	18	18

\*Use only when the system neutral is solidly grounded.

\*\*Minimum voltage rating.

†Also suitable for 4100 grounded Y.

‡Prices on arresters above 73 kv. on application.

Crystal Valve A.C. Lightning Arresters

Crystal Valve A.C. Lightning Arresters

Typical Crystal Valve Arresters

Crystal Valve Lightning Arresters represent the latest development in the design of highly efficient lightning protective apparatus and are the result of some highly successful researches in the rectifying properties and value characteristics of refractory conducting crystals. They are characterized by the following important advantages:

- Low initial or relief voltage for lightning disturbances.
- High discharge rate due to low internal impedance.
- They are of the true valve with all its attendant advantages.
- Cathode Ray Oscillograph tests show that their speed of operation is exceedingly high.
- Cathode Ray tests show time or speed characteristics are little affected by the steepness of the wave fronts.
- Does not cause radio interference.
- Bodies and caps are made from high grade wet process porcelain.
- They suffer no measurable deterioration in service.
- Their operating characteristics permit of their handling rapidly recurring discharges over long periods of time without danger of self destruction.
- Their impedance decreases as the severity of the discharge increases.
- They require no inspection other than a visual inspection.
- They are small in size and a low first cost, permitting them to be installed directly on the transformer pole and used to protect small transformers as well as large.

Due to their operating characteristics they have an unusually long life. Crystal Valve Arresters are regularly provided with line and ground leads of No. 6 B. & S. gauge stranded cable, 18 inches long and with hot galvanized strap hangers.

Fig. 1 Nos. 50935, 50925, 50927, 50931 With Type CA Mounting Bracket

Fig. 2 Nos. 50932, 50933 and 50934 With Type DA Mounting Bracket

All voltages specified are maximum phase-phase voltages.

For straight single-phase circuits use arresters recommended in Table 1.

Treat single-phase circuits split from 2-phase, and single and 2-phase circuits split from 3-phase circuits in accordance with the recommendations covering the particular type of circuit from which they are split.

For 2-phase 4-wire ungrounded circuits use arresters recommended in

Table 1. For 2-phase 3-wire circuits with ungrounded neutral use arresters recommended in Table 1 for the phase wires; for the neutral wire use arresters rated at 71 per cent of the phase-phase voltage.

For the neutral wire of 3-phase 4-wire ungrounded Y circuits use arresters rated at 58 per cent of the phase-phase voltage.

For neutral protection on either 2 or 3-phase circuits where the neutral is solidly grounded, use Types T-300, N or NS arresters. If, due to unbalancing, the voltage between neutral and ground is between 350 and 750 volts, use type CV form D arrester, listed below.

Form 11 arrester is designed for application to systems having phase to phase voltages of from 15,000 to 25,000; these include Delta systems, Y systems with solidly grounded neutral, and Y systems with ungrounded neutral. On a 4-wire ungrounded Y system form 11 arrester should be used on the phase wires while the form 10 arrester should be used on the neutral. On 4-wire Y systems with solidly grounded neutral, for neutral protection use Type T-300, N or NS arresters. If, due to unbalancing, the voltage between neutral and ground is above 350, use any of the listed Crystal Valve Arresters rated for the maximum voltage existing between neutral and ground.

### Three E Outdoor Expulsion Fuse Disconnects

Type F.V.H.

Type F.V.F.

These fuse disconnects are equipped with hinges which enable operators to remove the fuse tube for re-filling. The fuse links are enclosed in live rubber tubing. On low capacities this tube confines the gases until sufficient pressure is created to expel the entire blown link and rubber tube. It also absorbs some of the mechanical shock caused by blowing on heavy short circuit. Obtainable from 7500 to 69,000-volt. Maximum rating, 100 amperes.

### Three-E 6600 and 8600 Type Air Break Switches

These switches are easily installed under almost any mounting conditions. Contacts are full floating, self-aligning, and generous in design. Several types of operating mechanisms available. In voltages from 5000 to 69,000-volt, and from 200 to 4000 amperes.

8600 Type

6600 Type

### Three-E Indoor Type Gang Operated Disconnecting Switches

The construction is the same as the single pole switches. Any combination of front and back connection can be obtained. Operating handles are available for any operating or mounting conditions. A complete line of accessories, such as insulating barriers, etc. can be furnished.

### Three-E Metal Enclosed Switching and Fuse Cabinets

Metal enclosed cabinets can be installed economically and operated safely on industrial power supply installations. The space required is much less than open type bus work.

All cabinets are designed so that the equipment is readily accessible for alteration or inspection.

### Three-E Outdoor Bus Supports

Type HFU

Type AFU

Type MFH

Type TFU

Type RFU

Type FFU

Three-E Outdoor Bus Supports are of interchangeable construction. The illustrations are for flat mounting and are designated as Type FU. For pipe mounting, the letter P should be substituted for the letter F.

These bus supports can be used on either a.c. or d.c. service. They are available for voltages from 7500 to 69,000.

A complete line of accessories, such as mounting and adjustable top adapters, is available.

Ask for Bulletin Giving Complete Information

**Three-E Indoor Type Disconnecting Switches**

The double blade type of construction is used throughout, giving the advantages of low temperature rise, self-aligning contacts, etc. The clips are cast copper.

Built for voltages from 110 to 34,500 and ampere capacity from 100 to 5,000.

Switches can be supplied in all combinations of front and back connection, of the single throw, double throw, and transfer types with or without blade locks, for flat or pipe mounting on steel, slate, marble, ebony asbestos and alberene stone.

Insulating barriers, blade stops, and terminals can be supplied for all switches.

**Three-E Form A-1 Indoor Bus Supports For Flat Vertical Bus Bar**

Type HF

Type HP

Type AF

Type AP

Type KF

Type KP

Type GF

Type GP

All bus supports illustrated are the Form A-1. Heavy pressed steel mounting bases are used on this form of bus support.

These supports are available for voltages from 5000 to 34,500 and the cantilever strength at insulator cap. of 6000 inch pounds.

Indoor bus supports are also furnished in what is known as Form A. This form uses heavy cast malleable bases.

## Three-E Gang Operated Telescoping Isolators

This device is known as porcelain clad and was designed principally for economy and safety. The isolator uses less space than any other disconnecting device of the same capacity.

All live parts are completely enclosed in porcelain, both in the open and closed positions. This feature minimizes electrical accidents to operators and workmen.

The isolator can be mounted vertically or horizontally.

Available in voltages of 7500, 15,000, and 23,000 volts and for 600, 1200, and 2000 amperes.

Ask for Bulletin Giving Complete Information

## Three-E Clamp Insulator Supports

**Type CIL Pipe Mounting**  
**Type MIL Flat Mounting**  
 Consists of porcelain spools held by metal clamps. The lower half is made of heavy pressed steel and the top half of heavy pressed non-ferrous metal. Also available with a heavy cast malleable base instead of pressed steel. Can be used on either a.c. or d.c. service. Available for conductor sizes ranging from  $\frac{5}{16}$  to  $3\frac{1}{2}$  inches.

## Three-E Bus Clamps

The Three-E line of bus clamps is complete in every respect. Clamps can be supplied for all commercial size bars.

The illustrations show a medium duty Type H and Type A, and a heavy duty Type H and Type A Clamp.

## Three-E Electrical Copper Fittings

For Wire, Cable, Rod, Tubing and Bar

The above illustrations show but a small portion of the Three-E line of conductor fittings. Fittings can be supplied for any size or kind of conductor.

## Three-E Iron Pipe Fittings

The above illustrations show but a small portion of the Three-E line of pipe fittings. Fittings can be supplied for the commercial pipe sizes in all manner of shapes to meet most any condition.

**G-E Type I-16 Watthour Meters**  
Single-Phase, 60 Cycles

Designed for residential or commercial service. For high torque large overload capacity; excellent overload accuracy, no tendency to creep.

A single iron casting forms the base, the housing for motor element and the support for damping magnets, bearings and register.

Furnished with glass cover and special sealing arrangement. All parts readily accessible when back plate is removed.

Meters can be supplied with top bearing detent to prevent negative registration for \$1.00 net extra.

\*This is a 6-terminal meter with a 3-wire winding intended for use with 2 separate current transformers on a 3-wire circuit.

†3-wire, single-phase circuits can be metered with the 2-wire meter Cat. No. 10X209 when connected with double-primary, single-secondary, 3-wire type of current transformer.

‡Cat. Nos. of meters do not include transformers and the order should state the ratio of the transformers with which they will be used that they may be calibrated and furnished with suitable register to read directly the primary energy. When meters are to be suitable for use with instrument transformers but not rated nor equipped with direct-reading registers for any particular transformer combination, order should so state.

Meters may be used on circuits the voltage of which may be 10% above or below the minimum rated voltage of the meter. When ordering meters for voltages outside of these limits, specify the normal operating voltage.

**G-E Type D-14 Polyphase Watthour Meters**

2-Element, 60 Cycles

A single iron casting constitutes the base and frame and provides a rigid mounting for the parts as well as a housing for the elements. Parts are readily accessible. The one-piece terminal block is removable by removing two screws, and includes 8 current terminals and 7 potential and demand terminals.

Glass cover fits against cork gasket.

If wanted for circuits having voltage more than 10% above or below the minimum rated voltages below, specify the normal operating voltage; otherwise order by catalog number.

## G-E D.C. Watthour Commutating Meters

For House Service

Type C-6—Side Connected—Metal Cover

In this meter the resistor for the potential circuit is combined with the light load compensating coil, no other external resistance being used. The entire meter element is supported on a frame of aluminum alloy. The back is also cast of aluminum alloy. Cover is of zinc with domed front, which adds greatly to its strength, and provided with a single window to observe the dial.

The external finish is dull black, presenting a neat appearance. The frame and various parts inside the meter retain their natural finish of aluminum and brass.

37608	71.00	230-240	50				

Meters can be equipped with ratchet device to prevent negative registration for \$2.00 net extra.

\*When ordering meters for voltages outside of these limits the normal operating voltage should be specified.

## Type C-15—Bottom Connected—Metal Cover

This meter is identical in principle with the Type C-6 meter and retains those essential features which insure successful operation.

Meter differs largely in mechanical details, which are possible by limiting its ratings to 5, 10 and 15 amperes, 2 and 3-wire, and a maximum of 250 volts.

These differences are reduction in size and weight and the use of Type I-16 meter parts, such as register, terminals, and magnets, including micrometer full-load adjustment device.

Has removable terminals and separately sealed terminal chamber.

### 2-Wire

Meters can be equipped with ratchet device to prevent negative registration for \$2.00 net extra.

\*When ordering meters for voltages outside of these limits the normal operating voltage should be specified.

**G-E Watthour Meters  
For Switchboard Service  
60 Cycles**

Type IS-8

This line combines the improved elements of G-E front-connected meters with the narrow switchboard case. May be mounted on 5 1/2-inch centers permitting maximum number on panel of given width.

Finished in aluminum interior and black exterior. Steel parts galvanized before finish is applied.

Self-contained sizes have good accuracy on loads up to 300%; ample margin of safety on greater loads. Polyphase types have potential indicating lamps. In case of an open circuit, lamp on that phase shows "out." If wanted for circuits having voltage more than 10% above or below minimum rated voltages, specify normal operating voltage.

**Type IS-8 (Single-Phase) Self-Contained Meters  
2-Wire**

*21X961	118.00	460-480Δ and 266-277Y	..

\*Meter only. Transformers should be ordered by Cat. No. and rating. If meters are to be used with instrument transformers in customer's possession, ratio of transformers must be given on order. Unless otherwise specified, meters ordered with transformers or for use with transformers in customer's possession will be calibrated and furnished with suitable register to read directly the primary energy. When ordering meters for voltages outside these limits, specify normal voltage.

Meters can be supplied with top bearing detent to prevent registration for \$1.00 net extra.

Prices on meters for other frequencies on request.

**G-E Type KT Electric Time Meters**

Consists of a little synchronous motor, geared to a registering counter, the whole mounted in a case about 4 1/2 inches in diameter and 2 3/4 inches deep.

Meter will measure actual operating time of any electric equipment depending on a.c. For example, meter may be used to indicate machine hours by showing motor running hours, the "on" time of street lighting circuits, etc.

Supplied to register hours, tenths of hours or minutes. In ordering, specify register desired, voltage and cycles of circuit; whether portable, conduit or switchboard type.

115 Volts, 25, 50 or 60 Cycles	each	\$17.00
230 Volts, 25, 50 or 60 Cycles	each	18.00
460 Volts, 25, 50 or 60 Cycles	each	19.00

**Jewels and Pivots for Watthour Meters**

**Jewels—Mounted in Screws**

**No. 39924—Sapphire**

For d.c. meters, Types C, C-5, C-6, C-7, C-9 and C-15; single-phase, house and switchboard meters, Types I, I-8, IS-2 and IS-3 and polyphase meters Types D-3, D-4, D-9, DS-2, DS-3, DS-4, DS-5 and DS-9

No. 39924, in Lots of 10..... \$6.60

**No. 6X453—Sapphire**

For single-phase meters, Types I-14, I-15, I-16, I-18, IS-4, IS-5, IS-6, IS-7 and IS-8; for polyphase meters, Types D-6, D-7, D-8, D-14, D-15, DS-6, DS-7, DS-11, DS-12, DS-19, DS-20, DS-21 and DS-23 and for test meters, Types IB-5, IB-6, IB-7, IB-8 and IB-9.

No. 6X453, in Lots of 10..... \$5.40

**No. 39925—Diamond**

For d.c. house service meters of Type C construction. No. 39925, in Lots of 10..... \$52.00

**No. 118569—Diamond**

For d.c. meters of double armature construction, Types CS, CS-2, CS-3, CS-4, G-2 and G-3. No. 118569, in Lots of 10..... \$52.00

**No. 39926—Diamond**

For Types E and G house service d.c. meters of earlier than Type C construction. No. 39926, in Lots of 10..... \$52.00

**No. 295309 Pivots**

For all types of meters. Packed in boxes of 25. No. 295309.....per box \$3.85

## Model 45 Weston Portable D.C. Instruments

For general testing work for rugged service. Accurate within 1/2 of 1%. Permanent magnet moving coil type. Shielded from external magnetic fields.

Enclosed in a polished hardwood case provided with a hinged cover and carrying handle.

Voltmeters, ammeters and milliammeters are 8x8x4 3/4 inches in size; scale length, 5 3/16 inches. Approximate weight, 9.9 pounds.

Resistance, 100 ohms per volt, self-contained to 750 volts inclusive; ranges from 750 to 25000 volts may be had by using external multipliers. Voltmeters having a higher sensitivity than 100 ohms per volt available on order.

Single Range					
Ranges	Each	Scale Divisions	Ranges	Each	Scale Divs.

\*Scale adapted for use in connection with cadmium test on storage batteries.

### Ammeters

Self-contained up to and including 25 amperes; above 25 amperes, with external shunts. Ranges, 1.5 to 25 amperes may be had with external shunts, at base price plus price of shunt selected. Specify when desired for use with Weston Rotary Shunt, as an instrument with a special movement having a resistance of 10 ohms and a sensitivity of 5 milliamperes must be supplied for this purpose. This special instrument is supplied without extra charge.

Ranges	Each	Scale Divs.	Ranges	Each	Scale Divs.	Ranges	Each	Scale Divs.

±150/15/3	15/1.5/.15	100.00		150

†Conforms with A.R.A. specifications. ‡Designed for railway use; all ranges protected by replaceable fuses.

## Model 155 Weston Portable A.C. Instruments

Movable iron type. Scale length, 5 1/4 inches. Black walnut case without cover, leather carrying handle.

Power consumption: Voltmeters at 115 volts, 6.5 watts; at 115 volts, 25 or 60 cycles, 6.5 volt-amperes. Ammeters at 5 amperes, 1.1 watts; at 5 amperes, 25 cycles, 1.1 volt-amperes; at 5 amperes, 60 cycles, 1.4 volt-amperes.

### \*Voltmeters

Self-contained up to and including 750 volts. Higher ranges may be obtained by using Models 311 or 457 portable potential transformers in conjunction with 150-volt instrument. Dimen.: to 300 v., 7x7 1/8 x 3 1/4"; above 300 v., 7 3/4 x 8 3/4 x 4". Wt.: to 300 v., 4 lbs.; above 300 v., 5 lbs.

75	56.00	123	.28	150	750	56.00	1.10	.002	150

Double range milliammeters, prices on application. Leather cases: For voltmeters up to and including 300 volts, ammeters up to and including 300 amperes, and all milliammeters, \$11.00; for voltmeters above 300 volts, \$14.00; for ammeters above 300 amperes, \$12.00.

**Model 433 Weston Portable A.C. Instruments**

Electromagnetic or moving iron type instruments contained in bakelite cases with leather carrying handles. Shielded from external magnetic fields.

Instruments can be left in circuit continuously without overheating, therefore no contact key is used.

Dimensions, 5 1/16 x 6 1/32 x 3 1/2 inches; scale length, 3 1/16 inches. Weight, 2 1/2 pounds.

**Voltmeters**

Self-contained for ranges shown. Higher ranges obtained by using multipliers or Model 311 or 457 potential transformer in conjunction with a 150-volt instrument; for use on frequencies up to 133 cycles per second.

Voltmeters to be used on 500 cycles, add \$4.00 to prices.

Single Range		Double Range		Triple Range			
Ranges	Each	Resist. Ohms	Scale Divs.	Ranges	Each	Resist. Ohms	Scale Divs.

Also available in double range combinations.

**Model 432 Weston Portable D.C. and Single-Phase A.C. Wattmeters**

This wattmeter is of the electro-dynamometer type, accurate within 1/2 of 1%. Shielded from external magnetic fields.

Made with double voltage and single and double current ranges, self-contained up to 300 volts and 50 amperes. Potential ranges up to 750 volts are available by using external multipliers, higher ranges require the use of potential transformers such as the Model 311 or 457. Current ranges can be extended beyond 50 amperes by using a 5-ampere instrument in conjunction with either the Model 312, 313 or 461 current transformers.

Potential ranges have maximum voltage capacities as shown in the range listing. The maximum capacity of the current ranges is 50% greater than the normal rated current capacity.

These instruments are accurate on all commercial frequencies up to 133 cycles per second. The phase angle is negligible on such frequencies. They may be used on d.c. and checked in comparison with d.c. standards. The temperature error is less than 1% for 25° C. change in temperature.

As the working error is negligible, they may be left in circuit continuously without appreciable effect on the accuracy.

Power consumption: Potential side, at 115 volts, 1.2 watts; at 115 volts, 25 or 60 cycles, 1.2 volt-amperes. Current side, at 5 amperes, .67 watt; at 5 amperes, 25 cycles, .73 volt-ampere and at 5 amperes, 60 cycles, .98 volt-ampere.

Dimensions: 6 1/2 x 5 1/4 x 3 1/2 inches; scale length, 3 1/16 inches. Weight, 3 1/4 pounds.

## Model 430 Weston Portable D.C. Instruments

Accurate within 1/2 of 1%. Permanent magnet moving coil type. Unshielded from external magnetic fields.

Voltmeters are made with single and triple ranges at a standard sensitivity of 1000 ohms per volt, with 5000 ohms per volt also available at an increase in price.

Ammeters and milliammeters regularly made with single and triple ranges, self-contained up to 50 amperes inclusive. Double ranges available on special order. Microammeters are made only in single range form.

Voltmeters with triple ranges only; sensitivity, 1000 ohms per volt. Available with self-contained ranges of 300 volts and 50 amperes. Prices on application.

Dimensions, 5 1/16 x 6 1/2 x 3 1/2 inches; scale length, 4 inches. Approximate weight, 3 1/2 pounds.

100	55.00	1650			

Leather case for single range voltmeter, single or triple range ammeter, milliammeter or microammeter, \$7.50; case for triple range voltmeter, \$8.00.

## Model 280 Weston Portable D.C. Instruments

Accurate within 1%. Permanent magnet moving coil type.

Voltmeters and volt-ammeters have resistances of approximately 100 ohms per volt.

Dimensions, 4.4x4.6x1.5 inches; scale length, 2 1/16 inches. Approximate weight, 1.1 pounds.

### Voltmeters

Range	Each	Scale Divs.	Range	Each	Scale Divs.
1 2	\$25.00	60	150	\$25.00	75

†For railway and automatic train control testing. Leather Case for Model 280 Instruments.....each \$3.00

**Model 540 Weston Portable Fused 6-Range Volt-Ammeters For D.C. Only**

Accurate within 1%. Permanent magnet moving coil type. Contained in bakelite case with hinged cover and leather carrying strap.

All ranges fused for protection from overloads. Voltage ranges protected by single fuse located in a cap. Each of current ranges protected by individual fuse mounted in special compartment covered by hinged back. Ranges are brought out through selector switch to 3 binding posts, a common +, a current and a potential post. By this arrangement instrument can be so connected to circuit that both current and voltage readings can be taken by turning switch without changing connections. Line is closed at all times when connecting to ammeter binding post.

Dimensions, 3 5/16 x 4 7/8 x 2 1/2 inches; scale length, 2 1/16 inches. Approximate weight, 2 pounds.

150/30/3	50.00	30/3/0.3	60
150/30/3	50.00	30/0.6/0.06	60

Extra replacement fuses in assorted lots of one dozen, \$1.00. When ordering, give range of instrument and quantity of fuses desired for each range.

**Model 330 Weston Portable A.C.**

Accurate within 1% at 60 cycles, 2% at 25 to 100 cycles. Iron core dynamometer type. Contained in a mottled red and black bakelite case with hinged cover and leather carrying handle.

In this type of voltmeter, low ranges combined with an unusually high sensitivity are possible. For use wherever current drain caused by instrument must be limited to a low value. Although the high sensitivities of the copper oxide type of voltmeter are not possible with this meter, nevertheless its accuracy is unaffected by wave form and variations in frequencies over relatively wide limits.

A range-changing switch is incorporated for selection of ranges. To eliminate parallax errors and facilitate accurate readings, a knifedged pointer and mirror scale are used.

Dimensions, 3 15/16 x 4 7/8 x 1 13/16 inches; scale length, 2 1/16 inches. Approximate weight, 1 3/4 pounds.

For measurement of a.c. voltages below .2 volt, the use of Model 482 thermocouple instruments is recommended.

Ranges	Ohms per Volt	Scale Divisions	Each

50	13.50	175	50
Leather Case for Model 528 Instruments	each		\$2.50

**Model 539 Weston Portable Current Transformers**

For use with Model 528 ammeters. Primary ranges: 2, 5, 10 and 20 amperes, self-contained primary; maximum of 200 amperes inserted primary. Weight, 2 3/8 pounds. Model 539, Size 5 1/2 x 4 1/4 x 1 7/8 Inches .....each \$28.00

**Model 461 Weston Portable Multi-Range Current Transformers**

Has 4 self-contained primary ranges of 10, 20, 50 and 100 amperes to which connections are made by means of binding posts; with one turn of wire through core opening a primary range of 800 amperes results; with 2 turns, 400 amperes; with 4 turns, 200 amperes, etc. Secondary current rating at normal primary current is 5 amperes. A short-circuiting switch is provided for secondary winding to prevent damage to transformer if secondary circuit should be opened while current is on primary.

Maximum secondary burden is 5 volt-amperes. Transformer is contained in a black, moulded bakelite case.

Has a ratio accuracy sufficiently high for use with Models 155 and 433 ammeters or Models 329 and 432 wattmeters without the use of correction curves when used on frequencies of from 25 to 133 cycles per second, and with secondary burdens within limit of 5 volt-amperes. Line potentials up to 2500 volts are permissible. When ordering correction curves state model, type and serial number of instruments to be used and frequency or frequencies at which curves are to be made. If more than one curve is required with different combinations of instruments, list those combinations. State length and size of leads to be used, otherwise 10-foot leads of No. 14 B. & S. gauge (resistance .05 ohms) will be assumed.

Dimensions, 6 $\frac{5}{8}$ x7 $\frac{1}{8}$ x2 $\frac{3}{4}$  inches. Weight, 7 $\frac{1}{4}$  pounds.  
 Model 461.....each \$73.50  
 Leather Case.....each 9.00

**Model 457 Weston Portable Potential Transformers**

Designed to meet the demand for a compact, light weight portable transformer which can be conveniently transported with other measuring instruments, and yet will perform with a high degree of accuracy.

Contained in a black walnut case with hinged cover, lock and leather carrying strap.

Primary range is changed by means of a range-changing switch which enables the ratio of primary

ranges of 4 to 1 to be easily selected.

Designed for a maximum secondary burden of 25 volt-amperes at 115 volts and frequencies of from 50 to 150 cycles per second. Ratio accuracy is within one-half per cent from 0 to 25 volt-amperes secondary burden which is sufficient for use with Models 155, 433, 329 or 432 without the use of correction curves. If correction curves are desired, state model and serial numbers of instruments to be used, and frequency or frequencies at which curves are to be made. If more than one curve is required with different combinations of instruments, list combinations.

Primary to secondary tested for breakdown at 10000 volts for one minute.

Frequency per second, 50 to 150 cycles.

Dimensions, 8 $\frac{5}{16}$ x5 $\frac{3}{4}$ x5 $\frac{1}{2}$  inches. Weight 11 $\frac{1}{2}$  pounds.

Normal	Volts		Each
	3000/750 to 115	Maximum 2500/625 to 125 at 50 Cy.}	
3000/750 to 115	3000/750 to 150 at 60 Cy.}	2500/625 to 125 at 50 Cy.}	\$145.00
3000/750 to 100	3750/937.5 to 125		145.00

**Model 564 Weston Volt-Ohmmeters**

The equipment consists of a Model 301 with four 1000 ohms per volt voltage ranges of 600/300/30/3 and resistance ranges of either 0-100000 and 0-1000 ohms or 0-1000000, 0-100000 and 0-1000 ohms. A self-contained 4 $\frac{1}{2}$ -volt C battery is provided for potential. A pair of 50-inch test leads is shipped with each Model 564.

Any change in potential of the self-contained battery can be readily compensated for by short circuiting the pin-jacks X-X and adjusting the pointer to the zero ohm position by turning the voltage adjuster located at the top of the nameplate.

All voltage ranges are brought out to pin-jacks. A toggle switch connects the meter in circuit as a voltmeter or ohmmeter. The instrument sensitivity, when used as an ohmmeter, may be changed by a toggle switch from 1 to 100 milliamperes when using the 100000 or 1000-ohm scale; when using the 1000000-100000-1000-ohm instrument the sensitivity may be changed from .1, or 1 to 100 milliamperes. This simplifies checking up trouble in high or low resistance circuits.

Shipping weight, 6 pounds.

Model 564, 0-1000000-Ohm Instrument.....each \$35.50

Model 564, 0-100000-Ohm Instrument.....each 30.00

**Model 663 Weston Volt-Ohmmeters**

Supplies the demand for an ohmmeter capable of measuring very low and very high resistances.

This volt-ohmmeter is made possible by the use of a super-sensitive instrument requiring only 50 microamperes for full scale deflection. This instrument is connected into circuit network by means of a control switch which selects desired range of 6 available ohmmeter ranges, or as a milliammeter or voltmeter for d.c. and voltage measurements. Resistance measurements from .1 ohm to 10 meg-ohms; voltage measurements to 1000 volts and current measurements to 100 milliamperes are available.

The scale of the indicating instrument is marked 0-1000 ohms, 0-2.5-5-10 volts and milliamperes. The following ranges are available: 0-5-25-250-25000-250000 ohms center scale; 0-200-1000-10000-100000-1000000 ohms full scale; 0-2.5-10-100-250-500-1000 volts full scale, 1000 ohms per volt; 0-1-5-25-100 milliamperes full scale at 500 millivolts.

Model 663, Less Carrying Case.....each \$60.00  
 Model 663 Carrying Case.....each 5.00

**Model 614 Weston Foot-Candle Meters**

A direct reading foot-candle meter calibrated directly in terms of tungsten filament standard lamps. Responds quickly to even slight variations of light.

With this meter any user of light can analyze lighting conditions and determine the correct illumination for each particular and individual purpose.

Does not require the use of batteries, voltage or lamps; has indefinite life with permanent calibration.

The operating equipment consists of an indicating instrument, a 3-way toggle switch and a Photronic photo-electric cell all mounted on a bakelite panel. The instrument reads directly in foot-candles and has 3 ranges, 0-50, 0-250 and 0-500 which are controlled by the 3-way toggle switch. The Photronic photo-electric cell or light target is hinged so that it can be lifted from the horizontal to the vertical position.

This meter is always ready for instant use. To measure illumination on a horizontal plane it is only necessary to open cover, hold instrument in a horizontal position with the cell or light target lying in its socket and then take the readings. The toggle switch simplifies switching to any of the 3 meter ranges so as to give a good scale deflection for any value of light intensity within maximum range of instrument.

Assembled in a moulded black bakelite carrying case equipped with hinged cover and strap handle. Length of case, 7 inches; height, 3 1/2 inches; width, 2 1/4 inches.

Weight, 1.8 pounds.

Model 614.....each \$50.00

**Model 603 Weston Portable Direct Reading Illumination Meters**

To measure light intensities with this foot-candle meter it is only necessary to turn the searching unit to the light to be measured and then read its value in foot-candles directly on the 50-division uniformly divided scale.

The Photronic cell is instantaneous in its response to light variations; color response closely approximates that of the human eye.

Calibration of the scale is permanent.  
Dimensions, 8 1/4 x 8 3/4 x 4 1/2 inches. Weight, 7 pounds.

**3-Range Type**

Consists of an accurate indicating instrument mounted in a carrying case and a searching unit or light target with a 6-foot cable permanently attached to instrument.

Three ranges, 0 to 10, 0 to 50 and 0 to 250 foot-candles are selected by means of a 3-position switch.

Model 603, 3-Range Type.....each \$95.00

**6-Range Type—For Street Lighting Work**

Similar to the 3-range type. Six ranges: 0-1, 0-2.5, 0-5, 0-25, 0-100 and 0-500 foot-candles. Readings are possible to as low as .02 foot-candle on 1 foot-candle range.

A bank of 16 Photronic photo-electric cells are permanently mounted in hinged cover and act as a light target for the 3 low ranges. For these ranges it is simply necessary to slip off cover and plug the 10-foot flexible cord into socket connecting the instrument. The 3 high ranges utilize a standard 2-cell light target which plugs into the instrument in a similar manner. All ranges selected through a 6-position switch on instrument panel.

Model 603, 6-Range Type.....each \$300.00

**Weston Switchboard D.C. Instruments**

Models 24, 57 and 251

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded.

Model 251 harmonizes with Models 167, 214, 215, 216, 226 and 261 instruments.

Prices cover instruments finished in dull black. Models 24 and 57 have cast iron cases; Model 251, pressed steel. Regularly supplied in surface type, back connected cases. Flush type in Models 24 and 57 can be supplied at no extra cost.

**Wattmeters, Power Factor Meters, Frequency Meters and Synchrosopes**

These instruments, representing a complete line for the conventional switchboard, are available in designs matching the voltmeters and ammeters listed above.

Prices and complete bulletins furnished on application.

## Weston Switchboard A.C. Instruments Models 151, 156 and 261

Accurate within 1%. Movable iron type; magnetically shielded. Model 261 forms a part of a complete matched line including voltmeters, ammeters, wattmeters, power factor meters, frequency meters and synchrosopes, details of which will be furnished on request.

Prices cover instruments finished in dull black. Models 151 and 156 have cast iron cases; Model 261, pressed

steel. Regularly supplied in surface type back connected cases. Flush type voltmeters in Models 151 and 156, at no extra cost. Flush type ammeters with ranges of 5 amperes or less supplied without extra charge, but for ranges above 5 amperes an extra charge of \$5.75 each will be made.

Power consumption: Voltmeters on 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

### Ammeters

Ammeters are for use on frequencies up to 500 cycles per second.

Model 151 or 156 ammeter can be furnished with self-contained capacities up to and including 500 amperes for use on potentials to 2300 volts. Model 261 ammeter is listed in one range only. This model is employed generally with current transformers, and the price shown covers instruments for currents up to 10 amperes, with scales figured to correspond to the transformers with which employed.

\*Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than the rated primary capacity of the current transformer, can be supplied at no extra charge.

### Voltmeters

For use on frequencies up to 133 cycles per second. Available for 500-cycle service at an extra cost of \$4.00.

With external resistors for ranges above 300 volts.

A special percentage ground indicator may be supplied for indicating grounds and their intensities on 3-phase ungrounded systems; information on application.

## Model 252 Weston Switchboard D.C. Instruments

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded. Forms part of a complete matched line including voltmeters, ammeters, wattmeters, power factor meters, frequency meters and synchrosopes, details of which will be furnished upon request.

With pressed steel case, dull black finish. Surface type, back connected.

This instrument, with suitable exploring coils, can be used as an electric resistance thermometer; information on application.

Ammeters provided with external shunts. Voltmeters self-contained up to 300 volts; sensitivity, approximately 80 ohms per volt. Voltmeters may be provided with a second but lower range at \$5.50 extra.

Diameter at base, 7<sup>21</sup>/<sub>32</sub> inches; projection from panel, 4 inches; length of scale, 5<sup>5</sup>/<sub>32</sub> inches. Approx. wt., 9 lbs.

## Model 260 Weston Switchboard A.C. Instruments

Accurate within 1%. Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish.

This instrument forms a part of a complete matched line, details of which will be furnished on request.

Power consumption: Voltmeters on 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes.

Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Size at base, 7<sup>21</sup>/<sub>32</sub> inches; projection from panel, 4<sup>1</sup>/<sub>32</sub> inches; length of scale, 5<sup>5</sup>/<sub>32</sub> inches. Weight, 8 pounds.

### Ammeters

Ammeters are for use on frequencies up to 500 cycles per second. Model 260 ammeter listed in one range only; employed generally with current transformers; price shown covers instruments for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than the rated primary capacity of the current transformer, can be supplied at no extra charge.

Model 260.....each \$35.00

### Voltmeters

Voltmeters are for use on frequencies up to 133 cycles per second. For 500-cycle service, \$4.00 extra.

With external resistors for ranges above 300 volts.

Volts	Scale Divs.	Each	Volts	Scale Divs.	Each	Volts	Scale Divs.	Each
75	75	\$37.00	150	30	\$37.00	500	50	\$46.00

**Model 610 Weston Switchboard D.C. Instruments**

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded. Harmonizes with all Model 610 instruments.

With pressed steel case, dull black finish. Flush type, back connected.

Model 610 instrument has 2 Mazda 6-volt (No. 40 T-3) lamps that provide indirect full scale illumination free from shadows. Lamps are operated from an independent circuit and may be conveniently replaced by removing 4 screws which hold the bakelite front.

Ammeters provided with external shunts.

Voltmeters have a sensitivity of 100 ohms and are self-contained at this sensitivity up to 300 volts; from 300 to 500 volts self-contained the sensitivity is 200 ohms per volt. Ranges from 500 to 1000 volts employ a Type 12 No. 1 resistance box at 100 ohms per volt. Voltmeters provided with a second but lower range at \$5.50 extra.

Size at base, 4x4½ inches; projection from panel, ⅞ inch; length scale, 3½ inches. Weight, 2 pounds.

130	65	37.00	300	30	41.00	750	75	53.00

**Model 502 Weston Switchboard D.C. Instruments**

Accurate within 1%. Permanent magnet moving coil type; magnetically shielded. Harmonizes with Models 496, 497, 498, 499, 500 and 501 instruments.

With pressed steel case, dull black finish. Surface type, back connected cases. Flush type model can be supplied at \$1.00 extra.

This instrument, with suitable exploring coils, can be used as an electric resistance thermometer; information on application.

Ammeters are provided with external shunts. Voltmeters have a sensitivity of approximately 100 ohms per volt and are self-contained up to 750 volts. Voltmeters may be provided with a second but lower range at an additional cost of \$5.50.

Size at base, 5¾x6 inches; projection from panel, 4½ inches; length scale, 5½ inches. Weight, 8 pounds.

**Model 496 Weston Switchboard A.C. Instruments**

Accurate within 1%. Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish. For flush type instrument, add \$4.00.

Power consumption: Voltmeters on 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Size at base, 5¾x6 inches; projection from panel, 4½ inches; length of scale, 5½ inches. Weight, 6 pounds.

**Ammeters**

Ammeters are for use on frequencies up to 500 cycles per second. Listed in one range only; employed generally with current transformers; price shown covers instrument for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than the rated primary capacity of the current transformer, can be supplied at no extra charge.

Model 496.....each \$35.00

**Voltmeters**

Voltmeters are for use on frequencies up to 133 cycles per second. For 500-cycle service, \$4.00 extra. Model 496 requires an external resistor for all ranges. For ranges up to 300 volts, resistor is mounted on studs at rear of instrument; for ranges between 300 and 750 volts a Type 3 No. 2 box is employed; for ranges above 750 volts, the use of a potential transformer is recommended.

Volts	Scale Divs.	Each	Volts	Scale Divs.	Each	Volts	Scale Divs.	Each
75	75	\$37.00	150	30	\$37.00	500	50	\$46.00
100	50	37.00	250	25	40.00	600	60	49.00
130	65	37.00	300	30	41.00	750	75	53.00

## Model 501 Weston Switchboard A.C. Ammeters

For use on frequencies up to 500 cycles per second. Listed in one range only; employed generally with current transformers, and price shown covers instrument for currents up to 10 amperes with scales figured to correspond to transformers with which employed.

Triplex instruments supplied in any combination of 3 rectangular a.c. or d.c. switchboard instruments; prices on application.

Accurate within 1%. Movable iron type; magnetically shielded. Surface type back connected case of pressed steel, dull black finish.

Power consumption: Voltmeters at 115 volts, 6.8 watts; on 25 or 60 cycles, 6.8 volt-amperes. Ammeters on 5 amperes, 1.1 watts; on 25 cycles, 1.1 volt-amperes; on 60 cycles, 1.4 volt-amperes.

Ranges slightly higher or lower than 5 amperes as required when maximum scale value is somewhat larger or smaller than rated

primary capacity of current transformer, can be supplied at no extra charge.

Size at base, 5 3/4 x 1 5/2 inches; projection from panel, 4 1/4 inches; length of scale, 5 1/8 inches. Weight, 17 pounds. Model 501 .....each \$100.00

## Model 600 Weston Small Panel Microammeters

Permanent magnet moving coil type. Regularly furnished in flush type bakelite case; also available with flush type metal case.

Scales are hand calibrated and basically have an accuracy of 2% except in rectifier type where percentage accuracy is about 5% due to inherent properties of rectifier.

Rectifier instruments can be made with a high sensitivity, and for many laboratory and field measurements, voltmeters with a resistance of as high as 10000 ohms per volt can be had. Such instruments can be used for power level measurements against high resistance loads and for any other position where extremely small energy drain is required. Similarly, d.c. instruments may be supplied in this model with sensitivities as high as 30000 ohms per volt.

Case Material	Bakelite	Metal
Flange Diameter	3 1/2 inches	3 3/4 inches
Body Diameter	2 13/16 inches	2 9/16 inches
Body Depth	1 3/4 inches	1 3/4 inches
Length of Scale	2 3/8 inches	2 3/8 inches
Approximate Weight	1 pounds	1 pounds

*100	\$26.00	3700	50	250	\$19.25	2300	50
200	19.25	2500	40				

\*Despite its low range, this instrument is subject to a temperature error of but 1% per degree Centigrade.

## Weston Switchboard D.C. Instruments Models 267, 269, 271 and 273 Fan-Shaped Ammeters, Milliammeters and Voltmeters

Permanent magnet moving coil type; magnetically shielded.

In surface type pressed steel cases with back connections, dull black finish, at prices shown. Model 269, with bakelite case at a surcharge of \$3.50 above regular price. When a bakelite case is used, instrument is not shielded.

**Condenser Meter**

Reads capacity in microfarads. Movable iron type; accurate within 3% when used on voltage for which they are adjusted. Supplied with an external box.

15-1.5 Microfarads, 30 Divs. each \$29.00

## Model 375 Weston Student Galvanometers

For student use in school laboratories and wherever a d.c. galvanometer of extreme sensitivity is not essential. Permanent magnet moving coil type.

Has a sensitivity of approximately 22 microamperes per division; resistance, about 23 ohms. Scale is zero-center with 60 divisions; calibrated 30-0-30 in millimeter divisions. As a galvanometer for portable use, instrument is mounted in 45° angle base; also without base for mounting in apparatus or on panels.

Dimensions: With mounting base, 3 3/4 x 3 3/4 x 3 17/32 inches; without mounting base—case, 3 1/4 inches; body, 2 3/8 inches. Scale length, 2 3/8 inches.

Model 375, with Mounting Base, Weight 12 Oz. .each \$13.00  
 Model 375, without Mounting Base, Wt. 8 Oz. .each 10.00

## No. 24 Sterling Pocket Ammeters

This pocket ammeter is universally used for testing dry cells. It has 0-35 ampere scale, 1-ampere divisions.

This is a durable instrument, having correct scale calibration and a clearly marked dial.

Full nickel finish.

Packed in individual boxes and supplied in a standard package containing 10 boxes. Shipping weight, 3 pounds.

No. 24. . . . .each \$1.00

## Sterling Pocket Voltammeters

Packed 1 in a box, 10 boxes in standard package. Shipping weight, 3 pounds.

### No. 44

Tests amperage of dry cell A batteries and voltage of both dry cell and storage A batteries; 0-35 amp. scale, 1-amp. divisions; 0-10 volt scale, 1/5-volt divisions.

No. 44. . . . .each \$1.50

### No. 45

Tests amperage of dry cell A batteries and voltage of either dry or storage B batteries up to 50 volts; 0-35 ampere scale, 1-ampere divisions; 0-50 volt scale, 1-volt divisions.

No. 45. . . . .each \$3.00

## Square D Voltage Testers

This voltage tester does not require lamps and operates on a.c. or d.c., indicating the voltage of either type. There is no danger of breaking and it will withstand hard usage.

Simple to operate. Place one wire in each side of the circuit and the indicator shows what the voltage is. Sharp metal points on end of long rubber-covered leads permits piercing insulation without damaging it. Fibre handles insulate the lead wires.

Can be carried in pocket.

Cat. No. 5000, Maximum Voltage, 600 D.C. . . . .each \$10.20  
 Cat. No. 5002, Voltage Tester Case. . . . .each 1.00

## Test-O-Lites

The Test-O-Lite contains two electrodes in a Neon gas filled bulb, each of which is connected in series with a suitable protecting resistor.

It will indicate voltage—a dim glow is shown when testing 110 volts, and on higher voltages up to 550 volts the glow is brighter in proportion.

Indicates whether a.c. or d.c. If a.c. both electrodes will glow, and if d.c. only one will glow and at the same time indicate the negative pole of the circuit.

Detects the live and ground wires. One can test whether a conductor has tension against ground or not by touching one of the leads with the hand.

Tests resistance leaks. Can be used as a pilot light if connected permanently to any circuit.

Furnished in a bakelite casing. Is no bigger than a fountain pen.

Test-O-Lite. . . . .each \$1.50

## Brach Fixed Neon High Voltage Indicators

TYPE "R"

TYPE "RC"

TYPE "RS"

Consists of a sensitive Neon tube enclosed in a glass protecting case with metal ferrules on each end connected to electrodes of the tube.

Designed for permanent installation. With sufficiently high voltage indicator will give an indication if only one end is attached to line.

Greater brilliance is obtained if a plate or other metal is attached to free end giving greater capacity to electrodes.

Wherever practical the indicator may be placed directly across a high voltage line, provided sufficient resistance is placed in series with tube to limit current to only a few milliamps. Another type of indicator has been developed recently for use across a line (or from line to ground) with a suitable resistance in series.

Also furnished when specified, at \$1.00 extra, with metal strap arranged to act as condenser plate and support one end of tube.

**Type R.**—Neon tube is a straight tube with electrodes about 3/4-inch apart. Will give an indication on 500 volts.

Type R. . . . .each \$2.50

**Type RC.**—Neon tube is straight but has a constriction between electrodes. Will give an indication on 500 volts.

Type RC. . . . .each \$2.80

**Type RS.**—Neon tube is of small bore tubing wound into a spiral. This type gives more illumination than Types R and RC when voltage is sufficiently high to operate same. Requires about 3000 volts for an indication.

Type RS. . . . .each \$3.70

## Brach Safe-T-Glow High Tension Detectors

Safe-T-Glow consists of a sensitive Neon tube mounted on cushion supports, the light of this tube being amplified by a mirror reflector. It is sensitive to the presence of high tension current and will start to glow at 2000 volts when exposed terminal is held in contact with high tension wire. With increased voltage the tube will glow at varying distances away from the wire, depending on the voltage.

Model A, with 3-Foot Handle for Circuits 2000 to 35000 Volts. . . . .each . . . . .

Model B, Same as Model A except with 6-Foot Added Extension to 3-Foot Handle for Circuits from 45000 to 220000 Volts. . . . .each . . . . .

# SWITCHBOARDS

FOR GENERAL POWER AND LIGHTING SERVICE

2300-VOLT 3-PHASE GENERATING STATION SWITCHBOARD

Whenever you are interested in the purchase of any type of switchboard, either for light or power, or both, let us submit figures on our product.

We feel that this catalogue will be in the hands of persons familiar with the electrical line generally and therefore that you are competent to make up a layout of practically any board you may wish a figure on.

With this in mind, we are soliciting your inquiries, asking that you give us detailed information when you submit your drawing.

## G-E Type CP-108 Trip-Free Air Circuit Breakers Manually-Operated

Particularly applicable to installations where reliable circuit protection and service with minimum maintenance are of importance.

A complete line of breakers up to and including 1600 amperes and 650 volts a.c. or d.c. These breakers have high interrupting ratings, are simple, compact and sturdy in construction, attractive in appearance, and all parts are fully accessible.

Accessories, including under-voltage device, shunt trip, and auxiliary switch, can be attached to breaker without affecting its calibration or interfering with normal operation.

**Triple-Pole, 250-Volt, 400-Amp. A.C. Breaker with 2 Over-Current Inverse-Time Devices**

600	600-1200	275	394	340	387	368	456	375	525
800	800-1600	290	431	360	436	375	505	395	574
1200	1200-2400	265	513	335	545	345	615	355	684
1600	1600-3200	275	735	345	845	355	920	365	1000

The above prices include time delay breakers mounted on a permanent base of the size given in dimension table.

Breakers listed above are rated 650 volts a.c. or d.c., in single and double-pole units, and 250 volts a.c. or d.c., in triple or 4-pole units. For 251 to 650 volts a.c. or d.c., see additions below.

### Permanent Base Dimensions

Description	Amperes	Height Inches	Width Inches	Thickness Inches
Single-Pole	15-800	24	8	1 1/2
Double and Triple-Pole	15-800	24	16	1 1/2
Double and Triple-Pole	1200	24	20	1 1/2
Double and Triple-Pole	1600	24	20	1 1/2
4-Pole	15-400	24	24	1 1/2
4-Pole	600-1600	24	28	1 1/2

### Additions

For triple or 4-pole breakers at 251 to 650 volts a.c. or d.c., add barriers at \$6.90 per breaker.

If bases larger than standard shown in dimension table are required add for extra ebony asbestos compound only \$2.00 per square foot for 1 1/2 or 2 inches thick and \$2.60 per square foot for 2 1/2 inches thick.

For dead-front operation of double or triple-pole breakers, add for steel cover plate, position indicator, extended handle, trip button and barriers, 15-1600 amperes, \$76.00.

### Deductions

To make breakers instantaneous trip omit time delay device at \$33.00 per coil for 15-1200 amperes and \$40.00 per coil for 1600 amperes. To make breakers non-automatic omit overload trip at \$69.00 per coil for 15-1200 amperes and \$76.00 per coil for 1600 amperes.

## G-E Type AF-1 Air Circuit Breakers

Single-Pole

Triple-Pole

The Type AF-1 breakers are for switchboard or panel-board service in the following ratings: 125 volts a.c. or d.c., 15-50 amperes; 250 volts a.c. or 250/125 volts d.c., 15-50 amperes; 250 volts a.c. or d.c., 51-100 amperes; 600 volts a.c. or 250 volts d.c., 100-225 amperes; 600 volts a.c. or 250 volts d.c., 226-400 amperes; 600 volts a.c. or 250 volts d.c., 401-600 amperes. Breakers of the 50-ampere frame capacity have an interrupting rating of 5000 amperes. All breakers above the 50-ampere frame capacity have an interrupting rating of 10000 amperes.

They are made single, double and triple pole for the 50-ampere frame size and double and triple pole for all other sizes. The breakers are quick-make, quick-break and trip-free. Breakers having an interrupting rating of 5000 amperes are equipped with time delay thermal trips only. Breakers having an interrupting rating of 10000 amperes are equipped with both instantaneous magnetic trip (for short circuits) and thermal time delay trip (for overload).

Silver alloy, self-aligning, non-welding pressure contacts, which produce a firm positive contact operating at low temperature, are standard on these breakers.

### Front Connected Only For Lighting and Power Distribution Panelboards Load Center and Meter Service

Amps.	125 Volts A.C.-D.C. Sgl.-Pole		230 Volts A.C. 125/250 Volts D.C. Dbl.-Pole		Triple-Pole		600 Volts A.C. 250 Volts D.C. Dbl.-Pole		Triple-Pole

500	50	269.00	60	321.00
550	50	278.00	60	333.00
600	50	288.00	60	345.00

The above breakers can be made back connected for switchboard application by adding studs as follows:

Amperes	50	100	225	400	600	
Studs	each	\$ .35	.50	1.20	4.50	5.35

Price covers one stud only and must be multiplied by number required for each breaker.

**G-E Type FK-33 Oil Circuit Breakers**

\*5000 Volts

These breakers are of the single-tank type, i.e., all poles in one tank, of cast and punched steel construction and operated by the universal Type HA-2 lever.

Furnished for manual and solenoid operation.

Breakers are furnished with stud and cable terminals. For bar connections, the cable terminals are omitted and connection bars are bolted to the stud terminals.

Cable terminals have cable holes as follows: 200 amperes, .625 inch in diameter; 400 amperes, .881 inch in diameter.

Illustration shows front view of Type P-5 self-supporting steel panel for isolated installations with Type FK-33 oil circuit breaker assembled for shipment.

**Manually Operated, Non-Automatic**

Operated by the Type HA-2 lever. This lever is equipped with provisions for a 1, 2 or 3-coil trip mechanism. Changeovers from non-automatic to automatic features can be made with a minimum amount of labor and cost. Automatic attachments with calibrating tubes are easily installed in the field. A complete line of transformer, relay, reactor and d.c. trip coils is available. Manually operated breakers have provision for mounting auxiliary switches. Breakers operated remotely may be equipped with magnetic locks.

\*The installation of apparatus on panel or switchboard is not recommended when that apparatus is subjected to pressure in excess of 2500 volts between phases for ungrounded systems or between lines and neutral for grounded systems. For such installations remote control apparatus is recommended.

**Solenoid-Operated, Non-Automatic—Single-Throw**

Furnished for mounting breaker and solenoid back to back on pipe framework. Breakers are made automatic by the addition of suitable tripping transformers and circuit-closing overcurrent relays.

Prices and complete information on solenoid-operated breakers on application.

**G-E Types FK-35 and FK-35Y2 Oil Circuit Breakers**

\*2500 and 7500 Volts, Single-Throw

Triple-Pole, Single-Throw, 7500-volt, 600-Ampere Breaker

Types FK-35 and FK-35Y2 breakers follow the standard unit design, i.e., each pole is integral with its own cover, tank, contacts and operating rod. Frame carries breaker mechanism and cross head. Double or triple-pole breakers are assembled on same frame, the former omitting the middle pole. Four-pole have a longer frame and cross head.

Furnished with stud and cable terminals. For bar connection cable terminals are omitted and connection bars bolted to stud terminal. Cable terminals have cable hole as follows: 600 amperes, 1.209 inch diameter; 800 amperes, 1.461 inch diameter.

**Features**

- Breakers adapted to either vertical or horizontal operation
- By making one member of breaker mechanism a bell crank.
- Interchangeability of breaker units of like rating.
- Each phase in separate tank.
- Heavy oval tanks suspended by hook bolts.
- Flared wedge contacts under heavy pressure.
- Arcing tips on FK-35Y2.
- Breaker opens by gravity accelerated by compression springs on operating rods with buffers to absorb shock.
- Full complement of stud and cable terminals.
- Bell alarm auxiliary switch with all operating levers.

**Manually Operated, Non-Automatic**

With HA-2 operating lever. Non-automatic breakers listed can be made automatic by the addition of suitable current transformers and automatic trip attachments.

\*Installation of apparatus on panel or switchboard is not recommended when apparatus is subjected to pressure in excess of 2500 volts between phases for ungrounded system or between lines and neutral for grounded systems. For such installations, remote control apparatus is recommended.

†Breaker frame support included.

**Double-Throw**

Double-throw FK-35 and FK-35Y2 breakers consist of two single-throw breakers, mechanical interlock and cross-trip for two operating levers. Order two breakers by Cat. No. and specify that they are to be operated as a double-throw equipment. Specify desired distance between operating levers 8, 9, 10, 11, 12 or 13 inches for remote operation and 15¼ inches minimum for direct on panel or 5 inches back of panel. Price the complete double-throw breakers at exactly twice the price per Cat. No. selected from above table.

**Solenoid-Operated, Non-Automatic**

Breakers are made automatic by the addition of suitable current transformers and circuit-closing relays. Prices and complete information on application.

300	2802307G2	50	49	2802306G2	35 49

Calibration from 75 to 150 per cent of normal capacity.

### D.C.—\*Plain Shunt Trip

Shunt trip coils are intended for momentary operation only and must not be left in circuit continuously after being energized. Connections should be so arranged that the opening of the circuit breaker will disconnect the shunt trip circuit. If for any reason, however, the shunt trip has to be connected to the line side, a circuit-opening auxiliary switch should be mounted on the breaker to open the trip circuit.

Amps.	Cat. No.	Single-Pole, 550 Volts or Less		Back Connected for 1½ or 2-in. Panel	
		Front Connected on Base	Ship. Wt. Lbs. Net Each	Front Connected on Base	Ship. Wt. Lbs. Net Each
100	2802329G1	20	\$21	2802328G1	12 \$21
200	2802331G1	32	29	2802330G1	20 29
300	2802331G2	32	31	2802330G2	20 31
Double-Pole (Trip Both Poles Same as Overcurrent), 550 Volts or Less					
100	2802333G1	25	\$29	2802332G1	15 \$29
200	2802335G1	48	44	2802334G1	32 44
300	2802335G2	48	49	2802334G2	32 49

\*The coil used with the shunt type breaker will operate on any d.c. voltage of 550 volts or less.

These breakers have no overcurrent coils. The shunt coil on these breakers replaces the overcurrent coil, and is not an attachment as in the case of overcurrent and shunt trip.

### D.C.—Undercurrent

Undercurrent breakers are calibrated in the factory to trip on 20 per cent of the carrying capacity. They can be set to trip at any point as low as 10 per cent if so specified on requisition.

300	280235462	20	34	280235862	32	46	280238262	50	79

†Coil used with shunt trip breaker will operate on any a.c. voltage, 600 volts or less.

Capacities below 100 ampere, same price.

These breakers have no overcurrent coils. Shunt coil on these breakers replaces the overcurrent coil, and is not an attachment as in the case of overcurrent and shunt trip.

**G-E Undervoltage Attachments**

For Type CG Air Circuit Breakers

For Use with Single and Double-Pole Breakers 125, 250 and 550 Volts A.C. or D.C.

By the use of undervoltage release attachment, circuit breakers may be arranged to operate on a drop in or cessation of voltage, two or more circuit breakers may be electrically interlocked and by use of a switch to short-circuit undervoltage release, circuit breakers may be tripped from one or more remote points.

Releases at approximately one-half rated voltage.

Voltage of Circuit	Approx. Releasing Voltage	*For Use with 3 to 100-Amp. Breakers			*For Use with 200 and 300-Amp. Breakers		
		Cat. No.	Ship. Wt. Lbs.	Net Wt. Each	Cat. No.	Ship. Wt. Lbs.	Net Wt. Each

550	250	6001362G3	6	11	6001362G6	6	11

\*For use with single and double-pole breakers only. Information covering undervoltage attachment for use with triple-pole breakers on application.

**G-E Shunt Trip Attachments**

For Type CG Air Circuit Breakers

For Use with Single and Double-Pole Breakers, 125, 250 and 550 Volts D.C.—110, 220 and 440 Volts A.C.

This attachment should be allowed to remain in circuit only momentarily.

Same attachment is used with either single or double-pole breakers. Only one pole (the right-hand from front) is tripped out by these attachments.

## G-E Type AB-2 Air Circuit Breakers

Trip-Free—Enclosed for Individual Mounting

600 Volts A.C. or 250 Volts D.C.

A back-connected trip-free air circuit breaker mounted on an insulating base. Can be manually or electrically operated and is double or triple pole.

Available in the following arrangements: Open construction—on front of panel; metal-enclosed; metal-enclosed with pull box. Mounted in dead-front or metal-enclosed switchboards.

Breaker has high interrupting rating—12000 amperes for all voltages. It is rated at 250 volts d.c. and 600 volts a.c., 15 to 600 amperes.

The above illustration shows a 3-pole breaker having 3 overcurrent trips in steel cabinet with pull box for wall mounting, disconnecting contacts for studs and shunt-trip connections.

Amperes	Double-Pole 2 Coils Net Each	Triple-Pole 2 Coils Net Each	Triple-Pole 3 Coils Net Each
15	\$70.00	\$77.00	\$83.00
20	70.00	77.00	83.00

## G-E Induction Time Relays

For A.C. Circuits

Type IAC Single-Unit Current Relay

Type IAV Single-Unit Voltage Relay

For protection of a.c. circuits and apparatus. These relays are particularly applicable where either consistency or selectivity in time of operation is desired.

Rectangular case is 5½ inches wide; permits mounting of 4 relays side by side in space 24 inches wide.

The stationary contact members are individually adjustable.

Target indicator is clearly visible on Type IAC when relay has operated. Disc on Type IAC is reset by weight, producing constant return force.

Type IAC relays can be furnished for time overcurrent tripping at current settings and instantaneous overcurrent tripping at higher current settings by adding instantaneous attachments.

**Standard Ratings**

**Type IAC Overcurrent or Undercurrent Relays**

Current taps: 4 to 15, 4 to 16, 1.5 to 6 and .5 to 2.5 amperes. Taps: 4-15 amperes—taps at 4, 5, 6, 8, 10, 12 and 15 amperes; 4-16 amperes—taps at 4, 5, 6, 8, 10, 12 and 16 amperes; 1.5-6 amperes—taps at 1.5, 2.0, 2.5, 3.0, 4.0, 5.0 and 6.0 amperes; 0.5-2.5 amperes—taps at 0.5, 0.6, 0.8, 1.0, 1.5, 2.0 and 2.5 amperes.

Frequency: 25, 50 and 60 cycles.

Target ratings: 1 and 0.2 ampere.

**Type IAV Overvoltage and Undervoltage Relays**

Voltage: 115, 230, 460 and 575 volts.

Frequency: 25, 50 and 60 cycles.

**Features**

**Type IAC**

Units: Single or 3.

Contacts: 2-contact, single-circuit closing; 3-contact, double-circuit closing; double-throw, single-circuit closing each way.

Attachments: Current indicator, instantaneous element, and auxiliary trip.

**Type IAV**

Contacts: 2-contact, single-circuit closing; 3-contact, double-circuit closing; double-throw, 1-circuit closing each way.

Attachments: Instantaneous element.

The standard undervoltage adjustment of Type IAV relays is 70% of rated voltage to close the contacts. This may be adjusted to any value between 50% and 95% of rated voltage by turning adjusting screw on front of relay.

The burden of the 115-volt, 60-cycle coil is 13 volt-amperes and of the 115-volt 25-cycle coil, 7.5 volt-amperes at rated voltage. All coils are suitable for continuous operation at rated voltage.

**Time Overcurrent**

Type	Each	Service	Function	Circuits	Shp. Wt. Lbs.
IAC	\$41.00	Sgl.-Ph.	Cir.-Closing	1-Circuit	19
IAC	179.00	3-Ph.	Cir.-Closing	Three 1-Cir.	55
<b>Instantaneous and Time</b>					
IAC	\$53.00	Sgl.-Ph.	Cir.-Closing	1-Circuit	19
IAC	215.00	3-Ph.	Cir.-Closing	Three 1-Cir.	60
<b>Undervoltage</b>					
IAV	\$53.00	Sgl.-Ph.	Cir.-Closing	1-Circuit	19
IAV	57.00	Sgl.-Ph.	Cir.-Closing	2-Circuit	19
<b>Overvoltage</b>					
IAV	\$53.00	Sgl.-Ph.	Cir.-Closing	1-Circuit	19

The above are typical listings with 1 ampere 0.25-ohm, or 0.2 ampere 7 ohms target coil; specify which target coil or the device with which relay is to be used when ordering.

**G-E Plunger Type Relays**

For Mounting on Panels

A.C., Single-Pole

Time Relay

Instantaneous Relay

The plunger type includes a complete line of relays to protect against overcurrent and undervoltage, and for use as auxiliary relays. The same principle of operation is common to all of them and depends upon the action of a magnet coil in attracting or releasing the plunger when predetermined values of voltage or current are present in the coil circuit.

The mechanical design is unique, as all relays are single-pole, made of interchangeable parts, and the contacts can be arranged for circuit opening or circuit closing. This design, with its variety of adjustments, large variety of coils, and arrangement of contacts, makes it possible to adapt these relays to an unusually large number of applications.

For convenience of selection the following typical varieties are listed:

Type	Each	Circuits	Operation	Function	Normal Position	Shipped Lbs.
<b>Overcurrent</b>						
PAC*	\$28.00	2	Instantaneous	1—Closing 1—Opening	Open	6
PAC*	32.00	2	Time		Closed	6
<b>A.C. Undervoltage</b>						
PCV	\$36.00	2	Instantaneous	1—Closing 1—Opening	Open	6
PCV	40.00	2	Time		Closed	6
<b>Auxiliary Voltage</b>						
PAA*	\$30.00	2	Instantaneous	1—Closing 1—Opening	Open	6
PAA*	34.00	2	Time		Closed	6
<b>Overcurrent</b>						
PQ	\$22.00	1	Instantaneous	Closing	Open	10
PQ	26.00	1	Time	Closing	Open	12

\*These relays are self-reset and are also available with either electrical or hand-reset features.

In ordering specify by description and for time relay state whether inverse time or definite time is desired. Current transformers are not included.

**Principal Features**

- Covers are made of a molded compound.
- Removable studs are provided for back connection.
- Only one valve is provided for time relays. This valve serves a dual purpose and can readily be adjusted to make the time interval effective on either the up or down stroke of the plunger, or both in the PAC and PAA types.
- Contacts are of the universal design and can be readily changed from circuit-opening to circuit-closing or vice versa.
- Toggle can be changed from self-reset to hand-reset or vice versa, by a simple means provided for this purpose.
- The movable contact bar is held securely but not permanently, thereby easily permitting change from parallel to separate circuits or vice versa, by replacing contact bar.
- Material of bellows is not affected by seasonable changes in temperature.
- All relays are provided with an orange-colored mechanical target indicator, hand-reset by means of a push button in cover.

**G-E Type PJ-4 (Standard Unit) Current and Potential Transfer Jacks and Plugs**

For Mounting on 5/32, 1, 1½ or 2-Inch Panels

10 Amperes, 600 Volts

Cat. No. 3663608G2 Jack with Plug Cat. No. 2874991G1 Inserted Part Way

The Type PJ-4 line includes jacks and plugs other than those for connecting an ammeter to any phase of a 2 or 3-phase circuit for use with current transformers having a 5-ampere secondary.

\*Plugs not included in Cat. No. or prices of jacks except in Cat. Nos. 3663608G6 and 3663608G10.

†When old style plug Cat. No. 2649822G5 for 5/32-inch panel is used omit all spacers when mounting receptacle on panel.

‡Do not use on any board where a common instrument is connected to plug receptacle of same size opening.

§Formerly used also for temperature meter outfits. Complete information furnished on jacks and plugs for temperature meter equipment.

Plug holder—if desired, use Cat. No. 129965.

## G-E Combined Receptacle and Resistor Indicating Lamps and Color Caps

Receptacle body and escutcheon are made of insulating compound which permits using the device on metal panels. The escutcheon, which mounts in panel hole from front and receptacle body which mounts from rear are threaded, making a

compact unit when assembled.

Resilient metal contact clips hold lamp and provide rear connections.

A complete indicating lamp outfit with Cat. No. 59X243 G-E Mazda telephone type T2 bulb, No. 902 slide base, 24 volts, .032-.038 amperes, a resistor except on 24 volt where none is required, a set of binding screws and a push-type compound color cap. Specify color of cap wanted in ordering.

Resistor element slides over receptacle body from rear and complete device has provision for soldered connections. Binding screws are included for use where soldered connections are not desired.

Device is for mounting on 1, 1½ or 2-inch panel. For mounting on ¾-inch panel order one spacer Cat. No. 6009135-P1, 10 cents net extra. For mounting on ½-inch metal panel, order one spacer Cat. No. 6009135P2, 10 cents net extra. Panels more than 1 inch thick must be counterbored on the back with a diameter of 1¼ inches to a depth of 1 inch from the front of panel.

\*This applies to the telltale system of connections as used with Type CL-1, special twin pull-button and Type SB-1 control switches.

†For rated voltages higher than listed, use Cat. No. 6005406G1 and a cage-type resistor mounted separate from receptacle.

## G-E Type SB-1 Control and Instrument Switches

The Type SB-1 switches are multi-contact switches for the control of circuit breakers and electrically operated governors and rheostats, for the transfer of current and potential coils of instruments, and for many other similar applications.

The features of these switches are:

Positive quick-acting contacts.

Silver-to-silver contacts.

Barriers between adjacent contacts to prevent arcing.

All connections easily fastened with a screwdriver.

Ample room for connecting leads.

Escutcheon plates of black Textolite, permanent finish.

Switches are compact and require small panel space.

Mechanical target (red or green) shows last operation of the circuit-breaker control switch.

Distinctive handles of different styles.

## G-E Type JY-285 Tripping Current Transformers

For Oil Circuit Breakers  
25-125 Cycles, 5000 Volts or Less

May be used with any standard 4 and 5-ampere trip coils. In general its use is limited to tripping duty only, either directly or in connection with relays, but where high accuracy is not essential a secondary ammeter may also be used.

Tested at 15000 volts between primary and all other parts, and at 2500 volts between secondary and ground.

Primary terminals are not included.

Shipping weights: 5 to 100 amperes, 16 pounds; 120 to 200 amperes, 18 pounds; 250 to 800 amperes, 20 pounds.

**G-E Type Y-298A Tripping Current Transformers**

For Oil Circuit Breakers

25-125 Cycles, 15000 Volts or Less

400 Amperes and Below

These transformers are for tripping oil circuit breakers. They may be used with any of the standard 4- and 5-ampere trip coils. They are listed in capacities from 5 to 800 amperes at 15000 volts or less.

In general their use is limited to tripping duty only, either directly or in connection with relays, but where high accuracy is not essential a secondary ammeter may be used.

As these transformers are small and inexpensive they may be used very conveniently in installations where series trip has heretofore been recommended.

500 to 800 Amperes

The smaller capacities from 5 to 400 amperes inclusive are equipped with cast metal bases with two-bolt holes, allowing them to be bolted to flat surfaces or pipe supports.

The larger capacities from 500 to 800 amperes inclusive are of the bus type and are supported by the buses or the stud of the oil circuit breaker, no bases being required due to the light weight of these transformers.

Cat. No.	Primary Capacity in Amperes	Ratio	Shipping Weight Pounds	Price Each

246266	600	120-1	44	56.00
246267	800	160-1	44	56.00

All transformers are provided with an additional turn on secondary for ammeters only.

These transformers are tested at 5000 volts between primary and all other parts, and at 2500 volts between secondary and ground.

**G-E Type B Direct Current Motors**  
Ball or Sleeve Bearings, 115 or 230 Volts

Constant Speed

These motors are particularly suitable for a wide range of industrial applications, such as driving pumps, fans, blowers, line shafting and similar equipment requiring continuous operation and fairly close speed regulation. The h.p. ratings are based on continuous duty at 40° C.

**Constant Speed—Shunt or Compound-Wound**

On all constant speed motors, speed may be increased 25% by field control and reduced 50% by armature control.

284	3	700	2	750	2 to 3	700	271.00	258.00

\*Constant h.p.: from basic speed upward to 150%, temperature will not exceed 50° C. rise; above 150% of basic speed the temperature will not exceed 40° C. rise.

\*\*For ball bearings add 5% to sleeve bearing price, minimum addition \$4.00.

†Tapered h.p.: from basic speed upward to 106%, motor delivers minimum rated h.p., temperature not to exceed 50° C. rise; 40° C. rise is not exceeded at speeds above 150% of basic speed.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

## G-E Single-Phase Motors

¼ to 10 H.P., 60 Cycles, 220 Volts

### Type SCR

The Type SCR motor is a constant-speed repulsion-induction single-phase motor intended for use in general purpose applications. This motor combines the high starting torque of the repulsion motor with the excellent speed characteristics of an induction motor, and is consequently a successful motor for use in a wide range of industrial applications.

### Type KC

Type KC Motor, Capacitor, Starter and Push-Button Station

For three different classes of duties, as follows:

1.—General purpose constant speed capacitor motors. These motors are suitable for application where quiet operation, freedom from radio interference or high power factor is desired and where regulations require enclosure of commutator type motors. In order to secure quiet operation the motors should be loaded to at least 50% of full load.

Suitable applications include centrifugal pumps, refrigeration compressors, conveyors, garage equipment, etc. Motors for such applications as elevators, washing machines, etc., are special and information will be furnished upon application.

2.—High torque constant speed capacitor motor for fan duty. Suitable for belt-driven fans—quiet operation is the most important characteristic and in order to secure quiet operation the motor should be loaded to at least 50% of full load.

The two types above are designed to use a definite type and size of capacitor as indicated in the motor nameplate. Capacitor unit consists of a running capacitor, a starting capacitor and a relay, all mounted in a metal enclosing case. The running capacitor is continuously rated and is permanently connected in the motor circuit. The starting capacitor is intermittently rated and is disconnected from motor circuit during period of starting by a relay.

3.—Low torque constant speed capacitor motors for fan duty. Suitable for direct connected fans only. Here too, quiet operation is the most important consideration.

Motor is designed to use a definite type and size of capacitor which is permanently connected in the motor circuit and is suitable for continuous duty.

## G-E Single-Phase Motors

Types SCR and KC

¼ to 10 H.P., 60 Cycles, 220 Volts

The following list of ratings of types SCR and KC single phase motors cover sizes and designs which meet the majority of application requirements usually found in industry.

For additional information and for single phase motors with mechanical or electrical variations not provided for by the motors listed here refer to our nearest house.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

Frame Nos. 204 to 225 inclusive, all speeds 1800 r.p.m. and lower, have wool-yarn-packed bearings. Speeds higher than 1800 r.p.m., also frame Nos. 254 and 255, all speeds, have oil-ring-lubricated sleeve bearings.

Where quiet operation is essential, sleeve-bearing motors should be quoted in preference to ball-bearing motors.

Voltage and frequencies other than listed, on application.

**G-E General Purpose Squirrel-Cage Induction Motors**

1/4 to 75 H.P., Constant-Speed, 2 and 3-Phase, 60 Cycles, Continuous Duty, 40° C. Rise

**Type K—Normal Torque, Normal Starting Current**

1/2 to 15 H.P., 1800 R.P.M. Motor

15 to 75 H.P., 1800 R.P.M. Motor

This motor is usually applied to the large majority of constant-speed drives. It is the squirrel-cage motor best fitted for driving pumps, fans, blowers, line shafting and similar equipment requiring continuous operation with a fairly constant load.

**Type KF—Normal Torque, Low Starting Current**

The essential difference between the Type KF and the Type K motors is in the design of the rotor slot. The rotor in the Type KF motor is so designed as to give a low starting current, permitting the motor to be thrown directly across the line in sizes 30 h.p. and smaller. Obviously, this permits the use of a small, light, and compact magnetic starter. The Type KF motor may be applied to any drive for which the Type K motor is suitable. It should be chosen where it is desirable to keep the first cost of apparatus as low as possible or where limitations as to weight or space make it desirable to use as small and compact control as is possible.

**Type KG—High Torque, Low Starting Current**

Intended to supply the needs for motors having a higher per cent torque at starting than can be supplied by either Types K or KF motors with full voltage applied, yet having the per cent of starting current equal to or lower than the Type KF motor.

The Type KG motor is recommended for such drives as compressors without unloading valves, conveyors which must be started loaded, and other applications requiring high starting torque. The Type KG motor should be used only where the driven mechanism will not be injured by the sudden application of the starting torque of this motor. This caution applies especially to drives or driven machines utilizing belts (either flat belts or V-belts), chains or other flexible or slack elements.

**G-E General Purpose Squirrel-Cage Induction Motors**

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

These standard 60-cycle open motors can in general be operated on 50-cycle circuits although they will not necessarily meet the standards established for 60-cycle operation and will have a slightly greater temperature rise than at 60 cycles. Synchronous speeds at 50 cycles will be 5/6 of those at 60 cycle. Control may be different.

\*Recommended only for direct connection and prices cover motors with standard straight short shafts.

## G-E Type K Squirrel-Cage Splash-Proof Motors

Ball-Bearing—1/4 to 25 H.P., Constant Speed, 2 and 3-Phase, 60 Cycles

Typical of Frame Nos. 202-236

These motors are constructed to operate under conditions subject to dripping and splashing liquids, particularly in certain industries, such as dairies, meat packing plants, etc. where, for obvious reasons, it is necessary to "hose-down" the equipment regularly, at least once a day. Since in order to meet these conditions, these motors are constructed to exclude falling water or other materials coming directly at the motor, at an angle not exceeding 100° from the vertical, they can and have been used successfully out of doors without pump-house or other protection, in those localities where the hazards of climate are not greater than those encountered in the conditions for which they are designed.

**G-E Totally-Enclosed Squirrel-Cage Induction Motors**

Fan-Cooled, Ball-Bearing, Constant Speed

1/2 to 5 H.P., 2 and 3-Phase, 60 Cycles

Type K

Types K or KF, Fan-Cooled  
Frame Nos. 224-326

Types K or KF, Fan-Cooled  
Frame Nos. 365-506

For those applications requiring totally-enclosed motors, the General Electric Company offers a standard (for sizes 1 1/2 h.p., 900 r.p.m. and smaller) totally-enclosed, non-ventilated motor. These motors have ample radiating surface to assure proper cooling without the use of external fans.

Type K, Non-Ventilated

For larger motors the standard is the totally-enclosed fan-cooled construction. The construction involves essentially a totally-enclosed motor surrounded by an external housing. A single fan, mounted between motor endshield and the external protecting endshield at the end opposite the shaft extension, draws air through the protecting screen,

forces it across the surface of the stator punchings and out the drive end, providing positive and direct ventilation. This design provides a strong and rigid construction and permits a greater output per pound of material than is possible with ordinary methods of total enclosure, with the result that the mounting dimensions of totally-enclosed fan-cooled motors are identical with those of open motors of the same rating in all except the largest sizes.

These motors are of special design to operate successfully under adverse conditions of abrasive dust, lint and moisture. When specified on order, motors will be furnished with Underwriters' label, indicating their suitability for Class II Group G hazardous dust locations.

## G-E Totally-Enclosed Squirrel-Cage Induction Motors

**Fan-Cooled, Ball-Bearing, Explosion-Proof  
For Class I, Group D, Hazardous Gas Conditions  
Constant Speed, 2 and 3-Phase, 60 Cycles**

### Types K and KF

The General Electric Company has a complete line of explosion-proof motors for Class I Group D hazardous gas conditions as defined by the National Electric Code. In sizes 1½ h.p., 900 r.p.m. and smaller these motors are built in totally-enclosed, non-ventilated frames. In larger sizes they are built in totally-enclosed, fan-cooled frames. These motors have been tested and listed by Underwriters' Laboratories and are furnished with a label indicating their suitability for those locations where gas involved is no more hazardous than high-test gasoline vapor.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

All motors listed above may be started with full-voltage, but the Type K at all speeds, and the Type KF 20 and 30-h.p. at 3600 r.p.m. as well as 40-h.p. and larger sizes at all speeds, have starting current values slightly exceeding N.E.L.A. recommendations. Reduced-voltage starting is a requirement of many operating companies; therefore, before quoting, be sure that full-voltage starting will be acceptable to those supplying the power.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

\*Totally-enclosed non-ventilated.

All motors listed above may be started with full-voltage, but the Type K, 7½ and 10-h.p. motors have starting current values slightly exceeding N.E.L.A. recommendations. Reduced-voltage starting is a requirement of many operating companies; therefore, before quoting, be sure that full-voltage starting will be acceptable to those supplying the power.

**G-E General Purpose Gear Motors**

40° C., Continuous Rated

Types K, KG and M—2 and 3-Phase, 60 Cycles, 220, 440 and 550 Volts

Type B—D.C., Shunt-Wound, 115 or 230 Volts

Type SCR—Single-Phase, 60 Cycles, 110-220 Volts

**G-E General Purpose Gear Motors**

40° C., Continuous Rated

Types K, KG and M—2 and 3-Phase, 60 Cycles, 220, 440 and 550 Volts

Type B—D.C., Shunt-Wound, 115 or 230 Volts

Type SCR—Single-Phase, 60 Cycles, 110-220 Volts

Typical of Riveted-Frame, Squirrel-Cage Induction Designs, Single-Reduction

The G-E Gear Motor consists of a highly efficient straight-line helical gear reduction unit built into the end frame of a standard ball-bearing, normal speed motor. Connection to the driven machine may be either direct, or through a belt, chain or gear. The listed low speed r.p.m. are based on 1800 r.p.m. synchronous speed and full load r.p.m. will be slightly lower depending on the variation of full load motor speed from synchronous speed. Access to entire gear mechanism is obtained by removing front cover plate. Gears run in oil. Oil is kept in and dust kept out by felt shields on shaft apertures. Pinions are of G-E Textolite and with helical gears eliminate the noises associated with geared speed reduction.

Gear motors may be furnished for vertical or flange mounting and with all mechanical and electrical modifications available with standard general purpose motors.

Typical of Skeleton-Frame, Squirrel-Cage Induction Designs, Single-Reduction

In applying gear motors the following information should be obtained and sent with order:

Torque—starting (high) (low); accelerating (high) (low); running: constant torque, constant speed, adjustable speed; variable torque, periodic; intermittent, varies with speed, give duty cycle, including time and magnitude.

Speed—constant, variable, adjustable.

Load—continuous (8 to 10 hours daily) (24 hours daily); intermittent, frequent starts and sudden stops, reversing.

Method of drive—directly mounted, coupled, belt or chain (give type of belting and relative position of shafts), pinion. Space limitations.

Ambient conditions—hazards, temperature, protection, atmosphere (abrasive) (corrosive) (explosive) (excessive moisture).

Attention—regular (skilled), uncertain.

The normal control for the type of motor involved should be selected from the standard G-E control shown on other pages of this catalogue.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

\*For Type SCR motors, frame is A-225.

All types of gear motors are suitable for operation with standard listed controllers. Where full-voltage starting is used to obtain maximum starting torque of motor, the number of starts should be limited to 4 to 6 per day.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

All types of gear motors are suitable for operation with standard listed controllers. Where full-voltage starting is used to obtain maximum starting torque of motor, the number of starts should be limited to 4 to 6 per day.

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

All types of gear motors are suitable for operation with standard listed controllers. Where full-voltage starting is used to obtain maximum starting torque of motor, the number of starts should be limited to 4 to 6 per day.

G-E General Purpose Synchronous Motors

High Speed, 60 Cycles  
 1.0 Power-Factor—40° C. Stator and Rotor  
 0.8 Power-Factor—40° C. Stator, 50° C. Rotor

Type TS (3-Phase)—Type QS (2-Phase)

7500 Series—Form BL (except 1800 R.P.M.)—

Skeleton Frame, Sleeve Bearings

7500 Series—Form EL (1800 R.P.M.)—Closed Box Frame (with Air Intake and Discharge Openings)

Sleeve Bearings

7600 Series—Form AL, Cast Frame, Sleeve Bearings

Form BL—25 to 600 H.P., at 1200 R.P.M.

Developed to fill the need for a synchronous motor which could be recommended for most general purpose applications, in the same way that a squirrel-cage induction motor is recommended—that is, without a detailed study of the requirements of this application. For this reason, in the line of general purpose synchronous motors, there were incorporated high starting torque, overload capacity, mechanical simplicity, and reliability of G-E squirrel-cage motors.

Since the exciter is direct connected and overhung on the motor end shield, the general purpose synchronous motors form complete and compact units which like the squirrel-cage induction motors, merely require connection to the a. c. power supply.

Form EL—75 to 450 H.P. at 1800 R.P.M.

## G-E Synchronous Motor Controllers

2 or 3-Phase, 3-Wire 50 or 60 Cycles

Undervoltage Protection on Low-Voltage Panels  
 (600 Volts Maximum)

Time-Delay Undervoltage Protection on High-Voltage Panels  
 (Above 600 Volts)

Typical Reduced-Voltage Semi-Magnetic Controller CR7062 for High-Voltage Application (Above 600 Volts)

Available in 4 types: Full-voltage, magnetic; full-voltage, semi-magnetic; reduced-voltage, magnetic; reduced-voltage, semi-magnetic. Magnetic controllers are controlled by push buttons, whereas semi-magnetic controllers are equipped with manual starting devices. Both types have automatic field application and removal equipment.

The following equipment is common to all types: A.C. line ammeter; d.c. field-ammeter; field applying contactor and field discharge contactor with discharge resistor; sequencing relays for maintaining the proper sequence in application and removal of field excitation; power-factor field-removal relay which operates on lagging power-factors to remove field excitation during the first slip-cycle out of synchronism; stator temperature overload relay and temperature squirrel-cage protective relay; drilling for exciter field rheostat.

The full-voltage magnetic controllers employ a magnetically operated contactor for connecting the motor to the line, and the semi-magnetic type is equipped with a manually-operated circuit breaker.

Reduced-voltage magnetic controllers are furnished with starting and running contactors and an auto-transformer for supplying reduced voltage to the motor in starting. The accelerating time is automatically determined by a telechron-motor-operated transfer relay, which is adjustable.

The reduced-voltage semi-magnetic controllers are similar to the magnetic type except that the starting and running devices are manually-operated.

**G-E Type RSA Single-Phase Constant Speed Motors**

Wound Stator and Rotor, Repulsion Start, Induction Run  
\*110-220 Volts, 60 Cycles, Short Hour Service

A constant speed motor having high starting torque, good accelerating torque and large reserve power. Suitable for driving hard starting devices which operate only part of the time such as domestic water pumps, garage equipment, air compressors, etc. All motors are rated for continuous duty. The base has slots for belt tightening.

Drip-proof end shields, built in terminal box and large capacity wool-packed long-life sleeve bearings are incorporated. Reconnectable for 110 or 220 volts, direction of rotation easily changed.

Cat. No. Motor with Rigid Base	Motor with Solid Base Each	Frame No.	H.P. at 40° C.	Rated Full Load Speed R.P.M.	Ship. Wt., Lbs.

\*Prices of motors for other frequencies on application. Type K polyphase and Type BC direct current motors are available with interchangeable mounting dimensions. For larger h.p. ratings use Type SCR motors.

**G-E Type SCR Single-Phase Constant Speed Motors**

Repulsion-Induction, Wound Stator, Wound Rotor with Buried Squirrel Cage  
\*110-220 Volts, 60 Cycles, Short Hour Service

Cat. No. 5SCR75AA2

A constant speed motor having high starting torque and accelerating torque and large reserve capacity. Suitable for driving hard starting devices which operate only part of the time such as floor surfacing machines, compressors, garage and dairy equipment, hoists, etc. All motors are rated for continuous duty.

Drip-proof end shields protect the motor, large wool-packed bearing provides adequate lubrication, reconnectable for either 110 or 220 volts; rotation easily changed. Provision is made for conduit connection. A solid welded-on base is provided.

Cat. No. Motor with Rigid Base	Each	Frame No.	H.P. at 40° C.	Rated Full Load Speed R.P.M.	Ship. Wt., Lbs.
5SCR65AA4	\$32.80	65	1/2	1780	68

\*Prices on motors for other frequencies on application. Type K polyphase and Type BC direct current motors are available with interchangeable mounting dimensions.

**G-E Type KH Single-Phase Constant Speed Motors**

Wound Stator, Squirrel Cage Rotor-Resistance, Split-Phase Starting  
110-220 Volts, 60 Cycles\*

Type KH-B with 45A Frame

Type KH motors have moderate starting and accelerating torque and large reserve power. Suitable for driving any easily started device requiring constant speed, such as oil burners, blowers and ironing machines. All motors are rated for continuous duty.

Base is equipped with slots for belt tightening. Drip-proof end shields, built-in terminal box, and a device to eliminate end bump are included in the 40 series frames. While these motors are considered quiet, a resilient base can be furnished on long hour service motors at slightly additional cost where more quiet operation is desired. The 1/2 and 1/4-h.p. short service motors are for devices requiring high maximum output but which operate only a small part of the time.

All motors are reconnectable for either rotation.

**Long Hour Service**

Type K polyphase and Type BC direct current motors are available with interchangeable mounting dimensions. All sizes are equipped with large oil capacity wool yarn packed sleeve bearings. Ball-bearing motors are available; prices on request.

## G-E Type KC Single-Phase Constant Speed Motors

Wound Stator, Squirrel Cage Rotor

110-220 Volts, 60 Cycles, Long Hour Service

With 45A Frame, on End-Flange Cushion Base

Type KC motors have high starting and accelerating torque and exceptionally large overload capacity.

Suitable for driving hard starting devices where service is severe such as refrigerator compressors, stokers, etc.

All motors are rated for continuous service and will give long care-free dependable service.

Bases of all motors up to the 60 and 70 series frames have slots for belt tightening. The 40, 60 and 70 series frame motors have drip-proof end shields and a device in each end shield to eliminate end bump.

The 40 series frames have a built-in terminal box for easy lead connection; either cord and plug or conduit may be used.

All motors are equipped with large oil capacity wool-yarn-packed sleeve bearings. Rotation of 40, 60 and 70 series frame motors is easily changed.

**G-E Type K 2 and 3-Phase Constant Speed Motors**

Wound Stator, Squirrel Cage Rotor

110, 220, 440, 550 Volts, 60 Cycles

Type K, with 45A Frame, with Solid Base

Type K polyphase motors have excellent starting and accelerating torque and large reserve power. They will start and drive any device operated by any of the single-phase motors of corresponding rating. As far as possible the design of the single-phase and polyphase motors are built from interchangeable mechanical parts and have similar external appearance. Mounting interchangeability between single-phase and polyphase motors is maintained. Motors are equipped with rigid base.

\*Cat. No. covers 3-phase 60-cycle motors; 2-phase motors are available at the same price. Prices of motors for other frequencies on application.

\*\*These prices apply to 110-volt motors; 220-volt motors can be furnished at same prices. For 440 and 550-volt motors, add \$3.00 each to above prices.

\*\*\*These motors are included to provide mounting interchangeability with Type KH short hour service motors.

†These motors are included to provide interchangeability with Type KH long hour service motors.

‡These motors are included to provide interchangeability with Type KC motors.

§These motors are included to provide interchangeability with Type RSA motors.

**G-E Type BC Direct Current Constant Speed Motors**

32, 115 and 230 Volts

These motors have excellent starting and accelerating torque and large reserve power. They will start and drive any device operated by any of the single-phase motors of corresponding rating. As far as possible the design of the d.c. motors follows the general design of the single-phase motors. They have a similar external appearance and in general, the same mechanical features. Mounting interchangeability between single-phase and d.c. motors is maintained. Motors are equipped with rigid base.

\*Cat. No. covers motors having counter clockwise rotation (when viewing end opposite shaft extension). Rotation may be changed internally. Clockwise rotation will be furnished from the factory if specified on order at no additional charge.

\*\*These prices apply to 115-volt motors; for 32 and 230-volt motors, add \$1.00 each to above prices.

\*\*\*These motors are included to provide mounting interchangeability with Type KH short hour motors.

†These motors are included to provide mounting interchangeability with Type KH long hour motors.

‡These motors are included to provide interchangeability with Type KC motors.

§These motors are included to provide interchangeability with Type RSA motors.

## G-E Series Wound Motors

1/100 H.P. at 5000 R.P.M. to 1/3 H.P. at 1000 R.P.M.  
110 and 220 Volts, Varying Speed

Type BA with 45A Frame

A complete line of series wound motors are available for portable machines, domestic devices, etc. requiring high outputs with small size and weight. Self-aligning bearings and large oil capacity housings with oil returns provide lubrication. Only occasional oiling is required. Ventilating

system cools motor even when operating under heavy loads. Series type motors offer high starting and accelerating torque and operate at high speeds. They have varying speed characteristics, that is the speed varies with the load, but with constant load they offer constant speed. A motor must be chosen whose output closely matches the requirements of the device. The requirements of the device to be motorized are usually determined by test.

Motor parts, consisting of rotor, stator and brush mechanism are also available for built-in applications.

## G-E Motors for Unusual Requirements

In addition to general purpose motors, G-E Fractional H.P. Motors are designed for special requirements.

The following is intended to indicate the wide scope of special service motors available: gear motors, for low speeds; explosion-proof motors, for explosive atmospheres; synchronous motors, for close speed regulation; fan duty motors, for fans and blowers; totally enclosed motors, for dusty locations; dynamotors, for converting d.c. to a.c.; motor generators, for converting power; vertical and flange-mounted motors, where special mounting arrangements are required.

Further information will be furnished on application.

## G-E Induction Motor-Generator Sets Types B or CD, D.C. Generator—Shunt or Compound Wound

3-Bearing, 40° C. Continuous Rated, 2 or 3-Phase, 60 Cycles

Made up of standard G-E motors and generators connected by solid steel couplings and mounted on welded structural steel bases. Bearings are of the self-aligning, self-feeding, oil-ring sleeve type.

			2200	1306.00

Prices are for motor only. Pulley and base when required will be furnished at slight additional cost.

## G-E Type CR1061 Motor Starting Switches

For Fractional—H.P. Motors—Manually Operated

Maximum Ratings: { A.C. Sgl.-Pole, 3/4 H.P., 110 or 220 V.  
Dbl.-Pole, 1/2 H.P., 110 or 220 V.  
D.C. Sgl.-Pole, 1/2 H.P., 115 or 230 V.

For Wall Mounting

The operating mechanism of these switches is of the positive snap-action type which prevents slow opening or closing of the contact tips and insures maximum contact-tip life; these tips are pure silver, of generous size. Vibration will not cause switch to trip.

Complete protection against stalled rotor current and injurious overload conditions is provided. It is impossible to hold switch closed under injurious overload conditions. After overload device has permitted the switch to trip, motor cannot be restarted until it has cooled to a safe operating temperature.

All molded parts, except the arc chute of the d.c. switches, are of G-E Textolite, and all metal parts are corrosion-resisting.

Order by CR and Cat. No. and specify one heater for overload device.

**G-E Type CR1062 Motor Starting Switches**

Manually Operated—For Small A.C. Motors

25, 40, 50 and 60 Cycles

Two CR1062-C5 Switches Mounted on Pedestal Cat. No. 4923350G1

These switches are single throw with double-break contacts. Provide overload protection by means of hand-reset thermal overload device and are used for throwing small a.c. single or 3-phase, 60, 50, 40 or 25-cycle motors directly across the line. Operating mechanism trips free from handle. Contacts are of silver.

Cases have conduit knockouts and sufficient wiring space for 8 line wires with soldered terminals. Protects against single-phase operation of polyphase motors.

Order by CR and Cat. and Form No. and give rating of motor with which to be used. Specify if heaters are required for overload protection. Order pedestals by Cat. No.

**Type CR1062-B6—Single-Phase, for Wall Mounting**

**G-E CR1026 A.C. Enclosed Starting Rheostats For Type SCR Repulsion-Induction Motors 40, 50 and 60 Cycles, Single-Phase**

These starters may be used with motors that do not require more than 150 per cent torque to start or longer than 30 seconds to attain full speed. They comply with American Standard Resistor Classification No. 35. They are primarily for use with the single-phase repulsion-induction motors (Type SCR) where the inrush of current resulting from throwing the motor directly upon the line is objectionable. When these motors are started by being thrown directly upon the line they require from 250 to 300 per cent full-load current. While in many cases this starting current may not be objectionable, it is recommended that a starter be installed in every case with the 7½ and 10 h.p. motors and with the smaller motors when it is desired to reduce the starting current.

Starters for use with motors up to and including 5 h.p. 110 volts and 7½ h.p. 220 volts are provided with button contacts. Larger sizes have renewable segments.

H.P. of Motor	110 Volts Each	220 Volts Each	H.P. of Motor	110 Volts Each	220 Volts Each	440 Volts Each

3	23.00	23.00	.....	.....	.....	.....

When ordering state CR No. of rheostat and h.p., voltage and frequency of motor.

## G-E Type CR1034 A.C. Hand-Starting Compensators

Manually Operated—For Squirrel-Cage Induction Motors

3-Phase, 3-Wire,—60 Cycles

Type CR1034-K1 Compensator with Ammeter Attachment

Type CR1034-K1 Compensator Cover Removed Showing Type CR2824-TC-121 Relay Mounted

Suitable for starting squirrel-cage induction motors on applications requiring not more than 15 seconds to attain full speed, once every 4 minutes for an hour.

Compensators consist of an auto-transformer with suitable taps, a switching device, an instantaneous undervoltage protective device and a hand-reset overload relay, all self-contained within a sheet metal case.

Arranged for wall mounting; has conduit wiring box. The 2200-volt size is floor mounted. Switch is oil immersed. Compensators can be furnished with attachments such as ammeters, jack type disconnecting switches or motor-circuit switches.

When ordering, specify a CR1034 compensator with temperature overload relay giving the complete motor rating and naming attachments wanted.

## G-E Type CR7006 A.C. Magnetic Switches

For Throwing Single, 2 or 3-Phase Motors Directly on the Line

25, 50 and 60 Cycles

Type CR7006-D30B with Cover Removed

These switches consist of a 2 or 3-pole magnetically-operated contactor with overload relays mounted on a base and enclosed in a suitable case.

Provides undervoltage protection or release. May be operated by means of a push button station, float or pressure switch, etc.

Prices will be quoted on request on these switches designed specially for installation in dusty or corrosive atmospheres or in Class 1 Group D hazardous gas locations.

Order by CR No. and specify rating of motor with which to be used and heater units required for overload protection.

\*Price includes push-button and overload relay or heaters.

**G-E Type CR7008 Combination Magnetic Switches**

For Throwing Single, 2 and 3-Phase Motors Directly on the Line  
25, 50 and 60 Cycles

Size 2, Fusible, with Cover Removed

This switch consists of a magnetic switch (CR7006) with a quick-break manually-operated motor circuit switch. Fuses can be added and provision is made to supply a test jack if desired.

Order by CR number and specify relay heaters for over-load protection; with or without fuses or test jack.

Furnished in sheet steel or dust-tight cases.

\*Price includes push-button and heaters. The relay heaters or the push-button station may be omitted or additional ones furnished at the following prices: relay heaters, 50 cents each; push-button stations, \$2.00 each.

†Price is for combination switch in cast iron case without push-button station but with relay heaters. Cast iron case cannot be furnished for combination switch with test jack. Relay heaters may be omitted at 50 cents each. If dust-tight push-button station is required, the CR2940-BS207CJ is recommended.

**G-E Type CR7051 Automatic Starting Compensators**

Manually Operated—For Squirrel-Cage Induction Motors

60 Cycles

Size 1 Compensator

Provides remote control for constant-speed squirrel-cage induction motors on compressors, blowers and any application that does not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour. Consists chiefly of an autotransformer for supplying reduced voltage to motor during acceleration, accelerating contactor which connects autotransformer to line and motor to low-voltage taps, line contactor, temperature overload relay, a definite time relay which causes accelerating contactor to open and line contactor to close after a predetermined time.

†Cat. No. does not include relay heater units.

## G-E Type CR1003 D.C. Enclosed Heavy Duty Starting Rheostats

### Undervoltage Protection

For Series, Shunt or Compound-Wound Motors  
 Amer. Std. Resistor Class. { Up to 25 H.P., No. 35  
 { Above 25 H.P., No. 34

This heavy duty starting rheostat affords a convenient, simple means of providing starting and smooth acceleration for all kinds of d.c. motors.

Provides undervoltage protection.

Order by CR and Cat. No. and state rating of motor with which to be used.

## G-E Type CR4065 Definite-Time Limit Automatic Starters

For Shunt or Compound-Wound, D.C. Motors

Type CR4065-A8, 3-Point Starter

These starters provide definite time limit acceleration, provide thermal overload protection as well as undervoltage release or protection. The mechanism consists of a solenoid operated, multi-fingered contactor which, with the overload relay, is mounted on a compound base. The starting resistor is mounted on the back of the base and the whole is assembled in a ventilated sheetsteel case.

Order by CR No., give complete rating of motor and specify heater units required for overload protection.

‡Price includes starter with CR2940-2A1 push-button station, which may be omitted or additional ones furnished at a price of \$6.00 each.

**G-E Type CR2927 Pressure and Vacuum Switches**

**Diaphragm Type—For Starting Small Motors or for Pilot-Circuit Control**

**Maximum H.P. Ratings:**

2 H.P. 110 Volts, 5 H.P. 220 Volts, 3 H.P. 440 and 550 Volts A.C. Polyphase

1½ H.P. 110 Volts and 3 H.P. 220 Volts A.C. Single-Phase

1 H.P. 110 Volts, 2 H.P. 220 Volts and ¾ H.P. 440 and 550 Volts D.C.

**Pressure Switch (Cover Removed) with Unloader Valve and Differential-Adjusting Attachment Mounted in Place**

These switches are designed to open or close contacts upon changes of pressure or vacuum of any gas or liquid which will not affect rubber or steel parts.

Used for starting motors not larger than 2 h.p. 110 volts, 5 h.p. 220 volts and 3 h.p. 440 and 550 volts polyphase; 1½ h.p. 110 volts and 3 h.p. 220 volts single-phase or 1 h.p. 110 volts, 2 h.p. 220 volts and ¾ h.p. 440 and 550 volts d.c. When larger motors are used, these switches can be used in connection with automatic starters which will also provide overload protection. This protection can also be secured by ordering one CR1920 which consists of 2 thermal cutouts mounted in a sheet steel enclosing case at \$5.00 each.

Order by CR No. and specify adjustment if other than factory adjustment is required.

**G-E Type CR2931 Enclosed Float Switches**

**For A.C. or D.C. Motors**

Suitable for use in the control circuit of a.c. or d.c. automatic starters, and, except for the Form P, can directly handle the circuits of small motors.

These switches, as furnished, are arranged for tank operation, that is, the switch closes as the lower liquid level is reached, and opens as the top level is reached. This action may be easily changed for sump operation by interchanging the float and counterweight. Standard floats should not be subjected to pressure. Quotation on special floats will be furnished on request.

All switches are drip and splash-proof and suitable for outdoor installation where they are not subjected to snow or sleet. Where the liquid whose level is to be controlled is subject to freezing, a float switch should not be used.

All switches are quick acting when closing and opening, and this insures a minimum of arcing and burning of the contacts.

Form	No. of Poles	Description	Each
A	Dbl.	For Clamping to Inside Top Edge of Tank; Operated by Rod and Float; Range, 10 Inches to 2 Feet.....	\$39
A	4	Same as Form A Double-Pole.....	44
B	Dbl.	For Bolting to Tank Cover; Requires Guide in Cover for Operating Rod; Range, 10 Inches to 3½ Feet.....	44
B	4	Same as Form B Double-Pole.....	48
C	Dbl.	For Bolting to Tank Cover; Range, 10 Inches to 3½ Feet.....	41
C	4	Same as Form C Double-Pole.....	46
D	Dbl.	†For Bolting to Tank Cover; Operated by Chain and Float; Suitable for Any Depth of Tank or Any Variation in Water Level Not Less Than 10 Inches.....	*44
D	4	†Same as Form D Double-Pole.....	*48
L	Dbl.	†Operated by Chain and Float; For Any Variation in Water Level Not Less Than 5".....	*25
M	Dbl.	Rod-Operated; Range, 2½ In. to 4½ Ft..	25
P	Sgl.	§Operated by Chain and Float; For Any Variation in Water Level Not Less Than 2".....	†13
U	Sgl.	Same as Form P, Except with Mercury-Tube, Heavy Duty Connectors.....	†15

Order by CR and Form numbers. Specify number poles of switch.

\*Price includes 15 feet of bronze chain. If more is required add 15 cents for each additional foot.

†Price includes 15 feet of brass chain. If more is required add 5 cents for each additional foot.

To obtain maximum operating range: †Deduct 3½ feet from length of chain; §deduct 1½ feet from length of chain.

## G-E Type CR7505 Photoelectric Relays

**Type CR7505-K1,  
with Cover Removed**

These devices consist generally of a phototube, a relay, an amplifying tube and associated apparatus mounted on a base and within an enclosing case. Their purpose is to control an electric circuit in response to an increase or decrease in the amount of light falling on the phototube.

Form K1 is applicable to installations where at least 50% changes of light variation are obtainable and will control only small currents (1 ampere at 110 volts, non-inductive load).

Form A5 operates on 40% change in light and includes a contactor which will make or break a circuit of 15 amperes at 110 or 220 volts a.c., 10 amperes at 125 volts d.c. and 5 amperes at 250 volts d.c. (non-inductive load). Its features are in general similar to the K1.

### Features

Responds to the interception or application of light.

Operates without offering resistance to the actuating object and without impairing the accuracy of delicate mechanisms.

Will operate from light flashes or interruptions of not less than  $\frac{1}{15}$ -second duration, with not less than  $\frac{1}{15}$ -second between impulses. With these conditions, a maximum speed of 450 operations per minute can be obtained. For such high speeds of operation in counting applications, it is recommended that a .5-mfd. capacitor be used across the counter-coil.

Easily mounted by means of two screws through holes in back of enclosing case or directly on vertical rigid conduit.

Unit can be taken from case by removing two screws.

Sensitivity can be adjusted with a screwdriver through opening in front cover.

All terminals easily accessible from front of unit by removing cover.

The relay may be mounted in any position, provided vibration will not loosen the tubes in the sockets. Where excessive vibration is present, relay should not be mounted at more than 45 degrees from the vertical.

A domestic Mazda lamp, with or without reflecting shield, may be used for a light source. For applications where a higher light intensity is required or where it is necessary to mount the unit a considerable distance from the light source, standard light sources are available.

The phototube window should be shielded from extraneous light when the unit is to operate at a considerable distance from the light source.

Order by Cat. No.

Cat. No.	Including Tubes Each	Type	Volts	Cycles	Approx. Ship. Wt. Lbs.
4389209G2	\$35.00	CR7505-K1	110-120	60, 50	5

4981669G4	87.00	CR7505-A5	110-120	25	35
4981669G3	87.00	CR7505-A5	220	60, 50	35
4981669G5	87.00	CR7505-A5	220	25	35

## G-E Type CR7500 Light Sources

**No. CR7500-A3**

By referring to the chart shown below, the illumination obtained from various light sources at definite distances can be readily determined. For example: the CR7505-K1 relay with a standard cover requires a minimum illumination of 5 foot-candles. The curves (see illustration below) show that 5 foot-candles can be obtained at a distance of 30 feet from the CR7500-A3 light source. Therefore, CR7500-A3 light source with a 21-candlepower lamp will operate the CR7505-K1 photoelectric relay over a distance of 30 feet, assuming a clear atmosphere between the two units.

Order by CR number with or without transformer. Unless a 6-volt supply is available transformer must be included.

**Illumination Intensities of Various Types of Light Sources**

When light beam must pass through a dusty atmosphere or through material which absorbs some light (such as glass or water), the value of illumination taken from the curves, should be decreased by a factor which is a conservative estimate of the per cent absorption of the atmosphere or material. When light beam must be reflected by some surface to reach the phototube, the value of illumination taken from the curves, must be multiplied by the reflection coefficient of the surface to obtain a proper estimate of the illumination available at the phototube.

It is sometimes desirable to have the light beam reach the phototube through an aperture smaller than the opening provided in the phototube housing. In such cases, the illumination necessary is increased in the same proportion that the area of the aperture is decreased.

Cat. No.	†Each	Installation	Form	Volts	Cycles	Ship. Wt. Lbs.
4981750	*\$11.00	Indoor	A4	110-220	50-60	6
4980621	* 19.00	Indoor	G1A	110-220	50-60	6
4980654G2	25.00	Outdoor	B2	110-220	50-60	12

\*The transformer, which mounts in a box, may be omitted at a price of \$6.00. †Price includes transformer but no lamp.

If a 110-220-volt, 25-cycle transformer is required for indoor type of light source, add \$8.00 to price of light source alone. A 25-cycle transformer cannot be mounted in outdoor type of light source because the physical dimensions of transformer are too great.

An infra-red filter may be provided with CR7500-G1A light source at a price of \$4.00.

**G-E Type CR9006 Enameled Resistor Units**

Form QD

FORM QL.—Has stranded copper leads for making external connections.

FORM QD.—Has stranded copper leads and porcelain bushings to facilitate mounting.

FORM QC.—Designed for fuse clip mounting. Leads are connected to metal ferrules.

FORM QS.—Provided with screw base for mounting in lamp sockets. The 3/4-inch size has a candelabra base and the 1 1/8-inch size has a standard Edison base.

FORM QF.—Provided with metal feet to which leads are connected and through which external connections are made.

Cat. No. 2X931, Fuse Clips for 85, 122 and 180-Watt, Form QC Units, each .12

Two fuse clips are required for each unit.

**G-E Type CR9504 Thrustors**

To Provide Smooth Straight-Line Thrust From Electric Motor Drive

This is a self-contained hydraulic device which exerts a smooth, straight-line thrust (50 to 3200 pound maximum thrust) in one direction throughout a definite distance (2 and 16-inch maximum stroke). The return stroke is effected by gravity or a spring.

The device can repeat this cycle of operation indefinitely at a rate of 10 to 30 times per minute depending on the size of unit. It is driven by a built-in fractional h.p. motor and therefore the power consumption is small.

The CR9504 Thrustor performs services similar to those accomplished by air cylinders and large a.c. and d.c. magnets and solenoids.

Order by CR and Form No. giving voltage, frequency and phase.

\*Inrush current for a.c. motors is approximately 5 times running current.

†Use these thrustors for 50-pound d.c. application also.

## G-E Type CR9507 Solenoid-Operated Valves

Cover Open to Show Operating Mechanism

### Features

Operating coils are designed for continuous duty.

Valves are of the unbalanced type and require little power for operation.

Valve seats can be ground without removing valve from the line.

Rotary-gland design results in much less wear and friction than are usual with the reciprocating type.

Solenoids have more power than required to operate valves. The operating mechanism is so designed that the solenoid plunger accelerates without load for a fraction of the stroke, thus effecting quick and reliable operation.

Minimum number of wearing parts.

Valve seats are wide and designed to provide long life and dependable operation.

Solenoids and operating mechanisms are supported from the main sections of the valve-body castings. This strong construction removes all strains from the valve seat and operating members.

Solenoids and operating mechanisms are enclosed in sheet-metal cases with knockouts suitable for conduit connection.

### A Few Suggested Uses of CR9507 Solenoid-Operated Valves

For operating steam or air whistles.

For controlling the flow of brine through cooling pipes in cold storage rooms.

For remotely or automatically controlling the supply of oil or gas to furnaces.

For automatically controlling the flow of liquids in connection with weighing machines.

For controlling the flow of water in cooling jackets on compressors.

Type CR9507 solenoid-operated valves can be supplied for a wide variety of general-purpose applications. Some of their more common uses may be classified as follows:

A—Steam, water, natural gas, air, oil, formaldehyde.

B—Ammonia gas, artificial gas, air, oil, sodium-chloride brine.

C—Chlorine gas.

D—Steam, natural gas, air.

### Construction According to Classification

D	Cast Steel	Stainless Steel Seat and Poppet.	250 700

## G-E Type CR2940 Push Button Stations

Typical 3 Button Station for Front-of-Panel or Wall Mounting

The CR2940 push button stations are primarily intended for use in the control circuits of various magnetic controllers. The large contacts and substantial construction of these heavy-duty stations make them well able to withstand the frequent operation and ordinary rough usage of machine-tool and similar applications.

The stations listed are divided into three general classes: momentary contact, maintaining contact and a combination of momentary and maintaining contacts. With a momentary contact the circuit is completed or interrupted only as long as the operator's finger depresses the button. This feature is required when the station is used with a controller that must provide under-voltage protection. A maintaining contact holds the circuit open or closed as does an ordinary knife switch.

**Paul Green Knight Water Systems**

250 Gallons per Hour  
Self-Priming

A Complete Automatic System with Storage Tank

The Paul Green Knight Water System is especially designed for supplying the water requirements of the average home, either for soft water or for complete water service, where the water level of the source of supply is not more than 22 feet below the pump.

It is a completely automatic water system, consisting of a Paul Type K Pump, 10-gallon galvanized pressure tank, Paul Type G Automatic Pressure Controller, and all fittings including relief valve and automatic air volume control, all assembled into a sturdy compact unit.

The pump uses only two valves, a bronze poppet type suction valve and a live soft rubber discharge valve. This permits a greatly simplified construction and fewer moving parts—yet a more positive and efficient action.

**Standard Equipment**

Paul Type K Self-Priming Suction Pump, belt-driven.

Standard constant duty a.c. or d.c. motor, mounted on pump base. The a.c. motors are of the repulsion induction type.

Electric welded tank, heavily galvanized inside and out, guaranteed for a working pressure of 75 pounds.

V-belt drive, operating on V-motor pulley and flat face belt wheel.

Fixtures include automatic air volume control, which automatically maintains proper water level and volume of air; Paul Relief Valve for protection against excessive pressure; and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double-pole, diaphragm operated, starts pump at 20 pounds; stops at 40 pounds.

Pump, tank and pipe are finished in jade green lacquer. The motor is black enamel. Fittings are gold and nickel trimmed.

**Type GK Paul Shallow Well Pumps Fully Automatic—Self-Priming—Motor Driven**

This suction pump covers a large range of domestic or farm requirements, lifting water from any source of supply not more than 22 feet below its level. It may be operated automatically in connection with any style or size of pressure tank; this pump may be installed to operate on an open tank service by using an automatic float.

Standard equipment includes Paul Type GK Self-Priming Suction Pump, V-belt driven; constant duty a.c. or d.c. motor, mounted on base plate with pump; and Type G Improved Pressure Controller, double pole, diaphragm operated, which starts pump at 20 pounds and stops at 40 pounds.

**Model SP Paul Shallow Well Water Systems**

**Fully Automatic—Self-Priming**

**A Complete Automatic System with Storage Tank**

Especially designed for the requirements of the average home, either for soft water or complete water service, where the water level of the source of supply is not more than 22 feet below the pump.

Has standard constant duty a.c. or d.c. motor. The a.c. motors are of the repulsion induction type.

Fitted with automatic air volume control which automatically maintains proper water level and volume of air, and Paul Relief Valve for protection against excessive pressure, and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds.

Pump, tank, and pipe are nickel bronze. Motor is black enamel. Fittings are gold and nickel trimmed.

The Model No. 250-SP System has Paul Type K Self-Priming Suction Pump, belt-driven; electric welded tank, heavily galvanized, and guaranteed for a working pressure of 75 pounds; and V-belt drive, operating on V-motor pulley and flat face belt wheel.

Model Nos. 300-SP and 400-SP have Paul Type L Self-Priming Suction Pump, belt-driven; electric welded tank, heavily galvanized, and guaranteed for a working pressure of 85 pounds; and are fitted with a pressure gauge showing pressure in the pressure tank.

**Type L Paul Shallow Well Pumps**

**Double Acting—Fully Automatic Self-Priming—Motor Driven**

This suction pump covers a large range of domestic or farm requirements, lifting water from any source of supply not more than 22 feet below its level. It may be operated automatically in connection with any style or size of pressure tank; this pump may be installed to operate on an open tank service by using an automatic float switch.

Standard equipment includes Paul Type L Self-Priming Suction Pump, V-belt driven; constant duty a.c. or d.c. motor, mounted on base plate with pump; and Type G Improved Pressure Controller, double pole, diaphragm operated, which starts pump at 20 pounds and stops at 40 pounds.

**Type US Paul Shallow Well Water Systems**

**Fully Automatic—Self-Priming**

**A Complete Automatic System with Storage Tank**

Especially designed for the requirements of the average home, either for soft water or complete water service, where the water level of the source of supply is not more than 22 feet below the pump.

Its compact arrangement requires the minimum of floor space. There is no mess from oil or water leaks, and no stuffing boxes to require adjustment.

The Paul Direct-from-Well Attachment may be used in connection with this system to furnish water fresh from the source, for drinking purposes.

**Standard Equipment**

Paul Type K Self-Priming Suction Pump, belt driven.

Standard constant duty a.c. or d.c. motor, mounted directly above the pump. The a.c. motors are of the repulsion induction type.

Electric welded tank, heavily galvanized inside and out, and guaranteed for a working pressure of 85 pounds.

Fixtures include water gauge showing the water level in the pressure tank, pressure gauge showing pressure in the pressure tank, Paul Relief Valve for protection against excessive pressure, and all pipe and fittings connecting pump and tank.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds. Controller may be adjusted for other pressures.

Pump, tank, and pipe are royal blue lacquer. Motor is black enamel. Fittings are brass and nickel trimmed.

**Type K Paul Shallow Well Water Systems**  
**Fully Automatic—Self-Priming**  
**A Complete Water Service for the Home**

This type of system is especially adapted for complete water service in the average home, or soft water service if a large reserve supply is desired. It will pump from cistern, well, lake, or stream, wherever the water is not more than 22 feet below the level of the pump.

If the system is used for supplying water for drinking purposes, it is recommended that the pump be equipped with a Paul Direct-from-Well Attachment.

**Standard Equipment**

Standard equipment includes Paul Type K Self-Priming Suction Pump, belt driven; standard constant duty a.c. or d.c. motor, mounted on pump base; electric welded tank, galvanized and tested for 85 pounds working pressure; water gauge, pressure gauge, and relief valve.

The Type G Improved Pressure Controller, double pole, diaphragm operated, starts pump at 20 pounds and stops at 40 pounds. Range may be adjusted at other pressures if desired. Controller is mounted in connection with non-pulsating device, producing quiet operation.

**Type L Paul Shallow Well Water Systems**

**Double Acting—Fully Automatic—Self-Priming**  
**A Complete Water Service with 50 to 120-Gallon Tank**

This type of system is especially adapted for complete water service in the average home, or soft water service if a large reserve supply is desired. It will pump from cistern, well, lake or stream, wherever the water is not more than 22 feet below the level of the pump.

If the system is used for supplying water for drinking purposes, it is recommended that, because of the large size of the tank, the pump be equipped with a Paul Direct-from-Well Attachment.

The pump and tank, being mounted separately, permit that the installation be arranged to suit the location.

**Standard Equipment**

Paul Type L Self-Priming, Suction Pump, belt driven. Standard constant duty a.c. or d.c. motor, mounted on pump base. The a.c. motors are of the repulsion induction type.

Electric welded tank, galvanized inside and out by the hot dip process. Tested for 85 pounds working pressure.

Type G Improved Pressure Controller, double pole, diaphragm operated. Starts pump at 20 pounds and stops at 40 pounds. Range may be adjusted at other pressures if desired.

Fitted with water gauge, pressure gauge, and relief valve.

Pump, controller and base are finished in royal blue lacquer. Tank is natural galvanized.

## Type US Paul Deep Well Cushion Stroke Systems

A completely automatic water system, delivering the water from the well to point of use under pressure. Assembled into a sturdy, compact unit especially designed for the requirements of the average home.

### Standard Equipment

Equipment includes Paul Type J Cushion Stroke Deep Well Pump, belt driven; standard a.c. or d.c. motor, mounted on pump base; electric welded tank, galvanized, and guaranteed for a working pressure of 85 pounds.

Has Paul Deep Well Cylinder of either the spring or ball valve type, and either octagon ash wood or round steel pump rod, depending upon type of cylinder used.

Type G Improved Pressure Controller is double pole, diaphragm operated. Starts pump at 20 pounds and stops at 40 pounds. May be adjusted for other pressures as desired.

Water gauge, relief valve, and all pipe and fittings connecting pump and tank.

## Type J Paul Deep Well Cushion Stroke Systems

This system is equipped with a Paul Type J Cushion Stroke Deep Well Pump, belt-driven. This pump is designed to pump water from any deep well where the water level is beyond the lift of the suction pump. Its wide range of capacities and sizes offers complete water service for home, farm, factory, or institution where water is needed.

The motor is standard a.c. or d.c., mounted on pump base. The a.c. motor is of repulsion induction type. Has Paul Deep Well Cylinder of either spring or ball valve type, and either octagon ash wood or round steel pump rod, depending upon type of cylinder used. Electric welded tank, galvanized and tested for 85 pounds working pressure. Fittings include water gauge, pressure gauge, and relief valve.

If the system is used for supplying water for drinking purposes, it is recommended that the pump be equipped with a Paul Direct-from-Well Attachment.

**Model 930-K Saylor-Beall Automatic Electric Beer Pressure Air Pumps**

Designed for the average service bar having 1 to 4 taps. Draws air through a felt filter located on top of compressor. Pipe fittings are of bronze, cadmium-plated. Storage tank is automatically controlled at a pressure of 30 to 55 pounds. Compressor running continually will cost about three-quarters of a cent per hour.

Complete unit, with 2½-gallon storage tank, galvanized, occupies only 1.58 square feet floor space. Height, 19½ inches; width, 9½ inches; length, 24 inches over all.

With automatic pressure switch, tank pressure gauge, safety valve and regulator and gauge for pressure at taps. Standard equipment includes a ¼-h.p., 110-volt, 60-cycle G-E motor with V-belt drive. Operates compressors at 450 r.p.m., and at this speed has a piston displacement of 1.43 cubic feet of air per minute. Relief valve set at 70 pounds pressure.

Model 930-K, Complete ..... each \$69.50  
 Extra for D.C. ¼-H.P., 115 Volts..... each 7.00

**Model 950-K Saylor-Beall Automatic Electric Beer Pressure Air Pumps**

Recommended for dispensers having 6 to 12 taps where volume and constant air pressure is required. Storage tank automatically controlled at a pressure of 30 to 55 pounds. Completely equipped with air regulator with gauge, also storage tank pressure gauge.

To assure quietness, moving parts are cushioned with rubber. Pipe fittings are of bronze, cadmium-plated.

Complete unit, with 11-gallon galvanized storage tank, occupies 2.07 square feet floor space. Height, 26 inches; width, 13 inches; length, 25 inches over all.

Standard equipment includes a ¼-h.p., 110-volt, 60-cycle G-E motor for a.c. with V-belt drive. It operates compressor at 450 r.p.m., and at this speed has a piston displacement of 1.43 cubic feet of air per minute. Relief valve set at 70 pounds pressure.

Model 950-K, Complete ..... each \$79.50  
 Extra for D. C. ¼-H.P., 115 Volts..... each 7.00

**Model 116-KC Saylor-Beall Portable Air Compressors**

This compressor furnishes compressed air for spraying paints or lacquers, tire inflation, operating small tools and many other purposes. Ideal for use in homes, hotels, apartments, hospitals, schools, office buildings, etc.

Simple in design and sturdy in construction.

Adjustable rubber belt drive. With bronze bearings; positive lubrication. Fittings are cadmium-plated. Rubber hose, 14 feet of 3-ply cloth inserted with connections.

Finished in red and black enamel.

Motor, ¼ h.p., 110 volts, 60 cycles, a.c.

**Model 590-K Saylor-Beall Portable Air Compressors**

This twin cylinder unit is designed especially to meet all requirements for compressed air up to a volume of 6 cubic feet of free air per minute.

Develops a sufficient volume and pressure of air to operate mostly all of the larger paint spray guns and small pneumatic tools. Used by painters, stone-cutters and for garages, factories, hotels, apartment houses, etc.

Where high pressure and lower volume are required, a change is made in the motor pulley at slight additional cost, and the relief valve set to operate at 90, 120 or 150 pounds pressure.

Adjustable rubber belt drive. Special dipper type lubrication. Fittings are cadmium-plated. Bearings are of bronze. Finished in red and black enamel.

Motors, ¾ h.p., 110/220 volts, 60 cycles, a.c.

## Model 317-K Saylor-Beall Spray Guns For Use with Model 116-KC Air Compressors

Can be used as a syphon or pressure type and also with a pressure feed material tank.

The adjustments on the material and air nozzles are so constructed that any width of spray can be obtained from 1/2 inch to 10 inches. All grades of paints, lacquers, enamels, varnishes, oils, insecticides and other liquids can be sprayed successfully.

The material cup is of heavy copper and will stand 75 pounds pressure without bulging the bottom. The threads are machined on a brass ring soldered on cup and then ground to give an even, flat surface for gasket, to prevent leaks. Threads machined in this manner will wear indefinitely. Capacity of cup, 1 full quart.

The internal spray nozzles are machined from brass and chromium-plated to increase durability. External nozzles are made from same material and nickel-plated.

In order to do all kinds of spraying it is advisable to have a complete set of air and material nozzles which includes flat and round nozzles of both internal and external atomizing types. Internal nozzles are specially adapted to spray slow drying materials and the external for fast drying materials, such as lacquers and enamels. Complete instructions are packed with every spray gun.

Model	Description	Each
317-KA	With Internal Atomizing Fan Spray Nozzle	\$10.00
317-KB	With External Atomizing Fan Spray Nozzle	11.00
317-KC	With External and Internal Atomizing Fan Spray Nozzle	12.75
317-KD	With Complete Set of Nozzles	16.00
317-KE	With 6-Inch Oiling and Cleaning Nozzles	11.00
317-KF	With 10-Inch Oiling and Cleaning Nozzles	11.50

## Type 403 Speedway Portable Blowers

A powerful 5-pound tool that delivers a blast of clean, dry air at high velocity for cleaning and drying purposes. Indispensable wherever dust and dirt collect on motors, etc.

Universal motor operates a centrifugal fan at 12,000 r.p.m. Made of pressed steel throughout. Soft rubber nozzle covering prevents shorting when cleaning electrical apparatus. Toggle switch is located at operator's thumb.

Equipped with 8-foot cord, unbreakable rubber plug and soft rubber nozzle covering. Universal motor, 110 volts.

Operates from any light socket and is easily handled.

Type 403.....each \$19.50

## Sturtevant Big Midget Portable Blowers

Delivers dry air for removing dust from machinery. Compressed air ordinarily contains moisture; this blower shoots dry air. Does away with air lines and lugging a

hose around, and work is reached from all sides. Has 1/2 h.p. universal motor, 110 or 220 volts; speed, open outlet, 9895 r.p.m., closed outlet, 11100 r.p.m.; volume delivered, 43.2 cubic feet per minute; air velocity, 14820 feet per minute; static pressure, outlet closed, 16.62 ins. water; inside diameter nozzle, 3/4 inch.

Furnished with 20 feet cord and plug; switch in handle. Weight, 7 Pounds.

Price.....each \$50.00

## 1lg Self-Cooled Propeller Fans

The construction of the 1lg Fan combines strength and simplicity. The round-bodied motor fits into a cast iron ring supported by forged arms fastened to the outer ring. This makes it possible to interchange or replace motor without disturbing the alignment. Frame and motor can be installed separately, thus dividing weight.

The vacuum that is created at the axis of the motor draws a current of cool air from the outside over the motor, after which it is carried away with the general exhaust.

The 1lg Lubricating System is used on all fans larger than the 20-inch size. This system permits the lubrication of the motor, while the fan is in operation, by providing grease cups at the front of the ball bearing motors.

Enclosed speed controllers furnished with all d.c. fans except the Type 12 size.

**Ilgair Portable Floor Fans**

With the Ilgair Portable Floor Fan, the cooling vitalizing blasts of air overcome the heat in operations of all kinds.

Used for recirculation of air in drying rooms and prevention of stratification in refrigeration rooms.

The 12-inch size is furnished with cord and plug; the 30 and 36-inch sizes furnished with standard enclosed switch.

**Ilg Automatic Shutters**

Fan Running

Fan Not Running

These shutters are used on the outside of propeller fans to protect the fan when not running and also to keep out the wind, rain, snow and cold.

Ilg Automatic Shutters are built of special hard rolled aluminum leaves, pressed on Whiting Alloy copper coated rods supported in cast frame.

When fan is running, the shutter is held open by the force of the air current. When fan is shut off, the shutter closes automatically by gravity.

Shutters are moisture proof and need no attention after they are installed.

Size of shutter corresponds to size of fan.

Sizes 48-inch and larger are built in two sections.

**Type P Ilg Volume Blowers**

The Ilg Type P Volume Blower is designed to handle small quantities of air over a pressure range of 1/2 to 3 inches. The housing is of heavy cast-iron; the wheel is of cast aluminum.

This blower can be hung from ceiling or suspended from side wall and fitted into any one of four different discharges quickly and easily.

It is particularly useful for exhausting fumes from chemical laboratories. It can also be used

for handling light dust from polishing wheels and grinders and is suitable for any small exhaust purpose where a considerable amount of resistance is caused by a long run of small duct. The 7 1/2 Type P Blower at 3400 r.p.m. can be satisfactorily used on single-fire blacksmith forges.

**Ilg Power Roof Ventilators**

FRONT VIEW Pent-House with Automatic Shutter

The Ilg Power Roof Ventilator is for buildings where roof ventilation provides the only practical means of exhausting foul air.

With this ventilator there is a constant suction created by the Ilg Self-Cooled Motor Propeller Fan which is enclosed in the penthouse. The foul, dead air and excess heat are positively and uniformly drawn off by the action of the fan. Wind and weather can have no effect.

Placed above machines in special processes and connected by duct work, the unit serves as a fume or smoke and heat exhauster. Since heat's natural direction of travel is upward, the Ilg Power Roof Ventilator has found wide use in every industry confronted with excessive heat.

The Ilg Self-Cooled Motor Propeller Fan is mounted within a sheet steel penthouse. Solidly constructed over a heavy angle iron frame, the house is weathertight in every respect.

Furnished complete with shutter. Prices do not include fan.

## Ilgair 12-Inch Adjustable Portable Ventilators With Adjustable Steel Panel

Two panel widths, 26 to 36 inches and 36 to 46 inches.

Finished in ivory. Supplied with 10 feet of rubber covered cord with switch and plug. Exhausts 750 cubic feet of air per minute. Shipping weight, 40 pounds.

50-60-Cycle 110 Volts A.C. . . . . each \$41.00  
110 Volts D.C., 25-Cycle A.C. . . . . each 45.00

### With Adjustable Glass Panel

Furnished with two-piece clear vision plate glass panel supported in stainless steel frame. Adjustable panel widths, 30 to 36 inches, 36 to 42 inches, and 42 to 48 inches.

50-60-Cycle 110 Volts A.C. . . . . each \$54.50  
110 Volts D.C., 25-Cycle A.C. . . . . each 67.00

## Ilgair Kitchen Ventilators

### 12-Inch Built-In Cabinet Type

This built-in-the-wall type ventilator can be installed in old or new kitchens.

The quiet Ilgair ventilator is inconspicuous behind the clean-cut white grille front.

A nickel silver pull chain operates the Ilgair and opens the outer weather-tight door. No adjustment need be made for different wall thicknesses.

Exhausts 750 cubic feet of air per minute.

Operates at 1140 r.p.m.

Consumes only 70 watts.

Depth, 8 $\frac{5}{8}$  inches; height, 12 $\frac{3}{4}$  inches; width, 13 $\frac{5}{8}$  inches.

Finished in white.

Shipping weight, approximately 42 pounds.

Rear View of Cabinet Showing Weathertight Door

## No. 55 National Pyramid Brush Assortment

For Fractional Horsepower Motors

Brushes for vacuum cleaners, fans, vibrators, electric ironers, washing machines, sewing machines, food and drink mixers, heat regulators, pumps, electric tools, cash registers and office appliances.

Designed for effective counter or store display. Resale prices for each brush and spring shown on the label in each compartment. Contains 198 brushes of 17 different sizes (3 sizes complete with shunts, springs and terminals) and 100 springs in 3 sizes.

Sizes range between  $\frac{5}{32}$  in. square and  $\frac{5}{16}$  in. square with 10 intermediate sizes of round and rectangular brushes including 3 types of brushes with shunts, springs and terminals. Springs are made of the best grade phosphor bronze wire.

No. 55 Assortment Complete . . . . . \$10.00

**Type 53-C Speedway Electric Drills**

1/4 Inch Capacity in Steel

Steel body is finished in chromium. With oilless, self-aligning bearings, open grip handle, 1/4-inch keyless chuck and universal motor. Furnished with 8-foot rubber-covered cable and separable plug. Over all length, 13 inches. No load speed, 2000 r.p.m. Normal load speed, 1200 r.p.m. Weight, 5 1/2 pounds. Type 53-C.....each \$19.50

**Type 56-C Speedway Electric Drills**

5/16 Inch Capacity in Steel

Steel body is finished in chromium. With oilless, self-aligning bearings, closed grip handle, 5/16-inch keyless chuck and universal motor. Double gear reduction. With 8-foot rubber-covered cable and plug. Over all length, 13 inches. No load speed, 1500 r.p.m. Normal load speed, 900 r.p.m. Weight, 6 1/2 pounds. Type 56-C.....each \$21.50

**Type 57-C Speedway Electric Drills**

3/8 Inch Capacity in Steel

Made of steel, chromium finish. With oilless, self-aligning bearings, keyless chuck, ball-bearing thrust, quick-make-and-break trigger switch, large cooling fan and universal motor. With 8-foot rubber-covered cable and plug. Over all length, 14 inches. Breast plate, 3/8-inch. Weight, 8 pounds. Type 57-C.....each \$30.00

No load speed, 1300 r.p.m. Normal load speed, 800 r.p.m.

**Type 60-C Speedway Electric Drills**

1/2 Inch Capacity in Steel

Made of steel, chromium finish. With oilless, self-aligning bearings, 1/2-inch keyless chuck, ball-bearing thrust, quick-make-and-break trigger switch, large cooling fan, breast plate and universal motor. With 8-foot rubber-covered cable and plug. Over all length, 15 inches. No load speed, 500 r.p.m. Normal load speed, 300 r.p.m. Weight, 12 1/2 pounds. Type 60-C.....each \$45.00

**Speedway Portable Drills Heavy Duty**

Of ball bearing construction.

Operates on both a.c. and d.c. Heavy duty switch, toggle type.

Jacobs 3-jaw key type chuck and chuck key; 8-foot heavy rubber lead cord with indestructible soft rubber split plug connection. Specify voltage when ordering.

Type.....	88	90	92
Each.....	\$45.00	50.00	55.00

**Type 59 Speedway Electric Drills**

1/2 Inch Capacity in Steel

Has a wood drilling capacity of 1 inch holes or better; average reaming capacity, 3/16 inch. Has oversize 110 volt universal motor. Heavy duty trigger switch in side handle. Ball bearing construction.

With Jacobs Chuck, chuck wrench, 8-foot lead cord and plug. Length, 14 inches. Speed r.p.m. load, 350; no load, 700. Weight, 14 pounds.

Type 59....each \$65.00  
Type 220 Drill Stand....each 22.50

**Speedway Master Electric Drills**

Capacity in Steel:  
Type 94 - 5/8 Inch  
Type 95 - 3/4 Inch  
Type 96 - 7/8 Inch  
Type 97 - 1 1/4 Inches

Reaming capacity averages 75 per cent of drilling capacity in steel. Capacity in wood ordinarily runs double capacity in steel and over.

Heavy duty trigger switches can be locked on contact. With 110-volt universal motor, 8-foot lead cord and plug. Types 94 and 95 with Jacobs Chuck and Chuck Wrench; Types 96 and 97 with Nos. 2 and 3 Morse Taper Sockets.

Type	Each	Cap. in Steel In.	Lgth. In.	Load Speed R.P.M.	No Load Speed R.P.M.	Wt. Lbs.

97	115.00	1 1/4	19	180	300	28

1/2-Inch Jacobs Chuck on Morse Taper Arbor for Morse Taper Sockets, for Types 96 and 97....each \$10.00  
Type 223 Drill Stand.....each 35.00

## Type 6 Speedway Portable Hammers

110 Volts

Primarily built for drilling into concrete, stone, brick, etc., light chipping, channeling, scaling and other uses where a great number of blows is required.

Operates at about 15 per cent of the power cost of operating air tools and without the expense and inconvenience of compressor, air piping hose, etc., Over handwork, the economy is from 80 to 90 per cent. Every tool is controlled by a switch mounted in the handle and equipped with flexible cord and plug. They may be attached to any lamp socket.

A man drilling by hand strikes from 40 to 65 blows per minute, this hammer, 1800 blows per minute. Power cost is negligible, about 15 cents a day for ordinary work. The hammer, element is at all times free from the motor and the strength of the blow is constant. Cannot overload the machine, no burning out of armatures.

Drills 1 1/4-inch diameter hole in concrete or softstone, and drills 2 inches deep per minute.

Operated on both a.c. and d.c. Watts, 275.

Weight, No. 6, 26 pounds; No. 10, 16 pounds.

Type 6 ..... each \$165.00  
 Type 10 ..... each 110.00  
 Add \$3.00 for 220 or 32 volts.

For drilling speed in brick multiply by 2. For drilling speed in granite divide by 2 and use diamond drills.

### Electric Hammer Stands

## Type 175 Speedway Portable Electric Saws

For general maintenance, carpentry and construction.

Motor operates from any light socket, a.c. or d.c.

Equipped with 8 feet heavy rubber covered lead cord with soft rubber indestructible split plug connection. Choice of either rip or cross cut blade. A 6-inch blade provides cutting capacity up to 1 3/4 inches. A 7-inch blade with cutting capacity of 2 1/4 inches at extra cost.

Length over all, 15 inches.

Weight, 15 pounds. Speed, 3800 r.p.m.  
 Type 175, 110-Volt..... each \$48.00  
 Type 175, 220-Volt..... each 51.00  
 Type 175, 32-Volt..... each 51.00

## Speedway Portable Electric Saws

Slipper plate can be raised or lowered for adjustment of depth of cut. A ripping guide is mounted on the front of the slipper plate to facilitate long cuts.

Base plate tilts 45° to cut bevels.

Each machine is furnished with a light frame which permits the saw to be turned up side down and used as a table saw.

Swinging saw guard automatically pushes out of the way when cutting pressure is applied and returns to position when pressure is released.

The machine is fitted with ball bearings. All gears and shafts are made from heat treated chrome nickel steel.

Equipped with an adjustable D type handle. Motor cases, handles, and slipper plates are of cast aluminum.

Furnished complete with necessary wrenches and a carrying case. Runs on either a.c. or d.c.

## Type 281 Speedway Combination Drill and Saw Kit

### Universal Motor

Five power driven portable electric tools are built into this kit. One power unit is adapted to all 5 to make an attractive price for so practical a set.

The set includes a portable saw, drill, grinding wheel, buffer, scratch brush, motor stand, accessory arbor and steel carrying case. Specify voltage. Add \$3.00 for 32 or 220 volts.

Price, Type 281 ..... each \$37.50

**Speedway Screw-Drivers and Nut-Tighteners**

This is a light and compact driver for small and medium sized screws. A simple change from screw-driver tang to nut-socket converts it into nut-tightener.

Housing is of drawn steel, electrically welded to handle. The motor operates on both a.c. and d.c.; 32, 110, or 220 volts. Quick make and break switch, return spring type. Capacity, No. 16 screws up to 2½ inches.

Type.....	155	156
Each.....	\$65.00	75.00
No Load Speed.....r.p.m.	700	700
Driving Speed.....r.p.m.	375	375
Clutch.....	Positive Drive	Positive and Slip Drive
Gear Reduction.....	26 to 1	26 to 1

**Type 122 Speedway Bench Grinders**

Oversize shaft and dust-proof ball-bearings are features of this tool.

Operates two 6-inch grinding wheels at 3500 r.p.m. Wheels are well guarded. Has adjustable tool rests.

Equipped with ¼-h.p. a.c. or d.c. motor, 110 or 220 volts, not universal.

Weight, 39 pounds.

Type 122, A.C. Only, 110 or 220 Volts.....	each	\$35.00
Type 122, D.C. Only, 110 or 220 Volts.....	each	37.50
Add for 32 or 220 Volts.....		3.00

**Type 108 Speedway Tool Post Grinders Universal Motor**

Type 108 is a precision grinder combining correct speed with accuracy and ample power. Ball-bearing throughout. Speed of bare grinder is 10000 r.p.m.

Standard equipment includes one 2½ and one 4½-inch grinding wheels. Specify voltage.

Price, Type 108.....	each	\$35.00
Add \$3.00 for 32 or 220 volts.		

**Extra Equipment for Types 108 and 110 Grinders**

Price, A, Arm for 3-Inch Internal 30000 R.P.M.	each	\$20.00
Price, D, Arm for 5-Inch Internal 10000 R.P.M.	each	20.00
Price, B, Arm for 10-Inch Internal 10000 R.P.M.	each	30.00
Price, E, Arm for 15-Inch Internal 10000 R.P.M.	each	35.00
Price, C, Arm for Button Die Grinding.....	each	35.00

**Speedway Portable Drill Stands**

The usefulness of a portable drill is greatly increased with the added equipment of a drill stand as shown here.

This stand insures perfect alignment and makes drilling a much easier job. A type for each drill is available.

Type	Each	Class	For Use with Drills Types	Weight Pounds
210	\$10.00	B	49, 53, 56	9
214	16.00	B	60	40
220	22.50	A	59	41
221	22.50	A	88, 90, 92	35
223	35.00	A	94, 95, 96, 97	60

**Speedway Oilers**

**Types A and B Constant Level Oilers**

Showing Type A Oil Bearing Installed

For ring-oiled and waste-packed bearings.

The oil level in the bearing is held at the same height as the opening of the short tube in inverted bottle cap. As soon as the oil gets below this level air enters the jar through this tube, and oil flows out through long tube until level is raised enough to again seal the air opening in the short tube. The oil level cannot vary more than a slight fraction of an inch.

This oiler doubles the capacity of the oil reservoir, so bearings need inspection only half as often. Inspection is simplified and speeded up.

No oil is wasted by this oiler. Every drop goes to the bearing when it is needed.

A glance at the glass tells if oil level is correct. If not, the bottle can be refilled and replaced in an instant. Keep oil in the bottle and the level cannot vary.

For Ring-Oiled Bearings Bottom Opening

Type A oilers are quickly and easily installed on most ring-oiled bearings by connecting directly to the side oil opening.

Type B oilers are used on ring-oiled bearings not having a side opening. They are connected as shown in illustration at left.

Types A or B, 1-Oz. Oil Cap..ea.	\$1.25
Types A or B, 3-Oz. Oil Cap..ea.	1.30

**Type T Thermal Oiler**

For plain sleeve bearings.

When Speedway Thermal Oilers are used on machine bearings it means fewer repairs, longer life and less depreciation.

Oilers are entirely automatic and are so sensitive to the varying needs of a bearing that they operate on a temperature change of 2 degrees.

Main oil supply is held in the glass bottle A from which it flows as needed to the thermal chamber B. Any slight rise in temperature of bearing is communicated to air imprisoned in B, which expands, forcing oil out of small opening C. Ratio of air and oil in chamber B is always the same, thus insuring uniform operation.

Type T-1 Oiler, 1-Ounce Size.....	each	\$1.80
Type T-3 Oiler, 3-Ounce Size.....	each	2.00

## Thor 3/16-Inch Light Production Electric Drills

A midget type drill for rapid drilling in small work. Because of its light weight and high power it is particularly adapted for phonograph, radio, piano and automobile work.

Can also be furnished without handle for drilling in close quarters. Equipped with Jacobs chuck.

In ordering, specify voltage desired.

Size.....	ULB
Each.....	\$38.00
Free Speed.....	2300 r.p.m.
Length Over All.....	10 3/4 inches
Weight.....	3 1/4 pounds

## Thor 3/16-Inch Heavy Production Electric Drills

Built to withstand the drilling service of continuous production work for small drilling operations.

With Jacobs chuck.

Bonnet cap furnished if desired. A ball-bearing tool with small body that is so rounded that it makes it easy to grasp.

Specify voltage when ordering.

Size.....	UKC
Each.....	\$42.00
Free Speed.....	3500 r.p.m.
Length Over All.....	11 inches
Weight.....	5 pounds

## Thor 1/4-Inch Light Duty Electric Drills

Particularly built for light work and for intermittent drilling. This tool is receiving wide service for drilling holes

for light manufacturing work.

Large comfortable handle provides a firm, steady grip.

In ordering, specify voltage desired.

Size.....	UXD
Each.....	\$30.00
Free Speed.....	2200 r.p.m.
Length Over All.....	11 3/8 inches
Weight.....	5 3/4 pounds

## Thor 1/4-Inch Heavy Production Electric Drills

Powerful, rugged drills perfectly balanced with small rounded exterior. Equipped with Jacobs chuck.

Sizes USA and UAC with grip switch; Size UAA with side switch.

In ordering, specify voltage desired.

Size.....	USA	UAC	UAA
Each.....	\$45.00	47.00	47.00
Free Speed.....	2500 r.p.m.	2300	2300
Length Over All.....	12 5/8 inches	13 1/8	13
Weight.....	8 pounds	8 1/4	8 3/4

## Thor 5/16-Inch Heavy Production Electric Drills

For production drilling in wood or metal.

With Jacobs chuck. Fully balanced and with ball-bearing construction.

In ordering, specify voltage desired.

Size.....	UAD
Each.....	\$50.00
Free Speed.....	1750 r.p.m.
Length Over All.....	13 3/8 inches
Weight.....	8 pounds

## Thor 5/16-Inch Heavy Production Electric Drills

A side switch type drill. Grip handle can be removed for drilling in close quarters.

Equipped with Jacobs chuck; ball-bearing construction.

Specify voltage, when ordering.

Size.....	UAB
Each.....	\$50.00
Free Speed.....	1750 r.p.m.
Lgth. Over All.....	13 inches
Wt.....	8 1/8 lbs.

## Thor 3/8-Inch Heavy Production Electric Drills

A powerful, sturdy tool. Used mainly in industrial plants and shops where it is necessary to drill all sizes of holes up to and including 3/8 inch.

Equipped with Jacobs chuck.

In ordering, specify voltage desired.

Size.....	UBD
Each.....	\$52.00
Free Speed.....	750 r.p.m.
Length Over All.....	14 inches
Weight.....	9 pounds

## Thor 3/8-Inch Heavy Production Electric Drills

Suitable for drilling deep holes in wood. Recommended for drilling where speed of larger drills is too slow and power of smaller drills is too light.

Equipped with Jacobs chuck. In ordering, specify voltage desired.

Size.....	UCE
Each.....	\$54.00
Free Speed.....	750 r.p.m.
Length Over All.....	15 inches
Weight.....	13 3/4 pounds

**1/2-Inch Thor Universal Electric Drills**

This is a general purpose drill for either maintenance or production work. Especially adapted for use in a drill stand.

Has combination spade handle and breast plate. Equipped with Jacobs chuck and dead handle.  
 Size Number..... URA  
 Each..... \$55.00  
 Capacity.....in. 1/2  
 Free Speed.....r.p.m. 500  
 Length Over All in. 16 1/2  
 Weight.....lbs. 14 1/2

**Thor 5/8-Inch Heavy Electric Drills**

A side heavy duty switch type drill. For drilling and reaming tough materials.

Equipped with either No. 2 Morse Taper Spindle or Jacobs chuck. Has spade and dead handles.

In ordering, specify voltage desired.

Size..... UEN  
 Each..... \$85.00  
 Free Speed.....r.p.m. 400  
 Length Over All.....inches 16 3/4  
 Weight.....pounds 21 1/2

**Thor 1/2-Inch Heavy Production Electric Drills**

A side switch type drill. Will drill any metal or other material up to its capacity.

Equipped with Jacobs chuck, spade handle and dead handles.

In ordering, specify voltage desired.

Size..... UCL  
 Each..... \$68.00  
 Free Speed.....r.p.m. 550  
 Length Over All.....inches 15 1/4  
 Weight.....pounds 14 1/2

**Thor 3/4-Inch Light Electric Drills**

Specially adapted for the hardest kind of service in production shops on a wide variety of work.

Equipped with No. 2 Morse Taper Spindle, spade handle and dead handle. Heavy duty.

In ordering, specify voltage desired.

Size..... UES  
 Each..... \$85.00  
 Free Speed.....r.p.m. 330  
 Length Over All.....inches 16 3/4  
 Weight.....pounds 22

**Thor 1/2 and 9/16-Inch Extra Heavy Production Electric Drills**

Exceptionally rugged tools for continuous production drilling.

With Jacobs chuck, spade handle, side switch handle and dead handle.

Length over all, 16 1/2 inches. Weight, 20 3/4 pounds.

Specify voltage when ordering.

Size..... UDA UDB  
 Each..... \$70.00 72.00  
 Capacity.....in. 1/2 9/16  
 Free Speed r.p.m. 650 500

**Thor 3/4-Inch Heavy Electric Drills**

A side switch type drill of extra heavy construction. Suitable for all heavy duty work.

With Jacobs chuck, spade and dead handles. Specify voltage when ordering.

Size..... UFH  
 Each..... \$95.00  
 Free Speed r.p.m. 550  
 Length Over All.....inches 17  
 Weight.....pounds 26 1/2

**Thor 5/8-Inch Medium Electric Drills**

Used for all classes of maintenance work and light drilling.

Equipped with Jacobs chuck, side switch handle, spade handle and dead handle.

In ordering, specify voltage desired.

Size..... UCN  
 Each..... \$76.00  
 Free Speed.....r.p.m. 550  
 Length Over All.....inches 15 3/8  
 Weight.....pounds 15 1/2

**Thor 7/8-Inch Universal Electric Drills**

For heavy production work. Used by manufacturers of heavy machinery, in railway shops and in mine and construction work.

A side switch type drill; with grip handle, dead handle and No. 2 Morse Taper internal spindle.

Size..... UFS  
 Each..... \$96.00  
 Free Speed.....r.p.m. 350  
 Length Over All.....inches 19 1/2  
 Weight.....pounds 27 1/4

## Thor 1 and 1 1/4-Inch Heavy Production Electric Drills

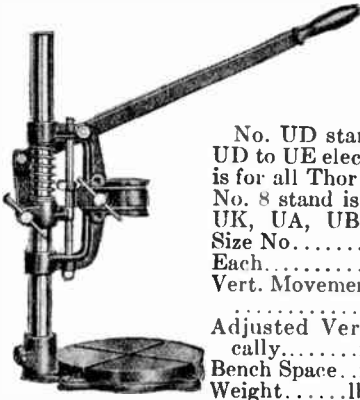

Powerful, sturdy tools for the heaviest type of drilling and reaming.

Equipped with No. 3 Morse Taper spindle, spade and dead handles.

In ordering, specify voltage desired.

Size.....	UFZ	U3Z
Each.....	\$115.00	150.00

Weight.....lbs.	28	40	40

## No. U60 Thor Universal Electric Grinders

Equipped with super-power motor, special heat-treated gears, large ball bearings. Carries a 6x1-inch wheel. Furnished with straight switch handle and emery wheel guard.

Size No.....	U60
Each.....	\$100.00
Speed, No Load.....	r.p.m. 4000
Length Over All.....	in. 25 3/8
Weight.....	lbs. 17

## No. BG6 Thor Electric Bench Grinders

110 Volts, 60 Cycles, Single-Phase, A. C.

An exceptionally powerful machine designed for 6-inch wheels. Sturdy construction, quiet in operation and free from vibration. Heavy ball bearings on spindle, fully protected from dust and dirt. Extra heavy wheel guards. Tool rests are adjustable and independent from the guards.

Speed, no load, 3600 r.p.m. Size grinding wheels: 6-inch diameter x 1-inch face x 5/8-inch hole. Equipped with switch in base. Cable can be connected to lamp socket. Weight, 40 pounds. Alternating current only.

No. BG6, 110 Volts.....each \$42.00

## Thor Universal Electric Screwdrivers

No. ULT for No. 10-24 metal screws. Used for driving small screws and nuts in metal work on radios, phonographs, pianos, automobiles, furniture, etc.

No. ULP for No. 8 wood screws. Designed for cabinet work, radios,

aeroplane assembly and automobile trim work. Both types equipped with Thor double slip clutch attachment which can be adjusted to drive screws to any pre-determined tension.

Size No.....	ULT	ULP
Each.....	\$48.00	50.00
Free Speed.....	r.p.m. 900	450
Length Over All.....	in. 11 1/4	11 1/4
Weight.....	lbs. 3	3

## Thor Universal Electric Screwdrivers

Grip switch type; can be used in all lines of industry that require small screws, cap screws and nuts. Positive Clutch. Capacity, 1/4 inch metal or No. 12 wood screws.

Size No.....	UKG	UKH
Each.....	\$54.00	54.00
Free Speed.....	r.p.m. 750	400

Weight.....	pounds 5 1/2	5 1/4
Size of Case to Center of Spindle.....	in. 1 5/16	1 5/16

## Thor Universal Electric Screwdrivers

A grip switch type screwdriver for all light screw and nut driving.

Equipped with double clutch friction type screw driv-

ing attachment with stationary finder.

Capacity, 1/4 inch metal or No. 12 wood screws.

Size.....	UKP
Each.....	\$64.00
Free Speed.....	r.p.m. 400
Length Over All.....	inches 14 3/4
From Side of Case to Center of Spindle.....	inches 1 5/16
Weight.....	pounds 5 3/4

## Thor Universal Electric Screwdrivers

A grip switch screwdriver for Nos. 10 to 16 wood screws.

Will do fast, accurate screwdriving on a wide range of work. Used in automotive plants, furniture factories, etc.

Equipped with positive clutch attachment but can be furnished with a variety of attachments for difficult screw and nut driving.

Size.....	UBG
Each.....	\$68.00
Free Speed.....	r.p.m. 750
Length Over All.....	inches 14 1/2
Weight.....	pounds 8 1/2

**Thor 1/4-Inch Universal Electric Nut Setters**

Grip switch type; with No. 140 Thor Kick-Out Nut Driving Attachment.

Nut and bolt setting require elasticity in attachment, so that various tensions may be easily obtained. Thor Double Slip Clutch with kickout was developed for this purpose.

Size.....	UBGN
Each.....	\$80.00
Free Speed.....inches	750
Length Over All.....inches	18
From Side of Case to Center of Spindle.....inches	1 3/16
Weight.....pounds	10 1/4

**Thor Electric Nut Setters for 3/8 and 1/2-Inch Nuts**

Equipped with suspension cap and hook or grip handle. Has side switch and dead handle.

Has the Thor Double Switch Clutch with kick-out attachment which drives nuts to any pre-determined tension.

Size.....	UEH	UCH
Each.....	\$125.00	105.00
Capacity.....inches	1/2	3/8
Free Speed.....r.p.m.	550	550
Length Over All.....inches	17 1/2	16 1/4
Weight.....pounds	23 1/4	15 1/2

**Thor Universal Electric Hammers**

Can be used as a drill or hammer. Used to drill, chip and channel concrete, brick, wood, etc. Consists of a No. USA 1/4-inch electric drill and hammer attachment. Furnished with 1/4-inch Jacobs chuck, 5/16-inch Star drill, tool holder, ejector pin and carrying case. Capacity in concrete per minute: 1-inch hole, 3 inches deep.

Size.....	USH
Each.....	\$90.00
Blows per Minute.....	3000
Length Over All.....inches	18
Weight Complete.....pounds	16

**Thor Electric Grinder Stands**

For No. 6 Thor Grinder. Converts a portable electric grinder into a bench grinder. Stand comes complete with adjusting bars and 2 tool rests.

Bench space, 5x7 5/8 inches. Weight, less electric grinder, 10 1/2 pounds.

Each.....	\$15.00
-----------	---------

**Thor Double Slip Clutch and Kick-Out Attachments**

For Screw and Nut Driving

These Thor features guarantee the correct tightness of every nut or screw driven, assuring 100% uniformity and accuracy in the tension of nuts and screws.

Prevents clutch breakage and wear and can be adjusted for any tension.

**Thor Universal Electric Tappers**

Size UKS

Grip switch type; for tapping or stud driving jobs. Super-power motors, ball-bearing design, special heat-treated gears, etc.

Tappers have the mechanical reversing feature. A slight pull on the machine disengages the forward speed and engages the reverse speed. Can be equipped with Errington Friction Clutch for bottom tapping, or all makes of 1/4-inch stud setting chucks.

Have universal motors; will operate on a.c. or d.c.

Size UBR

No. UKS is equipped with a 5/16-inch chuck, No. UBR with a 3/8-inch chuck.

From side of case to center of spindle: No. UKS, 1 inch; No. UBR, 1 3/16 inches.

Size No.....	UKS	UBR
Each.....	\$68.00	85.00

## Vulcan Electric Soldering Irons

Display Board

These electric soldering irons are approved by Underwriters' Laboratories. Can be connected to any lighting socket and will operate with identical results on either a.c. or d.c.

They are wound for standard voltages as follows: 32, 110, 115, 120, 125, 200, 220, 230, 240 and 250 volts. An extra charge of \$1.00 is made for special voltages. Specify voltage when ordering.

Each iron is equipped with a patented, ventilated, adjustable handle, by which it can be lengthened or shortened, and a 6-foot approved heater cord and attachment plug cap.

### No. 10 and No. 20

For finest instruments, smallest fuses, light telephone repairs, radio, and all very light soldering.

No. 20 is recommended for industrial use.

## Vulcan Rheostats

Provides more flexible and accurate temperature control in the use of soldering tools. Protects them when not actually delivering their working heat by preventing the unused heat from storing up.

Protects tinning from burning off tip and prolongs life of the winding. Maintains exact degree of temperature required for perfect soldering on any particular job.

## American Beauty Electric Soldering Irons

No. 3138

All irons except No. 3138 have special baffle-plate construction at shank to prevent free conduction of heat to handles. No. 3138 iron does not need baffle plate.

Copper tips are coated with pure nickel to prevent oxidation and corrosion.

Standard tips regularly supplied. Pointed tips can be supplied in place of chisel tips and vice versa; for No. 3138 iron a special long drawn semi-chisel shaped tip can be furnished in place of standard tip.

No. 3158

Stands are supplied with all irons.

Heating element core is machined from solid steel rod; outer surfaces are impregnated with zinc.

In standard voltage ranges: 100-109, 110-120, 121-130, 190-209, 210-240, 241-260. Will operate on a.c. or d.c. circuits. Can also be supplied for 32 volts.

No. 3138.—Primarily adapted for light work; radio, telephone, telegraph, ignition work, etc.

No. 3158.—For the same purposes as No. 3138 iron and for work of a somewhat heavier nature; for electric starter and ignition manufacturers, repair work, etc.

No. 3178.—For use on heavier work; connections, light commutators and for service and production work.

No. 3198.—For shop, service, production work, etc. Supplies a large volume of heat at high temperature.

## G-E Soldering Irons

Cat. Nos. 43X700 and 43X701

These irons are simple in design and construction. There are only 8 different parts. Copper tip surrounds the cartridge type heating unit and all heat generated must pass through the tip. Copper has high heat conductivity, this means quick heating and low watts input.

\*Price includes radiating stand.

†Chisel type tips are employed on all sizes.

‡Excluding stand.

G-E Strip Heaters

Serves the double purpose of air heater and clamp-on heater. A few of the common applications are for: process machinery, drying ovens, matrix scorers, warming tables, glue tables, water baths, drying cabinets, valve and pump houses, pipe lines, etc. Made of steel-sheath, enclosing nickel-chromium resistance wire insulated by magnesium-oxide powder. Heater is  $\frac{25}{64}$  inch thick and  $1\frac{1}{2}$  inches wide. Sheath temperatures, 750° F. or 1200° F. Can be connected in series for use on 440 or 550-volt circuits. For these higher voltages, secondary insulation is recommended, especially at sheath temperatures above 600° F.

Maximum Sheath Temperature, 750° F.

G-E Immersion Heaters

Single Heat, .75 and 1 Kw.

3 Heats, 1.2 to 10 Kw.

Single Heat, .6 Kw.

3 Heats, 2 Kw.

These heaters offer an economical method of heating liquids in kettles, tanks, metal barrels, etc. They are substantially constructed, utilizing G-E Calrod Sheath Wire.

For heating water, a tinned copper-sheathed unit of high heat density and having a threaded brass header is used. For heating heavier liquids, such as oil and paraffin, a heater having a much lower watts density is used because of possible damage to such liquids and to the heaters caused by carbonization, etc. Steel is used as the sheath and header material in oil-immersion heaters.

When ordering specify if Type 5 is desired, also Cat. No. and voltage.

**Chromalox Immersion Heaters**

Types M, MO, CM and CMO

Type M or MO

Type CM or CMO with Switch and Outlet Box

**USES.**—Because of their efficiency, Chromalox Immersion Heaters supply the most economical method for heating fluids in tanks, vats, kettles, boilers, stills and other containers where direct heat energy is desirable. Hundreds of companies are using these durable heaters for heating cleaning solutions, volatile solutions, tempering baths, pickling baths, water, oils, acids, glues, paraffin, syrups, gasoline, caustics and other fluids.

**CONSTRUCTION.**—All Chromalox Immersion Heater blades or heating units proper are similar in construction to Chromalox Strip Heaters having the resistor embedded in refractory material. The heating units are encased in seamless metal tubing or sheath pressed tightly over them, the seamless sheath being welded or brazed to the pipe threaded screw plug making entire unit waterproof and insuring efficient heat transfer.

**OPERATION.**—Single heat heaters have one blade or heating unit while 3-heat immersion heaters have two blades or heating units that can be operated in parallel or series giving full or 1/4 total wattage; operating only one blade or unit of a heater gives 1/2 total wattage. A 440-volt operation, single heat, can be obtained by connecting the two blades or heating units of a 3-heat, 230-volt immersion heater in series. A 3-heat, 115-volt immersion will operate with the two blades in series on 230 volts.

**INSTALLATION.**—Chromalox Immersion Heaters are easily installed. Where tank wall is 3/8 inch thick or more,

simply drill a hole and thread it with either 1 1/4 or 2-inch standard pipe thread, depending upon what immersion heater is used. If tank wall is less than 3/8-inch thick, solder or weld a standard 1 1/4 or 2-inch pipe threaded flange or metal disc to tank wall and install immersion heater.

**Types of Heaters**

**TYPE M.**—For water heating and solutions that readily absorb generated heat. Regularly supplied with copper sheath and bronze screw plug. *For alkali solutions* where copper is attacked, steel sheath, iron screw plug and welded seam construction is supplied—when specified.

**TYPE CM.**—Same as Type M except furnished with 3-heat switch mounted on outlet box which covers heater terminals, providing for conduit or BX wiring if desired.

**TYPE MO.**—For heating mineral oils, paraffin and other fluids that absorb heat slowly. Supplied with steel sheath, iron screw plug, and brazed seams. Can be furnished with copper sheath and bronze screw plug where steel would be attacked.

**TYPE CMO.**—Same as Type MO except furnished with 3-heat switch mounted on outlet box, which covers heater terminals, providing for conduit or BX wiring if desired.

**NOTE.**—If solution to be heated will attack the standard immersion heater construction, special seamless metal sheathed heaters can be furnished. Write for prices specifying type of solution.

## Type H Chromalox Electric Air Heaters

Underwriters' Laboratories Approval No. 7601  
For 115, 230, 250, 440 and 550 Volts

Exterior View of Heater Equipped with 2 Chromalox Units

Designed for those many hard-to-heat places where heat must be concentrated near the floor. Ideal for mounting underneath low windows—the most effective location for electric air heaters. This heater is ideal for use in offices and shops.

Interior View of Heater Equipped with 4 Chromalox Units Showing 3-Heat Switch and Conduit Box Mounted on End of Heater

Heater discharges heated air horizontally into the room where it is needed (not up to the ceiling), thereby providing even heat distribution and eliminating the usual "hot spots" and "cold corners". Mounting side (back part) is always cool, therefore this heater can be fastened to wall or wooden partition without fire hazard.

Showing Over All Dimensions of Heater

Fully Assembled with 3 Feet of Flexible Cable and 3-Heat Switch Mounted on Standard Conduit Box Ready to Connect to Power Line

\*Can be supplied for 3-heat operation on 440 or 550 volts. All other air heaters listed above can be supplied for single-heat operation on 440 or 550 volts. For 3-heat switch (440-550 volts) add \$4.00 to above prices.

†Including switch.

## Chromalox Electric Air Heaters

Underwriters' Laboratories Approval No. 7601

Type V—For 115, 230, 250, 440 and 550 Volts

Exterior View of Heater Equipped with 4 Chromalox Units

Showing Over All Dimensions of Heater

This heater is easily mounted on walls or wooden partitions without fire hazard.

Fully assembled with 3 feet of flexible cable and 3-heat switch mounted on standard conduit box ready to connect to power line.

Cat. No.	Complete Each	Without Switch or Cable Each	No. of Units	Over All Height Inches	Wattage

†*EH-2040	45.00	39.00	6	27	4500

\*Can be supplied for 3-heat operation on 440 or 550 volts. All other heaters listed can be supplied for single-heat operation on 440 or 550 volts. †For 3-heat switch (440-550 volts) add \$4.00 to above prices.

†The 4500-watt (4.5 kw.) heater can be supplied on order for 3-phase, 2-phase or single-phase operation and the load will be evenly balanced on each phase. If greater heating capacity is required than is supplied by a 4.5 kw. heater, mount two or more heaters side by side and thus secure the necessary total kw. of heater capacity.

Type P—For 115, 230 and 250 Volts

This heater is doubly useful because it meets the frequent requirements calling for a heater that can be quickly moved from one place to another.

Cat. No.	Complete Each	No. of Units	Over All Ht. In.	Wattage

**Type HV Chromalox Electric Air Heaters**

*Underwriters' Laboratories Approval No. 7601*

For 115, 230 and 250 Volts

This inexpensive Chromalox auxiliary type heater is being widely adopted by chain stores, telephone companies, etc., for heating small places requiring equipment having the Underwriters' approval. Also being installed in ticket booths, valve houses, fire extinguisher houses, etc., where safe, fumeless, clean heat is a necessity and economy is a factor.

Can be mounted in any position—on walls, floors or ceilings of the space to be heated. Because of the low wattage rating, heater is not equipped with switch, but is shipped from stock ready for direct connection to the power line. If a switch is required, it can be supplied at a nominal additional charge. The low wattage also eliminates the necessity of the patented flue-back, making it possible to supply these heaters at a low price.

Showing Heater Mounted Vertically on Wall Near Floor

Heater is furnished complete with 6 feet of heater cord and attachment plug.

**American Beauty Electric Glue Pots**  
Automatic Temperature Control

Nos. 1041, 1042, 1044

Pails are equipped with reversible wiping balls.

Complete with cord, separable connector and attachment plug.

Constructed of aluminum alloy castings with heavy spun seamless copper, nicked, glue containers.

Outer enclosing casings of heavy sheet steel.

Made in the following standard voltage ranges: 95-104, 105-114, 115-125, 190-209, 210-229, 230-250.

Can be used on either d.c. or a.c. circuits.

**Water-Jacketed Type With Water Bath**

In this type the glue pail is immersed in a water bath and the contents thus heated.

Cat. No.	Each	Cap. Qts.	OVER ALL DIMEN. INCHES		INSIDE DIMEN. INCHES			Watt- age	Ship. Wt. Lbs.
			Height	Max. Diam.	Top	Bottom	Depth		
1041	\$27.50	1	6 3/8	8 1/4	4 3/4	4 1/4	4	440	12

1044	54.00	4	10 1/2	12 3/8	7	6 1/4	7	880	30

**Dry Type No Water Bath**

The glue is put directly into the cast aluminum pot.

Separate glue pails to fit into the pot can be furnished if desired.

141	\$21.00	1	6 1/2	7 3/4	4 7/8	4	4 1/8	250	10
142	26.50	2	8 5/8	8 3/4	6	5	5 1/2	350	14
144	37.00	4	10	10	7	6 1/4	7	660	25

**G-E Electric Glue Pots**

Furnished in two types.

The jacketless type has no water jacket and is used for continuous operation; single heat, 145° F. maximum temperature, using aluminum pot for quick heat distribution and prevention of glue sticking to side walls.

The water-jacketed type has 3 heats and is used for quick intermittent service. Water jacket is of cast iron and pot of

copper to which glue will not stick.

The 115-volt pot operates satisfactorily on voltages from 110 to 120; the 230-volt pot on from 220 to 240 volts.

Order by Cat. No. and voltage.

**Jacketless (Single Heat)**

With contact plug, 8-foot cable, socket attaching plug.

Average constant temperature in pot at low heat, 145° F.

## Bare and Insulated Wires

### General Information

### Stocks

We carry at our various distributing houses large stocks of wire and cables, which, in addition to the large reserve stock carried by the manufacturers from whom we buy, gives this company a unique and comprehensive assortment. We handle thousands of types of wires, bare and insulated, suitable for general purposes, and, of course, in addition, special wires and cables for aerial, underground, submarine, mine, signal, telephone, and telegraph service.

### Factory Facilities

Factory facilities for the manufacture of rubber covered wires and cables have been continually improved, so that to-day the Graybar Electric Company is in a position to offer its customers unsurpassed facilities for the production of rubber insulated wires, and we are as well able to have produced promptly special wires and cables such as are used by the railroads, the mines and the United States Government.

### Price and Quality

The Graybar Electric Company sells its wires and cables at prices consistent with the quality of material used, and our customers will find that we are in line with other manufacturers producing high grade wire.

### Special Wires

Although the foregoing refers principally to the standard types of rubber covered wire, the same holds good to other classes of insulated wire handled by the Graybar Electric Company. We are in a position to furnish not only material from a large stock of wires and cables, which meet these ordinary specifications, and from which shipment can usually be made as soon as order is received, but we also have exceptional facilities for executing promptly all orders for emergency or special cables even of the most complicated construction.

### Service

Our distributing houses are so well located and our stocks are so large that we are able to give customers service of a quality that cannot be exceeded by any of our competitors in any part of the country, and salesmen can unhesitatingly assure their customers that all stock of Graybar Electric wire receives the most careful scrutiny and inspection by men experienced in that line of work.

## Habirshaw Wire and Cable

### Insulation

Habirshaw wires and cables, distributed by the Graybar Electric Co. are insulated with rubber or varnished cambric. The various types of insulation are briefly described below.

### Black Core Code Grade Compound

Habirshaw Code Compound is a standard compound and, although designed primarily to meet the minimum requirements of the National Electrical Code, it possesses superior electrical, mechanical and chemical properties. Its quality and uniformity are carefully controlled by rigid inspection.

### Engineers Intermediate Grade Compound

Habirshaw Engineers' Grade Compound is an intermediate type, that is, it contains not less than 25 per cent rubber and comes between the Code and Thirty Per Cent grades of insulation. It conforms to the N.E.M.A. Building Wire Specification for Intermediate Insulation. This compound has remarkable natural aging properties and is a satisfactory insulation for use in high-grade building construction where an inexpensive insulation of better than Code grade is required.

### Thirty-Per-Cent Hevea Compounds

Habirshaw 30 per cent Hevea compounds contain not less than 30 per cent of the best grade of new Hevea rubber, carefully compounded. Thirty Per Cent insulation is made in two grades.

1. ASTM-D-27-32-T, Grade A (N.E.M.A. Standard).
2. ASTM-D-27-32-T, Grade AO.

Grade A compound is one not permitting the use of an Anti-oxidant, and has no aging performance requirement.

Grade AO compound is one requiring the use of Anti-oxidant to meet specified aging performance tests.

### Performance Test Compound

Habirshaw Performance type of rubber insulation is a high grade insulation having long life, good electrical and physical properties as well as low water absorption. This insulation conforms to the N.E.M.A. Building Wire Specification for Performance Test Insulation and also to A.S.T.M. Specification D-353-33T for Performance Rubber Compound.

The suitability of this type of compound as insulation is determined solely by physical and electrical tests. No limitations as to the kind or amount of rubber or other ingredients are specified, so as to permit the use of new materials and modern developments in the art, provided rigid tests are complied with. The use of Performance compound will ensure the obtaining of an insulation comparable with the best type of Thirty Per Cent, and one which represents the most advanced progress in compounding unrestricted by chemical analysis.

The above compounds, Black Core, Engineers', Thirty-Per-Cent Hevea and Performance Grade, represent the standard types of insulation used for building wire and cables and low voltage power cables.

**Habirshaw Wire and Cable**

Continued

Some of the special compounds regularly furnished by the Habirshaw Cable and Wire Corporation are briefly described below. Complete specifications and information on these types of insulation will be furnished on request.

**Habirite**

Habirshaw Habirite is a high voltage compound having low water absorption, high dielectric strength, is corona-resistant and has remarkable aging qualities, as indicated by natural life and long time Geer Oven aging tests.

**Performite**

Habirshaw Performite compound represents the most modern development in so-called super-aging compounds. It shows remarkable results in both Oxygen Bomb and Geer Oven aging tests and is the best rubber compound for high temperature and long service life. This compound is standard for I.A.M.E. Fire and Police Signal Cables.

**Forty Per-Cent and Sixty Per-Cent Jacket Compounds**

These compounds are used for abrasion-proof coverings on portable cords, arc-welding cable, mine cable, etc.

**Other Compounds**

In addition to the above, rubber compounds can be furnished which are resistant to oil, acids and alkali.

The Habirshaw Cable and Wire Corporation is in a position, with its well-equipped research laboratories and technical staff, to give expert advice on all special problems.

**Habirshaw**

**Flame-Stop Finish**

The new Code requires that all 600 volt braided building wire must have a flame retarding, moisture-resisting finish. This is one of the most constructive rulings ever introduced, tending to improve the quality of wire along with the improvement of quality in other wiring materials and devices.

Several years ago, Habirshaw, looking to the future, developed Habirshaw Flame-Stop Wire with the required flame retarding finish.

There has been over 200,000,000 feet of Habirshaw Flame-Stop Wire installed in the outstanding buildings of the United States due to the foresight of the leading architects, engineers and electrical contractors.

Habirshaw Flame-Stop Wire is backed up by Habirshaw's policy slogan "Proven by the test of time."

Habirshaw Wires and Cables are also supplied with metallic protective coverings. Lead sheathed cables are carried in stock; steel strip and wire armored and other special coverings are manufactured to order.

**Varnished Cloth Insulation**

Habirshaw varnished cambric insulated cables are manufactured and guaranteed in accordance with I.P.C.E.A. Specifications. Wires and cables of this type may be used at higher operating temperatures than rubber insulated cable and are used for switchboard wiring, feeders and power wiring. They are also used for voltages higher than ordinarily recommended for rubber cables.

### Reels

Some sizes and kinds of wires necessarily must be shipped on reels.

In such cases the reels will be billed at cost and credited at full billing value, if returned to mill within six months of shipping date.

Obtain return tags and shipping instructions before shipping reels.

## Habirshaw Rubber Covered Braided Wire 3-Conductor—Solid 600 Volts

Each conductor of the 3-Conductor Rubber Covered House Wire is insulated by Black Core rubber compound. The covering over insulation is a 2 to 6 A.W.G., one rubber filled tape, and an 8 to 14 A.W.G., one saturated braid.

The conductors are grouped by twisting. They are filled with jute, covered by one rubber filled tape. The whole is covered by a saturated cotton braid.

Size A.W.G. Gauge	No. of Strands	Rubber Wall 64th Inch	Approximate O.D. Inches	Std. Pkg. Feet	Type Package	Shipping Wt., Lbs. per 1000 Feet
14	1	3	.480	1000	Reel, 30"	185
12	1	3	.515	1000	Reel, 30"	215
10	1	3	.560	1000	Reel, 30"	265
8	1	4	.690	1000	Reel, 36"	410
6	1	4	.760	1000	Reel, 36"	545
4	1	4	.850	1000	Reel, 36"	720

NOTE.—Corrugated paper used on reels up to 42 inches, inclusive, lagging used on above sizes only when specified. Sizes 48 to 84 inches inclusive, lagged.

## Habirshaw Rubber Covered Braided Cable 3-Conductor—Stranded 600 Volts

The 3-conductor stranded code house cable is used under the same conditions as solid 3-conductor code house cable unless greater flexibility is required, especially in larger sizes. Number of conductors, 3.

Range of sizes, 500,000 cm to 14 A. W. G., stranded.

Insulation on each conductor, "Black Core" rubber compound.

Covering over insulation, 500,000 cm to 6 A.W.G., one rubber filled tape, 8 to 14 A. W. G., one saturated braid.

Grouping of conductors, twisted.

Fillers, jute.

Covering over jute, one rubber filled tape.

Covering over all, one saturated braid.

**Habirshaw Lead Covered Cable**  
**Stranded Twin Flat Conductor**  
600 Volts, N.E.C.S.

Used under the same conditions as stranded single conductor lead covered wire. Sizes range from 0000 to 14 A.W.G., stranded. Black Core rubber compound insulation on each conductor. Rubber filled tape or braid covering over insulation. Conductors grouped parallel. When specified, round cable with 2 conductors twisted will be furnished. Covering over all is lead sheath. Type letter R D L.

Size A.W.G.	No. of Strands Concentric	Thickness of Insulation 64ths Inch	Thickness of Lead Sheath 64ths Inch	Diameter Over Lead Inches	Approx. Ship. Wt. Lbs. per 1000 Ft.

**Habirshaw Lead Covered Cable**  
600 Volts, N.E.C.S.

Used for 3-phase circuits. Stranded are used where extra flexibility is required in smaller sizes and always in larger sizes where solid conductors would make cable too stiff to handle.

Contains 3 conductors. Sizes range from 500,000 cm. to 14 A. W. G. Each conductor insulated with Black Core rubber compound. Insulation covered by rubber filled tape. Conductors twisted, filled with jute. Rubber-filled tape covering over jute. Lead sheath covering over all.

## Habirshaw Steel Tape Parkway Cables

Single Conductor

2-Conductor, Flat

Parkway cables are used for transmission and distribution where it is preferable to bury the cables directly in the ground rather than to put them in ducts. Any kind of cable will be furnished with park cable covering, but the following types are in general use for distribution purposes.

Standard parkway cables (0-600 volts). Number of conductors, one to three.

Insulation on each conductor, "Black Core" rubber compound for 5000 volts or less. For higher voltage, special high voltage rubber.

Covering over insulation, rubber filled tape. Covering over tape, lead sheath.

Covering over lead sheath, asphalted jute.

Protective armor, two ungalvanized steel tapes, wound in the same direction, the outer tape covering the spaces between turns of the inner tape.

Outside covering, asphalted jute.

Parkway cables with galvanized steel tapes will be furnished when so specified.

Habirshaw Parkway Cables are made to conform to I.P.C.E.A. standards for rubber insulation and metallic coverings.

**Habirshaw Armored Submarine Cable**

Armored cable, or submarine cable, as it is sometimes called, is used under water for crossing rivers, bays and lakes.

Armored cable may be insulated with paper, varnished cambric or rubber compound. If insulated with paper or varnished cambric, a lead sheath is required. If insulated with rubber compound, a lead sheath is preferable, but may be omitted where the water, in which the cable is to be laid, does not contain injurious impurities and does not attain an unusually high temperature. If the cable is rubber insulated and not lead covered, it has a rubber filled cotton tape.

The leaded or taped core is served with jute yarn, run through hot asphalt compound, then armored with galvanized steel wires, \*run through hot asphalt compound, served with two layers of yarn and finally run through asphalt compound.

The asphalt and jute over the armor may be omitted, if desired.

Upon receipt of inquiry stating the conditions of service, our Engineering Department will furnish additional data.

\*Hot asphalt compound is also applied during armoring at the points where the armor wires come into contact, insuring complete sealing of the armor.

**Habirshaw Mast-arm Cable**

Mast-arm cable is used where a flexible cable, capable of passing over a pulley, is required to connect arc-lamps suspended from a mast-arm or bracket to the feeder line where the lamps must be lowered for maintenance purposes.

Number of conductors, 2. Range of sizes, 6 and 8 A. W. G. Stranding, flexible. Insulation on each conductor, "Black Core" rubber compound. Thickness of insulation, code standard. Covering over insulation, one saturated cotton braid.

Grouping of conductors, parallel. Covering over all, 2 saturated cotton braids.

**Habirshaw Corona-Proof Cable**

This cable is used where rubber insulation is desirable, yet must be proof against the deteriorating effects of the elements and the oxidizing action of Corona discharges. It is a cable insulated with a special rubber compound, especially developed for this service, covered with a layer of tape, enclosed in one or more saturated cotton braids.

This cable is used for aerial distribution circuits at voltages of 2200 and over. Also for special purposes where extra high voltages are used.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

**Habirshaw Fire Alarm Cable**

Habirshaw Fire Alarm and Police Signalling Cable is used to connect fire alarm and police signal boxes, on the street and in buildings, with department headquarters.

Such cables are usually made to customers' specifications or to the Specifications of the International Association of Municipal Engineers. This latter specification calls for Performite insulation and is recommended as the most satisfactory insulation for this class of cable.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish recommendations and additional data.

**Habirshaw Signal Wire and Cable****American Railroad Association Signal Division Standard**

Railway signal wire is made to conform with the exacting specifications of the American Railroad Association Signal Division Standard and represents the standard engineering practice in this line. Standard practice means a great deal more to the railway signal engineer than to most others, as upon the reliability of signals depends the safety of millions of passengers.

The present American Railroad Association Signal Division Standard specification for rubber insulation is a development resulting from a study of the manufacture, inspection and use of rubber insulated wire extending over a period of many years, by a strong and representative committee of signal engineers who have given considerable time and attention to this subject. The specification has undergone changes in this time and every change has improved the product and confirmed the opinion of signal engineers as to the excellent quality of the insulation which it exacts. Habirshaw also makes a higher grade signal wire known as Habirite signal wire which is recommended for locations where operating conditions are exceptionally severe.

Habirshaw has specialized on A. R. A. Signal wire and makes all standard types including the following:

**Rubber Insulated Signal Wire for 660 Volts or Less**

Number of conductors, one or two.

Range of sizes, 0 to 18 A. W. G., solid.

Insulation on each conductor, A. R. A. Signal Division compound.

Covering over insulation, one cotton braid, weatherproof to A. R. A. specification.

Thickness of insulation, No. 0-2 A. W. G., inclusive,  $\frac{5}{64}$  inch; 4-8 A. W. G., inclusive,  $\frac{3}{64}$  inch; 9-14 A. W. G., inclusive,  $\frac{1}{16}$  inch; 16-18 A. W. G., inclusive,  $\frac{1}{8}$  inch.

Shipped on reels or in coils as ordered. If in coils the following lengths are standard: No. 6. A. W. G., 1000 ft.; 8-12 A. W. G., inclusive, 1500 ft.; 14 A. W. G., 2000 ft.

**Aerial Braided Cable for 660 Volts or Less**

Number of conductors, as specified.

Range of sizes, 4 to 16 A. W. G. (not necessarily all the same size in a given cable).

Insulation on each conductor, A. R. A. Signal Division compound. Can be furnished lead covered if required.

Fillers, dry jute.

Covering over each layer, rubber filled tape.

Covering over all, one saturated cotton braid,  $\frac{3}{64}$  in. thick.

Thickness of insulation, No. 4 A. W. G.,  $\frac{5}{64}$  inch; 6-9 A. W. G., inclusive,  $\frac{3}{64}$  inch; 10-14 A. W. G., inclusive,  $\frac{1}{16}$  inch; 16 A. W. G.,  $\frac{1}{8}$  inch.

Cables of more than three and less than seven conductors are made with jute or sisal center. One wire in each layer is taped for a tracer.

Cables will be shipped on reels.

**Habirshaw Varnished Cambric Insulated Cable**

Varnished cambric insulated cable is used:

a. In power stations and sub-stations for connecting machinery and apparatus of all voltages (see Apparatus Cable and Station Cable).

b. In buildings in place of rubber insulated cable, especially for the larger sizes.

c. For low voltage underground distribution, where special reliability is desired.

d. On vibrating structures where paper insulation cannot be used due to the crystallization of the lead sheath.

Varnished cambric insulation consists of varnished cambric tapes applied helically to the conductor with intervening layers of mineral base grease. The turns of tape overlap and the joints in successive layers are staggered. They are also reversed at least every three layers.

Varnished cambric insulated cable is usually covered as follows:

Apparatus cable, saturated cotton braid.

Station cable, a rubber filled cotton tape and a flameproof braid.

Building mains, a rubber filled cotton tape and two saturated cotton braids.

Underground cable, lead sheath.

Cable for outdoor structures, a rubber filled cotton tape, two galvanized steel tapes, and a layer of asphalted jute under and over the armor.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

**Habirshaw Tree Wire**

Habirshaw Tree Wire is a single rubber insulated, medium hard-drawn tinned copper conductor, enclosed in protective coverings of rubber-filled tapes, pre-asphalt-saturated jute, fibre tape armor, asphalt and a cotton braid thoroughly saturated and finished with Habirshaw Flame-Stop Finish.

Tree Wire is designed for use on aerial distribution lines consisting nominally of weatherproof wire, but where the lines pass through trees. The insulation for tree wire is not designed to carry the full voltage to ground continuously, as the line insulators carry it under normal conditions. It is only when wet and in contact with a wet tree that the full voltage is carried by the rubber insulation.

**Habirshaw Service Drop Cable**

Service Drop Cable is used for bringing power aerially from the main lines on poles to buildings.

Habirshaw Service Drop Cable is a two or three conductor cable, both conductors of the duplex and two conductors of the triplex being insulated with Type AO 30% Hevea Rubber Compound, covered with two substantial cotton braids, thoroughly saturated with asphaltic compound and finished with Habirshaw Flame-Stop Finish. The neutral conductor of the three conductor cable is without rubber insulation, but covered with three substantial weatherproof braids. Conductors in both types are laid together helically to form a twisted cable, without overall covering.

Size A.W.G. Stranded.....	8	6	4	2
Max. Diameter 2-Conductor.....in.	.78	.86	.95	1.07
Max. Diameter 3-Conductor.....in.	.84	.92	1.03	1.16

**Habirlite  
Habirshaw Headlight Wire  
Single Conductor**

Habirshaw wire is used where resistance to oil heat, sulphur fumes and steam is essential. Standard sizes, 10 to 14 A. W. G., solid. Wrapping, soft cotton wind, saturated. Insulation, heat proof compound insoluble in mineral oils, non-hygroscopic, chemically inert to reagents and flexible to breaking point of wire. Covering, three cotton braids saturated with heat resisting compound.

Size A.W.G.	Diameter Overall Inches	Weight Lbs. per 1000 Ft.	Type of Package	Feet in Package	Shipping Weight of Package
10	.220	51	10 coils in box	10000	540
12	.200	37	10 coils in box	10000	390
14	.190	29	10 coils in box	10000	310

**Habirshaw Battery Charging Cable  
2-Conductor**

Battery charging cable is used for connecting storage batteries of automobiles to the stationary charging outfit. Also used largely by railroads for charging train lighting batteries on electric baggage trucks both in the charging rooms and for boosting while in position under railroad cars and on the baggage trucks. Range of sizes, 0000 to 8 A. W. G., stranded. Insulation on each conductor, "Black Core" rubber compound. Covering over insulation, one saturated braid. Grouping of conductors, twin (flat), except No. 0 and larger, which are round. Fillers, jute (for No. 0 and larger, only). Covering over both conductors, two saturated braids.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inches	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.

8	61	4	.395x .720	210	Reel	1000	310

**Habirshaw Control Cable**

Station control cables are used for the remote control of outdoor or automotive substations and are installed in conduit being either braid or lead covered.

Number of conductors, 1 to 7.

Usual size, 19 No. 22 A. W. G. or 37 No. 22 A. W. G.

Separator, soft cotton wind.

Insulation on each conductor, rubber compound of quality specified.

Thickness of insulation each conductor, 3/64 or 1/64 inch.

Covering over insulation, colored dry cotton braid.

Grouping of conductors, twisted.

Fillers, dry jute.

Covering over filler, one rubber filled tape.

Covering over all, two saturated cotton braids or lead as specified.

It is usual to have a different colored braid on each conductor in order to facilitate the identification of circuits.

Upon receipt of inquiry stating conditions of service, our Engineering Department will furnish additional data.

**Habirshaw Mine Cable, Single Conductor Locomotive or Gathering Reel Cable**

Single conductor mine cable is used for operating gathering reel locomotive run on steel tracks which can be used for the return current.

Number of conductors, one.

Range of sizes, 2 to 6 A. W. G., flexible.

Insulation, "Black Core" rubber compound.

Covering over insulation, rubber filled tape.

Covering overall, one extra heavy or seine-twine (as specified), extra tight weatherproof braid.

Size A.W.G.	No. of Strands	Thickness of Insulation 64ths Inch	Outside Diameter Inch	Weight per 1000 Feet Lbs.	Type of Package	Feet in Package	Shipping Weight of Package Lbs.

**Habirshaw Triplex Mine Cable**

Triplex mine cables are used with three-phase motor equipments, and are usually made for pressures up to 600 volts.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor "Black Core" rubber compound.

Covering over insulation, one saturated cotton braid or rubber-filled tape.

Grouping of conductors, twisted.

Fillers, jute.

Covering over filler, rubber filled tape.

Covering over all, one or two saturated extra tight braids.

**Habirshaw Twin Mine Cable Flat**

Twin (flat) mine cable is used for gathering reel locomotives, cutting machines, hoists, drills, and other electrical machines in mines.

Number of conductors, two.

Range of sizes, 2 to 8 A.W.G., flexible.

Insulation on each conductor, "Black Core" rubber compound.

Covering over each conductor, one saturated braid.

Grouping of conductors, parallel.

Marker, raised thread in the braid of one conductor.

Covering over all, two or three saturated extra tight braids as specified.

**General Cable Varnished Cambric Wire and Cable**

**Aerial — Underground — Submarine**

Made in accordance with I. P. C. E. A. specifications. Varnished cambric forms an insulation which is mechanically strong and rugged and will withstand severe strains during installation and service. Not affected by oils and greases and resists corona and ozone attack.

Cables are easily installed; they have high dielectric strength, high permissible operating temperatures, long life and excellent current-carrying capacity. Varnished cambric cables with suitable protective braids are recommended for general interior wiring in stations, substations and industrial plants. For power distribution and transmission a lead sheath is added and for vertical risers in buildings and mine shafts, a steel wire armor is applied. Also available with steel tape armor for park and street illumination and in still other constructions for unusual services and operating conditions.

**Switchboard Wire**

**Brush Holder and Apparatus Cable**

**Braided**

**Lead Sheath**

**Annular Conductors**

**Steel Wire Armor**

**Interlocking Steel Tape**

## General Cable Parkway Cable

Parkway cables are used for boulevards, park systems, and street lighting circuits, or wherever an installation is required to be made directly in the earth, without the use of ducts or conduits. Parkway cable is protected from mechanical injury by two dependable plain flat steel tapes, as well as full weight presaturated jute covering thoroughly treated with hot asphaltic compounds.

**General Cable Single Strip Steel Armored Cable**

Designed to meet requirements for street and boulevard lighting; used in all classes of underground installations requiring insulated copper conductors with a protective covering against mechanical injury. May be used on any type or size conductors, for any standard voltage or under any condition of service ordinarily met with where park cable is used. Used in train control and other service where it is essential to have conductors protected.

This cable is of single strip construction; arch is designed to give maximum mechanical protection against crushing load and at the same time afford flexibility. Joints operate on a ball and socket plan.

Prices upon application.

## General Cable Trenchlay Cable Power Type 0-600 Volts

General Cable Trenchlay cable, is the original non-metallic armored cable.

The fundamental principles of Trenchlay are to provide a cable for direct earth installation primarily offering mechanical protection during and after installation.

Trenchlay features in all four types consist of an asbestos braid, a series of Asbestos Base Caulk seals and an improved non-metallic armor.

## General Cable Trenchlay Cable Power Type Grounded or Ungrounded 2001-3000 Volts

When selecting insulation thicknesses, these cables are rated at operating voltages between phases.

For three phase systems with grounded or ungrounded neutral, use thickness values in accordance with the following table.

For single or two phase systems up to and including 3000 volts, use thickness values in accordance with the following table.

**General Cable Trenchlay Cable  
Power Type  
Grounded—Between Conductors  
3001-4000 Volts**

When selecting insulation thicknesses, these cables are rated at operating voltages between phases.

For 3 phase systems with grounded or ungrounded neutral, use thickness values in accordance with the following table.

For single or two phase systems up to and including 4000 volts, use thickness values in accordance with the following table.

Size A.W.G.	No. of Conduc- tors	No. of Strands	Rubber Thick- ness Inches	APPROX. WEIGHT POUNDS PER 1000 FEET

## General Cable Trenchlay Cable Control Type

General Cable Control Type Trenchlay embodies all the advantageous structural features of power type Trenchlay. It is intended for direct earth installation for control circuits requiring several conductors. Each conductor is easily identified by the use of colored braids or colored markers in the braids.

Standard sizes are Nos. 14, 12 and 9 A.W.G. in stranded construction.

For structural details, tests, etc. ask for Specification No. 3104.

## General Cable Trenchlay Cable Railway Signal Type

General Cable Railway Signal Type Trenchlay offers a variety of uses on multiple conductor or single conductor circuits because it is constructed for direct earth installation use in ducts or as an aerial cable. Unlike the other types of Trenchlay, this cable employs a tough weatherproof Sisal braid as an outer covering and can be flame-proofed if desired.

For structural details, tests, etc. ask for Specification No. 3204.

## General Cable Super Service Cable

Super Service Cable has unusual tensile strength, durability and capacity to stand severe abrasion; the smooth, dense, sturdy hide will give long service on any job.

Cannot be kinked. This cable is tough, flexible, waterproof and highly resistant to oil or acid.

The name is embossed every 20 feet in the rubber jacket. Two lateral fins or ridges along opposite sides of cord mark the places where vulcanizing molds come together.

### Single Conductor—600-Volt Insulation

Used on mine locomotives, cutting machines, electric shovels, draglines, dredges, power leads, emergency cables, grounding leads, loading machines, conveyors, lifting magnets, cranes and welding equipment where safety and hard usage are important factors.

### Twisted Conductor—600-Volt Insulation

In the twisted conductor cable the construction is similar to the cord with the exception that the copper conductors are tinned and have the same stranding as other cables. Polarity is indicated by rubber filled tapes of distinctive colors applied over the individual conductors. For instance, the 3-conductor cable is colored with black, white and red rubber tapes. However, on 4 and more conductor cables Size No. 6 and heavier, polarity is indicated by covering one conductor with red tape and all others with black tape. Polarity can then be readily recognized by counting from the red conductor.

3	133/#24	80	.900				

**General Cable Super Service Parallel Duplex Mining Cables**

This cable is approved by the U. S. Bureau of Mines for use on explosion-proof equipment.

Used chiefly in the mines on cutting machines and also for charging cable in industrial plants.

Size A.W.G.	Stranding	Allowable Cap. Amps.	O.D. In.	Size A.W.G.	Stranding	Allowable Cap. Amps.	O.D. In.

3	133/#24	80	1.109x.675				

**General Cable Super Service Welding Cable**  
Single Conductor—600-Volt Insulation

Recommended wherever a flexible portable cable is required.

Extreme flexibility is obtained by the large number of fine bare copper wires, rope stranded. This obviates the necessity of splicing additional lengths for electrode holders and assures freedom of wrist movement in the welding operation. This cable is waterproof; it coils easily, lies flat and does not kink or tangle.

\*Bare copper, cotton separator.

**General Cable Super Service Grounding Cable**  
5000-Volt Rating

Used in the field for temporary grounding of lines while undergoing repairs. The ground clamp with cable attached is hooked on the line by means of a grounding stick, the other end having previously been connected to ground either by clamping to transmission tower or when working on a pole, to any temporary ground connection available. Also used in generating stations and substations for grounding apparatus during repairs.

Tests indicate that cable can be safely used to ground lines up to 132000 volts (system phase to ground potential).

Cable is flexible and easy to handle. Outer rubber jacket is tough and durable, waterproof and highly resistant to oils and acids. Withstands hard service.

\*Tinned copper.

**General Cable Super Service High Voltage Cable**  
3 Conductors

This cable offers remarkable wearing qualities under the most adverse conditions and also possesses exceptional resistance to the corona action, set up by the high tension currents, which has been the source of so much trouble with cables in the past.

Corona action is caused by current leakage through the insulation. The current leakage changes the oxygen in the air to two parts oxygen or ozone. Ozone is one of the most active agents in deteriorating rubber and its presence on the surface of the cable will quickly break down the rubber jacket. This danger has been practically eliminated in Super Service High Voltage Cable by the corona-resisting compound used on the individual conductors and the combination of ground strands which carry off the leakage.

## General Cable Super Service Portable Cords

Type S-2 Conductors

For portable electric tools such as drills, hammers, grinders, buffers, chucks, reamers, riveters and saws; also trouble lamps, solder irons, sand cutters (foundry), conveyors, portable loaders, compressors, microphone and movie-tone installations, electric heating devices, floor scrubbers, train control devices, portable blowers, blasting devices, hoists, concrete mixers, pumps, refrigerators, stage lights and any other type of portable tools or machinery where the cord is subjected to hard usage.

Nos. 16 and 18 with  $\frac{1}{32}$ -inch insulations are rated for 300-volt service. Any number of conductors can be used up to an outside cable diameter of 2½ inches.

## General Cable Supertex Rubber Lamp Cords

Supertex is a new type of lamp cord insulated with a thin covering of high grade colored rubber in place of the usual cotton or rayon braids. Furnished in 4 standard colors, sizes Nos. 16 and 18 only. The unique construction of the rubber sheath protects and at the same time separates the 2 conductors.

This is the ideal cord for hotels, dormitories, clubs, asylums and hospitals. Recommended for use on all types of household extension lamps, electric clocks, instrument cords, dental and hospital equipment, electric fans and toys. Greatly reduces cord difficulties and practically eliminates costly labor charges for repair and replacement.

To strip ends twist cord, to loosen sheath from conductors pull sheath beyond conductors as far as desired, cut off sheath while stretched, allow sheath to slip back to its original position exposing ends of conductors and strip conductors in usual way.

**General Cable Unit Package Splicing  
and Jointing Materials**

For convenience of customers, the complete materials required for splices and joints on all types of cable are put up in handy unit package form. By purchasing splicing and jointing materials in this manner, an accumulation of dead stock in the store room is prevented and the time and expense of buying the various items required for the work from more than one source is saved.

When ordering, specify number and size of conductors, thickness of insulation and lead sheath and voltage rating.

## General Cable Slow-Burning Triple Braided Wire

### Solid

All 3 braids of cotton are thoroughly saturated with white fireproof compound. The compound used on the outer braid becomes very hard, but still the wire retains its flexibility. As this insulation does not deteriorate in a continued high temperature, it is especially suitable for engine and boiler rooms, furnaces and foundries.

## Tirex Rubber Armored Cable

The flexible copper conductors are insulated with a rubber compound of high dielectric strength containing a minimum of 30 per cent of new Para rubber.

The inner jacket is a 40 per cent Para rubber compound and fills the interstices between the conductors.

The outer jacket or rubber armor contains a high percentage of new Para rubber and is securely locked to the cable.

A double reinforcement of hard twisted seine twine between the jackets adds greatly to the wearing qualities of Tirex Cables.

The outer covering or rubber armor effectively protects the cable and safeguards the user.

Tirex Cables, being all rubber, do not absorb moisture and are not appreciably affected by oils or acids under ordinary industrial conditions.

### Tirex Single Cable—600 Volts

For use wherever a single conductor portable cable is needed. Specially suitable for electric mine locomotives of the gathering reel type when it is necessary to leave the trolley wire in the main entry and enter rooms to pick up or place cars.

To insure adequate tensile strength the conductors of Tirex Single Conductor Cable are reinforced with steel strands.

## Tirex Rubber Armored Cable

Maximum flexibility is obtained by proper stranding of the copper conductors and the omission of stiff, fibrous braids and fillings. Tirex Cables never kink.

The smooth, clean, outer surface of Tirex Cables does not collect and hold dirt and grease. It may easily be wiped clean when soiled.

Rigid electrical tests are made during the manufacture of Tirex Cables. These tests insure the integrity of every length.

The rubber armor has remarkable wear-resisting properties and protects the cable from outside injury.

## Type S Tirez All Rubber Portable Cord For Electrical Tools and Appliances

Tirez fits standing bushings. It is most satisfactory for portable lamps, tools or other appliances. Oils and acids have no appreciable effect upon it and the clean, smooth outer surface does not collect dirt or grease. The conductors are copper wire, stranded and cotton wound. Insulation is 30 per cent. The insulated conductors are twisted and covered with a high-grade rubber jacket which entirely fills the interstices between the conductors. Electrical tests are applied to each length of cord after 12 hours' submersion in water.

Two and three-conductor Nos. 14, 16 and 18 and 2-conductor No. 12 are packed in special cartons containing approximately 250 feet each (from 200 to 270 feet), so constructed that the cord may be drawn out as needed without disturbing the remainder of the coil.

\*There are no N. E. C. standards for 1-conductor rubber sheathed flexible cord.

Prices upon application.

## Type SJ Tirez Portable Cord

2-conductor

Recommended for pendent drop lights, floor or table lamps, vacuum cleaners and small electrical tools and apparatus.

It is suitable for portable use in offices, dwellings and reasonably dry places where conditions are not so severe, and for pendent use in manufacturing plants and garages.

The cord is practically wearproof, never frays or kinks and is so flexible that its full length is always available without delay or annoyance.

The outer covering or rubber armor is smooth and attractive in appearance and is furnished in black or green as desired.

The colors are permanent and the wear and tear of ordinary service has no appreciable effect on them.

The insulation of each conductor is of a distinctive color for identification and polarity marking.

Tirez is packed in convenient cartons containing approximately 250 feet each, (from 200 to 270 feet) so constructed that any desired length may be removed without disturbing the remainder of the coil.

Other lengths may be obtained in coils or on reels.

## Tirez Shot Fire Cable

Two-conductor

Suitable for rough work in damp or wet places. Not affected by acid, gas or oil.

The particular features which will appeal to the shot firer, are the small diameter of about 1/4 inch and the light weight of 4 1/2 pounds to 100 feet.

Cable is flexible and has adequate tensile strength for the work for which it was designed. Does not kink or snarl.

**Whitney Blake Flexible Cords**

N. E. C. Standard

**Type C Twisted Pair Lamp Cord**

For pendant or portable use in dry places and where not subject to hard usage.

Each insulated conductor is covered with a glazed cotton or rayon braid and twisted together.

Size.....	A. W. G.	10	12	14	16	18
Insulation.....	in.	3/64	3/64	3/64	1/32	1/32
Weight per 1000 Feet.....	lbs.	110	81	60	37	27

**Type PO Parallel Flexible Cord**

Type PO-32 is for portable lamps and appliances where extra factor of safety and good appearance is desired. Type PO-64 is for portables not subject to severe usage.

Each insulated conductor is covered with a soft cotton braid laid parallel and then covered with an outer braid of glazed cotton or rayon.

Type No.....		PO-32		PO-64	
Size.....	A. W. G.	14	16	18	18
Insulation.....	in.	3/64	1/32	1/32	1/64
Weight per 1000 Feet.....	lbs.	60	37	28	20

**Type PD Twisted Portable Cord**

For household equipment subject to more or less flexing.

Construction is same as Type PO except that conductors are twisted together before outer braid is applied.

Size.....	A. W. G.	16	18
Insulation.....	in.	1/32	1/32
Weight per 1000 Feet.....	lbs.	38	28

**Types P-32 and P-64 Reinforced Portable Cord**

For pendants or portable use in dry places and where subject to hard usage.

Each insulated conductor is covered with a soft cotton braid twisted together and covered with a rubber jacket not less than 1/64 inch thick around twisted conductors, then covered with an outer braid of glazed cotton or rayon.

Type No.....		P-32			P-64	
Size.....	A. W. G.	12	14	16	18	18
Insulation.....	in.	3/64	3/64	1/32	1/32	1/64
Weight per 1000 Feet.....	lbs.	169	121	72	64	40

**Type PWP Weatherproofed Reinforced Portable Cord**

For use in damp places subject to hard usage.

Construction is same as Type P except outer braid is soft cotton weatherproofed.

Type No.....		PWP-32			PWP-64	
Size.....	A. W. G.	12	14	16	18	18
Insulation.....	in.	3/64	3/64	1/32	1/32	1/64
Weight per 1000 Feet.....	lbs.	175	128	79	71	45

**Type K Braided Heavy Duty Cord**

For pendant and portable use in damp places and where subject to hard usage.

Each insulated conductor is covered with a soft cotton braid and twisted with jute filler to provide added protection. This is protected with a covering of two braids of weatherproofed cotton.

Size.....	A. W. G.	10	12	14	16	18
Insulation.....	in.	3/64	3/64	3/64	1/32	1/32
Weight per 1000 Feet.....	lbs.	175	130	105	71	56

**Whitney Blake Flexible Cords**

**Types FF-32 and FF-64 Flexible Rubber Covered Fixture Cord**

Type FF-32 is for wiring fixtures where temperatures do not exceed 120°F. Type FF-64 is for radios, etc.

The insulated conductor is covered with a braid of cotton, rayon, or weatherproofed cotton.

Type No.....		FF-32				FF-64	
Size.....	A. W. G.	10	12	14	16	18	18
Insulation.....	in.	3/64	3/64	3/64	1/32	1/32	1/64
Weight per 1000 Feet.....	lbs.	54	40	29	17	13	9

**Type CF Flexible Heat Resisting Fixture Cord**

For wiring fixtures where temperatures do not exceed 194°F.

Stranded conductor of bare copper, several coverings of cotton thoroughly saturated with a flameproof and moisture-proof compound.

Can be furnished in Types C, PO and PD Lamp Cord constructions in glazed cotton or rayon.

Size.....	A. W. G.	14	16	18
Weight per 1000 Feet.....	lbs.	22	16	12

**Type AF Flexible Heat Resisting Fixture Cord**

For wiring fixtures where temperatures are over 194°F.

Stranded conductor of bare copper, several coverings of asbestos thoroughly saturated with a flameproof and moistureproof compound.

Can be furnished in Types C, PO and PD Lamp Cord constructions in glazed cotton or rayon.

Size.....	A. W. G.	14	16	18
Weight per 1000 Feet.....	lbs.	22	16	12

**Type HPD Flat Iron Heater Cord  
3000 or 10,000-Cycle**

For flat irons and other heating appliances where subject to severe usage and flexing.

Stranded conductor of bare copper with separator. Rubber insulated 1/64 inch minimum, and asbestos covered. The two conductors are then twisted together and covered with an overall braid of glazed cotton or rayon.

Type HC is the same except that each conductor is individually braided and then twisted.

Size.....	A. W. G.	10	12	14	16	18
Weight per 1000 Feet.....	lbs.	100	72	53	41	30

**Type POSJ Rubber Sheathed Parallel Cord**

For portable lamps and appliances. Is of lasting quality and capable of withstanding severe abuse.

Flexible stranded conductors with high grade insulation and an oval jacket of tough rubber over all.

Standard colors, brown or black.					
Size.....	A. W. G.	18			
Insulation.....	in.	1/64			
Weight per 1000 Feet.....	lbs.	28			

**Types S and SJ Rubber Sheathed Cord**

Type S is a heavy duty cord for portable use where normally exposed to hard usage. Adapted for outdoor use, in machine shops, factories, garages, etc.

Type SJ, constant service cord, is very flexible. For portable use where not normally exposed to hard usage.

Flexible strand of No. 34 bare copper with separator. Insulation 30 per cent rubber. Twisted with fillers and covered with cotton braid and 40 per cent rubber sheath.

Both types are also furnished with 60 per cent rubber sheath to meet extremely severe conditions.

Size.....	A. W. G.	10	12	14	16	18

### Standard Colors as Adopted by Natl. Elec. Mfrs. Assn.

Black, blue, maroon, red, gray, white, yellow, oak tan, brush brass, olive, green, and dark brown. Glazed cotton also furnished in medium and light brown, and orange.

Rayon colors are also old gold, tiffany, and rose.

### Ordering Instructions

When ordering, specify size in A.W.G.; No. of conductors; style, either by type or letter; finish, whether dry or weatherproof, cotton or rayon; and color.

## Whitney Blake Type GT Gas Tube Neonlite and Type GTO Oil Burner Cables

Made in three different types, each in two finishes.

Weatherproof finish, black fire resisting wax and mica.

Lacquered finish, flexible black fire resisting lacquer over black glazed cotton braid.

Furnished in 250-foot coils.

## Whitney Blake Automotive Wires and Cables

### Braided Ignition Cables

A Corona-Proof compound is used on all ignition cables. The lacquered cables are covered with a closely woven braid of cotton and treated with a flexible lacquer built to withstand oil, gasoline, and extremes of heat and cold.

For the severe conditions encountered on bus and truck work Type No. 715 is specially recommended. It has an insulation of rubber and layers of varnished cambric tape wound in reverse direction, natural cotton braid weather-proofed and over all a high quality glazed cotton braid treated with the same flexible lacquer as the S.A.E. grade. "Com" indicates commercial grade.

### High Tension Ignition Cable

Tinned wire furnished on application at \$.02 1/2 per pound extra.

**Damp-Proof Office Wire**

This wire is double braided, the inner braid saturated with black weatherproof compound. The outer braid is specially treated with wax, highly polished and will not collect dust. Damp-proof office wire is carried regularly in the following colors: red, red and white, blue, blue and white.

Sizes 16 and 18 wire, in red, red and white, blue, blue and white, are also carried in duplex wire, being two separately insulated conductors under one braid.

Size A.W.G.	Wt., Lbs. per 1000 Ft.	Single Conductor		Duplex Double Conductor Wt., Lbs. Net Additions per 1000 Ft. 10-lb. Coils
		NET ADDITIONS TO BASE		
		10-lb. Coils	5-lb. Spools

16	14.5	.12	.17	27 .13
18	10	.14	.18	18 .15

Tinned wire furnished on application.

**Annunciator Cables**

This cable is designed for connecting the annunciator in an elevator car with the push buttons on the different floors.

Each conductor is composed of 16 strands of No. 30 A.W.G. gauge soft untinned copper wire and insulated with two reverse wrappings of cotton and one cotton braid. The insulated conductors are then cabled (using a steel supporting strand if desired, in order to give extra tensile strength, but ordinarily supplied without same) then covered with two cotton braids, the inner one being white and the outer one black. This is a dry cable, and the outer braids are not flameproof.

Prices on application.

## Deltabeston Fixture Wire—Plain

### Single Conductor—Stranded

Type AF

The flexible conductor is insulated with a 1/32-inch wall of asbestos fiber, purified by a special process. Felted asbestos fixture wire is recommended for all classes of fixture wiring, etc., and is especially adapted for fixtures in which the temperature liable to be attained by some parts are such as to render the use of rubber covered wires or cords either undesirable or impracticable. It can be "fished" through fixtures with the utmost ease. Standard length, 250 feet. Furnished on spools.

Size B. & S.	Diam. Over All In.	Stranding B. & S.	Wt., Lbs. per 1000 Ft.
10	200	65/28	42
12	177	66/30	29
14	141	41/30	20
16	123	26/30	14
18	111	16/30	10

### Colored Finish, Plain

Single conductor fixture wire, plain, similar to that described above, can be finished with gray, cream, old brass or bronze colored filling compound at an increase in price.

### Single Conductor—Solid

Either the black finish or colored finish fixture wire described above can be furnished with solid conductor where extreme flexibility is not necessary.

## Deltabeston Fixture Wire

### Cotton and Art Silk

This is the plain, black finish fixture wire with a braided outer covering of art silk or cotton. It is especially adapted for fixtures on which the wiring is exposed to view. It has a small diameter and is neat and attractive in appearance. This wire is furnished in single and two conductors. Standard length of spools, 250 feet.

## Deltabeston HPD Heater Cords

No. 60

Deltabeston HPD Heater Cord should not be confused with ordinary rubber and asbestos insulated heater cords. It is a product of fine materials, close precision, workmanship and careful inspection, both as to raw materials and the finished product.

The outer braid, which is of fine quality glazed cotton yarn, is woven over the two conductors in a manner similar to that of woven fire hose. The asbestos is applied in a uniform adhesive mass which forms a solid tube of asbestos fibres completely around the rubber insulated conductor.

Meets with a wide margin of safety, all requirements of the National Electric Code and an Underwriters' label is applied every 5 feet throughout the entire length.

Made in 4 standard styles of braiding Pattern Nos. 30, 40, 50 and 60.

Shipped in 250-ft. coils or in long lengths on 24-in. wooden reels.

Order by pattern number for all sizes and classes.

Special patterns supplied on orders for 5000 ft. or more.

## Deltabeston Heater Cord

### 2-Conductor, Stranded

Style A, Asbestos Braid Overall

For service where rubber is not necessary, felted asbestos heater cord is satisfactory. Each conductor is composed of 30 B.&S. gauge copper wires stranded together and insulated with a 1/32 inch wall of pure asbestos fiber. This is filled with a compound which gives it high dielectric strength and provides a tough, pliable insulation.

Style A is a fire-proof cord. The twisted conductors are covered with an asbestos braid.

The felted asbestos insulation does not deteriorate with age. The insulation so cements the wires that, even should some of them break, the fine strands will not penetrate the outer covering and cause short circuits.

**Deltabeston Flexible Strand Apparatus Cable**

For 750-Volt Service

Insulated with Pure Long-Fibre, Felted Asbestos, Varnished Cloth Insert—Finished with Black Asbestos Braid—Flame and Moisture-Proof

Recommended for wiring all low-voltage apparatus in power plants, steel mills and any other installations where severe conditions exist.

Insulation will not deteriorate under constant temperature of 250° F. Resists oil, acids and corrosive vapors.

Can be bent to a radius equal to 6 times its own diameter without reducing thickness of insulating wall.

## Deltabeston Switchboard and Rheostat Wire

### Black Asbestos Braid, Solid Conductor

For wiring rheostats, control panels, switchboards and all other installations where heat is a factor. The insulation will not dry out with age, is unaffected by moisture, steam or severe heat (400° F.), is flexible at all times and remains concentric when the wire is bent.

### For 600-Volt Service

Insulated with a Heavy Wall of Pure Long-Fibre, Felted Asbestos—Finished with a Heavy Asbestos Braid

Insulation consists of a heavy wall of compressed felted asbestos applied directly to the conductor in a smooth mass of uniform thickness. It is then thoroughly dried and completely saturated with a compound by means of a process which completely excludes moisture, toughens the insulation and moulds it into a compact body.

Over this is closely braided an asbestos covering, which is impregnated with a flame and weatherproof compound, cementing braid to inner layer of insulation and resulting in a close, tight wall of moulded asbestos.

Finish, black or white.

### For 750-Volt Service

Insulated with Varnished Cloth, Felted Asbestos, Asbestos Braid

Insulation consists of a wall of black varnished cloth, free from all imperfections and applied in the form of helically-wound tapes with the joints in successive layers being staggered. A non-hardening plastic compound is applied between the layers of varnished cloth.

Over this a wall of felted asbestos thoroughly impregnated with a flame and moisture-proof compound is applied by a special process which actually seals the varnished cambric beneath it.

Outer finish is a heavy asbestos braid, also flame and moisture-proof, which protects the insulation from abrasion. After impregnation the braid becomes a part of the insulation, all spaces being completely filled.

Standard color, black; other colors supplied if desired.

## Deltabeston Switchboard Wire

### For 750-Volt Service

Insulated with Varnished Cloth, Felted Asbestos, Flame-Proof Cotton Yarn Braid—Solid Conductor, Tinned

For wiring switchboards and all other types of control apparatus.

Insulation consists of a wall of black varnished cambric applied in the form of helically-wound tapes with joints in successive layers being staggered. A non-hardening plastic compound is applied between the layers of varnished cambric and excludes moisture and air. Over this a wall of felted asbestos, thoroughly impregnated with a flame and moisture-proof compound, is applied by a special process which seals the varnished cambric beneath it. Outer finish is a closely woven cotton yarn braid saturated with a flame and moisture-proof compound.

Standard color, gray; other colors can be supplied.

**Deltabeston Round, Square and Rectangular Magnet Wire**

Round

Rectangular

This wire is insulated with pure long fibre asbestos applied by a unique process which dispenses the fibres in a completely aired atmosphere while being spun around the copper. The result is a firmly compressed insulating wall of intertangled asbestos fibres, which, after being thoroughly impregnated with various varnishes and waxes, is much greater than the thickness of double cotton magnet wire insulation. It is rated as Grade B insulation and its heat resisting qualities make it practically indestructible by any temperature it may be subjected to in commercial service.

**Standard Finishes**

Standard brown finish has a smooth waxy surface which will not harden with age. It resists abrasion exceptionally well and the copper can be formed into intricate coils with the utmost ease.

Standard white finish has a covering of pure white asbestos and is a soluble insulation. This finish is recommended for those who desire to impregnate their own coils.

White enamel (WE finish) consists of standard white finish with a baked enamel finish over the outside, the result being an asbestos insulation with a coating of high grade enamel over all.

Enameled asbestos (EA finish) is enameled magnet wire insulated with a very thin coating of asbestos. This wire can be furnished in any of the above finishes.

## Square and Rectangular Magnet Wire

Increasing attention is being given to the economies to be secured by the substitution of Square or Rectangular for round magnet wire. When round wire is used, considerable space is wasted, even when turns are fitted together as closely as possible, whereas the waste spaces are filled when square or rectangular wire is used, and a greater current carrying capacity secured.

### Square Magnet Wire

Square magnet wire can be furnished in all sizes from number 14 to 0000 B. & S. gauge. (In computing the gauge the diameter of round wire is comparable to the thickness of square wire.) Sizes smaller than No. 14 cannot be regularly procured owing to the difficulty of winding.

### Rectangular Magnet Wire

Rectangular magnet wire sizes have not, as yet, been standardized but can be supplied in sizes from .410 to .020 in thickness and from .460 to .064 in width and the regular insulation is double cotton wound. Rectangular wire is not carried in stock, but made specially on order, and in view of this, orders should not be for less than 200 pounds of any size.

Prices on square and rectangular magnet wire will be quoted upon application.

## Gleason Hand-Wound Reels

### Fire Department Reels

Designed to operate searchlights, etc. Capacity 60 amperes. All steel, ball-bearing with locking device. Painted gray; extra for fine coloring.

Dimensions: J, 24 inches; E, 12 1/2 inches.

Capacity: 250 ft. No. 14 cable; 175 ft. No. 10; 175 ft. No. 8. Reel Only.....each \$60.00  
Double capacity adds \$20.00.

### Type C Reels

Designed for stacking machines. Capacity: 50 ft. No. 10-3 cable; 70 ft. No. 14-3 cable.

Reel Only.....each \$30.00

### Outdoor Reels

For coal loading machines. Made of wood to prevent rust.

No.	Each	Ft.	CAPACITY CABLE	Size
A1	\$48.00	125		10-4
A2	60.00	250		10-4
A3	125.00	300		4-3

## Gleason Spring-Wound Reels

For Hoists, Cranes, Lifting Magneto, Etc.

No. S-15

furnished with 18 ft. No. 14-3 cable. 30 amps.  
No. S-15.....each \$45.00

No. S-25

30 amps. Capacity: 25 ft. No. 10-3; 30 ft. No. 14-3.  
No. S-25 Reel Only.....each \$75.00

No. S-60

60 amps. Capacity cable: 50 ft. No. 10-3; 40 ft. No. 6-2; 60 ft. No. 14-30  
No. S-60 Reel Only.....each \$90.00

No. S-61

Special reel for monorail hoists designed to serve 100-ft. rail and not pull the hoist.  
No. S-61 Reel Only.....each \$95.00

No. S-75

60 amps. Capacity cable: 100 ft. No. 14-3; 75 ft. No. 10-3; 60 ft. No. 6-3; 75 ft. No. 6-2.  
No. S-75 Reel Only.....each \$150.00

No. S-100

60 amps. Capacity cable: 150 ft. No. 14-3; 100 ft. No. 10-3; 100 ft. No. 8-3; 100 ft. No. 6-2.  
No. S-100 Reel Only.....each \$200.00

No. S-200

120 amps. For various larger and longer cables.  
No. S-200 Reel Only.....each \$400.00

### Motor-Driven Reels

For long heavy cables. Must be made to fit the application. Complete information upon request.

**Friction Tape**

**Sticka Black Friction Tape**

A popular-priced tape for general use.

Used to protect the splicing compound on a wire joint from abrasion.

Roll contains 1/2 pound gross of 3/4-inch tape, length 60 feet to a roll.

Per Pound..... \$ .90

**Victor Black Friction Tape**

Protects the splicing compound on wire joints from abrasion.

A high grade tape for outside or inside work.

Roll contains 1/2 pound gross of 3/4-inch tape, 67 1/2 feet to a roll.

Per Pound..... \$ 1.00

**Amazon ASTM Black Friction Tape**

Highest quality friction tape to meet the most strict specifications.

Standard rolls contain 1/2 pound net of 3/4-inch tape, which is 82 1/2 feet to a roll.

Per Pound..... \$ 1.25

**Splicing Tape  
Victor Black Rubber Splicing Tape**

A good grade, unvulcanized compound.

Will fuse into a homogeneous mass at average air temperature under heat of the fingers.

Half-pound roll gross, .030 inch thick, 21 feet to a roll.

Per Pound..... \$ 1.00

**Amazon ASTM Gray Rubber Splicing Tape**

A compound of the best quality, partially unvulcanized, high in dielectric and tensile strength.

The adjacent layers adhere readily on a joint and become a solid, homogeneous mass.

Roll weight 1/2 pound net, 3/4-inch tape, .030-inch thick, 26 feet to roll.

Per Pound..... \$ 1.25

**Manson Friction Tape**

Has a closely woven cotton fabric of highest quality into which has been frictioned (on both sides) a rubber compound containing new Heavea rubber with chemically pure admixture.

Rolls, 3/4 in. wide, containing 78 feet, black, per lb..... \$ 1.10

**Okonite Rubber Tape**

Made from fine Up-River Para rubber. Ingredients are selected, prepared and mixed with care.

Impervious to moisture.

Rolls, 3/4 in. wide, containing 30 feet, black, per lb..... \$ 1.70

**Hydro-Proof Tape**

A waterproof tape with an average dielectric strength per layer of 1850 volts.

Width, 3/4 inch.

Packed 24 yards per 8-ounce roll.

Per Pound..... \$ 1.00

**Crescent Chatterton Compound**

This is an insulating material used chiefly in submarine cable construction to fill the interstices between the strands of the cable conductors.

No. 1 Domestic..... per lb. \$ 2.00

**Allen Soldering Salts**

These salts are dry and in concentrated form. To make up a perfect flux of sufficient strength to use on old metal add 3 parts water to 1 part salts; on new metal, use even greater dilution.

1/2-Pound Bottles..... each \$ .40  
1-Pound Bottles..... each .59  
5-Pound Bottles..... each 2.70

**Crescent Soldering Salts**

A combination of several of the most efficient soldering agents in a convenient soluble form. Gives off no obnoxious gases. Much superior to old time acids for the designed purpose.

Price, No. 2779, 1-pound..... each \$ .90  
" " 2780, 1/2 " ..... " .68

## Sherman Set Screw Connectors

Number Plainly Stamped on Each Connector. A great help in re-ordering and saves much time and possible mistakes in sorting small mixed stocks.

Screws Heavily Galvanized, Hence Rust-proof. This prevents rusting in dealer's stock, and enables consumer to use connectors over again when removed from temporary work.

Neatly Boxed and Plainly Labeled. Insuring neat shelf stock.

These connectors are made from solid brass rod; all dimensions and proportions are carefully held to accurate size.

Four-screw connectors are made also with hole clear through, and two-screw connectors can be furnished in divided wall style.

**Sherman Soldering Lugs**

U. S. Pat. Reissue 14401

Lugs are seamless all around. The solder cannot leak out at the closed end. Also better conductivity is secured. Round end lugs in small sizes are recommended.

These soldering lugs or drawn copper terminals are now approved and listed by the Underwriters' Laboratories. The requirements are exacting, and the designs and dimensions have been carefully worked out.

**Round End**

**MARKING.**—For identification as approved fittings, lugs will be marked with letter S and Underwriters' rating in amperes, placed crosswise of the flat portion at wire end.

**2-Hole, Center Formed and Angle Lugs**

These types are standard but not regularly carried in stock. Will be made up promptly to order at percentage listed below, added to price of regular lugs plus net charges listed.

3/16 to 1/8 Inch Inclusive	add 75% plus \$3.00 net
5/8 to 1 1/16 Inch Inclusive	add 75% plus 4.25 net
1 1/8 to 1 1/2 Inches Inclusive	add 75% plus 5.50 net
1 3/8 to 1 7/8 Inches Inclusive	add 50% plus 7.50 net
1 3/4 Inches	add 50% plus 9.00 net
2 1/16 Inches	add 50% plus 11.00 net

Above net charges must be added for each different size of lugs ordered. These net charges cover special machine set-up expense regardless of quantity of lugs ordered.

## Sherman Heavy Duty Soldering Lugs

N.E.L.A. Standard

2-Bolt Tongue

These lugs are made of best quality seamless copper tubing.

Lugs Nos. 8, 8-A, 9-A, 10 and 11 have a sufficient socket diameter to take rope core

cables of sizes listed without removing core. Core can be drilled out and space filled with copper plug or solder.

Blank lugs furnished when specified; otherwise regular bolt holes as listed. Special drilling may be had if specified. Straight lugs regularly furnished. Angle lugs 45 and 90-degree when specified at extra price. Plain finish unless otherwise specified. Special finishes as follows at added prices: Rosin dipped, cadmium plated, tinned inside only and tinned all over. Special dimensions may be made to order with dimension E other than regular or special drilling of stud holes, at added cost.

1/2	19/8	13/4	1	213/16	33/4	21/16	513/16	715/16

## Sherman Drawn Copper Connectors

The connector consists of two seamless terminals, so constructed that when bolted together both halves are in perfect alignment, and no part projects beyond the circumference of the tubular portion, so that a piece of flexible conduit or fibre sleeve may be slipped over the entire connection for insulation.

While two pieces are required to make one complete connector, they are described and listed by single pieces. Connectors are not shipped assembled, as they cannot be applied in that way.

On account of its small size, only the 1/4-inch connector is made wider than tubular part.

Maximum Stranded Wire B & S Gauge

Size (A) In.	Wire B & S Gauge	APPROXIMATE DIMENSIONS, INCHES							Approx. Wt., Lbs. per 1000
		B	C	D	E	F	G	H	
1/4	8	.186	11/32	3/8	13/32	1 1/32	3/7	3/8	9

These sizes have two stud holes. Two bolts and nuts are required for each complete connector, consisting of two pieces.

Size (A) In.	Wire B & S Gauge	APPROXIMATE DIMENSIONS, INCHES							Approx. Wt., Lbs. per 1000

**T & B Tite-Bind Solderless Connectors**

T & B Tite-Bind Connectors and Lugs are designed to give the best electrical contact and mechanical connection, utilizing a principle unique in this field.

The bore of the body has a slight (3°) taper into which the tapered sleeve is forced by the bushed nut. Corrugations in the sleeve form numerous line contacts, increase the area of contact and strengthen the mechanical grip. The sleeve exerts a uniform pressure on the cable throughout its length.

If the insulation is cut the length of the sleeve and nut, when the nut is made up, the cable travels with the sleeve into the connector body and the insulation will remain tight against the nut.

As the sleeve travels into the body the slight tapers exert a great pressure on the cable. This maximum pressure produces the minimum electrical resistance and the maximum mechanical grip.

The open end of the lug offers visual evidence that the cable is of proper size and in place.

Once made up tight, the sleeve stays wedged in place and exerts the same pressure on cable even with nut removed.

**Solderless Lugs**

Tite-Bind Solderless Lugs are for connecting wire, cable, or tubing to terminals on equipment, to bus bars, etc.

Front-connected lug as illustrated, with either one or two bolt holes is standard, with standard tongue dimensions and drillings. For special tongue dimensions and drillings, add 20 per cent to list price.

Center-formed lugs, angle lugs, round-tongue lugs, and other varieties will be furnished at an increase in price.

**2-Way Connectors**

Used for splicing the ends of conductors of the same size.

Reducers for splicing the ends of two conductors of different sizes can also be furnished.

**Elbow Connectors**

Elbow connectors are used for splicing two conductors at right angles and are useful where short bends must be made in heavy conductors.

Reducing elbows and elbows of other angles are also furnished.

**3-Way Connectors**

The 3-way connectors are used to splice three conductors of the same size or of different sizes.

The T or right angle type is illustrated. The Y type is also regularly furnished.

**Cable Taps**

**Tee Taps**

Tite-Bind Cable Taps utilize the same connection principle as Tite-Bind Lugs for the branch conductor. The connection to the main conductor is made with a U-bolt and seat shaped to fit the conductor and clamped to it without splicing.

They are used to tap a main conductor at right angles, and are regularly furnished for all combinations of main and branch conductor sizes.

**T & B Tite-Bind Solderless Connectors**  
**Parallel Gutter Taps**

Tite-Bind Parallel Taps are similar in design to the cable taps, except that the main and branch conductor connections are parallel.

Used to tap a main conductor where space is limited, as in panel board gutters, etc. Regularly furnished for all combinations of main and branch conductor sizes.

**Connecting Blocks**

The 3-way connecting block is illustrated, but connecting blocks are furnished for any number of conductors and any combination of sizes.

**Additional Designs**

Only a few of the more popular types of connectors are illustrated. Other types are designed for all types of transmission line, high tension and special installations. There are connectors designed to hold in excess of the cable strength. For example, a T & B 2-Way Connector of special construction has been approved for use with Type HH cable, the connector developing the full cable strength.

T & B Solderless Connectors or related material will be specially designed to meet any special requirements.

All T & B Solderless Connectors can be furnished with parts rounded for high tension installation, as illustrated.

When ordering, give size and type of conductor being used. Connectors will be furnished for stranded cable unless otherwise specified.

Reducers, reducing elbows, and 3-way connectors, cable taps, and parallel taps to take different sizes of cables are regularly furnished. Prices on these items, listings of other items, and dimensional data furnished on request.

## Reliable Solderless Lugs

Solderless Lug

Showing Clamp Reversed So That Screw Is Accessible From the Opposite Side

Used for connecting electrical conductors to terminals of electrical equipment.

Only one piece to handle, conveniently and quickly installed with only a screwdriver or wrench. Will not vibrate loose.

Clamp of high strength bronze, lug of electrolytic copper, 98 per cent conductivity.

High pressure contact makes permanent low resistance connection. Cross section of lug at any point has full conductivity of cable. Runs cooler than well soldered joint, cooler even than the cable itself.

Eliminates hazard, uncertainty, inconvenience and lost time of soldered connections.

## Reliable Solderless Connectors

For use wherever two wires, not under tension, must be connected. Hardware bronze connectors are recommended as they are free from season cracking.

The nut is reversible and a pilot aids in starting it.

Edges are rounded to prevent wire nicks and glove cuts.

Head shape and material make for a strong, re-usable connector.

The efficient thread fit, bearing surface and contact design insure a high compression joint.

Packed in small cartons with quantity, catalogue number and wire size clearly marked on the ends of the carton.

Dossert Solderless Connectors

Type A, 2-Way

Type C, 2-Way

3-Way Joint

Elbow

Y-Joint

Type F Stud Connector

Type M Stud Connector

Style R Cable Anchor

Style S Cable Anchor

Style E Cable Anchor

Dossert Connectors eliminate the use of solder in making electrical connections. They are approved for use without solder on all classes of wiring on both solid and stranded conductors.

The Dossert joint has greater mechanical strength than a soldered joint and an electrical conductance in excess of the cable.

2-Way Connectors

3,000,000 CM	16.00

\*Specify if for solid or stranded on sizes 14 to 0000.

Reducers take the maximum 2-way list.

The 3-ways and Y's add 50 per cent to 2-way list.

The 3-ways, Y's reducers take maximum cable size price.

Elbows take same price as 2-ways. See list above.

List prices of Styles F and M Stud Connectors are the same as a 2-way of corresponding size less 20 per cent, except when special large diameter or length of stud end is specified.

List prices of Style S Cable Anchor are the same as for 2-way connectors of corresponding sizes.

List prices of Styles R and E Cable Anchors are the same as for regular 3-way connectors of corresponding size.

Prices on larger sizes upon application.

### Dossert Insulated Parallel Gutter Taps

Consists of two parts only. Is insulated with fabric bakelite. It has two countersunk hardened screws of the wrench type. The screws are held in place by washers to prevent falling out.

This molded insulated unit saves time required for taping or putting on loose covers with screws in the narrow gutter of a panel. It is especially adapted for making taps on live cables.

Hook Type

Bolt Type

The cable tap is used to connect a branch wire, rod, or bleeder to a main wire, rod, or feeder. It does not splice the main but simply clamps onto it.

The Hook Type consists of hook, cover, jam nut, compression nut, and compression sleeve. The upper parts of cover and hook are machined to fit the main wire, while the lower end or shank is threaded, drilled, and tapered to form a nipple of a regular 2-way connector.

The Bolt Type is in the form of a split tee clamp tightened by four strong bolts. The branch connection is held by a Dossert compression sleeve and nut. The tap is made without cutting the main conductor.

**Frankel Solderless Connectors**

No. 2560 2-Way Connector

No. 2562 Elbow

No. 2561 3-Way Connector

No. 2559 Y Connector

No. 2587 Cable Anchor

No. 2589 Cable Anchor

No. 2588 Cable Anchor

No. 2563 Plug Stud Connector

No. 2564 Stud Connector

**No. 2560 2-Way Connector**

To connect two wires of the same size.

**No. 2586 2-Way Reducer**

To connect wires of different sizes.

**No. 2562 Elbow**

To splice two cables, wires, rods, or tubes that meet at right angles. Conductors may be same or different size.

**No. 2561 3-Way Connector**

To splice a main cable or two different size cables and make tap at point of splice.

**No. 2559 Y Connector**

A 3-way splice to connect any combination of 3 wires.

**No. 2587 Cable Anchor**

To splice and anchor end of cable to strain insulator.

**No. 2589 Cable Anchor**

To splice and anchor two cables at right angles.

**No. 2588 Cable Anchor**

To anchor one cable and to take a branch wire off the anchored cable.

**No. 2563 Plug Stud Connector**

To connect wire or cable to a threaded stud or rod.

**No. 2564 Stud Connector**

To connect wire or cable to block terminals by screwing stud end of connector into a threaded hole, or to strap terminals by inserting stud end through a hole in strap and clamping by a nut on end of stud.

Size Wire or Cable	Nos. 2560 2586, 2562 and 2587 Each		Nos. 2561 2559, 2589 and 2588 Each	
	16 to 4*	\$.40	\$.60

1,000,000CM	5.00	7.50		
1,250,000CM	6.00	9.00		
1,300,000CM	6.50	9.75		
1,500,000CM	7.00	10.50		
1,750,000CM	8.00	12.00		
2,000,000CM	9.00	13.50		

\*Specify solid or stranded.

Where the wires joined are of different sizes, use list price of largest size.

If plug or stud connector is no larger in diam. than diam. of wire, use 2-way price less 20%. If larger, refer to 2-way prices, take 1/2 wire price plus 1/2 wire price next larger than plug or stud, less 20%.

**Frankel Solderless Lugs**

**No. 2568 Front Lug**

Connects cable to bus bars or plate.

**No. 2569 Back Lug**

Connects cable to stud.

**No. 2570 Angle Lug**

**No. 2572 Right Angle Lug**

Connects cable to stud. Made with rectangular plates for cable to bus.

**No. 2574 Swivel Lug**

An adjustable angle connector to splice two or three cables of the same or different sizes.

## Frankel Solderless Cable Taps

**No. 2575 Hook Cable Tap**

To tap current from a continuous run of feeder cable.

Main and branch may be any combination of sizes. Also rod to rod, tube to tube, and rod or tube to cable.

**No. 2602 Bolted Cable Tap**

A heavy duty tap with Everdur Bolts.

To tap a current from a continuous run of feeder cable.

May be any combination of wire, cables, rod, or tube.

**No. 2601 Parallel Panel Gutter Tap**

A simple parallel tap to branch from a continuous feeder to a tap.

Small enough to easily fit in the gutter of a distribution panel.

May easily be taped or covered with a bakelite cover.

**No. 2603 Insulating Cover for Panel Gutter Tap**

Two heavy bakelite halves which closely fit over panel gutter tap and the insulation of the wires. Is held in place with a heavy cadmium-plated steel spring.

**Ideal Universal Wire Connectors**  
Solderless—Tapeless

Ideal Connectors replace, at a big saving, solder and tape, plug connections, terminal blocks, binding posts, etc. They are intended for all roughing-in joints, fixture hanging, connections in appliances, fixtures, tools, signs, radios, etc.

Approved by Underwriters' and Factory Mutual Laboratories. Recommended by National Electrical Code.

Making a joint with an Ideal Connector is just like screwing a nut on a bolt. The connector simply screws on giving a positive and permanent contact. Spiral metal insert (copper coated), which acts as a current carrying sleeve, presses threads into the wires and binds them together in a vise-like grip—assuring a doubly secure joint.

**No. 72 Fixture-Appliance Universal Type**

A small connector for fixture wiring, joints in shallow canopies and appliances. Particularly adapted for Nos. 18 or 20 wires, either solid or stranded.

No.	Description	Per 100	Per 1000
72	For 2 No. 20 to 3 No. 18 Solid or Stranded Wire	\$2.45	\$20.00

**No. 74 Standard Universal Type**

Fits all common wiring joints.

No.	Description	Per 100	Per 1000
74	For 1 No. 14 Solid and 1 No. 18 Stranded to 4 No. 14 or 2 No. 12 Wires, Solid or Stranded	\$3.85	\$35.00

**No. 76 Large Universal Type**

For use in the industrial field and where larger gauge wires are used, or where a large number of small wires are to be joined in a junction box.

No.	Description	Per 100	Per 1000
76	For 4 No. 14 to 3 No. 10 Solid or Stranded Wire	\$4.35	\$39.35

**Bryant Solderless Wire Connectors**

No. 767

No. 768

No. 769  
Showing Coil Spring Insert

Moulded composition with spiral coiled wire insert.

No. 767 is for making connections to fixtures. No. 768 is for combinations of Nos. 12, 14, 16 and 18 wires to a maximum of two No. 12, or four No. 14. No. 769 is large size, for connecting wires up to three No. 10.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
767	\$2.50	Up to 3 No. 18 Wires	100	1000	5

**Universal Test Clips and Insulators**

No. 24 Clip Only

No. 45 Clip with No. 47 Insulator

Test clips save time in electrical work requiring quick temporary connections. May be used over and over again.

Rubber insulators are a convenient protection against electric shock and prevent clips from shorting on each other. Furnished half red and half black to indicate polarity.

Packed 10 to a box and 10 boxes to a carton.

**Screw Connection**

**Reliable Testing Clips**

For temporary connections to insulated wires. Made of heavy nickel silver with hard sharp insulation puncturing points and perfectly registering teeth.

No. 1

Fitted with screw, nut and washer for attaching to instrument cord.

No. 1.....each \$30

No. 2

Same as No. 1 but with screw, nut and washer omitted. Preferred where connection to cord is to be soldered.

No. 2.....each \$30

No. 3

Same as No. 1 but without the spike.

No. 3.....each \$30

No. 5

A light, sturdy clip with a strong spring. Convenient for temporary connections in radio, telephone and signal work.

Particularly good for congested telephone equipment.

Plenty of room for soldering flat cord terminals.

No. 5.....each \$24

## Fahnestock Binding Posts

### No. 3

Will take No. 10 B. & S. Wire. Length over all,  $1\frac{1}{16}$  inches. Width,  $\frac{3}{8}$  inch. Screw hole for No. 8 screw.

## Fahnestock Test Connectors

### No. 30

Made of special copper bronze spring metal. Two large clips riveted together. Both snap over the line. Made for different size wire. Used for test poles or for party line work. Length over all,  $1\frac{1}{16}$  inches. Width,  $\frac{5}{8}$  inch. In ordering, state kind and size of wires to be connected.

Price, No. 30, Bronze.....each \$.15

### No. 31

One large and one small clip riveted together. Large clip snaps over the line wire. The small clip does not snap over, and will take up to and including No. 10 B. & S. Used for attaching drop or jumper wires to line on junction poles or party lines. Length over all,  $1\frac{1}{16}$  inches. Width,  $\frac{5}{8}$  inch.

In ordering, state kind and size of wires to be connected.  
 Price, No. 31, Bronze.....each \$.10

### No. 33

Temporary connector for emergency work and test sets.

Will snap over a No. 8 B. W. G. Wire.  
 Price, No. 33, Bronze.....each \$.15

### No. 34

THIS END SNAPS OVER THE WIRE

One end snaps over the line. Made in only one size. Snaps over a No. 12 B. W. G. Wire.

Other end does not snap over wire but will take any size wire up to No. 9 B. W. G.

Length over all,  $2\frac{3}{4}$  inches. Width,  $\frac{5}{8}$  inch.

Price, No. 34, Bronze.....each \$.10

## National Double Tube Connectors

These sleeves are manufactured accurately to size from the best grade of pure copper. Each detail of operation has been carefully planned, and a rigid factory inspection weeds out any possible defective material.

When twisted, National Sleeves are drawn so tightly around the conductors as to form practically a welded joint.

Thus the danger of corrosion, due to air and moisture, is entirely eliminated; and instead of building up a high resistance, as is true of the average hand splice, a joint of this type has a ratio of conductivity with the conductor of better than two to one.

Weight per 100..... pounds	12	20

\*Price does not include insulators.

**Diamond Bridle Wire Insulators**

For insuring a dry connection between a bare wire and an insulated wire tapped therefrom. Where a dry connection is necessary to prevent leakage over and around the insulation the wire insulator is used. The braid and rubber portion is stripped from the bare wire which is passed through the messenger-proof cup and soldered to prevent messenger following the bare wire into the protected glass petticoat.

It is used on loading coils in telephone construction and for lead-in wires on telegraph strands.

Price.....per 100 \$100.00

## National Cable Rings

National Rings are easily and quickly placed on the strand and once in position are rigidly immovable. The ease with which these rings can be installed is an important factor. Another feature is the ample space for re-clipping.

Cable can be pulled in from either direction, and neither the strain of this operation, nor the swaying of the cable by the wind, can move the ring from its original position, for the greater the strain, the tighter the grip.

Hot dip galvanized; made in all strand sizes. No. 511 is light; No. 512 heavy.

**Universal Insulator Supports**

Supports are malleable iron clamp fitted with cup-pointed case-hardened steel set screws (cadmium-plated, electro-galvanized or sher- ardzined) for securing porcelain and glass insulators, knobs or brackets to ex- posed steel framework in all classes of structures.

Nos. 500, 501, 502 and 503

Nos. 505 and 506

Cat. No.	Per 100	Size Inches	*STANDARD TAPPING Inches	TAPPING Threads per Inch	Std. Pkg.	Wt., Lbs. per 100

\*Tapped as specified without extra charge.

†Carried in stock untapped; specify tapping when ordering. Prices include leather washers but no machine screws.

**Brach Thermal Bi-Pass-Ors**

Every Neon sign should have a Brach Thermal Bi-Pass-Or across each section of glass. It keeps the balance of the sign operating when a glass section breaks.

Avoids outside jumpers, costly servicing and radio interference from broken section. Reduces fire hazard due to high open circuit voltage.

Overall length, 7 inches; diameter, 2 inches.

Packed 25 to a standard package; weight, 11 pounds.

Each..... \$ .50

**Federal Porcelain Clamp Bushings**

Made of vitrified porcelain in one piece. Clamping rings are made of metal, threaded to fit threads on the porcelain. By reversing the clamp ring bushings can be used on thicker material. Bushings furnished in all colors.

Nos. K-1 and K-2 elbow bushings are of a special shape for outdoor work, preventing water from entering around wire; also prevents damage to wire or insulation by sudden bending at the bushing.

No. 502 Support with No. 3 1/2 Insulator

No. 502 Support Used with Clamp for Carrying Rome-X, Rubber-Covered Wires, Etc.

No. 501 Support with No. 33 Sectional Insulator

No. 500 Support with Two No. 5 1/2 Split Insulators

No. 501 Support Used with K. & M. Rings

**Machine Screws**

For Attaching Standard Insulators to Universal Supports

\*For 1/2-inch Neon sign cable. †L.S., long shank. ‡Loom.

**Scotch Electrical Tape for Neon Signs**

A black tape particularly adapted for blocking out turn-backs and spacing between letters on Neon signs.

Requires no moistening to apply; permits of faster working. Has instant adhesion to glass and the slightest pressure seals it. Will withstand all weather conditions.

The thinness of this tape makes for easier wrapping.

Rolls contain 72 yards.

## Neon D-V-A-Tor Sign Fittings

New Adjustable Electrode Housings—No Danger of Puncturing Electrode

All Housings Made on Principle Shown Below—Water Cannot Come in Contact with Electrode

**No. 88**  
Large Size

All These Housings Also Made with D-V-A-Tor Combination

**No. 87**  
Medium Size

2 Types Front Mounting, Spring-Clamp or Screw

**No. 89**  
Small Size for Window Sign

**No. 93**  
Double Housings—2 in 1  
Also D-V-A-Tor Combination

### Neon Safety Device D-V-A-Tor Arc-Gap or Thermostat Control

Nos. 90-91-92

A Neon fire protector, fulfilling all requirements of the law. Reduces fire insurance rates.

### D-V-A-Tor Control

### Window Bell and Pipe for Skeleton Sign

Bell in 2 sizes. Also double housing for window border. Eliminates fire violations.

**No. 101** Assembly of D-V-A-Tor Electrode Bell and H.T. Wire Bushing

**No. 102**  
Large Bell for 15 MM. Electrode and Less

**No. 103**  
Small Bell for 12 MM. Electrode and Less

### New Cable Support Quick Mounting

Nos. 12, 13, 14, 15

### No. 10348 Brass Connector

### New Ring Post Combinations

Made in 3 sizes: Large, medium and small.

### Bushings

### 3-Way Tie Glass Post

### Rigid Steel Conduit

Installation of Rigid Steel Conduit in buildings is recognized as the most practicable method of protecting electric wires, and making provision for their replacement when judged advisable. The first requirement of such conduit is that it shall be permanent.

#### Sherarduct

Sherarduct Rigid Steel Conduit manufactured from spellerized steel is the impregnable wiring raceway.

Zinc-alloy and pure zinc protection obtained over the inside and outside surfaces in the sherardizing process, and elastic acid-proof enamel baked on, assure permanence under all conditions of moisture and acid corrosion.

Sherarduct elbows, nipples and couplings are manufactured

of the same high grade spellerized steel as Sherarduct conduit, and are given the same zinc and enamel protection against corrosion.

The threads on Sherarduct conduit are cut clean and sharp. The annealed steel bends, cuts, and threads easily because of annealing. Wires slide quickly on glass-like inside enamel of sherarduct.

#### Economy

Economy Rigid Steel Conduit is thoroughly coated inside and outside with elastic and acid-proof enamel, for installation under less rigorous corrosive conditions.

It is manufactured of the same high grade spellerized steel as Sherarduct Conduit, and bends easily for offsets and angles. The enamel used on Economy Conduit will not crack or chip off under the roughest handling and remains

intact when Economy is bent. Economy Elbows, nipples and couplings are given the same thorough enamel protection as Economy Conduit.

On sizes of Economy Conduit up to 2 inches inclusive, thread protectors are furnished; on all larger sizes excess enamel is carefully removed from the threads before shipment.

#### X Duct

Xduct is electro-galvanized conduit manufactured from spellerized and scale-free tubing, the inner surface raceway is coated with a highly glazed, hard, conduit enamel,

unaffected by acids and alkali, this enamel is elastic and is not affected when the conduit is bent.

#### Electroduct

Electroduct is enameled both inside and outside, manufactured from spellerized, scale-free tubing. The enamel will

bend with the conduit without cracking or flaking. Electroduct is full standard weight, threads are cut sharp and clean.

## Rigid Steel Conduit Enameled Conduit

Enameled conduit is manufactured from mild drawn steel tubing. Before enameling, the tubing is thoroughly cleaned and freed from dirt, grease, scale, silicates and burrs. This process leaves clean surface for the application of the compound.

### Sherarduct

Sherarduct rigid conduit is made of full weight mild spellerized steel tube and finished under the famous sherardizing process. In this process pure zinc is alloyed with the steel tube both inside and outside to form a rustproof finish which is so entirely a part of the pipe that it cannot be knocked or chipped off.

### Permissible Exceptions to Above Table

Stage pocket and border circuits, sign flashers, Classes 1, 2 and 3 signal circuits, elevator control wires, and wires between controllers and motors, and otherwise as permitted by the authority enforcing this code (see table below). In addition the following exceptions are permitted where the run of rigid conduit or electrical metallic tubing does not exceed 50 feet in length and does not contain more than the equivalent of 2 quarter-bends from end to end; 3 No. 6 stranded or 6 No. 8 solid conductors in a 1-inch conduit; and for services only, 2 No. 6 Type R, and 1 No. 6 bare, wires, 2 No. 4, Type R, and 1 No. 4, bare, wires, in 1-inch conduit and 2 No. 2, Type R, and 1 No. 2, bare, wires in 1 1/4-inch conduit.

A smaller bare wire may be used in each of the above combinations if of suitable current carrying capacity.

### 3-Conductor Convertible System

SIZE OF WIRES	1 Wire	Size Conduit Inches	SIZE OF WIRES		Size Conduit Inches
			2 Wires	1 Wire

6	..	..	..	..	14	22

**Steeltubes Electrical Metallic Tubing**

No threads to cut, ductile, bends easily, is light, tough and strong; resists corrosion.

Steeltubes takes up less space and consequently can be used in narrower quarters.

Hangers for 3/8-inch heavy conduit are the right size for 1/2-inch Steel-tubes, hangers for 3/4-inch Steeltubes are the same as for 1/2 inch heavy conduit, etc.

Electrunit Steeltubes Conduit with the knurled inside finish showed by actual test a saving of 20 to 30 per cent in the effort required to pull cable through. The cable rides the tops of the tiny knobs instead of making contact the entire length.

The 1933 Code approves Steeltubes for open and concealed work and buried in concrete (except cinder fill) in all sizes up to 2 inches inclusive, 600 V. No. 4 wires.

Furnished in 10-foot lengths; galvanized finish only—inside finish is black enamel.

3855	35.00	2	25	25	35

## Sherman Ground Clamps

An all copper, one-piece clamp which can be drawn up tight. The roll portion for soldering is turned in to rest against opposite tongue of clamp, preventing the two ends from tipping together when tightened; holding the ears parallel, and insuring large amount of drawing power.

Cat. No.	Size Pipe Inches	Carton	Std. Pkg.	Approx. Wt. Lbs., Std. Pkg.	Price Each
1	3/8 to 1	100	1000	80	\$ .20
2	1/2 to 2	100	1000	125	.25
3	3/4 to 3	50	500	80	.30
4	3/8 to 4	..	250	50	.60

**T & B Erickson Conduit Couplings**

Conduit Union does away with running threads, saving dies and labor. Permits opening of conduit at any desired point. Enables the start of circuit from 2 outlets and makes a good, strong connection at any

point in the run. The pipe ends abut so that no space is left between the lengths of conduit, therefore, it is not necessary to draw the 2 ends of the conduit together. Vibration will not loosen a connection made with an Erickson coupling. The hexagon shoulder and ridges on the outside of the coupling make an easy grip for a pipe wrench.

Cat. No.	Per 100	Size Inches	Unit Pkg.	Std. Pkg.	Weight per 100 Pkg.
674	\$32.00	3/8 for 3/8-Inch Conduit	50	100	13

### No. 90 T & B 3/8-Inch Cable Clips

Straddles the cable so that the top rests across the spirals of the cable and the clip faces at right angles to the spirals of the cable. Will not harm cables.

Will take Nos. 14W2, 14W3, 12W2, 12W3, 10W2, 10W3, 8-1, and also 3/8-inch S.S. and D.S. flexible conduit. Standard package 10,000.

No. 90 ..... per 1000 \$4.00

### T & B Adjustable Conduit Hangers

Type A

Hanger will fit any flange from 2 3/4 to 12 inches. It is adjustable for varying plaster lines and will support any number of conduits from 1 to 8, which may run at any angle with the beams and close against the beam, or far enough below to permit a second line of conduit to be run above. Additional runs of conduit can be added without interfering with lines already in position. It is not necessary to loosen clamp to meet any condition which may arise. No other conduit hanger will accomplish half as much at twice the cost. Clamps of stamped steel.

duits to be run above. Additional runs of conduit can be added without interfering with lines already in position. It is not necessary to loosen clamp to meet any condition which may arise. No other conduit hanger will accomplish half as much at twice the cost. Clamps of stamped steel.

### No. 1629 Klein's Fish Tape Pullers

This tape puller is light in weight, strong and can be carried in the vest pocket.

Weight, each, 3 1/2 ounces.

For Fish Tape

No. 1629 ..... each \$2.50

No. 12 Iron Wire

No. 1629A ..... each \$2.50

## R & S Cable Supports Standard Conduit Type

A compact, strong and easily installed device for supporting cables in conduit risers.

Support consists of a threaded collar, not much larger in diameter than the outlet bushing which it replaces at the end of the conduit inside of the pull box. It has a set of inserts for one or more cables as required and individual tapered cable grips. They are suitable alike for lead, paper or braid-covered cables.

In installing, the collar is screwed on to end of riser, in lieu of a bushing, the cables are then pulled, the inserts dropped into socket of collar and the split, tapered grip bushings placed over the individual cables, which are now allowed to pull the grips into place by their own weight. A perceptible slack of cable should be provided between supports to allow for expansion and contraction.

Made of galvanized iron, with hard fibre cable grips. When ordering, specify o.d. of cable to be supported.

\*Over insulation.

### Special Tile Duct Type

Made on special order only. Used to support risers run through tile duct; can be furnished in any number of gangs. Prices and full information upon application.

### Split Type

Where installations are already in use, and the necessity of a support for the cables occurs, it is possible to utilize this type of support without the necessity of disconnecting and pulling out the cable risers. This split type can be installed around cable and the necessary inserts and bushings as used on the conduit type inserted. The range of sizes are the same as on the conduit type.

Prices and full information upon application.

### Tempered Steel Fish Tapes

Regularly furnished a n y assortment of lengths, from 100 to 500 feet, put up in coils. If wire is desired in continuous lengths of 2000 feet or over it will be furnished on reels when specified.

Cat. No.	Size Inches	Weight per 1000 Feet Pounds	Price per 100 Feet

1005	1/4x.030	25	2.50

**Wedgtite Pipe Hangers**

*Schedule CR*  
Furnished with Wedge

Type CHP Installed

Type CHU Installed

Wedgtite Pipe Hangers are quickly and easily installed as only a few blows of a hammer are necessary. They can be used with any I beam, channel, or other structural shape having a lower flange  $\frac{1}{8}$  to  $\frac{3}{8}$  inch thick. They consist of two pieces, a hook and a wedge, which is provided with saw teeth so that vibration will not loosen it. The wedge is interchangeable with all types and sizes of hooks.

Types CHP and CHR are made so that one end hooks under the pipe and the other over the flange of the structural shape. The end that hooks over the flange has a groove into which the wedge is driven, tightly drawing the pipe against the flange and securely holding it in position.

Type CHU is wedged to the flange independently of the pipe or group of pipes it is to support. A bolt is used for suspending the pipe, its head resting securely in a pocket in body of hanger. This pocket takes a  $\frac{1}{2}$ -inch bolt. Bolt can be inserted after the hanger has been secured to the flange.

Type CHA consists of a Type CHU Hanger and a bracket to carry 2 or 3 porcelain knobs for wires. Bracket is attached to CHU Hanger with a bolt and nut. Bolt can be loosened and bracket turned to accommodate wires running either parallel with or at right angles to the structural shape.

The thickness of flange as measured about  $\frac{3}{4}$  to 1 inch from the edge may be  $\frac{1}{8}$  to  $\frac{1}{2}$  inch if the pipe is clamped directly against the under side of the flange. If a coupling is so placed as to hold the pipe away from the flange, the thickness of the coupling should be subtracted from the above maximum dimension ( $\frac{1}{2}$  inch).

Cadmium-galvanized is the standard finish.

**Type CHP Hangers**

For pipe running parallel with a structural shape.

Cat. No.	Each	Size In.	Std. Pkg.
CHP1	\$.40	$\frac{1}{2}$	100
CHP2	.45	$\frac{3}{4}$	100

For carrying open wires on structural steel work.

CHA2	\$.10	50
CHA3	\$.15	50

**T & B Lakin Conduit Hickeys**

The shank has a bushed hole into which the end of the conduit enters when a short bend is made at its end or a bend is to be worked down.

The bushed opening in the shank fits snugly over the end of the conduit and protects the threads.

This hickey will not slip on the conduit while a bend is being made. It enables a workman to make bends having different curvatures. It will not kink the pipe when making the shortest practical bends.

Made of malleable iron. Japanned finish.

Cat. No.	Size Pipe Inches	Unit Pkg.	Std. Pkg.	Wt., Lbs. per 100	Price Each
335	$\frac{1}{2}$	1	10	190	\$1.75
336	$\frac{3}{4}$	1	10	220	2.25
337	1	1	2	520	3.25

**Allen Improved Pipe Benders**

This bender is made of high test steel. Has tempered case hardened teeth which grip in all positions. Has solid jaws, no adjustments; 2-in-1 design with V receiving groove to prevent any contact on inner part of curve, thus preventing mashing, crushing or deforming the pipe. It will bend anything tubular or solid that can be bent cold.

In 2 sizes: Combination of  $\frac{1}{4}$  to  $\frac{3}{4}$  inch inclusive, combination of  $\frac{3}{4}$  to  $1\frac{1}{4}$  inclusive. Side opening. Individually boxed,

No. 1 packed 10 boxes in standard package, No. 2 packed 5 in a standard package.

Price, No. 1, Sizes  $\frac{1}{4}$  to  $\frac{3}{4}$  Inch..... each \$6.20

Price, No. 2, Sizes  $\frac{3}{4}$  to  $1\frac{1}{4}$  Inches..... each 9.00

**Steel City Conduit Benders**

Made in 2 forms as listed. Furnished complete with riveted handles. The castings are malleable iron.

903	$\frac{3}{4}$	45°	12	1.50

**T & B Benders**

**For Thinwall Conduit**

This bender will also bend standard conduit;  $\frac{1}{2}$ -inch bender will bend  $\frac{1}{2}$  and  $\frac{3}{8}$ -inch tubing or  $\frac{3}{8}$ -inch conduit;  $\frac{3}{4}$ -inch will bend  $\frac{3}{4}$ -inch tubing or  $\frac{1}{2}$ -inch conduit; 1-inch will bend 1-inch tubing or  $\frac{3}{4}$ -inch conduit.

Cat. No.	Each	Size Inches	Std. Pkg.	Car. ton	Std. Pkg.
4195	\$2.50	$\frac{1}{2}$ , $\frac{3}{8}$	10	2	25
4196	3.90	$\frac{3}{4}$	10	2	42
4197	5.95	1	2	1	14
*4192	62.50	$\frac{1}{2}$ , $\frac{3}{4}$ , 1	1	1	68

\*No. 4192 is a combination bench bender for  $\frac{1}{2}$ ,  $\frac{3}{4}$  and 1-inch thinwall conduit.

**Steeltubes Hickeys**

For short bends and tight corners and for stubbing up in concrete work.

Cat. No.	Each	Size In.	Std. Pkg.	Wt. per M
2195	\$1.40	$\frac{1}{2}$	18	150
2196	2.00	$\frac{3}{4}$	9	275
2197	2.71	1	6	600

## National Flexsteel A.B.C. Cable Armored Bushed Cable—Double Armored

National Flexsteel A.B.C. Cable with Anti-Short bushing has a moisture-proofed wrapping of Kraft over conductors, instead of an overall braid. Stripping conductors for terminals, Kraft unwinds quickly without use of sharp tools next to conductors, can be broken off by hand, and allows space inside steel for Anti-Short bushing.

Kraft armor strips with a pull—no possible injury to conductors—reduces labor.

Kraft armor unwinds below steel, providing space for Anti-Short bushing.

Anti-Short bushing lays over conductors from the side—a squeeze inserts it inside steel.

### Single Strip—1-Conductor

Size B & S Gauge	Per 1000 Feet	Approx. Feet in Coil	Wt. Lbs. per 100 Feet
14-1	\$57.20	250	168
12-1	62.10	250	192

## Flexsteel EZ Hinged Strap Box Connectors

### For Armored Cable and Flexible Conduit

EZ Strap is wide, strong and clamps cable more securely and strongly without contortion of cable. This point is particularly advantageous in use with flexible steel conduit.

Peephole is patented.

Sherardized finish.

Furnished with bondnuts.

Holds 6-1 armored cable; 8-1 armored lead cable; 18-3, 16-2, 16-3 plain lamp cord; 3/16-inch flexible conduit.

Cat. No.	Per 100	I.D., In. Open	I.D., In. Closed	Wire Throat In.	Knock-out In.	Car-ton	Std. Pkg.	Wt. Lbs. per 100 Pkgs
2222-EZ	\$27.00	35/64	27/64	3/8	1/2	25	500	28

**No. 2163 Flexsteel Tangent Set Screw Box Connectors**

**For Armored Cable and Flexible Conduit**

An important feature of this connector is the position of the screw which brings great pressure upon the cable with a minimum of crushing of cable. Set screw is usually large.

Peephole is patented. Sherardized finish.

Furnished with bondnuts.

Holds 14-2, 14-3, 12-2, 12-3, 10-2 armored cable; 14-3, 6-1 armored lead cable; 3/8-inch flexible conduit.

Cat. No.	Per 100	I.D., In. Open	I.D., In. Closed	Wire Throat In.	Knock-out In.	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.

### T & B Panel Connector Extensions

Can be used with any connector or other fitting having male thread. Makes any connector a panel connector.

Protected against corrosion with Tabolite Superior galvanizing.

To make 3/8-inch panel box connectors use Extension No. 1440 with connectors Nos. 300, 300-V, 240, 240-V, 248, 253, 253-V, 265, 266, 280 or 281.

To make 3/8-inch A panel box connectors use Extension No. 1440 with connectors Nos. 301, 260, 271 or 272.

To make 1/2-inch panel box connectors use Extension No. 1440 with connectors Nos. 302, 241, 254, 323, 267 or 268.

To make 3/4-inch panel box connectors use Extension No. 1441 with connectors Nos. 304, 255, 278, 325, 269, 270 or 279.

To make 1-inch panel box connectors use Extension No. 1442 with connectors Nos. 306, 256, 326, 264, 261 or 273.

To make 1 1/4-inch panel box connectors use Extension No. 1443 with connectors Nos. 308, 257, 262 or 274.

To make 1 1/2-inch panel box connectors use Extension No. 1444 with connectors Nos. 310, 258, 263 or 275.

To make 2-inch panel box connectors use Extension No. 1445 with connectors Nos. 312, 259 or 276.

To make 2 1/2-inch panel box connectors use Extension No. 1446 with connectors No. 249 or 330.

Above combinations will hold cables and flexible conduits as shown under description of straight and angle squeeze connectors or straight and angle Tite-Bite connectors.

Cat. No.	Per 100	Size Inches	THREAD, INCHES		Unit Pkg.	Std. Pkg.	Wt., Lbs. per 100

**T & B Squeeze Connectors**

For Flexible Steel Conduit and Armored Conductors

**Malleable Iron—Galvanized**

Locknuts are furnished with connectors without charge except Nos. 250 and 252.

Nos. 250 and 252 have 3/8-inch (pipe size) threaded ends to fit standard sockets.

Nos. 250 and 250A are made to hold 14D solid s.s., 12D solid s.s., 10D solid s.s., 8D solid s.s., 14D solid d.s., 8D solid d.s., 16E s.s., 18E s.s., 16E d.s. and 18E d.s. conductors.

## T & B Squeeze Combination Couplings

Malleable Iron—Galvanized

For connecting flexible and rigid metallic conduits, also for connecting flexible metallic conduit to outlet boxes by means of Chase nipple. One-piece malleable iron, galvanized. Cannot pull apart.

Cat. No.	Per 100	Size In.	Made to Hold	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100
----------	---------	----------	--------------	-----------	-----------	------------------

## T & B Slip-In Connectors

For machine and appliance installations as well as house wiring.

The Tite-Bite grip has teeth spaced to just fit the convolutions of the cable. The design of the grip prevents the teeth from entering between or spreading the convolutions, and the screw cannot touch the armor.

### With Tite-Bite Grip

Cat. No.	Per 100	Size In.	Made to Hold	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100
----------	---------	----------	--------------	-----------	-----------	------------------

### Set Screw Type

Cat. No.	Per 100	Size In.	Made to Hold	Unit Pkg.	Std. Pkg.	Wt. Lbs. per 100
----------	---------	----------	--------------	-----------	-----------	------------------

## T & B Inclined Set Screw Connectors

The screw is on the right-hand side, making it easy to tighten.

Nos. 240 and 240-V are made to hold Nos. 14W2, 14W3, 12W2, 12W3, 10W2, 10W3,  $\frac{3}{8}$ -inch S.S. conduit,  $\frac{3}{8}$ -inch D.S. conduit.

No. 241 is made to hold Nos. 8W2, 8W3, 10W2L, 8W2L, 10W3L,  $\frac{1}{2}$ -inch S.S. conduit,  $\frac{1}{2}$ -inch D.S. conduit.

\*Open-mouth, visible type, for bushed cables.

## T & B 2020 Type Connectors

For 14W2, 14W3, 12W2, 12W3, 10W2, and 10W3 non-metallic sheathed cable, also  $\frac{1}{2}$ ,  $\frac{3}{4}$ , and  $\frac{3}{8}$ -inch flexible fibre tubing.

Can be installed outside or inside box. Simply snap connector into knockout, insert cable or tubing and tighten down screw. Has no rough edges or projections to cut into fibre armor. At same time they protect armor from rough edges of knockout opening. Present long rounded bearing surfaces to armor, doing away with possibility of injury to cable. Present nicely rounded shoulders to conductors as they are bent up to the outlet.

**National Ovalflex A.B.C. Flat Armored Bushed Cable**

2-Conductor

A safely bushed and insulated flat armored cable for underplaster installations and alterations.

Its neat appearance recommends it for exposed surface wiring, and easy bending edgewise or flatwise makes it suitable for fitting snugly into corners and around machinery.

Anti-Short dependable bushes cut end of steel armor, preventing damage to wires.

3-Conductor

Regularly made with solid conductors and N. E. Code insulation, but can be furnished with stranded conductors or special insulation.

\*These boxes and spacers can be equipped with the usual supporting ears but because of the length of box, 4 inches, an ordinary switch plate will not cover the ears.

**Flextube Non-metallic Flexible Conduit**

Made from an especially prepared stiff fiber cord interwoven with a tough yarn. The result is a seamless tube with a smooth, hard, canvas-like roller-bearing interior which affords the best obtainable fishing surface. This interwoven insulating tubing is then treated with a superior moisture and flame resisting compound, is further protected by a strong, tough braiding which is also compounded.

Regularly inspected and labeled by the Underwriters' Laboratories.

**3-Wire Ovalduct**

Ovalduct is a flat raceway made for extension work on walls and ceilings or fireproof buildings. It is a rigid tube formed from sheet steel.

In making wiring alterations with ordinary materials much time is lost channelling deep grooves in tile, concrete, or brick surfaces to receive the raceway; and cutting tile floor arches seriously affects their strength. Ovalduct is installed without grooving or channelling the underlying concrete, tile or brick. In new work it is fastened in place and plastered over; in old work, it is laid in a groove cut only in the plaster, and covered by plaster patching.

The Ovalduct line includes elbows, couplings, boxes and connectors which will take care of any wiring requirement and permit it to be installed in conjunction with any other raceway or wiring system.

Ovalduct is furnished in 10-foot lengths and has an oval cross section  $1\frac{1}{2}$ -inch high and  $3\frac{1}{2}$ -inch wide.

Standard package, 100 feet.

Weight per 100 feet, 35 pounds.

Per 100 Feet..... \$9.00

**Fittings for 3-Wire Ovalduct**

**Squeeze Type Couplings**

For Ovalduct and elbows. Length,  $1\frac{1}{4}$  inches.

Cat. No.	Per 100	Unit Pkg.	Std. Pkg.	Wt. Lbs. Std. Pkg.
2133	\$7.30	50	200	13

**90° Internal Elbows**

Radius  $1\frac{1}{4}$  inches. Offset, back to end, approximately  $2\frac{1}{2}$  inches. Fits coupling 2133 and connectors 2156, 401 and 2181.

## No. 12-SB National Interchangeable Sectional Switch Boxes

### For Armored Cable and Loom Wire

Made especially for use with A.B.C. armored bushed cable and anti-short bushings, but equally suitable for use with any cable. The special clamps have knockout closing flanges, lookouts which render the anti-shorts visible for inspection, and a baffle plate which holds the anti-short inside A.B.C. cable and

eliminates brass ferrules used with other types of cables.

In this box, slots are provided beside each knockout, into which a screwdriver may be inserted to pry out the knockout disc.

The stud brackets and lath supports welded-on this box are gauged to fit standard spacing of lath and plaster. This assembly is vibration-proof and will not become loose.

Lath support extends at least 3/4 inch beyond top and bottom of switch box allowing lath to pass through extended portions of lath support, and entirely across studding. This additional support makes section of all around switch box the strongest portion. The box is held by stud bracket, by lath above and below, and by shortened lath which terminate in groove of lath support.

The box is easy to install making it a real time and labor saver.

Depth 2 1/2 inches. Has two 2 1/2-inch cable knockouts in ends; two in sides; one 1/2-inch knockout in bottom and fixture stud holes. Welded-on stud bracket and lath support.

Two CL-4 flanged clamps.	
Sherardized or black enameled finish.	
Standard package, 50.	
Weight, 80 pounds per 100.	
No. 12-SB, Sherardized . . . . . per 100	\$30.00

**R & S Fixture Hanger Boxes**

For supporting and lowering fixtures or chandeliers in theatres, lobbies and auditoriums from the floor above or from hung ceilings, thus providing an easy means for relamping and cleaning. Circuits of chandelier are disconnected by means of single-pole plugs, the safety devices removed and fixture then lowered by means of special portable winch previously connected to eye of chandelier by steel cable.

The use of two  $3 \times 3 \times \frac{3}{8}$ -inch thick angle iron supports under box to distribute load over a large area or across eye beams in ceiling is recommended. Cast iron box is fitted with brass floor flange and gasketed brass cover. Dimensions over all,  $10\frac{1}{2} \times 10\frac{1}{2} \times 5$  inches deep.

Maximum conduit,  $1\frac{1}{2}$  inches in center of all sides. Specify size and location of outlets when ordering.

When ordering specify size of fixture stem to be used.

Approximate weight, 51 pounds. Price includes plugs.

**No. 1601 National Economy Bar Lath Supports**

Where outlet boxes mounted on steel bars are installed between joists or studding, the Economy Bar Lath Support holds the loose ends of the lath firmly in place. It fits over the bar through a punched hole in the bottom of the support and will slide back and forth to any position. The lath slides between the top and bottom flanges, making a rigid support and preventing the plaster around the box from breaking away.

Cat. No.	Car-ton	Std. Pkg.	Wt., Lbs. per 100	Price per 100
1601	100	1000	7	\$4.00

## Economy Bar Hangers

Will Fit Any Box Having 1/2-Inch Center  
Knockout  
With 3/8-Inch Stud  
Straight Bar Hanger

For shallow boxes in new work or for holding boxes to concrete forms. With 1/2-inch deep boxes where bar is nailed to joists or studding, edge of box will be flush with ordinary plaster.

Cat. No.	Length Bar, In.	Unit Pkg.	Wt., Lbs. Unit Pkg.	Price per 100
2263	18	100	62	\$13.50
*2263-L	24	100	72	25.00

## Shallow Offset Bar Hangers

Hanger for 1 1/2-inch deep boxes without switch covers or plaster rings; offset brings box edge flush with plaster.

## R & S Floor Outlets

### Elbows, Tees and Adjustable Tops

Future requirements for service connections may be anticipated by systematically studding the floor with these outlets, all radiating from one or more pull boxes, from which any changes or additions may subsequently be made by the pulling of wires. The complete outfit consists of a galvanized iron long radius conduit fitting, and brass adjustable top with water-tight cap, which can be raised or lowered to meet the final surfacing of floor.

**Typical Square-Duct Installations**

Fig. 1

Fig. 1 is a down-view showing how the use of 4 vertical elbows makes it possible to cross over or to bridge another section of wiring trough. The use of 2 of these fittings makes it possible to drop to a lower level whenever desirable. In this view, the wiring trough sections are mounted to the side wall by means of bracket hangers.

Fig. 2 illustrates the use of the telescope fitting, the drop hanger, the junction box and connecting a wiring trough section to the power panel.

Fig. 2

By looking carefully at the bottom of the telescope fitting, you will notice a cutaway view showing how the use of the panel fitting collar provides a smooth surface over which wires can be drawn without trouble.

Fig. 3

Fig. 3 illustrates the use of elbows, telescope fitting and mounting brackets, in coming up out of a panel to a section of wiring trough suspended from the ceiling.

Fig. 4

Using one of the many knockouts in the wiring trough to make a connection to a switch.

Fig. 5

Illustration shows how a bracket hanger is used to mount a section of trough to the sidewall.

Fig. 6 shows the use of the T fitting in a section of trough. The use of this fitting permits the connection to another section of trough running at right angles, to a junction box, or to make a right angle connection when the joints are not conveniently located.

Fig. 6

Fig. 7

Illustration shows the use of two 45° elbows, passing a column located in a corner.

Fig. 8

Fig. 8 shows one method of using Square Duct trough to connect power panels in one common gutter. It also illustrates the use of the junction box as a cross fitting.

## Square-Duct and Fittings

No. 20443

This is a steel enclosed wiring trough for distribution wires. The trough is flanged at both ends and provided with screws so that the trough can be fastened to the power panel cabinet or so that 2 or more sections of trough can be clamped together. The cover is hinged to the trough and is provided with spring latches for fastening in closed position. Knockouts are provided in the sides and back for (1/2, 3/4, 1 and 1 1/4-inch) conduit. Knockouts 3/8-inch diameter are provided in both sides and back of wiring trough so that for surface mounting the small knockout can be knocked out to provide mounting holes for 1/4-inch screws or bolts.

Cat. No.	Each	Size Inches	Length Feet	Cat. No.	Each	Size Inches	Length Feet
20241	\$1.70	2 1/2 x 2 1/2	1	20441	\$2.30	4 x 4	1
20242	2.00	2 1/2 x 2 1/2	2	20442	3.00	4 x 4	2
20243	3.20	2 1/2 x 2 1/2	5	20443	5.00	4 x 4	5

### Universal Drop Hanger

For suspending wiring trough from overhead. Provided with screws and nuts.

Cat. No.	Each	Size Inches
20217	\$ .20	2 1/2 x 2 1/2
20417	.30	4 x 4

### Reducing Fitting

For joining 4x4-inch to 2 1/2 x 2 1/2-inch duct.

20422	\$ .40
-------	--------

### Telescope Fitting

Slide arrangement for making connections to duct fittings at varying distances. The 2 1/2 x 2 1/2-inch size extends from 7 1/2 to 12 inches; 4x4-inch size from 8 to 12 inches.

20244	\$2.00	2 1/2 x 2 1/2
20444	2.80	4 x 4

### Closing Plate

To close end of section or any side of junction box. With knockouts.

20216	\$ .36	2 1/2 x 2 1/2
20559	.40	4 x 4

### Universal Bracket Hanger

For mounting wiring trough on side wall.

Cat. No.	Each	Size Inches
20227	\$ .20	2 1/2 x 2 1/2
20427	.30	4 x 4

### Panel Fitting Collar

For connecting duct to panels. By cutting hole size of duct in panel box and clamping box wall between panel fitting collar and duct collar, a solid, smooth connection is made.

20221	\$ .36	2 1/2 x 2 1/2
20421	.40	4 x 4

### Junction Box

To form T, L or cross. Price includes two closing plates. Removable cover.

20248	\$1.70	2 1/2 x 2 1/2
20448	2.00	4 x 4

### Trough Collar

Used when necessary to cut standard duct.

20240	\$ .30	2 1/2 x 2 1/2
20440	.40	4 x 4

## Square-Duct Fittings

### Pull Box

For 4x4-inch duct only.

Box price does not include closing plates for unused openings. (See No. 20559.)

Cat. No.	Each	Size Inches
20558	\$12.00	.....

### Box Fitting

For connecting duct to panels, pull boxes, etc. One end fits round hole in box, the other end matching duct collar.

Cat. No.	Each	Size Inches
20249	\$1.80	2 1/2 x 2 1/2
20449	2.60	4 x 4
*20467	2.60	4 x 4

\*For 4x4-inch square hole in box or panel cabinet.

### Elbows

#### 22 1/2° Elbows

20255	\$2.00	2 1/2 x 2 1/2
20455	3.00	4 x 4

#### 45° Elbows

20245	\$2.00	2 1/2 x 2 1/2
20445	3.00	4 x 4

### 90° Elbow and Pull Box

20472	\$6.00	4 x 4
-------	--------	-------

### T Fitting

For T connection. Cut hole inside of duct and drill holes to match holes in flange on narrow end of fitting.

20247	\$1.70	2 1/2 x 2 1/2
20447	3.00	4 x 4

### T Fitting and Pull Box

20471	\$7.00	4 x 4

No. SK-2191 Attached to Square-Duct

**Nepcoduct Under Floor Wiring System**

Convenience outlets arranged for in circuit wiring systems, under floors, must of necessity be of very definite and rugged design and construction—but the prime importance is adaptability and accessibility at floor surfaces.

The introduction and ready withdrawal of wires and cables must be accomplished without excess labor or interference of any nature. The system must be definitely protective and adequate. Nepcoduct accepts the charge and responsibility for such a perfected system.

Made in two sizes: No. 7002 with cross section  $1\frac{3}{8} \times 1\frac{1}{8}$  inches, and No. 7005 with cross section  $1\frac{3}{8} \times 2\frac{1}{8}$  inches, both being furnished in ten-foot lengths. Each length has outlets at specified intervals (usually 2

No. 7002

feet), which are complete with plugs adjustable for height. Duct is finished inside and outside with durable hard black enamel.

No. 7005

Rounded Bull Nose or filleted corners of Nepcoduct reduce tendency to cracking of concrete and surface floor materials.

Sweeping curve from inside of Nepcoduct up to rim of outlet makes pulling of wires easy, and safeguards insulation against abrasion.

**Floor Junction Boxes**

Nepcoduct 4-way floor junction box No. 7542-45 is in reality, two boxes and two sets of crossovers, in a one-piece casting of gray iron—one box and cross-over to be used for high potential, and the other box and cross-over for low

potential. No communication is to be had between the low and high potential boxes.

Box capacity is unusually large to accommodate splices and terminal blocks, unobstructed by cross-overs. Box is finished inside and out with black enamel.

It is levelled, regardless of uneven surfaces, by adjustment of three long set screws located around edge upon which box rests.

Two outlet assemblies installed in box above are the standard outlet and cover. Unused duct openings in box are to be closed with duct opening plug and unused openings for conduit are to be closed with conduit opening plug and adapter.

Single compartment underfloor junction boxes are available; box No. 7542 has six openings for  $1\frac{3}{8}$  inch x  $1\frac{1}{8}$  inch Nepcoduct, and two openings for  $1\frac{1}{4}$  inch conduit; box No. 7545 has four openings for  $1\frac{3}{8}$  inch x  $2\frac{1}{8}$  inch Nepcoduct, and two openings for  $1\frac{1}{4}$  inch conduit. These boxes are for installation in Single Duct Systems, and take the same size and type floor outlets as the large two compartment box.

**Nepcoduct Under Floor Wiring System  
Floor Junction Boxes**

**Standard Outlet and Cover for Linoleum,  
Rubber Tile, Cork Tile, Carpet**

This junction box outlet assembly is the standard for all floor junction boxes.

The assembly is installed flush with surface of finished concrete or wood floors. When floor coverings are used, however, the brass ring is forced up, using novel arrangement of screws. Floor covering is then cut to fit around brass ring, and it is replaced in position and drawn down flush with newly installed floor covering. Rim of brass ring holds floor covering down securely, and renders the box waterproof.

stalled floor covering. Rim of brass ring holds floor covering down securely, and renders the box waterproof.

**Special Outlet and Cover for Marble  
and Wood Flooring**

When this junction box outlet assembly is installed, only rim of adjusting ring and head of elevating screw are visible through marble or wood floor.

Adjustment is made for thickness of marble or wood, by turning adjusting ring down into floor junction box, so that top rim is set level with finished surface. Brass cover fastens inside adjusting ring with small screws shown, and there is ample depth above it for filling in with floor material.

A circular section of marble or wood is placed inside adjusting ring and is secured in position by turning down elevating screw. Threaded collar on elevating screw provides means for lifting out circular section of marble or wood to gain access to floor junction box.

**Universal Levels**

Nepcoduct floor junction box is quickly and accurately levelled by use of Universal Level, No. 7952, which indicates level in every horizontal direction simultaneously.

Universal Level may be applied to any article which is to be brought to a level position on more than one horizontal line.

**Wire Pulling  
Sheeves**

Wires and cables can be pulled through Nepcoduct floor junction box at any angle, from any direction with use of the Cable Pulling Sheeve No. 7970, as indicated in the mechanical drawings.

Shaft of sheeve engages a tapped boss in bottom of the junction box. A spider fits upper part of box, and a jam nut locks the whole assembly into position to insure rigidity when sheeve is in use. Wires can be pulled from lower entrance of ducts to upper entrance (in high potential compartment), and around any required bend without adjustment. In low potential compartment, there is no difference of elevation in duct entrances.

## Nepcoduct Under Floor Wiring System Adjustable Duct Saddle Supports

Double duct saddle support is a valuable labor saving device, it eliminates errors of position, a costly labor item. Every part of Nepcoduct system is laid out when base members of saddle support are installed, all other parts of system having definite relation to them. Slight projection of base members from floor arch, and their rugged construction make them stand up under abuse of wheelbarrows and mud buggies, and conditions of normal construction operations. Saddle support holds Nepcoduct down as well as up and keeps it from floating in wet concrete fill.

No. 7425, for large and small Nepcoduct.

No. 7422, for two lines of small Nepcoduct.

Adjustment is made for height of Nepcoduct by spinning adjustment nuts up or down on bolts. Both lateral and longitudinal adjustments of duct are easily made.

Saddle slips into place when adjusting nuts are loose. Saddle is rigid with base member when adjusting nuts are locked above and below it.

Base members of saddle support are installed on floor as early as possible, to indicate lines of Nepcoduct, thus avoiding interference of other trades' work.

Seats in saddle for duct are stamped accurately, and hold ducts in proper relation to each other, as well as to the finished floor.

Tie wires, when twisted over top of ducts, hold them firmly in saddle.

### Elbows and Offsets

#### 90° Flat Floor Elbows Long Radius

No. 7215 for large Nepcoduct.  
No. 7212 for small Nepcoduct.

#### 90° Vertical Wall Elbows Long Radius

Can be used as shipped, or sawed in sections as indicated by 2 illustrations on the right, to meet requirements of situation.

No. 7225, for large.  
No. 7222, for small.

#### 90° Vertical Wall Elbows Short Radius

No. 7235, for large Nepcoduct.  
No. 7232, for small Nepcoduct.

### Duct End Outlets

With Height Adjusting Screw

Fits on end of Nepcoduct and receives standard duct outlet plug.

No. 7725, for large Nepcoduct.  
No. 7722, for small Nepcoduct.

### Cross-Under Offsets

Designed to offset lines of Nepcoduct so that conduit, pipe, or other lines of duct can cross within floor thickness.

No. 7325, for large.  
No. 7322, for small.

## Nepcoduct Under Floor Wiring System Miscellaneous Fittings

### Couplings

With Height Adjusting Screw

No. 7165 for large Nepcoduct.

No. 7162 for small Nepcoduct.

### Duct End Blanks

With Height Adjusting Screw

No. 7715 for large Nepcoduct.

No. 7712 for small Nepcoduct.

### Duct Opening Plugs

No. 7745 for large Nepcoduct.

No. 7742 for small Nepcoduct.

Closes unused duct openings in floor junction box. Easily removed by gripping middle vertical partition with pliers.

### Connectors—Duct to Cabinet

No. 7755 for large Nepcoduct.

No. 7752 for small Nepcoduct.

Takes Nepcoduct runs into wall cabinet.

### Adapters—Duct to Conduit

No. 7732 and No. 7762

No. 7762-F

No. 7732 with male end to fit coupling for small Nepcoduct, and female opening for 1¼-inch conduit.

No. 7762 with male end to fit coupling for small Nepcoduct, and female opening for 1-inch conduit.

No. 7762-F with female end to fit small Nepcoduct, and female opening for 1-inch conduit.

No. 7735 with male end to fit coupling for large Nepcoduct, and 2 female openings for 1¼-inch conduit.

Two openings for 1¼-inch conduit permit branching from duct to conduit with wiring up to full duct capacity.

No. 7735

### Conduit Opening Plugs and Reducers

Closes unused conduit openings in floor junction box. Threaded inside for 1-inch conduit. With tin cap removed, it can be reversed end to end, screwed on end of conduit, serving thus as reducer in 1¼-inch opening of floor junction box. (See line drawing above.)

No. 7780 Conduit Opening Plug and 1¼ to 1-inch size reducer.

No. 7781 Conduit Opening Plug and 1¼ to ¾-inch size reducer.

**Nepcoduct Under Floor Wiring System**  
The Evolution of an Outlet

No. 7950, Plug Removal Wrench  
End Fits Depressions in Top of Outlet Plug

No. 7140, Floor Covering Escutcheon of Red Bronze  
No. 7141, Floor Covering Escutcheon of Monel

No. 7143, Abandoned Outlet Plate

**Type A Plug**

Lines of Nepcoduct are embedded in concrete fill with plugs screwed down into duct outlets. Plugs may or may not be concealed by floor construction, and marker screw can be elevated to show at floor when required.

Rubber collar locks plug in adjusted position, protects plug threads from concrete, and seals the joint between plug and rim of duct outlet against entrance of moisture. When marker screw is to show through floor coverings of linoleum, rubber, cork tile or carpet, the escutcheon shown above is used to protect such floor coverings from fraying.

When duct outlet is to be used for service, it is necessary to remove small amount of concrete from top depression of plug in order to use the plug removal wrench. Plug can be readily screwed from the duct and concrete with plug removal wrench of which the socket end is shown.

Removal of plug leaves neat pre-formed passage through the concrete to duct outlet. Void in concrete around rim of duct outlet is a catch-all for dirt and small particles.

Service Extension Assembly No. 7910 directly engages the duct outlet without use of any forms of adapters, insuring positive protective grounding, as required in National Electrical Code. Stopping collar is sweated in place in manufacture, and serves as a gauge so that service extension pipe will always be turned into duct outlet to proper depth.

When outlet is abandoned, the plug is screwed again into duct outlet, and an abandoned outlet plate is pulled tight over opening in floor material, by tightening marker screw into plug.

**Type B Plug**

Type B plug, when adjusted, protrudes very slightly above top rim of duct outlet. This shallow plug is intended for use where duct is installed under wood or marble, as it is impracticable to cut a number of holes in the underside or through these materials to fit over a Type A plug protruding above level of concrete fill; when the Type B plug is used, holes need be cut only where duct outlet is to be used for service. Other outlets are located by marker screws, or by measurement.

**Nepcoduct Under Floor Wiring System**  
No. 7921 Service Fittings

This fitting is used for either high or low potential service from the duct. It is entirely brass with the exception of required insulating bushings or terminal block which are completely housed within it. The service assembly presents a neat symmetrical appearance entirely consistent with the most pretentious office furnishings, and is very sturdy in construction.

Since the fittings will frequently occupy positions under desks or in foot space, they are purposely designed to be kick proof. They will stand any reasonable abuse in connection with exposed position. Ribs at two ends of opening prevent desk occupant's feet from injuring connection, attachment plug is sufficiently protected so that the feet will not strike the plug itself, thereby eliminating interruptions to service.

**No. 7911 Service Heads**

Service Head No. 7911 is a housing for duplex T-slot receptacle No. 7912 for high potential service, such as for lighting, or various electric driven office appliances; or housing for bushings for low potential service to telephones and various office signal systems. Can be assembled with double T-slot receptacle shown, for high potential service, in which standard attachment plugs are used, or with two bushings illustrated below, for low potential service.

**Service Head Bushings**

Fibre bushings which are clamped securely just inside outlets of service head when it is assembled. Designed to prevent contact and abrasion between edges of head outlets, and low potential wires.

No. 7913, 1/2-inch low potential service bushing.  
No. 7914, 1-inch low potential service bushing.

**No. 7910 Service Extension Assembly**

Delivered fully assembled, as shown, is adjustable to accommodate floor thicknesses approximately 1 to 2 inches above the duct. The stopping collar is sweated in place to insure proper depth engagement with duct outlet. When service pipe is screwed into outlet to shoulder engagement, a very tight joint is effected. The floor flange is screwed down to a bearing on finished floor surface, further stabilizing extension assembly.

It is provided with holes for spanner wrench, so that by use of the wrench considerable pressure can be applied between floor flange and finished floor, giving an extraordinary strength to whole installation. Locking collar is jammed against floor flange by turning it down with other end of spanner wrench. Besides acting as a locknut for floor flange, it hides spanner wrench holes, and the unused threads on service extension pipe.

Service extension pipe itself has an unobstructed cross sectional area of 1 square inch through which to pull service wires. The whole service extension assembly is delivered fully assembled which saves field labor, and is adjusted easily for various floor thicknesses.

**No. 7951 Service Extension Wrenches**

Lugs on one end fit into holes in floor flange, for tightening it down against finished floor. Half octagon socket on other end fits around locking collar, for tightening it down against floor flange.

## T & B Watertight Floor Boxes

Box is furnished with polarized receptacle plug.

Three outlets in sides and 2 in bottom for 1/2-inch rigid conduit or any connector with 1/2-inch threads.

Has 5 tapped holes for 1/2-inch conduit, 4 of these are plugged with watertight steel plugs.

Box is Tabolite finish, bronze cover.

Outside diameter: Box body (under flange), 2 3/4"; overall (face of plate), 3 3/4". Outside height: Box body (under flange), 2 5/8"; overall, including plate but not nozzle, 3". Height of nozzle, 1 1/4"

Standard package, 25. Weight, 70 pounds.

- No. 1700, Box with 2-Wire Recp. .... each \$4.00
- No. 1701, Box with 3-Wire Recp. .... each 5.00
- No. 1702, Box with 3-Wire Grnd. Recp. .... each 5.00
- No. 1703, Phone or Signal Floor Box, No Recp. .... each 3.00

## No. 8000 T & B Utility Outlets

10 Amperes, 250 Volts—15 Amperes, 125 Volts

An ideal convenience outlet for baseboards, plaster walls, mantles, etc.

Screws slip through keyhole slots in bottom of box. When tightened, box body, connector and convenience outlet become a rigid, compact unit.

Total height, 2 1/4 inches. Diameter body, 1 3/8 inches; diameter plate, 2 1/2 inches.

Tabolite finish.

Standard package, 50.

Price, No. 8000 ..... each \$1.00

## T & B Adjustable Watertight Floor Boxes

No. 1730, with Bell Nozzle

The bell nozzle is not standard equipment.

Adjustment range is 5/8-inch vertical and 10 degrees angular.

Minimum height of deep series boxes is 3 1/2 inches; of shallow series, 3 inches. Cover plate is 4 inches in diameter.

Unit package, 1; standard package, 10.

Description	CAT. No.		Each
	Deep Series	Shallow Series	
Box with 2-Wire Receptacle.....	1730	1760	\$5.00
Box with 3-Wire Receptacle.....	1731	1761	5.50

Tel. or Signal Box, No Receptacle.....	1733	1763	4.00

## T & B Rectangular Gang Floor Boxes

### Adjustable—Watertight

Combination 1/2 and 2-inch bronze disc with each gang is standard equipment. Receptacles and other accessories must be ordered separately. Two 1/2-inch drilled and tapped holes straight through each gang and one at each end of box is standard, with all but one hole in each gang plugged. Boxes drilled and tapped to specification, no extra charge.

Adjustment, 5/8-inch vertical, 10 degrees angular.

Unit package is 1. Standard package is \$60.00 net value.

\*Bushed extension piece can be furnished in any length. Extensions furnished in 3/4 and 1-inch stock, any length. Standard package, \$60.00 net value. Accessories may be assorted with complete boxes to obtain standard package.

## No. 499 Steel City Midget Floor Receptacles and Boxes

Provides smallest possible convenience outlet for work which does not have to be watertight.

A 10-ampere receptacle insulates wires from contact with box body.

Flange around top of box, 2 5/8 inches in diameter; 3/8 inch thick with beveled edge. Height of box, 3 3/4 inches overall.

Box Body furnished with 1/2 inch drilled and tapped hole in bottom complete with loom clamp held in place by two screws.

By removing loom clamp either a BX connector or rigid conduit can be used.

Standard package 25.

Weight, 11 ounces.

Price, No. 499 ..... each \$2.40

## Fullman Non-Adjustable Type Floor Outlets

Designed to take a 25-ampere receptacle.

Inside dimensions of box body, 4x4x3 1/2 inches deep. Standard bronze cover plate is 3/8 inch thick and 4 3/8 inches square extending 1/4 inch beyond edge of box body on all 4 sides; has

2-inch tapped hole in center for bell nozzle.

**Fullman Non-Adjustable Floor Outlets**

**No. 477**

PATENTED AND PATENTS PENDING

No. 477

Sectional View of No. 477 Showing Receptacle Mounted on Steel Ring

Design and construction of the No. 477 is simple with few parts, small outside dimensions and plenty of room inside for wiring. Fitted complete with receptacle and bell nozzle. The receptacle is mounted on a flat steel ring which also serves as a seat for the bell nozzle or flush bronze plug. This construction permits use of only one rubber gasket.

Cover plate is 3½ inches in diameter with 2-inch opening for bell nozzle or flush bronze plug. Height is 3⅞ inches to top of cover plate.

Conduit holes: 1 in each side and 2 in bottom tapped for ½-inch conduit. Three of the holes are plugged with bronze plugs.

All bronze parts are brushed bronze finish. All iron and steel parts are sherardized to prevent rust.

Standard package, 25 complete outlets.

Complete outlet as described, consists of No. 481 box body, No. 478 porcelain plug, receptacle and flat steel ring, No. 484 rubber gasket, No. 483 bronze cover plate, No. 480 flush bronze plug and No. 479 bell nozzle.

Weight, 2½ pounds.

Price, No. 477.....each \$4.00

**No. 490**

Complete outlet similar to No. 477, consisting of Nos. 481, 482, 484 and 487 parts listed below. Nos. 465 and 467 nozzles can be used in cover plate.

Weight, 1¾ pounds.

Price, No. 490.....each \$2.60

**No. 491**

Complete outlet same as No. 477, except furnished complete with 20-ampere polarized receptacle and plug and No. 466 bell nozzle.

Weight, 2¾ pounds.

Price, No. 491.....each \$5.60

PATENTED AND PATENTS PENDING

Cover plates are 4 inches in diameter, ¼ inch thick sheet bronze. The flange ring is ⅛ inch thick, making the total diameter of the top of box 4¼ inches.

The height of standard box is 3¾ inches over all. Other heights may be had by the following combinations:

No. 402 body with No. 406 adjusting ring, minimum over all, 4¼ inches; with No. 407, 4⅞ inches; with No. 408, 5½ inches.

No. 404 body with No. 405 adjusting ring, minimum over all, 4⅞ inches; with No. 406, 4⅞ inches; with No. 407, 5½ inches; with No. 408, 6⅞ inches.

An adjustment of ½ inch higher may be had on each of these measurements in setting adjusting rings in the No. 476 cement. These boxes can be furnished special with shallow box body making minimum height 3¼ inches over all.

Conduit holes: Standard is 4 holes tapped for ½-inch conduit, 3 of which are plugged with brass plugs, making them water tight. Can be tapped for larger conduit without extra cost to meet requirements when sketches are furnished showing size and location of conduit holes. Only 1 conduit hole can be tapped in each of 4 sides of box bodies. Plugs larger than ½-inch charged for extra.

Receptacles are not furnished unless ordered.

No. 400, Complete

No. 400 No. 401, Complete

Complete standard outlet consisting of No. 402 box body tapped for ½-inch conduit, No. 405 combination adjusting ring and bronze flange ring, No. 409 bronze cover plate with No. 471 ½-inch bronze plug, No. 411 rubber gasket, and No. 476 sealing cement. Weight, 5 pounds. Price, No. 400.....each \$5.20

**No. 401**

Complete standard outlet consisting of No. 402 box body tapped for ½-inch conduit, No. 405 combination adjusting ring and bronze flange ring, No. 410 bronze cover plate with No. 472 2-inch bronze plug, No. 414 steel plate, forming seat for No. 411 rubber gasket, and No. 476 sealing cement. Weight, 5 pounds.

Price, No. 401.....each \$5.20

At an extra cost, both Nos. 400 and 401 outlets may be had with the special No. 404 deep body box tapped for standard ½-inch conduit or tapped special to meet specified requirements. Special depth adjusting rings, Nos. 406, 407 and 408, can be furnished at extra cost.

**Parts for Nos. 400 and 401 Outlets**

No. 402 Body

No. 404 Body

**No. 402 Standard Box Body**

Standard tapping is 4 holes tapped for ½-inch conduit, 3 of which are closed with ½-inch bronze plugs. Can be tapped for ¾ or 1-inch conduit, when specified. Height over all, 3⅞ inches; depth of groove, 1 inch; opening in top, 3¼ inches in diameter. Weight, 3½ pounds. Price, No. 402.....each \$3.30

**No. 404 Special Deep Box Body**

Can be tapped for conduit up to 1½ inches with room for bushing inside or for 2-inch conduit without room for bushing. Height over all, 3¾ inches; depth of groove, 1 inch; opening in top, 3 inches in diameter. Weight, 6¼ pounds. Price, No. 404.....each \$4.40

## Fullman Adjustable Floor Outlets

### Separate Parts Adjusting Rings

No. 405

The No. 405 adjusting ring is 1½ inches deep over all (standard). Deeper rings also furnished as per Nos. 406, 407 and 408. These rings give a range of adjustment of about 2½ inches. All are interchangeable.

## Fullman Gang Floor Outlets

This rectangular gang floor outlet is for supplying a variety of service, such as electric lights, fans, telephones, etc., from one point.

It makes a neater appearance than several single outlets grouped near a desk or table.

Lugs are provided in each section for flush type receptacles.

No. 459 cover plates are furnished standard for use with No. 466 bell nozzle. No. 458 cover plate may be substituted for one or more sections if desired for use with No. 465 or No. 467 nozzles or ½-in. pipe extension. Bronze edge frame extends around all cover plates.

Minimum height to top of cover plate is four inches. Box body only is 3¼ inches high. The cover of No. 441 outlet is 5½ inches by 4 inches over all. The cover of No. 442 outlet is 5½ inches by 7 inches over all. Each additional section adds three inches.

End sections are provided with three holes tapped for ½-inch conduit. Intermediate sections have two ½-inch tapped holes. Can be tapped for ¾-inch and 1-inch conduit with room for bushings or for 1¼-inch conduit without room for bushings. Sketches must be furnished showing size and location of conduit holes if special tapping is required.

All bronze parts furnished brushed bronze finish. All iron and steel parts sherardized to prevent rust.

### Complete Outlets

Complete rectangular outlets are regularly furnished with No. 459 cover plates. Can be provided with No. 458 cover plates when specified.

-----	--	---	--------

**R & S Non-Adjustable Floor Boxes**

A high grade floor box intended for use in wood flooring, easy to install and can be firmly secured.

Box is made of galvanized cast iron, floor plate of heavy brass and provided with suitable gaskets to make it watertight.

These fittings are furnished with or without receptacles and plugs, providing for uniformity when used for either high or low tension installations.

Height, 3¼ inches; diameter of floor plate, 3½ inches. Two ½-inch outlets on sides; two ½-inch outlets on bottom; three outlets plugged. Cannot be tapped for larger conduit. Receptacle and plug, 10 amperes 250 volts, furnished with No. 2580. All parts of these floor boxes are interchangeable and various available combinations of boxes and accessories can be furnished. Each box is packed in a strong carton.

**No. 2580**

Furnished complete with receptacle, cone nozzle and 2½-inch diameter flush cap. Weight, about 2½ pounds.

Price, No. 2580.....each \$4.00

**No. 2590**

Plain box and cover with ½-inch pipe flush cap. Weight, about 1¾ pounds.

Price, No. 2590.....each \$3.00

**No. 2581**

Furnished complete with 3-wire receptacle, plug, cone nozzle and 2½-inch diameter flush cap.

Weight, about 2½ pounds.

Price, No. 2581.....each \$5.00

**R & S Shallow Type Adjustable Floor Boxes**

No. 2504

This floor outlet can be used with a 3-inch floor fill. It is designed and constructed along the same lines as the larger type box. All cast iron parts are galvanized and the adjustable flange and cap are of brass with a machined finish across the top.

The No. 2504 box is furnished complete with a tee slot receptacle, which will accommodate the standard type plug cap and will take the standard No. 2558 cone nozzle same as used in conjunction with the larger type floor boxes. Gaskets are provided to make this box watertight.

**ADJUSTMENTS.**—Ample angular and ¾-inch vertical.

**OUTLETS.**—Maximum size, ¾ inch. When ordering specify outlets required.

Height, 2½ inches minimum. Diameter box, 3¼ inches. Diameter flange ring, 3⅜ inches.

Cat. No.	Description	Weight Pounds	Price Each
2504	Complete with Tee Slot Receptacle and 2½-Inch Diameter Flush Cap.....	2¾	\$5.50
2505	Complete with ½-Inch Flush Cap but without Receptacle.....	2¾	5.00

**FS Series 2-Gang Threadless Condulets**

*Schedule CR*

Threadless and Threaded Condulets Take the Same Covers and Wiring Devices

Take covers and flush rectangular wiring devices. Cadmium-galvanized is the standard finish.

The FS Series Condulets with their variety of covers permit flush rectangular wiring devices to be mounted either on the surface of or flush with the wall. There is ample room around the wiring device for the passage of extra wires.

Two styles of sheet steel covers for these condulets are available: for surface mounting and for flush mounting. Those for flush mounting are extended to cover the rough plaster line. Cast feraloy covers for these condulets are suitable for either surface or flush mounting.

**G-H Series Condulets**

Schedule CR

**With Adjustable Bar**

Condulets of the G-H Series with adjustable bar are compact, shallow, and the same diameter as the base of the largest device for which each form is designed.

The hubs are cast solid with the body and have an integral bushing and tapered thread.

The adjustable bar is removable and should be attached to and centered on the wiring device. The wiring device is then centered on the body. The adjustable bar clamps it to the flange and securely holds it in position.

A gasket can be used between the cover or wiring device and the Condulet. Gaskets are not regularly furnished with these Condulets and, if desired, must be specifically ordered.

The fastening screws are furnished with and so retained in the covers that they cannot fall out.

These Condulets take covers or round base wiring devices. Cadmium-galvanized is the standard finish.

**Limiting Dimensions of Round Base Wiring Devices for Use with Condulets of the G-H Series with Adjustable Bar**

**J-K Series Condulets**

*Schedule CR*

Rigid conduit installations exposed to the weather require wiring devices that will prevent rain, ice, sleet, and snow from coming in contact with the current carrying parts. Condulets of the J-K Series meet all such requirements.

They take wiring devices or blank cover.

Cadmium-galvanized is the standard finish.

**Condulet Wiring Devices and Blank Covers**

*Schedule CR*

For Condulets of the J-K Series

These wiring devices are weatherproof; therefore they can be installed either in or out of doors.

They are made in two parts, base and cap. The base is secured to the conduit by a single center screw. Direct connection to the circuit wires is made by two binding screws (entirely enclosed) on the base, eliminating soldered and taped joints. The cap of the lamp receptacle or rosette is secured to the base by two screws, which also complete the electrical connection. Lamp receptacles and rosettes have a common base. This construction permits changing from lamp receptacles to rosettes, or vice-versa, without disconnecting circuit wires.

The 2-pole attachment plug receptacles with double T slots take standard 15-ampere attachment plugs with parallel or tandem contact blades, or the parallel blade 15-ampere polarity plugs. The 2-pole attachment plug receptacles with IT slots take 15-ampere attachment plugs with tandem contact blades, or Hubbell 15-ampere polarity plug 6918.

The fastening screws are furnished with and so retained in the wiring devices that they cannot fall out.

Made of porcelain and furnished with gasket.

**Attachment Plug Receptacles**

If specified on the order, lamp receptacle with lamp grip will be furnished at an advance of 10 cents list.

Prices do not include attachment plugs for receptacles listed above.

## GS Series Condulets

Schedule CR

Take covers, fixtures, round base snap switches, vapor-proof fixtures, plug receptacle housings, or connection blocks. Furnished with fastening strap for wiring devices.

Forms 5, 10 and 20 indicate sizes of condulets which take covers and wiring devices correspondingly classified.

Cadmium-galvanized is the standard finish.

**GS Vaporproof Fixtures**

*Schedule CR*

**For Form 20 Condulets of the GS Series**

Form 20 Condulets of the GS series with vaporproof fixtures meet conditions where vapor, gas, or moisture exist, as in marine installations or cold storage plants.

Bodies are of liberal dimensions, providing ample space for making taps, for connections to fixtures, and for the passage

Pendant

Bracket

of additional circuits. They are provided with blind screw holes for fastening covers or fixtures. A flat, unusually wide surface inside of the screw hole circle provides a good seat for the fixture gasket, insuring a gas and watertight joint.

Fixtures are furnished with receptacle, gaskets, and with or without globe and guard.

Cadmium-galvanized is the standard finish.

**Form 75**

Take 50-watt (PS20), 60-watt (A21), 75-watt (PS22), or 100-watt (A23) lamps.

## Type BRG Plug Receptacle Housings

Schedule CR

### For Condulets of the GS Series

\*30 Amperes, 250 Volts A.C.

These housings take Type BP plugs. The 2-pole housings are furnished with 30-ampere, 250-volt receptacles BR1302 or BR302. The 3-pole housings are furnished with 30-ampere, 250-volt receptacles BR1303 or BR303.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

The threaded housings are furnished with round gaskets cemented in grooves. The gaskets are inside the screw circle, and the holes in the Condulets for the fastening screws are blind tapped; therefore when a watertight plug or the brass cap is used, the Condulet is absolutely vapor, gas, and dustproof.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning; the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

**GROUNDING.**—On the plugs used with these receptacles, provision is made for a grounding wire in the cable to connect the frame of the portable device to the shell of the plug. The grounding or safety circuit is completed through the shell of the plug, the detent spring, the receptacle housing, and the conduit system. The detent spring in the receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N. E. C. standard.

Standard package quantity is 25.

C442	\$3.35	100

If specified on order, lamp receptacle with lamp grip will be furnished at 10 cents advance in list price.

**SK Series Condulets**

*Schedule CR*

**For Concealed Installations in Concrete**

Take ARB vaporproof fixtures, blank covers, or covers with hubs, and are drilled and tapped to take 3/4-inch outlet box round base wiring devices with 2 3/4-inch screw centers.

The blank cover has countersunk fastening screw holes and is furnished with flat head screws. This makes the cover suitable for use in floors or sidewalks.

A gasket is made for use with blank covers, so that when used with condulets of the SK Series, an excellent water-tight junction box is provided.

Elxits, Ben-ox fixtures and other wiring devices that have 4 fastening screw holes instead of 2 on 2 3/4-inch centers are given especially rigid support.

Cadmium-galvanized is the standard finish.

**Type VS Vaporproof Portable Hand Lamps**

*Schedule CR*

**Clamp Guard**

With Terminal for Ground Wire

Type VS Portable Hand Lamps are suited for use in garages, refineries, bakeries, flour mills, grain elevators, marine work or wherever inflammable vapor, dust or moisture is present.

The guard and globe holder are made of cast aluminum; the handle of molded rubber; and the gland nut of molded composition.

The rubber handle has sufficient flexibility to prevent breakage when subjected to rough usage, yet is sufficiently rigid to function as a satisfactory grip. Temperatures are not excessive.

Furnished with globe, guard, receptacle, gasket and vaporproof gland in handle.

Standard package quantity is 20.

**Complete with Globe V15 and Guard VS95**

Takes 60-watt (A21) lamps or any lamp not exceeding 2 3/4 x 5 3/8 inches.

*Schedule CR*

**With Grounding Terminal**

Take 15 to 60-watt (A17 A19, A21, P19, PS20, S17, S19, or S21) lamps.

Nos. LPG24 and LPH24 Safety Hand Lamps are constructed to withstand the severe service encountered in railroad shops, garages, industrial plants, storehouses, etc.

A terminal is provided for a safety circuit wire in the connecting cord for grounding the guard and other metal parts not connected with the electrical circuit.

Handle is well seasoned maple, black enameled. A metal bracket on which ground terminal is mounted also provides a cord strain relief and support for lamp socket as a unit.

The guard and half shade are made of aluminum alloy. A compression washer prevents a twisted lamp cord from turning the lamp out of a set position.

Standard package quantity is 20.

**Type LPG, with Guard**

Cat. No.	Each
LPG24	\$3.00

**Type LPH, with Guard and Half Shade**

## Condulet Vaporproof Industrial Fixtures

Schedule CR  
Clamp Guard

Regularly furnished with clear globes.

Colored globes can be substituted at an extra charge. A reflector can be used by omitting the guard regularly furnished and substituting the proper combination of reflector and reflector holder. A reflector and guard can be used by omitting guard regularly furnished and substituting the proper combination of guard with reflector holder and reflector.

Cadmium-galvanized is the standard finish.  
Standard package quantity is 10.

**Form 75**  
Furnished with Globe V75 and Guard V97, and takes 50-watt (PS20), 60-watt (A21), 75-watt (PS22), or 100-watt (A23) lamps.

**Form 200**  
Furnished with Globe V200 and Guard VH99, and takes 100 or 150-watt (PS25), or 200-watt (PS30) lamps.

## Types GU and GUE Explosion-Proof Junction Condulets

Schedule CE

The Types GU and GUE Condulets provide explosion-proof utility junction boxes with welded hubs to meet requirements for special hub combinations. The body is blind tapped to take CB connection block.

The catalogue numbers and prices are arrived at in the following manner: Refer to the illustrations above and select the particular type of Condulet desired. Use this

type as the first portion of the catalogue number. The catalogue number is completed by using the symbols\* shown below in the schedule of threaded and union hubs, to indicate the size and type of each hub in rotation as lettered on the illustration.

Any hub may be omitted by using a zero (0) in the proper position in the catalogue number.

### Example

See illustration at the left. A is to be 3/4-inch threaded hub; B, 1-inch threaded hub; C, 3/4-inch union hub; and J, 3/4-inch union hub in center of back.

The catalogue number will be GU11-23PP.

The price is determined in the following manner:

Type GU Body and Cover without Hubs.....	\$2.00
A Hub, 3/4-Inch Threaded, Symbol 2*	.65
B Hub, 1-Inch Threaded, Symbol 3*	.75
C Hub, 3/4-Inch Union, Symbol P*	1.00
J Hub, 3/4-Inch Union, Symbol P*	1.00
<b>Total Price of Unit.....</b>	<b>\$5.40</b>

\*Symbol numbers are given in schedule of threaded and union hubs below.

Type GUE catalogue numbers are made up in the same manner. Hub arrangements and type numbers are same as in Type GU.

### Types GU and GUE without Hubs

Furnished with screw cover. Take threaded or union hubs.

#### Type GU

Dimensions over all: 4 1/8 in. square; 2 1/8 in. deep; 3 5/8 in. diameter of cover opening. Body and Cover without Hubs...each \$2.00

#### Type GUE

Dimensions over all: 4 5/8 in. square; 3 5/8 in. deep; 3 5/8 in. diameter of cover opening. Body and Cover without Hubs...each \$2.00

### Threaded and Union Hubs For Types GU and GUE Condulets

Type GU takes 1/2 to 1-inch hubs.

Type GUE takes 1/2 to 2-inch hubs†.

†Maximum size of hubs: Rear hub, 1 1/4 inches; 2 hubs on each side, 1 1/2 inches threaded, 1 1/4-inch union.

Threaded			Union		
Size	Symbol	Each	Size	Symbol	Each
1/2	1	\$.60	1/2	N	\$1.00
3/4	2	.65	3/4	P	1.00
1	3	.75	1	Q	1.20
1 1/4	4	.90	1 1/4	R	1.75
1 1/2	5	1.15	1 1/2	S	3.00
2	6	1.50	2	T	4.00

### Type GUP Explosion-Proof Condulets

Type GUP Condulets are especially suitable for gasoline pump installations that are to be rewired to comply with the new inspection requirements for hazardous locations, where frequently an explosion-proof junction Condulet will be required to replace a steel knockout box. Hubs tapped for 3/4-inch conduit. Cover opening diameter, 3 5/8 inches.

#### With 6 Hubs

2 in top; 1 in each side; 2 in bottom; none in back.  
No. GUP215.....each \$2.70

#### With 10 Hubs

2 in top; 1 in each side; 2 in bottom; 4 in back.  
No. GUP214.....each \$2.90  
Outside dimensions of body exclusive of hubs: Length 4 1/2 in.; width 4 1/2 in.; depth 2 1/2 in.

### Connection Blocks

For Types GU and GUE Condulets

Style, 4-wire. Rating—20 amps., 125 volts.  
No. CB1124.....each \$1.90

**EV Series Explosion-Proof Lighting  
Fixture Condulets**

Schedule CE

40-watt is furnished with globe EV4 and guard EV084, and takes 25 or 40-watt Type A lamps, 50-watt Type P19 mill type lamps, or any medium base lamp not exceeding 2 7/8 x 4 1/4 inches.

100-watt is furnished with globe EV10 and guard EV081, and takes 50, 60, 75, or 100-watt lamps, or any medium base lamp not exceeding 2 7/8 x 6 1/16 inches.

200-watt is furnished with globe EV20 and guard EV082, and takes 150 or 200-watt lamps, or any medium base lamp not exceeding 3 3/4 x 8 5/8 inches.

## Type EVG Explosion-Proof Lighting Fixture Condulets

For Gasoline Pump and Pump Dial Illumination

Type EVG Condulet is provided with a special Condulet body having a small oscillating switch type SWH; a wiring compartment with sufficient room for making the taps and splices; and a hub arrangement particularly suited to the requirements of gasoline pump wiring.

Intended for mounting within the pump housing where its globe is not subject to breakage.

When used for indirect illumination of the pump dial, the fixture should be installed with the globe in horizontal position or in a vertical position with the base of the lamp down, so the globe may be removed easily.

Dimensions over all, exclusive of hub: Length 8 5/8 in.; width 5 1/2 in. Size 1/2 inch.

Furnished with switch SWH13 and globe EV4. Takes 25 or 40-watt Type A lamps, 50-watt Type P19 mill type lamps, or any medium base lamp not exceeding 2 3/8 x 4 1/4 inches.

No. EVG2 Condulet ..... each \$10.00  
No. EV4 Clear Globe with Threaded Ring ..... each 4.00

MECHANISM FOR 4-INCH KEY

ATTACHMENT FOR ROD OPERATION

Switch Condulets of the FS Series listed above can be furnished with various special mechanisms. For such arrangements the catalogue number should be followed by a suffix as described below. Example: FS2106-S32.

There is no extra charge for these mechanisms.

Suffix No.	Description	Charge
S-32	Key Operation, 4-Inch Key*	No Extra Charge
S-33	Attachment for Rod Operation	No Extra Charge

\*Furnished with nut for clamping against inner casing and 4-inch key for operation through outer casing of a pump housing. Can be applied to Condulet for key operation only.

**Type GUB Explosion-Proof Panelboard Condulets**

Schedule CE

Type GUB1

Type GUB14

The Type GUB Condulet is used as a 2-circuit, 3 to 2 or 2 to 2-wire convertible panel, on 125-volt, 2-wire, or 125-250-volt, 3-wire, systems with grounded neutral, each circuit having single-pole protection. The 3-wire or 2-wire feeder may extend through, if wire size is not reduced.

The terminal board has a neutral bar or strip with main lugs at each end and a wire-binding screw for the neutral conductor of each circuit; also 2 terminals with lugs, one terminal for each outside conductor.

If furnished without breakers, circuit breaker ratings must be stamped in name plate when breakers are installed.

Outside dimensions, exclusive of hubs; Length 10 in.; width 8 in.; depth 5 1/2 in.; diameter of cover opening 7 in. Standard finish, cadmium-galvanized.

Furnished with terminal board\* and with or without two 125-volt, single-pole Flipon circuit breakers.

**Threaded for Rigid Conduit**

## Type FLP Explosion-Proof Panelboards

Schedule CE

With Circuit Breakers

Type FLP Panelboard consists of a ready-wired assembly of "Flipon" circuit breakers in an explosion-proof housing. A separate compartment is provided for each breaker. Wiring connections are made to main and branch circuit terminal blocks mounted in a separate T-shaped compartment. Main terminals are furnished with main lugs only. The wire terminals are accessible through openings provided with threaded covers. Usually the panelboard is mounted so that the branch circuit hubs are at the top;

it may be mounted with the circuit hubs pointing downward if it is desirable to have the branch circuits coming out of the bottom of board.

Main hubs are arranged for 2-inch conduit and are located at each end of the main terminal compartment. The 3/4-inch branch circuit hubs open into the branch terminal compartment. Circuit breaker compartments are numbered from top to bottom with odd numbers on the left and even numbers on the right. Regularly furnished wired for 3 to 2 or 2 to 2-wire systems, convertible.

Dimensions overall including hubs: Length 8 circuits, 27 1/8 in.; 6 circuits 23 1/2 in.; 4 circuits 18 3/8 in.; width 21 3/4 in. depth 6 3/4 in.

## Type FLS Explosion-Proof General Use Switch Condulets

Schedule CE

Type FLS are general use enclosed switches, rated in amperes, for use in hazardous locations. If used as motor switches allowance should be made for the locked rotor motor current which may be 5 or 6 times the full load motor current. The single throw, and the double throw with no "off" position, are furnished with switches of the tumbler type, positive quick make and break; therefore they cannot be held in partial contact.

The double throw and motor reversing switches with "off" position are slow make and quick break. The slow make permits proper control of handle for joggling.

These Condulets are listed with 2 hubs, through feed, both hubs for threaded conduit of the same size. Other hub arrangements can be furnished.

Standard finish, cadmium-galvanized.

Furnished with switch, not fusible.

**Types FLF and GUB Explosion-Proof Motor Starting Switch Condulets**

Schedule CE

Type FLF

Type GUB

Types FLF and GUB Condulets are designed as explosion proof housings with operating handles or push buttons for external operation of certain definite motor starting switch mechanisms as indicated in the listings. Holes are provided for a padlock so that the operating handle can be locked "off" or "on." The switches are trip-free from the handle; therefore, locking the handle "on" does not prevent tripping but the switch cannot then be reset without removing the padlock. Switches are "across-the-line" starting type with thermal overload trip.

Heaters for the thermal overload trip units should be selected in accordance with the name plate current rating of the motor to be protected. If the name plate current rating is not known, it can be approximated from tables published in Article 8 of the N. E. Code. However, for proper protection to the motor, the heater should be selected in accordance with the actual motor name plate rating. If switch is located in a cool place and the motor in a hot place, the heater rating should be smaller than normal.

The heating elements are renewable and can be changed to suit the current rating of the particular motor that is to be protected. Only 2 heaters are used, one in each of the outer poles of the switch. Therefore, if used on 2-phase 3-wire circuits, the common wire should be connected to the center pole. All switches are top connected; line at top, load at bottom.

These Condulets are listed for threaded hub arrangements. Other hub arrangements can be furnished.

Standard finish, cadmium-galvanized.

\*Catalogue number includes 2 heaters which must be specified. Select heaters required and add Crouse-Hinds symbol number of heater as a suffix to the catalogue number of complete conduit. Example: The catalogue number of FLF104-22, when furnished with two 1.1-ampere heaters, would be FLF104-22-114. Symbol number 0 (zero) may be used to indicate heaters omitted, to be ordered and installed later.

4.6 to 13.6	100	60	5	7	100
15.4 to 20.0	100	100			

\*TESTED FOR GROUP FUSING TWO OR MORE MOTORS ON ONE FEEDER.—Under certain conditions laid down in rule 808b2, exception 1, of the National Electrical Code, individual branch circuit fuses for each motor may be omitted and two or more motors each with its individual running protective device may be grouped on one feeder, in which case the maximum size of the fuses must not exceed the smallest maximum fuse protection specified in connection with any of the motor running protective devices for that group.

Many running protective devices have been subjected to short-circuit tests to determine the maximum rating of feeder fuses which may be used and still prevent the motor protective device from becoming a fire hazard on short circuit. These figures are usually marked on such devices, also published where such devices are listed.

## Delayed Action Explosion-Proof Arktite Plugs and Receptacles

Schedule CE

Type CES Receptacle

Designed to provide a greater degree of safety in hazardous locations. The purpose of the delayed action is to permit the arc to be broken and the resulting flame, sparks, and hot metal parts to cool below the ignition temperature before the arcing chambers are opened to the atmosphere. An interference on the rotating sleeve prevents complete withdrawal of the plug but it can be withdrawn far enough to interrupt the circuit; and as is the case in all Arktite plugs and receptacles, the resulting arc is broken in the arcing chamber. The plug having been withdrawn as far as possible, the sleeve must be rotated to the new position before the plug can be completely withdrawn.

The delayed action Arktite plug and receptacle takes the place of an interlocked plug and explosion-proof switch. The delayed action Arktite however has this advantage. If the cord or cable is broken through undue strain, the plug will have been withdrawn far enough to break the circuit in the receptacle and the cord is dead at the point where the break occurs.

### Type CES Receptacle Equipment Complete

Includes Condulet, Receptacle, and Receptacle Housing

Condulets have 3 hubs, 2 of which are furnished with pipe plugs. Standard finish, cadmium-galvanized.

## Type EYS Sealing Condulets for Hazardous Locations

Schedule CE

In hazardous locations, Class I, the conduit system should be sectionalized by sealing at frequent intervals.

Type EYS is a small, compact sealing Condulet for use in vertical runs of conduit. Taps or splices within the fitting are not permissible, and it is not recommended where there are more than 3 or 4 wires in the conduit. Condulets of the GUA series with sealing cover are more convenient for use in horizontal runs, or where there are 4 or more wires in the conduit, or where it is thought likely that changes may become necessary in the wiring. The cover makes it less difficult to remove the sealing compound.

Condulets are furnished with pipe plug. Standard finish, cadmium-galvanized.

### With Female Hub Top and Bottom

## Type RCDE-8 Explosion-Proof Pit Lights

Recommended for lighting automobile greasing pits and lifts, and for general use in hazardous locations.

When installed in the concrete wall of a pit or in the floor, the unit is practically flush with the concrete, for the door projection is only 3/8 inch when used without a grid, and 1 1/16 inches when used with a grid. For mounting on the surface of a wall, 3 steel Z brackets are supplied.

Without Brackets

Grounding

The 1928 National Electrical Code requires that in industrial establishments, portable devices having exposed metal parts, such as a metal frame or casing, shall be equipped with a cord containing an additional or safety circuit conductor; shall be equipped with polarized attachment plug; shall have the safety circuit conductor connected to the frame or casing of the appliance and to the safety circuit contact of the plug; and shall have the safety circuit contact of the receptacle adequately grounded.

Arktite plugs and receptacles are made in two styles: Style 1 is for use under ordinary conditions, where the plug sleeve and receptacle housing may serve as part of the safety circuit; Style 2 is for use in hazardous locations, and where conditions exist favorable to corrosion, either at the receptacle or along the conduit between the receptacle and the point of grounding.

Style 1

Arktite Plug with Cable Grip and Receptacle Mounted on Type GEE Condulet With Plug Partially Inserted

Style 1 plugs and receptacles are not provided with an extra pole for the grounding or safety circuit conductor, because the plug sleeve and receptacle housing serve as the grounding pole. Provision is made for connecting the safety circuit wire to the handle of the plug. If flexible armor is used for the safety circuit conductor, plugs with cable grip only should be used. The safety circuit is then completed from the frame or casing of the portable device through the safety circuit wire or flexible armor to the plug handle, thence through the natural contact of the plug handle with the plug receptacle housing to the conduit system.

The contact between the plug handle and the plug receptacle housing is made more effective than it otherwise would be by the detent springs.

Style 2

Arktite Plug with Rubber Bushing and Receptacle Mounted on Type GEE Condulet With Plug Partially Inserted

Style 2 plugs and receptacles have an extra pole for the grounding or safety circuit conductor. This pole is made extra long so that contact between the plug and receptacle is made first and broken last on this safety circuit contact. By this means any possibility is avoided of the portable device or plug handle being momentarily alive, due to arcing on the live contacts when the circuit is broken. The safety circuit contact in the plug is bonded to the plug handle. That in the receptacle is bonded to the receptacle housing or Condulet.

The safety circuit may be completed from the frame or casing of the portable device, through the extra (safety circuit) wire of the cable, to the safety circuit contact in the plug, to the corresponding safety circuit contact in the receptacle; thence (1) through the conduit system, which must then be considered as a grounding conductor and be made up accordingly; or (2) through a separate copper conductor extending back to an adequate ground connection; or (3) through a separate conductor in parallel with the conduit system. The latter methods (2) or (3) are necessary if conditions exist favorable to corrosion of the conduit.

Style 1 plugs fit only Style 1 receptacles. Style 2 plugs fit only Style 2 receptacles.

## Arktite Receptacle Equipment Complete

Includes Condulet, Receptacle and Receptacle Housing

BP396036	9.50	3-Pole	1.188 to 1.234	10

### Type BP, for Flexible or Armored Cable 60 Amperes, 600 Volts\*

For receptacle BR6036 in housings QE6036, QE66036, QE76036 and QE86036.

BP46036	\$7.75	3-Pole	.813 to 1.063	10
---------	--------	--------	---------------	----

\*Underwriters' rules require an approved switch in series with receptacle of this rating.

†Can also be used with housings QE6036 and QE66036.

## Type BRM Plug Receptacle Condulets Schedule CR

30 Amperes, 250 Volts A.C.\*

Take Type BP plugs.

The 2-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2302.

The 3-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2303.

Threaded housings are also furnished with gaskets.

These plug receptacle condulets furnish a compact, convenient and rigid receptacle device. They are especially suitable for semi-permanent or temporary installation either for light or power, as in such installations it is desirable to include a device that will permit the conduit and wiring system to be easily broken and at the same time not sacrifice any of the protective features of rigid or flexible conduit.

These Condulets take plugs for rigid or flexible conduit, or armored or other cable.

The threaded Condulets, when used with a watertight plug or the aluminum cap, are vaporproof. They make excellent devices for installation on locomotives, as they provide means whereby the conduit system can be easily removed or replaced in sections, as is necessary when a locomotive is to receive a thorough overhauling.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning, and the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

\*Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits if circuit is broken before plug is withdrawn.

**Type BRME Plug Receptacle Condulets**

Schedule CR  
30° Angle

30 Amperes, 250 Volts A.C.\*

Take Type BP plugs.  
The 2-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2302.  
The 3-pole Condulets are furnished with 30-ampere, 250-volt receptacle BR2303.

Threaded housings are also furnished with gaskets.  
Type BRME Plug Receptacle Condulet is for mounting on the wall or on the frame of a portable machine, by means of two heavy lugs. The Condulet is mounted at such an angle with the surface to which it is attached, that there is no danger of the operator injuring his knuckles when inserting or removing the plug.

These receptacles furnish a compact, convenient, and rigid receptacle device. They take plugs for rigid or flexible conduit, or armored or other cable.

The threaded Condulets, when used with a watertight plug or the aluminum cap, are vaporproof. They make excellent devices for installation on locomotives, as they provide means whereby the conduit system can be easily removed or replaced in sections, as is necessary when a locomotive is to receive a thorough overhauling.

The plugs and receptacles are polarized. The receptacle housing is provided with a clip which makes contact with the shell of the plug, effectually grounding the plug through the conduit system.

The plug and receptacle contacts are self-aligning, and the receptacle contacts are completely enclosed in a body of molded insulating material. The prongs of the plug are protected by a steel sleeve.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

**Type BP Plugs**

Schedule CR

For use with Types BRB, BRD, BRG, BRM, BRME, BRY, and QE plug receptacle housings.

The 30-ampere plugs are arranged for soldered terminals. The 20-ampere plugs are equipped with binding screw terminals. Plugs so equipped with binding screw will not take wires larger than No. 12; consequently, these plugs are rated at 20 amperes. Otherwise, the 20 and 30-ampere plugs are exactly alike.

GROUNDING.—Provision is made for a grounding wire in the cable to connect frame of portable device to shell of plug. Grounding or safety circuit is completed through shell of plug, detent spring, receptacle housing, and conduit system. Detent spring in receptacle has three branches, two of which make contact before and break contact after the main circuit contacts. This method of grounding is N. E. C. standard.

Cadmium-galvanized is the standard finish for all plugs and receptacles. This insures a perfect ground connection between all metal parts in the grounding or safety circuit.

Standard package quantity for all plugs is 25.

**For Flexible Cable**

Furnished with clamp for flexible cable. With composition handles (non-watertight).

## RS Series Condulets

Schedule CR

Cadmium-galvanized finish. Furnished with cast feraloy cover, gasket and screws. The use of these Condulets provides an easy method of tapping a conduit system, where a Condulet body of this series has been installed in the line, by removing the blank plates and substituting plates with the desired sizes of hubs. Cover, hub plates, and blank side plates are gasketed, making the Condulet watertight.

Cat. No.	Each	Type	Inside Dimen. Inches	Std. Pkg.

**PR Series Junction Condulets**

*Schedule CR*

For use where durable, watertight junction condulets of medium size are required, as in railroad yards and shops. Also suitable for underneath or overhead car wiring installations.

The hubs are so designed as to insure a clearance of at least 3/4 of an inch between the surface wired over and the conduit; therefore, when these condulets are used on car roofs, there is no opportunity for the accumulation of cinders. Hubs are cast solid with the body and have an integral bushing and tapered thread.

The cover overhangs the condulet, and is held in place by 4 heavy brass cap screws. The joint is made watertight by a gasket.

The bottom of the condulet is reinforced at the center to allow drilling and tapping for an extra conduit or for the suspension of a center lamp fixture or car fixture of pedestal design.

Inside diameter, 6 1/8 inches; depth, varies with size.

Cadmium-galvanized is the standard finish.

Furnished with cast feraloy cover and gasket.

Standard package quantity is 10.

\*Sizes of end hubs, given first; side hubs, given last.

**Type FJC Condulets**

*Schedule CR*

**For Floor Outlets**

Type FJC meets conditions in factories, textile mills, technical schools or printing houses, where there are a number of individual motor driven machines and it is difficult to determine the final and permanent location of these machines when the preliminary layout is made or the conduit is installed.

It is general practice, in using a Type FJC Condulet, to drill the cover and attach a connector for flexible conduit; but rigid conduit can be used, if desired.

The over all dimensions of body exclusive of hubs are: Length 6 3/8 inches; width, 4 3/8 inches; depth, 4 3/16 inches.

Cadmium-galvanized is the standard finish for condulets and cast feraloy covers.

Furnished with cover and gasket.

Standard package quantity is 10.

## YW Series Condulets

Schedule CR

### For Cutouts—Without Hub Plates

Fuse cutouts are installed in a fireproof enclosure. These condulets have gasketed cast ferrous doors with adjustable eyebolt hinges. A tubular gasket is cemented in the door which, when closed, is watertight. Removable conduit hub plates, thoroughly gasketed, are secured to the cast ferrous body by 4 screws. These condulets are watertight, therefore, they are suitable for installation where dust, moisture or excessive gases are present.

The removable conduit hub plates make it possible to cut these condulets into an existing installation without disturbing the conduit system.

Designed to take wires which will enter the grooves or terminals of the fuse cutout of the same rating as the conduit. The additional space in the hubs is for the passage of extra wires. These extra wires should not be larger than can be properly accommodated in the body of the conduit with the cutout installed.

Cutout fastening plates are slotted so that almost any standard make of cutouts can be mounted thereon by means of the bolts and nuts furnished with the cutout fastening plates.

Cadmium-galvanized is the standard finish.

### Type YW

Takes main line fuse cutouts, and removable conduit hub plates or plug receptacle housings. Furnished with cast ferrous door, gaskets and cutout fastening plates.

Cat. No.	Each	RATING Amp.	Volt	No. of Wires	Takes Hub Plate	Takes Housing	Std. Pkg.

## Type BRY Plug Receptacle Housings

Schedule CR

### For Condulets of YW Series; or Any Condulet That Takes Conduit Hub Plates of YYP5 or YYP7 Series

\*30-Ampere, 250-Volt A.C.

Takes Type BP Plugs; 2-pole housings are furnished with 30-ampere, 250-volt receptacle BR302; 3-pole housings with 30-ampere, 250-volt receptacle BR303.

Cadmium-galvanized is the standard finish on all plugs and receptacles. This is necessary in order to insure a perfect ground connection between all metal parts in the grounding or safety circuit.

### With Spring Door

\*Can be used on 25-ampere, 125-volt d.c. circuits; or on 30-ampere, 250-volt d.c. circuits, if circuit is broken before plug is withdrawn.

## Z Series Condulets

Schedule CR

### For Cutouts and Switches

A condulet combining a switch and cutout is desirable for the control of small motors where a starting box or compensator is not required, and for independent control and protection of certain lighting, heater and other special circuits.

Takes round base wiring devices and main line fuse cutouts. Furnished with sheet steel door, adjustable bar, adapting rings and cutout fastening plate. Round base wiring devices are mounted on the sloping surface. The cutout is mounted on a fastening plate which can be removed for installing the cutout and making the electrical connections. The hubs are cast solid with the body and have an integral bushing and tapered thread.

## FA Series Safety Switch Condulets

Schedule CR

2-Pole—30-Ampere, 250-Volt or 5-Ampere, 600-Volt  
3-Way—20-Ampere, 125-Volt or 10-Ampere, 250-Volt

These Condulets are furnished with Crouse-Hinds tumbler switch, cover and gasket, and are for use in industrial plants or wherever switches would be subjected to unusually severe conditions. The switches are enclosed in Condulets and are externally operated, affording the switch maximum protection.

Watertight covers are especially adapted for use out-of-doors or wherever dust, moisture, or gases are present. They have a handle for external operation of the switch.

The non-watertight cover has a rim to protect switch handle which projects through a slot in cover. Handle is self-indicating (furnished with luminous finder at 50¢ extra).

Cadmium-galvanized is the standard finish.

**Type MKS Interlocking Safety Switches and Plug Receptacle Condulets**

Schedule CR

Without Hub Plates

For use with portable electrical appliances such as welding machines, rivet heaters, motor-driven machines, or for similar purposes where switches and plugs are used.

Consists of a safety switch and a plug receptacle. The receptacle and switch are so interlocked that the plug cannot be withdrawn unless the switch is open, nor can the switch be closed unless the plug is fully inserted.

Takes conduit hub plates and Type DP Interlocking Plugs.

Furnished with fusible knife switch and interlocking plug receptacle with spring door housing.

These condulets are not weather proof. When installed out-of-doors or where exposed to the weather, a weather-proof housing should be built around the condulet.

Cadmium-galvanized is the standard finish.

†250-volt cartridge fuses.

‡600-volt cartridge fuses.

§Westinghouse plug type thermal cutouts.

°General Electric thermal cutouts.

If specified on the order, Type ZT can be furnished with a key-operated interlock release at \$2.50 extra.

## AL Series Fixture Hanger Condulets

Schedule CR

For Pendent Fixtures—Always Hang Plumb

For Fixtures with 1/2-Inch Stem

These condulets provide a flexible suspension for electrical fixtures. Fixtures are suspended from a universal joint which assures that fixture will hang plumb. It also prevents breaking fixture stem at point of suspension. This universal joint permits fixture to swing through an angle of about 20° in any direction from the perpendicular.

The cushion fixture hanger is provided with a spring which carries the weight of the fixture and absorbs any shocks due to vibration or other causes.

Standard finish is cadmium-galvanized. In this finish, which does not interrupt safety circuit (ground) between body and pendent, flexible fixture hangers are N.E.C. standard.

**AL Series Threadless Flexible Fixture Hanger Condulets**

Schedule CR

For Pendent Fixtures—Always Hang Plumb

These condulets provide a flexible suspension for electric fixtures. Fixtures are suspended from a universal joint which assures that the fixture will hang plumb. It also prevents breaking fixture stem at point of suspension. This universal joint permits fixture to swing through an angle of about 20° in any direction from the perpendicular.

Standard finish, cadmium-galvanized. In this finish, which does not interrupt safety circuit (ground) between body and pendent, fixture hangers are N.E.C. standard.

H1066	.65	4 to 8	25
H1067	.65	8 to 16	25
H1068	.65	16 to 30	25

### Type ARB Ball Fixture Hangers

For 4-Inch Outlet Boxes—Always Hang Plumb

Cat. No.	Each	Std. Pkg.
ARB6	\$1.00	25

### Type ARB Cushion Fixture Hangers

For 4-Inch Outlet Boxes—Always Hang Plumb

Cat. No.	Each	Total Wt. of Fixture, Lbs.	Std. Pkg. Asst'd
ARB14	\$1.00	2 to 4	25
ARB 8	1.00	4 to 8	25
ARB10	1.00	8 to 16	25
ARB12	1.00	16 to 30	25

### Type UCY Threaded Fixture Rings

Schedule CR

For Use with Threadless Condulets

Thick Wall

The Type UCY Threaded Fixture Ring not only provides a secure suspension for fixtures, but also makes possible a combination of threadless and threaded hubs in the same conduit. The fixture ring takes the place of the grip ring in the threadless conduit hub, and is secured by the knurled nut. Cadmium-galvanized is the standard finish.

Cat. No.	Each	Size Inches	Std. Pkg.
UCY1	\$.04	$\frac{1}{2}$	200
UCY2	.06	$\frac{3}{4}$	100
UCY3	.08	1	50
UCY4	.15	$1\frac{1}{4}$	25
UCY5	.30	$1\frac{1}{2}$	10
UCY6	.50	2	5

## ET Series Condulets

Schedule CR

Single runs of conduit may be made from these junctions to the desired outlets, where the necessary taps and splices in the wires can be made. The hubs have an integral bushing and tapered thread.

Lugs are provided for anchoring to forms.

Where these condulets are not used, all conduits must be run to an accessible junction box or outlet. Where these condulets are used, junctions in the conduit system may be made at concealed or inaccessible points.

Type ET Short Radius Bend Condulets with lugs are required especially for installing LA Series Condulets in moving picture theatres having very shallow floors. Type ET Short Radius Bend Condulets without lugs are for use with outdoor meters where T connections are required to service conduit.

From the center line of the branch hub of the Type ETE Condulet to the surface wired over is  $1\frac{1}{8}$  inches. The purpose of this offset is to bring the branch hub of the Type ETE Condulet in line with the conduit outlet of certain meter boxes.

Cadmium-galvanized is the standard finish.

### Type ET—Short Radius Bend

1½	25	ELB4	1.60
1½	10	ELB5	1.85

\*Size of largest hub is given first and is shown at the bottom in the illustrations.

\*\*Size of branch hub is given first.

†ETE54 has a large radius bend, same as ET54.

**Groundulets**

Schedule CM

**Safety Circuit Equipment**

Cadmium-galvanized is the standard finish for groundulets.

Types GCA and GCD Groundulets are for making a thoroughly secure mechanical and electrical connection between a grounding conductor enclosed in conduit and a water pipe or other grounding electrode. At the same time the grounding conductor and its connections are fully protected from mechanical injury. The conduit itself, as well as the wire contained within it, are electrically connected to each other and to the water pipe.

Grounding electrode, 5/8 to 1 inch.

**Type GCA**  
For Threaded Heavy Wall Conduit

Cat. No.	Std. Pkg.	PER 100		Size Conduit Inches	Size Pipe In.	No. of Straps	Std. Pkg.	Car-ton
		Car-ton	Less Car-ton

GCD32	135.00	148.50	216.00	1	*1/2 to 2	3	10	5

\*For use also on lead pipe in sizes 1/2 and 3/4-inch Grades AA and AAA, and 1-inch Grades A, AA and AAA.

**Type GCH—With Angle Adjustment**

Type GCH Groundulets are attached to a water pipe by rigid clamp jaws, insuring permanent and positive contact. A single substantial bolt holds the assembly in firm contact with both the water pipe and the grounding conductor.

Grounding electrode, 1/2 to 1 inch.

For Threaded Heavy Wall Conduit

GCH1	\$37.50	\$46.90	\$60.00	1/2	1/2 to 1	..	25	5
------	---------	---------	---------	-----	----------	----	----	---

For prices without globe and guard, deduct \$2.60 from price of Form 75, and \$3.05 from price of Form 200.

**Equipment**

Schedule CR

For Mounting on Condulets of the CL and LO Series

Used for railway mail car lighting and fan installations. Cadmium-galvanized is the standard finish.

**Fixtures**

Standard package quantity is 20.

For Storage Section Lighting

For 50-watt, A21 or PS20 lamps.

No. LOB101, Complete with Holder, Lamp Receptacle GS1621 and Reflector.....each \$4.00

No. LOB104, Holder Only, Complete except Reflector.....each 1.00

No. SH50, 12-Inch RLM Reflector Only.....each 3.00

For Door and Lavatory Lights

Furnished with lamp receptacle GS1621. The half shade is cast as an integral part of the receptacle holder.

No. LOB102, For 25-Watt, S17, A19 or PS16 Lamps.....each \$1.80

No. LOB103, For 50-Watt, A21 or PS20 Lamps.....each 2.00

**Fixture Bases**

Three standard angle fixture bases are listed to take care of the curvature of car roofs at letter-case mountings. These angles, together with a possible slight shimming of the condulets, should meet nearly every condition.

The complete fixture is made up by assembling a condulet of the CL or LO Series, Type LOB Fixture Base, Type DAH Reflector Holder and a conduit stem of the proper length.

Assorted standard package quantity is 20.

Style Hub	1-Inch		1 1/2-Inch

SH40	\$1.50	20

**Receptacles**

For DAH Reflector Holders

Cat. No.	Each	RATING		Std. Pkg.
		Watt	Volt	
PE55	\$.40	660	600	200

Can be furnished with lamp grip at 10 cents extra.

## FS Series Switch Condulets

Schedule CR

Cadmium-galvanized is the standard finish.

### Type FS

For controlling the lavatory light, door lights at the opposite end from the lavatory in full mail cars and door lights in baggage compartment of combination mail and baggage cars.

Takes any standard square handle, single-pole, flush tumbler switch.

Has guarded switch cover.

Cat. No.	Each	Size In.	Std. Pkg.
FS132g	\$1.00	1/2	50

### Type FSS—Fusible

For controlling the door lights in the clear storage end or lavatory end of full mail cars; for one door light in 15-foot postal apartments; or for use in any location where a fusible switch is required.

Takes one standard square handle, double-pole, flush tumbler switch; and one standard double-pole, plug fuse cutout No. 62965.

Furnished with guarded switch cover and cover for fuse cutout.

FSS1732	\$2.45	1/2	10
---------	--------	-----	----

### Type FSS—2-Gang—Fusible

For controlling door lights and center lights of 15 or 30-foot postal apartments.

Takes 2 standard square handle, double-pole, flush tumbler switches, and 2 standard double-pole, plug fuse cutouts No. 62965.

Furnished with guarded switch covers and covers for fuse cutouts.

FSS2834	\$4.75	3/4	10
---------	--------	-----	----

### Type FSF

For Fan Control Switch

The lower double-pole switch is actually the "on" and "off" control of the fan. When this switch is thrown to "on" position, it starts the fan in low speed. If medium or high speed is desired, the switch indicated as medium or high may be thrown in to obtain those speeds, but in order to stop the fan it is only necessary to throw the lower double-pole switch to the "off" position.

Takes one standard square handle, double-pole, flush tumbler switch; one standard square handle, 2-circuit, flush tumbler switch Bryant No. 2892 or similar; and one standard double-pole, plug fuse cutout No. 62965.

Furnished with cover and resistance for 32-volt fan.

Cat. No.	Each	Size In.	Std. Pkg.
FSF251	\$7.50	3/4	5

### Type FSF

For Combination Fan and Light Control Switch

A 2-gang switch performing the functions of one No. FSS1732 Light Control Switch and one No. FSF251 Fan Control Switch.

Takes 2 standard square handle, double-pole, flush tumbler switches; one standard square handle 2-circuit, flush tumbler switch Bryant No. 2892 or similar; and 2 standard double-pole, plug fuse cutouts No. 62965.

Furnished with cover, resistance for 32-volt fan and one RE21 Reducer.

FSF2281	\$10.00	3/4	5
---------	---------	-----	---

### Type FSFR Resistances

For 3-Speed Fan

Used in Type FSF switch condulets.

Cat. No.	Each	Voltage	Resistance Ohms	Std. Pkg.
FSFR10	\$1.50	32	5-10	10
FSFR100	1.50	64	*25-50	10
FSFR100	1.50	110	50-100	10

\*One half of 100-ohm resistance for 50 ohms, and 2 halves in multiple for 25 ohms.

## JRY-KRY Series Condulets

Schedule CR

### For Side Wall or Car Vestibule Fixtures

For mounting back of the car finish. The fixtures can be fastened directly to them instead of the finish of the car; therefore, it is unnecessary to reinforce the car finish where the fastening screws enter. Takes connection blocks and fixtures.

The use of connection block No. CF101 eliminates soldered and taped joints, facilitating the removal of fixtures for refinishing or other purposes.

Fixtures are not furnished for this series, but the fastening screw holes are spaced and tapped to take fixtures.

Cadmium-galvanized is the standard finish.

### Type JRY

Cat. No.	Each	Size In.	Std. Pkg.
JRY1	\$.70	1/2	25
JRY2	.80	3/4	25
JRY3	.90	1	25

### Type KRY

KRYA2	.75	3/4	25
KRYA3	.85	1	25

## Type SRH Car Vestibule Fixtures

Schedule CR

### For Condulets of the JRY-KRY Series

Cadmium-galvanized is the standard finish.

### Fixtures Complete

Consists of holder SRH3, reflector SH25, receptacle C227 and Bezel Bez 1.

Cat. No.	Each	Std. Pkg.
SRH357	\$3.50	25

### Holders Only

For SRH Fixture

SRH3	\$.75	25
------	-------	----

### Lamp Receptacles

For SRH Fixture

Cat. No.	Each	Rating Watt	Volt	Std. Pkg.
C227	\$.25	660	600	100

## TJ Series Telephone Jack Condulets

Schedule CR

Arranged with bracket to take Western Electric Telephone Jack No. 200. When the plug is removed, a lid automatically closes the opening and prevents the entrance of dust, moisture and insects. Cadmium-galvanized, standard finish.

### Type TJ

Intended for use under the body of a railroad car. Has a swivel base which allows the plug to pull out easily when the car is moved.

Furnished with insulating bushing and jack support attached to gasketed metal cover.

Cat. No.	Each	Std. Pkg.
TJ200	\$5.00	15

### Type TJD

Intended for use on poles or buildings along the right-of-way of a railroad, transmission line or canal. The line wires enter the conduit through a 2-wire porcelain cover. Furnished with 2-wire porcelain cover and jack support attached to gasketed metal cover.

Cat. No.	Each	Std. Pkg.
TJD200	\$5.00	15

**Type LG Gauge Lamps**

Schedule CR

Bottom tapped for 3/8-in. bolt for attaching to bracket on boiler head or in cab. Cast Aluminum; aluminum standard finish. Takes lamps in A17, S14, or S17 bulb. Lamp receptacle with lamp grip furnished.

**Water Glass Lamps**

A—Size of hub for 1/2-inch rigid conduit.  
B—Outside diameter of round cord or cable. Furnished with tapered bushing and gland nut.  
C—Outside diameter of flexible conduit or armored cable. Furnished with tapered split lead sleeve and gland nut.

**LD Series Tender Lamp Condulets**

Schedule CR

Cast ferrous. Cadmium-galvanized is standard finish.

**Types LDJ and LD**

Used as back up lamps on rear of locomotive tenders. Weatherproof; front and side roundels gasketed. Provided with removable sliding door which is held in position by a cap screw.

The style with 2 round openings in the sides provides ground illumination so that the engineer can see that the lamp is burning. The style with rectangular opening in the bottom not only provides ground illumination, but also throws a light directly downward for coupling.

Takes any medium screw base lamp in A17, A19, A21, S17, S21, G18 1/2 or P19 bulb. Furnished with clear Spredlite Lens, lamp receptacle with lamp grip, and gaskets.

**Type LDJ**

With Rectangular Opening and Plain Glass in Bottom

**Type LD**

Can be furnished in aluminum at \$4.50 extra.

## LE Series 2-Color Tender Lamp Condulets

Schedule CR

Provided with a red color screen that may be placed between the lamp and the lens when a red light is desired. In Type LEA, the door must be opened to operate color screen; in Types LEBJ and LEBF, it is operated by means of a lever on the outside of the case.

A single rectangular glass-covered opening in Type LEA, and 2 such openings in Types LEBJ and LEBF, throw a light downward for coupling and for ground illumination.

Doors, lenses and openings in the bottom are gasketed, making the condulets weatherproof.

Cast feraloy. Cadmium-galvanized is the standard finish.

### Type LEA

With Rectangular Opening and Plain Glass in Bottom

Takes any medium screw base lamp in A17 or S17 bulb. Furnished with 5 3/8-inch clear Spredlite Lens, color screen, C139 Keyless Lamp Receptacle with lamp grip, and gaskets.

Cat. No.	Each	Size In.	Std. Pkg. Astd.
LEA18	\$10.00	1/2	10
LEA28	10.00	3/4	10

Can be furnished with No. C131 Key Receptacle with lamp grip at 20 cents extra; or with the same key receptacle and an operating mechanism similar to that furnished with Type LEBJ Condulet at 70 cents extra. If furnished with key receptacle without the operating mechanism, the door must be opened to operate the key receptacle. Can be tapped for conduit in the back or at either side instead of at bottom. Can be furnished in aluminum at \$3.25 extra.

### Types LEBJ and LEBF

Take any medium screw base lamp in A17 or S17 bulb.

Furnished with GSG Removable Conduit Hub Plates, 5 3/8-inch clear Spredlite Lens, and color screen and key receptacle No. C123 with lamp grip. Key receptacle is controlled by a simple durable externally operated knob or button.

#### Type LEBJ

For Through Feed Horizontal Conduit

#### Type LEBF

For Vertical Conduit in Bottom

## LG Series Locomotive Filler Hole and Stack Lamp Condulets

Schedule CR

Each type consists of a cylindrical housing enclosing receptacle for an incandescent lamp in A17 or S17 bulb and tapped for rigid conduit. Furnished with lamp receptacle with lamp grip and 3-inch clear semaphore lens.

Type LGUA is especially intended for oil burning locomotives to furnish light for taking on oil and water. It is provided with lugs for fastening bolts. Made of cast feraloy. Cadmium-galvanized is the standard finish.

Type LGUB is similar to Type LGUA except the hub comes out at an angle of about 30 degrees to the axis. No lugs are provided for fastening, the lamp being supported by the conduit. Made of cast aluminum. Aluminum is the standard finish.

### Type LGUA Filler Hole Condulet

Cat. No.	Each	Size In.	Std. Pkg. Astd.

## LMK Series Engineer's Reading Light Condulets

Schedule CR

Also suitable for use in railroad shops, roundhouses and railroad yards. Provided with a half shade and with or without a half guard. The shade is cast as part of the conduit, while guard is hinged to conduit.

The body and shade are cast feraloy; the guard is cast aluminum. Cadmium-galvanized is the standard finish.

Takes any lamp in A17 or S17 bulb. With key receptacle with lamp grip, and metal key operating mechanism.

**LM Series Locomotive Deck Light Condulets**

*Schedule CR*

For locomotive gangways; provides illumination for coal passers. Consists of a condulet and half shade cast in one piece, and a weatherproof composition receptacle with lamp grip. The half shade is the correct length and size so that when used with a 25-watt, A17 or S17 lamp, the filament is not visible from any point over the rear end of the tender. The diameter of the half shade prevents the use of large headlight bulbs.

Cadmium-galvanized is the standard finish.

## UG Series Battery Charging Condulets

Schedule CR

Single receptacle battery charging condulets.

Furnished with 2-pole rectangular or round receptacle, spring door and gaskets. Rectangular receptacle No. BR100 is rated at 100 amperes, 80 volts and takes plugs Nos. BP100, BPB100 or BPF100. Round receptacle No. BRA100 is rated at 100 amperes, 125 volts and takes plugs Nos. BPA100, BPA105 or BPA100. Rectangular receptacle No. \*BR200 is rated at 200 amperes, 65 volts and takes 200-ampere plugs Nos. BPD200, BPD203, BPDF200 or BPB100 or 100-ampere plugs Nos. BP100 or No. BPF100.

Cadmium-galvanized is the standard finish. Standard package quantity is 5.

\*If specified on the order, 200-ampere rectangular receptacle BR200 can be substituted for receptacle No. BR100 at \$1.25 extra. When so arranged, the conduit is suitable for low voltage welding machines of 200-ampere capacity.

\*\*Furnished with hub plate and hub cover for 2-inch conduit stem. Conduit stem is not furnished.

## BRH Series Battery Charging Condulets

Schedule CR

For Flexible Cable

For storage battery charging outlets, particularly on railroad cars and electric vehicles.

Makes excellent outlets for electric welding systems. If one side of the welding circuit is permanently grounded, both terminals of the plug and receptacle can be connected to the same conductor, thereby making them single-pole and doubling the ampere capacity.

Made for flexible cable. Furnished with 2-pole rectangular or round receptacles which are interchangeable in all the condulets of the BRH Series, except BRHE which takes the round receptacle only.

Receptacles and plugs are polarized.

The receptacle housings are provided with a spring door.

Types BRHA and BRHE are furnished with improved M.C.B. Brackets and are pivoted so as to allow the receptacle to align itself with the direction of the pull on the plug when the latter is withdrawn. Both of these condulets comply with all the A.R.E.E. standards.

The housing of Type BRHE is inclined at an angle and the wires enter the conduit from the bottom. The wire openings can be sealed by wrapping tape around the wires where they enter the housing. The combination of these features prevents the collection of dust, cinders, and moisture within the receptacle. Another advantage of having the housing set at an angle is that there is no downward pull on the receptacle when the plug is jerked out by the car moving away. Receptacle No. BRA100, which is furnished with this conduit, has self-aligning contacts. Furthermore, that part of the housing around the opening of the receptacle is made extra long so that it and the plug handle will take the side strain.

Rectangular receptacle No. BR100 takes plug No. BP100. Round receptacle No. BRA100 takes plugs No. BPA100 or No. BPA105. Rectangular receptacle No. BR200 takes plugs Nos. BPD200, BPD203 or BP100.

Cadmium-galvanized is the standard finish.

Standard package quantity is 5.

### Type BRHE

BPA105 takes No. 1 Round Flexible Cable, outside diameter 1 3/16 to 1 1/8 inches. The wire terminals of receptacle BR100 are drilled 11/32 of an inch in diameter and will take any size cable up to and including No. 1, B & S gauge. The wire terminals of receptacle BRA100 are drilled 13/32 of an inch in diameter and will take any size cable up to and including No. 0, B & S gauge. The wire terminals of receptacle BR200 are drilled 5/8 of an inch in diameter and will take any size cable up to and including No. 0000, B & S gauge.

\*\*A spanner wrench will be furnished free with every shipment of BPA100 or BPA105 Plugs. If ordered separately or additionally, they can be furnished at 35 cents each.

**Type YE Cab Connection Condulets**

Schedule CR

For Rigid Conduit

For Flexible Conduit

Especially intended for use on locomotives. Provides an easy means for connecting the wiring system on the boiler to that in the cab.

A detachable hub plate is furnished which slides into grooves at the bottom of the condulet and may be quickly removed when door is open.

Also furnished with 4 bosses, any of which can be tapped for 1/2, 3/4 or 1-inch rigid conduit, but there are no hubs cast solid with the body.

The connection blocks furnished with these condulets are equipped with 14-24 R.S.A. Binding Nuts; 4-wire condulets are furnished with 2 connection blocks CB9222; 6-wire with two CB9223; 8-wire with

two CB9223 and one CB9222. The removable plates are made in 2 styles: One for rigid conduit and one for flexible conduit.

Positions of drilling and tapping in the bosses should be specified according to letters A, B, C, D, shown on cuts. A and C are the bosses on the left and right sides, B at the top and D at the back near the top. To order size by number: 1 is 1/2 inch, 2 is 3/4 inch, 3 is 1 inch. For example: YE1023-1233 (YE1023 is the catalogue number of the condulet with connection block).

Cadmium-galvanized is the standard finish.

## Type UCA Threadless Connectors

For Screwing into the Threaded Hub of a Condulet

Type UCA Connector is for connecting a threaded condulet to a piece of threadless conduit. In cases where combinations of threaded and threadless condulets are used, it offers a simple method of branching from a threaded condulet to threadless conduit. In other cases where threadless condulets of a desired type are not available, threaded condulets can be used with Type UCA Connector, in order that threadless conduit may be used.

Cadmium-galvanized is the standard finish.

\*Threaded end is 1/2 inch; threadless end is 3/8 inch.

## Type UCT Threadless Adapters

Schedule CR

Thin Wall

Type UCT Adapters make available all types of threaded condulets, covers, and wiring devices for use with electrical metallic tubing.

They may also be used to connect the tubing to condulet elbows, condulet unions, condulet reducers, threaded pipe, couplings, or to any fitting that has a standard female tapered thread of the corresponding size. Thus, for example, a standard conduit coupling and two Type UCT Adapters make a coupling suitable for use with electrical metallic tubing.

Cadmium-galvanized is the standard finish.

Cat. No.	Each	Size Inches	Std. Pkg.
UCT1	\$.06	1/2	200
UCT2	.08	3/4	100
UCT3	.12	1	50

**Type UCC Threadless Conduit Unions or Couplings**

For Connecting Threaded or Threadless Conduit

Cadmium-galvanized is the standard finish.

## No. 3707 Bryant Porcelain Lined Aluminum Heavy Duty Sockets

With Shade-Holder Threads  
660 Watts, 660 Volts

The aluminum shell is threaded on the end to receive a special shadeholder, No. 3700.

This device is fitted with lanced screw shell which prevents loosening of lamps from vibration.

Diameter of body, 1 1/2 inches.

Length, 2 1/2 inches.

Diameter of shade-holder flange, 1 1/2 inches.

Carton, 10. Standard package, 50; weight, 20 pounds.

No. 3707, 1/2-Inch Female Cap. per 100 \$70.70

Unassembled

**Bryant Candelabra Sockets**

75 Watts, 125 Volts

**Pull Candle Socket**

Composition with Paper Jacket and Female Thread Bushing

The bushing of this socket is threaded for 1/8-inch iron pipe, .405-inch outside diameter, 27 threads per inch.

The standard chain is No. 3 size and extends 5 inches below the composition. The standard finish of chain is brush brass, but polished or dull nickel finish will be furnished without extra charge.

Outside diameter, 1 3/16 inch. Length over all, 2 15/32 inches. Regularly supplied with a paper insulating jacket which covers the mechanism and screw shell. Outside diameter of jacket, 2 9/32 inch.

**Hubbell Brass Shell Threaded-Catch Sockets**

No. 1639 and 1636

No. 1637

No. 1638

Threaded ring is included as part of socket body. Standard finish is brush brass.

A heavy threaded ring holds the cap and shell together securely and will not pull apart from strain or vibration. This ring holds with a strong grip and will sustain the weight of the heaviest reflector.

## P & S-Despard Switches and Receptacles

The P & S-Despard units listed below, when combined or interchanged with one another, enable the contractor to assemble over 59244 different wiring device combinations.

P & S-Despard units are easily assembled in the mounting straps. A small screwdriver is all that is needed to lock each device securely in place. The correct style of mounting strap is furnished with each plate.

P & S-Despard Switches are fully capable of controlling

Type C lamp loads. The mechanism contains only 4 moving parts, including a laminated insulating disc which acts as an arc snuffer.

Receptacles or convenience outlets contain contacts of entirely new design. Contacts grip both sides of plug cap fingers and are formed so that the spring action is at bottom of the receptacle. This insures constant spring tension and prevents loose plug caps.

### Flush Tumbler Switches

Made of brown bakelite including lever which is doubly insulated. Strap is insulated from switch. Front and back are enclosed, making a thoroughly dust-proof unit.

Any P & S-Despard tumbler flush switch can be quickly and easily converted into a lock switch by use of lock switch hood No. 1315.

### Lock Switch Hoods and Keys

Fits over switch lever and is fastened to wall plate by 2 small holding screws fitting into knockouts provided in all bakelite plates. Special notched screws for fastening plates to box are also provided to prevent unauthorized removal—cannot be removed without use of a special key Cat. No. 1316. This same key also used in operating switch installed with lock switch hood.

### Convenience Outlets

15 Amp., 125 Volts; 10 Amp., 250 Volts  
 For use with switch radio outlet or any other P & S-Despard device.  
 Single parallel slots.

Cat. No.	Per 100	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
1320	\$15.00	10	100	7
1341	\$25.00	10	30	4

### Insulating Adapters

Supplied with No. 1671-R Brass Plate, but can be furnished separately. Designed to fit over the neck of outlet Nos. 1320 and 1341 and into round opening in brass plate.

1327	\$10.00	10	50	4
------	---------	----	----	---

### Triplex Convenience Outlets

15 Amp., 125 Volts; 10 Amp., 250 Volts  
 With Constant Tension Contact

Three convenience outlets in place of the usual two. Has easy finding slots, constant tension contacts which grip both sides of plug cap blades, 4 binding screws for feed-thru circuits and one-piece brown bakelite body. Furnished complete with wall plate.

1325	\$39.00	10	100	25
------	---------	----	-----	----

### Attachment Plug Caps

#### Self-Locating

Either regular or polarized with finger-grip feature and parallel blades. Finger grip feature enables thumb and finger to get a good grip to pull cap from receptacle or insert it. Due to their rectangular shape they are self-locating. Has ½-inch cord hole.

Cat. No.	Brown			Wt. Lbs. Std. Pkg.	Cat. No.	Alabar			Wt. Lbs. Std. Pkg.

## P & S and P & S-Despard Combination Brass Plates

Combination brass plates for P & S wiring devices can be made up in either .040 or .060 metal.

Combination brass plates for P & S-Despard devices can be finished only in .060 metal.

When a combination plate is desired punched with openings for both P & S wiring devices and P & S-Despard devices, such plates can be supplied in .060 metal only.

When combination plates are punched with openings for P & S-Despard devices the correct mounting strap for that particular section of the plate is supplied.

A combination plate must be made up of two or more different symbols.

Standard finishes: .040 metal plates are furnished in either brush brass or Passmour finish; .060 metal plates furnished only in brush brass finish. Can be furnished in a number of special finishes.

The number of gangs, thickness of plate and finish (either brush brass or Passmour) are denoted by the basic catalogue number.

The device openings are designated by symbols following the basic catalogue number. These symbols must be listed after the basic catalogue number in order of arrangement desired reading from left to right when looking at face of plate.

Example: When a 3-gang .060 brush brass plate is specified for 4 P & S-Despard switches and a duplex receptacle, the order should read as follows: 1-1673-BBF.

### Basic Catalogue Numbers for Combination Plates

No. of Gangs	.040		.060
	Brush brass Cat. No.	Passmour Cat. No.	Brush Brass Cat.No.

## Hubbell Twist-Lock Devices

National Electric Code rules advise installation of polarized and grounded devices to protect the users of portable motor driven tools and equipment.

Many industrial plants, equipping with 3 and 4-wire protective devices, are specifying Twist-Lock to end the work-

interrupting disconnection nuisance which troubles users of portable equipment. Twist-Lock Devices never part in the middle of a job, no matter how hard the cord is yanked about. A lock-fast connection is made by a twist of the cap.

1. Plug in-

2. Twist-

3. They're locked!

### 2-Wire Twist-Lock Caps 10 Amperes, 250 Volts

No. 9763

No. 7102

No. 7062

### Rubber Cord Grip Caps

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.

*7063	36.36	1 1/2-Inch Cord Hole	10	50	7

\*Polarized—One wide and one narrow blade.

### 2-Wire Porcelain Flush Receptacles

10 Amperes, 250 Volts

This receptacle may be used with either polarized or non-polarized Twist-Lock Caps.

Supporting screw holes spaced 3 1/2 inches.

No. 7210 receptacle fits any standard single convenience outlet plate.

Cat. No.	Per 100	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
7210	\$48.48	10	50	13

### With 3 1/4-Inch Cover

Cat. No.	Per 100	Car-ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
7216	\$54.54	5	50	27

### With 4-Inch Cover

7217	\$60.60	5	30	18
------	---------	---	----	----

Standard finish of covers is cadmium finish. Black japan covers may be had on special order at no advance in price.

### 2-Wire Porcelain Receptacles

10 Amperes, 250 Volts

Mounting screws 3 1/2 inch on centers. Diameter 1 3/4 inches, height 1 27/64 inches. Face diameter 1 1/2 inches.

Similar to Cat. No. 5624, but is of the Twist-Lock Type and polarized.

## Hubbellock Approved Industrial Devices

### For High Frequency Portable Tools

20 Amperes, 250 Volts D.C.; 30 Amperes, 600 Volts A.C.

Built unusually strong to withstand the daily strain, severe service and electrical hazards incidental to the use of high frequency, high cycle portable tools.

The positive locking feature prevents accidental breaking of current, with consequent stoppage of production, and guarantees a lock-fast connection, as long as desired. Standard finish is cadmium.

### 4-Wire Polarized Receptacles, Cord Connectors and Caps

With Adjustable Cord Grips

No. 20401, with Cast Iron Lift Cover Plate

No. 20403, Receptacle

No. 20415, Cap

No. 20414, Connector Body

Receptacles will fit FS and FD boxes.

Cat. No.	Per 100	Description	Car- ton	Std. Pkg.	Wt., Std.	Lbs. Pkg.
20401	\$500.00	Receptacle with Lift Cover...	2	20	27

20416	75.00	Iron Plate with Lift Cover...	2	20	17	
20417	65.00	*Iron Plate.....	2	20	8	

\*Without lift cover.

### 4-Wire Cord Connectors

With Insulated Cord Grips

No. 21415, Cap

No. 21414, Connector Body

Exposed View Showing Rubber Insulating Cord-Grip Bushing

Hole in rubber bushing will accommodate cords from .360 to .484 inches in diameter.

Regularly equipped with 1/2-inch thick sponge rubber discs located within neck of steel casings and a specially designed rubber cord-grip bushing.

Cat. No.	Per 100	Description	Car- ton	Std. Pkg.	Wt., Std.	Lbs. Pkg.
21414	\$485.00	4-Wire Connector Body Only.	2	20	20	
21415	325.00	4-Wire Cap Only.....	2	20	14	

## Hubbell Bakelite Convenience Outlets

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

### Duplex—Top Wired, Double Binding Screws

Supporting screw holes are spaced 3 3/8 inches on centers.

Cat. No.	Per 100	Description	Car- ton	Std. Pkg.	Wt., Std.	Lbs. Pkg.
7625	\$38.38	Narrow Ears.	10	100	30	
7626	38.38	Wide Ears....	10	100	30	

No. 7626

### Duplex—Side Wired, Double Binding Screws

Supporting screw holes are spaced 3 3/8 inches on centers.

Cat. No.	Per 100	Description	Car- ton	Std. Pkg.	Wt., Std.	Lbs. Pkg.
9575	\$29.00	Narrow Ears.	10	100	26	
9595	29.00	Wide Ears....	10	100	27	

No. 9575

### Single—Side Wired

Supporting screwholes spaced 3 3/8 inches on centers.

The face of these receptacles is ornamental and harmonizes with all types of face plates. Self-locating slots facilitate the insertion of plug caps.

Cat. No.	Per 100	Description	Car- ton	Std. Pkg.	Wt., Std.	Lbs. Pkg.
7550	\$22.00	Narrow Ears.	10	100	21	
7590	22.00	Wide Ears....	10	100	21	

No. 7550

Regularly furnished in brown bakelite, but may be had in black, at the same price.

## Acorn Duplex Receptacles

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

### Duplex, Flush

Cat. No.	Per 100	Description	Car- ton	Std. Pkg.	Wt., Std.	Lbs. Pkg.

**Hubbell Single Convenience Outlets and Switches**

No. 8891

Fitting single gang boxes, these devices afford an opportunity to provide an extra convenience outlet wherever a switch is installed. Operating handles and receptacle faces are made of brown bakelite.

Ratings given below are for switches only. Receptacle rating in all cases is 10 amperes, 250 volts; 15 amperes, 125 volts.

Wiring diagrams above show method of installing to provide variation of control.

Cord-Grip—Armored—Angle					
Composition, steel covered, cadmium. Adjustable clamp grips cord tightly, relieving strain from binding posts. Cord-grips take standard No. 14 wire.					
9076	\$53.32	..	10	50	9

Composition—Multiple					
Provides T slots, into which may be plugged tandem or parallel blades of any other plug cap.					
6771	\$33.34	..	10	20	3

## Hubbell Polarized Plug Caps

### Standard Size Parallel Blades

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

Cat. No.	Per 100	Cord Hole Inches	Car-ton	Std. Pkg.	Wt., Lbs.
*6764	\$8.58	13/32	10	250	20

\*Polarized—one wide and one narrow blade.

### Finger Grip—Parallel Blades

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

9973	\$11.50	13/32	25	100	8
------	---------	-------	----	-----	---

### Cord-Grip—All Rubber Parallel Blades

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

9755	\$26.66	9/16	10	50	7
9757	26.66	5/8	10	50	7

### Cord-Grip—Armored Parallel Blades

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

Composition cap, steel covered cadmium plated. Can be supplied in brush brass finish at \$5.50 per 100 extra.

Polarization is effected by one wide and one narrow blade.

7059	\$33.34	9/16	10	50	6
7185	33.34	5/8	10	50	8

### Cord-Grip—Rubber

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

9970	\$60.00	19/64 to 9/16	10	30	5
9971	60.00	5/8	10	30	5

20 Amperes, 250 Volts

9758	66.66	5/8	10	30	6
------	-------	-----	----	----	---

### Cord-Grip

Composition cap, steel covered, cadmium plated.

The adjustable clamp grips the cord tightly, thus relieving the strain from the binding posts, and also prevents the outer cover of cord from unraveling.

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

7092	\$60.00	19/64 to 9/16	10	30	6
7241	60.00	5/8	10	30	6

29 Amperes, 250 Volts

7058	66.66	5/8	10	30	8
------	-------	-----	----	----	---

### Cord-Grip—All Rubber Double T Blades

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

9760	\$46.66	9/16	10	50	7
9762	46.66	5/8	10	50	7

### Cord-Grip—Armored Double T Blades

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

Blades are a combination of tandem and parallel rived and key-locked to form a girder-like unit of unusual strength. Fits all double T slot receptacles. Steel covered, cadmium plated.

7286	\$53.32	9/16	10	30	5
------	---------	------	----	----	---

## Hubbell 2-Wire Cord Connectors

10 Amperes, 250 Volts; 15 Amperes, 125 Volts

### Standard Size with Tandem Slots

With Brass Covered Strain Relief Caps

For 2-conductor cords, Nos. 16 and 18 standard, No. 18 Super Service and No. 18PS Duracord.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt., Lbs.
6095	\$106.66	Body Only . . .	10	50	12
5700	73.32	Cap Only . . . .	10	50	10

### Small Size with Parallel Slots

Composition

Measures but 1 5/8 inches overall.

Cat. No.	Per 100	Description	Cord Hole Inches	Car-ton	Std. Pkg.	Wt., Lbs.
*6180	\$21.58	Plug Complete.	13/32	10	50	7

No. 7436

No. 7437

No. 7438

No. 7438 receptacle is  $2\frac{1}{2}$  inches high by  $1\frac{1}{32}$  inches wide by  $1\frac{1}{8}$  inches deep, permitting its being installed in a single gang box. The face diameter of No. 7438 is larger than standard and requires the special plate No. 7439. The outside diameter of the cap is such that it will not fit when used in a two-gang installation of 7438 receptacles.

These devices are comparable to Cat. Nos. 7070, 7071, 7072, but are not interchangeable with them. Polarization is effected by means of one wide and one narrow blade and corresponding lugs.

**H & H Bakelite Convenience Outlets**

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

These convenience outlets are all bakelite and moisture-proof throughout. The face has a modernistic design and finding grooves.

**Top Wired**

Binding screws are handily placed on the top of the base. Connections may be completed after receptacle is fastened to wall case.

Cat. No.	Per 100	Description	Car-ton	Std. Pkg.	Wt. Lbs.
7724	\$26.26	Single, with Plaster Ears	10	100	28
7725	38.38	Duplex, with Plaster Ears	10	100	32

**Top Wired, 4 Screws**

7725-B	\$38.38	Duplex, with Plaster Ears	10	100	21
--------	---------	---------------------------	----	-----	----

**Side Wired, 4 Screws**

The 4 binding screws speed up through wiring because no splices are necessary. Wires can be cut at first binding screw and continued from second screws for additional outlets.

1913	\$29.00	Duplex	10	100	21
1913-G	29.00	Duplex, with Plaster Ears	10	100	23

**2-Circuit**

One circuit or one outlet is left "Always On," for various electric appliances. The other circuit may be used for floor and table lamps controlled from a switch at the doorway.

1914	\$35.06	2 Feeds, 1 Return	10	100	21
1914-G	35.06	2 Feeds, 1 Return, Plaster Ears	10	100	23

1915-G	35.06	2 Feeds, 2 Returns, Plaster Ears	10	100	23

**H & H Warning Lights**

When the current is on, a candelabra lamp (mounted in the porcelain base) glows through the ruby, cut-glass bull's-eye and serves as a reminder to turn current off when not needed. It saves current, prevents injury to irons or heaters, and helps to prevent fire.

The lamp socket is hinged to the base, permitting the lamp to be easily inserted and reducing the lamp breakage.

Carton, 10. Standard package, 30.

## H & H Bakelite Radio Outlets

### Single

For ground and aerial connections.

Fits a standard wall case and takes standard brass or bakelite plates.

Receptacle is brown bakelite with patented finding grooves.

Slots and plug fingers are set at an angle so that it is impossible to reverse aerial and ground when inserting plugs.

No. 2147

Cat. No.	Per 100	Description	Car-Std. Wt. Pkg. Lbs.
2147	\$51.00	Receptacle and Cap.....	2 10 2
2190	62.58	Receptacle, Cap, and Bakelite Plate	2 10 3

No. 2145

### Duplex

For aerial, ground, and power connections. Similar to the Single, except the addition of a standard power outlet.

Because of the angle of the slots, aerial-ground caps and power caps cannot be interchanged.

Fits standard wall cases, and standard duplex brass and bakelite plates.

2145	\$99.36	Receptacle and Cap.....	2 10 12
2146	109.88	Receptacle, Cap, and Bakelite Plate.....	2 10 15

No. 2151

### Duplex, with Cover for 4x4-Inch Box

Specially designed to meet revised Underwriters requirements covering low tension radio circuits and power circuits in the same box.

Furnished complete with box cover and barrier.

2180	\$138.16	Receptacle, Cap, Cover, and Bakelite Plate.....	2 10 9

## FA Hanger Outlets Fixture Stud Type

Designed for use with standardized outlet box and 3/8-in. fixture stud. Furnished with beveled edge face plate, bakelite receptacle and special fan supporting bracket which is adjustable for plumbing the outlet if box is out of line. A heavy steel stud (1/4-20) with brass washer for attaching fan, is furnished.

Box is not furnished. Any NEMA 4x4x1 1/2-inch outlet box with 3/8-in. fixture stud and NEMA rectangular opening single switch cover, 1/2 in. deep, can be used.

Cover is 2 3/4x4 1/2-in. (.060-in.) struck-up brass, brush brass or black finish; bakelite receptacle which is included in price.

Prices on finish to match Bakelite, and special finishes upon request, with sample. Special finishes are difficult to match and it is recommended that plates be purchased unfinished, so special finish can be applied locally.

Carton, 1; standard package, 50; weight, std. pkg., 29 pounds.

Each..... \$3.50

## FA Security Hanger Outlets

Primarily designed for fan service, this outlet readily lends itself as a utility outlet for heaters, show-window floodlights, and various electrical appliances.

Adaptable to all classes of modern buildings and approved by the Underwriters' Laboratories for supporting oscillating fans up to and including 16-inch.

Furnished with a pressed steel box, 4x4x1 1/2 inches; four corners of box fitted with substantial supports to which steel box cover is fastened. Box has 1/2 and 3/4-inch knockouts. Brass cover plate fastens to steel box cover. Adjustable bracket, to which fan is fastened by 1/4-inch steel stud, is riveted to back of box. Heavy brass adjusting stud allows for variation in plaster. Furnished with .060-inch struck-up brush brass finish cover plate, 2 3/4x4 1/2 inches, and special outlet box with bakelite T-slot receptacle.

Individual cartons; std. pkg., 50; wt. std. pkg., 90 lbs. Complete, Brush Brass or Black Finish.....each \$4.00

Polarized receptacle, 50 cents additional.

## No. 3750 Bryant Fan Hanger Outlets Yoke Type

15 Amperes, 125 Volts; 10 Amperes, 250 Volts

Designed primarily as a fan hanger outlet, but is adapted for individually illuminated pictures, electric heaters, radio loud speakers, etc. May be hung on supporting screw so as to conceal the receptacle outlet, cord, and hangings.

Rigid vibration-proof assembly. Uses standard square outlet box and cover with raised rectangular opening.

A heavy gauge sherardized steel plate supports the receptacle.

Brass finishing plate is held independently.

No. 3750 Complete

Cat. No.	Per 100	Car- ton	Std. Pkg.	Wt., Lbs. Std. Pkg.
3750	\$244.00	10	50	45

## R & S Fan Hanger Outlets

Adapted for individually illuminated pictures, electric heaters, radio loud speakers, etc. Pictures can be hung on supporting screw, concealing receptacle outlet, cord and hangings.

Heavy gauge cadmium steel plate supports receptacle. This construction permits installation and wiring less finishing plate prior to final decorating of walls.

Receptacle with supporting straps welded to steel plate prevents loosening due to vibration.

Heavy gauge brass (2 3/4x4 1/2 inches) finishing plate held independently, prevents loosening of plate on failure to replace the fan hanger supporting screw when fan is removed.

### Yoke Lock Type

The yoke lock fan hanger affords convenience, flexibility and low cost installation.

Has rigid vibration-proof assembly; standard square outlet box and cover with raised rectangular opening. This permits the contractor installing standard material throughout.

With yoke lock clamping device and 2-point support produced by assembly of brass toggle and malleable iron yoke.

Standard package, 50. Approximate net weight each, 1/8 pound.

No. 661

### Stud Lock Type

Complete with specially constructed heavy gauge galvanized steel cover and box with 1/2 and 3/4-inch k.o. in back and four sides.

With secure and rigid assembly of malleable iron stud to box with lock nut and additional cotter safety pin. This prevents loosening from constant vibration.

Standard package, 50. Approximate net weight each, 1 1/2 pounds.

No. 649

## No. 7707 Hubbell Bakelite Electric Clock Hanger Outlets

This device allows the clock to hang flush with the wall and to cover neatly the electrical outlet.

The attachment plug is out of the way of the clock.

No unsightly and often dangerous wires need show, yet the clock can be removed and installed in a few seconds.

With .040" Brass Plate

**R & S Ever-Lok Receptacles, Plugs and Cord Connectors**

Ever-lok fittings are for use with portable motor-driven tools, hand portable appliances, timestamps, adding machines, etc. They are mistake-proof and connect or disconnect only one way assuring an accident-proof connection.

Ever-lok receptacles, plugs and cord connectors are polarized.

Exteriors are heavy steel, cadmium finish.

Arrows on shells indicate line-up of only position in which connection can be made. Plug cannot be inserted from any other position.

Interiors are molded bakelite, grooved to fit corresponding upset lugs on shells so that improper assembly or alignment of interior is impossible.

Contacts are properly marked to maintain identification of polarity throughout.

Fittings are automatic locking. Outer shell of plug floats on inner shell and turns within limits allowed by two pins in two slots on opposite sides of shell. As plug is inserted in connector or receptacle, lugs on outer shell ride diagonally down into funnel-shaped grooves until they strike the bottom, then outer shell turns on its axis by means of a spring in its base and lugs snap into position, automatically locking plug.

To disconnect plug it is necessary to grasp it firmly and give a short reverse twist to bring lugs back out of position to where they will pull out. Outer shoulders are knurled to facilitate this action, but plug cannot be withdrawn without first giving it this reverse twist.

Standard package, 100 assorted pieces.

**Receptacles and Rectangular Covers**

Can also be furnished with cast iron conduit box No. 8009 for surface mounting or for mounting to standard switch box cover for flush work.

10 Amperes, 250 Volts D.C.—
