Everything Electrical Nationwide!

The man who specifies, purchases, installs or maintains electrical equipment will find, in Graybar, a convenient and dependable source for almost every need. No matter what type of business, market or area you are in, always call Graybar first for anything electrical and for associated products. As the world's largest and oldest independent electrical distributor, we offer you the finest in quality products, the widest selection, the very latest types, unbiased recommendations and a nationwide service based on almost one hundred years in the electrical industry.

GraybaR

ELECTRIC COMPANY

CATALOG NO. 106

As the owner of a Graybar Catalog No. 106 you have in your possession the most complete catalog of electrical supplies and equipment yet published. However, the scope of the Electrical Industry has increased so rapidly that even this book cannot be complete. If you don't find what you want listed, please call our nearest office and warehouse (see inside back cover for location).

**PRICES IN THIS CATALOG ARE SUGGESTED
WHOLESALE PRICES AT THE TIME OF PUBLICATION AND

PRICE OF THIS CATALOG \$10.00 POSTPAID

WHAT CAN EXPECT

... all the products you need from a single source.

Graybar offers the largest variety of electrical supplies and equipment available from any single source. On standard items, even on items which are not usually stocked, we can give you the fastest possible delivery. More than 100,000 electrical products for office, industry and government, are available through Graybar to fill your electrical requirements — emergency or normal. One order, one responsibility will save you time and money.

... the quality and reliability you want (and get) from the nation's leading electrical manufacturers.

The Graybar Tag is a symbol of quality and dependability. We have a reputation for distribution of top grade, top value supplies and equipment designed to do any kind of electrical job. Long term association with nationally known leaders in electrical manufacturing (many relationships existing for over seventy-five years) has established Graybar as THE place to come for the right products to answer your electrical needs. You can purchase with confidence, when you buy from Graybar.

... the specialized help you require to assist with your problems.

It's not enough to sell the best products — at least that's the way we feel. Graybar offers, as well, know-how in the correct use and application of these products. Our specialists in cooperation with our Suppliers' engineers and technicians are available to help you with unusual electrical problems. They have a thorough knowledge of the materials and equipment best suited to your requirements. Call Graybar first when you need special help. It's the place to get it!

FROM GraybaR

... a localized service with national resources.

Graybar service can be had from coast to coast, border to border. It is a localized service with national scope and resources. In more than 140 locations established strategically throughout the country, you can get "home town" service from your local Graybar house. We are as near as your telephone — and waiting for your call. For emergency needs . . . for special help . . . for complicated orders . . . for routine purchases, call Graybar first! It's the sure, fast, convenient way and only an arm's length away.

... service that's sure and satisfying.

The guesswork is taken out of your delivery dates when you plan your purchasing with Graybar. You get the materials you need when and where needed. Through our unique, speedy, service set-up, the materials you order are shipped from our widely diversified local warehouse stocks immediately. Out of stock items will be expedited from other Graybar branch warehouses or from our numerous sources of supply.

... seasoned experience backed by streamlined operation.

Graybar's experience predates much of the vast electrical industry as we know it. Yet in product lines, methods and specialized services, we endeavor to keep a step ahead of today's requirements. Founded in 1869, we have kept pace of rapid developments in the electrical and electronics fields. Actually the name Graybar is only forty-one years old but company tradition extends back into the beginning of the Western Electric Company and the electrical industry itself, giving us almost one hundred years of electrical heritage and know-how.

... a personal interest in serving you and serving you right.

Graybar people own their company. That's why they are anxious to give you the kind of service you expect. They have a personal interest in wanting to maintain customer good will, for it not only protects their jobs, it protects *their* company. Graybar employees purchased their company in 1929 from Western Electric and have made a success of it ever since because of this personalized service. Whatever your requirements, be they catalog information or quotation service, counsel on problems or delivery of an order, you get this friendly, efficient service from *every* Graybar location.

PRICES...

Prices found in this catalog are suggested wholesale prices at the time of going to press. It is understood that they are subject to change or correction without notice and are, therefore not offered by us as quotations. When definite quotations are necessary, please write or consult our salesmen or nearest office. It is contemplated that all prices are for shipment from our warehouse unless otherwise specified. All local, State or Federal taxes of any nature must be added to prices quoted, unless they are already included.

ORDERS...

Where possible, we have placed opposite each article a catalog number. When ordering give the catalog number and description of the article required.

You are requested to specify the routing over which you prefer shipments to be made. In the absence of specific instructions, we shall use our best judgment in selecting the route, but we are not responsible for extra trucking expenses at destination.

PAYMENT TERMS...

Shipments will be made on our regular payment terms to customers who have established credit.

Cash discounts where applicable are indicated on our invoices and may be deducted if payment is made on or before the 10th of the month following billing. All bills are due net within 30 days of invoice date and are subject to interest charges thereafter.

Credit accounts are welcomed. Should you desire to open an account please send bank and trade references or other financial information. If material is urgently needed, we suggest you enclose a check or money order with your first order, or authorize us to send it C.O.D. to expedite shipment while your account is being opened.

RETURNED GOODS...

We can take no responsibility for any material returned without our authorization. Where we give shipping instructions for returning goods, they should be carefully followed so that credit may be issued promptly.

SHIPMENTS...

Goods are sold F.O.B. shipping point unless otherwise specifically stated. Shortages or damage must be noted on delivery receipt, and the delivering carrier must be requested to make an inspection. Claim must be filed on carrier without delay. Claims for concealed loss or damage must also be handled immediately upon discovery. While we do not assume any responsibility for such claims, we will assist in every way possible to bring about settlement with the transportation company.

REELS...

Except when wire is shipped on "Non-Returnable" reels, reel deposits will be included on the invoice, and should be paid for (net, no cash discounts) at the same time as the material. Reels may be returned freight collect via cheapest way to destination specified on reel. Full credit will be allowed when reels are returned in good condition not later than 12 months from invoice date. We should be notified when return shipment is made so that we can follow the manufacturer for prompt credit. No charge will be made for non-returnable reels, and no credit allowed if returned.

RESPONSIBILITY...

All statistical information contained in this catalog, pertaining to Strength and Proper Working Loads of material, tools or machines is derived from tables compiled by the Manufacturers thereof, and is reprinted by us for the convenience of the buyer. This information is necessarily based upon use under proper working conditions. We assume no responsibility by this reprint, and in no way do we give you a guarantee, expressed or implied, on any material.

QUICK REFERENCE INDEX

WIRES — CABLES — CORDS

Wire Data — Electrical Terms & Formulas	1- 8
Power Cables	9-23
U.R.D. Cables	24-27
Building Wires & Cables	28-32
Control Cables	33-38
Portable Cords & Cables	39-46
Lead Cured Cables	46-48

ALPHABETICAL INDEX .1062-1116

TO OUR CUSTOMERS . . .

The Wire Section of this catalog has been prepared primarily to illustrate and describe the many standard types of wire and cables in everyday use . . . for light, power, control, telephone, communications and electronics wiring, for industry, and for the home.

Graybar distributes wire, cable and cords made only by leading manufacturers. These Suppliers are selected by Graybar for their integrity, engineering ability and conformance to standards set up by the IPCEA-NEMA Associations. While we list on the following 64 pages all the most popular types of wire, cable and cords manufactured by these Suppliers, it must be realized that it is not possible for us to stock every type and size at every one of our locations. Your needs and requirements, however, can be adequately met through our nationwide facilities, and prompt deliveries assured under normal conditions.

New types of wire are introduced periodically and in the event you cannot find a particular type of wire in this catalog, please call upon your nearest Graybar Distribution Center for assistance. We will welcome the opportunity to discuss your cable problems with you and recommend and furnish cables to meet unusual conditions of installation or operation.

DATA REQUIRED ON ORDERS, REQUISITIONS, OR REQUESTS FOR QUOTATIONS

1. Total length of each item.
2. Number of insulated conductors.
3. Size of conductors and whether solid or stranded.
4. Thickness of insulation and type.
5. Finish and jacket.
6. Rated voltage.
7. Cutting lengths and shipment requirements.
8. Any special specifications of cable involved.

ABBREVIATION LIST FOR TYPES OF WIRE AND CABLE

A	Asbestos-covered #18 to 8, solid or flexible copper, nickel-clad copper or nickel. No braid. 300V, 150C or 200C. See footnote.	AWG	American Wire Gauge. Copper wire.	EHV	Extra high voltage. 345KV and above. AC or DC.
AA	Asbestos and asbestos braid-covered solid, stranded, flexible or extra-flexible. Latter called motion picture wire. 300V, 150C or 200C. See footnote.	AWM	Appliance Wiring Material. 1, 2 or 3 conductor, flat, #20 to 10. Vinyl insulation. 600V or 1000V, 80C, 90C or 150C. Some AWM approved by both U.L. and C.S.A., latter as TEW. Neoprene insulation, 600V, 75C or 90C. Rubber insulation, 600V, 60C or 90C.	EO	Elevator control. Rubber insulation, cabled, cotton braid, neoprene jacket. With or without steel support.
AAR	Association of American Railroads.	AZA	Alathon Zytel Alathon. Polyethylene insulation and nylon on conductors, polyethylene jacket. 600V, 75C.	EPR	Ethylene propylene rubber.
ABC	Armored bushed BX-type building wire. 600V, 60C.	B	Braid.	ET	Elevator control. PVC insulation, cabled, 3 braids. With or without steel support.
AC	Alternating current.	B	Vinyl hookup wire. 600V. Uncovered, 105C. With nylon jacket, 115C. MIL-W-16878D.	F	Flat metallic armor.
ACA	#20 to 2, flexible, synthetic tapes, asbestos, flameproof cotton braid. Table 108. Or #14 and 12, 19 strand synthetic tapes, asbestos, lacquered cotton braid. Table EMA. Both 1000V, 90C.	B&S	Brown & Sharpe Gauge. Copper wire.	F	Electronic instrument wire, #24 to 12, stranded, silicone insulation, with or without glass braid. 600V, 200C.
ACSR	Aluminum line conductor with core of steel reinforcing strand(s).	BW	Basket weave. Armor braid of aluminum, steel, bronze, copper or stainless steel wire.	FA	Fire alarm cable with twisted pairs. IMSA.
ACSR	Aluminum line conductor with Alumoweld reinforcing strand(s).	BWG	Birmingham Wire Gauge. Steel wire.	FF	Flexible fixture. Rubber insulation, braid FF-1 and FF-2, 60C. FFH-1 and FFH-2, 75C. Also FF electronic instrument wire, #24 to 4/0 flexible, silicone insulation, with or without glass braid. 1000V, 200C.
ACT	BX-type armored building wire. 600V, 60C.	BX	Armored building wire. Type ACT. 600V, 60C.	FLPF	Flameproof.
ACV	Multi-conductor, VC insulation with interlocked armor. 600 to 15,000V.	BXL	Armored, lead-covered building wire. 600V, 60C.	FRMR	Flame-retarding, moisture-resisting finish.
AEIC	Association of Edison Illuminating Cos.	C or Cdr.	Conductor.	G	Multi-conductor, rubber insulated, neoprene jacketed, hard service portable power cable with uninsulated ground wire(s). 600V to 5000V, 75C.
AF	Asbestos fixture, solid or flexible, plain or braided. 300V, 150C.	C	2 or more conductor cord. Insulation, braid, twisted, no covering overall. 300V or 600V. Temperature rating according to kind of insulation.	GN	Grounded neutral (of power system)
AFC	2 or 3 braided AF conductors, twisted, no covering overall. Flexible cord. 300V, 150C.	C	Vinyl hookup wire. 1000V plain, 105C. Nylon jacket, 115C. MIL-W-16878D.	GOR	Gasoline- and oil-resistant. Thermoplastic insulation, nylon jacket.
AFPD	2 or 3 AF conductors, twisted, cotton or asbestos braid overall. Flexible cord. 300V, 150C.	CB	Brewery cord. 2 conductor. Rubber insulation, waterproof braid, twisted, no covering overall. Small, 300V; large, 600V, 60C.	GR-S	Buna-S synthetic performance grade heat- and moisture-resistant rubber.
AFPO	2 AF conductors, laid parallel, cotton or rayon braid overall. Flexible cord. 300V, 150C.	CBN, CBO	Brewery cord. 2 conductor. Neoprene insulated, twisted, no covering overall. Small, 300V; large, 600V, 60C.	GR-I	Synthetic heat- and moisture-resistant butyl rubber.
AFS	2 or 3 AF conductors, twisted, rubber jacket. Flexible cord. 300V, 90C.	CF	Cotton fixture. Flexible, impregnated cotton. 300V, 90C. CFC, CFPD and CFPO represent CF cords similar to AF.	H	Heat-resistant.
AI	Same as A except moisture-resistant. 300V, 125C. See above.	CLP	Cross-linked polyethylene.	H	Type H shielded power cable. Metallic shielding tape over each insulated conductor.
AIA	Solid, stranded or flexible copper, asbestos insulation and asbestos braid. 600V, 125C.	CLX	Welded corrugated sheath of steel, aluminum, bronze or copper.	HMW	High molecular weight polyethylene.
AIEE	American Institute of Electrical Engineers.	CU	Copper.	HPD	Braided heater cord. 2 or 3 conductor, #18 to 12, 3000 cycles or 2 conductor, #18 or 16, 10,000 cycles. Rubber, asbestos, twisted, overall braid. 300V, 90C.
AMA	Same as AVA except mylar tapes in place of VC. See below.	CV	Continuous vulcanization process for thermosetting compounds like rubber, neoprene and cross-linked polyethylene.	HPN	Flat neoprene heater cord. 2 conductor, #18 or 16, 3000 cycles. 300V, 90C.
AMP	Ampere. Unit of current.	D	Double or duplex.	HSJ	Heater cord. #18 to 14, rubber, asbestos, cotton braid, twisted, rubber jacket, 3000 cycles. 300V, 90C.
ASA	American Standards Association.	D	Vinyl hookup wire. 3000V, 105C. MIL-W-16878D.	HSO	Heater cord. Same as HSJ except neoprene jacket, #14 and 12. See above.
ASE	Armored service entrance. See SEU.	DB	Fibrous covering, consisting of two braids or tape and one braid.	HW	Heavy wall vinyl hookup wire. May have neoprene jacket, braid or shield. #16 to 12, 2500V; #14 to 6, 600V, 80C. MIL-W-76B.
ASTM	American Society for Testing Materials.	DBWP	Two weatherproofed cotton braids No voltage rating. 80C.	I(AC)	Interlocked armor of steel, aluminum or bronze.
AV, AVA, AVC	Asbestos and VC-insulated power and control cable.	DC	Direct current.	IEEE	Institute of Electrical and Electronic Engineers.
AVA	Asbestos, VC, asbestos, asbestos braid. 600V, 110C.	E	Elevator control. Rubber insulation, 3 overall braids. With or without steel support.	IMSA	International Municipal Signal Association. Specification for traffic control and fire alarm cable.
AVB	VC and asbestos insulation, flameproof cotton braid. Switchboard wire. 600V, 90C.	E, EE, ET	Extruded or taped TFE teflon (fluorocarbon resin). ET-300V, E-600V, EE-1000V. Silver-coated copper, 200C. Nickel-coated copper, 260C.	INS	Insulation.
AVL	Asbestos, VC, asbestos, lead sheath. 600V, 110C; 5000V, 100C.				
AVPD	2 or 3 conductor, flexible, asbestos and VC, twisted, asbestos braid. Flexible cord. 600V, 110C.				
AVPO	2 conductor, flexible, asbestos and VC, laid parallel, asbestos braid. Flexible cord. 600V, 110C.				

ABBREVIATION LIST FOR TYPES OF WIRE AND CABLE

IPCEA	Insulated Power Cable Engineers Association. Rubber specification S-19-81; plastic specification S-61-402. Others.	PD	Lamp cord. 2 conductor, rubber, braid, twisted braid. 300V, 60C.	RHML	Multi-conductor, heat-resistant rubber-lead building wire. 600V, 75C.
IPE	Irradiated polyethylene tape in place of VC in Type AVC.	PE	Polyethylene insulation or jacket.	RHRW	Heat- and moisture-resistant rubber insulated, braided building wire. Forerunner of RHW. 600V, 75C dry; 60C wet.
J	Asphalted jute covering.	PG	Portable rubber-neoprene mining cable. 2 or 3 power conductors, 1 uninsulated ground wire. 600V, 75C.	RHW	Heat- and moisture-resistant rubber insulated, braided building wire. 600V, 75C dry or wet.
K, KK, KT	Extruded FEP teflon (fluorocarbon resin) over stranded, silver-coated copper. KT-300V, K-600V, KK-1000V, 200C.	PILC	Same as PL. See below.	RHWN	Same as USE. See below.
KV	Kilovolt. One thousand volts.	PJ	1 conductor, #8 and larger, stranded, polyethylene insulation, PVC jacket. 600V, 75C.	RINJ	Rubber-insulated, neoprene-jacketed.
L(D)	Lead sheath.	PJJ	Multi-conductor, #8 and larger, stranded, polyethylene insulation, PVC jacket on conductors, PVC jacket overall. 600V, 75C.	RLJFJ	Rubber, lead, jute, 2 flat steel tapes, jute. Parkway cable for earth burial. Now use Type USE for most applications. 600V, 60C (75C with RH rubber).
LW	Light wall vinyl hookup wire. 300V, 80C. With nylon jacket, 90C. MIL-W-76B.	PL	Paper insulation impregnated with oil. Lead sheath. Splices and terminations must be moisture tight. For transmitting large blocks of power, usually at high voltage. 85C to 60C depending on voltage.	RML	Multi-conductor rubber-lead.
M	2 or more twisted conductors.	PN	1 conductor, #18 through 9, stranded, polyethylene insulation, nylon jacket. 600V, 75C.	RNB	Rubber-neoprene bus drop. 600V, 60C.
MC	Metal clad cable. Article 334 of 1965 NE code.	PNJ	Multi-conductor, #18 through 9, stranded, polyethylene insulation with nylon jacket on conductors, PVC jacket overall. 600V, 75C.	RR	RHW or butyl rubber insulation, neoprene jacket, 1 or multi-conductor power or control cable for use in ducts or conduit, aerial or buried. 600V to 15KV. 75C, 85C or 90C. Shielding tapes, terminated with stress cones, required above 5KV.
MCM	One thousand circular mils.	PNR	Control cable. Light polyethylene insulation, nylon jacket, conductors twisted, PVC jacket. 600V, 75C.	RRD	RR 1 conductor, #14 to 10, for use in ducts. 600V, 75C.
MHD	Medium hard-drawn temper.	PNR-X90	Control cable similar to PNR except tinned copper and high density polyethylene. 600V, 90C.	RSS-101	Flexible nickel-clad copper, special insulation combination, glass braid, 600V, 399C.
MI	1 or more conductors, magnesium oxide insulation, copper sheath. 600V, 85C. With suitable terminals, 250C.	PO	Flat 2 conductor, rubber insulated, rayon braided lamp cord. 300V or 600V, 60C.	RU	Latex 90% unmilled rubber. RUH, 75C dry; RUW, 60C wet.
ML	1 conductor, paper-lead cables, twisted, without overall covering.	POLY	Polyethylene.	RW	Moisture-resistant rubber-insulated, braided building wire. 600V, 60C. Forerunner of RHRW.
MM	Mining machine cable. See PBM.	POSJ	Now designated SP. See below.	RWS	Flexible 1 conductor, rubber-braid. 600V, 75C.
MPF	Mine power feeder. 3 conductor, butyl rubber, shielding tape, cabled with 3 ground wires, neoprene. 5000V to 15,000V, 90C.	POT	Now designated SPT. See below.	S	Hard service cord. Rubber insulation, twisted with fillers, rubber jacket. 600V, 60C.
MRFR	Moisture-resisting, flame-retarding finish.	PS	Non-metallic shielding tape.	S	Shielded cable. Terminate 2000V and higher voltage shielded cable with stress cones. IPCEA specifications include shielding recommendations.
MTW	PVC insulated machine tool wire. 600V, 90C in air, dry; 60C in oil.	PSJ	Same as PJ except with electrostatic shielding. See above.	S(R)A	Silicone insulation, asbestos braid.
MW	Medium wall vinyl hookup wire. May have nylon jacket, braid or shield. 1000V, 80C. With nylon, 90C. MIL-W-76B.	PVC	Polyvinyl chloride thermoplastic insulation or jacket.	SB	Single braid.
N(A)	Nylon (armored). Polyamide jacket, 105C.	R	Code grade rubber-braid building wire. 600V, 60C.	SBR	Styrene-butadiene synthetic rubber. Identified formerly as GRS.
NBS	National Bureau of Standards.	RB	Rubber-braid bus drop. 600V, 60C.	SEA	Armored (Style A) service entrance cable. Same as SEU except with flat steel armor under outer covering. See below.
NEC	National Electrical Code. Underwriters Laboratory Standard.	RD	Flat 2 conductor, rubber-braid building wire. 600V, 60C.	SER	Round, braided Type SE (Style SER) service entrance cable. In 3 conductor cable, all conductors RHW rubber insulated. In 4 conductor cable, three conductors RHW insulated and fourth is bare. 300V to ground, 75C.
NEMA	National Electrical Manufacturers Association.	RDL	Flat 2 conductor, rubber-lead building wire. 600V, 60C.	SEU	Service entrance, Style U. 2 RHW rubber-insulated conductors laid flat, neutral conductor served concentrically thereover, tape and braid or neoprene. 300V to ground, 75C.
90TW	Control cable. PVC insulation and jacket. 600V, 90C dry; 60C wet.	RF	Rubber-braid fixture wire. RF-1 #18- ¹ / ₆₄ " insulation, 300V, 60C; RF-2 #18 and 16- ³ / ₆₄ " insulation, 600V, 60C.	SF	Silicone fixture wire. See SR-FWF, etc.
NJ	Neoprene jacket.	RH	Heat-resistant rubber-braid building wire. 600V, 75C dry. Fore-runner of RHRW.	SH-A	Portable mine power cable. 3 or 4 conductor, butyl rubber or CLP insulation, shielding braid, cabled, mold-cured neoprene. 5000V, 75C to 90C.
NM	Non-metallic sheathed, Romex-type, 2 and 3 conductor building wire. Braid or PVC jacket, with or without ground wire. 600V, 60C dry.	RHD	Flat 2 conductor, heat-resistant rubber-braid building wire. 600V, 75C dry.		
NMC	Non-metallic, PVC sheathed corrosion- and moisture-resistant cable, with or without ground wire. Also classed as UF for earth burial in fused branch or feeder circuits. 600V, 60C dry or wet.	RHDL	Flat 2 conductor, heat-resistant rubber-lead building wire. 600V, 75C.		
NS	Non-shielded.	RHF	Heat-resistant rubber-braid fixture wire. 600V, 75C. See RF, RHF-1 and RHF-2.		
P	Paper insulation.	RHH	Heat-resistant rubber-braid building wire. 600V, 90C dry.		
P-BM	Surface embossed or indent marked legend indicates approval of portable power cable or cord by Pennsylvania and United States Bureaus of Mines for use in mines. Numerals between P and BM are manufacturer's identifying number.	RHL	Heat-resistant rubber-lead building wire. 600V, 75C.		
PCG	Portable rubber-neoprene mining cable. 2 or 3 power conductors, 2				

ABBREVIATION LIST FOR TYPES OF WIRE AND CABLE

SH-B	Portable mine power cable. 3 or 4 conductor, butyl rubber or CLP insulation, cabled, shielding braid, mold-cured neoprene. 5000V, 75C to 90C.	SSJ	Shielded 1 conductor with insulating jacket over shield.	20&10	Multi-conductor control cable. 20 mils polyethylene and 10 mils PVC insulation, PVC jacket. 600V, 75C dry or wet.
SH-C	Portable mine power cable. 3 or 4 conductor, butyl rubber or CLP insulation, cabled with bare ground wires, shielding braid, mold-cured neoprene jacket. 5000V, 75C to 90C.	ST	Hard service cord and portable control cable. PVC insulation and jacket. 600V, 60C.	UF	Underground (buried) branch circuit or feeder. Requires over-current protection. 1 conductor, #14 to 4/0, PVC. NMC multi-conductor type used for same service. 600V, 60C dry or wet.
SH-D	Portable mine power cable. 3 or 4 conductor, butyl rubber or CLP insulation, shielding braid, cabled with bare ground wires, mold-cured neoprene jacket. 5000V to 15,000V, 75C to 90C.	STO	Same as ST except special oil-resistant jacket.	UGN	Underground neutral (of power system).
SHD-GC	Portable mine power cable. 3 shielded power conductors, 1 insulated ground check wire, 2 ground wires.	SV	Vacuum cleaner cord. Rubber insulation and jacket. 300V, 60C.	U.L.	Underwriters' Laboratories. Provide building wire and cord approval service.
SJ	Junior grade hard service cord. Rubber insulation, twisted, rubber jacket. 300V, 60C.	SVO	Vacuum cleaner cord. Rubber insulation, neoprene jacket. 300V, 60C.	URC	Utility standard double or triple braid, weatherproof overhead line wire. No voltage rating—must be on insulators.
SJO	Same as SJ except neoprene jacket. Oil- and sunlight-resistant.	SVT	Vacuum cleaner cord. PVC insulation and jacket. 300V, 60C.	URD	Underground residential distribution cable.
SJT	Junior grade hard service cord. PVC insulation, twisted, PVC jacket. 300V, 60C.	T	PVC thermoplastic insulation or jacket compound. Type T building wire superseded by TW and THW.	USE (-RR)	Underground service entrance cable for use in ducts or direct earth burial. 1 conductor, RHW rubber, neoprene jacket. 2 conductor, RHW rubber, laid flat, neoprene jacket. 3 and 4 conductor, RHW rubber, cable 1, neoprene jacket. 600V, 75C.
SJTO	Same as SJT except special oil-resistant jacket.	TA	Switchboard wire. PVC and asbestos insulation, flameproof cotton braid. 600V, 90C.	V	Varnished cambric tape insulation.
SL	Same as ML. See above.	TAA	Appliance wire. Flexible nickel or nickel-clad copper, teflon and asbestos insulation, asbestos braid. 600V, 200C. See footnote.	V	Voltage.
SO	Hard service cord and portable control cable. 1 to 60 conductors, rubber insulation, cabled with fillers, neoprene jacket. 600V, 60C to 90C, depending on kind of rubber insulation.	TB	Bus drop. 3 conductor, PVC insulation, cabled with 3 bare ground wires, PVC jacket. 600V, 60C.	VCB	Varnished cambric insulation, cotton braid, FRMR finish. Usually 1 conductor, unshielded. 600V to 15KV ungrounded.
SP	Flat lamp cord. All rubber. #18 and 16. SP-1, 3/4" insulation; SP-2, 5/8" insulation. 300V, 60C.	TBS	Switchboard wire. PVC insulation, flame-proof cotton braid. 600V, 90C.	VCL	Varnished cambric insulation, lead sheath. Multi-conductor cables rated up to 8KV usually have part of insulation on individual conductors, balance as belt over twisted conductors. Cables rated above 8KV should have Type H (see above) shielded construction. Cable ends must be hermetically sealed.
SPT	Flat lamp cord. PVC. SPT-1, 3/4" insulation; SPT-2, 5/8" insulation; SPT-3, 5/8" insulation. 300V, 60C.	TBSB	Triple cotton braid, slowburning. No voltage rating. 90C. Install on insulators.	VCV	Vertical continuous vulcanization process.
SR-AW	Silicone appliance wire. Flexible tinned or nickel-plated copper, silicone rubber, glass braid. #16 to 12. 600V, 200C.	TBWP	Triple cotton braid, weatherproof overhead line wire. No voltage rating. 80C. Install on insulators.	VSP	Blend of basic polyethylene with special voltage stabilizing chemical additives.
SR-C	Silicone lighting wire. Solid tinned copper, silicone rubber, glass braid. #14 to 8. 600V, 125C.	TC	Traffic control cable. IMSA.	W	Portable hard service cables. 1 conductor, rubber insulation, open reinforcing braid, mold-cured neoprene jacket. Multi-conductor, rubber insulation, cabled, fillers may be integral with inner jacket, open reinforcing braid, mold-cured neoprene jacket. 600V, 60C, 75C or 90C.
SR-E	Silicone power cable. Stranded tinned copper, silicone rubber, asbestos braid. #14 to 500MCM. 600V, 125C.	TF	Fixture wire. Solid, #18 and 16, PVC insulation. 600V, 60C.	WP	Weatherproof line wire. 1 conductor, solid or stranded soft, medium hard or hard-drawn copper or aluminum or ACSR. Double or triple cotton braid, polyethylene or cross-linked polyethylene, PVC or neoprene covering. No voltage rating—must be installed on insulators. 80C.
SR-FWC	Silicone appliance (#18 to 10) and SF-2 fixture wire (#18 to 14). Stranded tinned copper, silicone rubber, glass braid. 600V, 200C.	TFF	Fixture wire. Flexible, #18 and 16, PVC insulation. 600V, 60C.	XLP(E)	Cross-linked polyethylene.
SR-FWF	Silicone appliance (#22 to 12) and SFF-2 fixture wire (#18 to 14). Flexible tinned copper, silicone rubber, glass braid. 600V, 150C.	TEW	See AWM above.		
SR-H	5000V silicone power cable, stranded tinned copper, silicone rubber, asbestos braid. 5000V, 125C.	TG(S)	Flexible nickel or nickel-clad copper, or iron conductor, teflon insulation, glass braid. 600V, 200C. See footnote.		
SR-M	(F-19/27, D-19/25, T-19/22). Silicone control cable. Tinned copper, silicone rubber, color coded glass braid, cabled, asbestos braid. 600V, 125C.	THW	Heat- and moisture-resistant PVC building wire. Superseding TW and braided RHW for many applications. 600V, 75C wet or dry; 60C in oil.		
SR-ML	Silicone apparatus and motor lead. Flexible tinned copper, #20 to 500MCM, silicone rubber, glass braid. 600V, 200C. AIEE Class H intermittent service rating. See footnote.	THWN	Nylon-jacketed thin wall THW building wire. #14 to 500 MCM. 600V. (Sizes #16 and 18 rated only as 105C appliance and 80C in oil). U.L. rating, 75C wet or dry building wire; 80C in oil; 105C appliance wire.		
		TP	Twisted pair.		
		TPE	Cross-linked polyethylene.		
		TPS	Shielded twisted pair.		
		TPSJ	Shielded twisted pair with overall insulating jacket.		
		TT	Twisted triad. Three twisted conductors.		
		TTS(J)	Shielded twisted triad. J indicates overall insulating jacket.		
		TQ	Twisted quad. Four twisted conductors.		
		TQS(J)	Shielded twisted quad (jacket overall).		
		TW	Moisture-resistant PVC building wire. 600V, 60C. Supersedes Type T but in turn is being superseded by Type THW.		

Footnote

Where a rating of 200C is shown it will be understood that copper conductors composed of less than 0.015" diameter (#27) strands are limited to 150C rating for continuous service. Strands of #27 or smaller gauge must be nickel-coated copper, nickel or monel metal for 200C rating.

CONDUCTOR APPLICATION FOR GENERAL WIRING

1965 National Electrical Code
Table 310-2(a).

Trade Name	Type Letter	Max. Operating Temp.	Application Provisions
Rubber-Covered Fixture Wire Solid or 7-Strand	*RF-1	60°C 140°F	Fixture wiring. Limited to 300 V.
	*RF-2	60°C 140°F	Fixture wiring, and as permitted in Section 310-8.
Rubber-Covered Fixture Wire Flexible Stranding	*FF-1	60°C 140°F	Fixture wiring. Limited to 300 V.
	*FF-2	60°C 140°F	Fixture wiring, and as permitted in Section 310-8.
Heat-Resistant Rubber-Covered Fixture Wire Solid or 7-Strand	*RFH-1	75°C 167°F	Fixture wiring. Limited to 300 V.
	*RFH-2	75°C 167°F	Fixture wiring, and as permitted in Section 310-8.
Heat-Resistant Rubber-Covered Fixture Wire Flexible Stranding	*FFH-1	75°C 167°F	Fixture wiring. Limited to 300 V.
	*FFH-2	75°C 167°F	Fixture wiring, and as permitted in Section 310-8.
Thermoplastic-Covered Fixture Wire—Solid or Stranded	*TF	60°C 140°F	Fixture wiring, and as permitted in Section 310-8, and for circuits as permitted in Article 725.
Thermoplastic-Covered Fixture Wire—Flexible Stranding	*TFF	60°C 140°F	Fixture wiring, and as permitted in Section 310-8, and for circuits as permitted in Article 725.
Cotton-Covered, Heat-Resistant, Fixture Wire	*CF	90°C 194°F	Fixture wiring. Limited to 300 V.
Asbestos-Covered Heat-Resistant, Fixture Wire	*AF	150°C 302°F	Fixture wiring. Limited to 300 V. and Indoor Dry Location.
Silicone Rubber Insulated Fixture Wire	*SF-1	200°C 392°F	Fixture wiring. Limited to 300 V.
Solid or 7 Strand	*SF-2	200°C 392°F	Fixture wiring and as permitted in Section 310-8.
Silicone Rubber Insulated Fixture Wire	*SFF-1	150°C 302°F	Fixture wiring. Limited to 300 V.
Flexible Stranding	*SFF-2	150°C 302°F	Fixture wiring and as permitted in Section 310-8.
Code Rubber	R	60°C 140°F	Dry locations.
Heat-Resistant Rubber	RH	75°C 167°F	Dry locations.
Heat Resistant Rubber	RHH	90°C 194°F	Dry locations.
Cross Link Polyethylene RHH			
Moisture-Resistant Rubber	RW	60°C 140°F	Dry and wet locations. For over 2000 volts, insulation shall be ozone-resistant.
Moisture and Heat Resistant Rubber	RH-RW	60°C 140°F	Dry and wet locations. For over 2000 volts, insulation shall be ozone-resistant.
		75°C 167°F	Dry locations. For over 2000 volts, insulation shall be ozone-resistant.
Moisture and Heat Resistant Rubber	RHW	75°C 167°F	Dry and wet locations. For over 2000 volts, insulation shall be ozone-resistant.
Cross Link Polyethylene RHW			
Latex Rubber	RU	60°C 140°F	Dry locations.

*Fixture wires are not intended for installation as branch circuit conductors nor for the connection of portable or stationary appliances.

Trade Name	Type Letter	Max. Operating Temp.	Application Provisions
Heat Resistant Latex Rubber	RUH	75°C	Dry locations.
Moisture Resistant Latex Rubber	RUW	60°C 140°F	Dry and wet locations.
Thermoplastic	T	60°C 140°F	Dry locations.
Moisture-Resistant Thermoplastic	TW	60°C 140°F	Dry and wet locations.
Heat-Resistant Thermoplastic	THHN	90°C 194°F	Dry locations.
Moisture and Heat-Resistant Thermoplastic	THW	75°C 167°F	Dry and wet locations.
Moisture and Heat-Resistant Thermoplastic	THWN	75°C 167°F	Dry and wet locations.
Thermoplastic and Asbestos	TA	90°C 194°F	Switchboard wiring only.
Thermoplastic and Fibrous Outer Braid	TBS	90°C 194°F	Switchboard wiring only.
Synthetic Heat-Resistant	SIS	90°C 194°F	Switchboard wiring only.
Mineral Insulation (Metal Sheathed)	MI	85°C 185°F	Dry and wet locations with Type O termination fittings. Max. operating temperature for special applications 250°C.
Silicone-Asbestos	SA	90°C	Dry locations—max. operating temperature for special application 125°C.
Fluorinated Ethylene Propylene	FEP or FEPB	90°C 194°F 200°C 392°F	Dry locations. Dry locations—special applications.
Varnished Cambric	V	85°C 185°F	Dry locations only. Smaller than No. 6 by special permission.
Asbestos and Varnished Cambric	AVA	110°C 230°F	Dry locations only.
Asbestos and Varnished Cambric	AVL	110°C 230°F	Dry and wet locations.
Asbestos and Varnished Cambric	AVB	90°C 194°F	Dry locations only.
Asbestos	A	200°C 392°F	Dry locations only. In raceways, only for leads to or within apparatus. Limited to 300 V.
Asbestos	AA	200°C 392°F	Dry locations only. Open wiring. In raceways, only for leads to or within apparatus. Limited to 300 V.
Asbestos	AI	125°C 257°F	Dry locations only. In raceways, only for leads to or within apparatus. Limited to 300 V.
Asbestos	AIA	125°C 257°F	Dry locations only. Open wiring. In raceways, only for leads to or within apparatus.
Paper		85°C 185°F	For underground service conductors, or by special permission.

CONDUCTOR — CONDUIT DESIGN INFORMATION

1965 National Electrical Code

Notes To Tables 310-12 through 310-15.

Ampacity. The maximum, continuous, ampacities of copper conductors are given in Tables 310-12 and 310-13. The ampacities of aluminum conductors are given in Tables 310-14 and 310-15.

1. Explanation of Tables. For explanation of Type Letters, and for recognized size of conductors for the various conductor insulations, see Sections 310-2 and 310-3. For installation requirements, see Section 310-1 through 310-7, and the various Articles of this Code. For flexible cords see Tables 400-9 and 400-11.

2. Application of Tables. For open wiring on insulators and for concealed knob-and-tube work, the allowable ampacities of Tables 310-13 and 310-15 shall be used. For all other recognized wiring methods, the allowable ampacities of Tables 310-12 and 310-14 shall be used, unless otherwise provided in this Code.

3. Aluminum Conductors. For aluminum conductors, the allowable ampacities shall be in accordance with Tables 310-14 and 310-15.

4. Bare Conductors. Where bare conductors are used with insulated conductors, their allowable ampacities shall be limited to that permitted for the insulated conductors of the same size.

5. Type MI Cable. The temperature limitation on which the ampacities of Type MI cable are based, is determined by the insulating materials used in the end seal. Termination fittings incorporating unimpregnated organic insulating materials are limited to 85°C. operation.

6. Ultimate Insulation Temperature. In no case shall conductors be associated together in such a way with respect to the kind of circuit, the wiring method employed, or the number of conductors, that the limiting temperature of the conductors will be exceeded.

7. Use of Conductors With Higher Operating Temperatures. Where the room temperature is within 10 degrees C of the maximum allowable operating temperature of the insulation, it is desirable to use an insulation with a higher maximum allowable operating temperature; although insulation can be used in a room temperature approaching its maximum allowable operating temperature limit if the current is reduced in accordance with the Correction Factors for different room temperatures.

8. More Than Three Conductors in a Raceway or Cable. Tables 310-12 and 310-14 give the allowable ampacities for not more than three conductors in a raceway or cable. Where the number of conductors in a raceway or cable exceeds three, the allowable ampacity of each conductor shall be reduced as shown in the following Table:

Table 3. Combination of Conductors

(See Sections 346-6, 346-11 and 348-6)

For groups or combinations of conductors not included in Table 1, Chapter 9, for new work, or Tables 1, 1A or 1B Chapter 9, for rewiring, the conduit or tubing shall be of such size that the sum of the cross-sectional areas of the individual conductors will not be more than the percentage of the interior cross-sectional area of the conduit or tubing shown in the following table:

	Per Cent Area of Conduit or Tubing				
	Number of Conductors				
	1	2	3	4	Over 4
Conductors (not lead covered)	53	31	40	40	40
Lead-covered conductors	55	30	40	38	35

For ampacity of more than three conductors in a conduit or tubing, see Tables 310-12 through 310-15, Note 8.

See Tables 4 through 8, Chapter 9, for dimensions of conductors, conduit and tubing.

Number of Conductors	Per Cent of Values in Tables 310-12 and 310-14
4 to 6	80
7 to 24	70
25 to 42	60
43 and above	50

Exception No. 1 — When conductors of different systems, as provided in Section 300-3, are installed in a common raceway the derating factors shown above apply to the number of Power and Lighting (Articles 210, 215, 220 and 230) conductors only.

Where the number of conductors in a raceway or cable exceeds three, or where single conductors or multi-conductor cables are stacked or bunched without maintaining spacing as required in Article 318 and are not installed in raceways, the individual ampacity of each conductor shall be reduced as shown in the above table.

Exception No. 2 — The derating factors of Sections 210-23(b) and 220-2 (second paragraph) do not apply when the above derating factors are also required.

9. Where Type RH-RW rubber insulated wire is used in wet locations the allowable ampacities shall be that of Column 2 in Tables 310-12 through 310-15. Where used in dry locations the allowable ampacities shall be that of Column 3 in Tables 310-12 through 310-15.

10. Overcurrent Protection. Where the standard ratings and settings of overcurrent devices do not correspond with the ratings and settings allowed for conductors, the next higher standard rating and setting may be used.

Exception — Except as limited in Section 240-5.

11. Neutral Conductor. A neutral conductor which carries only the unbalanced current from other conductors, as in the case of normally balanced circuits of three or more conductors, shall not be counted in determining ampacities as provided for in Note 8.

In a 3-wire circuit consisting of two phase wires and the neutral of a 4-wire, 3-phase WYE connected system, a common conductor carries approximately the same current as the other conductors and is not therefore considered as a neutral conductor.

12. Voltage Drop. The allowable ampacities in Tables 310-12 through 310-15 are based on temperature alone and do not take voltage drop into consideration.

Maximum Number of Conductors in Trade Sizes of Conduit or Tubing

Derating factors for more than three conductors in raceways, see Note 8, Tables 310-12 through 310-15.

(See Section 300-17, 300-18, 346-6 and 348-6)

New Work or Rewiring — Types RF-2, RFH-2, R, RH, RW, RHH, RHW, RH-RW

New Work — FEP, FEPB, RUH, RUW, T, TF, THHN, THW, THWN, TW

Table 1. New Work or Rewiring

Size AWG or MCM	Maximum Number of Conductors in Conduit or Tubing (Based upon % conductor fill, Table 3, Chap. 9, for new work)											
	1/2 Inch	3/4 Inch	1 Inch	1 1/4 Inch	1 1/2 Inch	2 Inch	2 1/2 Inch	3 Inch	3 1/2 Inch	4 Inch	5 Inch	6 Inch

CROSS LINK POLYETHYLENE POWER CABLE

Copper Conductor — 600 Volts

Single conductor cross link Polyethylene insulated cable suitable for use in wet or dry locations at temperatures not exceeding 90°C. All sizes may be installed in conduit or duct or other recognized raceways. Sizes 8 AWG and larger are also suitable for direct burial and for properly supported aerial installations.

Packaging: 1000' reel.

These data are approximate and subject to normal manufacturing tolerances.

STYLE RR POWER CABLE

Copper and Aluminum Conductor — 600 Volts

Single conductor insulated cable with jacket suitable for operation in wet or dry locations.

Rubber Neoprene—Max. operating temperature 75°C. Type RHW insulation with Neoprene jacket. Identified as Type RHW for conduit and duct installations; as Type USE for direct burial as well as conduit, duct and aerial installations.

Butyl Neoprene—Max. operating temperature 90°C. Butyl insulation with Neoprene jacket. Suitable for use in conduit, racks or trays. Size 8 AWG and larger for aerially and direct burial applications; size 10 AWG and smaller not for direct burial application.

Butyl PVC—Same as Butyl Neoprene except with Polyvinyl Chloride jacket.

Size AWG or MCM	No. Strands	Insul. Thick. 64th In.	Jacket Thick. In.	O.D. In.	Net Wt. Lbs. M Ft.

2/0	19	5	3	.68	526
3/0	19	5	3	.73	644
4/0	19	5	3	.79	791

Packaging: 1000' reel.

Note: For special applications such as involving exposure to chlorine gas, similar cables having high molecular weight Polyethylene uni-insulation and jacket to the same outside diameters, are available. Also available in one-shot construction.

Price on Application

TYPE AVA POWER CABLE

Copper Conductor—600 Volts

Single conductor, asbestos-varnished cambric-asbestos insulation, covered with an asbestos braid that is heat and flame resistant finish. For use in high ambient temperature locations. Maximum operating temperature 110°C.

Packaging: 500' reel.

TYPE VCL VARNISHED CAMBRIC POWER CABLE

Copper Conductor — 600 Volts

Single conductor, varnished cambric insulated cable with an overall lead sheath. Can be installed in conduits or ducts, aerially, direct burial or as open wiring indoors. Maximum operating temperature 85°C.

Packaging: Sizes 14 through 8 AWG, 500' coil; 6 AWG and larger, 500' reel.

Price on Application

TEFLON POWER AND CONTROL CABLE

Copper Conductor — 600-1000 Volts

Single conductor with Teflon 200°C rated FEP or 260°C rated TFE resin insulating material applied directly to conductor; no jacket. Used when a system may be subject to current overload conditions; resists the most severe conditions of industry. Highly resistant to chemicals and moisture.

Size AWG	No. Strands	600 Volts			601-1000 Volts

Price on Application

RUBBER HIGH VOLTAGE POWER CABLE

Copper Conductor — 5000 Volts

Single conductor insulated cable with jacket suitable for operation in wet or dry locations where high resistance to ozone, heat and moisture is essential. Can be installed in conduit, underground ducts, aerially or direct burial.

Butyl Neoprene—Max. operating temperature 90°C. Butyl insulation with Neoprene jacket.

Butyl PVC—Same as Butyl Neoprene except with Polyvinyl Chloride jacket.

BUTYL HIGH VOLTAGE POWER CABLE

Copper Conductor — 8000 & 15000 Volts

Single conductor insulated cable with jacket suitable for operation in wet or dry locations. Can be installed in conduit, underground ducts, aerially or direct burial.

Butyl Neoprene—Max. operating temperature 90°C. Butyl insulation with Neoprene jacket.

Butyl PVC—Same as Butyl Neoprene except with Polyvinyl Chloride jacket.

C-L-X METALLIC SHEATHED CABLE

Steel and Aluminum Sheath — 600 & 5000 Volts

Rubber insulated conductors, steel or aluminum sheath and Polyvinyl Chloride cover overall. Combines cable and conduit in one preassembled unit for use in a wide range of indoor and outdoor installations, buried, aerial, tray, etc. Impervious sheath seals the system against penetration by oil, water or chemicals, and eliminates the need for a separate duct. Extremely pliable, unlimited bends. Maximum conductor operating temperature 90°C.

UNDERGROUND RESIDENTIAL DISTRIBUTION (URD)

Polyethylene—URD

Cross-Linked Polyethylene—URD

The combination of improved reliability, greater safety, and better appearance has made underground power distribution an increasingly important factor in the planning of residential housing developments. Reduced component costs and improved installation efficiency have made it feasible for more and more residential developments to install electric utility systems below the surface. Underground installations offer the added advantages of fewer service interruptions, greater personal safety, and lower maintenance costs.

The majority of residential underground primary systems are single-phase circuits, although three-phase systems are operated by some utilities due to heavy load conditions. In a URD system, the primary cable feeding the step-down distribution transformer is a vital link. As such, the cable design chosen must provide the best possible reliability consistent with an economical system.

The requirements for a primary URD cable vary somewhat across the country, but basically consist of the following:

- (1) A complete single-phase cable, providing the phase conductor as well as the neutral.
- (2) A moisture-resistant cable suitable for direct burial or installation in an underground duct.
- (3) A cable construction that provides "built-in" protection against accidental "dig-ins."
- (4) A reliable, time-proven insulation that will give trouble-free service for many, many years.
- (5) Lowest possible cost consistent with all of the above requirements.

Obviously there are many different cable designs that can meet the first four of the above requirements. As a matter of fact, the most recent survey of residential underground practices of the nation's utilities (IEEE publication S-144) shows that 18 basic types of cable have been used to solve ostensibly the same problem. While some of these special designs may be necessary to solve the peculiarities of a specific job, it is not necessary to consider 18 possible solutions for the basic problem of underground distribution.

An analysis of the aforementioned requirements, backed up by the experience of many utilities around the country, shows that **one basic construction** provides the best **general solution** for primary URD cable. This construction consists of:

- (1) Copper or aluminum conductor.
- (2) Strand shield to minimize stress concentration.
- (3) Synthetic insulation to provide moisture resistance and long life.
- (4) Extruded semiconducting layer to act as part of the shield and mechanically protect the insulation.
- (5) Concentric wires overall to shield the cable electrostatically, serve as the neutral conductor, and provide protection against "dig-ins."

Most installations can be served with either of the following synthetic insulations, however, if a special problem requires other alternates, all modern insulations including paper, butyl, etc., are available:

Polyethylene (URD)—The most economical synthetic high-voltage insulation presently available is high-molecular-weight polyethylene. Its excellent electrical properties and moisture resistance make it particularly suited for URD cables. Temperature limits are 75°C normal service and 90°C emergency service, which are adequate for most cases.

Cross-Linked Polyethylene (URD)—If higher temperature limits, both normal and emergency, are required, cross-linked polyethylene is the best bet. Temperature rating is 90°C for normal service and 130°C emergency service.

Direct burial is the least expensive of the installation practices now being used, however, to allow for easy replacement of cable or being able to pull-in new conductors when necessary, consideration should be given to "cable-in-conduit" installations consisting of primary URD cables and 600-volt secondary cables preassembled in a conduit, or the use of fiber or plastic duct suitable for burial.

UNDERGROUND RESIDENTIAL DISTRIBUTION (URD) CABLES

Copper and Aluminum Conductor — 5000 & 15,000 Volts

Polyethylene—URD

Cross-Linked Polyethylene—URD

Polyethylene (URD)—Copper or aluminum conductor with extruded semiconducting polyethylene strand shield and high-molecular-weight polyethylene insulation; extruded semiconducting polyethylene jacket and neutral of concentric tinned copper wires overall. Maximum operating temperature 75°C.

Cross-Linked Polyethylene (URD)—Tinned copper or aluminum conductor with extruded semiconducting strand shield and insulation of cross-linked polyethylene; extruded semiconducting polyethylene jacket and neutral of concentric tinned copper wires overall. Maximum operating temperature 90°C.

PREASSEMBLED "CABLE-IN-CONDUIT"

Copper and Aluminum Conductor — 600 Volts

Two and three conductor cables preassembled within a flexible Polyethylene duct making a single unit. Overcomes wasteful installation of short lengths of duct, joined by many couplings. Instead, single long lengths of coilable plastic duct, already containing the required number of parallel conductors, are shipped on reels.

Available in Types THW and RHW-USE with all conductors insulated or with two insulated and one bare neutral. Rated 75° in wet or dry locations.

SAFETY MINERAL INSULATED CABLES

Type MI — 600 Volts

Type "H" End Seal and Gland

Type "O" End Seal and Gland

Mineral insulated metal sheathed cable is a cable in which one or more electrical conductors are insulated with a highly compressed refractory mineral insulation and enclosed in a liquid-tight and gas-tight metallic tube sheathing. May be used for services, feeders and branch circuits in both exposed and concealed work, in dry or wet locations.

CROSS LINK POLYETHYLENE CONTROL CABLE
Copper Conductor — 600 Volts

Insulated conductor with 30 mils of Polyethylene (25 mils on 16 AWG size) and Polyvinyl Chloride jacket. Suitable for important control circuits, leads from temperature recording devices on rotating equipment to switchboard, motor leads, etc. Can be installed in open air, in ducts or conduit and direct burial. Not recommended for direct burial as a single conductor. Maximum operating temperature 90°C.

Price on Application

TYPE 2010 GENERAL PURPOSE AND STATION CONTROL CABLE

Copper Conductor — 600 Volts

Insulated conductor with 20 mils of Polyethylene and then covered with 10 mils of Polyvinyl Chloride for double-wall insulation, color coded. Polyvinyl Chloride jacket overall provides protection against moisture and flame and excellent resistance to oils, grease, acids, and chemicals. Suitable for use in conduit, duct, aerial or direct burial. Maximum operating temperature 75°C.

*Size 16 AWG also supplied in 26 strands. Sizes 14, 12 and 10 AWG also supplied in 19 strands.

†Flat cable. 16 AWG—.21x.33 O.D.; 14 AWG—.233x.366 O.D. 12 AWG—.252x.404 O.D.; 10 AWG—.276x.452 O.D.; 9 AWG—.291x.482 O.D.

Note: Size 16 AWG approved with 15 mils of Polyethylene insulation and covered with 10 mils of Polyvinyl Chloride.

Note: Can be supplied in any number of conductors required.

Packaging: 1000' and longer.

SMALL DIAMETER POLYETHYLENE NYLON PVC CONTROL CABLE — 90°C

Copper Conductor — 600 Volts

Insulated conductor with .026" Polyethylene and .004" Nylon (.021" Polyethylene and .004" Nylon on 16 AWG) and overall covering with a Polyvinyl Chloride jacket. Suitable for conduit, tray, duct, aerial or direct burial installations. Resistant to oils, chemicals, flame and moisture. Maximum operating temperature 90°C.

Price on Application

PVC STATION CONTROL CABLE

Copper Conductor — 600 Volts

Conductor insulated with $\frac{3}{4}$ " Polyvinyl Chloride and Polyvinyl Chloride jacket. Resistant to the effects of weather, sunlight, ozone, oils, grease and most acids and chemicals. Suitable for operating switchgear, boiler room control, remote substation control, supervisory control systems, variable speed motor control, etc. Can be installed in conduits, ducts, supported aerial and direct burial. Not recommended for direct burial as a single conductor.

No. Conductors	14 AWG* (7x.0242" Strands)			12 AWG* (19/25)			10 AWG* (7x.0385" Strands)			9 AWG (19/22)

Price on Application

RUBBER INSULATED CONTROL CABLE

Copper Conductor — 600 Volts

Each conductor insulated with 3/64" of rubber and covered overall with a Neoprene jacket. Suitable for important control circuits, leads from temperature recording devices on rotating equipment to switchboard, motor leads, etc. Can be installed in open air, in ducts or conduit and direct burial. Not recommended for direct burial as a single conductor.

No. Conductors	14 AWG* (19/27)			12 AWG* (19/25)			10 AWG* (19/23)			9 AWG (19/22)

*Sizes 14, 12 and 10 AWG can be furnished in solid or 7 strands.

†Flat cable. 14 AWG—.30x.50 O.D.; 12 AWG—.34x.56 O.D.; 10 and 9 AWG—.38x.63 O.D.

Note: Can be supplied in any number of conductors required.

Packaging: 1000' and longer.

SILICONE RUBBER-INTERLOCKED ARMOR CONTROL CABLE

Copper Conductor — 600 Volts

Each conductor insulated with 3/64" silicone rubber and glass braided with galvanized steel interlocked armor. Recommended for connection of control or signal circuits to withstand constant high temperatures.

LOW ENERGY SAFETY CONTROL WIRE

Copper Conductor — 100 Volts

Flat parallel type solid conductor with thermoplastic insulation and polarity identification ridge. Suitable for fire detection, audio signal, general signal and control circuits. Available colors: black and white.

Size AWG	No. Conductors	No. Strands	Insul. Thick. 64th In.	O.D. In.	Net Wt. Lbs. M Ft.
18	2	1	2	.112x.215	20
18	3	1	2	.112x.322	30

Packaging: 500' spool.

Remember, Graybar can take care of your requirements for wire, cable, cords and everything else electrical too! Save time and money by relying on Graybar, the convenient, responsible and dependable source for 100,000 quality electrical products.

Price on Application

TYPE SO PORTABLE CONTROL CABLE

Copper Conductor — 600 Volts

Extra flexible conductor with rubber insulation and Neoprene jacket overall. Suitable for connecting push-button stations to control panels, leads from temperature control devices, traffic control systems, fire alarm controls, motor leads, etc. Can be installed in conduits, ducts, raceways and open wiring.

No. Conductors	2/64" Insulation			16 AWG (26/30)			14 AWG (41/30)			12 AWG (65/30)			No. Conductors	3/64" Insulation 10 AWG (104/30)

TELEMETERING AND SUPERVISORY CONTROL CABLE

Copper Conductor — 300 Volts

Multi-pair conductors with Polyethylene insulation and Polyvinyl Chloride jacket overall. Copper tape shield is applied over the cable assembly on single jacket type and between jackets on the double jacket type. Resistant to moisture and effects of ozone, oils, grease, flame, solvents, many acids and chemicals.

Recommended for telemetering, supervisory control, intercom circuits, pilot relay circuits, railroad communication and suburban telephone operation. Maximum operating temperature 75°C.

Single Jacket—for conduit, duct or supported aerial installations.

Double Jacket—for conduit, duct or supported aerial installations and direct burial.

These data are approximate and subject to normal manufacturing tolerances.

**TRAFFIC SIGNAL, FIRE ALARM
AND SIGNAL CONTROL CABLE**
(Conform to IMSA Specifications)
Copper Conductor — 600 Volts

Solid conductor available with rubber insulation and Neoprene or Polyvinyl Chloride jacket, or Polyethylene insulation with Polyvinyl Chloride jacket. Used for traffic control, fire alarm, police signaling and supervisory control systems. Can be installed in conduit, duct, aerially on messengers or direct burial.

No. Conductors	14 AWG			12 AWG

TYPE AVA CONTROL CABLE
Copper Conductor — 600 Volts

Each conductor insulated with asbestos - varnished cambric-asbestos, cotton braid and overall braid of asbestos. Recommended for connection of control or signal circuits, in dry locations either exposed or in conduit where the operating temperature is too high for other insulations. Resists heat, flame, moisture, oil, grease and corrosive vapors. Maximum operating temperature 110°C.

These data are approximate and subject to normal manufacturing tolerances.

**TYPES SV, SVO, SVT AND SVTO
LIGHT WEIGHT PORTABLE CORDS**

Copper Conductor — 300 Volts

Types SV and SVT

Types SVO and SVTO

Two and three conductor light weight, small diameter cord with great flexibility. Designed for use on vacuum cleaners but can be used for light duty appliances, floor polishers, etc. Maximum operating temperature 60°C.

Type SV—Rubber insulation and jacket.

Type SVO—Rubber insulation and Neoprene jacket which is resistant to oils, acids, etc.

Type SVT—Plastic insulation and jacket.

Type SVTO—Plastic insulation and jacket that is resistant to oils, acids, etc.

TYPES S AND SO HEAVY DUTY PORTABLE CORDS

Copper Conductor — 600 Volts

Type S

Type SO

Multi-conductor heavy duty cord for extra hard usage such as garage portable lights, battery chargers, portable stage lights, heavy tools and equipment. Maximum operating temperature 60°C.

Type S—Rubber insulation and jacket.

Type SO—Rubber insulation and Neoprene jacket which is resistant to oils, acids, etc.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Strand-ing	O.D. In.	Net Wt. Lbs. M Ft.	
					"S"	"SO"
18	2	2	16x30	.390	80	86

10	3	3	104x30	.690	290	310
10	4	3	104x30	.745	354	364

Packaging: Sizes 18/2, 18/3, 16/2, 16/3—250' spool; balance of sizes, 250' coil.

TYPES SP AND SPT PARALLEL PORTABLE CORDS

Copper Conductor — 300 Volts

Two and three conductor parallel cord with mid-rip for easy splitting and stripping. Suitable for use on household items such as fans, clocks, lamps, radios, etc., that are not subject to hard usage. Available in various colors.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Strand-ing	O.D. In.	Net Wt. Lbs. M Ft.
Type SP—Rubber Insulation					
18-SP1	2	2	41x34	.115x.215	26

*Not UL listed.

Packaging: 250' spool.

These data are approximate and subject to normal manufacturing tolerances.

TYPE HSJ HEATER CORD

Copper Conductor — 300 Volts

Two and three conductor flexible wire, cotton wrapped, rubber insulation, asbestos roving, twisted, soft braid and rubber jacket overall. Suitable for use on hair dryers, vaporizers, soldering irons, glue and solder pots, etc.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Strand-ing	O.D. In.	Net Wt. Lbs. M Ft.
3000 Cycle					
18	2	1	41x34	.315	49
18	3	1	41x34	.340	63
16	2	1	65x34	.340	60
16	3	1	65x34	.365	77
14	2	2	104x34	.420	82
14	3	2	104x34	.445	113

Packaging: 250' coil.

TYPE HPN PARALLEL HEATER CORD

Copper Conductor — 300 Volts

Two conductor flexible wire with Neoprene insulation and jacket, mid-rip for easy splitting and stripping. Suitable for all heater cord uses including heavy duty applications such as soldering irons, paint removers, industrial heating pots, etc.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Strand-ing	O.D. In.	Net Wt. Lbs. M Ft.
3000 Cycle					
18	2	3	41x34	.150x.278	36
16	2	3	65x34	.155x.300	43

Packaging: 250' spool.

TYPE HPD HEATER CORD

Copper Conductor — 300 Volts

Two and three conductor flexible wire, cotton wrapped, rubber insulation, asbestos covering, twisted, cotton braid overall. Suitable for use on household appliances such as flat irons, percolators, toasters, heaters, etc.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Strand-ing	O.D. In.	Net Wt. Lbs. M Ft.
3000 Cycle					
18	2	1	41x34	.280	32
18	3	1	41x34	.300	44
16	2	1	65x34	.310	40
16	3	1	65x34	.335	57
14	2	2	104x34	.370	60
14	3	2	104x34	.390	84
12	2	2	165x34	.400	78
12	3	2	165x34	.420	104

Packaging: Sizes 18 through 14 AWG, 2 conductor, 250' spool; 14 AWG, 3 conductor and 12 AWG, 250' coil.

Price on Application

†2/12 AWG (65x30 strands) and 4/18 AWG (41x34 strands).

Price on Application

TYPE AFPD TWISTED ASBESTOS HEAT RESISTING FIXTURE WIRE

Copper Conductor — 300 Volts

Two conductor wire covered with felted asbestos, saturated with moisture-resisting, flame-retarding compound, twisted, cotton braid overall. Suitable for use in wiring hollow fixtures where space is limited, or chain fixtures with exposed wiring in dry places. Maximum operating temperature 150°C.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
18	2	2	16x30	.250	24
16	2	2	26x30	.280	34
14	2	2	41x30	.310	46

Packaging: 250' spool.

TYPE AFPO PARALLEL ASBESTOS HEAT RESISTING FIXTURE WIRE

Copper Conductor — 300 Volts

Two conductor wire covered with felted asbestos, saturated with moisture-resisting, flame retarding compound, parallel, cotton braid overall. Suitable for use in wiring hollow fixtures where space is limited, or chain fixtures with exposed wiring in dry places. Maximum operating temperature 150°C.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
18	2	2	16x30	.135x.240	24
16	2	2	26x30	.145x.270	34
14	2	2	41x30	.165x.305	46

Packaging: 250' spool.

TYPE CBO TWISTED BREWERY CORD

Copper Conductor — 300 & 600 Volts

Two conductor cord with Neoprene insulation and ribbed for polarity. Suitable for portable or drop use in damp locations and temporary lighting. Not listed by UL.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
300 Volts					
18	2	2	16x30	.235	22
16	2	2	26x30	.255	30

12	2	3	65x30	.385	75
10	2	3	104x30	.445	103

Packaging: 250' coil.

These data are approximate and subject to normal manufacturing tolerances.

TYPE C TWISTED LAMP CORD

Copper Conductor — 300 & 600 Volts

Two conductor cord with rubber insulation and cotton braid. Suitable for use in dry places on drop lights, fixtures and appliances.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
300 Volts					
18	2	2	16x30	.300	31
16	2	2	26x30	.320	40
600 Volts					
14	2	3	41x30	.400	60
12	2	3	65x30	.460	84

Packaging: Sizes 18 and 16 AWG, 250' spool; 14 and 12 AWG, 250' coil.

TYPE PO PARALLEL LAMP CORD

Copper Conductor — 300 & 600 Volts

Two conductor cord with rubber insulation, cotton braid, parallel with rayon braid overall. Suitable for use in dry places on clocks, lamps, radios and similar appliances not subject to hard usage.

Size AWG	No. Conductors	Insul. Thick. 64th In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
300 Volts					
18-PO1	2	1	16x30	.120x.220	23
18-PO2	2	2	16x30	.155x.280	30

600 Volts					
14-PO	2	3	41x30	.200x.395	59

Packaging: 18 through 16 AWG, 250' spool; 14 AWG, 250' coil.

SHOT FIRING OR BLASTING CABLE

Copper Conductor — 300 Volts

Two conductor wire with red and white color-coded insulation and red rubber jacket. Suitable as leads for blasting purposes.

Size AWG	No. Conductors	Insul. Thick. In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
18	2	.025	16x30	.300	120

Packaging: 125' coil.

Price on Application

RUBBER INSULATED TRAILER CABLE

Copper Conductor — 300 Volts

Multi-conductor cable with color-coded rubber insulation and rubber jacket overall. Suitable for wiring and lighting of commercial motor vehicles. Fit all standard connectors.

Size AWG	No. Conductors	Insul. Thick. In.	Stranding	O.D. In.	Net Wt. Lbs. M Ft.
14	2	2/64	41x30	.360	84

Packaging: 250' coil.

RUBBER AND PLASTIC INSULATED TRAILER CABLE

Copper Conductor — 600 Volts

Rubber

Plastic

Multi-conductor cable with rubber insulation and rubber or Neoprene jacket, or plastic insulation and jacket. Suitable for use with mobile homes as the attachment from source of supply to the distribution panel within the trailer.

Size AWG	No. Conductors	O.D. In.	Net Wt. Lbs. M Ft.
Rubber Insulation—Rubber or Neoprene Jacket			
6/3*	2-#6, 1-#8	.955	575

Plastic Insulation—Plastic Jacket			
8	4ST	.950	560

*UL listed as Type S and SO cords for use in the trailer industry.

Packaging: 250' coil.

WELDER POWER SUPPLY CABLE

Copper Conductor — 600 Volts

Two, three and four conductor cable with rubber insulation and rubber jacket. Suitable for use as primary circuit connection from power source to welding equipment and for portable usage.

Size AWG	No. Conductors	No. Strands	Insul. Thick. 64th In.	O.D. In.	Net Wt. Lbs. M Ft.
8	2	105	4	.73	324

3/0	4263	.76	450	667
4/0	5376	.83	550	821

Packaging: 1000' reel.

LEAD CURED WELDING CABLE

Copper Conductor — 600 Volts

Single conductor extra-flexible stranded cable with lead cured Neoprene jacket. Greater flexibility means less "drag" to fatigue the operator. Resistant to destructive forces encountered in the vicinity of welding operations—notably heat, ultra-violet, ozone, oil, acids, tearing, chipping and crushing.

Size AWG or MCM	No. Strands #84 Wire	O.D. In.	Rating Amps.	Net Wt. Lbs. M Ft.

Price on Application

LEAD CURED TYPES W AND G PORTABLE CABLE

Copper Conductor — 600 Volts

Multi-conductor insulated cable with rubber and lead cured Neoprene jacket which is resistant to abrasion, impact, oils, greases, acids, gasoline, flame, heat, cold, sunlight and ozone. Designed to give maximum service under severe operating conditions. Maximum operating temperature 75°C.

Size AWG or MCM	No. Strands	Type W		Type G

LEAD CURED TYPE W MINING CABLE

(Approved by U.S. Bureau of Mines and Pennsylvania Department of Mines)

Copper Conductor — 600 Volts

Single conductor flexible or extra-flexible stranded cable insulated with rubber and an overall jacket of lead cured Neoprene. Recommended for interior wiring of motors, mine locomotives and wherever a flexible cable is needed. Maximum operating temperature 75°C.

Size AWG or MCM	No. Strands	O.D. In.	Net Wt. Lbs. M Ft.

LEAD CURED TYPES W AND G MINING CABLE

(Approved by U.S. Bureau of Mines and Pennsylvania Department of Mines)

Copper Conductor — 600 Volts

Twin parallel conductor insulated cable with rubber and lead cured Neoprene jacket which is resistant to abrasion, crushing, sunlight, aging, heat, cold, ozone, oils, acids and flame. Suitable for use on take-up reels, used in connection with portable equipment in mines, such as coal cutters, drills, coal loaders and as battery leads. Maximum operating temperature 75°C.

Packaging: 1000' and longer.

Note: Can also be supplied as 3-conductor parallel in Type W and G.

Price on Application

LEAD CURED TYPE SH-D PORTABLE POWER CABLE

Copper Conductor — 5000 & 8000 Volts

Three conductor flexible stranded cable insulated with Butyl rubber and Neoprene inner and outer jacket. Suitable for use on shovels and similar equipment where flexibility and maximum protection to cable and personnel is desired. Maximum operating temperature: 90°C for 5000 volt and 85°C for 8000 volt.

Standard colors available: 18 through 10 AWG—black, white, red, blue, green, yellow, orange, brown; 8 through 2 AWG—black, white, red; 1 and larger, black.

Packaging: *1000' spool; †500' spool; 14 through 1 AWG, 500' coil; 1/0 and larger, 500' and 1000' reels.

TYPES TF AND TFF FIXTURE WIRE

Copper Conductor — 600 Volts

Single conductor wire with thermoplastic insulation suitable for use on lighting fixtures and other applications where temperatures do not exceed 60°C.

Size AWG	No. Strands	Insul. Thick. 64th In.	O.D. In.	Net Wt. Lbs. M Ft.
Solid Conductor				
18	1	2	.105	13
16	1	2	.115	15
Stranded Conductor				
18	16x30	2	.112	12
16	26x30	2	.120	14

Packaging: 500' spool.

Price on Application

**CROSS LINK POLYETHYLENE
MOTOR AND APPLIANCE LEAD WIRE**

Copper Conductor — 600 Volts

Single conductor cross link Polyethylene insulated wire especially suitable for use as leads for small Class B motors, transformers or coils. Can be used wherever 125°C lead wire is required. Also listed by UL as suitable for use within appliances at temperatures not exceeding 125°C.

Size AWG	No. Strands	Insul. Thick. 64th In.	O.D. In.	Net Wt. Lbs. M Ft.

Packaging: 500' spool.

**CROSS LINK POLYETHYLENE
SWITCHBOARD WIRE**

Copper Conductor — 600 Volts

Single conductor cross link Polyethylene insulated wire suitable for wiring of switchboards and all other types of control apparatus. Resists heat, moisture, flame, oil and corrosive vapors. Maximum operating temperature 90°C.

Packaging: Sizes 18 through 6 AWG, 500' coil; size 4 AWG, 500' reel.

TYPE A ASBESTOS APPLIANCE WIRE

Nickel Conductor — 300 Volts

Single conductor wire covered with felted asbestos, smokeless insulation coated with a heat resisting compound. Suitable for use on waffle irons, sandwich grills and other applications subject to maximum operating temperature requirements of 200°C.

Size AWG	No. Strands	Insul. Thick. 64th In.	O.D. In.	Net Wt. Lbs. M Ft.
16*	65x34	2	.125	16

*Not listed by UL.

Packaging: 500' spool.

These data are approximate and subject to normal manufacturing tolerances.

**TYPES A AND AI ALL-ASBESTOS
APPLIANCE LEAD WIRE**

Copper Conductor — 300 Volts

Solid

Stranded

Single conductor of copper or nickel insulated with a wall of felted asbestos.

Type A insulation is impregnated with flame and heat resistant compound. Suitable for wiring of apparatus where severe heat conditions exist, such as hot plates, toasters, coffee-makers, etc. Maximum operating temperature 200°C.

Type AI insulation is impregnated with flame, heat and moisture resistant compound. Suitable for wiring where moderate moisture hazards exist, such as electric ranges, ovens, grills, water heaters, space heaters, dryers, etc. Maximum operating temperature 125°C.

Price on Application

TYPE AA RHEOSTAT WIRE

Copper Conductor — 300 Volts

Single conductor wire insulated with felted asbestos and an overall asbestos braid. Suitable for grid jumper connections and connections from grids to faceplates, infra-red dryers, ovens, electric stove bus circuits, element leads on well type annealing furnaces and open wiring exposed to extremely high temperatures, corrosive fumes, grease, oil or fire hazard. Maximum operating temperatures: solid and stranded, 200°C; flexible stranded, 150°C.

These data are approximate and subject to normal manufacturing tolerances.

TYPE AA MOTION PICTURE CABLE

Copper Conductor — 300 Volts

Single conductor flexible or extra-flexible cable insulated with felted asbestos and an overall asbestos braid. Suitable for use in wiring motion picture equipment and similar applications where a smokeless insulation is required to withstand extreme heat, in dry locations only.

Size AWG or MCM	No. Strands	Thickness, Mils		O.D. In.	Net Wt. Lbs. M Ft.

*Not NEC or UL listed.

Packaging: Sizes 18 through 6 AWG, 500' coil; 4 AWG and larger, 500' reel.

**TYPE AF ASBESTOS
FIXTURE WIRE**

Copper Conductor — 300 Volts

Single conductor wire covered with felted asbestos, saturated with moisture resisting, flame retarding compound. Suitable for use in wiring hollow fixtures where space is limited, or chain fixtures with exposed wiring in dry places where temperatures do not exceed 150°C.

Type AF has asbestos insulation but not braid.

Type AF & Braid has asbestos insulation as well as cotton appearance braid overall.

Price on Application

TYPE AIA RHEOSTAT WIRE AND CABLE

Copper Conductor — 600 Volts

Solid

Stranded

Single conductor wire and cable insulated with felted and impregnated asbestos and an overall covering of asbestos. Ideally suited for grid jumper connections and connections from grids to faceplates, infra-red dryers, ovens, electric stove bus circuits, element leads on well type annealing furnaces and open wiring exposed to extremely high temperatures, corrosive fumes, grease, oil or fire hazard. Flexible stranded used by automotive bus manufacturers and operators for engine compartment wiring and leads for batteries, crank case and radiator immersion heaters because of its high resistance to heat and flame. Maximum operating temperature 125°C.

DIESEL LOCOMOTIVE CABLE

(Approved by U.S. Bureau of Mines and Pennsylvania Department of Mines)

Copper Conductor — 600 Volts

Single conductor lead cured Type W mining cable. Flexible or extra-flexible stranded conductor insulated with rubber and an overall jacket of lead cured Neoprene. Recommended for interior wiring of motors, mine locomotives and wherever a flexible cable is needed. Maximum operating temperature 75°C.

TYPE TA SWITCHBOARD WIRE

Copper Conductor — 600 Volts

Solid

Stranded

Single conductor wire insulated with a Polyvinyl Chloride sheath, impregnated felted asbestos and covered with a cotton braid finished with flame resistant compound. Recommended for switchboards, control panels and hinge connections. Maximum operating temperature 90°C.

Packaging: Sizes 18 through 8 AWG, 500' coil; 6 AWG and larger, 500' reel.

Price on Application

VARNISHED CAMBRIC APPARATUS LEADS

Copper Conductor

Extra-flexible conductors insulated with varnished cambric and covered overall with a lacquer or moisture resistant braid. Suitable for use where cable is subjected to ordinary usage such as brush-holder leads, motor leads, etc., where it comes in contact with lubricating and other oils.

	1325/24 & larger	7
	19/24 & larger	8

*Sizes smaller than 19/25 are not recommended for voltages greater than 750 volts. These data are approximate and subject to normal manufacturing tolerances.

SMALL DIAMETER NEOPRENE MOTOR LEADS

Copper Conductor — 300 & 600 Volts

Single conductor Neoprene insulated wire especially suitable for use as leads for coils, transformers, motors, or ballasts where the baking cycle is severe. Also used wherever an appliance wire is required to withstand elevated temperatures, either in the manufacturing cycle or in actual operation. Listed by UL for operation within appliances at 90°C dry and for 60°C operation in oil.

1	133	5	.57	376

Packaging: 500' spool.

BELL (ANNUNCIATOR) WIRE

Copper Conductor

One and two conductor wire with thermoplastic insulation suitable for bells, radios, chimes, communication systems and toy electric trains.

Size AWG	No. Strands	No. Conductors	Insul. Thick. In.	O.D. In.	Net Wt. Lbs. M Ft.
20	1	1	.015	.060	5
18	1	1	.015	.070	7
18	Twisted Pair	2	.015	.140	13

Packaging: Sizes 20 AWG single conductor available in 1/4, 1 and 5 lb. spools or 25' and 65' coils. Size 18 AWG single conductor available in 1/4, 1/2 and 1 lb. coils or 1, 5 and 7 lb. spools. Size 18 AWG two conductor available in 500' spools.

MAGNET WIRE

Many types of round, square or rectangular magnet wire are available some of which are listed below:

Enameled Wire—(1) plain, (2) vinyl acetal resin varnish, (3) nylon, (4) polyurethane which is solderable, (5) polyester, (6) epoxy, etc.

Single and Double Covered Enameled Wire—(1) cotton, (2) paper, (3) glass fiber yarn bonded with varnish, (4) cotton or paper over vinyl acetal resin varnish (5) glass fiber yarn over vinyl acetal resin varnish, (6) combination glass fibers and dacron fibers bonded with varnish, etc.

Single and Double Fiber Covered Wire—(1) cotton, (2) paper, (3) glass fiber yarn bonded with varnish, (4) glass fiber yarn bonded with silicone varnish, (5) combination glass fibers and dacron fibers bonded with varnish, etc.

Check your Graybar office for complete information.

Price on Application

BUS DROP POWER CABLE

Copper Conductor — 600 Volts

Three conductor Polyvinyl Chloride insulated cable with ground wires, cabled with jute fillers, Mylar tape and Polyvinyl Chloride jacket overall. Suitable for use to connect branch circuit runs between overhead bus feeders, open or enclosed, to machine tools, factory equipment, etc., where resistance to water, oils, and lubricants is highly important. Maximum operating temperature 60°C.

Size AWG	No. Strands	Thickness 64th In.		Each Gr'd. Wire Size	O.D. In.	Net Wt. Lbs. M Ft.

AIRPORT LIGHTING CABLE

(Conform to FAA Specification L-824)

Copper Conductor — 3000 & 5000 Volts

Single conductor cables that meet the requirements of FAA Specification L-824, Specification for Underground Electrical Cables for Airport Lighting.

Type A—Natural or synthetic rubber insulation with Neoprene jacket. Maximum operating temperature 75°C.

Type B—Ozone resistant Butyl rubber insulation with Neoprene jacket. Maximum operating temperature 85°C.

Packaging: 1000' reel.

BORE-HOLE POWER CABLE

Copper Conductor — 5000 Volts

Three conductor Butyl rubber insulated cable with Neoprene jacket. Suitable for almost any three conductor circuit but especially suited for use in mine bore-hole applications and for direct burial along the right-of-way. Maximum operating temperature 90°C.

Packaging: Sizes 18/2, 18/3, 16/2, 16/3, 500' spool; balance of sizes, 250' spool.

**AERIAL & DUCT EXCHANGE
AREA CABLE**

(REA Specification PE-22)
Copper Conductor

Each solid conductor is insulated with heat-stabilized, moisture resistant, high dielectric strength, high density, low-loss Polyethylene. Full color coded, all pairs guaranteed. Pairs twisted to eliminate cross-talk and assembled into layer or group cables. Cable binder is a non-hygroscopic tape. Available with .008" aluminum or .005" copper tape shield applied longitudinally with the large diameter shields being corrugated for flexibility. Outer jacket is black high molecular weight Polyethylene which is highly resistant to abrasion, weathering, moisture, corrosion and environmental cracking.

DIRECT BURIAL TELEPHONE CABLE

(REA Specification PE-23)
Copper Conductor

Each solid conductor is insulated with heat-stabilized, moisture resistant, high dielectric strength, high density, low-loss Polyethylene. Full color coded, all pairs guaranteed. Pairs twisted to eliminate cross-talk and assembled in layer and group cables. Cable binder is a non-hygroscopic tape. Inner jacket is an extruded high dielectric strength Polyethylene belt for a lightning-impulse barrier, impervious jacket and mechanical protection. .005" copper tape shield is standard and is applied longitudinally with the large diameter shields being corrugated for flexibility. Also available with a .010" copper tape shield to provide more protection against gopher attack. Outer jacket is black high molecular weight Polyethylene which is highly resistant to abrasion, weathering, moisture, corrosion and environmental cracking.

FIGURE "8" EXCHANGE AREA CABLE
(REA Specification PE-38)

Copper Conductor

Each solid conductor is insulated with heat-stabilized, moisture resistant, high dielectric strength, low-loss, high molecular weight Polyethylene. Full color code, all pairs guaranteed. Pairs twisted to eliminate cross-talk and assembled into layer or group cables. Cable binder is a non-hygroscopic tape. .005" copper tape shield, corrugated and applied longitudinally. Messenger is 6M, 1/4", 7 wire extra high strength, Class A double galvanized steel per ASTM A-122. Strand interstices are sealant filled to provide corrosion protection. The messenger and cable core are unitized in the simultaneous figure 8 extrusion of black high molecular weight Polyethylene, which is highly resistant to abrasion, tearing, weathering, moisture, corrosion and environmental cracking.

TELEPHONE TYPE BSW BURIED SERVICE WIRE
(REA Specification PE-43)

Two parallel soft copper conductors individually insulated with high density Polyethylene, with inner jacket of black Polyethylene, helical shield (.005" bronze tape) applied with overlap, and outer jacket of black Polyvinyl Chloride. Color code: blue and white. Used as buried drop wire in rodent or termite infested areas without additional mechanical protection.

19	.275x.215	8.7	46	2000

TELEPHONE TYPE BSW4 UNDERGROUND SERVICE WIRE

Four star-quadded 40% conductivity annealed copper-clad steel conductors insulated with color coded high density Polyethylene, with inner jacket of Polyvinyl Chloride, spirally wrapped aluminum tape shield, and outer jacket of black Polyvinyl Chloride. Used for direct burial on subscriber's premises.

Size AWG	O.D. In.	Max. Cond. Resistance @68°F Ohms/M Ft.	Wt. Lbs. M Ft.	Reel Lgth. Ft.
20	.248	30	40	2500

TELEPHONE TYPE ADC BURIED DISTRIBUTION CABLE

Soft copper conductors with standard color code, high density Polyethylene insulation. Core is designed with all different pair twist lays to minimize cross-talk and is covered with non-hygroscopic tape. Inner jacket of extruded high molecular weight Polyethylene, protected with served armor of flat steel ribbons (with flooding compound to protect armor from corrosion and exclude water), outer jacket of tough black Polyethylene impervious to moisture. For underground distribution of telephone circuits. Suitable for direct burial without supplementary mechanical protection. Good for rodent or termite infested areas.

JACKETED PAIR DISTRIBUTION WIRE

Multi-pair, capable of withstanding relatively severe physical abuse, and featuring a high degree of electrical stability under all weather conditions.

Annealed copper conductors insulated with a tough, extra heavy wall of high density Polyethylene. Integral white longitudinal stripe tracer on one insulated conductor of each pair. Pairs easily identified by a single two color Polyvinyl Chloride jacket. In all pair sizes each pair appears on the outside at frequent intervals for easy access. Self-supporting, can be attached directly to pole or underside of crossarm.

Individual pairs are twisted with various lengths of lay to minimize cross-talk. The jacketed pairs are twisted around a Polyethylene covered, extra high strength .109" or .134" galvanized steel messenger wire. Cables of 6 pairs or less are twisted directly around the messenger.

Packaging: Pairs 1 through 6, 6000' reel; pairs 12 and 18 of 22 AWG, 3000' reel; pairs 12 and 18 of 19 AWG, 2000' reel.

These data are approximate and subject to normal manufacturing tolerances.

BRIDLE WIRE

Polyethylene

Neoprene Jacketed

Used for making connections between open wire lines and wire terminals or protectors and as leads on various types of apparatus. Size 20 AWG forms fuseable connection for lightning and high voltage protection. Polarity indicated by ridged tracer on one leg.

Polyethylene (REA PE-19)—Two 14 AWG soft copper or 20 AWG copper-clad steel conductors twisted together, insulated with weather resistant black Polyethylene.

Neoprene Jacketed—Two or three Teleplate soft copper conductors in 14 and 18 AWG, Teleplate hard copper and copper-clad steel (CWB) conductors in 20 AWG, twisted together, insulated with high quality SBR rubber and jacketed with Neoprene compound.

INSULATED LINE WIRE

Copper-clad steel, galvanized steel or Alumoweld (aluminum-clad steel) conductors with black high density Polyethylene or Neoprene insulation. Single conductor for open wire construction in corrosive atmospheres, to reduce line spacing and to eliminate problems associated with mid-span hits on long-span insulation.

*Dia. is that of a single leg.

TELEDUCT INSIDE-OUTSIDE STATION WIRE

For outside as well as inside runs from station protector to telephone terminal block. Designed for stapling gun installation.

Neoprene Jacket — Two, three and four tinned, parallel, Neoprene insulated soft copper conductors with overall brown Neoprene jacket.

Polyvinyl Chloride Jacket (REA PE-20)—Same as above except Polyethylene insulated conductors twisted together and overall beige Polyvinyl Chloride jacket.

Multi-Pair—Similar to Polyvinyl Chloride but available in 2, 3 or 4 pairs.

INSIDE WIRING CABLE

Solid bare soft copper conductors with semi-rigid Polyvinyl Chloride insulation that has high resistance to crushing and cold flow (UniPair rated 60°C; Telecable rated 80°C). Pairs are twisted with systematically varied lays to minimize cross-talk and are cabled without fillers into a round core. Standard color code. Free stripping jacket of tough, flame and abrasion resistant Polyvinyl Chloride. Nylon rip cord for easy removal of jacket in beige tone. Number of pairs and gauge size indent marked on jacket. Lightweight for easy installation; water resistant for use in damp ducts. UniPair has two conductors insulated simultaneously in such a manner as to be joined by a thin web. Web-attached conductors provide positive pair and conductor identification, making error-free installation possible. Jacket also available in olive gray on request.

COPPERWELD-COPPER COMPOSITE CABLE
Extra-High Strength

Used for transmission, distribution and rural electrification. The high strength of the copper-weld wire in these conductors permits longer span construction, thereby effecting economies by requiring fewer pole or tower assemblies. The excellent weathering characteristics of copper and the high strength of steel give these conductors a strong advantage in all applications.

WEATHERPROOF WIRE AND CABLE

Copper and Aluminum Conductor

Soft, medium-hard or hard-drawn copper, or hard-drawn aluminum conductor with Polyethylene or Neoprene covering. Made to conform to the requirements of the American Society for Testing Materials specifications for Weather-Resistant Wire and Cable which are the recognized American standards.

Price on Application

ALUMINUM BUS CONDUCTORS

Aluminum bus conductors are available in alloys with a range of electrical and mechanical properties which meet the requirements for all bus conductor applications.

RECTANGULAR COPPER BUS BAR

Minimum conductivity, 98%
 Made to conform to the requirements of ASTM specifications which are recognized American standards for this product.
 Processed to a uniform temper and to meet close dimensional and straightness requirements.
 Special sectional shapes furnished as specified.

COPPER BUS TUBE

Extruded and Drawn — Seamless Copper

Minimum conductivity, 98%
 Made to conform to the requirements of ASTM specifications which are recognized American standards for this product.
 Tubular bus shapes are processed to a uniform temper and to meet close dimensional and straightness requirements.
 These shapes are characterized by greater mechanical rigidity per square inch of cross-section, and provided for better heat dissipation, decreased "skin effect," lower corona losses and better efficiency of transmission at power frequencies.
 Tubular shapes may be easily bent or flattened for application of terminals or to meet special installation requirements.

AIRCRAFT WIRE

MIL-W-5086A

Single conductor of stranded tinned copper with vinyl thermoplastic insulation. Temperature ranges of -55°C to $+105^{\circ}\text{C}$. 600 volts.

Type I—White PVC insulation with clear nylon jacket, unshielded. Sizes: 22-12 AWG.

Type II—White PVC insulation, white glass braid with clear nylon jacket, unshielded. Sizes: 22-12 AWG.

Type II—White PVC insulation, white glass braid with lacquered nylon braid, unshielded. Sizes: 10-4/0 AWG.

MIL-C-7078A

Single conductor of stranded tinned copper with vinyl thermoplastic insulation. Temperature ranges of -55°C to $+105^{\circ}\text{C}$. 600 volts.

Type I—Colored PVC insulation with clear nylon jacket and braided tinned copper shield. Sizes: 22-12 AWG.

Type I—White PVC insulation, color coded glass braid, clear nylon jacket and braided tinned copper shield. Sizes: 22-12 AWG.

Type II—Color coded PVC insulation, clear nylon inner jacket, braided tinned copper shield and clear nylon jacket overall. Sizes: 22-12 AWG.

Type II—White PVC insulation, color coded glass braid, clear nylon inner jacket, braided tinned copper shield and clear nylon jacket overall. Sizes: 22-12 AWG.

MIL-W-7139B Class I

Single conductor of stranded silver plated copper, Teflon tape, Teflon impregnated fiberglass tape, Teflon impregnated fiberglass braid. Temperature ranges of -65°C to $+200^{\circ}\text{C}$. Sizes: 22-12 AWG. 600 volts.

MIL-W-8777B-MS-25471

Single conductor of stranded silver coated copper, silicone rubber insulation, glass and dacron braid impregnated with hi-temp lacquer, white dacron braid and lacquer overall. Temperature ranges of -55°C to $+150^{\circ}\text{C}$. Sizes: 22-4 AWG. 600 volts.

These data are approximate and subject to normal manufacturing tolerances.

HOOK-UP WIRE — PLASTIC INSULATED

MIL-W-76B

Single conductor of stranded tinned copper with thermoplastic insulation. Multi-conductor available in most types.

Type LW—300 Volts

Uncovered Plastic—Light wall insulation, 80°C . Sizes: 30-20 AWG.

Nylon Jacket—Same as above with clear nylon jacket overall, 90°C . Sizes: 30-20 AWG.

Type MW—1000 Volts

Uncovered Plastic—Medium wall insulation, 80°C . Sizes: 24-6 AWG. Also available in solid.

Shielded—Same as above with tinned copper shield overall, 80°C . Sizes: 24-6 AWG.

Nylon Jacket Shielded—Same as above with clear nylon jacket over shield, 90°C . Sizes: 24-6 AWG.

Nylon Jacket—Same as uncovered with clear nylon jacket overall, 90°C . Sizes: 24-6 AWG.

Glass Braid—Same as uncovered with lacquered glass braid overall, 80°C . Sizes: 24-6 AWG.

Glass Braid Shielded—Same as above with tinned copper shield overall, 80°C . Sizes: 24-6 AWG.

Type HW—600 Volts

Uncovered Plastic — Heavy wall insulation, 80°C . Sizes: 14-2/0 AWG.

Type HW—2500 Volts

Uncovered Plastic — Heavy wall insulation, 80°C . Sizes: 22-16 AWG.

Glass Braid—Same as above with lacquered glass braid overall, 80°C . Sizes: 22-16 AWG.

MIL-W-16878D

Single conductor of stranded tinned copper with vinyl thermoplastic insulation. Also available with Teflon insulation. Multi-conductor available in most types.

Types B and B/N—600 Volts

Uncovered Plastic—.010" insulation, 105°C . Sizes: 32-14 AWG.

Nylon Jacket—Same as above with clear nylon jacket overall, 115°C . Sizes: 32-14 AWG.

Types C and C/N—1000 Volts

Uncovered Plastic—.016" insulation, 105°C . Sizes: 24-12 AWG.

Nylon Jacket—Same as above with clear nylon jacket overall, 115°C . Sizes: 24-12 AWG.

Types D and D/N—3000 Volts

Uncovered Plastic—.032" insulation, 105°C . Sizes: 24-1/0 AWG.

Nylon Jacket—Same as above with clear nylon jacket overall, 115°C . Sizes: 24-1/0 AWG.

Types E and EE—600 and 1000 Volts

Type E—Stranded silver plated copper with extruded Teflon insulation. .010" wall, 200°C . Sizes: 30-10 AWG. 600 Volts.

Type EE—Same as above but with .016" wall, 200°C . Sizes: 30-8 AWG. 1000 volts.

Price on Application

TYPES TFE AND FEP TEFLON*

Description

The continuous duty rating of almost all electrical equipment is set by the maximum permissible operating temperature of the wire and cable associated with it. These temperatures are in turn governed by the thermal resistance of the insulation used. The large scale development and acceptance of fluorocarbon dielectrics has launched an entirely new family of high temperature wire and cable.

A summary of the unique properties of Teflon TFE (tetrafluoroethylene) and Teflon FEP (fluorinated ethylene propylene) insulated wires and cables follows:

1. Excellent dielectric characteristics, including minimum interconductor capacitance and dielectric losses under a wide range of temperature, frequency and humidity.
2. Wide operating temperature range, from -67.8°C to $+200^{\circ}\text{C}$, or even higher.
3. Mechanical toughness and long flex life, even at very low temperatures.
4. Non-flammability, even in highly oxygenated atmospheres. Teflon will not absorb flammable materials such as gasoline and oil.
5. Chemical resistance to virtually all organic and inorganic materials, including missile fuels, hydraulic chemicals, LOX, and solvents.
6. Weight and size economy due to greater electrical load capabilities, permitting new advances in miniaturization designs.

Properties

Two types of Teflon are presently available—Teflon TFE and Teflon FEP. Major differences between the two are in their maximum operating temperature ranges. Teflon TFE operates up to 260°C (500°F); Teflon FEP operates up to 200°C (392°F) and has the advantage of being readily processed in long, continuous lengths in conventional extruders. From the operating temperatures, it follows that TFE has somewhat better solder resistance (it is completely unaffected by the process), but FEP does have adequate resistance to the temperatures attained in most soldering operations. It is important to note, too, that Teflon FEP is an ideal high temperature jacketing material, markedly superior to Teflon TFE tapes previously used for this purpose. With the exception of these differences, Teflon TFE and FEP can be considered to have almost identical properties.

*DuPont trademark.

These data are approximate and subject to normal manufacturing tolerances.

HOOK-UP WIRE — TEFLON* INSULATED

The following descriptions are limited to single conductor wires. Multi-conductor wires are available in most types. Consult nearest Graybar office for details.

MIL-W-22759

Type I—For general use where properties of TFE are required. Stranded coated copper conductor with Teflon TFE insulation. Available as silver coated conductor MS-21985 (WEP) or nickel coated conductor MS-21986 (WEP). Sizes: 28-18 AWG.

MIL-W-16878D

TFE Insulation Only

Insulation and Braided Copper Shield

Insulation, Braided Copper Shield and Fiberglass Overbraid

These wires are suited for use as low-loss hook-up wire in electronic equipment operating over temperature ranges of -65°C to $+260^{\circ}\text{C}$. Conductors are stranded copper with either silver, nickel or tin coating. Insulation may be either Teflon TFE or FEP (or PVC). A braided shield of coated copper is optional. Outer coverings and jackets of nylon, vinyl or Teflon are available. Nylon or fiberglass overbraids may be specified.

Type	Teflon Insulation	Voltage	AWG Sizes
ET	TFE	250	32-20
E	TFE	600	32-10
EE	TFE	1000	32-8
KT	FEP	250	32-20
K	FEP	600	32-10
KK	FEP	1000	32-8

NAS-703

This wire is suited both as a general purpose and aircraft wire at temperature ranges of -55°C to $+200^{\circ}\text{C}$. Conductors are silver coated stranded copper with Teflon TFE primary insulation.

Class A—1000 Volts (Sizes: 32-8 AWG)		Class C—600 Volts (Sizes: 32-14 AWG)	
Type U—Unshielded	Type S—Braided Silver Coated Shield	Type U—Unshielded	Type S—Shielded
Type SJ—Shielded with TFE Jacket.		Type SJ—Shielded and Jacketed	

U.I. Appliance Wire

These wires are recommended for use in environments where corrosive fumes, high humidity, or temperatures in excess of 100°C exist. Conductors are silver or nickel coated copper, solid or stranded with Teflon TFE insulation. Sizes: stranded 26 to 16 AWG; special 14-10 AWG.

300 Volts	600 Volts
Style 1164, 150°C	Style 1198, 150°C
Style 1180, 200°C	Style 1199, 200°C

*DuPont trademark.

Price on Application

HOOK-UP WIRE — TEFLON* INSULATED
(continued)

The following descriptions are limited to single conductor wires. Multi-conductor wires are available in most types. Consult nearest Graybar office for details.

U.L. EDP

Where UHF pulse circuitry is employed under conditions of high temperature and humidity or corrosive environments, these wires will provide high reliability. Silver coated solid or stranded conductor with Teflon TFE insulation. Tinned conductor with Teflon FEP insulation. Sizes: 26-20 AWG. No voltage rating.

TFE		FEP	
Style 1212,	80°C	Style 1226,	80°C
Style 1213,	105°C	Style 1227,	105°C

U.L. EDP With Nylon Jacket

These wires are recommended for wiring of computer back panelboards. Particularly adapted to "wire-wrap" applications. Construction similar to Style 1227 except with extruded nylon jacket. Sizes: 26-20 AWG. No voltage rating.

Style 1192, FEP, 105°C.

MIL-C-17C and MIL-C-8721
Miniature Coaxial Cable

The properties of Teflon make possible dramatic savings in weight and space in RF applications particularly when severe environmental conditions are encountered. A Teflon core dielectric coaxial cable can carry four times the power as polyethylene cables of the same cross section.

Cables are available in a variety of combinations. Please refer to nearest Graybar office for characteristics of any type construction.

Inner Conductor: Silver coated, copper covered steel; silver coated, cadmium bronze.

Primary Insulation: Extruded TFE; extruded or foam FEP.

Shield: Silver coated copper braid.

Outer Covering: Extruded nylon, nylon braid, vinyl, KEL-F, TFE or FEP or silicone impregnated glass braid.

Characteristic Impedance: 50, 70, 75, 93 or 95 ohms.

*DuPont trademark.

300-OHM TWIN LEAD TELEVISION AND FM RECEIVER ANTENNA CABLE

Stranded copper conductor, parallel, with low-loss Polyethylene insulation. Suitable for use as television and FM receiver antenna lead-in wires. Available in brown, silver and clear Polyethylene.

Size AWG	No. Conduc- tors	No. Strands	O.D. In.	Net Wt. 1 lb. M Ft.
20	2	7x28	.100x.405	22
20	2	7x28	.055x.350	17
22	2	7x30	.055x.335	12

Packaging: 500' and 1000' spool.

These data are approximate and subject to normal manufacturing tolerances.

MICROPHONE CABLE

Plastic Jacket—One or two conductors of stranded tinned copper with white polyethylene insulation, braided or spiral wrapped tinned copper shield, gray PVC jacket overall. Sizes: 26-20 AWG.

Rubber and Neoprene Jacket—One or two conductors of stranded tinned copper with color coded rubber insulation, cotton wrap, braided tinned copper shield, cotton wrap, rubber or neoprene jacket overall. Sizes: 20-18 AWG.

Low Capacity—One or two conductors of stranded tinned copper with white foam polyethylene insulation, braided tinned copper shield, chrome gray PVC jacket overall. Sizes: 26-22 AWG.

AUDIO CABLE

Unshielded Solid—Two to four solid tinned copper conductors with color coded PVC insulation, gray PVC jacket overall. Sizes: 22-16 AWG.

Unshielded Stranded—Two to sixty stranded tinned copper conductors with color coded PVC insulation, gray PVC jacket overall. Sizes: 22-18 AWG.

Spiral Shield—One to six stranded tinned copper conductors with color coded PVC insulation, spiral wrapped copper shield, gray PVC jacket overall. Sizes: 22-12 AWG.

Braided Shield—One to four stranded tinned copper conductors with color coded PVC insulation, braided copper shield, gray PVC jacket overall. Sizes: 22-12 AWG.

Price on Application

"NATIONAL ELECTRIC"
SHERARDUCT — SHERARDIZED

Full Weight — Threaded
Listed by Underwriters' Laboratories, Inc.

Sherarduct differs from other types of zinc-coated conduit in its superior protection against rust. In Sherardizing, the zinc coating thus obtained is not merely a covering, it is alloyed with the steel, on the outside and on the thread. Sherarduct is further protected by a coating of MVC-23 Poly-Vinyl, applied over the zinc. This resists acids or similar fumes, which zinc alone will not withstand. On account of the heat to which it is subjected in Sherardizing, Sherarduct is exceptionally easy to bend without flaking or cracking.

REPUBLIC
PLASTIC COATED GALVITE®
RIGID STEEL CONDUIT

Plastic Coated GALVITE Conduit is available for extreme corrosion resistant installations where code requirements necessitate the use of heavy wall conduit. Plastic Coated GALVITE is furnished in standard trade sizes 1/2" to 6" inclusive. Stocks of GALVITE are carried in many large distribution centers for your convenience. Should be installed in accordance with provisions of the National Electrical Code as stated in Article 346 for rigid conduit.

Size In.	Ext. Dia. In.	Wt. Lbs. Per 1000' Inc. Pkg.	Feet Per Std. Pkg.

5	5.627	15483	10
6	6.689	20362	10

Furnished in standard 10-foot lengths with one coupling.
NOTE: Couplings for GALVITE Rigid Conduit will be furnished uncoated.

BYERS WROUGHT IRON CONDUIT

U/L and Non-Labeled

Wrought Iron rigid electrical conduit assures users safety, mechanical protection and uninterrupted service in installations where severe corrosion conditions exist — underground, on bridges, underwater, for airport runway lighting, tunnels, and buried in concrete.

Underwriters' Label—Produced from pipe manufactured and galvanized in accordance with ASTM A-72 specification, latest edition. Available in sizes 1/2" through 6". Complies with all requirements of the Underwriters' Laboratories for rigid metallic conduit.

Non-Labeled — Meets the requirements of ASTM A-72 specification and is furnished black and galvanized in full-random and half-random lengths, sizes 1/2" through 12". Can be supplied with a standard coupling or a conduit coupling. Also available in plain ends for welding.

Long Radius (12" thru 48") Elbows are also available.

Wrought Iron Nipples are manufactured from new, tested and full weight galvanized wrought iron conduit in accordance with commercial standards. They conform to U/L standards and ASTM A-72 specification. Threads meet ASTM or ASM standards.

Price on Application

**AMERICAN BRASS EVERDUR®
ELECTRICAL CONDUIT AND FITTINGS**

Everdur Electrical Conduit is available in both Rigid Conduit and Electrical Metallic Tube sizes labeled by the Underwriters' Laboratories, Inc., under their Factory Inspection and Label Service Procedure. Both types of Everdur Conduit are seamless, immune to rust and offer exceptional resistance to a wide variety of corroding agents.

Everdur Seamless Rigid Conduit

Nom. Size In.	Dimensions			Weight Lbs. per Nominal 10 Ft. Lgth.
	O.D. Inches	I.D. Inches	Wall Inches	
3/8	.540	.382	.079	4.381

2 1/2	2.875	2.519	.178	58.18
3	3.500	3.084	.208	83.05
3 1/2	4.000	3.548	.226	103.5
4	4.500	4.026	.237	122.3

Everdur Seamless E.M.T. Conduit

Nom. Size In.	Dimensions			Weights Lb. per Foot
	O.D. Inches	I.D. Inches	Wall Inches	
3/8	.577	.493	.042	.2677
1/2	.706	.622	.042	.3322
3/4	.922	.824	.049	.5096
1	1.163	1.049	.057	.7510
1 1/4	1.510	1.380	.065	1.119
1 1/2	1.740	1.610	.065	1.297
2	2.197	2.067	.065	1.651

Variations from these dimensions and weights must be expected in practice.

EVERDUR SEAMLESS COUPLINGS

For Assembling Everdur Rigid Conduit

Everdur Seamless Couplings in sizes for 1/4 to 4 inches inclusive are available for assembling Everdur Rigid Conduit. These couplings have tapered threads which insure five thread engagement and result in stronger and tighter joints than can be secured with the usual straight threaded conduit coupling of other metals.

SEAMLESS EVERDUR ELBOWS

For E.M.T. and Rigid Conduit

Standard 45° and 90° Elbows, also Elbows of special radius, are available in Everdur E.M.T. or Rigid Conduit in sizes of 1/2 inch and larger.

EVERDUR SEAMLESS RACEWAYS

Special sizes in larger diameters with wall thicknesses comparable to Everdur Electrical Metallic Tubing are available up to 4-inch nominal sizes, in random lengths of 10 to 14 feet. They are not listed with Underwriters', but are specified as Everdur Seamless Raceways.

EVERDUR FITTINGS

Everdur fittings (locknuts, bushings, nipples, Condulets, etc.) are available. Prices on request.

Price on Application

E.M.T. THINWALL CONDUIT

Underwriters' Approved

Galvanized electrical metallic tubing which is light in weight and easy to handle. It is furnished in 10 ft. lengths without couplings.

PLASTIC ARMORED RACEWAYS

ELECTRUNITE® PLASTIC COATED E.M.T.

Republic ELECTRUNITE Plastic Coated E.M.T. is the answer where electrical raceways have to be replaced frequently because of extremely corrosive conditions. Plastic Coated E.M.T. is standard galvanized electrical metallic tubing to which corrosion resistant polyvinyl chloride is applied by a patented extrusion process. By using this plastic armored raceway, replacement costs are minimized, "down-time" of production equipment is eliminated, and it actually costs less because it lasts longer. Installation is simple, no special tools, special fittings or special techniques needed. Has all the installation advantages and built-in qualities of ELECTRUNITE E.M.T. including a grounded system plus the extra protection against corrosion. Plastic Coated E.M.T. is carried in many large distribution centers for your convenience. Should be installed in accordance with provisions of the National Electrical Code as stated in Article 348 for E.M.T.

SEALTITE® CONDUIT

SEALTITE TYPES U.A., U.A. — O.R., C.S.A.

Flexible, Liquid-Tight Wiring Conduit
An Anaconda Product

Sealtite flexible, liquid-tight conduit is manufactured by Anaconda Metal Hose Division of Anaconda American Brass Company. Sealtite is designed to protect wiring on electrical equipment where wiring must move and/or is endangered by moisture, oils, abrasion, corrosion, etc. Sealtite is available in long lengths on reels or in cartons. Liquid-tight connectors are available for Sealtite; these must be purchased separately.

SEALTITE TYPES E.F., H.C., O.R.

Sealtite Type E.F. meets J.I.C. requirements. Its core is of flexible galvanized steel with a polyvinyl chloride cover extruded over the core to make the conduit liquid-tight. Standard color is black; also available in gray or white. Sealtite Type H.C. has a special polyvinyl chloride cover extruded over a rugged flexible galvanized steel core. Type H.C. Sealtite is designed to protect wiring through the temperature range; plus 221°F. to minus 40°F. Type O.R. is covered with a special polyvinyl chloride that provides greater resistance to oil degradation.

Price on Application

Sealtite Type U.A. is approved by Underwriters' Laboratories, Inc. Sealtite Type C.S.A. has been approved by Canadian Standards Association. Type C.S.A. is used in Canada and by American manufacturers who sell or service their products in Canada. A tough extruded polyvinyl chloride cover protects wiring against moisture, oil, chemicals and corrosive fumes. Standard color is black; Type U.A. is also available in gray. The flexible metal core is made of interlocked galvanized steel with a copper bonding conductor wound spirally in the space between each convolution on the inside of the conduit. Type U.A. — O.R. has a special oil-resistant cover for extra protection from destructive oils.

ALUMINUM ELECTRICAL RIGID CONDUIT AND FITTINGS

Approved by Underwriters' Laboratories

Conduit length is 10 feet, threaded both ends, one end fitted with coupling the other end with a plastic protector. Threads: Conduit, elbows with American Standard Tapered Pipe Thread, ASA B2.1; couplings tapped with straight threads. Dimensions and weights are nominal except as otherwise noted. Alloy: All rigid conduit, couplings, elbows and bends are Alloy 6063.

PLASTIC CONDUIT AND FITTINGS

Extruded from a high impact polystyrene compound for underground installation of electrical wires and cables. It meets the physical dimensions outlined in NEMA Standard TC-1-1965. It is light in weight, easy to handle and offers economical, strong and durable corrosion resistant service.

**H-D-P HEAVY WALL (Schedule 40)
PLASTIC CONDUIT AND FITTINGS**

Extruded from a high density (Type III) polyethylene compound. The excellent physical properties of H-D-P Conduit provides an end product with high impact values and toughness. Being highly resistant to acids and alkalis it will also provide long trouble-free service. Installation is a simple procedure.

Nom. Size In.	Nom. O.D.	Nom. Wall	Approx. Wt. Lbs. Per 100'	Standard Lengths

PVC CONDUITS

Extruded from high grade virgin polyvinyl chloride compound, light grey in color. This compound has established its ability to retain its outstanding properties over many years of severe use. Its dependability has been proven by long immersion in water and oil, outdoor aging, exposure to sunlight, underground environments and corrosive atmospheres.

It meets Underwriters' Laboratories specifications for direct or encased underground installation as well as specific above ground locations.

Price on Application

POLYETHYLENE FLEXIBLE PLASTIC CONDUIT

A low cost flexible conduit designed for low voltage wiring. It is extruded from an electrically proven medium density compound which provides a high degree of flexibility. Available in continuous long length coils that allow for a crooked trenching and obstacles without the necessity of installing elbows. A low coefficient of friction makes cable pulling fast and simple. Widely used for small gauge control wiring, telephone conduit for pre-wired outlets, TV lead lines, call systems, and temporary conduit applications.

TYPES, CHARACTERISTICS, AND APPLICATIONS CHART: PLASTIC CONDUIT
Chart prepared by the Thermoplastic Conduit, Duct and Accessories Section, NEMA

TYPE OF PLASTIC CONDUIT	MATERIAL DESCRIPTION AND USE	TYPICAL APPLICATIONS	FEATURES	CODE & STANDARDS	NOMINAL SIZE
PVC-Polyvinyl Chloride Type EPC Schedule 40 Heavy Wall	Gray Semi-Rigid usually supplied in 10' Lengths. A high grade self-extinguishing high impact plastic conduit designed for above and underground installations offering maximum corrosion resistance and life. Primaries to 5KV. Secondaries to 600V.	Industrial & commercial bldgs., schools, hospitals, highway & street lighting, underground feeders, prestressed concrete structures, and general slab work. Corrosive & wet locations as a surface mounted conduit.	Light non-magnetic, non-electrolytic strong 1/6 wt. of steel, 1/2 wt. of aluminum. Inert to most chemicals long life. Worthwhile installation savings. Simple solvent weld gives permanent water tight joints. Fittings available for adapting to threaded system.	U.L. 651 Above ground underground & concrete encased. Listed in NEC, WC 1094 - Type II, MIL C-23571 Type II	1/2" thru 6"
Type EPT Schedule A, Light Wall	Gray Semi-Rigid usually supplied in 10' Lengths. A high grade self-extinguishing conduit used in underground enclosed installations.	Concrete slab & underground.	Same as above.	U.L. 651 concrete encased underground, WL-1094 Type I MIL C-23571 Type I	1/2" thru 4"
Type EPC Schedule 80, Extra Heavy Wall	Gray Semi-Rigid usually supplied in 10' Lengths. Same as Schedule 40 except heavier wall for added safety in hazardous areas requiring an extra high impact conduit.	Utility pole risers and load applications requiring extra heavy wall support.	Same as above.	U.L. 651	1/2" thru 6"
Polyethylene EPC Schedule 40	Black Semi-Rigid usually supplied in 10' Lengths.	Direct Burial & Concrete Encasement	Light Non-Corrosive.	U.L. (Sch. 40) Underground. Listed in NEC	1/2" thru 2"
ABS Type II or DB (Direct Burial)	Black Semi-Rigid usually supplied in 20 and 30' Lengths. A high impact material developed to meet W.U.C. specifications for direct burial in underground distribution systems.	Utility underground distribution systems. Primaries & secondaries & low voltage systems.	Light, strong, quickly installed for maximum labor savings. Excellent for utility use, airport lighting and other underground systems.	Western Underground Committee Spec. (W.U.C.) DB	1" thru 6"
ABS Type I or EB - (Encased)	Black Semi-Rigid usually supplied in 20 & 30' Lengths. Same as DB except thinner wall for concrete encasement.	Same as above except concrete encased.	Same as above except concrete encased.	Same as above EB	2" thru 6"
Polystyrene Type II	Black Semi-Rigid usually supplied in 20 & 30' Lengths. Light, corrosion resistant material underground direct burial communications and distribution.	Airport & highway lighting - Power & Tele. Co. use. Underground distribution systems. Primaries, secondaries and low voltage systems.	Lightest of all plastic conduits. Fast solvent weld joints reduce installation costs.	Corps of Engr. 303.06 Guide Spec. NEMA Std., GSA, Spec. #302-2 Type II	1-1/2" thru 6"
Type I	Black Semi-Rigid usually supplied in 20 & 30' Lengths. Light, corrosion resistant materials for communication and distribution for concrete encasement.	Same as above except concrete encased.	Same as above except concrete encased.	Same as above Type I	1-1/2" thru 6"
Low Voltage Flexible Tubing (PE)	Black Very Flexible usually supplied in 100-500' Lengths, recommended by some manufacturers for underground work, as well as low voltage applications.	Communication conduit, low voltage work, for encasement or direct burial.	Long continuous laying lengths offer worthwhile labor savings and protection.		1/2" thru 2"
Coilable Duct (Polyethylene) Medium and High Density	Black Flexible usually supplied in 100 - 1000' Lengths. High density polyethylene design for use with wiring pre-assembled.	Expressways, utility service lines low voltage systems.	Pre-assembled wire & duct can be run from reels into trench in long continuous runs. Good for URD work, street lighting, etc.		1/2" thru 2"

NATCO UNDERGROUND CLAY CONDUIT
SINGLE AND MULTIPLE DUCT CONDUIT

For telephone, telegraph, railway signal, fire alarm and light and power service. Multiple duct for main telephone runs, single duct for laterals.

The 3 1/4" is the standard telephone duct; 3 1/2" and 4 1/4" are oversize telephone ducts. 3 1/4" bore conduit is unglazed; 3 1/2" and 4 1/4" bore conduit have glazed ducts.

All above have dowel holes for aligning duct holes.

EXPANDED WEB CONDUIT

This conduit permits the division of multiple duct main lines into two or more branch lines, each having a smaller number of ducts than the main line. Such a division is highly advantageous in splaying main duct lines for entrance to central office buildings or to manholes or in straddling pipe lines or other underground obstructions.

One end of this conduit is the same shape and size as regular straight conduit, while at the opposite end, the individual ducts are more widely separated by means of double webs, permitting alignment with abutting branch lines.

No. Duct Holes	Type	For Branching Into:	No.	3 1/4-In. Price Per Piece	3 1/2-In. No.	Price Per Piece

Also available scored for splitting. Prices on application.

All pieces 24 inches long.

NATCO UNDERGROUND CLAY CONDUIT
TRANSPOSITION CONDUIT

Transposition conduit facilitates changing the position of cables on approaching manholes, cable vaults, viaducts, bridges or other crossings.

The position of ducts and cables in 2, 3, 6 or 8 duct conduit lines may be transposed either a quarter turn of ninety degrees, or a half turn one hundred eighty degrees.

A ninety degree transposition changes the conduit line from flat to edge position or vice versa, and the direction of the twist may be either right hand or left hand.

A one hundred eighty degree transposition reverses the position of the top and bottom ducts and cable in the conduit line, and the direction of the twist may be either right hand or left hand. All pieces are 24 inches long.

Nominal Bore, In.	Degree of Twist	No. Pieces in 90 Degree Turn

MITERED CONDUIT

Provides a flexible means of constructing simple or reverse curves in either horizontal or vertical planes. Only one mitered shape is required for any curve of ten foot radius or larger. The radius is varied by interposing straight short pieces between the mitered pieces. The arc or angle of the curve, from 3 degrees up, is governed by the total number of mitered pieces used.

Minimum radius 10 feet. Angle of cut, 3 degrees. 30 pieces required for 90 degree curve. Approximate length per piece, 6 x 6 5/8 inches.

NATCO UNDERGROUND CLAY CONDUIT
FACTORY SPLIT CONDUIT

Before Reassembly

After Reassembly

Designed for repairing or replacing existing conduit lines without disturbing cable. These units are split apart at the factory, then reassembled and securely banded together in their original position by steel straps until ready for use on the job. Diagonal markings on one side of each piece insure proper reassembly in the original position.

WRAPPING TAPE

A special prepared tape which is frequently used for wrapping joints before applying the joint mortar.

It adheres closely and firmly to the conduit surfaces, and aids in waterproofing the joints. Made of paper with a waterproof paraffin coating. Especially valuable when installing conduit duct in trench, sub-

way or masonry structures before pouring concrete encasement.

In Rolls of 100 Linear Yards

Cat. No.	Width In.	Wt. Lbs. Per Roll	Price Per 1000 Yards
9060	4	8	\$36.00
9061	6	12	54.00

DOWEL PINS

Pressed steel dowel pins with integral center flange are used for joining and aligning individual sections of conduit.

All multiple duct and single duct conduit is made with not less than two continuous dowel holes, large enough to accommodate the pins. Two pins are used at each joint.

Size: 1/4" x 3".

No. 9051 Dowel Pinsper 1000 \$23.00

ORANGEBURG FIBRE CONDUIT Available in Three Types

ORANGEBURG STANDARD FIBRE CONDUIT (Type I) is designed for encasement in concrete and provides the most efficient and economical construction for multiple duct installation.

ORANGEBURG CA CONDUIT, flush coupling attached at factory, (Type I) is also designed for encasement in concrete. Installation is a "One step" operation. No separate couplings to handle or store . . . saves time . . . cuts costs.

ORANGEBURG NOCRETE® FIBRE CONDUIT (Type II) is designed for direct burial without concrete encasement where single ducts or several ducts, side by side, are required.

Orangeburg Fibre Conduit meets and exceeds the requirements of Federal Specification WC-581, A.T. & T. (Bell Laboratories) AT-7047, U.S. Navy 9Y, NEMA BC-1-1959, Corps of Engineer Spec CE 303.06. All sizes of Type I and 3" and 4"

Type II are listed by Underwriters' Laboratories.

No joint compound is recommended, no swabbing or reaming is needed.

Conduit Bell Ends

For use at conduit terminals in manholes, at substations, etc.

Conduit Reducers

For reducing from one size fibre conduit to another. Available in all combinations from 2 to 4 in., inclusive. The standard reducer is taper sleeve joint at both ends.

When ordering specify whether for Standard or Nocrete conduit and sizes involved.

Conduit Adapters

Adapters from metal pipe to fibre conduit are available in all combinations from 2 to 4 in., inclusive.

The standard adapter is taper sleeve joint at the fibre end and threaded for metal pipe size specified. Can be supplied straight bore for unthreaded metal pipe.

When ordering specify sizes and types.

5° Angle Couplings

These couplings permit the laying of offsets, long radius bends, etc., to get around obstructions and other services which may be encountered.

ORANGEBURG
ORANGEBURG BENDS AND ELBOWS

These fibre bends and elbows are made to the required radius and degree. Furnished with standard interchangeable taper sleeve joint (coupling included). Stock bends and elbows are listed with dimensions. Split bends and bends of special radius and degree may be made to order.

20" Offset Bends

Bend Sections — 5°-36" Radius

For special radius applications — cross-unders, transformations, obstructions. Offset male and female tapered joints tooled at an angle of 2½°, resulting in a bend section of 5°. Various degrees and length bends, offsets and spirals can be assembled in the field.

Plugs and Caps

Plugs and caps are available for standard and nocrete in all sizes.

Price on Application

PORTER XTENSIONDUCT AND METAL MOLDING

(NATIONAL ELECTRIC)

111 XTENSIONDUCT

Neutral Gray Finish — Two pieces, base and capping. Packed 20 lengths, 5 ft. long in sealed corrugated container. Wire Retaining Clips furnished with each length.

WIREMOLD SURFACE METAL RACEWAYS AND MULTI-OUTLET SYSTEMS

Fittings for use with each system are partially listed, and are typical. Couplings (not shown) are furnished with all one-piece raceways; Plugmold® 2000, Snapicoil® and Wired Sections; and Plugmold 2200 Snapicoil. Couplings must be purchased separately for two-piece raceways. Refer to the latest Wiremold Catalog and Wiring Guide, available from Graybar, for description of full line of fittings and accessories. Wiremold systems are completely inter-connectable with each other and with other types of wiring systems.

**PORTER NEPCODUCT
"K" SYSTEM**

(NATIONAL ELECTRIC)

7055K Nepcoduct System

K type Nepcoduct is an electrical raceway system made of 14 gauge steel. It provides convenient outlets at the floor surface. This system can be used for both high and low potential wiring. Nepcoduct may be used as a single duct system or in multiples of two or three ducts for additional capacity and to provide separate wiring facilities for light, power, telephone and signal circuits. All outlets are threaded. Nepcoduct is protected from corrosion by a zinc covering plus a special polyvinyl acid-resistant coating. Listed by Underwriters Laboratories, Inc., K Duct is used on many jobs in conjunction with H Duct because they complement each other in providing the proper channel space to accommodate wiring requirements. See Service Fittings section for desired fittings you require.

Cat. No.	Nepcoduct Description	Estimated Price/Ft.
7055	10' Blank	\$1.20
7055-K	10' w/5 outlets 24" O.C. 2" pipe size threaded 1" high*	1.50
7055-K	With 5 outlets 24" O.C. 2" pipe size threaded 1½" to 1⅞" high	1.66
7055-K	With 5 outlets 24" O.C. 2" pipe size threaded 2" to 2⅜" high	1.84
7055-K	With 5 outlets 24" O.C. 2" pipe size threaded 2½" to 3" high	2.00

*For duct with outlets up to and incl. 1⅞" high—use price above.

Note:

- 1) For outlets higher than 3" refer to factory.
- 2) For outlets closer than 24" O.C. add .25 per outlet.
- 3) For outlets 30" O.C. use standard price.
- 4) All prices based on 14 gauge steel electro-galvanized duct with M.V.C. coating.
- 5) All outlets are die cast zamak with standard 2" pipe thread.
- 6) For 1½" outlet size type L duct corresponding price on K duct outlet height—consult factory for delivery—type "L" duct is not stock material.

A complete line of Junction Boxes, Saddle Supports, Couplings, Linoleum Pans, Outlet Adapters, Outlet Extensions, Reducers, Afterset Inserts, Flat and Vertical Elbows, Marker Screws and Special Fittings are available with this product line.

**PORTER NEPCODUCT
"H" SYSTEM**

(NATIONAL ELECTRIC)

7055H Nepcoduct System

H type Nepcoduct is an electrical raceway system made of 14 gauge steel. It is used as a power raceway or telephone and communications systems for modern office buildings requiring network teletype, data processing and extensive communications systems. All outlets are threaded. Large duct area eliminates congestion of large size cable feeds and facilitates cable pulling. H type Nepcoduct is protected from corrosion by a zinc covering plus a special polyvinyl acid-resistant coating. Listed by Underwriters Laboratories, Inc.

H Duct is used on many jobs in conjunction with K Duct because they complement each other in providing the proper channel space to accommodate wiring requirements. See Service Fittings section for desired fittings you require.

- 4) All prices based on 14 gauge steel electro-galvanized duct with M.V.C. coating.
- 5) All outlets are die cast zamak with standard 2" pipe thread.
- 6) For 1½" outlet size type L duct corresponding price on K duct outlet height—consult factory for delivery—type "L" duct is not stock material.

A complete line of Junction Boxes, Saddle Supports, Couplings, Linoleum Pans, Outlet Adapters, Outlet Extensions, Reducers, Afterset Inserts, Flat and Vertical Elbows, Marker Screws and Special Fittings are available with this product line.

**PORTER 14000 SERIES HEADERDUCT
(NATIONAL ELECTRIC)**

A rugged rectangular pre-galvanized 14 gauge steel duct 1 3/8" deep by 7 3/4" wide. This complete system offers power-light-communication raceway distribution from panel to floor cell. This system can be installed as a two piece or one piece system. The two piece system eliminates waste, reduces cutting and allows maximum access to cellular floor since cover is removed.

Junction units are an integral part of the duct lengths designed to eliminate the raised spots and depressions that occur because of minor variations in the level of the concrete. Three accessible flush screws makes the junction unit ring adjustment easily.

Floor Taps, Grommets, Marker Screws, Abandon Outlet Plates, Elbows, Duct Straps, Capping Plate, Linoleum Pans, Cross Boxes, Hand Hole Boxes, Adapter Ducts, Cell to Conduit Connectors and Elbows, Standpipe Fittings and other miscellaneous fittings round out this complete product.

**PORTER TRENCHDUCT
(NATIONAL ELECTRIC)**

Trenchduct is a rugged pre-galvanized 14 gauge steel duct available in cover width sizes of 9, 12, 18, 24, 30 and 36 inches by 2 3/8" minimum and 3 1/8" maximum depth for both adjustable and non-adjustable. This system is designed to provide the distribution capacity necessary to energize a cellular steel floor. Made with one or more compartments to accommodate all high and low potential systems in one duct run. Removable cover plates permit access to wiring at any point. A complete line of fittings include flat elbows, tee boxes, cross boxes, riser duct, 90° vertical elbows, end blanks, cabinet connectors and trim strips.

Non-Adjustable Trenchduct—Std. Length 6'0";
Cover Length 3'0"; Trench Depth 2 1/2"

**15000 SERIES
FLUSH**

Flush-type 15000 Series Headerduct is a rugged pre-galvanized 14 gauge steel duct 2 1/2" deep by 10" wide. This system offers a large header capacity for telephone and power lines to be used as a feeder to the cellular floor. Removable rib-reinforced cover plates of die cast aluminum butt to form top of duct, permitting access to wiring at any point. Flush plates for carpet covering or recessed plates for the flooring are standard. A complete line of fittings include floor and wall elbows, tee boxes, panel duct and cabinet connectors. Standard duct length is 5 feet.

7960-F	Svc. fit. ditto for flushduct outlet.	13.50

SQUARE D UNDERFLOOR RACEWAY SYSTEMS
THE NEW DESIGN IN UNDERFLOOR DUCT INSERTS

This new insert is a departure from the cylindrical insert always used in the past. The advantage of the ellipsoid is that the larger opening and greater effective turning radius makes fishing and pulling simple and easy. It is now practical to use the duct for industrial applications as the longer opening will permit the use of heavy power cables. It has excellent uses in office buildings, where the larger cables for Key, Call Director and Call Commander telephones can be pulled and even looped through one of these new inserts.

The "Dedicated Service" concept becomes even more practical with the use of Square D ellipsoid insert duct. Abandoning Amphenol terminated telephone cables is possible without removing the connectors now that the necessary underfloor duct equipment is available in the Square D line. The abandon outlet fitting in the ellipsoid insert has provision for storing the Amphenol connector and the flush floor fitting with the high tension receptacle provides for terminating the power wires. Thus when the station is changed, the connector can be recessed within the insert and left in that position. When reactivated at a later date, by relocation of office personnel, there is no interruption of office procedure. The same technique can be used with raw-ended station cable.

Ellipsoid Insert Duct — Standard and Super

Abandoned Outlet with Stored Connector

SQUARE D TWO-LEVEL JUNCTION BOXES FOR PYRAMIDAL FEED* SYSTEMS

The unique (U. S. Patent No. 3,264,791) PYRAMIDAL FEED* system provides unlimited capacity for telephone, power, or any other service. Distribution or insert duct is placed to provide the degree of flexibility desired. The number and size of the insert duct will depend on the services and capacity required. Each service (i.e., telephone or power) is connected to the source (i.e., telephone closet or panelboard) by a super duct on a lower level. Two-level boxes are used at the junction of distribution duct and its feeder.

This balanced feed is a highly efficient use of materials, and therefore, is most economical.

*Trademark of Square D Company.

TRIANGLE UNDERFLOOR RACEWAYS**TRIANGLE HEADERDUCT CELLULAR FLOOR
FEEDER RACEWAYS**

Triangle Headerducts are large capacity feeder raceways which provide access to a building's cellular steel floors, thus utilizing the cells as raceways for electrical conductors. Individual outlets for power, telephone and intercommunications may be located anywhere along the energized cells. A Triangle Headerduct feeder raceway system provides the most efficient electrical distribution for cellular floor construction. The simplified method of locating and relocating service outlets results in lowest installation and building maintenance costs. Triangle Headerduct Systems incorporate outstanding design features which simplify layout and installation of the cellular floor electrical system —

- Steel ducts painted with corrosion proof acrylic coating.
- Cast Aluminum Grommets assure grounding continuity of Headerduct and Cellular Floor. (polyethylene also available)
- Electrical Service Fittings in Color (Colorful above-floor fittings to match room decor)
- Capacity for both present and future electrical requirements.
- Corrosion-proof acrylic coating on couplings and straps.

A full line of assembly fittings, accessories and service fittings is available.

**TRIANGLE TRENCHDUCT ELECTRICAL RACE-
WAY SYSTEM**

Triangle Trench Duct is an extra-large capacity electrical distribution feeder system for power or telephone and communication wiring. This system meets the ever-increasing demand for these services *today*, and provides the necessary expansion area for future requirements. Trench Duct primarily serves as a feeder raceway system to the activated cells of a cellular type floor. May also be used as an isolated trench for long runs of feeder cables or, by use of adapters, as a feeder system for standard underfloor duct distribution. For initial installation of conductors, covers may be removed from the Trench Duct run and cables laid in. When new cables are subsequently added, access to the trench is achieved by removal of cover plates at desired locations and cables pulled in. Trench Duct may be partitioned to provide separate power and communications compartments within the common housing. The partition may be located to adapt the duct to expected wire fills for low and high potential requirements. Partitions are installed in the duct at the factory. Trench Duct System layouts are factory-engineered for customer convenience and for manufacturing specifications for each component. The drawings are furnished to the electrical engineer/contractor for installation guidance and future reference. This is a Triangle courtesy service. A full line of assembly fittings is available.

Three types available:

1. Non-adjustable cover plate
2. Standard adjustable cover plate
3. Double wall linoleum trim (exclusive 4 sided tile trim protects all four edges during servicing.) Aluminum or stainless steel available.

**Service Fitting Utility**

Attractive above-floor Service Fittings are designed with built-in ruggedness to withstand floor traffic and floor-cleaning equipment. The sturdy Service Fittings fasten securely in the threaded floor outlet, lock snugly in the selected floor position.

TRIANGLE Service Fittings are adaptable, permitting interchange of receptacle covers without changing the housing. This flexibility reduces inventories of complete fittings required for changing floor layouts and results in lower building maintenance costs.

Price on Application

TRIANGLE UNDERFLOOR RACEWAYS

"TRIANGLEDUCT" UNDERFLOOR ELECTRICAL RACEWAY SYSTEMS

"Triangleduct" Raceways utilize a unique system of multiple purpose parts in which a given part performs more than one function. This method reduces the number of parts to about 25% of the usual requirement. The result is better service, ease of ordering, fewer parts for you to keep track of, less possibility of losing parts. Moreover, many parts are common to all four of our systems, often multiplying the above advantages. "Triangleduct" is coated for maximum protection against rust and corrosion by a costly acrylic painting process. This extremely hard surfaced coating does not sacrifice itself to corrosion as does zinc, but retains its corrosive resistant properties year after year. Non-corrosive ZAMAK Duct Outlets assure life-time trouble-free access to the ducts. Service Fittings may be matched to floor coverings or desks to blend with their modern surroundings. The trim, new Service Fittings, less than three inches high, have ample wiring capacity to meet modern office requirements. A full line of Assembly Fittings, Duct-Supports, Junction Boxes, Service Fittings and accessories are available.

For: Power and light
Telephone, signal, Intercommunications

"TRIANGLEDUCT" CATALOG No. 6 DUCT

Designed to meet requirements of maximum wire fills and large size telephone and signal installations. No. 6 Duct has cross section area of 8.75 square inches. The duct is 14 gauge steel, corrosion resistant coating with 2" threaded outlet spaced every 24". Assembly fittings are provided for complete installation of No. 6 duct systems or in combination with No. 3 Ducts. The entire system installs in floor fill ranging from 2½" to 8".

No. 6-B JUNCTION BOX

The new 6B two level sheet metal Junction Box provides a larger work and wire pulling area at the junction point . . . while providing for segregation of systems (distribution — top, feeder lines — bottom). Where at least 4" of concrete slab exists, it provides a more flexible, in some cases more economical method of obtaining large capacity. Available in three different leg lengths to assure adequate width under adjacent duct. Adaptable to single 3, double 3 or 3/6 combinations. U.L. approved.

"TRIANGLEDUCT" CATALOG No. 3 DUCT

Standard size duct, 14 gauge steel, protected from corrosion by extra-heavy coating. Cross section area of 3.923 square inches meets majority of electrical wiring requirements. The underfloor raceway system of one -- two -- or three duct runs provides independent service for power, telephone and inter-communications. Two inch pipe size threaded outlets, with wide sweep radius for safe wire pulling, are spaced every 24" along the 10 foot duct length.

GLOBE CABLE-STRUT® CABLE TRAY

CABLE-STRUT Cable Tray Installation by Globe

DESCRIPTION AND UTILITY

Cable-Strut Tray Systems are proven members of the United States Gypsum product family. Designed and manufactured by Globe Division to exacting USG standards, they serve in many places and many ways throughout industry.

Cable-Strut Cable Tray, available in three interchangeable types, is a continuous mechanical support system designed for installation of control, power, and signal conductors or other electrical services. It is made in straight sections, with matching fittings to accommodate all changes of direction or quantity of cables. Design conforms to NEMA recommendations for ventilated cable trays.

These cable trays will also support metal, glass and plastic pipes used in chemical processing, hydraulic lines, and various other industrial equipment. Trays may be supported by Globe-Strut Channel Framing (see USG Folder AV-98 for suggested support system).

TYPES AND FUNCTIONS

Ladder Type — Cable-Strut Ladder Type Tray, Model K, is fabricated with two longitudinal side rails connected by individual transverse rung members. Standard clear inside widths: 6", 9", 12", 18", 24", 30" and 36"; depth: 3", 4" and 6"; rung spacing: 6", 9", 12" (and 18", steel only).

Trough Type — Cable-Strut Trough Type Trays are available in two models: Model U is of one-piece metal construction with ventilated bottom; Model K is fabricated with two longitudinal side rails. The vented tray transverse rungs are 1" o.c. with $\frac{1}{8}$ " opening. Standard clear inside widths: 6", 9", 12", 18", 24" and 30"; depth: 3", 4", and 6". These troughs are generally recommended to prevent festooning of light cables.

Solid Bottom Type — Cable-Strut Solid Bottom Trays are available in Model U. Widths and depths are same as Trough Tray Type, Model U.

Channel Type — Cable-Strut Channel Type Tray, Model U, is identical to the trough type but generally is used as a branch type feeder. Standard clear inside widths: 3" and 4"; depth: 3".

MATERIALS

Steel — Steel used is of commercial quality, with a standard finish of galvanized coating conforming to ASTM A-525. Also available hot dipped galvanized after fabrication.

Aluminum — Aluminum alloys used are selected for appropriate structural and mechanical properties.

FITTINGS

One series of fittings, standardized to serve both trough and ladder installations, provide economy.

CABLE TRAY COVERS

Cable tray covers, solid type or ventilated are available for all straight sections. Solid covers are available for all fittings. Standard material is commercial quality steel, mill galvanized in accordance with ASTM A-525 and/or aluminum.

MISCELLANEOUS ACCESSORIES

Cable clamps, hangers, side channel, hold down or cover clamps, tray divider strips with or without protectors, drill jigs, etc., are available as normal accessories. Cable pulleys, cable rollers, etc., needed for installation of cable are available for purchase or rent.

SAFE, UNIFORM LOAD

Consult current Globe Division literature for applicable safe uniform loads of various types of cable trays.

Trough Type Model "U"

Trough Type Model K

Ladder Type Model K

HUSKY/BURNDY CABLE SUPPORT SYSTEMS

Husky/Burndy pioneered the development of support systems for cables in free air and specializes in such systems "complete to the last bolt," not only the cable trays required, but also more than a thousand standard accessory items to permit complete unit responsibility.

Husky offers a variety of cable tray types and constructions in both steel and aluminum to meet the requirements of an infinite number of tray applications. One or more trays will be found to be most economical for a given set of conditions.

VENTRIB Trough

ELECTRAY Trough

Cable troughs are furnished with continuous bottoms either ventilated or non-ventilated. Standard widths are 6", 9", 12", 18" and 24". Standard radii are 12" and 24". For use as cable supports for small multi-conductor control, signal circuit, and power cables.

VENTRAY Ladder

ELECTRAY Ladder

The ladder type tray consists of two longitudinal side members or stringers connected by individual rungs. For use as power cable supports, the rungs are usually 18 inches apart. Lighter cables may require a rung spacing of 9 inches.

ELECTRAY Channel, 3"

ELECTRAY Channel, 4"

The channel type tray is one piece, ventilated channel section to support a single power cable or multiple control or signal cables.

FITTINGS

All Trough, Ladder and Channel lines are complete with fittings to accommodate changes in size or direction of the tray system.

QIKLOK

Quickly installed, makes a rugged connection between sections in the VENTRIB, VENTRAY systems. The QIKLOK splice is easily fitted and bolted through three pre-punched holes at the end of each tray section. Complete with nuts and captive lock washers, the required number of sets are automatically supplied with each order.

TROUGH AND LADDER SPLICE PLATES

For ELECTRAY troughs and ladders the required number of splice plates are automatically supplied with each order, complete with bolts, nuts and captive lock washers.

COVERS

A complete line of covers and fasteners to cover every type of application is available.

Corrugated, Ventilated

Flanged, Non-Ventilated, Flat

Corrugated, Ventilated Flat without Flange

Hat-Shaped, Ventilated

HUSKY/BURNDY CABLE SUPPORT SYSTEMS

SUPPORT MATERIAL

A full line of accessories is available when a cable support system is to be suspended from overhead. Trough, Ladder or Channel may be hung singly, in pairs, or in groups by means of hanger rods, in combination with hanger clips, support channels or other accessories.

LONG SPAN SUPPORTS

When long spans must be bridged, indoors or outdoors, cable trays are supported in various ways depending upon the length of the span, the possible ice load, the anticipated wind load, the arrangement and number of trays and other special circumstances.

Long spans may be bridged by trussed ladders, channel beams, angle trusses, suspension cables, and suspension bridges. Structural "H" frames, "A" frames, pipe supports and towers, used in connection with the various rigid and flexible span supports, complete the line of long spans offered.

PVC COATED TRAY

The polyvinyl chloride coatings lets you install a cable support system in areas highly corrosive to metals, which previously could not withstand the damaging effects of destructive chemicals and atmospheric conditions. The Husky PVC coating is abrasion resistant, will not chip, or peel, even under extremes of temperature.

Typical application for Husky PVC coated cable tray include chemical, petrochemical, cement processing, paper and pulp, electroplating and mineral industries.

HUSKY'S ENGINEERING SERVICE

Husky/Burndy offers to its users an exclusive engineering service which can substantially reduce field engineering and labor, thus achieving the lowest possible total installed cost. By coordinating marked-up layout drawings and support details with material packaging and marking, the erection of cable supports system is reduced to a simple assembly operation.

CABLE INSTALLATION TOOLS

"EZ" Rolls and pulleys (both single and triple types) facilitate greatly the installation of cable in Husky trough, ladder and channel. EZ rolls and pulleys may be purchased or rented on a weekly basis.

PORTER LADDER-WAY**(DELTA-STAR)**

Ladder-Way is a highly efficient and economical cable support system. Its low cost, fast installation and quick service features, offer advantages over other methods of wiring.

Accessibility of cables for inspection and maintenance as well as its adaptability to change due to increased load or relocation of equipment are of importance where expansion or change is contemplated.

The open construction of Ladder-Way offers additional advantages over solid or semi-solid tray construction. Being lighter in weight yet designed to provide a rugged structure capable of withstanding the loads imposed by the cable, they are more easily handled and quickly installed. Lighter supporting structures can be utilized. The open construction also results in better ventilation, lower operating temperatures and permits the use of higher current densities. Large openings permit dust, dirt and moisture to filter through, thus minimizing their accumulation.

The ample range of standard straight and curved sections plus the adaptability of these components make Ladder-Way one of the most versatile systems to install.

Ladder-Way is manufactured in standard lengths of 12' with 8" rung spacing. Special rung spacings can be provided at a minimum of 4" or in increments of 4". Straight sections are formed of pre-galvanized steel and are easily joined by bolted tray connectors which join the sections in perfect alignment to form a smooth and rigid junction. One set of two connectors are furnished with each section. Additional connectors are available. All Ladder-Way sections have pre-punched holes to accept connector bolts. Where sections must be field cut, field drilling can be easily accomplished.

STANDARD SECTIONS

Ladder-Way is manufactured in standard straight sections of 6", 12", 18" and 24" widths and 12' lengths with rung spacings of 8". Special rung spacings can be furnished as low as 4" and in greater spacings than 8" in increments of 4" on special order.

All Ladder-Way straight lengths and horizontal curved sections are fabricated from roll formed 19-gauge pre-galvanized steel. Rungs are of the same gauge, formed into a square tubular section and are fastened to the side rails by curling back the ears under pneumatic pressure. This construction results in an inherently strong and rigid tray that is light in weight and easily handled.

All vertical bends, both inside and outside, are of a design which permits adjustment yet will hold the shape when installed. This design is a distinct departure from the conventional means for changing the direction of a vertical cable run. When ordered, a straight section of joined links and rungs, factory assembled to provide the desired angle and radius when formed by hand in the field is furnished. These assemblies are identical for both inside and outside bends. During installation these elbows can be altered slightly to compensate for misalignment in the sections they join. This feature often eliminates field cutting or bending of sections. If desired, special bends of odd angle or double bends to meet specific conditions can be provided. These special fittings can often reduce the number of section joints or permit slight offsets over or under obstructions impossible with conventional rigid elbows and are an exclusive patented feature of "Delta-Star" Ladder-Way.

When required, the Ladder-Way line can be furnished either hot-dip galvanized after fabrication or in aluminum. All dimensions are the same as the standard pregalvanized tray.

Width W.	Catalog No.	Wt./Lbs.
6"	450600	33
12"	451200	38
18"	451800	42
24"	452400	47

Note: Catalog numbers cover pre-galvanized steel. Steel, hot-dip galvanized after fabrication or aluminum sections are also available. To order add suffix -H for hot-dip galvanized or -A for aluminum, to above numbers. For other than 8" rung spacing specify on order. Minimum rung spacing is 4".

Ladder-Way is produced as a complete system with the following components available: Straight Sections, Straight Section Covers, Tray Connectors, Cover Fasteners, Horizontal Bends, Crosses, Tees, Solid Covers for Horizontal Bends, Crosses and Tees, Vertical Bends Covers for Vertical Bends, Special Vertical Bends, Horizontal Reducers, Flexible Connectors, Cable Separators, Box Connectors, End Plates, Mounting Brackets, Drop outs, Hold-Down Clamps, Support Angles, Hanger Rods, Hanger Rod Couplings, Hangers, Rod Anchors and Beam Clamps.

PORTER UNI-TRAY

(DELTA-STAR)

Uni-Tray is a complete prefabricated electrical cable support system for control or power cables. Used extensively by both electric utilities and industrial plants. It can be installed economically for less than a conduit system. The accessibility permits easy inspection for normal maintenance or cable rearrangement. A variety of cable-way sizes permits selection of a unit which is large enough to allow for additional cables on future power requirements. When power demands increase beyond expectations, additional cable-way can be attached to hangers on the initial system.

Uni-Tray offers distinct advantages over solid or punched steel cable-ways. The reasons are due to unobstructed ventilation, lower electrical losses, lighter weight, cleaner plus rigid production and inspection standards.

Uni-Tray is fabricated from 9/11 gauge expanded steel and is available in standard 10 foot lengths, 3 inches deep. Standard galvanized steel sections can be obtained in 3, 6, 9, 12, 18 and 24 inch widths.

When required the entire Uni-Tray line can be obtained in aluminum. Standard sections are available in the same dimensions as galvanized steel, except that the maximum width is 18 inches.

Tray

Cover

UNI-TRAY CABLE-WAY INSTALLATION

The simplified system of assembling UNI-TRAY Cable-ways with WEDGIT fittings, plus Delta-Star's high quality workmanship on UNI-TRAY sections, makes installation quick and easy. The following suggestions may be helpful in setting up your cable-way system.

Planning the complete installation in advance simplifies succeeding operations, especially with regard to future plant expansion programs, etc. If system layout assistance is desired, field engineering service is available.

UNI-TRAY sections are joined by driving the WEDGIT clamping channels into position, as illustrated. Elbows, tees, crosses, reducers, drop-out, are joined in the same way. Barrier strips may be added as required.

It is recommended that tray supports be used at a maximum 10 ft. spacing. For proper appearance, deflection should be limited to one part in two hundred of span length.

As a complete system Uni-Tray has the following components available: Straight Sections, Straight Section Covers, Reducers, 90°—60°—45°—30° Horizontal Elbows and Covers, Horizontal Adjustable Elbows and Covers, Horizontal Tees and Covers, Horizontal Crosses and Covers, 45° Horizontal Wyes and Covers, 90°—60°—45°—30° Outside Bend Elbows and Covers, 90°—60°—45°—30° Inside Bend Elbows and Covers, Vertical Tees, Vertical Crosses, Cable Hanger Elbows, Barriers for Horizontal Elbows, Barriers for Riser Elbows, Barriers for Straight Sections, Uni-Tray Connectors, Uni-Tray to Ladder-Way Connectors, Blank Ends, Conduit Support Brackets, Wedgit Channel Fittings, Tray to Box Connectors, Cover Fasteners, Standard Drop-outs, 4 Way Frame Type Drop-outs, Round Drop-outs and Conduit Nipple Drop-outs.

*Tray Catalog Numbers include one set of Wedgit fittings.

Uni-Tray sections are easily fitted together with three Wedgit fittings.

Wedgit fittings slide into position . . . reduces section assembly time by 75%.

The assembled connection is strong and adds rigidity to the section.

Wedgit fittings eliminate all bolts, pins, rivets or hinges.

THE KINDORF CHANNEL ERECTOR SYSTEM

The Kindorf system of channels and accessories has been developed by Steel City engineers to provide an economical and time-saving installation of electrical and mechanical supporting and framing requirements.

GALV-KROM FINISH — electrogalvanizing plus zinc chromate, is standard on Steel City Kindorf products. This patented finish protects up to four times as long as the standard thickness required by Underwriters' Laboratories, Inc., Galv-Krom imparts an attractive bronze luster to the surface which does not require painting. It is smooth, clean and remarkably tough.

All Channels have 3/8" Continuous Slot and are produced with Solid Bases, Bolt Holes, Slots or KO's.

STEEL CITY SLOTTED ANGLE

Three Sizes... The Right Strength for Every Job

EXCLUSIVE TIME SAVER FEATURES

- Measuring lines every 3/4" and every 3"
- Slot and hole pattern for rigid assembly
- Cuts in one easy, burr-free stroke
- Galvanized after punching — complete rust resistance
- Packaged for "one-man" carry

All three sizes available in ten or twelve foot lengths — five lengths to the standard package with 36 3/8" hex bolts and an equal number of serrated nuts.

ACCESSORIES

Gusset Plate — RA-GP

A three-hole connector for all three sizes of slotted angle. Assures extra-rigid angle assemblies. Standard package 25.

**Casters
Rigid and Swivel Type**

Rigid Casters, RA-RC, and Swivel Casters, RA-SC, have large 3 1/2" diameter wheels of hard rubber composition. Casters are 4 3/4" high with mounting plate holes on 3-inch centers to match slotted angle hole pattern. Each caster supports 225 lbs. Packaged in sets of two.

PORTABLE CUTTER

For Slotted Angle

RA-C Portable Cutter cuts all sizes. Single stroke — clean, burr-free cuts. Positioning device assures accurate cutting.

BOLTS AND NUTS

Available separately. Nuts are serrated for self-locking.

RA-BN- 5/8" 3/8" — 16 x 5/8" long

STEEL CITY BANTAM CHANNELS

Practical and economical channel bars simplify the support of overhead fixtures, conduit pipe and boxes in suspended ceiling installations.

Installed slot-down, the open slot accommodates and allows easy positioning of Channel Bar accessory fittings or 1/4" hanger rod to support light and medium weight equipment.

TYPICAL APPLICATIONS

**Bantam Ribbed Channels
(Extra Strength)**

Cat. No.	Description
6029	16 gage (.060")
6028	18 gage (.044")
6027	20 gage (.034")

**Bantam Lightweight Channels
(Single and Double)**

6012	Double Channel Bar
6013	20 gage (.044")
6014	18 gage (.034")

R & S EVER-LOK RECEPTACLES, PLUGS AND CONNECTORS

Division of Midland-Ross Corp.

Automatic Locking
TYPE SE — FOR AUTOMATIC PRESS AND TOOL CONTROL APPLICATIONS

5 Amp., 250 Volts, A.C. or D.C.
Two to Twelve Pole—Polarized

RECEPTACLES WITH COVER

No. SE9

Covers—Heavy gage steel, cadmium plated. Furnished with 6-32 mounting screws. Can be furnished with 10-24 screws, at same price, if specified.

Boxes—Use type FD cast boxes. Can be furnished with single gang cast iron conduit box No. 3711 at additional cost. When so required, add final suffix "D" to catalog number.

Interiors—Contacts are removable and have crimp type terminals for No. 12 wire. Regularly furnished with housings ungrounded. When required with one pole grounded to housing, add prime suffix "G" to catalog number. Same price.

†Class I, Groups C and D for use with PS25-300W bulb.

‡Can be furnished with colored inner globe for 100 watt maximum lamp. Information and prices on request.

*Accommodates medium screw base lamp only.

•Accommodates 300/500 watt mogul screw base lamp.

Globes — Impact and explosion-resisting glass. Prismatic style globes are smooth outside to keep exterior of globe dust-free. Prisms on inside provide soft, even light with reduced glare and no loss of efficiency.

Outlets — Unless otherwise specified, furnished with ¼-inch tapped outlet on 100-500 watt fixtures. Maximum conduit: 100-500 watt ¼-inch. Specify size when ordering.

Conduit Base — Standardized base permits interchanging reflector globe assemblies of all sizes.

Housings — Cast aluminum alloy, natural finish.

Guards — Steel, cadmium plated finish. Can be furnished in cast aluminum alloy at extra cost.

Reflectors — Porcelain enameled steel; green outside, white inside.

For use between fittings and covers or wiring devices.

CROUSE-HINDS CONDULET® CONDUIT FITTINGS

TYPE XJ CONDUIT EXPANSION JOINTS

Vaportight and Weatherproof

Furnished with end bushing and lead wool packing for movable conduit.

Relieve long conduit runs from strain caused by expansion and contraction, due to temperature changes. The National Electrical Code requires that expansion joints and telescoping sections of raceways shall be made electrically continuous by bonding jumpers or other approved means.

GC100 grounding strap, with GC101 or GC102 strap clamps, constitutes an approved bonding jumper and is especially suited for this purpose.

Size Conduit	Maximum Conduit Movement	Minimum Length of GC100 Strap	Cat. No.	List Each

TYPE GUB AND EPC THREADED COVERS

For GUB Series Junctions

When GUB Series are used only as pull boxes, the flat covers are suitable but, when splices in heavy conductors are to be made and enclosed, the dome covers are more suitable as the conductors may be pulled in with the ends well out beyond the body opening to make them easily accessible for splicing. After the splices are completed they do not have to be crowded back into the body but can be left as made up to be enclosed and protected by the dome cover.

CROUSE-HINDS JUNCTIONS

TYPE WJB AND WJBF JUNCTION BOXES

**Watertight and Weather Resistant—Raintight
Meet NEMA 4 Test Requirements**

**Hot-Dip Galvanized Feraloy or Aluminum—
Same Price—Standard Material Feraloy—
Designated Aluminum by Suffix "SA"**

Type WJB181206-MF

Type WJBF181206-MF

Type WJB and WJBF junction boxes are suitable for both outdoor and indoor use. A round Neoprene gasket, cemented to the cover, effectively prevents the entrance of water even when the area is washed down with a hose. Bodies are outside flange design. Type WJB is for surface mounting and type WJBF with recessed, flat "sidewalk" cover is for flush mounting in walls or floors. Either type may be obtained with mounting feet by adding Suffix "MF" to the catalog numbers at the additional list prices indicated on next page.

Standard finish is hot-dip galvanized Feraloy. Aluminum is also available at no additional charge and is specified by adding Suffix "A" to the catalog number.

Pads of sample drilling templates for submittal of conduit arrangements are available on request. The number, type, and size of conduit entrance, in the location required, must be submitted on the drilling template or similar sketch.

TYPE LBH FITTINGS

**For Pulling Cables
Explosion-Proof and Dust-Tight**

Class I, Group D; Class II, Groups E, F, and G; and Class III LBH10 and 20 are also suitable for Class I, Groups B and C Locations

Well suited for pulling large conductors or conductors that are stiff because of lead sheathing. Especially useful at motor locations. Covers are domed, providing room for an easy bend in the conductor, thus avoiding undue strain upon the insulation or lead sheath.

Size Hub	Cat. No.	List Each	Overall Length Inches	Overall Width Inches

TYPE ESC PULLS

**For Pulling or Splicing Conductors
Explosion-Proof, Dust-Tight, and Weather
Resistant—Raintight**

Class I, Group D; Class II, Groups E, F, and G; and Class III

For use in hazardous locations, and designed to afford a convenient opening in the conduit system for pulling in or splicing conductors. They have threaded hubs for rigid conduit.

The body is cylindrical with a long work opening in the front between the threaded end portions.

Size Hub	Cat. No.	List Each	Overall Length, In. Conduit Pulled Open	Opening Only

CROUSE-HINDS CONNECTORS

TYPE UNA CONNECTORS

Explosion-Proof and Dust-Tight

Class I, Group D; Class II, Groups E, F, and G; and Class III

Type UNA is a convenient coupling for conduit joints made at angles from 90 to 180 degrees.

A single clamping nut provides a union feature as well as easy adjustment to required angles.

UNA16, 26, and 36 are classified by Underwriters' Laboratories as box connector conduit unions for use with conduit boxes threaded for conduit support.

Box Connector Conduit Unions— Male For Use Only if Adjacent to a Condulet

TYPE EZD INSPECTION AND DRAIN SEALS

Explosion-Proof and Dust-Tight

Class I, Groups C and D; Class II, Groups E, F, and G
For Sealing Vertical Runs of Conduit

The National Electrical Code requires that conduit systems in Class I Hazardous Locations be provided with means by which the systems can be drained of water, if there is a likelihood of water accumulation.

Type EZD Drain Seals and EZD Inspection Seals listed below make compliance with this rule simple and inexpensive.

Inspection Seals

Size Hub	Dimensions Lgth.	Dia.	Turn- ing Radius†	Internal Volume†	Cat. No.	List Each

CROUSE-HINDS SEALS

TYPE EZS SEALS

Explosion-Proof and Dust-Ignition-Proof

For Sealing Vertical or Horizontal Runs of Conduit

Have round cover openings and provide ample room for placing dams around and between conductors, preparatory to sealing.

Female Hub Top and Bottom

CROUSE-HINDS DRAINS AND BREATHERS

TYPE ECD DRAIN AND BREATHER VALVES

Explosion-Proof and Dust-Ignition-Proof (Dust-Tight)

Class I, Groups C and D

ECD Drain ECD Breather

The ECD breather valve is similar to the ECD drain but is designed to be installed in the top of explosion-proof housings, allowing air to pass in or out as conditions vary.

The labyrinth handle is a rotating cap to prevent dirt from interfering with the action of the valve.

CROUSE-HINDS COUPLINGS

EC SERIES FLEXIBLE COUPLINGS

Explosion-Proof, Dust-Ignition-Proof and Watertight

For use in hazardous locations where it is necessary to employ flexible fittings, as at motor terminals. Provide a safe means of making connections. They are made to withstand explosion pressures and to provide ample mechanical and electrical protection.

Also watertight, and are, therefore, suitable for use in damp locations or under water, such as connections to underwater floodlights and fountain lights.

TYPE REC REDUCING CONDUIT COUPLING

To facilitate the passing of wires from large size conduit to small conduit, these reducers are made funnel-like internally.

This feature is aided by integral bushings in both ends of the reducing couplings.

CROUSE-HINDS TERMINATORS

CGFJ SERIES TERMINATORS

For Jacketed Interlocked Armored Cables
and Simplex "C-L-X" or General Cable "CCW" Cables
For Use in WET Locations

With Neoprene Bushing For Watertight Seal and
Lead Bushing For Armor Grip

Drawing shows jacketed cable. For "C-L-X"
and "CCW" cables select terminator so that outside
diameter of armor is within the Cable O.D. Range
of the terminator.

*All parts of the same form may be used together in an assembly. Where there are two form letters, the first applies to the nut and Neoprene bushing, and the second applies to the lead bushing and body. Where there is one form letter it applies to all parts.

Bulkhead Kit: Following suffixes may be added to above catalog numbers: **S589**—provides locknut and insulating bushing. **S590**—provides flat gasket, locknut and insulating bushing for sealing around clearance hole in bulkhead or box. **S607**—provides "O" ring gasket, locknut and insulating bushing for use where bulkhead or box surface is rough.

Terminators for other types of cable are available. Ask for Crouse-Hinds Bulletin 2748.

CROUSE-HINDS ARK-trol® ELECTRICAL CONNECTORS

The complete line of ARK-trol electrical connectors meets and exceeds the most rigid industrial and military standards for environment-resistant plugs and receptacles. ARK-trol connectors provide the ultimate in performance under adverse environmental conditions.

Type RPE environmental ARK-trol connectors are moisture-proof, shock-insulated, dust-tight, and corrosion-resistant.

Type RPC circuit-breaking ARK-trol connectors have all the features of RPE plus ability to break circuits under full rated load.

"Stack" construction, proved superior to all other types, is employed: a silicone wafer with the resilient characteristics of rubber is located between the two insulators, providing a cushion against mechanical damage.

ARK-trol connectors are highly resistant to alkalis, strong caustics, acids, petroleum base and organic solvents. They operate in a temperature range of -80°F. to +225°F., and withstand pressure of 300 psi internal. ARK-trol plugs and receptacles exceed military specifications for pressure tightness, dust-resistance, vibration, humidity, and moisture.

Another feature is positive polarization; an exclusive feature of ARK-trol connectors. Assembly can be made in one way, the correct way only. A wide choice of contact configurations is available to suit all types of installations. Alternate polarity key positions, in addition to providing a wider scope of polarity arrangements or locations, eliminate the possibility of human error in assembling the unit, and resultant equipment damage and personal danger.

Design features and construction characteristics of the ARK-trol line have resulted in extremely compact, yet fully efficient connectors. All aluminum alloy components are high strength impact extrusions, offering greatest accuracy, strength, uniformity, and interchangeability. The aluminum shell has a strength approaching that of steel, yet it weighs less than one-third as much.

For complete information and listings of ARK-trol electrical connectors, see Crouse-Hinds Bulletin 2711 "ARK-trol Electrical Connectors."

CROUSE-HINDS PLUGS AND RECEPTACLES

TYPES CES AND CESD DELAYED ACTION ARKTITE PLUG RECEPTACLES

Explosion-Proof
Class I, Group D*

Includes Body, Receptacle, and Receptacle Housing—Takes Type CPH Plugs

Style 2—Grounded Through Extra Pole and Shell

Interchangeability: Types AP and APJ Arktite circuit-breaking plugs cannot be used with types CES and CESD delayed action Arktite receptacles. Type CPH delayed action Arktite plugs, however, can be used with regular style 2 Arktite receptacles of the same rating and pole arrangement. This fact may be utilized in a plant having hazardous and non-hazardous locations as follows:

Types CES or CESD delayed action receptacles can be installed in the hazardous areas.

Regular Style 2 Arktite receptacles rated 30 or 60 amperes, 2-wire, 3-pole or 3-wire, 4-pole can be installed in non-hazardous areas.

Portable equipment suitable for use in the hazardous areas may be equipped with type CPH delayed action plugs. Such equipment may then be used anywhere in the plant, including the non-hazardous areas.

Portable equipment not suitable for use in such areas may be equipped with regular types AP and APJ Arktite plugs and such equipment can then be used in any non-hazardous location in the plant, but there is complete assurance that it cannot be connected to a receptacle in the hazardous areas.

Type CES has three hubs, one on each side and one at the top, and two threaded pipe plugs.

Type CESD has vertical through feed hubs and one threaded pipe plug. There is a threaded opening in the top with a cover which may be removed to facilitate pulling wires.

CROUSE-HINDS PLUGS AND RECEPTACLES

TYPE EHR AND EHP RECEPTACLES AND PLUGS

Explosion-Proof

Adjustable—Factory Sealed For Flush Mounting in Hospital Operating Rooms and Similar Hazardous Locations
Class I, Groups C and D

Type EHR and Type EHP receptacles and plug are designed for safe performance in hospitals, in operating and delivery rooms and other anesthetizing locations, or in any class I, Group C or D atmosphere. The complete explosion-proof unit consists of a deep or shallow housing (CPS301 or CPS303); and an adjustable ring; and a bronze casting containing a specially keyed explosion-proof receptacle and plug.

Type EHP plug is specially keyed so that it is the only plug that will actuate the EHR receptacle. However, it will also operate in standard "Hubbel-lock" receptacles, used in both hazardous and non-hazardous locations.

Three-wire construction is used for equipment grounding. After cord is attached to plug terminals, all spaces are filled with potting compound so that gases or liquids cannot accumulate. An Epoxy potting kit is included with each plug.

Safety Chambered Type EHR Receptacle

Type EHR consists of a polished chrome-finished bronze casting, to which are attached a special "Hubbellock" receptacle and two cam-actuated microswitches; and a rear casting of aluminum which forms an explosion-retaining safety chamber around the switching mechanism. The mating surfaces of these castings are precision-ground to form a flame-tight joint. The CPS301 or CPS303 Condulet housing in which the EHR unit is mounted is also explosion-proof. Only when the EHP23 plug is rotated does switching take place. Other plugs will not operate it.

CROUSE-HINDS ARKITE PLUGS AND RECEPTACLES

Weather Resistant (Raintight)

30, 60, and 100-Ampere

250 Volts D.C., 600 Volts A.C.

APQ motor plugs are used to connect portable electric equipment to fixed outlets. In a typical installation an ARE or AREA receptacle with threaded cap is used as the power outlet. One or more identical cord sets are made with an APJ plug on one end and an APR receptacle on the other. The APQ motor plug is attached to the machine, either directly or mounted on a suitable AR or AJ series Condulet.

The APJ plug, having exposed contacts, is plugged into the receptacle having protected contacts. The cable connector receptacle at the other end of the cable set is then energized but has protected contacts. The cable connector receptacle mates with the APQ motor plug on the machine or with the APJ plug of another cord set.

CROUSE-HINDS CIRCUIT BREAKERS

TYPE EPC CIRCUIT BREAKERS

With Interlocking Arktite® Plug Receptacle
Explosion-Proof, Dust-Ignition-Proof and
Weather Resistant—Raintight

Class I, Groups C and D; Class II, Group G; and Class III
(NEMA Types 3, 5, 7CD, 9G)

Construction is light weight, corrosion-resistant aluminum.

Interlocked with an Arktite receptacle to provide a power outlet with overcurrent protection. Interlock is made so that plug cannot be withdrawn unless breaker is open; and breaker cannot be closed unless plug is fully inserted. Maximum rating of circuit breaker is available for supplying power to motor-operated portable equipment or other portable apparatus.

Enclosure equipped with a grounded solderless connector for a ground wire. An extra pole in the plug and receptacle is provided for a grounding conductor in the portable cable. Four conduit hubs are located on the top and bottom of the center section near the back. Side and back hubs also available. The Arktite receptacles listed take style 2 APJ plugs.

EPCB Series available for Class I, Group B (Hydrogen).

Style 2 Spring Door Receptacle—100-Ampere Frame Size Circuit Breaker with Non-Interchangeable Thermal Trip and Non-Adjustable Magnetic Trip 480-Volt A.C. or 250-Volt D.C. Without Circuit Breaker

**Insert the proper symbol in catalog number for the circuit breaker manufacturer that is desired: General Electric ("TT"), Square D ("DT"), ITE ("UT"), Westinghouse ("WT"). All furnished at the same list price.

CROUSE-HINDS CIRCUIT BREAKERS

TYPE DBR CIRCUIT BREAKERS

Dust-Ignition-Proof (Dust-Tight) and Weather Resistant—Raintight

With Interlocking Arktite Plug Receptacle

Class II, Group G; and Class III
(NEMA Types 3, 5, 9G)

Receptacles Take Type APJ Arktite Plugs

Use: Type DBR breakers listed below include interlocked circuit breakers and Arktite plug receptacles. They are for use wherever power outlets combined with over-current protection are required in Class II hazardous locations or where exposed to corrosive vapors, abrasive dust, or weather.

They may be employed for supplying motor-operated portable equipment up to the maximum horse power for which the circuit breakers are suitable. Also, they may be used for other portable electrical appliances.

When installed in hazardous locations, portable equipment must be suitable for the locations. These breakers accept standard Arktite plugs.

Breakers listed above are equipped with one grounded solderless connector for ground wire. A ½-inch conduit opening equipped with pipe plug is provided for the ground wire.

†Type DBR Breakers are furnished with one drilled and tapped conduit opening at the top equipped with threaded-in-bushing. Removal of the bushing permits the use of the opening for the next larger size conduit. Other sizes or arrangements of conduit openings can be furnished on application.

*Prices on application. Breakers with ITE or Westinghouse circuit breakers can be furnished at the same list prices. Catalog numbers on request.

EFS SERIES PUSH BUTTON STATIONS

Explosion-Proof and Dust-Ignition-Proof

Class I, Groups B, C and D; Class II, Groups E, F, and G; and Class III (NEMA Types 5, 7CD, 9EFG)

Enclosures are furnished with the D11 Series, heavy duty momentary contact push button stations. Single and two-gang units with dead end or through-feed hubs, and with front operated buttons or a rocker type operating handle, provide a wide selection of push button stations for use with magnetic motor starters to start, stop or reverse all types of electrical motors.

CROUSE-HINDS CONTROL STATIONS

EFD SERIES PUSH BUTTON STATIONS

Explosion-Proof and Dust-Ignition-Proof

Class I, Groups B, C and D; Class II, Groups E, F and G; and Class III (NEMA Types 5, 7 CD, 9EFG)

EFD factory sealed push button stations save installation costs and time by eliminating the need for external seals in the connecting conduit within 18 inches of the enclosure. Contacts are sealed in a special chamber which is part of the push button. No arcing contacts are exposed to the part of the enclosure where the conduit enters.

Heavy duty rated for use with magnetic motor starters to start, stop or reverse electric motors.

Each button operates a single universal momentary contact push button which may be connected for one circuit normally closed, one circuit normally open or two circuits, one normally closed and one normally open.

Ordering Information: Specify catalog number and indicating plate marking for each button. If marking is not specified, blank indicating plates will be furnished. Standard markings are available as follows:

START	RUN	TEST	FORWARD	UP	RAISE
STOP	JOG	HAND	REVERSE	DOWN	LOWER
ON	RESET	AUTO	OPEN	IN	LGT. ON
OFF	TRIP	EMER.	CLOSE	OUT

Pilot Lights, Heavy Duty Push Button Stations, Selector Switches and Combinations

Class I, Groups C and D, Class II, Groups E, F, and G; and Class III (NEMA Types 3, 4, 5, 7CD, and 9EFG)

Type EWC designed for use in hazardous locations. They are watertight and may be used where exposed to the weather or to the direct stream of water from a hose during washing-down operations.

Threaded covers, threaded operating shafts, and pilot light jewels are all effectively sealed with Neoprene O-Rings.

Single pilot lights are provided with candelabra base lamp receptacles and 125-volt, 6-watt, Type S-6 clear bulb lamps for use on 110-125-volt circuits. Colored or clear glass jewels and transformers for 220, 440, or 550 volts if required, are specified by adding suffixes as listed.

Duplex pilot lights are provided with miniature bayonet base lamp receptacles and 6-8-volt #44 T3¼ lamps. Transformers are furnished and are available for primary voltages of 120, 220, 440, or 550 volts. Heavy duty, 600-volt A.C. universal push button stations are used.

Rotary type, standard duty, 600-volt A.C. maintained contact selector switches are used.

Single-Gang with Push Button Station

Two-Gang with Push Button Station and Pilot Light

Three-Gang with Push Button Station, Pilot Light and Selector Switch

Explosion-Proof and Dust-Ignition-Proof**

Panel Mounting

Class I, Groups C and D; Class II, Groups E, F, and G;
and Class III (NEMA Types 5, 7CD, 9EFG)

Design: Type EMP designed for mounting on panelboards so that pilot lights, push buttons, and switch handles are flush with the front of the panel, and bodies are in back of the panel. Threaded necks are provided with locking nuts to firmly clamp the enclosures in place. This permits easy alignment with conduit and other enclosures on the panel.

Compactly designed to require the absolute minimum panel space consistent with explosion-proof construction. For this reason they are ideally suited for flow chart panels.

Bodies have through-feed 1" conduit hubs. They are fitted with flat ground joint covers fastened with heavy screws. Large covers give maximum accessibility to interior.

Type EMP furnished in two styles:
Style 1 for 125-volt pilot lights only—Factory Sealed
Style 3 for push button stations, selector switches, pilot lights and pilot lights with transformers or combinations of these — Not Factory Sealed.

Finish: Parts extending beyond the face of the panel have dull black instrument finish.

Sealing: External seals are required when push button stations and/or selector switches are used.

Panel Drilling: Holes in panels must be 1 1/8 inches in diameter. Any panel thickness up to 1 3/4 inches can be used. Hole spacing is 1 5/8 inches.

EMP Three-Gang with Pilot Light, Push Button Station and Selector Switch Style 3

Pilot Lights: Style 1 Pilot Lights are equipped with lamps for use on 110-125-volt circuits; and colored or clear glass jewels. For arrangements for circuit voltages other than 110-125 volts, use style 3 bodies. Flexible leads for connection to the circuit conductors are accessible through the rear cover opening. The lamp is accessible from the front of the panel by unscrewing the knurled jewel assembly.

Push Button Stations: Heavy duty, 600-volt A.C., momentary contact. Various contact arrangements available.

Selector Switch: Maintained contact selector switches are furnished with D11 Series push button stations operated by a maintained contact mechanism. Two- and three-position arrangements with contacts to operate in the sequences shown by the diagrams, will meet many of the requirements for this type of switch in motor control installations. Other arrangements and sequences can be furnished

Selector-Push Button Station: Two single momentary contact, heavy-duty, 600-volt push button stations are operated by one button-knob. When knob is turned to left position and pushed, one set of N.O. and N.C. contacts is operated.

Turning knob to right position operates a second set of N.O. and N.C. contacts. Knob will return to center position when released from either right or left positions. When pushed in center position, both right or left sets of contacts are operated together.

EMP 43 Single-Gang Style 3

EMP 501 Two-Gang Style 3

EMP 3000 Three-Gang Style 1

**Table 1
Push Button Marking**

The indicating plate marking for each push button must be specified. Standard markings are available at no extra charge. Special markings will be furnished at \$1.00 per word list additional. Standard markings available are:

Pilot Lights, Heavy Duty Push Button Stations, and Combinations

Explosion-Proof and Dust-Ignition-Proof

Class I, Groups B, C and D; Class II, Groups E, F and G; and Class III (NEMA Types 5, 7CD, 9EFG)

Pilot light enclosures are furnished for use on 110-125 volt circuits and are equipped with colored or clear glass jewels. Arrangements for circuit voltages other than 110-125 volts are also available. Flexible leads for connection to the circuit conductors are accessible through the rear cover openings. The lamp is accessible from the front of the panel by unscrewing the knurled jewel clamping ring. If required, a jewel clamping ring with guard can be supplied. Add suffix S93 to the catalog number and \$3.00 per lamp to the list price.

Table of Jewel Symbols

When there are two or more jewels and the colors are to be different, show the symbol for each jewel. For example: Cat. No. of EGP3115 with two red, one green, and one amber jewel is EGP3115-J1-J1-J3-J6.

Color	Symbol	Color	Symbol	Color	Symbol
Red	J1	Amber	J6	Clear	J10
Green	J3	Opal	J8	Blue	J11

Heavy duty, 600-volt, factory-sealed, single button universal push button stations are used. Each push button station may be connected for one circuit normally closed, one circuit normally open, or two circuits, one normally closed and one normally open. One unit may be used for jogging service or two may be used to make up a "Start-Stop" push button station.

Each operating button is provided with a U-shaped guard which may be rotated to place the open side at any desired position.

‡Flush Mounting: The grill type can be furnished for a flush installation by adding suffix -S549 to the catalog number and \$5.00 to the list each price.

*24 to 40 Cycle A.C.: For operation at this frequency add suffix -S225 to the catalog number, and \$5.00 to the list each price.

CROUSE-HINDS INSTRUMENTS

TYPE EMH INSTRUMENT ENCLOSURES

Explosion-Proof, Dust-Tight, and Weather Resistant—Raintight

Class I, Group D; Class II, Groups E, F, and G; and Class III (NEMA Types 3, 3R, 5, 7D, 9EFG)

Furnished with mounting plate and supports for instruments.

Surface type has four mounting feet with fastening holes. Flush type has a neck to project through a hole in the panel, a flange $\frac{1}{8}$ of an inch back from the end of the neck, and four mounting feet tapped for screws to fasten the body to the back of a steel panel approximately $\frac{1}{4}$ -inch thick. Bodies are equipped with mounting plates and posts to support the instruments near the cover window. This arrangement leaves ample space back of the instruments for wires and connections. General Electric A072, DO72, DO73, DO71; Westinghouse NA35, NX35, NC35, NT35, NH35; Weston Model 476, Model 425, Model 301; and Hickok Model 46, Model 47M, Model 47X, Model 47, Model 47T can be mounted in these Condulets.

Surface Mounting

Flush Mounting

Conduit Openings*	Size	Cat. No.	List Each
Surface Mounting			
One in Side	$\frac{3}{4}$	EMH521-20000	\$42.00

DISCOUNTS: UNDER \$100, 0—\$100-299.99, 10%—\$300 and OVER, 26%

CROUSE-HINDS INDUSTRIAL CONTROL

TYPE EPC COMBINATION LINE STARTERS

Explosion-Proof, Dust-Ignition-Proof (Dust-Tight) and Weather Resistant—Raintight

Class I, Groups C and D; Class II, Groups E, F, and G; and Class III (NEMA Types 3, 3R, 4, 5, 7CD, 9EFG)

Use: Type EPC bodies are arranged for combinations of air break circuit breakers with magnetic thermal time delay motor starting switches. The flexible design of the new M60 Type EPC body permits direct use of most manufacturers' single speed starters (Size 0-4) in combination with a variety of manufacturers' circuit breakers. They are suitable for use with polyphase A.C. induction motors when across-the-line starting is permissible.

Operation: For manual operation of the circuit breakers as a disconnect, an external handle is provided. The construction of the operating mechanism eliminates excessive strain being applied to

the circuit breaker handle. The circuit breaker has short circuit rupturing capacity; therefore, it will open the circuit without damage to itself. The thermal time delay feature of the starter prevents its opening during the normal starting period of the motor. However, under long continued overloads which would damage the motor or the conductors, the thermal relay anticipates the danger and opens the starter, disconnecting the motor. In case of undervoltage, the starter will open. The top cover has female threads and is skirted to effectively shed water; the bottom cover has male threads for the same purpose. Both covers are equipped with notches and the body with a pry bracket to easily loosen the covers when removal is necessary.

EPCB Series available for Class I, Group B (Hydrogen).

Reset: Starters have thermal overload relays arranged for manual reset; a reset lever is mounted on the side of the body.

Control: Built-in push button station, selector switch and pilot lights can be furnished in these bodies. Standard EPC bodies have operating shaft holes for push button station and selector switch, drilled, tapped and plugged for installation of these features at any time. For remote control, type EFD, EFS, EGP, EWC and OFC Series push button stations are recommended.

Mounting: The separate replaceable mounting bracket is attached to the rear of the EPC center section. By three-point suspension (one keyhole slot at top and two open slots at bottom) quick mounting and leveling can be accomplished.

Use: Types DMC and WMC bodies are arranged for combinations of air break circuit breakers with magnetic thermal time delay motor starting switches and are suitable for use with polyphase A.C. induction motors when across-the-line starting is permissible.

Features: The combination of a thermal time delay circuit breaker with a magnetic thermal time delay starter provides:

1. Disconnecting means (breaker)
2. Motor branch circuit protection (breaker)
3. Motor running protection (starter)
4. Undervoltage protection (starter)
5. Remote starting and stopping (starter)

Type WMC Combination Line Starters

Watertight

CROUSE-HINDS CIRCUIT BREAKERS
TYPE EPC AIR BREAK CIRCUIT BREAKER ENCLOSURES

Explosion-Proof, Dust-Ignition-Proof (Dust-Tight), and Weather Resistant—Raintight

Class I, Groups C and D; Class II, Groups E, F, and G; and Class III (NEMA Types 3, 3R, 4, 5, 7CD, 9EFG)

Type EPC enclosures with air break circuit breakers, are suitable for service entrance, feeder, or branch circuit protection, for lighting, appliance, and motor circuit conductors; but are not intended as substitutes for motor running protective devices.

For manual closing, opening, or resetting, an external handle is provided with name plates indicating whether the breaker is "on" "off", or "tripped."

50 and 100-Ampere "E" Frame with Non-Interchangeable Thermal-Magnetic Trip

Without Circuit Breaker
240 Volts—A.C. Maximum

*Takes G.E. or Westinghouse Circuit breakers. Insert symbol TT for G.E. circuit breaker or WT for Westinghouse circuit breaker.

**Takes Square D circuit breaker. Insert symbol DT in catalog number.

Manufacturer	For 50 and 100 Ampere "E" Frame	Symbol
General Electric	TE	TT
ITE	E	UT
Square D	ML or MLI	DT
Westinghouse	E	WT

A separate replaceable mounting bracket is attached to the rear of the center section. The top cover has female threads and is skirted to effectively shed water; the bottom cover has male threads for the same purpose. Both covers are equipped with notches and the body with a pry bracket to easily loosen the covers when removal is necessary. Interior mounting plates are supplied with all necessary holes and mounting screws to accommodate directly circuit breakers as listed.

Three padlocks may be used to lock the circuit breaker in either "on" or "off" positions. As the circuit breaker is trip free of the handle, locking in the "on" position does not prevent the breaker opening due to overload or short circuit; but the breaker then cannot be reset without removing the padlock.

EPCB Series available for Class I, Group B (Hydrogen).

50 and 100-Ampere "E" Frame with Non-Interchangeable Thermal-Magnetic Trip

†300-watt takes PS-30 medium base lamp.

*Center line of fixture must be located 5 inches from the wall for mounting angle reflector.

DISCOUNTS: UNDER \$100, 0—\$100-299.99, 10%—\$300 and OVER, 26%

CROUSE-HINDS VAPORGARD* VAPORTIGHT FIXTURES

Low cost installation and maintenance. No screws to remove. Globe-guard assembly removes and installs as unit. Ventilated reflector clips on. Attractive Blue-Gray finish.

Glare-free—more even light distribution. Prismatic globe has vertical fluting and stippled bottom. Versatile socket—offset strap is reversible. Permits use of various size lamps while holding light center in same position for maximum light output.

CROUSE-HINDS LIGHTING FIXTURES

EV SERIES

INDUSTRIAL LIGHTING FIXTURES

Explosion-Proof and Weather-Resistant Raintight

Class I, Groups B, C and D

Hoods are cast aluminum with etched alzak aluminum inner reflectors. Globe holder assembly consists of clear, heat-resisting, impact-resisting, glass globe, equipped with sheet aluminum gasket and cast aluminum mounting and retaining rings. Cast aluminum guards are held to globe mounting rings by machine screws. Furnished without reflectors.

Type EVA—Pendent Type

Complete with body for pendent mounting on a conduit stem. A set screw in hub may be tightened against unthreaded part of conduit to prevent unscrewing from conduit when relamping. May be suspended by a conduit stem from GUA or GUF series with three-inch cover opening and GUA fixture covers or canopies.

TYPE EVA INDUSTRIAL LIGHTING FIXTURES

Explosion-Proof and Weather Resistant—Raintight Factory Sealed

Class I, Groups A, B, C, and D

Provide complete protection when installed in hazardous areas containing acetylene (Group A) and hydrogen (Group B) as well as the gases and vapors of Groups C and D locations.

Lamp and wiring compartments are separate and individually explosion-proof. Flame-tight joints.

CROUSE-HINDS LIGHTING FIXTURES

TYPE EVA MERCURY VAPOR FIXTURES

**Explosion-Proof and Weather Resistant
Factory Sealed**

250-Watt—Class 1, Groups B, C and D
400-Watt—Class 1, Groups B and D

EVA mercury vapor fixtures for hazardous locations take 250 watt, Type BT-28 and 400-watt, Type BT-37 mercury vapor lamps. Mercury vapor lamps are particularly suited for high bay applications. High initial lamp costs are repaid time and again by increased lamp life reducing relamping costs, and by greater lumens per watt. Fixture construction is similar to that of standard type EV fixtures for incandescent lamps.

**APPLETON EXPLOSION-PROOF
PANELBOARDS**

EWP LIGHTING PANELBOARDS

24 Circuit EWP

**Explosion-Proof, Dust-Ignition-Proof and Weather Resistant (Raintight)
Class I, Group D (NEMA Type 7D);
Class II, Groups E, F and G (NEMA Types 9E, F & G);
Class III (NEMA Types 3, 3R & 5).**

The EWP Panelboard is designed especially for lighting circuits in chemical, petrochemical, distillery, refining, milling, enameling and all types of plants and industries where hazardous conditions may exist. Also ideal for use in non-hazardous locations where corrosive vapors, non-combustible dust or moisture are present.

Designed for use on lighting circuits in hazardous locations. The smallest and lightest pre-wired and pre-sealed explosion-proof Panelboard available. The 24 circuit model is only 26" high, 16" wide and 8" deep.

Ample wiring space is provided in the junction compartment for all connections. Main feeder cables are directly connected to pressure terminals, no splicing required. They can be installed, tightened or removed with an Allen wrench without disturbing branch wiring or main terminal protection cover. Special main lugs are appropriately located to eliminate severe bends in heavy main cables. Branch wiring is easy, too, because of the convenient location of the branch circuit terminal board and connection block.

12 Circuit EWP

Circuit breakers used are of the thermal magnetic Quicklag type. They snap into position for easy insertion or removal. 15, 20, or 30 ampere breakers can be supplied when required. Spring loaded operating handles locate on the breaker levers and can be padlocked in "on" or "off" position, trip-free.

Terminals in junction housing are solderless type and numbered for easy installation. Entire unit is a one-piece, aluminum casting. 40 and 50 ampere breakers can be supplied on request.

All EWP models have branch hub openings on the top, bottom and both sides. Shipped complete with mounting brackets.

EWP Panelboards are available with 6 to 24 single-pole, 3 to 12 double-pole and 2 to 8 three-pole breakers in various wiring systems.

Complete Details and Listings on EWP Explosion-Proof Panelboards Can Be Found in Section P of Appleton General Catalog

**EDP-EPP-ESP EXPLOSION-PROOF
LIGHT AND POWER PANELBOARDS**

EDP PLUG-IN PIVOT PANELBOARDS

The EDP Panelboards are the ideal way to provide circuit protection for lighting and low capacity power distribution equipment used in Class I, Group D; Class II, Groups E, F and G; and Class III, hazardous locations. They may also be used in non-hazardous locations where corrosive vapors, non-combustible dusts, or moistures are present.

EDP Panelboards are available in 4 to 24 single pole, 2 to 12 double pole, and 1 to 8 three pole circuits. Unique in design, the EDP series features a "pivot" between the junction and breaker housings.

Operating handles can be locked in either the "On" or "Off" position without interfering with the trip-free action of the circuit breaker.

They are engineered to handle motor control, machinery, alarm, lighting, and a wide range of various types of circuits requiring breaker capacities of 15, 20, or 30 amperes. They are also available with 40 and 50 ampere breakers and for 277 volt lighting system, if specified.

EPP POWER PANELBOARDS

EPP panelboards feature high voltage protection for electrical equipment used in Class I, Group D; Class II, Groups E, F and G and Class III, hazardous locations. May also be used in non-hazardous locations where corrosive vapors, non-combustible dust or moisture are present. Designed to Underwriters' specifications, however their maximum voltage for short circuit test is only for 125 volts. EPP explosion-proof power panelboards have ratings up to 600 volts AC/250 volts DC. Construction is similar to the EDP explosion-proof pivot panelboards and both have the same unique features. Dimensions and hub data for the EPP are the same as for the EDP.

10% discount for \$100.00 to \$299.99 list.
26% discount for \$300.00 list or over.

**APPLETON EXPLOSION-PROOF
PANELBOARDS**

ESP PANELBOARDS

The ESP is a new, low cost, rugged, durable, one-piece, 2-compartment panelboard for 4 single pole or 2 double pole circuit breakers. An exclusive new mounting principal is used to provide easier installation, operation and maintenance. The ESP is factory wired, sealed and listed by U.L. for use in hazardous locations and can also be used in non-hazardous locations.

All panelboards are shipped completely factory wired and sealed. No further sealing in field is necessary. Panelboards are sold either with or without drains and breathers. For complete details and listings, request Section P.

LS FORM 4

Appleton's engineering and production facilities are at your disposal to custom design and construct heavy-duty centralized control and power racks for hazardous areas. All needed equipment is assembled, tested and mounted; wiring is completed and sealed. These complete assemblies eliminate costly field engineering. Appleton engineers will give you information, provide cost data... even design an entire unit to give you maximum utility in minimum space. For prices and data contact Appleton's engineering department giving the following details:

1. Single line wiring diagram indicating type, rating, wiring system and desired arrangement of equipment.
2. Size and location of all conduits.
3. Physical limitations of switchrack and field conditions.
4. Provisions for future expansion (if required).
5. Special fittings if required (Drains, Breathers, etc.).
6. Name and address of company where data is to be sent.

18% discount for \$99.99 list or less.
23% discount for \$100.00 to \$299.99 list.
34% discount for \$300.00 list or over.

QA34-B	\$615.87	QA34-2B	699.03
QA40-B	1056.51	QA40-2B	1177.34
QA44-B	1228.37	QA44-2B	1364.45

In addition to the terminals listed, many variations of the QIKLUG are available — terminals designed for multiple cable accommodation, unusual tongue angles and drilling. When ordering specify conductor, tongue dimensions and drilling.

SCRULUG® — TYPE KPA

For low cost indoor terminal connections. Installed with screwdriver or pliers. Compact construction, especially useful on panelboards, in fuse boxes, safety switches, etc.

KA-LUG® — TYPE KA

For copper cable to flat. Features one hole tongue, range taking clamping element, and easy installation with Allen wrench. Compact design provides for easy terminating at service switch, terminal block, etc., where space and economics are important.

KA-LUG — TYPE KA-A

For copper or aluminum cable to flat. Features one hold tongue, range taking clamping element and easy installation with common wrench. Pre-filled with Penetrox joint compound and sealed. Compact design provides for easy terminating at service switches, etc.

HYLUG

Type YA

Long-barreled connectors for terminating cable sizes from #6 Str. to 2000 Mcm.

The long barrels permit double indentations on sizes above 250 Mcm for added mechanical strength in heavy duty applications.

HYLINK

Type YS

Long-barreled Hylinks for cables from #6 Str. to 2000 Mcm. Cable stops insure proper insertion of cable. Double indentation in each half of the barrel on sizes above 250 Mcm provide mechanical strength for heavy duty applications.

T & B CABLE INSTALLING KIT

For Bending, Slicing and Stripping Cable

The T & B Cable Installing Kit Contains

No. 366 T & B Cable Slicer — Makes a clean slice in seconds — eliminates dressing. And T & B has designed just the tool for a swift, smooth, even cut. Unique heart-shaped cutting edges gather strands and slice in one easy motion. Slices cable up to 1000 MCM.

No. 21649 T & B Cable Bender — The right tool for each operation takes grunt and groan out of cable handling. Even in the closest quarters this T&B engineered cable bender will perform perfectly and protect cable insulation. Bends cable up to 750MCM.

No. 368 T & B Stripper — The new, safe way to strip cable. Peels insulation away without touching conductor strands. Calibrated wire size settings permit precise adjustment to cable size. Strips cable from #1 to 1000MCM.

Kit comes complete in rugged steel carrying case.

No. 21649 Cable Bender	each	\$ 7.50
No. 368 Cable Stripper	each	\$18.00
No. 366 Cable Slicer	each	\$37.50
T & B Cable Installing Kit Complete		\$63.00

T & B COMPRESSION CONNECTORS FOR COPPER CABLE

1-Hole Lug

2-Hole Lug

2-Way Connector

T & B Method connectors offer the fastest, simplest way of making positive electrical connections. Through use of the proper installing tool, pressure is controlled to assure a strong, tight bond without damage to the cable. These lugs and connectors are available for use with code copper, flexible copper, and aluminum cable.

T & B COLOR-KEYED® COMPRESSION TOOLS

For #8 to 500 MCM Copper Conductors
#12 to 350 MCM Aluminum Conductors

No. TBM8
This hand compression tool is useful over a wide range of types and sizes. Furnished with steel carrying case and all necessary installing dies.

Installs: All code copper compression joints and taps — aluminum cables #12 to 350MCM — code copper lugs and connectors from #8 to 500MCM.

No. TBM8 Compression Tool.....each \$99.95

For #8AWG to 250MCM Copper Conductors
#12AWG to 3/0 Aluminum Conductor

No. TBM5
High-strength steel tool, with tubular aluminum handles and forged steel dies.

Complete with steel carrying case, three color-coded dies.

No. TBM5 Compression Tool.....each \$50.00

T & B COLOR-KEYED® COMPRESSION "C" TAPS

FOR CODE COPPER CONDUCTORS

Listed by Underwriters' Laboratories

These one-piece Color-Keyed taps assure positive, all around compression with low resistance and high pull out features. Made of high conductive wrought copper. Installing tool TBM8.

SELF-LOCKING TY-RAP TIES

Designed for rugged field and shop applications. A stainless steel tooth mounted in the eye locks the tie at any desired diameter. Installation is quick — simply slip Ty-Rap around bundle, thread tip through eye, draw tight and cut off.

All of the Self-Locking Ty-Rap ties exceed the minimum pull-out strength requirements specified in MIL-S-23190A(WEP). No tools are needed to install the self-locking ties. However, additional speed and convenience can be gained by using an appropriate Ty-Rap tool when installing large quantities of ties.

TWIST-LOCKING TY-RAP TIES

Available in a variety of colors for coding purposes. Specially designed convex ribs keep ties in place on cable preventing lateral movement.

BURNDY ELECTRICAL CONNECTORS

THERMOWELD

THERMOWELD welds a perfect, permanent electrical connection—to any copper cable, bus or steel structure, etc. Wide range of splices, taps, terminals, ground connections are made without external source of power.

THERMOMOLD

THERMOMOLD is the lightweight graphite mold that holds conductors in position and controls THERMOMOLD reaction that produces weld. Sizes available for making a wide variety of welded connections.

THERMOCHANGE CLAMPS

THERMOCHANGE clamps are made in two sizes 3" x 3" and 4" x 4" molds. They fit practically all standard THERMOWELDS and are convenient and easy to use.

THERMOWELD CARTRIDGES

Plastic cartridges have moisture tight caps. Sealed polyethylene envelope with moisture absorbing silicagel packet keeps powder perfectly dry. Starting powder won't mix with welding charge, even if cartridges are shipped or stored upside down—full starting charge assures positive ignition of welding powder.

BURNDY HYTOOL®

FOR INSTALLING HYDENT® CONNECTORS

No. Y10M

This light-weight hand tool installs a wide variety of Hydent connectors on wire sizes #22 thru #10. A wire cutter and single indenter die for all wire sizes are in the nose of the tool. Other features are wire strippers, bolt cutter, thread chasers and dies for closing insulation-grips.

No. Y10M Hytooleach \$5.00

No. MR4C

A compact ratchet-action hand Hytool for installing Hydent connectors on conductors No. 4, 6 and 8. Spring action of the jaw holds cable and terminal assembly in place, permitting use of both hands for the indenting operation.

No. MR4C Hytooleach \$41.40

No. MY29-3

This rugged "all around" contractor hand tool features one easily adjusted die set that installs Hydent connectors on commercial copper cable from #8—250 Mcm and aluminum building wire #8—4/0. No dies to install, change, identify or lose. Available with insulated handles.

No. MY29-3 Hytooleach \$50.00
No. MY29-3C Hytool (with insulated handles)each 64.50

BURNDY HYPRESS® HYDRAULIC TOOL FOR INSTALLING HYDENT CONNECTORS

No. Y34A

Portable, manually operated, completely insulated, hydraulic Hypress for installing Hydent connectors on #6 Str. thru 500 Mcm. cable. Weighs only 9 lbs.; develops 18,000 lbs. Supplied with convenient metal carrying case.

No. Y34A Hypresseach \$183.00

BURNDY MOLDED NYLON CABLE HANGERS

NYCLOLIP® — TYPE HP-N

Nyloclips weigh only 30% as much as comparable metal clips. Flexibility makes them easy to install. Smooth, non-abrasive surfaces with rounded edges protect cable insulations. Nyloclips are molded — require no shaping or forming on job. High tensile strength for maximum support; retain shape permanently. Temperature resistant from —60°F to 250°F for sustained periods, these nylon cable hangers are also unaffected by oils, gasoline, alcohol or hydraulic fluids, including noninflammable types. Cannot cause grounds or shorts, and are free from hysteresis losses.

U. L. Listed

Tools are malleable iron. Indenter points are case hardened. Indenter couplings and connectors are installed with one squeeze of the handles, eliminating the old method of "Squeeze, turn and squeeze again." With a single press of the handles, three case-hardened steel points indent both fittings and conduit, resulting in a permanent positive ground installation. Conduit and fittings stay round for trouble-free conductor pull-in.

METALLIC INSULATED BUSHINGS

Grounded and Non-Grounded

Available in sizes 1/2" thru 6" for standard threaded rigid conduit or with set screws for threadless rigid conduit.

Listed as standard in Everdur bronze, Aluminum, Hot Dip Galvanized Malleable Iron, as well as in malleable iron with cadmium plating. Also available as an E.M.T. insulated bushing in malleable iron either cadmium plated or hot dip galvanized.

EFCORLETS

THREADED FOR RIGID CONDUIT

Malleable Iron or Copper Free Aluminum Alloy

Type LB

Type LRL

Available in sizes 1/2" thru 4" except Types LRL and X which are available thru 2".

**SET SCREW TYPE FOR E.M.T.
Copper Free Aluminum Alloy**

Type C

Type T

Available in sizes 1/2" thru 2".

Blank aluminum, steel and composition covers as well as gaskets available for all Efcorlets 1/2" thru 4".

Contact your local Graybar office for prices.

O.Z. INSULATED BUSHINGS

GROUNDING TYPE "BL"

Type "BL" affords the protection of Insulated Bushings and provides the means of making quick, positive ground connections. These fittings consist of standard Insulated Bushings equipped with the O.Z. Combination Lug, Type "SLH". These lugs can be used for through type ground connections as well as for end use. A cup point set screw, provided with each fitting, locks the casting in any desired position.

Note—Set Screw and Thin Wall Conduit type Grounded Bushings can be furnished.

O.Z. CONDUIT FITTINGS

EXPANSION FITTINGS

Designed to compensate for expansion and contraction in a line of conduit. Prices include insulating bushings. Standard finish is hot dip galvanized. Types "EX" and "EXE" for heavy wall conduit and Type "TX" for thin wall conduit also available.

6	R6001	34.96	16.44	51.40	18.72	53.68	19.76	54.72	18.0

Specify: (1) Type of Conductor. (2) Number of Conductors in the conduit. (3) Outside diameter of each.

OTHER O.Z. CABLE SUPPORTS

- Type "S"—For two or more wires.
- Type "D"—Split type—For two or more wires.
- Type "DR"—Split type—For one or more wires.
- Type "CV"—Ventilating, Compound type.
- Type "C"—Non-ventilating, Compound type.
- Type "K"—Lock Type—For horizontal or inverted positions.
- Type "M"—For use where there is insufficient room for a cable support inside a junction box.
- Type "W"—Raintight enclosed cable support.

O.Z. CAST IRON JUNCTION BOXES

Standard Finish—Hot Dip Galvanized

TYPE "YS"

Unflanged Junction or Pull Box. Dust-tight, weatherproof.

For surface mounting.

Sizes available: 4" x 4" x 2" thru 48" x 6" x 6".

TYPE "YF"

Flat Flanged Box. Watertight (NEMA 4). Raintight Submersible*.

For surface mounting.

*Submersible under 20 ft. head of water.

Sizes available: 4" x 4" x 3" thru 36" x 18" x 12".

TYPE "YE"

For Hazardous Locations. Class I, Group D. Explosion - Proof (NEMA 7). Dust-tight, Weatherproof.

For surface mounting.

Sizes available: 4" x 4" x 2" thru 30" x 24" x 12".

TYPE "YG"

For Hazardous Locations. Class II, Groups E, F & G. (NEMA 9). Dust-tight, Watertight.

For surface mounting.

Sizes available: 4" x 4" x 3" thru 36" x 18" x 12".

TYPE "YW"

Hinged Cover Box. Watertight (NEMA 4). Raintight.

For surface mounting.

Sizes available: 5" x 5" x 3" thru 36" x 36" x 12".

TYPE "YR"

Outside flanged recessed cover box. Watertight (NEMA 4). Raintight.

For flush mounting.

Sizes available: 4" x 4" x 3" thru 30" x 24" x 12".

TYPE "YU"

Inside flanged recessed cover box. Dust-tight, weatherproof.

For flush mounting.

Sizes available: 4" x 4" x 2" thru 30" x 18" x 8"

TYPE "YT"

Checkered cover sidewalk box.

Sizes available: 6" x 6" x 4" thru 36" x 24" x 14".

Contact your local Graybar office for complete range of sizes and prices.

**KELLEMS GRIPS
STRAIN RELIEF GRIPS**

For Use With Bus Drop Systems

A better strain relief at moderate price. Eliminates direct tension pull on terminals without damage to cable.

Made of mesh-galv. plow steel strand. Has neoprene seal and aluminum seal retainer. Swaged aluminum collar. Cadmium plated steel lock-nut. N.P.S. conduit threaded fitting.

**CORD GRIP WITH KELLEMS
STAINLESS STEEL WIRE MESH**

The "RCGK" and "RCGFK" series of cord grips include a double stranded, stainless steel, wire mesh attachment. The addition of this accessory provides positive "arc of bend" control and at the same time eliminates any possibility of electrical failures as a result of extraordinary longitudinal stresses to which the cable may be subjected.

JB-150	1 1/2, 2	38	5	25	115.50

JAY CLAMPS

For right angle (90°) and parallel conduit runs. Malleable iron—hot dip galvanized.

For special applications (threaded rod, bridle rings, etc.), jay clamps may be supplied with holes tapped in bottom. When ordering, add suffix "H" to catalog number.

MINERALLAC JIFFY CLIP

Made in Everdur and zinc-plated steel to meet the demand for a substantial clamp for hanging pipe, conduit and lead covered cables. With this clip only one screw or bolt is required to hold the pipe, conduit or cable and clip firmly in place. It is made to afford great strength without being heavy or bulky, by having ribs drawn in the clip. A round emboss is also raised on the clip, through which is a hole for the screw or bolt. This emboss serves the purpose of a lock washer to prevent the clip from working loose.

By use of this clip the labor as well as the clip cost is greatly reduced and at the same time a very neat and substantial job is possible. Made for various sizes of conduit and pipe as specified.

MINERALLAC HANGERS

MIN-A-CLIP

For fastening conduit or pipe to the Bulb Tee sub purlin rails of poured gypsum deck roofs. May be installed during construction, or after completion of the roof without damage to the insulating material, without drilling holes, shooting studs or providing special brackets. The hanger can be turned on its

rivet so that the conduit or pipe may be run parallel to, or at right angles to the Tee Iron, eliminating bends and fittings. Zinc-plated steel.

MINERALLAC HANGERS FOR CONDUIT AND CABLE

These hangers are made of zinc-plated steel or Everdur metal, and are much stronger than cast iron hangers for the same purpose. They are easily and quickly put in place, so open wiring, conduit and cable may be run with greater rapidity and be

more compactly arranged than by the use of other hangers.

These hangers have been approved by the Underwriters' Laboratories for use on circuits up to 300 volts when mounted directly on the surface wired over. For voltages from 300 to 550 volts these hangers must be installed with spacers under the base of the hanger or mounted on metal racks or brackets so as to hold the conductors at least one inch from the surface wired over. For voltages above 550 volts the hangers should be used with an appropriate insulating bushing having necessary dielectric strength, the hangers being mounted on metal racks or brackets to hold the conductors far enough from the surface wired over to preserve the required electrical clearance.

STUD CLIP

For fastening outlet boxes to the Bulb Tee sub purlin rails of poured gypsum deck roofs. Has 10/24 stud. Ideal for mounting 8B or 1900 outlet boxes on the Bulb Tee Iron.

One clip on each side of the Tee, lines the studs up perfectly for the box mounting holes — prevents turning or loosening. Zinc-plated steel.

MYERS SCRU-TITE FITTINGS

FOR CONDUIT AND PIPE

A liquid-tight fitting, the scru-tite hub fits standard knockouts using standard tools. All Scru-tite fittings install without welding, in any position. Unique serrated design insures positive electrical ground and meets UL and JIC standards.

TIME SAVING INSTALLATION:

1. Insert hub through opening.
2. Hand thread nut on hub to snug fit.
3. Wrench tighten (from either side) until locked. Unique serrations on both hub and nut resist torque applied to opposite end making this a single wrench operation.

Outlets — Single gang: Tapped ¾" four way, three outlets plugged. Gang Boxes: Tapped two ¾" outlets straight through per gang, one plugged. Unless otherwise specified, 2" deep gang boxes can also be tapped one or two ¾" outlets on each end. 2½" deep gang boxes can also be tapped 1" in center of each end or two ¾" each end. Specify location of special outlets when ordering. See Note.

Adjustment—¾" maximum by means of locking style screws in box ears.

Enclosures—Boxes: Cast iron, corrosion resisting finish. Covers and flanges brass. Special finishes available, prices on application.

Rectangular boxes can be furnished with Forged Aluminum Covers and Flanges at same price. Add suffix "ALUM" to Cat. No. when required.

Note — ½-inch, ¾-inch and 1-inch drilled and tapped and plugged outlets as listed—no charge. Additional and/or larger outlets are extra. Plugs for 1¼-inch outlets and larger are extra. Boxes can be furnished with slip holes at same price.

LO-CON® DUPLEX FLOOR RECEPTACLE OUTLETS

Combine ultra-modern handsome styling with versatility. The smoothly rounded overhang hood serves as a shield for the receptacles and plugs. It is readily removable, permitting ease of wiring and installation to floor boxes or floor duct systems with ¾" or 1" openings.

Furnished complete with ¾" conduit nipple.

T & B FLOOR BOXES

NON-ADJUSTABLE WATERTIGHT FLOOR BOXES

Listed by Underwriters' Laboratories

No screws to take out to assemble this box, no careful matching of screw holes in gasket and box. Receptacle plate locks in place with a single twist, and the cover plate goes on with another. Boxes 1700 and 1701 are furnished with a receptacle (10 amp., 250 volts or 15 amp., 125 volts) and blank cover disc.

Cat. No.	Description	Std. Pkg.	Wt. Lbs. Each	Each

MECHANICALLY ADJUSTABLE WATERTIGHT FLOOR BOXES

Listed by Underwriters' Laboratories

Simple to install. No loss of time holding the adjusting ring to the finished floor level waiting for the cement to harden or for the concrete to be poured. This is all taken care of mechanically. Have a 5/8" vertical and a 10° angular adjustment. Covers are mechanically grounded to the box.

Cat. No.	Description	Std. Pkg.	Wt. Lbs. Each	Each
1760	2-wire with 1666 Recept.	10	3 1/2	\$12.13

RECTANGULAR GANG ADJUSTABLE AND WATERTIGHT

1, 2 and 3-Gangs for Light, Power and Communications

Listed by Underwriters' Laboratories

These boxes have a double mechanical adjustment: floor form adjustment by adjusting screw in ear at each corner of box; floor level adjustment by adjusting screws in cover frames. Covers have no unsightly screws. The cover is metallically grounded to the box. Boxes are heavily gasketed and are watertight.

Cat. No.	Description	Lgth. Inches	Std. Pkg.	Wt. Lbs. Each	Each

HOFFMAN ENCLOSURES

NEMA 12 PANEL ENCLOSURES

Strong rigid sheet steel construction with all seams welded. No holes. Neoprene gasket on door keeps out oil, dust, and water. Door screw clamp provides positive closing on single door units. Double door units furnished with 3 point latch and key-locking handle.

A removable panel and print pocket are furnished. Standard finish is white enamel interior, gray prime exterior. These enclosures meet NEMA 12 (Industrial Use) standards. Other standard stock sizes available in Stainless Steel, Aluminum, Free Standing, RFI Shielded, Flush Mounted, Heavy-duty, and to accept Square D, G.E., and Cutler-Hammer side mounted disconnects. In addition to standard sizes, we furnish special sizes, finishes and modifications on order.

HOFFMAN ENCLOSURES

OIL TIGHT JIC BOXES

These boxes serve as wiring and instrument enclosures. They keep out oil, coolant, water and dust. There are no holes and all seams are welded. Covers have neoprene gaskets. Covers of "LP" Style boxes are secured by screw clamps and lift-off hinges; covers are also chained to body. "CH" boxes have continuous hinges on one side. All models except as noted in table have weldnuts for supporting optional panel, or terminal strap kits available with or without blocks. Regular steel boxes are finished gray hammertone. Panels are white enamel. Boxes are made to JIC standards. Standard stock units are also available with RFI Shielding. Hot dipped galvanized units are also stocked. Special sizes, finishes and modifications can be provided on order.

OIL TIGHT PUSHBUTTON BOXES

Rugged 14 gauge sheet steel construction allows you to make conduit connections anywhere. "Universal" holes receive all standard, heavy duty oil tight pushbuttons. Cover has neoprene gasket. Larger boxes have internal hinge to hold removable cover on and open when wiring buttons. Cover screws are captivated and thread into sealed wells. Completely oil and dust tight. Finish is gray hammertone enamel. Stainless units are made of type 304 stainless and have plain finish.

HOFFMAN ENCLOSURES

To Provide Protection from Dust, Dirt,
Oil and Water

OIL TIGHT JIC LAY-IN WIREWAY

Protect electrical wiring from oil, dust, dirt or water. No "pulling-through" of wires is required with this design. Wires may be laid in along an entire wireway run.

Made of 14 gauge steel. All end flanges are 10 gauge steel. Seams are welded and there are no holes or knockouts.

The covers of straight sections and fittings have cellular neoprene gaskets cemented on with oil-resistant adhesive. Covers are hinged to trough bodies on one side and held closed with "Hoffman" design external clamps on the other. A 1/8" solid neoprene gasket is placed between flanges when pieces are bolted together.

After wires have been laid in, gasketed sealing plate is screwed tightly in place at the top of each joint to provide complete oil tight sealing between pieces.

Standard Sizes: 2 1/2" x 2 1/2", 4" x 4", 6" x 6", 12" x 6". **Straight sections:** 6", 1', 2', 3', 4', 5' and 10'. **Fittings:** 90° and 45° Elbows, Cross, "T", Closure Plate, Reducing Bushings, Telescope (1" to 7" adjustment) and Hangers.

OIL TIGHT JIC SECTIONAL WIREWAY

May be used for electrical wiring on machinery, equipment, and buildings — inside or outdoors where protection is desired from oil, dirt, dust or water. Special finishing desirable outside. Easy access to the interior of the wireway greatly facilitates electrical wiring. With the line of fittings available, the wireway may be assembled to fit any machinery or building requirement.

14-ga. sheet steel is used throughout except on the welded connection flanges which are of 10-ga. There are no holes in the cover, trough or fittings. The cover which has a neoprene gasket, is hinged to the trough on one side and held with external clamps on the other. Flanges are welded to both ends of each section and on all fittings. The flanges bolt together. A neoprene gasket is placed between each section. Finish is a baked gray hammertone enamel on a phosphatized surface.

Standard Sizes: 2 1/2" x 2 1/2", 4" x 4", 6" x 6" and 8" x 8". **Straight sections:** 1', 2', 3', 4', 5' and 10'. **Fittings:** 90° and 45° Elbows, Cross "T", Closure Plate, Reducing Bushings, Swivel Nipple, Telescope (1 1/2" to 13" adjustment) and Hangers.

Price on Application

**HOFFMAN WEATHERPROOF
POWER OUTLETS**

The most convenient design in weatherproof power outlets. Large receptacles, fuse pullouts, and circuit breakers are mounted on the inside back of the box rather than on the panel. This allows the panel to be taken completely out during hook-up and provides plenty of wiring room inside the box.

Units are prewired and the only connections necessary are the incoming wires and an equipment ground.

There is a complete model selection for farms, mobile home parks, etc., wherever an outdoor power source is needed. Units are available with rating from 15 to 120 amps with a wide variety of receptacles to fit your exact needs.

Boxes are made of galvanized steel with gray enamel finish. Pressure connectors are electro tin plated for use with copper or aluminum wire. Cord slots with rounded edges allow covers to be closed and padlocked when outlets are in use.

Other companion items available include Pole Top Switches, Remote Control Switches, Weatherproof Terminal Boxes, Fuse Pullout Boxes, Pull Boxes, Cutout Boxes, Raintight Enclosures, Multi-outlet Boxes, Angle Caps and Weatherproof Service Junction Posts for mobile home parks.

HOFFMAN ENCLOSURES**MULTIPLE USE OIL TIGHT CONSOLE**

No. C14B

For Electrical and Electronic Use

Made of 14 gauge steel with welded seams. Height is 50", width 24" and depth 23". There is an optional writing desk and casters also available.

The sloping front panel is ideal for mounting meters, switches and push-buttons. Flush, keylocking gasketed doors, front and rear, provide access to lower sub-panels which can be either stationary or swing-out. Note provision for pull-out electronic chassis and rack panels if desired, or combination stationary panel with pull-out chassis. This is the most versatile, heavy duty, all-welded oil tight and dust tight cabinet available.

COLUMBIA PULL BOXES

Columbia pull boxes are constructed to code specs for all surface mounted wiring requirements. Standard finish is gray enamel. The more popular sizes are listed. Check Graybar for special requirements including: without knockouts, galvanized, aluminum, or other sizes, etc.

Transformer cabinets are gray enamel on heavy sheet steel. Vault handle is standard with single or 3 point latching. For standard or special needs check Graybar.

Single Door

COLUMBIA WIREWAYS

All Columbia wireways are fabricated of code gauge steel with a gray enamel finish. Screws, bolts, and nuts are provided with each part for custom job site assembly. All fittings necessary for complete installation flexibility are available. Check Graybar for prices and special requirements.

TYPE AFS is screw cover lay-in flangeless wireway available with or without knockouts. Standard sizes include: 2½" x 2½", 4" x 4", 6" x 6", 8" x 8", 10" x 10", and 12" x 12".

TYPE AFH is hinged cover lay-in flangeless wireway available with or without knockouts. Standard sizes include: 2½" x 2½", 4" x 4", 6" x 6", and 8" x 8".

TYPE CD is neoprene gasketed, hinged cover (with external positive-pressure latching type clamps) flanged wireway. All items include necessary neoprene flange gaskets. Standard sizes include: 2½" x 2½", 4" x 4", 6" x 6", and 8" x 8".

Price on Application

COLUMBIA

RAIN TIGHT SCREW COVER BOXES AND WIRING GUTTERS

Overhanging flanges on top "shingle" over sides protecting enclosed wiring from the elements. Cover also slides under front flange and wide side flanges nest into body recesses. Screws at the bottom hold the cover in place and provide quick access. Knockouts are provided at the bottom. Finish is gray enamel. Check Graybar for prices.

Type CRG

Type CRSC

COLUMBIA

NEMA-JIC ENCLOSURES

Columbia produces standard special NEMA 1 and NEMA 12 enclosures, "JIC" enclosed wiring troughs, oil-tight pushbutton enclosures, "JIC" terminal and pull box enclosures, and special custom boxes and cabinets. All are fabricated from code gauge steel (depending on size, etc.).

NEMA 1 enclosures are gray prime coated inside and out with a removable white enameled panel.

NEMA 12 enclosures are gray prime outside, white enamel inside with a removable white enameled panel.

JIC WIRING TROUGH, PUSHBUTTON, TERMINAL AND PULL BOX enclosures are all gray hammertone inside and out.

These enclosures are also available in galvanized and other special finishes and aluminum and other materials.

**SQUARE D WIREWAY
SQUARE-DUCT® AND FITTINGS**

SQUARE-Duct Length

90° Elbow

Hinged Connector

Wire Retainer

Cut-Off Fitting

Universal Hanger

SQUARE-Duct combination wireway is usable as either Hinge Cover or Screw Cover Duct. Provides full lay-in features throughout. Hinged covers are quickly removed and replaced by pressing spring tabs. All SQUARE-Duct components are U/L listed as steel enclosed wireway and auxiliary gutter. Finish: Blue-gray baked enamel.

NO CONNECTORS ARE FURNISHED WITH LENGTHS OR FITTINGS

KEYSTONE WIREWAY SYSTEMS

The Ultimate in Wiring Convenience, Flexibility and Reaccess

Flangeless Screw-Cover Wireway

"T" Fitting and Pull Box

90° Elbow and Pull Box

Flangeless Hinged-Cover Wireway

Listed by Underwriters Laboratories, Inc.

Keystone Wireway Systems afford wiring ease unequaled with any other circuit or distribution enclosing device. Wires and cables are conveniently layed in place without conductor damaging stuffing or pulling. Taps are made with ease anywhere along the run. Reaccess, add-on and additional taps can be made at any time.

Components are produced from electrical code gauge steel. Keystone Wireway Systems are available with either durable baked gray enamel finish or galvanized steel. Screws, nuts and bolts required are packaged with each part. Lengths are available with or without knockouts. Ask Graybar to, "Have the Keystone man call".

KEYSTONE

NEMA-JIC BOXES, ENCLOSURES AND TROUGH

A wide variety of standard NEMA 1, NEMA 4, NEMA 12 and JIC boxes, push-button boxes, enclosures, panel enclosures, flange mounting disconnect switch enclosures, trough and accessory equipment is available for every need. For design and selection assistance ask Graybar to, "Have the Keystone man call".

KEYSTONE

JIC OIL-TIGHT LAY-IN WIREWAY SYSTEMS

Keystone's oil-tight, lay-in wireway and fittings provide rigid structural protection for all types of electrical wiring from oil, dust, dirt, coolants, water and lubricants. These versatile systems allow fast installation, and easy access throughout the entire run. Keystone's unique SIN-

GLE PLATE Sealing Closure eliminates pulling through of wires. They meet JIC oil-tight standards and are available in a wide range of sizes with all fittings.

"JIC" Flanged Hinged-Latched Cover Wireway

Completely gasketed with convenient hinged and latched covers for easy access, this rigid wireway system is finished with durable baked gray enamel. Standard sizes are 2 1/2" x 2 1/2", 4" x 4", 6" x 6", and 8" x 8".

KEYSTONE PULL BOXES, GUTTER AND CABINETS

Keystone pull boxes, wiring gutter and cabinets are made in a wide variety, for every wiring need.

Price on Application

HOPE CAST IRON BOXES**TYPE H2200****TYPE H3200****TYPE H5800****TYPE H7000****TYPE H6000****TYPE H3200-T****UNFLANGED JUNCTION BOXES TYPE H2200**

Weatherproof—Surface Mounting—
NEMA III, IV, V

Type H2200 boxes are equipped with overlap cover and retained gasket. Specify bossed conduit entrances to ensure raintight and dust-tight engagement. Mounting lugs add to ease of installation. Interior mounting buttons, tapped blind to specified centers, required for installation of panels or apparatus.

Standard Construction: Cast Iron Box and Cover; Hot Dip Galvanized finish; Neoprene gasket; Brass Machine screws.

Special Construction: Drilling; Tapping; Bosses for five threads; Mounting lugs; Interior buttons; Special gaskets; Panels.

Boxes are available with inside dimensions of 4" long x 4" wide x 3" deep thru 36" long x 36" wide x 12" deep.

HINGED COVER JUNCTION BOXES TYPE H3200

Weatherproof—Surface Mounting—
NEMA III, IV, V

Retained rubber gasket, adequate pressure hinges and brass wingnut provide thorough weathertight and dust-tight closure. Bossed and tapped conduit entrances recommended. Mounting lugs for ease of installation. Ideal for enclosing panels, transformers, relays and many diverse types of electrical equipment.

Standard Construction: Cast Iron Box and Cover; Hot Dip Galvanized finish; Retained Neoprene gasket; Brass with bronze hardware.

Special Construction: Drilling; Tapping; Bosses for five threads; Mounting lugs; Interior buttons; Special gaskets; Hasp.

Boxes are available with inside dimensions of 5" long x 5" wide x 3" deep thru 36" long x 36" wide x 12" deep.

SIDEWALK BOXES TYPE H5800

Weatherproof—Flush Mounting—NEMA III, IV, V

H5800 type boxes widely installed in sidewalks and walkways of bridges, dams, tunnels, approaches and airports. The checkered non-slip cover, flush with finished concrete, is cross-ribbed for heavy pedestrian traffic. Flanges and covers are replaceable without disturbing box and conduits when heavy vehicle damages installation. Monel cap screws, set down in counter-bore assure weathertight closure.

Standard Construction: Box, Flange and Cover of cast iron; Hot Dip Galvanized finish; Neoprene gasket; Monel hardware.

Special Construction: Drilling; Tappings; Bosses for five threads; Special gaskets.

Boxes are available with inside dimensions of 6" long x 6" wide x 4" deep thru 36" long x 24" wide x 14" deep.

FLOOR AND SIDEWALL BOXES TYPE H7000

Weatherproof—Flush Mounting—NEMA III, IV, V

Intended for flush mounting in side walls or parapets, or in concrete floors where light pedestrian traffic is encountered. For industrial floors, checkered galvanized steel covers should be specified to carry moderate hand-truck traffic. Non-adjustable.

Standard Construction: Box and plain cover of cast iron; Hot Dip Galvanized finish; Neoprene gasket; Galvanized checkered steel cover if specified on order.

Special Construction: Drillings; Tappings; Bosses for five threads; Mounting lugs; Special gaskets; Plain brass or checkered bronze covers.

Boxes are available with inside dimensions of 4" long x 4" wide x 3" deep thru 36" long x 24" wide x 30" deep.

EXPLOSION RESISTING HOUSINGS TYPE H6000

Class I, Group D—Surface Mounting—NEMA VII

Manufactured to the standards of the Underwriters' Laboratories but not tested by that agency. Specifying engineers recognize the rugged construction with bolt-on type covers as wholly adequate for installation in Class I hazardous locations of explosive vapors in refineries, chemical and powder plants, paint, varnish and solvent manufacture.

Standard Construction: Box and Cover of cast iron; Hot Dip Galvanized finish; Metal to Metal joint; Two mounting lugs each long side.

Special Construction: Five thread tapping; Bosses with five threads; Interior mounting buttons; Bronze hinges.

Boxes are available with inside dimensions of 5" long x 5" wide x 3" deep thru 70" long x 30" wide x 14" deep.

TERMINAL CABINETS TYPE H3200-T

Weatherproof—Dust-Tight—Surface Mounting
NEMA III, IV, V

Hinged terminal cabinets enclosing rugged terminal blocks in a variety of sizes to meet differing wiring conditions. The blocks, rated at 30 amps, 750 volts, are mounted on blind tapped buttons raised above back of box to provide air gap; each has white target strip for marking circuits. Ample wiring gutters. Ideal for thermocouple and telephone circuits; instrumentation. Galvanized finish.

Cabinets are available with inside dimensions of 5" long x 5" wide x 3" deep thru 34" long x 30" wide x 5 3/4" deep.

Underwriters Laboratories approved.

Specially designed or sized boxes available on request.

All XJF Junction Boxes listed by Underwriters' Laboratories have fixture drilled covers to assure interchangeability; this is essential when more than one housing of the same size is used. †These boxes and enclosures are listed by Underwriters' Laboratories. Additional boxes are periodically submitted for listing. *Nominal sizes are inside dimensions at opening. Width and length decrease at rate of 3/32" for each two inches of depth.

LOAD CENTER UNIT SUBSTATIONS

Load center unit substations are the surest way to dependable power distribution in industrial plants and commercial buildings, and for power station auxiliaries and other applications requiring continuity of service.

The function of the equipment is to transform power from the 2,400- to 13,800-volt range down to 600 volts or less, and to provide protection and control for low voltage feeder circuits.

Graybar Electric offers a complete line of load center unit substations, for indoor or outdoor installations. Standard designs free you from unnecessary purchasing and engineering details. Factory-assembled equipment reduces installation time and cost. Mechanical and electrical co-ordination results in greater reliability. Workmanship and materials are protected by one over-all warranty. Expert field engineering is available to further assure proper application, installation and operation.

Compact design means that the load center unit substations can be installed near the load area without wasting valuable production space.

Compartmentation of major components in the low voltage section can confine faults if they should occur and provide greater safety for operating personnel. Stored-energy breakers assure high-speed closing of breaker contacts independent of operating force, preventing unnecessary arcing and wear.

The load center unit substation consists of several standard components factory-engineered and co-ordinated for integral connection in the field to form a complete unit. While load center unit substations are handled as single packaged units, it simplifies matters from the engineering point of view to consider the substation as made up of three sections:

- (1) Incoming high voltage section
- (2) Transforming section
- (3) Outgoing low voltage switchgear section

Square D Company

LOAD CENTER UNIT SUBSTATIONS

Service reliability depends not only on the quality of the equipment and its method of installation, but also on the design of the power system and the proper co-ordination of protective devices. The four basic circuit arrangements shown below have evolved from many arrangements of circuits and equipments which are possible. In each case, power is supplied from metal-clad switchgear at voltages ranging from 2,400 to 13,800 volts, to load center unit sub-

stations, as shown, and distributed at voltages ranging from 120 to 600 volts.

The degree of power continuity desired by the user will determine the system arrangement to be chosen. Combining the best circuit arrangement with co-ordination of protective devices so that faults are cleared selectively, will afford the highest degree of service continuity.

SIMPLE RADIAL SYSTEM

Simple radial system is most economical load-center distribution system, has sufficient reliability for most power service requirements. There is only one primary feeder and one transformer through which a secondary bus is served. Loss of source power means loss of the entire substation until the trouble has been cleared.

SECONDARY SELECTIVE SYSTEM

Secondary selective system is—in effect—two radial systems with a secondary tie between them. Either source of power may be energized and power can be made available on both secondary buses by opening the proper substation main breaker and closing the tie breaker. This system costs from 25 to 50 percent more than the radial system.

SPOT NETWORK SYSTEM

Spot network system parallels the transformer secondaries to provide continuous service for an outage of one primary circuit. Failure of transformer or primary feeder results in automatic removal of the faulty equipment. This system costs from 20 to 50 percent more than the radial system.

PRIMARY SELECTIVE SYSTEM

Primary selective system provides an alternate supply to the primary of each transformer. If a primary fault occurs, the associated primary breaker opens and interrupts service to half of the load area. The de-energized transformers . . . out of service . . . are manually switched to the other feeder. Cost is 15 to 40 percent more than radial systems.

LOAD CENTER UNIT SUBSTATIONS

INCOMING LINE SECTION

Air-interrupter Switch

Air-interrupter switches, such as the one shown above, are three-pole, two-position switches, manually operated by handle from outside the enclosure. Fuses are installed in the same enclosure. Rating data for one type of air-interrupter switch is given in the table below.

Variations of this basic two-position, manually-operated, air-interrupter switch may be obtained, such as selector-type of operation (Line 1/Open/Line 2), double-break type, oil-filled type, and even electrically-operated.

Load center unit substations equipped with these switches are generally fed from metal-clad switchgear, which protects and switches the primary feeder circuit supplying the substation.

Rating Data, Typical Air-interrupter Switch

Voltage Class	Full Load Current Interrupting Rating		Limited Current Interrupting Rating	
	5 kv	15kv	5 kv	15 kv
Maximum design voltage rating	5500 v	14,500v	5500 v	14,500v
Basic impulse level	60 kv	95 kv	60 kv	95 kv
60-cycle test voltage (one minute withstand, dry)	19 kv	36 kv	19 kv	36 kv
Momentary (unfused) RMS asymmetrical	40,000 amp	40,000 amp	40,000 amp	40,000 amp
Momentary (fused) RMS asymmetrical	60,000 amp	50,000 amp	60,000 amp	50,000 amp
Fault close rating, RMS asymmetrical	40,000 amp	40,000 amp	None	None
Interrupting rating	600 amp	600 amp	See Note A	See Note A
Continuous current rating	600 amp	600 amp	600 amp	600 amp

NOTE A: Rating 100 amperes at 13,800 volts.
200 amperes at 7200 volts.
400 amperes at 4800 volts.

TRANSFORMING SECTION

Liquid-type transformer for indoor or outdoor installation

In the transforming section, the incoming (or primary) voltage is reduced to the outgoing (or secondary) voltage and supplied to the feeder breakers for distribution. Four main types of transformers are used in load center unit substations:

- (a) Oil-filled
- (b) Non-flammable liquid-filled (Askarel)
- (c) Open, dry type
- (d) Gas-filled, sealed, dry type

Typical ratings of these transformers are:
KVA—112½ to 2,500
Primary Volts—2,400 to 13,800
Secondary Volts—208Y/120, 240, 480Y/277, 480

The table below presents a comparison of several aspects of the different types, using the characteristics of the oil-filled transformer as a base.

**Transformer Comparison (Oil as Base)
(1000 Kva, 5 Kv Transformers)**

	Oil	Non-flammable Liquid	Open Dry	Gas-filled Sealed Dry
Price (Per)	100	125	110	200
Weight (Lb)	5850	6650	4250	8600
Floor Dimensions (Inches)	49 x 72	49 x 72	31 x 55	73 x 52
Noise Levels (Db)	58	58	64	63
Impulse Levels (Kv)	60	60	25	60

**LOAD CENTER UNIT SUBSTATIONS
OUTGOING LOW VOLTAGE SWITCHGEAR SECTION**

Low voltage switchgear with breakers (from top) in connected, test, disconnected and withdrawn positions.

The low voltage section of the equipment controls and protects power flow to different sections of the system. It consists of the necessary buswork and supporting structures, circuit breakers and fuses, and such meters, auxiliary transformers, and switches as may be required. All are mounted in grounded metal enclosures; drawout breakers are generally used, although stationary breakers are sometimes specified.

A transformer main secondary breaker is recommended to protect against faults on the main bus, to provide required transformer secondary protection in accordance with the NEC requirements, to meet the six disconnect requirement of the code where the number of feeder breakers is more than six, to facilitate interlocking, throwover, and relaying schemes, and to back up lower-rated feeder breakers in cascaded systems.

Individual breakers are provided for a variety of applications such as general purpose feeder breakers, motor starting, generator disconnects, and welding machine feeder circuits. They may be manually or electrically operated.

The breaker is chosen on the basis of available short-circuit current which it may be called upon to interrupt, together with the continuous current it will carry, plus the speed and time/current characteristic of the trip. Series trip units are available for each phase, most of them electro-mechanical in operation, but some static. The table to the right gives interrupting and trip ratings of the various common frame size breakers on typical low voltage distribution circuits.

Typical Power Circuit Breaker Application Range

Frame Size Rating	Voltage Rating 60 Cyc. A.C.	Interrupting Rating in Amp. RMS Symmetrical		Overcurrent Trip Device Rating—Amp		Short-time Rating Amp RMS Symmetrical	Short Circuit Limit for 2-step Cascade Operation Amp RMS Symmetrical

I-T-E TELEMANT[®] AUTOMATIC TRANSFER SWITCHES

With dual Telemant[®] motor operators and dual circuit interrupters, I-T-E offers 3 position flexibility (optional) which allows both interrupters to be open at the same time, providing complete safety to operating personnel doing maintenance and inspection work.

AVAILABLE IN ENCLOSURES OR AS SWITCHBOARD COMPONENT

- Available 600 Volt A.C. or 250 Volt D.C. with current ratings from 225 to 1600 amperes.
- Interrupting ratings from 25,000 to 200,000 rms. amperes.
- Enclosures: NEMA, 1A and III.
- Feeder Failure . . . provides load transfer to emergency upon complete feeder failure, or when voltage drops below 70% across lines to which relay is connected. Returns to normal when voltage is restored.
- Full Relay . . . load transfers when any normal line voltage drops below 70%; returns load to normal when line voltages are 90% or more.

- ① Price includes push button to close and trip. If control transformer is required, select and add from Table 20.
- ② Prices include neutral. If not required, deduct, using prices in Table 5.
- ③ The AKU-25 and -50 drawout breakers have fuses mounted integral with breaker. All others have fuses separately mounted on drawout carriage.
- ④ Refer to Graybar for single-phase, 3-wire.

TABLE 2—LB-1 POWER PROTECTORS
3-Phase, 4-Wire, 480-Volt A-c or Less^③
Price includes CLF[®] NEMA Class L fuses.

Rating in Amperes	Without Single-phase Protection or Blow-fuse Indication		With Single-phase Protection and Blow-fuse Indication		Space and Busing
	Manually Operated	Electrically Operated ^①	Manually Operated	Electrically Operated ^①

①800- and 1200-ampere ratings arranged for NEMA Class "L" current-limiting fuses only. U/L listing not available.
②Includes adaptor Cat. No. 792A372G4.
③Price for auxiliary contact is same for 800- and 1200-amp ratings.

TABLE 20—OTHER ACCESSORIES

Description	List Price Addition Each
CHANNEL SILL 4-inch X 1¼-inch per low-voltage vertical section. If channel sills are to extend under high-voltage compartment, transformer and transition sections of unit substation, add per transformer.....	\$10 42
LIFTING MEANS.....	Standard
CONTROL POWER TRANSFORMER—Single-phase (Includes primary fuses) 1 or less, 2- or 3-kva.....	300
LEVELING BOLTS—per vertical section.....	16
NAMEPLATES.....	6
PILOT LIGHTS—Indicating—(specify color).....	30
GROUND DETECTOR LAMPS①..... per set of 3	300
CONTROL SWITCH—(no pilot lights included) a. For power circuit breaker control..... b. Transfer (double-pole, double-throw). Additional poles (single- or double-throw).....	180 260 36
TUMBLER SWITCH—Maximum 60-amp (sp-st) (dp-st) (3-way).....	110
PUSHBUTTON—CR2940 (mom. contact) (heavy-duty or oil-tight).....	68
SELECTOR SWITCH—CR2940 (ON-OFF) or (HAND-OFF-AUTO).....	74
CLOCK—12-inch diam. or less a. Motor-driven, 120-volt, a-c only..... b. Spring-driven, Motor-wound a-c only.....	540 1020
TIME SWITCH—Maximum DPDT, 240-v, a-c, 60-cycle a. Plain dial..... b. With astronomical dial..... c. With astronomical dial and omitting device.....	120 150 180
ALARM, BELL OR HORN—12-inch diameter or less, 125-volt, a-c or d-c.....	330
RHEOSTAT MECHANISM—18-inch diameter or less (space, mounting and connectional only) a. Single-wheel..... b. Double-wheel.....	190 240
MIMIC BUS—Adhesive vinyl strip..... per device	20
SPACE HEATER②—Maximum 250-watt, 240-volt..... If transformer is required price from item 3 above.....	230
ELECTRICALLY OPERATED SWITCHES.....	Refer To Graybar
AUTOMATIC TRANSFER SWITCHES AND BREAKERS.....	Refer To Graybar
2-POLE FUSE BLOCK—30-amp, 250- or 600-volt.....	60
GROUND SENSOR RELAYING For 4-wire grounded system only. (Includes relay, window-type current transformer control-circuit fuse block, and fuses).....	730
NOTE: Add for ground bus, shunt trip and control-power transformer as may be required.	
TOUCH-UP PAINT, ASA-33..... 16 oz. can	5

①Set of 3 lamps with built-in resistors and push-button switch. 600-volt or less. Fuses included as required. If transformer is required, add \$180 List.
②Control and overcurrent protection NOT included.

TABLE 21—SWITCHBOARD STRUCTURE MODIFICATIONS

Description	List Price Addition Each
Blank Auxiliary Section. For pulling in underground service cables. 15" wide 15" deep, 78" or 90" high. No bus.....	\$150
Blank Vertical Section. No bus. Max. 30" w x max. 45" d x 90" h or 78" h..... Max. 45" w x max. 45" d x 90" h or 78" h.....	320 380
Blank space for mounting panelboards or other devices. Section width x Section depth. Add for each 12" or fraction thereof of vertical height.....	64
PANELBOARDS—Mounted in switchboards (Styles Q and NCP only) Space for mounting in switchboard..... And ADD for complete panelboard (including cabinet) (a) Style Q—for switchboards.....	See above Refer to Graybar Refer to Graybar Branch circuit feeder price
Add for dry-type transformer—if required.....	
Add for transformer protective device.....	
Wire Mesh Grille per sq. ft.....	16
Door with catch and lock—per door (a) In end or rear of steel enclosure..... (b) In wire mesh grille..... (c) Over blank space (full height)..... (d) Over group mounted devices..... (e) Front or rear of pull box.....	180 180 110 110 58
Glass Panel in Door or Cover Plate.....	90
PULL BOX—width and depth of switchboard— With screw-on plates—front and rear. Cable supports are not included.	Per vertical section: Class I
(a) 12" thru 30" high: Open bottom type..... With 1" ebony asbestos bottom.....	\$130 280
(b) 31" thru 60" high: Open bottom type..... With 1" ebony asbestos bottom.....	200 330
Bottom plate.....	22
Cable Supports—in pull box or rear of switchboard.....	78

TABLE 22—BUS BAR MODIFICATIONS

Description	List Price Addition Each
BUS BRACING—For 100,000 rms ampere symmetrical—per section.....	\$140
GROUND BUS—per switchboard.....	88
Reduced current density in bus bars (1000 amps per sq. in. std.).....	Refer to Graybar
Special Hardware (Bus bar bolts) (Zinc-plated steel standard) Everdur or Stainless Steel.....	Per Switchboard \$100

FPE STAB-LOK[®] METERING EQUIPMENT

FACTORY ASSEMBLED INDOOR TYPE

To meet requirements of local utilities and to simplify the contractor's job, Federal Pacific factory-assembles Meter Socket Equipment in its network of local Customer Service Centers and Speed Order Service plants. Each plant is staffed with engineers who know the utility requirements of their area.

The meter socket panel is completely wired and interconnected but may be segmented for convenience in handling.

- Maximum number of meters each vertical stack—
through 100 ampere—4 high (10" wide)
125 and 150 ampere—3 high (12" wide).
- Suitable for wall or floor mounting. See table IV.
- Up to 1200 ampere mains
1 ∅ 3W—120/240V or 3 ∅ 4W—120/208V.
- Code gauge steel—gray enameled finish.
- Sealing rings and covers provided for all meter socket positions.
- Underwriters' Laboratories, Inc. listed.

Pricing Data:

TABLE I—\$36.00 per meter socket list—100 ampere maximum
\$77.00 per meter socket list—125 and 150 amperes

TABLE II—Tenant Main Breaker Rating—2 Pole

Amperes	Catalog Number	List Price
Through 50	—	\$ 6.60
60	2P60	6.60
70	2P70	13.40
100	2P100	18.10
125	2B125	36.00
150	2B150	36.00

TABLE IV—Accessories:

	List Price
Transition gutter.....	\$30.00
Bottom to top bussed connector.....	90.00
Buss duct entrance.....	Refer to factory
End cable tap box.....	40.00
5th jaw, one per socket (when required).....	1.50
Manual by-pass.....	15.00
By-pass jumpers (MSJ100).....	1.50
Special sealing rings.....	Refer to factory
Glass cover (MSGC).....	1.50
*Free-standing floor mounting.....	Refer to factory

How to Price:

Step I — Multiply table I price times quantity of meter sockets required. See table I.

Step II — Multiply tenant main circuit breaker price by quantity required. See table II.

Step III—Select main disconnect price from table III or add end cable tap box from table IV.

Step IV—Itemize and price accessories as required from table IV.

Step V — Total cost of steps 1 through 4 for complete list price.

TABLE III—Main Disconnects

FPE STAB-LOK® METERING EQUIPMENT

PRE-ASSEMBLED, GANGABLE METER SOCKET ASSEMBLIES

400 Ampere—Single Phase—up to 100 Ampere Tenant Mains.

On single phase applications with mains rated 400 amperes or under, costs of meter socket equipment can be considerably reduced by simply bolting together individually packaged, lightweight assemblies. These assemblies are available in single or twin vertical stacks with 2, 3, or 4 sockets. Tenant mains for each stack are centralized, together with neutral, in one location, simplifying wiring.

Cat. No. ECTB4

Cat. No. MSNJL400-2

Cat. No. SMS3-4B

Cat. No. TMS44-4B

How to Price: Step I—Add quantity of meter socket assemblies required. See table I.

Step II—Select main disconnect price from table II or add end cable tap box from table IV.

Step III—Multiply tenant main circuit breaker price by quantity required. See table III.

Step IV—Itemize and price accessories as required from table IV.

Step V—Total cost of steps 1 through 4 for complete list price.

SQUARE D VERTICAL E-Z STACK INDOOR MULTI-METERING EQUIPMENT

- COMPACT
- VERSATILE
- COMPONENTS PRE-ASSEMBLED

Compact design of Vertical E-Z Stack makes the best use of available wall space. Pre-assembled components are easy to transport on the job-site through narrow doorways, up stairs or in the restricted confines of narrow meter rooms. Far superior to bulky factory-assembled meter centers.

Components interconnect with bus kits (provided). No internal cable is required. Rugged design and rigid bussing provides mechanical strength for services having high fault-current availability.

ORDER INSTRUCTIONS

A Vertical E-Z Stack meter-center may be ordered as (1) components, listed on the following page — or, as (2) meter-center priced from the simplified price method outlined on this page. In either instance, required components will be furnished from the nearest Square D warehouse.

Meter devices with 100A., 125A. or 150A. branches can be readily intermixed in a Vertical E-Z Stack assembly. Internal cross bussing permits random top or bottom loads without the expense and wall space of a transition section.

PRICING AND ORDERING INSTRUCTIONS: (SIMPLIFIED PRICE METHOD)

- Step 1 — Select main device.
- Step 2 — Add metered branches.
- Step 3 — Add special features: by-pass, etc.
- Step 4 — For 15A. thru 100A. branches, select and add 2-pole Type QO or Q1 breakers.
Note: Type Q2 2-pole breakers are included in 125A. and 150A. branches.
- Step 5 — Include sketch showing location of incoming service and arrangement of metered branches.

Example:

18 unit 120/240V., 1φ-3W overhead, 600A. main breaker, branches: 16-100A. and 2-60A.

1 — 600A. main breaker		\$ 599.00
18 — 100A. metered branches	\$32.00	576.00
16 — Q12100 circuit breakers	\$18.10	289.60
2 — QO260 circuit breakers	\$ 6.60	13.20
Total		\$1,477.80

As shipped: (per sketch)

- 1 — EZ316CB
- 2 — EZ4B
- 2 — EZ4T
- 1 — EZ2B
- 1 — EZSM316
- 4 — EZMM316
- 16 — Q1 2100
- 2 — QO260

*Unit consists of 4-jaw socket and two-pole breaker.

†For automatic circuit closing type sockets add suffix "C" to catalog number, i.e., EZ2CT, and add \$2.50 per each socket. For manual circuit closing type add suffix "D" to catalog number, i.e., EZ41DT-A, and add \$15.50 per each socket.

‡For 3 ϕ-4W systems, 5th jaw, Cat. No. SG66 is furnished for each socket. 5th jaw may be field mounted in either left, right, or bottom position.

★100 ampere units have space for two pole plug-in type Q0 or Q1 Breakers 15 thru 100 amperes. Order breakers separately.

▲125 and 150 ampere units have factory installed type Q2 main breakers. Price shown has breakers included.

Ⓞ125 and 150 A. units have sockets on 10" horizontal centers and 8 1/2" vertical centers.

For "Keeper Terminal" add \$1.10 per meter socket.

MAIN CIRCUIT BREAKERS*

(EZSM, EZMSM, SG104 or SG111 Connector kits must be ordered separately from table below)

SQUARE D UNITIZED E-Z STACK INDOOR GROUPED METERING EQUIPMENT

UEZ 145

UEZ 166

A completely self-contained meter-center with a unique removable interior assembly. Serves up to six apartments. 4 jaws are mounted on an indestructible base of polyester glass fiber. Provisions at 6 and 9 o'clock for potential 5th jaw. Rigid bussed throughout; no interconnections required. Service connects to top, bottom or side; load conduits connect to top, bottom, sides and back. External mounting provisions.

Interior removes as a complete assembly. Retained by one captive fastener for convenience. Removed interior assembly speeds attaching conduits and pulling wires. Meter jaws and other parts are protected from weather and construction hazards.

Supplied with snap-type seal rings. Lockoff and sealing provisions for each branch main breaker. Code-gauge steel finished blue-gray baked enamel. U/L listed.

Ⓞ Wire terminal. Ⓞ Specifications call for 600-volt breaker. TEF4 or THEF4 (480-volt) breaker may be acceptable on 480-volt systems, otherwise use TEF6 or THEF6 (600-volt) breaker. Ⓞ 2-pole breaker not U/L listed. If required use 3-pole breaker. Ⓞ D-c voltage rating applies to 125- thru 600-amp trip range on.

*WC-375a Interim Amendment 3 Feb. 1965

* Provides for 4 cables. Where provision for only 3 cables is required, the TN1800 may be used. TN1200 not U/L approved.

① Trips are not interchangeable between 800 amp and 1200 amp frames.
 ② Nonautomatic interrupter.
 ③ All TK1200 enclosures accept all TKM800 and 1200A magnetic breakers.
 ④ Enclosure U/L listed through 1200 amperes. Order hubs separately.

GENERAL ELECTRIC POWER CIRCUIT BREAKERS

Use as individually mounted units or as switching breaker in panelboard or switchgear equipment. Suitable for severe service, and where numerous operations are required for general power, lighting circuits, or motor-starting service.

Revolving pistol-grip handle operates manual quick-make mechanism, push-button trip for mechanical quick-break. Dual-magnetic time overcurrent trip unit per pole; arc quenchers; position indicator; provision for up to three padlocks for locking in trip-free position; bolted-type terminal connectors for enclosed breaker; selected enclosure except breakers for dead-front switchboard mounting. Electrically operated breaker eliminates operating handle; has solenoid (AK-2-15 and AK-2-25) or motor-operated (AK-2-50, AK-2-75, and AK-2-100) stored energy operating mechanism; closing relay; shunt trip device; four-circuit auxiliary switch, momentary-contact closing switch, and maintenance closing handle.

AK-2-15 stationary power circuit breaker, manual.

AK-2-25 drawout power circuit breaker, manual.

Selection and application information in Bulletin GET-1113. Or call Graybar for complete details.

GENERAL ELECTRIC TYPE PLB POWER PROTECTOR

APPLICATION

A "bolted"-pressure switch for service entrance, transfer and feeder circuit switching and protection in schools, hospitals, shopping centers, apartments and industrial plants. The PLB Power Protector can also be furnished with copper bars, instead of fuses for use as a non-fused disconnect switch.

DESCRIPTION

The PLB is available as either a Stationary Dead Front Mounted Switch or in the NEMA 1 General Purpose Enclosure for wall or floor mounting. Compact construction allows easier installation in up to 67 percent less floor space than other competitive models; switches up to 2000 amp can be stacked three high in a 90-inch enclosure.

FEATURES

Fuse "Rack-out"—Unique "rack-out" fuse carriage holds standard Class L current-limiting fuses mounted in a combination fuse holder and arcing contact assembly. Complete three-pole fuse assembly is switched in and out of the circuit. No separate switch assembly is necessary.

Reliability—Switching is handled by long-life replaceable arcing contacts; current does not make or break on fuse tangs. When switch is closed, "bolted" pressure is applied directly to fuse tangs.

"Anti-tease" mechanism—Operator cannot reverse direction until switch contacts are made. "Anti-tease" mechanism also absorbs any energy due to magnetic forces associated with closing in against faulty conditions, preventing transmission of these forces to operating handle. In the open position, entire fuse assembly can be tilted forward to disconnect fuses from line and load connections,

PLB in open position with fuses racked-out

PLB in free-standing enclosure

making fuses readily accessible for maintenance. Only a screwdriver is needed to replace fuses. Top or bottom feed switch can be top or bottom fed because fuses are completely removable for servicing.

Separable frame—Front frame with operating mechanism, fuses and movable arcing contacts can be completely separated from back frame and removed from enclosure for ease of installation and maintenance.

Front or back connection—Unique flat terminal pads in horizontal plane provide universal points for front or rear connection. Terminal adapter bars drilled for bolting to the terminal pads are provided with NEMA 1 PLB to permit mounting of customer's terminal lugs.

Mounting—Mounting dimensions generally interchangeable with equivalent rated Type AK power circuit breakers.

△ Specify down-fusing adapters when required.
 † Prices are for protector element only. Fuses must be ordered separately.
 ‡ Prices include the neutral assembly.
 § Catalog numbers and prices cover the enclosure, the protector element, and terminal adapter bars. Fuses must be ordered separately. Terminal lugs are not included and should be provided by the customer. Refer to GEA-8100 for suggested types of terminal lugs.
 * Consult Graybar for prices and availability.

NOTE: A provision of Kirk Interlock (locks not included) is available at \$40 each. It is recommended that Kirk Interlock's F-3^g be ordered directly from the lock manufacturer. PLB is also available as a nonfused disconnect switch at no change in list prices.

DOWN-FUSING ADAPTERS

The PLB Power Protector is fully rated (does not require derating) however down-fuse adapters are required for the PLB where the fuse ratings are smaller than that of the pressure switch. Specify down-fuse adapters by catalog number given below:

I-T-E LOW-VOLTAGE POWER CIRCUIT BREAKERS

Urelite® Individually Enclosed Low-Voltage Power Circuit Breakers provide overcurrent protection of main and feeder circuits where interrupting requirements are from 14,000 to 200,000 amperes at 600 volts a-c. Their advanced design provides continuous trouble-free service, added safety and simplified maintenance.

Features:

Drawout Construction • Quick-Make, Quick-Break Operation • Visible Break Disconnect Contacts • Larger, More Accessible Cable Box • Expanded Overcurrent Trip Calibrations.

Includes:

For K-225, K-600, K-1600

- Basic Drawout Breaker, Manually or Electrically Operated.
- Disconnect Devices for Drawout Operation.
- Enclosure with Pullbox for Wall Mounting.
- Solderless Cable Connectors.

For K-3000, K-4000

- Basic Stationary Breaker, Manually or Electrically Operated.
- Pullbox with Removable Top, Bottom, Back and Side Plates.
- Front Enclosure.

* Based on NEMA test procedures. UL ratings 5,000 amperes for EQ-T, EQ-P, EQ-8; 10,000 amperes for all other breakers, including QJ.

** Single-unit (EQ-P or EQ-8) or dual (EQ-T) construction must be specified.
▲ Meets Class 2d specifications, except rated 480 volts ac.

SQUARE D ENCLOSED CIRCUIT BREAKERS

NEMA I and NEMA 3R enclosed circuit breakers are UL listed as service equipment. Circuit breakers are quick-make, quick-break with thermal magnetic trip elements. Types A1, FA, KA and LA have permanently calibrated integral trip units and meet Federal Specifications W-C-375a.

Devices are UL listed under File E-10027. Terminal lugs are suitable for copper or aluminum cables. Finish is blue-gray baked enamel.

Units are shipped separately as a complete enclosure and a unit breaker.

Insulated groundable neutrals, if required, must be ordered separately for all devices not indicated with a solid neutral.

SQUARE D ENCLOSED CIRCUIT BREAKERS

NEMA 1 with Gasket

NEMA 12

NEMA I and NEMA 12 industrial enclosed circuit breakers utilize Type FA, KA and LA unit breakers with an integral permanently calibrated trip unit. MA devices have an interchangeable trip unit.

NEMA 12 enclosures meet JIC and all other industrial specifications. These devices utilize the same single stroke, interlocked, cover sealing mechanism as is used on NEMA 12 safety switches. The red and black handle is an integral part of the box not the cover. Positive tripped indication is provided by fluorescent indicator thru a window in the cover.

FUSIBLE SWITCH SHORT-CIRCUIT RATINGS

The maximum short-circuit interrupting rating of a General Electric Type QMR fused switch in symmetrical RMS amperes is:

- 25,000 with time-delay fuses.
- 25,000 with one-time fuses.
- 100,000 with time-delay current-limiting fuses.
- 200,000 with current-limiting fuses.

However if the interrupting rating of the fuse used is lower than that shown above, the interrupting rating of the fused switch will be the same as the fuse.

① Four blank fillers are included at no charge in each assembly. For additional fillers see footnote ②.
 ② For front Cat. No. add Suffix "F" for Flush or "S" for Surface Mounting.
 ③ Blank fillers Cat. No. 75C140045G703, \$0.25 list each. Also used to replace single-pole circuit breaker.
 ④ Main Circuit Breaker for top mounting.
 ⑤ 100-ampere Dual Lug Kit Cat. No. 75C140063G701, \$17 list each. Consists of neutral and three sub-feed lugs (#14-2/0 Cu-AL) with hardware for mounting beside main lugs on panelboards with 100- and 225-ampere main lugs only.

NOTE: No modifications available for these panels.

GENERAL ELECTRIC PANELBOARDS

With Panel Motor Control Units

- Combination Motor Starter and Disconnect Device in One Enclosure with Interlocked Door.
- NEMA Size No. 00 thru No. 4.
- Full Voltage Nonreversing, or Reversing.
- Two-speed and Part-winding Combination Starters available. Refer to Graybar.
- Units are Plug-in thru Size No. 2.
- Units available for existing Type CCB Panelboards.

① When boxes are required to be furnished without knockouts, add suffix "B" to box catalog number.

② Flush fronts (suffix "F") are 1 1/2" larger and surface fronts (suffix "S") are 1/4" larger than box inside dimensions.

③ Door openings are centered in front, on both horizontal and vertical center lines.

④ Surface fronts (suffix "S") are 1/4" larger and flush fronts (suffix "F") are 2" larger than inside box dimensions.

TELEPHONE CABINET

Standard General Electric Panelboard boxes can be used as telephone cabinets, readily available from distributor's stock. These can be supplied with 5/8" or 3/4"-inch plywood backboards at \$4.00 list per square foot.

The Above Items Are Subject to 50% Discount

GENERAL ELECTRIC SERVICE-ENTRANCE EQUIPMENT

Power Mark + * Circuit Breaker Load Centers

Load centers on this page are suitable for use as service-entrance equipment when installed in accordance with NEC 230-70A through G. Single-phase panels in excess of 12 circuits or three-phase panels in excess of 18 circuits must be protected by either an integral main breaker or a separate service-entrance disconnect.

FEATURES

- Full functional line of enclosures for either full-size or half-size plug-in circuit breakers. Each stab will accommodate either the one-inch TQL or half-inch TQP circuit breaker.
- The Master Main* line of main breakers can be field assembled or factory assembled. These breakers provide ratings from 70 amperes to 125 amperes without using branch spaces.
- Lay-in lugs for main and neutral terminations.
- All terminations approved for either copper or aluminum wire.
- Shallow-depth and flat-front construction permits flush mounting in modern thin-wall construction.
- Appearance-styled fronts with sturdy "Trim Line" bevel and a flat architectural profile.
- Interiors easily removable for installation convenience. There are no loose springs or hardware; just a single captive screw.
- Neutrals are application oriented to provide wiring ease and maximum use of gutter space.
- Same box and front are used for any 125-ampere, main-lug, split-bus, or main-breaker interior having the same number of circuits.

GENERAL ELECTRIC SERVICE-ENTRANCE EQUIPMENT

Power Mark + * Circuit Breaker Load Centers

Load centers on this page are suitable for use as service-entrance equipment when installed in accordance with NEC 230-70A through G. Single-phase panels in excess of 12 circuits or three-phase panels in excess of 18 circuits must be protected by either an integral main breaker or a separate service-entrance disconnect.

① Device has hole in endwall for plate-type Universal hub and comes complete with closing cap. Order hub separately.

② Using handle-tied breakers.

③ One additional 2-pole circuit is available using a handle-tied breaker.

④ Includes space for subsection main breaker.

⑤ Available July 1967.

⑥ Available May 1967.

⑦ Available June 1967.

⑧ On the three-phase, four-wire, 200-ampere panels, the maximum size of the main KO is 2 1/2 inches which will accept either 4 3/0 copper wires for 200 amperes or 4 3/0 aluminum wires for 155 amperes.

Type QMQB fusible panelboard

Standards

All Federal Pacific panelboards meet the following standards except where otherwise noted:

1. National Electrical Code—1965.
2. NEMA publication No. PB1-1957.
3. Underwriters' Laboratories, Inc.
 - A. Panelboards, U. L. 67
 - B. Cabinets and boxes, U. L. 50.
4. Federal Specifications
 - A. Panelboards, W-P-115a (January 7, 1963).
 - B. Circuit Breakers, W-C-375a, Amendment-3.

PANELBOARD CODE REQUIREMENTS

Column Type Panelboards used with cable troughs are subject to National Electrical Code Section 362-5 which reads "Wireways shall not contain more than 30 current carrying conductors at any cross section. The sum of the cross-sectional areas of all contained conductors at any cross-section of a wireway shall not exceed 20 per cent of the interior cross-sectional area of the wireway."

Exception No. 1. See Section 620-32.

The correction factors specified in Note 8 to Tables 310-12 through 310-15 are not applicable to the foregoing.

Exception No. 2. Conductors for signal circuits or controller conductors between a motor and its starter and used only for starting duty shall not be considered as current carrying conductors.

Therefore, if the neutral bar is mounted in the panelboard, 3 feeder wires and 27 branch circuit wires or 4 feeder wires and 26 branch circuit wires are permitted. If a separate neutral wire is run for each circuit, the largest panelboard acceptable would be 12 circuits. However, if common neutral conductors are used, the number of circuits in the panelboard could be increased.

In view of this ruling, it is advantageous and more economical to have the neutral bar mounted in the pullbox. Under the Code ruling, it would then be permissible to run 2 feeder wires and 28 branch circuit wires or 3 feeder wires and 27 branch circuit wires in the cable trough.

42 Circuit Rule—Underwriters' Laboratories, Inc. defines an over-current device as a single fuse holder or circuit breaker pole;

Ordering Information

The following data should accompany all orders for panelboards:

1. Type or catalog number.
2. Type of service: _____ phase, _____ wire, _____ volts.
3. Type of mains: main lugs, main breaker, or main switch.
4. Location of mains: top or bottom.
5. Ampere rating of
 - (a) Mains _____.
 - (b) Wire size feeding panel. (No. per phase and neutral).

therefore, panelboards having more than 42 poles and covered by the following rulings must be built as two panelboards.

N. E. C. Paragraph 384-14—states "a lighting and appliance branch circuit panelboard is one having more than 10% of its overcurrent devices rated 30 amperes or less, for which neutral connections are provided."

N. E. C. Paragraph 384-15—states "not more than 42 over-current devices of a lighting and appliance branch circuit panelboard shall be installed in any one cabinet or cutout box."

"A two-pole circuit breaker shall be considered two over-current devices; a three-pole breaker shall be considered three overcurrent devices."

Panelboard Gutter Taps—N. E. C. Paragraph 240-15 states "overcurrent devices shall be located at the point where the conductor to be protected receives its supply." Exception No. 5 to this paragraph permits omission of the main overcurrent device if, "(1) the smaller conductor has a current-carrying capacity of not less than the sum of the allowable current-carrying capacities for conductors of the one or more circuits or loads supplied, (2) the tap is not over 10 feet long and does not extend beyond the switchboard, panelboard or control devices which it supplies."

Gutter taps as illustrated are permitted under this ruling.

6. Branch circuits:
 - (a) Number of branch circuits.
 - (b) Ampere rating of each branch circuit.
 - (c) Number of poles (1, 2, or 3 pole).
 - (d) Type of breaker or switch.
7. Type of trim: flush or surface.
8. Special features or modifications.
9. Customer panel identification.

FPE CIRCUIT BREAKER PANELBOARDS factory assembled

With NEF, NF, NFJ, NJL, NM Standard; HF, HFJ, HM High Line Thermal-Magnetic Breakers

TYPE CDP

**1200A MAIN MAX.
600 VOLTS, A.C.**

- Service Voltage:** 600 volts, A.C. or 250 volts, D.C.
- Main Lugs:** 1200 amp max.
- Main Breaker:** 1200 amp max.
- Branches:** 1, 2, or 3 pole NEF and 2 or 3 pole NF, NFJ, NJL, and NM (also High Line circuit breakers in ratings from 15 to 800 amperes).
- Boxes:** Code gauge galvanized steel. Size is determined by frame size of circuit breakers as follows:

	Up to 225A	225A-800A	1000A-1200A
Cabinet Width	29"	38"	38"
Cabinet Depth	8 3/4"	8 3/4"	12"
Side Gutters	4 1/2"	9"	9"
End Gutters	Up to 400A 8" Over 400A 12"		12"

- Trims:** Code gauge steel, phosphatized and finished in gray enamel. Flush or surface trims available
- Surface type will be furnished unless otherwise specified.**

TO DETERMINE TOTAL LIST PRICE

1. Use correct base price for main lug or main breaker.
2. Add price and "X Units" for each Branch Circuit.
3. Add price and "X Units" for each space required.
4. Add price and "X Units" of sub feeds and meter loops, if required.

5. Add price and "X Units" of special features.
6. Add price and "X Units" of PMS Motor Starters, if required.
7. Total all prices—This is list price of panel.
8. Total "X Units" and select cabinet height to correspond with proper main bus size from cabinet dimension table.

FPE FUSIBLE PANELBOARDS factory assembled

With QMQB Fusible Switch Units up to 1200 Amperes

TYPE QMQB CONVERTIBLE — 600V., A.C.; 250V., D.C.

Main Lugs: 1200 amps. max.
Main Switch: 1200 amps. max.
Branches: 2 and 3 pole Type QMQB Fusible Switches, 30 through 1200 amps.
Cabinet: Code gauge galvanized steel. Size is determined by size of QMQB Switch as follows:

	Up to 100A.	Over 100A.
Cabinet Width	29"	38"
Cabinet Depth	8 ³ / ₄ "	8 ³ / ₄ "
Side Gutters	4 ¹ / ₂ "	9"
End Gutters	Up to 400A. 8"	Over 400A. 12"

Trims: Code gauge steel, phosphatized and finished in gray lacquer. Flush or surface trims available.

Surface Type will be furnished unless otherwise specified.

Door: Door optional. Add \$70 list and increase box depth to 12".

TO DETERMINE TOTAL LIST PRICE

1. Use correct base price for main lug or main switch.
2. Add price and "X Units" for each branch circuit.
3. Add price and "X Units" for spaces only.
4. Add price and "X Units" of sub feeds and meter loops, if required.
5. Add price and "X Units" of special features.
6. Add price and "X Units" of PMS Motor Starters, if required.
7. Total all prices. This is list price of panel. Fuses not included.
8. Total "X Units" and select cabinet height from cabinet dimension table below.

Base List Price

I-T-E PANELBOARDS

PANELBOARD CODE DATA

42-CIRCUIT RULE: N.E.C. Paragraph 384-14 defines a lighting and appliance branch-circuit Panelboard as one having more than 10 percent of its overcurrent devices rated 30 amperes or less, for which neutral connectors are provided.

N.E.C. Paragraph 384-15 states not more than 42 overcurrent devices of a lighting and appliance branch-circuit panelboard shall be installed in any one cabinet. For the purposes of this article a two-pole circuit breaker shall be considered two overcurrent devices; a three-pole circuit breaker shall be considered three overcurrent devices.

SIX-CIRCUIT RULE: N.E.C. Paragraph 230-70 provides that a device may be suitable for service equipment when not more than six (6) main disconnecting means are provided. In addition, a disconnect means shall be provided for the ground conductor.

30-CONDUCTOR RULE: N.E.C. Paragraph 362-5 states that wireways shall not contain more than 30 conductors at any cross section, unless the conductors are for signaling or motor control. It further states that the total cross-sectional areas of all the conductors shall not exceed 20 percent of the internal cross section of the wireway.

Column panels or panels fed by a single wireway are limited to three main conductors and 27 branch and neutral conductors (12-circuit panelboard 1Ø 3W). When the neutral bar is mounted in a column-panel pullbox, this will be changed to two main conductors and 28 branch circuits (28-circuit panelboard).

GUTTER-TAP RULE: N.E.C. Paragraph 240-15 states overcurrent devices shall be located at the point where the conductor to be protected receives its supply. Exception No. 5 to this paragraph permits omission of the main overcurrent device if (1) the smaller conductor has a current carrying capacity of not less than the sum of the allowable current carrying capacities of the one or more circuits or loads supplied and (2) the tap is not over 10 feet long and does not extend beyond the panelboard it supplies.

Gutter taps, as illustrated at the right, are permitted under this ruling.

PANELBOARD RATINGS

SPECIFICATIONS:

Listed by Underwriters' Laboratories, Inc., under "Panelboards" File #E2269.

Meet Federal Specifications W-P-115a, dated January 7, 1963, Type I, Class 1 for circuit-breaker panels, Type II, Class 1 for Vacu-Break fusible panels.

Also Available:

NDP—600A Mains, 225A Max. Branch Breaker, 120 / 240V Ac, 250V Dc.

NHDP—600A Mains, 100A Max. Branch Breaker, 277 / 480V Ac.

NTP, NTC—200A Mains, 30A Max. Branch Tumbler Switch and Fuse, 120 / 240V Ac.

NHCB—225A Mains, 30A Max. Branch Energy-Limiting Breaker, 277 / 480V Ac.

I-T-E PUSHMATIC® ELECTRICCENTERS®

PUSHMATIC ELECTRI-CENTER FEATURES

LOAD CENTERS

Positive Bolted Connection of Breakers Direct to Solid Silvered-Copper Bus Bars
 Lugs Suitable for Copper or Aluminum Conductors (100A and Larger)
 All Required Components Supplied at Purchase
 Full Insulated Groundable Neutrals
 Solid Straight-Through Bus Construction for Split Bus Panels — No Wires to Connect
 Factory-Installed Lighting Mains for Split Bus and Main Disconnect Panels
 Interiors Easily Adjusted to Meet Mounting Requirements
 Code Gauge Steel, Grey Enamel Finish
 Neat, New Look — Factory-Assembled Flat Doors with 6-20 Circuit Panels
 Combo Front — One Front for Flush or Surface Installations

CIRCUIT BREAKERS

Exclusive Push-Button Convenience Visual and Braille ON, OFF Indication
 Coil Magnetic and Thermal Protection for Each Circuit
 Positive Bolted Connection
 Identical Coil Protection for 15A and 20A Circuits
 Simultaneous Tripping for 2-Pole Breakers in Manual or Fault Operation

Pushmatic Electric-Centers are listed by Underwriters' Laboratories, Inc., under File E23615 and meet Federal Specifications W-P-115a. For more information, see Bulletin PEC-2A.

SQUARE D QO LOAD CENTERS

FOR USE WITH PLUG-IN QO CIRCUIT BREAKERS OR QF FUSIBLE UNITS OR BOTH

TO SELECT PROPER DEVICE:

1. Determine required number of single and two-pole units and total number of spaces required.
2. Select device with required mains rating having sufficient number of spaces for branch circuits.
3. Order basic device catalog number and cover when listed separately.
4. Order required QO Circuit Breakers or QF Fusible Units.

Description	Cat. No.	Price	Description	Cat. No.	Price
Handles Ties. Convert any two adjacent single pole QO or QOT poles to independent trip two pole.....	QO1HT	\$.10	Flush Lock. For converting spring catch in most QO load center doors to lock type.....	PK2FL	\$6.10
Closure Plate (S.P.). Fills opening in cover if twist-out is removed in error or if breaker is eliminated.....	QO1CP	.30	Sealing Ear for QO Covers. Provides means of sealing trim screws.....	QO1SE	.10
Filler Plate. Fills opening in blanked out type QO covers.	QO1FP	.10	QO Rejection Tool w/handle. For altering rejection rail.....	QO1JTH	1.00
Handle Lock-Off. Clip for fixing QO single pole handle in "on" or "off" position.....	QO1LO	.20	Handle Padlock Attachment. For padlocking one pole QO breakers in "off" position.....	QO1PA	.70
Handle Lock-Off for QO-QOT, Q1. Clip for fixing 1, 2 & 3 pole breaker handles in "on" or "off" position.....	HLO-1	.60	QO & Q1 Padlock Attachment. For 2 and 3 pole breakers which require padlocking in either "on" or "off" position.....
			Loose Attachment.....	QO1HPL	.70
			Fixed Attachment.....	QO1PL	.70

RAINTIGHT BOLT-ON HUBS

Square D raintight enclosures with suffix RB have an extruded opening on the top endwall covered with a bolt-on closing cap factory installed. For applications requiring a raintight hub, this opening allows the use of a bolt-on hub of ¼", 1", 1½", 1½", 2" or 2½". Hub mounting holes are elongated to allow adjustment to the conduit location.

Description	Cat. No.	Price
Closing Cap.....	B-CAP	Included
Bolt-on hub ¾".....	B-075	\$2.60

SQUARE D CIRCUIT BREAKER LIGHTING AND DISTRIBUTION PANELBOARDS

FACTORY ASSEMBLED TYPE

TYPE NA1B — For use on AC or DC systems. Listed by Underwriters' Laboratories. 1 ϕ , 3W; 3 ϕ , 4W; 240 V. AC or 125/250 V. DC. Maximum 600 A. main lugs on 400 A. main breaker.

Branches: Bolted, Type A1B, 1, 2 and 3 pole—15 thru 100 A.

Boxes: Galvanized steel W/ knockouts. Maximum 600 A. main lugs, 400 A. main breaker 20" W x 5 $\frac{1}{4}$ " D.

Fronts: MONO-FLAT[®] fronts with concealed door hinges, concealed trim clamps, flush lock, blue-gray finish.

TYPE NY1B — For use on AC only. Listed by Underwriters' laboratories. 3 ϕ , 3W; 3 ϕ , 4W; maximum 480 V. AC. Maximum 400 A. main lugs or main breaker.

Branches: Type Y1B, 1 pole or Type FA, 2 or 3 pole, 15 thru 100 A.

Boxes: Galvanized steel with knockouts. Maximum 400 A. main lugs or main breaker 20" W x 5 $\frac{1}{4}$ " D.

Fronts: MONO-FLAT[®] fronts with concealed door hinges, concealed trim clamps, flush lock, blue-gray finish.

FACTORY ASSEMBLED DISTRIBUTION PANELBOARDS

TYPE I-LINE — For use on AC or DC systems. Listed by Underwriters' Laboratories. 1 ϕ , 3W; 3 ϕ , 4W; maximum 600 V. AC or 250 V. DC. Maximum 800 A. main lugs or 400 A. main breaker.

Branches: Plug-on, Types FA, FAH, KA, KAH, LA, LAH and Q2, 1, 2 or 3 pole, 15 thru 400 A.

Boxes: 26" W x 6 $\frac{1}{4}$ " D, galvanized steel with knockouts; 32" W x 8" D and 41" W x 8" D without knockouts, finished blue-gray.

Fronts: With door, flush lock, finished blue-gray.

TYPE ML — For use on AC or DC systems. Listed by Underwriters' Laboratories. 1 ϕ , 3W; 3 ϕ , 4W; maximum 600 V. AC or 250 V. DC. Maximum 1200 A. main lugs or 800 A. main breaker.

Branches: Type A1B, Y1B, FA, KA, LA and MA, 1, 2 or 3 pole, 15 thru 800 A.

Boxes: 31" W x 10 $\frac{1}{2}$ " D and 38" W x 10 $\frac{1}{2}$ " D, without knockouts, finished blue-gray.

Fronts: With door, 3 point vault handle lock, finished blue-gray.

TYPE QMB Motor Starter — For use on maximum 600 V. 3 ϕ systems. Maximum 1200 A. main lugs or 600 A. main switch.

Disconnects: Type QMB Saflex fusible or QMB-FA and QMB-KA circuit breaker units.

Starters: Non-reversing and reversing, sizes 0 thru 4.

Boxes: 31" W x 10 $\frac{1}{2}$ " D and 38" W x 14 $\frac{1}{2}$ " D, without knockouts, finished blue-gray.

Fronts: Without door, finished blue-gray.

TYPE QMB — For use on AC or DC systems. Listed by Underwriters' Laboratories. 1 ϕ , 3W; 3 ϕ , 4W; maximum 600 V. AC or 250 V. DC. Maximum 1200 A. main lugs or 600 A. main switch.

Branches: Type QMB Saflex, HP rated plug-on fusible switch units. 2 and 3 pole, 30 thru 600 A.

Boxes: 31" W x 10 $\frac{1}{2}$ " D and 38" W x 14 $\frac{1}{2}$ " D, without knockouts, finished blue-gray.

Fronts: Without door, finished blue-gray.

The above items are subject to 50% Discount.

I-LINE® SQUARE D CIRCUIT BREAKER DISTRIBUTION PANELBOARDS

UNASSEMBLED TYPE

**FOR MAXIMUM 250 V. DC OR 600 V. AC APPLICATIONS
MAIN LUGS OR MAIN BREAKER**

Mains: Main Lug Only: 225, 400, 600 or 800A. Main Breaker: 100, 225 or 400A.

Branches: 1 Pole, 125V AC or DC; 2 and 3 Pole, maximum 250V DC or 600V AC plug-on circuit breakers. 15 thru 400 ampere.

Boxes: 26" wide 6¼" deep, Galvanized Steel, W K.O. 32" wide, 8" deep and 41" wide, 8" deep code gauge steel without knockouts, finished blue-gray baked enamel.

Fronts: With door, blue-gray baked enamel finish and flush lock. 32" wide fronts over 56" high and 41" wide fronts have 3-point vault handle locks.

Gutters: End Gutters — 8" minimum, side gutters — 5" minimum.

Service Entrance Approved with six circuits or less or with Main Breaker.

ORDERING INFORMATION

1. Select Branch Circuits Desired and Determine Total Space Required.
2. Select Interior, Box and Front Based on Required Unit Space and Main Bus bar size needed.
3. Select Blanks if Needed to Complete Unit Space.
4. **MAIN BREAKERS** — Select Branch Circuit Breaker of Proper Ampere Rating and Number of Poles. Mount Same as a Branch Circuit Breaker and Back-Feed.

SELECTION OF BREAKERS

- Single Phase and Three Phase "WYE" and "DELTA" connections are available by selection of the bus connections required as shown on the wiring diagram above.
- Breaker Catalog Numbers are completed by adding the required phase connection letters as a suffix to the circuit breakers listed in the table above.
- Panelboard Application: I-Line panelboards accept only the breaker types listed below —
 Type HCN — Type FA, FAH and Q2 breakers.
 Type HCM — Type FA, FAH, KA, KAH and Q2 breakers.
 Type HCW — Type FA, FAH, KA, KAH, LA, LAH and Q2 breakers.

★ When I-75,000 breakers (75,000 A.I.C.) are required, use prefix FH, KH and LH. Not available on Type Q2 breakers. Refer to Graybar for prices.

Example: 30A, 240 volt breakers required in phase connections and number of poles as shown.

Phase Connection	1 Pole	2 Pole	3 Pole
A*	FA-12030-A
B	FA-12030-B
C*	FA-12030-C
A-B	FA-22030-AB
A-C*	FA-22030-AC
B-C	FA-22030-BC
A-B-C	FA-32030

*Standard for single phase panelboards.

The above items are subject to 50% Discount.

SQUARE D FUSIBLE PLUG-IN QMB SAFLEX DISTRIBUTION PANELBOARDS

FOR APPLICATIONS 600 VOLTS MAXIMUM QUICK-MAKE, QUICK-BREAK H.P. RATED UNITS

UNASSEMBLED TYPE

Mains: Main Lug Only; 200, 400 or 600 A.: Main Switch 100 and 200 A. only.

Branches: Quick-Make, Quick-Break H.P. Rated Plug-in Switch units two and three pole, 30 to 200 ampere capacity.

Boxes: Code gauge steel without knockouts, finished blue-gray 31" wide by 10 7/8" deep.

Fronts: Code gauge steel, without door, finished blue-gray.

Wiring Gutters: End Gutters — opposite mains 5 1/2" — at mains minimum 8". Side Gutters — 6".

Service Entrance Approved with Six circuits or less or with Main Switch.

1 ϕ 2W. 250 V. AC or DC.

1 ϕ 3W. S/N 125/250 V. AC.

3 ϕ 3W. 250 V. or 600 V. AC.

3 ϕ 4W. S/N 120/208 V. or 277/480 V. AC.

ORDERING INFORMATION

1. Select Branch Circuit Desired and Determine Total Space Required.
2. Select Interior, box, and front based on required unit space and main bus bar size needed.
3. Select blanks if needed to complete unit space.

Ordering Instructions: 30 ampere branch units will be furnished on both NTFB and NTHB unless otherwise specified. 15 ampere units will not accept 20 or 30 ampere fuses. 20 ampere units will not accept 30 ampere fuses.

Note: Factory assembled lighting panelboard pricing is for all single pole circuit breakers. Consult Square D Digest or Graybar for complete pricing and combination circuit pricing.

The above items are subject to 50% Discount.

SQUARE D

**I-LINE® BUSWAY . . . BOTH FEEDER DUCT AND PLUG-IN DUCT
TOTALLY ENCLOSED LOW IMPEDANCE ONE BOLT JOINT**

Feeder and plug-in duct sections join without special adaptors in most ratings.

One bolt plug-in duct offers labor savings comparable to feeder duct.

I-LINE busway is a low impedance, high capacity duct in ratings from 225 amps through 3000 amps in plug-in construction and in ratings from 600 amps through 5000 amps in feeder duct construction. It provides extremely flexible and versatile power distribution with minimum voltage drop and power loss. Both copper and aluminum conductors are available. Totally enclosed construction allows mounting in any position without derating, and complies with the NEC paragraph on "extension through walls" without modification.

Plug-in duct is normally mounted with plug-in units along the sides, though the duct may be positioned with units arranged on top and bottom if job conditions require. A full line of plug-in devices is offered including fusible switch with visible blade, standard and high interrupting capacity circuit breaker, combination motor starter and contactor plug-in units and other special purpose plugs. Plug-in units are interlocked with the duct and incorporate a unique mounting arrangement allowing safe, rapid and easy installation on the duct.

TAKE ADVANTAGE OF THE TREMENDOUS INSTALLATION SAVINGS POSSIBLE WITH I-LINE!

I-LINE® VS. WIRE AND CONDUIT

Use I-LINE feeder duct instead of wire and conduit to cut the total cost for exposed (accessible) work. Although material costs are higher, the installation time of I-LINE is much less than that of wire and conduit. The installation time for wire and conduit is shown in the chart. The labor units for wire and conduit are based upon data from ESTIMATIC CORPORATION, without job factors, using 100 foot wire pulls and taking parallel wire pulls into account. Hangers or fastenings or terminations are not included.

INSTALLATION TIME OF I-LINE VERSUS WIRE IN CONDUIT FOR EXPOSED WORK
No Hangers, Fastenings, or Terminations Included.
Based Upon 100 Ft. Runs

I-LINE® VS. OTHER FEEDER DUCT

Compare the installation time of I-LINE vs. the installation time of other feeder duct. The labor units shown in the charts allow direct comparison. Neither of the charts include job factors, hangers, fittings, terminals or rigging. I-LINE installs faster, through simplified joint construction, lighter weight, compact size. The proof is given in the Labor Cost Survey by ESTIMATIC CORPORATION. Contact your local Square D field office for your copy.

OTHER BUSWAY LABOR UNITS (3-Phase, 4-Wire)

* From Electrical Construction Cost Manual by Ralph E. Johnson, Copyright 1957, McGraw-Hill Book Co. Used by Permission. Δ From I-LINE Installation Labor Survey by Estimatic Corporation, Denver, Colorado.

SQUARE D COMPANY I-LINE® BUSWAY, TOTALLY ENCLOSED, LOW IMPEDANCE

I-LINE busway includes both feeder duct and plug-in duct. Lengths are interchangeable within the same rating, and plug-in sections may be interspersed in feeder duct runs or vice versa without special adaptors. All I-LINE busway is totally enclosed and fully insulated over the entire length of each bus bar with Class B (130° C maximum operating temperature) insulation. Joints are of the "one bolt" interleaved type, and use a 3" spring steel washer to insure even pressure over the contact area.

I-LINE is totally enclosed in all ratings and is fully rated in all mounting positions. Runs may be installed in edgewise, flatwise or vertical positions with no derating. All bus bars, both aluminum and copper, are heavily electro-tin plated to insure low contact resistance and the best possible protection from corrosive atmospheres. Aluminum bus is prepared for plating using the Alstan 70* process.

Housings are constructed from formed steel or steel and aluminum sections, and are assembled so as to form rigid lengths which may be hung on 10'-0" hanger spacing. Standard short circuit bracing in all ratings of feeder duct is 100,000 amps RMS symmetrical.

I-LINE is manufactured in accordance with NEMA standards and is U/L listed under File Number E-22182.

*M & T Chemical Company.

▲Consult factory for price of 2 pole busway.

†Refer to "Additions" section for short-circuit current ratings and pricing for short-circuit current ratings exceeding NEMA Standards.

★To price weatherproof feeder duct, add 20% to indoor price per foot. The fittings labor only charge is the same for indoor and weatherproof feeder duct. Catalog numbers of weatherproof aluminum feeder duct are similar to indoor duct in the above tables except that the prefix is "AFW" instead of "AF". The same is true of copper except that the prefix is "CFW" instead of "CF". When ordering weatherproof feeder duct, a layout sketch must accompany

the order. Sketch must show all dimensions, and must indicate whether duct is in flatwise, vertical or edgewise mounting position.

●For elbows other than 90 degrees, double the labor only charge.

✚For lugs other than Square D manufacture, add lug charge from "Additions" section.

◎Type PTB cable tap boxes are plug-in devices and require no footage charge. When a plug-in cable tap box is used at the end of a run, order an end closure.

*5000 A. Aluminum will be supplied as two parallel runs.

The above items are subject to 50% Discount.

The Types CP, AF and CF cable tap boxes are factory assembled and include Square D standard lugs. If special lugs are required, add special lug charges from "Additions" section. The cable tap box price does not include duct footage. Duct footage should be figured through tap boxes at center of run and to the centerline of tap boxes at end of run.

SERVICE HEADS (WEATHERPROOF)

Service heads are factory assembled and include Square D standard lugs. If special lugs are required, add special lug charge. Price duct footage to end of duct run including dimension of service head. The vertical service head requires 24 inches of duct footage; the flatwise service head requires 20 inches of duct footage. Add cable tap box charges. The standard service head will accept service cable through a removable insulating bottom plate. If conduit entrance is required, additional gutter space and a steel bottom plate will be furnished.

BUSWAY PRICING

Prepare a layout sketch of the run showing all dimensions in feet and inches, all wall and floor locations and thicknesses and all fittings such as elbows, tees, crosses, flanged ends, end closures, cable tap boxes, expansion joints and reducers. Add all dimensions together and adjust the total to the higher whole foot. Multiply this total by the price per foot as determined by the type (plug-in or feeder) (aluminum or copper) (indoor or weatherproof), the ampere rating and the number of poles. To this add the labor only charges for each of the elbows, tees, crosses, flanged ends, expansion joints and reducers. To this add the price for each of the cable tap boxes, service heads, tap-off devices, transformer taps and end closures. Add for any bus extension or special features such as roof flanges, special lugs, ground bus. The sum of all these items is the price of the entire layout of duct.

The above items are subject to 50% Discount.

*Two pole units are supplied with A φ and C φ connections. If A-B or B-C connections are required, order 3 pole units.

Fusible Switch Plug-In Units can be plugged in at any opening of aluminum or copper plug-in duct. Plug-in units with 600 A. switches plug into any 2 adjacent openings spaced 24" apart. Units rated 400 A. require space of two openings. Add suffix "LB" to Catalog Number of plug-in units with switch ratings of 200 A., 400 A., and 600 A. when units are to be supplied as lug to bus main switches; e.g., PQ-3640-LB.

Class J Fuses — Add suffix "J" to catalog number (600 V. and 277/480 V. only) for Class J fuse provisions. For 2, 3 or 4 pole units, 400 amp., add \$5. price per unit. For 2 pole, 600 amp. unit, add \$30., for 3 or 4 poles, 600 amp. unit, add \$45.

Unfused Units — Use price of 250 V. fusible switch units for either 250 V. or 600 V. application.

●Two pole units are supplied with A φ and C φ connections. Add suffix to designate other connections, if desired; e.g., PFA-2230-BC.

Circuit Breaker Plug-In Units can be plugged in at any opening of aluminum or copper plug-in duct. Plug-in units with 800 A. frame circuit breakers plug into any 2 adjacent openings spaced 24" apart. Units rated 400 A. require space of two openings.

Add Suffix "LB" to Catalog Number of plug-in units with circuit breaker trip ratings of 225 A. and above when units are to be supplied as lug to bus main breakers; e.g., PLA-36400-LB.

The above items are subject to 50% Discount.

SQUARE D COMPANY I-LINE® BUSWAY, TOTALLY ENCLOSED LOW IMPEDANCE

VERTICAL E-Z STACK TAPS AND REDUCED CAPACITY CABLE TAP BOXES

Reduced Capacity Cable Tap Boxes: If reduced capacity cable tap boxes are required; i.e., 1000 amp. tap box on 4000 amp. duct, price from table. Tap boxes are factory assembled and include Square D standard lugs. Prices do not include duct footage.

Vertical E-Z Stack Taps: Price from table includes connection box and connectors for adjacent-mounted Vertical E-Z Stack.

System Service	E-Z Stack		Cable Tap Box		
	600 A.	400 A.	600 A.	800 A.	1000 A.
1 φ, 2W.	\$134.	\$142.	\$150.	\$161.
1 φ, 3W.	\$175.	167.	175.	183.	194.
3 φ, 3W.	167.	175.	183.	194.
3 φ, 4W.	208.	200.	208.	220.	233.

HANGERS

All I-LINE busway is U/L listed for 10 foot hanger spacing in the flatwise (normal) mounting position and in the vertical mounting position. I-LINE busway is U/L listed for 10 foot hanger spacing in the edgewise mounting position except as follows:

Type AP 225 A and CP 225 A 5 foot maximum spacing
 Type AP 400 A and CP 400 A, 600 A

..... requires Cat. #ACP-2-SC for 10 foot spacing

Type AP 600 A and CP 800 A

..... requires Cat. #ACP-3-SC for 10 foot spacing

Support channels Cat. #ACP-2-SC and ACP-3-SC will be furnished at no charge if requested at time of order entry.

Hangers are packaged separately with one hanger being furnished for each 10 feet of duct. If less than 10 foot hanger spacing is required additional hangers will be shipped no charge if entered with order.

If sway bracing is required, order Cat. #HP-1-SBC at \$1.00 each.

EXPANSION FITTINGS

Expansion fitting labor only charge does not include duct footage. The expansion fitting is built into a 5 foot straight length and cannot be ordered separately. Limit of expansion or contraction is ± 1½ inches.

REDUCER (UNFUSED)

Unfused reducers are used to reduce from a higher amperage busway to a lower amperage. Labor only prices are listed in table and do not include duct footage. Reducers are built into a straight length of duct. Price each rating of duct to the centerline of reducer and include the labor only price of the higher rating. NOTE: Local inspection rulings or National Electric Code Article 364 govern the use of unfused reducer.

JOINT TIE CHANNELS

Joint tie channels are shipped with each piece of busway except — Cat. #AJC-1 adapter tie channels are required to connect feeder duct to plug-in duct of like current rating and number of poles. One set of adapter tie channels, Cat. #AJC-1, will be furnished at no charge for each feeder to plug-in joint connection. Order separately.

JOINT PACKAGE ASSEMBLY

I-LINE busway does not require joint packages. All conductor connection parts are assembled to the duct ends.

ORDERING INSTRUCTIONS:

1. Devices shown above are 3-pole, 3-φ, 60 cycle, full-voltage, single speed, non-reversing. Select Catalog Number from table. Obtain suffix column headed "General Purpose Enclosure NEMA 1 Type 1" from starter or contactor Digest page; e.g., PCS-8539-SCG-13 is a starter unit for use with a 5 H.P., 3 pole, 220 volt motor.

2. Specify H.P., voltage, phases, frequency, and full load current of motor. Specify fuse clip size when ordering Class 8502 or Class 8903 units.

3. If control voltage is different from line voltage, specify control voltage and frequency.

4. For additions or special features, select Form Letter from table and list on order immediately following Catalog Number.

COPPER AND ALUMINUM BUS BARS

Footnotes

*Price covers weatherproof duct using one insulated bar per phase. For service entrance up to 30 feet in length.

□To price low impedance plug-in duct, add the following prices per plug-in opening to straight length prices.

Two bars per phase:	Add per opening
3 Wire.....	\$4.00
4 Wire.....	5.00
Four bars per phase:	
3 Wire.....	9.00
4 Wire.....	11.00

NOTE 1. Price covers complete device including weather-resistant barrier, 12" bus bar extensions, lugs, and one end closer.

NOTE 2. Price covers end cable tap box. For center cable tap box deduct cost of one end closer. Price includes sufficient lugs for rating of busway.

NOTE 3. Price includes flange, up to 12" bus bar extensions, and flange hardware. Extension hardware to be furnished with switchboard.

NOTE 4. Price includes complete device for making busway entrance through roof weather resistant.

NOTE 5. Price covers complete device including weatherproof barrier and lugs.

NOTE 6. Indoor price covers ventilated L.I. duct. For totally enclosed indoor L.I. duct price, use outdoor totally enclosed prices.

MODIFICATIONS

DESCRIPTION	List Price Addition
Special Bracing	\$ 3.00 per ft.

Makes plug-in duct suitable for installation on circuits capable of delivering up to 50,000 rms amperes short circuit current.
For low impedance bus duct. Refer to Factory

External Ground Bus	List Price Addition
1/4" x 7/8".....	2.50 per ft.
1/4" x 1".....	4.00 per ft.
1/4" x 2".....	8.90 per ft.

Extra Hangers	List Price Addition
Drop type or "C" type hangers...	2.50 each
Vertical hangers.....	15.00 each

Lugs (Extra)	List Price Addition
Cable range #2 to 4/0.....	2.50 per lug
1 0 to 350 mcm.....	4.50 per lug
1 0 to 600 mcm.....	8.50 per lug
250 to 500 mcm.....	8.50 per lug
600 to 1000 mcm.....	16.00 per lug

Miscellaneous	List Price Addition
Access covers, splice plates & hardware for one section joint (per set).....	5.00
Aluminum housing—add 30% to indoor bus duct	218.
Zip-on PVC boots (joint covers)...	4.00 per pole

The above items are subject to 48.5% Discount.

FPE PLUG-IN, FEEDER, AND LOW IMPEDANCE BUS DUCT AND FITTINGS

Plug-in Low Impedance Duct

Plug-in Duct

STANDARDS

Federal Pacific Bus Duct meets the following standards:

1. National Electrical Code—1965
2. NEMA Pub. No. BU1-1964
3. Underwriters' Laboratories, Inc. Pub. No. 857
4. Federal Specification W-B-811 dated June 23, 1962 as follows:

- | | |
|--|---|
| Type I Feeder, indoor | Type VI Trolley and plug-in, indoor (not available) |
| Type II Feeder, outdoor | Class 1—Copper conductors |
| Type III Plug-In, indoor | Class 2—Aluminum conductors |
| Type IV Plug-In Feeder, indoor | Style A—with ventilated enclosures |
| Type V Trolley, indoor (not available) | Style B—with unventilated enclosures |

• Two pole units are furnished with Plug-in stabs for the two outside bars in duct unless otherwise specified.
 ★Non-Fusible CFP and SP and LSP units available at 250-Volt prices. For current limiting fuse mounting, refer to factory.

†Not recommended for Plug-in service. These units bolt on to duct at splice between sections. When ordering, specify if front or rear mounted on duct and size of bars in duct on which units will be used.

NOTE: Fuses are not included.

STABreaker Plug-in Type AB Circuit Breakers, with stabs, provide additional flexibility and simplify maintenance when used in bus duct plug-in units. Both NE and NF frame breakers in ratings from 15 through 100 amp can be "stabbed" into the same size bus duct plug-in enclosure—whether it is for conventional plug-in bus duct (enclosure Cat. No. PBEF100) or for plug-in type low impedance bus duct (enclosure Cat. No. LPBEF100).

TYPES TQL, TQLX, TQLR (Circuit breakers not included)

Type TQL plug, includes space for 3 TQL breaker poles

Type TQLX plug, includes space for 3 TQL breaker poles, externally operated

Type TQLR plug, includes space for 3 TQL breaker poles and receptacles

① Includes space and mounting brackets for 1-, 2- or 3-conventional single-gang outlets and blank cover to fill unused spaces.

② Order by description—specify (Type) (service) (circuit breakers—quantity, amperes, poles and volts).

③ Orders of 50 or more can be furnished with desired type of receptacles installed and wired. Refer to Graybar.

TYPES TE, TEF4 and TEF6 (Circuit breaker included, rigidly mounted) (Noninterchangeable trip)

KO's same on both sides except locations reversed top-to-bottom on other side.

These plugs furnished with front operation as standard. Easily converted to side operation in the field.

④ Plugs listed are 3-phase, 4-wire design. The A-phase is ignored.

- ① Price includes power take-off box and enclosed device mounted on busway. Add for busway footage beside device.
- ② 800-ampere maximum rating.
- ③ For motor operation make following additions: (No push button, control switch or pilot lights included.) TFJ, TFK, THFK and TB1 breakers.....\$466 list each. All other molded-case breakers.....\$585 list each.
- ④ Price includes device, enclosure, connections, flange ends

- and labor. Add for busway footage of higher-rated busway through the cubicle. Do not add for tees or crosses.
- ⑤ Use prices in 600-volt column for type HPC switches rated maximum 480 volts.
- ⑥ No push buttons, control switch or pilot lights included. Maximum 230 volts a-c or d-c control.
- ⑦ Price does not include panelboard. Price panelboard separately.

* Trade-mark of General Electric Company.

- ① Price includes power take-off box and enclosed device mounted on busway. Add for busway footage beside device.
- ② 800-ampere maximum rating.
- ③ For motor operation make following additions: (No push button, control switch or pilot lights included.)
TFJ, TFK, THFK and TB1 breakers \$466 list each.
All other molded-case breakers \$585 list each.
- ④ Price includes device, enclosure, connections, flange ends

- and labor. Add for busway footage of higher-rated busway through the cubicle. Do not add for tees or crosses.
- ⑤ Use prices in 600-volt column for type HPC switches rated maximum 480 volts.
- ⑥ No push buttons, control switch or pilot lights included. Maximum 230 volts a-c or d-c control.
- ⑦ Price does not include panelboard. Price panelboard separately.

* Trade-mark of General Electric Company.

The Above Items Are Subject to 50% Discount

GENERAL ELECTRIC ARMOR-CLAD* FEEDER AND PLUG-IN BUSWAY

HOW TO ORDER

The following information should appear on all orders for all busways:

1. Project name and location
2. Power service (voltage, frequency, ampere ratings, phases and neutral capacity, if any)
3. Special atmospheric or ambient conditions
4. Shipping instructions
5. Mounting position—flatwise, edgewise or vertical riser
6. Hanger spacing
7. Reference to previous installation, if any
8. Part of order to be shipped first (on larger installations)

When a layout involves special fittings, drawings or sketches should be supplied with all busway dimensions shown as center-line measurements. The following information should also appear:

1. Power take-off locations
2. Location of possible obstructions
3. Number and size of lugs in tap boxes, transformer taps, power take-offs and adapters
4. Details, such as bus extensions, drillings, etc.
5. Switchboard drawings
6. Specifications, blueprints, and work sheets

HOW TO PRICE BUSWAY

To price busway, these steps should be followed:

- a. Figure total number of feet (or any fraction thereof) in each run including footage through all accessories. Select appropriate unit price.
- b. List all fittings required. Note that some are priced as a complete unit and others on a forming charge basis. See notes below.
- c. When desired fittings are not listed, refer to factory for prices.

Notes

1. Prices are per foot or any fraction thereof and include material, labor of forming and joint hardware. **ARMOR-CLAD** busway is U/L-listed for indoor or outdoor use and for hanging on 10-foot centers in any position. One hanger is included with each 10-foot section and each tap box.
2. Plug-in busway is similar to feeder type except that it is provided with 10 outlets for plugs in a 10-foot section. Available in indoor type only.
3. Feeder busway is used for connecting between a source and single load. Tapoffs along the run can be made only with power take-offs or cable tap boxes located at joints between sections. One or more lengths of plug-in busway can be installed in a feeder busway run. Price plug-in length(s) at the plug-in "per foot" price.
4. Price includes labor of forming only. Add for material at straight footage price. If angle between busways is other than 90 degrees, double the forming price. Any single change in direction of the center line of the busway is an elbow. A single offset is two elbows. For tees or crosses, use price of highest-ampere-rated busway entering the tee or cross. Add for reducer(s) if required.
5. Price includes material and labor of forming and necessary joint hardware.
6. Price includes material and labor of forming. End cable tap boxes are provided with sufficient lugs for the rating of the busway. Lugs are suitable for copper or aluminum cable. Suitable for end-of-run mounting.
7. Similar to end cable tap box (note 6) except for mounting at a joint between two sections.
8. Price includes flange, bus-bar extensions, phase collection and labor of forming necessary to connect to bus-bar risers in General Electric equipment. For connection to other equipment, refer to Graybar.

9. Price includes flange and 6-inch flared bus extensions. No phase collection, lugs or drilling included.
10. Price includes necessary bus-bar connections from busway to transformer load terminals, steel enclosure for full-length flange or throat on transformer and busway flange. Applies to General Electric power transformers only. For other makes, refer to Graybar.
11. Price includes transformer taps as indicated in Figs. 1 to 7 below, one end box, sufficient lugs for the rating of the busway, and labor of forming. Add for straight footage of busway passing by the transformers.
12. Price includes material and labor for forming 3-wire tap for 3-wire busway which may be used for 3-phase, 3-wire (Figs. 1 and 2) or single-phase, 3-wire (Fig. 3). For 3-phase, 4-wire includes 4-wire tap with half- or full-capacity neutral, same as busway (Figs. 4 and 5). Price includes end box.
13. Price includes three 2-wire taps for 3-wire busway (same as Fig. 7, except no neutral) or two 2-wire and one 2- or 3-wire tap (Fig. 6 or 7) for 4-wire busway and end box.
14. Price includes 50% capacity bus of same material as bus bars clamped to housing at the joints.
15. Price includes labor of forming only. Add for material at straight footage price. Furnished in minimum 5-foot lengths only. Expansion fittings permit ± 2 inches, total 4 inches of movement as standard. Not weatherproof. Refer to Graybar for other arrangements.
16. Price includes labor of forming only. Add for material at straight footage price. Use price of higher-ampere-rated busway entering reducer.
17. Price includes material and labor of forming flange only. Includes flange on one side of wall or floor. If flange on both sides is required, multiply the price by 2. Note busway is inherently resistant to passage of weather or fire through the housing.
18. Price includes material and labor of forming roof flange for either flat or sloping roof. Note busway is inherently resistant to passage of weather or fire through the housing. Add for busway at straight footage price.
19. Busway is inherently resistant to passage of weather or fire through the housing.
20. Includes necessary springs and hardware to attach busway to rigid vertical riser hangers when spring mounting is required.

TRANSFORMER CONNECTIONS

* Trade-mark of General Electric Company.

GENERAL ELECTRIC ARMOR-CLAD* PLUG-IN BUSWAY

CIRCUIT BREAKER PLUGS

NOTE: Standard plug steel stab shields provide a ground path from plug body to busway housing. If grounding stab on plug to engage internal bus is required, add \$10 list per plug. Order by description.

Table with 5 main columns: Frame, Trip Amp, 3-phase-3-wire (Catalog Number, List Price, Each), 3-phase-4-wire (Catalog Number, List Price, Each). Sub-sections include CONVENTIONAL CIRCUIT BREAKERS, CONVENTIONAL CIRCUIT BREAKERS (Cont'd), HI-BREAK® CIRCUIT BREAKERS, and TRI-BREAK* CIRCUIT BREAKERS. Models listed include TE, TEF4, TEF6, TFJ, TFK, TJJ, TJK4, TJK6, THF4, THF6, THFK, THJK4, THKM8, TB1, TB4, TB6, TB8.

NOTE: NIT—Non-interchangeable trip; IT—interchangeable trip.

▲ For weatherproof feeder duct, refer to I-T-E sales office.

** Also available with insulated conductors in ventilated or non-ventilated construction. To order, change first letter of Cat. No. Suffix from "B" to "V" for ventilated, or "E" for non-ventilated.

† TO ORDER—Use Basic Cat. No. and odd Cat. No. Suffixes as required for specific item. Example: Duct—U420AVF-G; Accessory—U420AVL-G.

* Dimensions and weights apply for edgewise or vertical-riser mounting. For sizes and weights on flatwise-mounted duct.

‡ Includes flange to cover cutout in top of switchboard and 8" of fabricated bus bar extension inside switchboard. Add for footage outside of switchboard.

* For weatherproof feeder duct, refer to I-T-E sales office.
 ** Also available with insulated conductors in ventilated or non-ventilated construction. To order, change first letter of Cat. No. Suffix from "B" to "V" for ventilated, or "E" for non-ventilated.
 † TO ORDER—Use Basic Cat. No. and add Cat. No. Suffixes as required for specific item. Example: Duct—U420CVF-W-G, Accessory—U420CVL-G.
 * Dimensions and weights apply for edgewise or vertical-riser mounting. For sizes and weights on flatwise-mounted duct, refer to I-T-E sales office.
 † Includes flange to cover cut out in top of switchboard and B" of fabricated bus bar extension inside switchboard. Add for footage outside of switchboard.

Fusible Switch Bus Plugs

† Grounding Finger—When required for any XL-U plug, must be specified by adding Suffix G to plug Cat. No. Add \$10.00 List to price.
 * When BD duct capacity exceeds 400A for aluminum or 600A for copper, capacity must be specified to obtain proper number and arrangement of neutral fingers.
 ** 480-volt ratings.
 † Enclosures available from stock. When ordering circuit-breaker bus plugs complete with breaker, factory-installed, allow time for assembly and SPECIFY Enclosure, Frame Size, Poles and Ampere Rating. Example: One U1C3100—EH—3P—70A—Factory-Assembled.
 ‡ Consult I-T-E sales office for availability.
 CLASS J FUSES—Adaptor kits available for converting switches to Class J fuses. See Accessories table for prices.

FEEDRAIL

Russell & Stoll Division, Midland-Ross Corp.

FEEDRAIL® is the modern "Trolley Busway System" and "Crane and Hoist Electrification System" of distributing electric power. Sturdy pre-fabricated track sections, enclosing copper bus bar conductors can be joined together to form runs of any length, straight or curved. Trolleys with positive pressured contacts roll freely in the track and act as electric power outlets which can be moved to any point along the track run.

The FEEDRAIL® Systems — engineered and constructed by specialists who devote their time exclusively to trolley busway electrification systems — are available in 60 ampere continuous service, 90 ampere intermittent service; 100 ampere continuous service, 150 ampere intermittent service; 225; 375 and 500 ampere capacities in 2- or 3-poles. Superior to ordinary wiring methods in safety, convenience and adaptability, they provide a dependable source of power for cranes and hoists, production and assembly lines, test lines, movable machinery, machine tools, business machines, lighting, etc. Feedrail Systems are readily installed without any special tools.

Also available are standard 4- and 5-pole Control Circuit Systems for cranes, hoists, moving machines, machine tools, etc., having track sections rated at 60 amperes continuous service and trolleys rated at 15 amperes.

FEEDRAIL "60" TRACK

FEEDRAIL "60" is listed by Underwriters' Laboratories, Inc. as a TROLLEY BUSWAY SYSTEM rated at 60 amperes continuous service and as a CRANE AND HOIST ELECTRIFICATION SYSTEM rated at 60 amperes continuous service and 90 amperes intermittent service (50% OFF — 50% ON).

300 V. — A.C. or D.C.

Door	FRS-201	29.40	FRS-101	33.00

5'-0" Lengths Complete with Bus Bars

Plain	FRS-200-5	\$16.20	FRS-100-5	\$18.00
Door	FRS-201-5	20.40	FRS-101-5	22.20

NOTE: It is recommended that a minimum of one door section for insertion and removal of trolleys be used with every five sections of plain track.

For sections less than 10'-0" long, consider fractions of a foot as an extra foot and multiply this length by the per foot list price of the corresponding 10'-0" STRAIGHT and add \$7.20.

10'-0" Lengths Without Bus Bars

Track	Cat. No.	Each
Plain	FRS-130	\$17.40
Door	FRS-131	21.60

5'-0" Lengths Without Bus Bars

Plain	FRS-130-5	\$12.00
Door	FRS-131-5	16.20

For sections without bus bars less than 10'-0" long, consider fractions of a foot as an extra foot and multiply this length by the per foot list price of the corresponding 10'-0" STRAIGHT without bus bars and add \$5.40.

Add \$7.20 for each feed box installed in a track section.

FEEDRAIL "60"

Russell & Stoll Division, Midland-Ross Corp.

2	Copper Graphite Roller	FRS-33	5.70
2	Copper Graphite Brush	FRS-27	6.75
3	Bronze Brush	FRS-3	5.55
3	Copper Graphite Roller	FRS-13	6.30
3	Copper Graphite Brush	FRS-7	7.80

Fusible with Cabinet (250 V.)

2	Bronze Brush	FRS-29	17.55
2	Copper Graphite Roller	FRS-39	18.00
2	Copper Graphite Brush	FRS-30	19.05
3	Bronze Brush	FRS-9	18.45
3	Copper Graphite Roller	FRS-19	19.20
3	Copper Graphite Brush	FRS-10	20.70

20 Amps. — 300 V. A.C. or D.C.

With Copper Graphite Brush Contacts

For curved or straight track without transfer points, with radius of 2'-6" or more. Recommended for budget hoists, light tonnage monorails, automatic cloth spreaders, machine tools, etc.

Poles	Description	Cat. No.	Price
2	Non-fusible—with Box	FRS-94	\$13.80
2	Fusible (250V.)—with Cabinet	FRS-96	27.00
3	Non-fusible—with Box	FRS-84	15.00
3	Fusible (250V.)—with Cabinet	FRS-86	28.80

Transfer Type

For straight or curved track with transfer points.

2	Non-fusible—with Box	FRS-64	21.90
2	Fusible (250V.)—with Cabinet	FRS-63	35.10
3	Non-fusible—with Box	FRS-74	23.10
3	Fusible (250V.)—with Cabinet	FRS-73	36.90

Note — Where motor propelled hoists are used on runs which include transfer points, two trolleys in tandem must be used to insure continuous current while crossing the transfer points.

Note — Fuses are not included with fusible trolleys.

FEEDRAIL "100"

Russell & Stoll Division, Midland-Ross Corp.

FEEDRAIL "100" is listed by Underwriters' Laboratories, Inc. as a TROLLEY BUSWAY SYSTEM rated at 100 amperes continuous service and as a CRANE AND HOIST ELECTRIFICATION SYSTEM rated at 100 amperes continuous service and 150 amperes intermittent service (50% OFF — 50% ON).

TRACK SECTIONS

PORTER CURRENT CONDUCTOR COLLECTOR SYSTEMS

POWER CRANES, CROSS TRAVEL AND SPECIAL APPLICATION

H-BAR CONDUCTOR SYSTEM

H-Bar Conductor System provides power for cranes and movable equipment requiring a constant source of electrical energy. System ratings are 500, 750, 1000, 1250, 1500, 1750, 2000, 2500 and 3000 amperes. Larger systems up to 10,000 amperes available on special request. Can be used for both A.C. and D.C. voltage applications. Due to variation of each installation the aluminum conductor sections, hanger supports, insulators, anchor supports, expansion joints, collectors, and/or special components must be determined from plans and specifications. Recommended systems are offered based on particular problem at a quoted price.

LEC-TROL-FEED

Lec-Trol-Feed System supplies power for 600 volt A.C. or 300 volt D.C. applications. Conductors are supplied in either bronze or aluminum or copper with respective amperage ratings of 250, 350 and 450 amps. Conductors are fully enclosed in an aluminum steel housing with overlapping bottom safety cover which prevents accidental contact with current. The system is made up of factory-assembled units for easy, time-saving installation in the field.

C-BAR CONDUCTOR SYSTEM

C-Bar Conductor System is a medium capacity system. It is compact, rugged, economical and usable for all types of A.C. and D.C. current collection applications. C-Bar Conductor systems power main runway cranes, cross travel on cranes, control circuits and special installations. The entire system is supplied as a complete package with insulators, hangers, conductors, collectors ready to mount on building or structural supports. Available only in Bronze at 350 amperes, Aluminum at 450 amperes and Copper at 550 amperes. Systems are suggested from plans and specifications of the user and prices quoted based on recommendations.

INVERTED V-BAR CONDUCTOR SYSTEM

Inverted V-Bar Conductor System is an aluminum system ranging from 500 to 6,000 amperes. Compactness of conductor and collector design allows installation with reduced spacing between conductor which results in lower impedance on an A.C. system and better voltage regulation characteristics. Good voltage regulation insures adequate voltage for maximum crane speeds and load capacities, thus it reduces the possibility of overload. Systems are complete with conductors, hangers, splice joints, anchors, feeders, expansion joints, isolating joints and collectors. Send us your layout and problems and we will provide recommendations and prices.

PORTER RED-POLY INSULATORS

Red-Poly Insulators for electrical systems up to 5,000 volts are available in 34 sizes. Its self cleaning configuration, flame retardance, arc resistance ability, mechanical strength to withstand high shock and vibration allows almost unrestricted application within the rated voltage. Designed to meet NEMA Class B requirements red poly insulators are available in two material grades. Standard Grade #1 is an electrical grade, corrosion resistant, fiberglass reinforced polyester having a maximum service temperature continuous at 300°F (Intermittent is 400°). Premium Grade #2 is an electrical grade, fiberglass reinforced polyester having exceptional corrosion resistance to acidic solutions and outstanding weather resistant characteristics. Premium Grade #2 has a maximum service temperature continuous at 350°F (Intermittent is 450°F).

PORTER CURRENT COLLECTING COMPONENTS

FOR TROLLEY WIRE, STEEL ANGLE AND STEEL RAIL SYSTEMS

Crane Steel Rail Collector

Shown are typical components for a crane steel rail collector system that are available.

Crane Steel Angle Collector

Shown are typical components for an inverted V steel angle crane collector system that are available.

Crane Trolley Wire Collector

Shown are typical components for a trolley wire crane collector system that are available.

Delta-Star also manufactures a complete line of components for steel angle, steel rail, and "T" Bar systems.

INSUL-8® 8-BAR ELECTRIFICATION SYSTEMS

INSULATED CONDUCTOR-BARS

Furnished in standard lengths with connecting devices and insulating covers. Special lengths and pre-fabricated curves to order. Special conductor-bar materials, laminates, and platings to order.

NOTE: Hanger Clamps and End Covers are not included in these assemblies and must be ordered separately. Connector Tool (Cat. No. 8300-NC); furnished at no charge on all pin-connected bars as follows: One tool for orders up to 500 lineal feet, two tools from 500 to 2000 feet, and one additional tool for each 2000 feet thereafter, up to a maximum of five tools.

HYSOL HYSEAL® COMMUNICATION SPLICES

**WITH OR WITHOUT VALVES FOR PRESSURE AND NON-PRESSURE APPLICATIONS
POSITIVE PROTECTION WITH EASY REENTRY**

HYSEAL Communication Splice Cases save time and reduce labor costs. The Posi-seal liner* serves as a built-in seal, eliminating inserts and grommets. Guarantees a positive seal at cable ends. The unique tapered ends provide precise fit and actually compensate for cable size variations. Inventories are reduced because 5 sizes can be used on cables ranging from 1/2" to 2 1/2" diameter. Non-pressurized cases are recommended for aerial, direct burial and vault applications at temperatures to 140°F. Pressurized cases are recommended for direct burial or manhole installations where temperatures will not exceed 90°F continuously. These flexible splice cases assure positive seals under vibration and cable flexing conditions.

*U.S. Patent 2,978,533

HYSOL HYSEAL® CABLE BUTT SPLICE CASES AND CABLE END CAPS

CABLE BUTT SPLICE CASES

**FAST
ECONOMICAL
ATTRACTIVE
EASY REENTRY**

HYSEAL Cable Butt Splice Cases replace unsightly taped splices. Save money by covering a splice in a fraction of the time it takes for taping. Reentry is quick and easy . . . simply loosen the stainless steel clamp and slide off. Eliminates hazards of personal injury and cable damage resulting from cutting open old-fashioned tape splices.

CABLE END CAPS

**PROTECT CABLES
FROM
DIRT AND MOISTURE**

HYSEAL Cable End Caps provide positive moistureproof, airtight seals on plastic, rubber or lead sheathed cable. Economical and easy to install . . . simply slip on cable until snug and tighten the stainless steel clamp. Use to seal reel ends, to maintain gas pressure during shipment or storage and in the field before splices are made. The tapered design of HYSEAL Cable End Caps provides a precise fit to compensate for cable size variations. Inventory is reduced because only 4 caps are necessary to seal cables from 3/8" to 4" in diameter. Patented Posi-Seal liner* serves as a self-sealing gasket to guarantee seal. Stainless steel clamps are adjustable for full diameter range of caps.

*U.S. Patent 2,978,533

Unique HYSEAL Cable End Caps with tapered design can be used on more cable sizes, providing precise fit to compensate for cable size variations.

HYSOL HYSEAL® EPOXY SPLICE KITS

FOR SOLID ENCAPSULATION OF POWER AND COMMUNICATION SPLICES

HYSEAL® Epoxy Splice Kits* feature a new cable centering device that assures maximum insulation around the cable. New air vents eliminate air entrapment. Self-sealing tapered ends on the flexible case provide positive seal to cable contours without taping. Specially designed filling and ventilating spouts are an integral part of the case and eliminate leak-loss of encapsulating resin. They also provide a reserve of resin for cable penetration to assure that the case is completely filled and without voids. The encapsulating resin has a controlled exotherm (heat build-up through chemical reaction) that will not damage even the thinnest wall polyethylene insulation. Low viscosity permits easy mixing and greater cable penetration without air voids. Colored components and pre-measured packaging assures fool-proof mixing. A special cable jacket primer improves adhesion of the cable to the epoxy and eliminates moisture penetration. Recommended for up to 5 KV. [©] Patent No. 3-145,421

REA APPROVED: E 1100-2 — Same as E 1100 except that the Kit includes a Shield Bonding Hardness. Prices are less on case quantities.

Characteristics of HYSEAL® Epoxy

Viscosity, mixture @ 79°F, cps	700 to 1380
Tensile strength, psi	3500 to 5450
Compressive strength, psi	12,000 to 14,000
Water absorption (24 hours), immersion, %	.36 to .41
Elongation, %	48 to 95
Shrinkage, cured @ R.T., %	.28 to .38
Izod impact, ft.-lb. per inch of notch	.29 to .35
Hardness, Shore D	62 to 89
Dielectric constant @ 86°F @ 100c	3.77 to 4.53
Dissipation factor @ 86°F @ 100c	.02 to .07
Volume resistivity @ 86°F, ohm-cm	Greater than 10 ¹⁴
Dielectric strength, volts per mil	Greater than 400
Shelf life (minimum from date of shipment)	1 year

Tests run in accordance with MIL-S-22266B

EASY TO USE:

No critical weighing required • Only mix amount needed — no waste • 100% solids • Usable at once • No solvents — no fire hazard • Non-toxic after cure.

HUNDREDS OF USES:

BOND — aluminum, glass, iron, wood, ceramics, cement.

SEAL — pipes and vessels, bushings, seams, ducts, glass, motors.

REPAIR — printed circuits, storage tanks, porcelain and tile, metal equipment, plastics, tools, boats.

GENERAL ELECTRIC CABLE ACCESSORY PRODUCTS

TERMI-KIT® CABLE TERMINATION SYSTEM

The G-E Termi-Kit Cable Termination System contains all the materials, including pre-shaped pennants, for quick, uniform, low cost terminations on all solid dielectric shielded or URD power cables 5 KV through 35 KV. Materials are designed to function properly regardless of application tension or direction.

UNI-KIT™ CABLE SPLICING SYSTEM

With G.E.'s Uni-Kit Cable Splicing System anyone can complete both shielded and non-shielded splices in less than an hour. Uni-Kit components are pre-engineered for simple, sure and economical application on all makes and constructions of 0-15 KV solid dielectric cables. Each kit is complete to the proper non-conducting cleaning materials.

IRRASIL® SILICONE TRACK RESISTANT COVER TAPE

Irrasil Silicone Track Resistant Cover Tape is the first silicone cover material offering a minimum-cost, thin-gauge insulation without adhesive. A Termi-Kit termination with an overwrap of Irrasil results in an outdoor termination that replaces a pothead at a saving of \$25 to \$45 in materials alone on each termination. Also cuts labor costs.

Product No.	Thickness in Inches	Width in Inches	Length in Feet	Price Per Roll*
42-005	0.015	3/4	30	\$4.00
	0.015	1	30	5.30

* Standard packages—12 rolls per carton, 48 rolls per case.

GENERAL ELECTRIC INSULATING MATERIALS
CABLE ACCESSORY PRODUCTS AND INSULATING PAINTS

HIGH-VOLTAGE SPLICING TAPES

Major utilities and contractors use 8380 High-voltage Splicing Tape on cable jobs through 15 KV at cost savings of 10% to 50% over previously specified tapes. G-E 8380 won't crack or form voids, eliminates inventory and possible mistakes in application.

Irrathene SPT® Tape is a self-amalgamating, cross-linked material that handles easily over a wide temperature range, and stretching doesn't affect it. The result: faster, more dependable splices and terminations, with real savings in time, material and service life. Also recommended for jacketing use.

Irricon S-B™ Conducting Shielding Tape is an elastomeric, self-bonding, conducting material designed to reduce the electrical stress in splices and terminations of high voltage power cables. It is used to continue the conducting shielding layers of power cables, over the lower half of stress relief cones, and over and under the insulating tapes on splices. Irricon has outstanding conductivity. Large conducting letters are clearly marked on the tape to prevent misuse.

Product No.	Thickness in Inches	Width in Inches	Length in Feet	Price Per Roll*

SEAMLESS BIAS VARNISHED CLOTH AND TAPE

Available in several forms, widths, and thicknesses, G-E Seamless Bias-cut Varnished Cotton Cloth has excellent conformability and dielectric strength. It is suggested for use in cable splices and other applications where oil resistance is a prime consideration.

Product No.	Thickness in Inches	Width in Inches	Length in Yards	Price Per Roll
992 (Black)	0.007	3/4	36	\$1.01
991 (Yellow)	.007	3/4	36	1.01
1786 (Black Oil Proof)	.010	3/4	36	1.10

VERSA-FAB® VARNISHED DACRON GLASS TAPE

Versa-Fab Tape's good conformability to irregular shapes and its great physical strength make it an ideal, low-cost insulation for cable connections and splices under 2300 volts. A straight weave tape, it is suggested for applications up to 130 C continuous operation.

Product No.	Thickness in Inches	Width in Inches†	Length in Yards	Price Per Roll*
76528 (Black)	0.010	3/4	36	\$1.10
76562 (Black Oil Proof)	.010	3/4	36	1.19

* Standard package—20 rolls.
† Other widths available upon request.

POTTING COMPOUND

A high-dielectric, hot-melt compound which saturates and penetrates porous materials, protecting them from air, moisture, dirt, oil, and other harmful materials. It is an ideal insulation for solid-filled cable accessories.

Product No.	Description	Weight/Gallon 7.25 lb	Price Per Container*
1332	Oil Stop Compound	1 gal.	\$9.85
		5 gal.	40.00

* Standard carton—4 gallon pails.

GENERAL-PURPOSE INSULATING AND TRACK RESISTANT PAINT

The resistance of time-tested Glyptal® 1201 Red Enamel to oil, acid, moisture and corrosion makes it an outstanding primer, protective finish, adhesive, sealer and electrical insulation. G-E 1201 is available in standard sizes, and, as 1201A, in a handy 16-ounce spray can.

Product No.	Container Size‡	Price Per Container
Glyptal Red Enamel

‡ Paints and thinners are also available in larger quantities.

GRAYBAR TAPES AND COMPOUNDS

PREMIUM BROWN FRICTION TAPE

Highest quality friction tape. Premium adhesive and tensile strength qualities. Best electrical properties. All because natural brown rubber is used as base of compound. Extra footage per roll. Packaged in 10-roll container.

No.	Size	Ft. in Roll	Packed	Per Can	10 Cans. Per Can
9483	8	70	10-roll Shop Pack	5.40*	5.05

AMAZON ASTM FRICTION TAPES

High quality friction tape guaranteed to meet or exceed all ASTM and U.S. Government specifications. Extremely abrasion resisting. Has excellent tensile and adhesive qualities. Long lasting, will not dry out, non-ravelling. Protected by moisture-proof wrapping in sturdy cardboard carton.

Nos.	Size	Ft. in Roll	Packed	Per Roll	Per 100 Rolls
9382	8	82½	Ind. Ctns.	.54	50.50
9381	8	82½	Cello-Label	.53	49.50
9383	8	82½	10-roll Shop Pack	5.40*	50.50

*Prices are for ¾-in. wide tape in moisture proof wrapping, in a carton. For tape in moisture proof wrapping only, deduct \$1.00 per 100 rolls.

Prices on width other than ¾ in. available on request.

VICTOR BLACK FRICTION TAPES

An all-purpose friction tape of highest quality. Alike to Sticka Tape in all instances, except footage per roll.

Nos.	Size	Ft. in Roll	Packed	Per Roll	Per 100 Rolls
9282	8	68	Ind. Ctns.	.49	45.50
9281	8	68	Cello-Label	.48	44.50

*Prices are for ¾-in. wide tape in moisture-proof wrapping in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices on widths other than ¾-in. available on request.

STICKA BLACK FRICTION TAPES

High quality friction tape, non-ravelling and suitable for all application where friction tape is indicated.

Strong, abrasion-resisting, and very adhesive.

Free from pinholes, will not dry out. Rolls packed in moisture-proof wrapping.

Nos.	Size	Ft. in Roll	Packed	Per Roll	Per 100 Rolls
9182	8	60	Ind. Ctns.	.46	43.00
9181	8	60	Cello-Label	.45	42.00
9183	8	60	10-roll Shop Pack	4.60*	43.00
9142	4	30	Ind. Ctns.	.24	23.00
9141	4	30	Cello-Label	.23	22.00

*Prices are for ¾-in. wide tape in moisture-proof wrapping in a carton. For rolls in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

†Shop package. The convenient container has 10 rolls of tape, each heat sealed in moisture-proof wrapping.

Prices on widths other than ¾-in. available on request.

AMAZON ASTM SPLICING COMPOUNDS

Rubber Tape

Manufactured from a higher grade rubber compound.

Will meet and exceed requirements of all U.S. Government and ASTM specifications. Self-vulcanizing, will conform to all splices so as to give complete insulation. Strong in tensile and extremely flexible.

Dielectric strength: 350 volts per mil. of thickness.

Nos.	Size	Ft. in Roll	Packed	Per Roll	Per 100 Rolls
9682	8	30	Ind. Ctns.	.59	55.00
9681	8	30	Cello-Label	.58	54.00

*Price Per Can (10 rolls per can)

*Prices are for ¾-in. wide tape in moisture-proof wrapping in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices for width other than ¾-in. on request.

VICTOR SPLICING COMPOUNDS

Rubber Tape

An excellent quality Splicing Compound designed for use on all regular circuits.

Extremely strong and elastic. Seals splices against all moisture and dirt.

Dielectric strength: 300 volts per mil. of thickness.

Nos.	Size	Ft. in Roll	Packed	Per Roll	Per 100 Rolls
9582	8	23	Ind. Ctns.	.49	46.00

9542	4	11	Ind. Ctns.	.26	24.50
9541	4	11	Cello-Label	.25	23.50

*Prices are for ¾-in. wide tape in moisture-proof wrapping in a carton. For tape in moisture-proof wrapping only, deduct \$1.00 per 100 rolls.

Prices on widths other than ¾-in. on request.

PLYMOUTH SPLICING COMPOUNDS

PLYMOZONE SPLICING COMPOUND

For maximum high-voltage resistance to ozone and moisture. Plymozone ozone-resisting splicing compound exceeds ASTM D-1373. Plymozone withstands four times the ozone concentration used as ASTM standard. Packed in individual tin cans.

No.	Roll Size	Rolls/Ctn.	1-39	Price per Roll	40-120	121-160
2022	¾" x 30'	40 Tins	.94	.89	.83	

PLYMPRENE NEOPRENE SPLICING COMPOUND

A highly weather-resistant splicing tape for maximum protection against oils, alkalies, and weather extremes. Use on neoprene wire for both insulating and jacketing. Packed in individual tin cans.

No.	Roll Size	Rolls/Ctn.	1-39	Price per Roll	40-120	121-160
2071	¾" x 30'	40 Tins	.94	.89	.83	

PLYMOUTH TAPES

NO. 7 SLIPKNOT PLASTIC ELECTRICAL TAPE

The dependable tape. Tough, economical, safe — resists water, acids, alkalkies, corrosion, oils, varying temperatures and weather conditions. Dielectric strength of over 10,000 volts. Comes packed individually, one 66' roll, 3/4" wide, in metal can; or 20' rolls, 3/4" wide, in handy

12-roll container. Also available in Flip-n-Cut dispenser for fast, economical cutting at no extra cost.

Nos.	Roll Size	Rolls/Pk.	Each	Price per Roll	
				10 Rolls	100 Rolls
3205	3/4" x 66'	1/Disp.	1.39	1.15	.95

3184	1" x 108'	1/Ctn.	3.40	2.84	2.36

NO. 10 SLIPKNOT PLASTIC TAPE

Its thicker gauge (.010") makes No. 10 Slipknot the ideal plastic electrical tape for tough applications. Made of the same fine quality materials as Slipknot No. 7 Plastic Electrical Tape, No. 10 Slipknot gives even greater protection — yet works easily and molds snugly to any contour. Dielectric strength: 12,000 volts.

Size In.	Each	Price per Roll	
		10 Rolls	100 Rolls
3/8"	1.68	1.38	1.15

			.34	.30
			1.08	.98

SLIPKNOT FILLER TAPE

Electrical insulating putty for filling voids and building up around sharp edges of connectors, etc. Molds perfectly under finger pressure. Designed for use with Slipknot Plastic Electrical Tapes. Packed in individual cartons.

No.	Roll Size	Rolls/Ctn.	Price per Roll		
			1-47	48-144	145-528
2074	1 1/2" x 60" x 1/8"	48	1.17	1.05	.99

SLIPKNOT ANTI-CORROSION PIPE-WRAPPING TAPE

A barrier that stops corrosion of both buried and overhead pipe and conduit. Meets electrical code requirements for protecting conduit in concrete. Self-sticking polyvinyl chloride (PVC) — 2", 4", and 6" wide. Slipknot #100 (.010" thick) for most applications. Slipknot #120 (.010" thick) green for cold weather applications. Slipknot #200 (.020" thick) for heavy-duty applications.

"SCOTCH" BRAND VINYL PLASTIC ELECTRICAL TAPE NO. 33

"SCOTCH" Brand Electrical Tape No. 33 (made of vinyl plastic) has been proved and accepted over the years as a general purpose insulation. It has excellent resistance to flame, abrasion, sunlight, moisture, alkalis, solvents, oil and many acids. No. 33, with its quick sticking, strong holding, pressure-sensitive adhesive, provides excellent stretch and conformability—gives full electrical and mechanical protection with minimum bulk. Consistent handling properties assure tightly wrapped splices that will not loosen.

Cat. No.	Roll Sizes	Roll	Packaging Ctns.	Case	Price Per Roll

"SCOTCH" BRAND SPECIAL VINYL PLASTIC ELECTRICAL TAPE NO. 99

"SCOTCH" Brand Electrical Tape No. 99 is designed to perform in a continuous temperature environment up to 220° F. It combines a special oil-resistant vinyl backing with a super oil-resistant adhesive to assure positive insulation protection in applications subject to oil splash or oil immersion.

Cat. No.	Roll Sizes	Roll	Packaging Ctn.	Case	Price Per Roll
99	¾" x 66'	1/can	10	100	\$1.78
99	¾" x 44'	1/plastic box	10	100	1.21

"SCOTCH" BRAND VINYL PLASTIC ELECTRICAL TAPE NO. 35 FOR COLOR CODING

Color coding tape in eight fadeproof colors (red, white, blue, yellow, green, orange, gray, and brown) possesses all the properties of "Scotch" No. 33 Tape.

Cat. No.	Size	Roll	Packaging Carton	Case	Price Per Roll
35	½" x 20'	1/Celo Pack	5	100	\$.39

"SCOTCH" BRAND ELECTRICAL SEMI-CONDUCTING TAPE NO. 13

A self-fusing, rubber base, semi-conducting tape for use on cable splices and terminations. No. 13 tape reduces electrical stresses in the area beneath the shielding continuation and around connectors and terminal lugs.

Cat. No.	Roll Sizes	Roll	Packaging Ctn.	Case	Price Per Roll
13	¾" x 15'	1/box	10	50	\$1.55

"SCOTCHFIL" BRAND ELECTRICAL INSULATION PUTTY

"SCOTCHFIL" Brand Electrical Insulation Putty is useful for filling voids and padding sharp edges of cable connectors, motor terminals, bus bars and tee connectors. It will not corrode copper. Uniform thickness (⅛ inch) gives rapid build-up to full cable thickness. Good electric and excellent aging properties insure thorough seal and long service life.

Roll	Size	Roll	Packaging Ctn.	Case	Price Per Roll
1½"	x 60"	1/box	10	50	\$1.44

"SCOTCH" BRAND ELECTRICAL TAPE NO. 23

Instant fusing, easy-to-use No. 23 provides excellent insulating and moisture-proofing qualities for high-voltage (including cross-linked polyethylene) and communication cable. It has unexcelled handling characteristics and excellent aging properties.

Cat. No.	Size	Roll	Ctn.	Case	Price Per Roll
23	¾" x 30'	1/can	10	50	\$1.27
23	2" x 30'	1/box	10	50	3.17

"SCOTCH" BRAND E-Z TAB STRESS CONE PENNANT NOS. 2330, 2340, 2360 and 2380

The "SCOTCH" Brand E-Z Tab Pennant is a one-piece triangular shaped ultra-violet and corona resistant insulating material that wraps on easily and fuses readily to provide a void free engineered stress relief cone.

Prod. No.	Size	Roll	Packaging Carton	Price Per Roll
2330	6" x 30"	1/box	10	\$1.66
2340	6" x 40"	1/box	10	1.86
2360	6" x 60"	1/box	10	2.11
2380	6" x 80"	1/box	10	2.55

"SCOTCH" BRAND ELECTRICAL SHIELDING TAPE NO. 24

"SCOTCH" Brand Electrical Shielding Tape No. 24 is a wire shielding braid in a flat, cable-like form. Easy to apply, it provides an effective replacement for the electrostatic shielding removed when splicing or terminating high voltage and communication cable.

Cat. No.	Size	Roll	Packaging Carton	Case	Price Per Roll
24	1" x 15'	1/box	10	50	\$ 2.18
24	1" x 100'	1/box	10	50	10.95

"SCOTCH" BRAND ELECTRICAL TAPE NO. 27

All common wire splices in high-heat areas are easily insulated with glass cloth No. 27. Not harmed by heat, resists flame and has thermosetting pressure-sensitive adhesive.

Prod. No.	Roll Size	Packaging Roll	Ctns. Case	Price Per Roll
27	1/2 in. x 66 ft.	1/can 10	50	\$1.88
27	3/4 in. x 66 ft.	1/can 10	50	\$2.80

"SCOTCH" BRAND ELECTRICAL TAPE NO. 70

This high-temperature silicone rubber splicing tape is recommended as the sole insulation or overwrap for splices and terminations on all types of silicone cables, or where arc tracking is a problem. Rated at 180° C, No. 70 offers excellent resistance to weathering, tracking, arcing and ozone.

"IRVINGTON" BRAND ELECTRIC ARC AND FIRE PROOFING TAPE NO. 7700

Insulates high voltage cables from electric arc and fire damage while protecting adjacent cables. No. 7700 is moisture, weather, and corrosion resistant—won't rot, flake, or disintegrate. Goes on fast, No. 7700 is light weight and conformable—easy to handle in cramped spaces.

Prod. No.	Roll Size	Packaging Roll	Carton Case	Price Per Roll
7700	3" x 20 ft.	1/box 10	50	\$8.66
	1 1/2" x 20 ft.	1/box 10	50	4.56

"FIBREMAT" BRAND ELECTRICAL TAPE NO. 2544 AND 2577

This tape is a non-woven web material, saturated with a high-grade electrical varnish. Unusually conformable for heavy-duty mechanical build-up and padding applications. No. 2577, with adhesive; No. 2544, without adhesive.

Cat. No.	Roll Size	Packaging Roll	Ctn. Case	Price Per Roll
2577	3/4 in. x 60 ft.	1/box 10	50	\$1.16
2544	3/4 in. x 60 ft.	1/box 10	50	1.11

"IRVINGTON" BRAND ELECTRICAL TAPES NOS. 2510, 2520

A bias-cut cambric tape impregnated with a high grade electrical varnish. Conformability and high electric strength, low power factor. No. 2520 with adhesive; No. 2510 without adhesive.

Prod. No.	Roll Size	Packaging Roll	Ctns. Case	Price Per Roll
2510	3/4" x 60 ft.	1/box 10	50	\$1.16
2520	3/4" x 60 ft.	1/box 10	50	1.25

"VI-SPRAY" BRAND ELECTRICAL SEALER NO. 2530

Handy spray can provides fast drying protection against corrosion and gives added protection on wire and cable splices where resistance to oils, acids, corrosive atmospheres, and moisture is required.

FREE PLASTIC PARTS BOXES

PERMACEL 29 and 295 Plastic Electrical Tape are packed 4 rolls to a box. Permacel 29R and 295R are packed 1 roll to a box. As the tape is used up each box makes a useful container for screws, nails or other small parts or for storing small items of fishing tackle.

Order the large boxes as 29L or 295L.

ORDERING INFORMATION: A UNIT is 12 rolls of a single product and size and equals 1 case for pricing and assorting purposes. Order in UNIT quantities; i.e. — 4 UNITS 29R (48 rolls — 1 shipping case).

PERMACEL* 30

Plastic Electrical Tape for heavy-duty applications. Excellent holding power. Strong resistance to weather effects. 10 mils thick. U.L. approved.

20-4050	3" x30'x.030"	2	24	3.40

†Okonite's trade name for a chemical cross-linking material.

OKOPRENE NEOPRENE TAPE

Designed to protect splices on neoprene jacketed cables. It can be used with power and control cables or for repairing portable cables, where a quick repair is desired without the use of a vulcanizer.

Mechanically rugged, it has good resistance to weather, moisture, oil and chemical splashings.

Cat. No.	Roll Size	Unit Pkg.	Case	Per Roll
30-6010	3/4" x30'x.030"	10	100	\$0.85
30-6020	1" x30'x.030"	6	72	1.13

30-6050	3" x30'x.030"	2	24	3.40

OKOWELD SPLICING TAPE

This neoprene tape does two jobs. It is the only self-fusing tape approved by the U.L. for both insulating and jacketing splices in low voltage neoprene and plastic cables. Also for protecting

splices in neoprene and plastic jacketed high voltage cables; has good dielectric strength and resists oil and chemical splashings. Fuses quickly into a homogeneous covering without external heat. Standard is black. Available also in red, blue, yellow and green subject to minimum order requirements.

Cat. No.	Roll Size	Unit Pkg.	Case	Per Roll
35-7010	3/4" x30'x.030"	10	100	\$0.85
35-7020	1" x30'x.030"	6	72	1.13

35-7050	3" x30'x.030"	2	24	3.40

MANSON FRICTION TAPE

A super strong friction tape. Made from fabric with 25% more threads per inch and impregnated with a natural rubber compound. For use where extreme resistance to mechanical abuse is desired.

Weather resistant — won't dry out or unwrap. Excellent electrical strength.

Cat. No.	Roll Size	Unit Pkg.	Case	Per Roll
05-1010	3/4" x82'x.015"	10	100	\$0.70
05-1020	1" x82'x.015"	6	72	.93

05-1050	3" x82'x.015"	2	24	2.80

OKONITE RUBBER TAPE

Ideal for splicing 600 volt rubber cables type RW, RH and RHW. Made of new natural rubber, it is mechanically strong, has good moisture resistance, dielectric strength and insulation re-

sistance. Fuses quickly into a homogeneous wall of insulation without external heat.

Cat. No.	Roll Size	Unit Pkg.	Case	Per Roll
10-2010	3/4" x30'x.030"	10	100	\$0.80
10-2020	1" x30'x.030"	6	72	1.07

SPLICING AND TERMINATING KITS

These kits are tailor made for splicing or terminating your specific cables. Ordering kits, rather than bulk splicing materials, is the easiest and safest way to be sure you have exactly what you need — in the right amounts — at the right time and place.

Complete and easier-to-follow drawings and instructions furnished with all kits. To order, specify: conductor size, type insulation and thickness or voltage rating, type jacket and thickness. If "T" splice, give same information for tap cable. If for termination specify if indoor or outdoor.

The Graybar Tag, together with the trademarks of famous manufacturers listed in this catalog, is your double assurance of quality.

BISHOP INSULATING MATERIALS

**BI-SEAL SELF BONDING
(polyethylene based)
ELECTRICAL TAPE**

Provides a permanent, watertight seal for service entrance connectors. Specifically designed for splicing and terminating high voltage polyethylene insulated power cable; may be used on all solid dielectric insulated power cable.

PLYMOUTH

TELEPHONE & UTILITY TAPES

PLYMOUTH "B" SPLICE COVERING

A .009" thick polyvinyl chloride sheeting. Excellent resistance to acids, alcohols, salt and fresh water, alkalies, chemicals, sun, and weather. Can be stretched to conform with irregular shapes. Fasten with No. 7 Slipknot Plastic Electrical Tape. Seal edges for a water-proof covering.

Cat. No.	Description	Packaging	Per roll	
			Less than 100 Rolls	100 roll Quan.
3049	48"x.009"x50' Wrapped roll in individual cartons	Packed singly	17.50	16.50
3050	20"x.009"x24" 5 sheets per pkg.	20 packages per case	1.90	1.75

PLYMOUTH RUBBER BANDAGE

A very elastic tape of highly vulcanized rubber used to compress splicing compound around high-voltage joints. When wrapped under tension, its high tensile strength and elongation factor squeeze out any air bubbles in the splicing compound -- assuring tighter, safer splices. Insulated joint is wrapped with two layers of Plymouth Rubber Bandage, using a 1/2 lap and pulling bandage to its stretch limit for maximum compression.

Bandage is removed after three minutes.

Cat. No.	Description	Rolls per case	Per roll	
			Less than 100 rolls	100- roll Quan.
2088	4"x.028"x14' Wrapped roll in individual carton	40	3.35	3.10

**PLYMOUTH DOUBLE-RUBBER TAPE
(D.R.) TL-192**

A special self-vulcanizing high-voltage rubber tape made expressly for wet conditions. D.R. tape provides over 22,500-volt dielectric protection. A layer of white unvulcanized rubber is fused to a layer of black vulcanized rubber, for extra thickness (.045") and superior insulation. Can be used even underwater for a fully water-proof splice. Fuses perfectly into a homogeneous mass that assures complete protection. In

individual cartons.

Nos.	Roll Size	Rolls/ Ctn.	Price per Roll		
			1-99	100-300	301-500

2013	2" x 15'	40	1.45	1.35	1.00

PLYMOUTH "CR" TAPE

A .050" thick tape, made up of a layer of .030" white unvulcanized rubber bonded to a layer of .020" black vulcanized rubber. Has exceptional cohesive characteristics, and can be squeezed together to form an absolutely air-tight seal. Also gas-proof.

Cat. No.	Description	Packaging	Per roll	
			Less than 100 rolls	100 rolls up
2065	28"x.050"x20' Wrapped roll in individual carton	Packed singly	26.00	24.25

ATLAS ASBESTOS TEXTILES

ASBESTOS WOVEN TAPE

Conforms to ASTM Specifications. Used widely for electric motor windings and other electrical insulation. Low iron content, high grade long fiber yarn, selvage edges. Incombustible, resists moisture, corrosion, alkalis, mild acids, vermin. Capable of absorbing a high percentage of resin to provide moisture barrier for efficient motor operation.

Other styles and widths also available.

CUSTOM-WEAVING FOR SPECIAL REQUIREMENTS

Whatever your need for tapes or cloths may be, look into Atlas' wide experience and modern facilities for custom-weaving a variety of fabrics— from asbestos and glass fibers to the newest synthetics and even ceramics withstanding service temperatures up to 2000° F. Orlon, Dacron, Teflon, Nylon and Dynel fabrics, plain or in combination with glass fiber, are available.

BUCHANAN pres-SURE-connectors

C24	Splice Caps Termend Lugs All above All above	1	\$5.90

Splice Caps listed by Underwriters' Laboratories, Inc. and Canadian Standards Association as "pressure cable connectors" for 2#18 thru 3#8 or 2#6 or equivalent combinations, and as "fixture type splicing connectors" for 2#18 thru 2#10 or equivalent combinations. Insulators listed for 600 volts on building wire and 1000 volts in fixtures, in applications up to 105°C. (221°F.) Also UL listed for 1000 volts in electric signs.

*Or equivalent combinations.

IDEAL WIRE-NUTS®
SOLDERLESS-TAPELESS WIRE CONNECTORS
 Underwriters' Approved

Shell made of strong phenolic compound with deep wide skirt to prevent flash-over and make it easier to join larger wires. Approved for use in recessed fixtures up to 150° C. 71B and 72B have U.L. and C.S.A. approval as 300V. fixture connectors 73B has 600V. fixture approval. 74B, 76B and 78B are U.L. and C.S.A. approved as 600V. pressure cable connectors (including fixture approval) for general use in all types of branch circuit wiring. 74B, 76B and 78B also approved for AL/AL and CU/AL splices. Complies with Federal Specifications W-S-610b.

IDEAL CRIMP CONNECTOR
WITH WRAP-CAP® INSULATOR

Sleeve is zinc plated steel for maximum holding power and protection against puncturing. Two sizes handle any combination. Crimp with Ideal Crimp Tool, No. 30-425 or Electricians' Pliers (with built-in crimping die) No. 30-420. Wrap-Cap insulates all around joint and even between wires. U.L. and C.S.A. approved for general use (600V.) in branch circuit and fixture wiring (1000V. when enclosed in fixture or sign), 75° rating. Pressure cable approved. Wrap-Cap may be used as sole insulation for use with any U.L. listed uninsulated cable and fixture type splicing connector or soldered connections. Complies with Fed. Spec. W-S-610b.

"SCOTCHLOK" BRAND SELF-STRIPPING ELECTRICAL CONNECTORS TYPE UR, UG, UIR, UIY, UIB

Utilizes the reliable *self-stripping* "U-Element" connecting principle which shears the insulation from the wire and grasps the conductor with a *constant pressure* metal to metal connection. Equivalent to the best twist and solder joint. A transparent polycarbonate resin jacket insulates the connection and allows a visual inspection of the complete splice. Use "SCOTCHLOK" Brand E-9 Crimping Tool on U Series "SCOTCHLOK" Connectors.

Type UR—For making pigtail splices on any 2 or 3 wire combination of No. 19-26 AWG solid or No. 20-24 AWG stranded wire. Self-sealing.

Type UG—For tap splicing (run wire intact) on UD any 2 wire combination of No. 19-26 AWG solid or No. 20-24 AWG standard wire.

Type UIR—For inline splicing of full pairs on telephone wire No. 19-24 AWG solid or No. 19-22 AWG stranded. Self-sealing.

Type UIB—For inline splicing of full pairs of No. 16-19 AWG solid or stranded wire. Self-sealing.

Type UIY—For 4 way tap splicing of No. 16-19 AWG solid or stranded wire. Self-sealing.

"SCOTCHLOK" BRAND ELECTRICAL SPRING CONNECTORS TYPE Y, R, AND B

"Live" spring action splices all common combinations of solid and stranded building and fixture wire. The "live" spring action expands and contracts with the wire, maintaining constant pressure on conductors. Prevents thermal or vibration loosening. Inner steel shell and vinyl cover adds extra strength and insulating qualities.

Type	Wire Range	Connectors Per Box	Boxes Per Ctn.	Boxes Per Case	Price Per Box

OK SPEED-WRAP TOOLS

For Solderless Connections

Speed-Wrap Gun with interchangeable Coiltite bits and sleeves that accommodate the proper size wire and terminal for any application, are accepted by design engineers as the simplest and best possible precision tools for making perfect solderless electrical connections. It is a hand operated precision tool of rugged, lightweight construction designed for production line or field work. Gear ratio keeps operator fatigue at a minimum. Weight: 10½ ounces.

Model G 100 Manual Speed-Wrap Gun

.....each \$36.00

Bits of various sizes are required depending on the size of wire and terminal and the height of terminal.

Coiltite Biteach \$12.45

Sleeves are required, depending on the size of wire and terminal. Coiltite sleeves are insulated and minimize shorting of adjacent terminals.

Coiltite Sleeveeach \$5.90

To make an OK Speed-Wrap connection is as simple as 1-2-3. Just Strip-Slip-Zip it's done.

Strip a prescribed solid wire to length. Insert in gun, and anchor.

Slip over terminal. Squeeze trigger easily and . . .

Zip it's done. A perfect, permanent, Speed-Wrap connection — in less than 1/10th second.

WEN SOLDERING GUNS MODEL 250 ELECTRONIC SOLDERING GUN

250-Watt

This new transformer type soldering device heats in 3 to 5 seconds when trigger is pressed. Cools quickly when trigger is released. Operates on 250 watts, 110-120 volts A.C., 60 cycle. Built-in spotlight automatically illuminates work. Long tips reach spots otherwise inaccessible. Tips are rigid, stay tinned, are easily replaceable. Sturdily constructed — handle and case are heat and shock resistant. U.L. approved. Guaranteed for one year against defects in material or workmanship. Individually boxed in display containers, packed 3 to a carton; shipping weight, 12 lbs.

IDEAL WIRE PULLING COMPOUNDS

YELLOW 77®

Yellow 77 wire pulling compound works best where the pulling is toughest. It is a yellow colored, creamy textured compound with a wax base. Not damaged by freezing. Won't dry out in the can. A dense film forms on top of remaining Yellow 77 in can, retarding drying. Applied by hand, brush or cloth. Made of exceptionally slippery wax base with additive that makes it "plate out" on wires in long runs — won't quit half way through. Doesn't "wash off" wires when pulling through water in conduit. Use on rubber or plastic covered wires or cables. For use in steel, aluminum or fibre conduit. Not for asbestos-covered wire.

Cat. No.	Description	Each
31-350	Quart (Packed 12 qts. per case).....	\$ 1.15
31-351	Gallon (Packed 4 gals. per case).....	2.75
31-353	Three Gallon	7.55
31-355	Five Gallon	11.35
31-365	55-Gal. Drum (Non-returnable).....	121.00

WIRE LUBE®

Makes wire pulling easier and saves time. Protects insulation against breaks and strains. Can be used on rubber or plastic covered wire. The lubricant can be applied by hand or brush. Wire or cable actually "rides" on a film of lubricant. U.L. approved.

Cat. No.	Description	Each
31-250	Quart (Packed 12 qts. per case).....	\$0.80
31-251	Gallon (Packed 4 gals. per case).....	2.00
31-255	Five Gallon	6.50

MINERALLAC No. 100 "PULL-IN" COMPOUND

Listed by Underwriters' Laboratories, Inc.

For use on rubber, synthetic, plastic or lead-covered wires and cables.

Minerallac's "Pull-in" Compound No. 100 was developed to cut costs and "speed up" electrical installations. It lubricates thoroughly, thus reducing tensions on hard pulls and facilitating easy pulling of wires and cables into conduits. Free of injurious ingredients.

Price Per Can.....	12 per Case		6 per Case		
	Pints	Quarts	1/2 Gal.	1 Gal.	5 Gal.
	\$0.50	\$0.85	\$1.50	\$2.00	\$8.25

Y-ER EAS LUBRICANT

FOR PULLING ELECTRIC CABLES

Y-ER EAS (wire ease) is a smooth creamy lubricant which dries rapidly in the air and in so doing shrinks in volume and becomes a light powder. Use on Lead-Rubber-Synthetic covered cables. Do not use on Asbestos covered cables.

Y-ER EAS has no injurious effects on insulation fabrics or conduits and is clean and easy to handle. It is not a grease. It will not spot wood or marble nor will it have any injurious effects on hands or clothing.

Y-ER EAS is packed in pails in the following quantities:

1 qt. can (1 1/2 lbs. approx.).....	per can	\$0.80
1 gal. pail (5 lbs. approx.).....	per pail	2.00
2 gal. pail (11 lbs. approx.).....	per pail	4.60
3 gal. pail (14 lbs. approx.).....	per pail	5.35
4 gal. pail (19 lbs. approx.).....	per pail	6.00

55 gal. drum (250 lbs. approx.).....price by quotation from local Graybar office

Y-ER EAS carries the UL and Union labels.

BURNDY CABLE LUBRICANT

SLIKON WIRE-PULLING COMPOUND

Recommended for use on rubber, plastic covered (except Polyethylene) or lead covered wires to be installed in steel, aluminum or other recommended conduits. Slikon is a permanent lubricant—even years later if it becomes necessary to remove a cable, the compound still acts as a lubricant.

Will not evaporate in the can. Will not stain hands or clothing—excess compound can be removed by washing with water.

Cat. No.	Net Wt. and Packaging	Price Each
Qt. -Slikon	2 lbs. in Quart Cans	\$0.90
Gal. -Slikon	9 lbs. in Gallon Cans	2.88
5 Gal. -Slikon	40 lbs. in 5 Gallon Pails	11.20

Also available in 55 Gal. Drums, prices on application.

CRC 2-26

CRC 2-26 drives out moisture, then forms molecular barrier to seal it out. Stops rust and prevents further destructive corrosion action. Restores electrical characteristics to original values. Keeps all electrical equipment operating like new. Low in toxicity. Non-staining, non-corrosive. Reduced downtime, improved efficiency, increased operational life of equipment, will return its cost many times over.

Size	Each
16 Oz. Aerosol Can.....	\$ 2.50
1 Gallon Liquid	7.00
5 Gallon Liquid	34.00
55 Gallon Liquid	340.00

CO CONTACT CLEANER

CO Contact Cleaner has split-second microscopic cleaning action. Removes moisture, dust, dirt, oils from high-precision electronic equipment, precious metal contacts, and components. Penetrates into tiny cracks and crevices. Leaves no residue or causes no solvent action on base materials. Maintains precision values. Highly stable. Equipped with plastic extension tube, reaches hard-to-get-at-places. Extremely safe to use and handle. Apply any place where delicate cleaning is necessary.

16 Oz. Aerosol Can CO Contact Cleaner...each \$2.50

CRC LECTRA-CLEAN

CRC Lectra Clean used on high voltage equipment (110 volts and above) to remove dirt, wax, oil, contaminants, moisture. Cleans fast — then evaporates. Non-flammable vapors or residues. No flash or fire point. Low in toxicity. Much safer than carbon tetrachloride. Non-conducting. Harmless to metal substrates. After cleaning with Lectra Clean, use CRC 2-26 to protect against future electrical failures.

CRC URETHANE SEAL COAT

Urethane Seal Coat is a permanent, flexible hard insulating film for electrical and electronic parts and equipment. Mar and abrasion resistant. One component —no catalyst. Unlimited shelf life. Resistant to acids, oils, alkali salts, corrosive atmospheres, chemicals. Use on printed circuits, URD transformer connectors and electrical equipment. Acts as insulation type varnish. Compatible with transformer oil. Temperature range from -90° to +300° F. (Class B Insulator)

BUSS TAP FUSES

For Use in Trolley Taps in Mine Service

BRT and BRW Tap fuses are of a new and improved design. They will open the circuit promptly to guard against the cable insulation flaming up or the cable burning through when a fault develops in the trailing cable.

They also guard against useless outages when motors start as they have a time-lag long enough to hold all normal motor starting currents.

BRT and BRW tap fuses have a very high interrupting capacity. They have been tested on a circuit set to deliver up to 8000 amperes at 600 volts direct current.

There are two types of contacts. BRT fuses have ferrule contacts. They can be used in the usual type trolley tap holders.

BRW fuses are designed to eliminate heating troubles in the fuse holder. Contact is made by a stud at each end of the fuse threading into the holder. This insures positive contact between the fuse and holder for the life of the holder.

Maintaining good contact prevents the useless outages so often caused by fuses blowing due to the heat from poor contact.

	BRT	BRW
Usual Amperages	Each	Each

BUSS CLEAR WINDOW PLUG FUSES

Carry Underwriters' Laboratories listed label.

Buss fuses have an extra large, clear window which makes it easy to see if fuse is blown.

Metal cap protects fuse against chipping that might cut fingers or weaken fuse. Buss fuses are shockproof — insulated with porcelain and mica like high voltage power lines. They will always fit in holder as there is no solder lump on outside to cause trouble.

Packed 5 in a colorful carton that carries complete information on why fuses blow and what to do when they do blow.

Sym- bol	Amp.	Wt. Lbs. per 100	Each	Sym- bol	Amp.	Wt. Lbs. per 100	Each
W3	3	6½	\$0.075	W15	15	6½	\$0.068
W5	5	6½		W20	20	6½	
W6	6	6½		W25	25	6½	
W8	8	6½		W30	30	6½	
W10	10	6½					

BUSS dual-element PLUG FUSES

0 TO 14 AMPERE

Fusetron fuses, like Fustat fuses, can be used to protect motors or apparatus against burnout. Have Edison base — hence insurance and inspection authorities and Underwriters' Laboratories do not recommend their use because all protection is lost if Fusetron or ordinary fuses of too large a size are used. Fustat fuses, because of their non-tamperable feature, are recommended for this work.

Amp.	Symbol	Each	Amp.	Symbol	Each
1	T1	\$0.17	5	T5	\$0.17
1¼	T1¼		5½	T5½	
1⅝	T1⅝		6¼	T6¼	
2	T2		8	T8	
2½	T2½		10	T10	
3⅝	T3⅝	12	T12		
4	T4	14	T14		

Packed 4 in a carton, weight 6¼ lbs. per 100.

15 TO 30 AMPERE

15 ampere Fusetron dual-element fuses provide safe protection. They won't blow on motor-starting current or any current which lasts only a short time, because of their thermal element, yet they protect on dangerous overloads or short-circuits.

20, 25 and 30 amp. sizes for use on appliance circuits or mains give the same kind of protection against useless blows. Carry Underwriters' Laboratories listed label. For voltages up to 125. Packed 4 in a colorful carton.

Amp.	Symbol	Each	Amp.	Symbol	Each
15	T15	\$0.09	25	T25	\$0.09
20	T20		30	T30	

Packed 4 in a box. weight 6¼ lbs. per 100.

BUSS FUSTAT FUSES

0 TO 14 AMPERE

To Protect Against Burned-Out Motors and Apparatus of Voltages up to 125

Fustat Fuse Adapter

Protect motors against burnout from such things as dry bearings, overload, etc. Prevent costly repair bills.

For size to use, get ampere rating of motor or apparatus from name plate, and install a Fustat fuse

of a size nearest to that figure. Then if device is in danger of burnout, the Fustat fuse will open. Also protects like a fuse against short-circuit.

Have non-tamperable base — which prevents anyone replacing them with a penny or readily bridging them — and prevents the use of sizes too large to protect.

Fustat fuses fit all regular plug fuse holders through the use of an inexpensive adapter which locks in place.

Carry Underwriters' Laboratories Label and have the same degree of approval for motor-running protection as the most expensive devices made.

Packed 4 in a carton, carrying complete instructions. Fustat fuse weight 5¼ lbs. per 100.

Amp.	FUSTAT FUSE		ADAPTER	
	Symbol	Each	Symbol	Each
1	S1	\$0.17	SA1	\$0.115

10	S10		SA10	
12	S12		SA15	
14	S14	SA15		

Many other sizes from 3/0 to 9 amperes can be obtained. Adapters not included with Fustat fuses — must be ordered separately. Adapter weight 3⅝ lbs. per 100.

15 TO 30 AMP. — FOR CIRCUIT PROTECTION

Operates like Fusetron dual-element Plug Fuses Non-tamperable (Type S) Base

The Fustat fuse is Bussmann's dual element fuse with type "S" base. It has a fuse link and a thermal cutout. Makes safe protection remain safe. Stops loss of money on needless "blown-fuse" service calls. Stops use of pennies or slugs; practically impossible to bridge with tinfoil, wire or any other material. A 20, 25, or 30 ampere size will not fit in a 15-ampere receptacle or adapter. Can be used in Edison base receptacles by use of adapter. Adapters not included with Fustat fuses, must be ordered separately. Listed by Underwriters' Laboratories as Type S fuses, in 15 to 30 amp. sizes. For circuit protection on voltages up to 125. Fustat fuse weight 5¼ lbs. per 100. Adapter weight 3⅝ lbs. per 100.

30	S30			

Quantity discounts available. Contact Graybar.

FUSETRON dual-element FUSES
250 AND 600 VOLT

Have tremendous time-lag and much less electrical resistance.

For circuit protection use same size as ordinary fuses. Their long time-lag prevents useless shut-downs caused by ordinary fuses opening on starting currents or other harmless overloads — yet they protect against short-circuits.

For motor protection use size about 100 to 125% of motor running current. On normal installations they will guard motor against burnout from overloads or single phasing.

Reduce heating in switches and panels. Operate cooler than any other type fuse. Prevent needless blows and heat damage.

Save space and money on new installations because smaller size switches or panels can be used.

U. L. listed and approved for both motor-running and circuit protection.

BUSS FUSES

FIBRE TUBE FUSETRON FUSES

13/32 x 1 1/4-Inches
Signal or Visual Indicating Type

FNA are FNM Fusetron fuses with silver plated indicating pin which extends from fuse when fuse is blown. In sizes up to 10 amperes can be used in Buss HPC-C fuseholder or if desired pin can be used to actuate a signal by using fuses in Buss Signal fuse block.

Fuses in sizes larger than 10 ampere have a dual tube construction. They can be used in Buss Signal fuse blocks but not in the HPC-C fuseholder.

0 to 15 amperes sizes listed by Underwriters' Laboratories, Inc.

Voltage	Symbol	Amperes
250 or less	FNA	1/10, 15/100, 2/10, 3/10, 4/10, 1/2, 6/10 or 8/10

FNA 12 to 30 amp.	.61

TYPE SC

Designed to meet the protection requirements of the ever increasing electrical load in homes, commercial and industrial locations.

Interrupting rating of 100,000 amperes at 300 volts or less to ground. Can safely handle heavy fault currents on 120/208, 120/240 and 277/480 volt circuits.

High degree of current limitation prevents damage to circuits, motors, appliances or equipment on heavy short-circuits.

Long time delay prevents needless interruption of service often caused by protective devices opening on motor starting currents or other harmless overloads.

Note: Type SC fuses in sizes under 6 ampere have normal opening time characteristics without built-in extra time delay. They may be used where quick acting fuses are desired.

Type SC fuses are 3/16" in diameter but their lengths vary with the ampere rating. This avoids possible errors in replacing fuses. Color coded to assist in identifying right ampere fuses.

Symbol	Amps.	Length Inches	Dia of Tube, Ins.	Ctn. Quan.	Each

BUSS FUSES

FIBRE TUBE FUSETRON FUSES

13/32 x 1 1/4-Inches
Dual-Element Type

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short circuits—they have a thermal cutout which functions on low overloads—the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% in 1 hour.

Approximate blowing time: at 200% load, 25 seconds; at 300% load, 8 seconds; at 500% load, 3 seconds. 125 and 250 volt listed as approved by Underwriters' Laboratories, Inc.

1/2 to 6 1/4 amp. Each \$0.29

HJM FUSEHOLDER

For 1/4 x 1 Inch Fuses

Normal current carrying capacity 30 amperes. Knob grips fuse tightly and pulls it from the holder when knob is removed. Listed by Underwriters' Laboratories, Inc. for 5 ampere rating for any voltage up to 125.

Type	Mounting	Fuse Voltage	Normal Current Carrying Capa.	Each
HJM	Panel	125 or less	30	\$0.37

HCM FUSEHOLDER

For 9/32 x 1 1/4 and 1/4 x 1 1/4 Inch Fuses

Normal current carrying capacity 18 amperes. Knob grips 9/32 x 1 1/4 fuse tightly and pulls it from holder when knob is removed. 1/4 x 1 1/4 inch fuse is not held by knob but extends from holder when knob is removed.

Type	Mounting	Fuse Voltage	Normal Current Carrying Capa.	Each
HCM	Panel	250 or less	18	\$0.52

LIMITRON FUSES

Limitron fuses have exceptionally fast opening characteristics. Their high speed operation limits fault currents to very low values. Limitron fuses have an interrupting rating of 200,000 amperes in both 250 and 600 volt ranges.

Limitron fuses are designed to protect circuit breakers from fault currents of values beyond the interrupting capacity of the breaker. Due to the fault current limitation provided by these fuses, contactors, starters and other components are not subjected to excessive stresses when high capacity short circuits occur.

When short circuits occur and fast opening of the protective device is needed to protect delicate instruments, Limitron fuses can be relied upon to do the job.

Limitron fuses are made to fit all standard fuseholders. When ordering, specify symbol and amperage.

HI-CAP FUSES

Hi-Cap fuses have interrupting rating of 200,000 amperes on any voltage up to 600—provide safe fuse protection for loads above 600 and up to 6,000 amperes.

The high-speed operation of specially designed, pure silver links combines with the arc-clinching action of a chemically inert filler in the Hi-Cap fuse case to limit let-through current on short circuits. Destructive forces normally resulting from heavy short circuits are confined to safe values by Hi-Cap fuses.

Exhaustive laboratory and field tests prove Hi-Cap fuses can be depended upon to minimize damage to equipment and cut down dangerous stresses in transformers. Since they have no moving parts, time or service conditions cannot affect their accuracy—costly inspection or maintenance is eliminated.

Hi-Cap fuses prevent major shutdowns when their blowing time is co-ordinated with that of Fusetron fuses in feeders and branch circuits.

To order Hi-Cap fuses, give symbol and amperages. This will assure that fuses with correct terminals and right voltage will be furnished.

LOW-PEAK FUSES

Current-Limiting—Dual-Element
250 and 600 Volt

0 to 60 Ampere

70 to 600 Ampere

Safely interrupt fault currents up to 200,000 amperes. Limit fault current to very low values. Hold 500% load for minimum of ten seconds.

Low-Peak fuses can completely revolutionize the protection of the entire electrical system.

Protect Mains, Feeders, Branch Circuits, Motors, Controllers, Switches—no matter whether the fault current is 1,000 amperes, 25,000, 100,000— or as high as 200,000 amperes.

Reduce stresses and prevent damage to Panelboards, Switches, Motor Controllers—other circuit components—because let-thru fault currents are limited to exceptionally low values.

Fuses fit standard switches and panelboards. Permit increasing interrupting capacity and current limitation on present system at minimum cost.

For circuit protection use same size as ordinary fuses. Their long time-lag prevents useless shut-downs caused by ordinary fuses opening on starting currents or other harmless overloads—yet they protect against short-circuits.

For motor protection use size about 100 to 125% of motor running current. On normal installations they will guard motor against burn-out from overloads or single phasing.

U. L. listed for both motor-running and circuit protection.

BUSS WELDER LIMITERS

Fit Standard N.E.C. Fuseholders
600 Volts or Less, AC Only

These limiters are special current-limiting devices designed for use on welder circuits only.

Their time-current characteristics are such that they will hold on the intermittent overloading encountered in welder operation, while providing short-circuit protection to the circuit and equipment.

By reason of these special characteristics, they are not intended for application on general-use circuits, where heating of panels or switches could be caused by continuous loading beyond the rating of the switch.

BUSS Welder Limiters are made to fit N.E.C. clip spacing and are available in the following sizes.

Limiter Catalog Number	Nominal Ampere Rating	Prices on Request
68150	150	
68200	200	
68400	400	
68600	600	

NOTE: Can also furnish special BUSS Limiters used to protect resistance welder circuits—such as BUSS type KAL, & 64000 series. Let us send BUSS representative to see you for application data requirements.

SUPER-LAG RENEWABLE FUSES

N. E. C. Standard

3 to 60 Amperes

70 to 600 Amperes

Reduce to extent not possible with other renewable fuses, number of shutdowns caused by needless blows. Patent fuse-case and Super-Lag link make this possible. Save time and money and decrease out-of-service losses.

Costs often cut in half on new motor installations as Code (Paragraph 4346) in many cases permits smaller size fused safety switches, fuse panels for fuse blocks if Super-Lag fuses are used.

Every Super-Lag fuse carries Underwriters' Laboratories, listed label.

SUPER-LAG RENEWAL FUSE-LINKS

3 to 60 Amperes

70 to 600 Amperes

Super-Lag design gives BUSS Links a long time-lag that reduces number of blows on starting currents or other harmless overloads.

Give better protection because they permit fusing nearer to load.

Come in one piece in all sizes. This makes renewal handy and prevents poor contact developing while fuse is in use.

Packed in small quantity in sealed boxes for convenience and to prevent dust, moisture or oxidation from affecting them.

Interchangeable with all makes of standard fuse links.

1/4 x 1 1/4-INCH FUSETRON FUSES

1/100 & 1/32 amp.

1/16 to 2 amp.

2 1/2 to 30 amp.

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on a very high overload or short circuit—they have a thermal cutout which functions on low overloads—the thermal cutout cannot operate quickly on any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test Specification—carry 110%, open at 135% in one hour.

Approximate blowing time: MDL Fuses — at 200% load, 25 seconds; at 300% load, 8 seconds; at 500% load, 3 seconds. MDX fuses—200% load, 12 seconds; at 300% load, 3 seconds; at 500% load, 1/2 second.

GENERAL ELECTRIC CLF® CURRENT-LIMITING FUSES AND ACCESSORIES

CLASS H

CLASS J

CLASS L

CLF fuses provide both short-circuit and overcurrent protection, and give safe and efficient protection against equipment damage on feeders, lighting-branch circuits, motor-branch circuits, motor starters, control power circuits, and similar applications. They have a tested and U.L. listed interrupting rating of 200,000 RMS symmetrical amperes at rated voltage and frequency. Class J and L fuses are U.L. listed for 200,000 amperes. The d-c interrupting rating is 100,000 amperes.

NEMA CLASS H

The Class H current-limiting fuse is designed for general power circuits and back-up protection for circuit breakers, motor starters, and other distribution equipment. It fits standard code fuse clips.

NEMA CLASS J

Class J fuses are used on applications similar to Class H types, and feature several refinements such as higher degree of current limitation, positive rejection of non-current-limiting types, 50 percent size reduction, and cooler operating temperatures.

ACCESSORIES

Class J Fuse Mounts permit a much wider use of the Class J fuse, and offer many outstanding features. Of extremely sturdy construction, with lugs which will accept standard size cables, the fuse mount is easy to install and has high insulation characteristics.

BUSS FUSTAT BOX-COVER UNITS

Many Combinations to choose from—mounted on any one of Four Covers to fit Boxes in use.

A simple, low cost way to protect 125 volt motors. A box-cover on which a Fustat fuse can be mounted—alone or in combination with a plug-in receptacle or switch.

There are four different sizes to fit the box you have. Units have Edison base fuseholder so proper size Fustat Adapter can be used. They are listed as approved by Underwriters' Laboratories when Adapter has been inserted.

On normal installations, use Fustat fuse of motor-running protection size. Mount it anywhere in the circuit to handle only the motor current.

These Box-Cover Units make it as easy to install motor protection as it is a wall switch. Use them to guard against burnout of motors on Home, Farm, Office, Factory Appliances and Equipment—from such things as: lack of oil, worn bearings, tight bolts, overloading or wrong or low voltage.

Units without switch for any motor ¼ h.p. or smaller. Units with switch for AC motors only—½ h.p. or smaller.

Symbol	Description	Each
Holder for Fustat Fuse Only		
SOU	on 2½ inch cover for Handy box..	\$0.55
SOW	on 2¾ inch cover for Switch box..	.55

SCY	on 4 inch cover for Square box.....	1.79
Holders for Two Fustat Fuses with one Tandem Blade Grounding Type Receptacle		
SKA	on 4½ inch cover for Square box..	1.92
Two Holders for Fustat Fuses with One Double Pole Switch		
STY	on 4 inch cover for Square box.....	2.00
Two Holders for Fustat Fuses Only		
SOY-B	on 4 inch cover for Square box.....	1.03

(Grounding type Receptacles take either ordinary 2 prong attachment plug cap — or the 2 prong parallel polarized plug cap with one wide prong — or 3 prong grounding type attachment plug cap.) Grounding type Receptacles meet N.E. Code requirements.

Fustat Fuses and Adapters are not included with Box-Cover Units, order them separately.

BUSS FUSE REDUCERS

Make it possible to use Fusetron or ordinary fuses of a size smaller than the fuse clips are intended to hold.

Fit in any panel or switch as reducers take up no more space than would a fuse of a size to fit clips.

Poor contact troubles are entirely eliminated because these reducers provide clamp contact throughout.

Reducers fit any form of clip, either the spring type or clamp type.

Packed—one pair in a carton.

Volts	Amp. Rating	No.	per pair
250 Volt	60 to 30	263	\$0.59

250 or 600 V.	600 to 400	2664	8.34

TRON CLIP-CLAMPS

Insure Good Contact Between Clips and Fusetron or Ordinary Fuses

Prevent needless blowing of fuses by eliminating heating from poor contact that often causes fuses to blow.

Reduce needless destruction of fuse-cases by preventing poor contact from burning up the fibre tube and destroying the fuse.

Makes replacement of fuse-clips unnecessary. Generally permits even injured clips to be used with perfect satisfaction.

Built for hard service and to prevent corrosion, all steel parts are heavily cadmium plated.

Cat. No.	Size of Clamp	Carton Qty.	Wt. Lbs. Per 100	Each

THOMAS INDUSTRIES

Incandescent Dimming Devices

Thomas Industries dimmers put mood lighting at your fingertips. A turn of the dial creates dozens of dramatic lighting effects from full brightness to candlelight for intimate dining. Dimmers can add that extra touch of fashion to any area in the home. Turn hall lights into night lights. Dramatize recessed lighting. You always have complete control for maximum comfort.

M-6504 Compact 600-watt dimmer. Continuous dimming from full brightness to less than 1%. Same compact size as M-6502, tap switch, 120-volt, 60-cycle. Face plate not included. **6.18**

M-6502 Compact 500-watt dimmer. Continuous dimming from full brightness to less than 1%. Small size simplifies installation in crowded switch boxes. 3-year warranty. Listed by U. L. Built-in "on-off" switch. 120-volt, 60-cycle. Face plate not included. **3.70**

M-6503 Same dimmer as M-6502, except with 3-way tap switch. Permits switching on or off up to two or three locations. **10.59**

M-6506 800-watt incandescent dimmer. Continuous dimming from full brightness to less than 1%. Mounts in standard two-gang switch box. Face plate with anodized brass finish. Separate on/off 3-way switch. Listed by U. L. 3-year warranty. 120-volt, 60-cycle. **19.92**

M-6509 1800-watt incandescent dimmer. Full range control—full brightness to less than 1%. Mounts in standard two-gang switch box. 9 1/2" square face plate in anodized brass finish. Can be painted to match decor. Separate on/off switch. Listed by U. L. 3-year warranty. 120-volt, 60-cycle. **50.00**

Fluorescent Dimming Devices

A completely new standard of performance in fluorescent dimming systems, made possible by development in silicon controlled rectifiers from the Thomas Industries laboratories. Gives smooth control without flicker through the full lighting range from 100% to less than 1%. Proven in thousands of successful applications.

M-6511 Wall Control and Master Dimming Strip. Wall control mounts in standard switch box, has separate on/off switch. This switch controls the master fluorescent strip included in this part number, plus 1 to 19 additional dimming strips. 40W. Rapid start. Length 48". **35.61**

LEVITON DIMMER CONTROLS

600 Watt, 120 Volt AC Incandescent Only

Dimming range: 0 to 100%. Push-on control. Dial controls level of light. Easy-to-wire terminal screws. Ivory knob. Replaces any ordinary single-pole switch. Specification grade construction. Printed circuits, radio/TV filter, proven components carefully chosen to resist vibration, shock and temperature change. Backed by full-year factory warranty.

HUNT ELECTRONIC DIMMERS

Model PC-6-IB — Incandescent — U.L. Listed

Replaces any two-way switch. Controls from one to any number of incandescent lamps whose combined ratings do not exceed 600 watts. Fits standard 2" single gang box. Tap on tap off control at any intensity setting. Full range dimming in control knob.

600 watt, 60 cycle, A.C., 5 amps. 120 volt.

Model PC-6-IB...Each **\$9.30**

Model PC-6-1B/3P — Incandescent — U.L. Listed

Incandescent dimming control for 3-way switches. Simply replaces one of the standard switches, in a 2" deep, single gang switch box. 600 watt capacity. Taps on and off at any light intensity setting, and uses any standard single gang face plate. 120 volt, 60 cycle, A.C., 5 amps.

Model PC-6-1B/3Peach **\$11.30**

Model PC-10-IB — U.L. Listed

Controls incandescent lamps whose combined ratings do not exceed 1000 watts. Positive on/off action and full range dimming in control knob. Unit furnished with decorative metal face plate. Fit 2" deep double gang box.

1000 watt, 60 cycle, A.C., 8.33 amps. 120 volt.

Model PC-10-IB each **\$30.00**

Model PC-10-FB — Fluorescent

Fluorescent dimming control with 100 watt capacity. Fits any standard 2" deep, double gang switch box. Operates from 2 to 20 forty-watt rapid start lamps. Conventional 4-wire installation. Positive On-Off and full dimming range. 120 volt, 60 cycle, A.C., 8.33 amps.

Model PC-10-FBeach **\$43.33**

Model F-5 — Fluorescent

Full and even dimming control on up to ten rapid start lamps. Works with wider range of dimming ballasts. Dimming ratio is adjustable. Surge and transient protected. Over/under voltage compensated. Fully guaranteed.

120 volt, 60 cycle, 5 amps.

Model F-5each **\$26.63**

Model LC15-I Light Control

Photocell actuated light control for outdoor application. 75 to 1500 watts incandescent load. Reduced voltage is applied to load at turn-on, gradually increasing to full voltage, prolonging lamp life and decreasing filament fatigue. Weather sealed, corrosion-proof. No moving parts or contacts. Threaded for 1/2" conduit or 1/2" EMT with connector.

Model LC15-Ieach **\$13.27**

Model LCT15-I Light Control

Similar to LC15-I except with adjustable timer control.

Model LCT15-Ieach **\$26.60**

Model PC-15-I — Incandescent — U.L. Listed

Controls up to 1500 watts in combined ratings of incandescent lamps. Positive on/off action and full range dimming in control knob.

1500 watt, 60 cycle, A.C., 15 amps. 120 volt.

Model PC-15-I each **\$53.33**

Model PC-20-IR — Incandescent

Controls up to 2000 watts of combined ratings of incandescent lamps. Positive on/off remote control station fits 2" deep single gang box. Full range dimming.

2000 watts, 60 cycle, A.C., 16.6 amps. 120 volts.

Model PC-20-IR...each **\$88.00**

Model PC-30-IR — Incandescent

Controls up to 3000 watts of combined ratings of incandescent lamps. Positive on/off remote control station fits 2" deep single gang box. Full range dimming. The PC-30-IR case has the same appearance as the PC-20-IR except the PC-30-IR is 1/2" longer in height.

3000 watts, 60 cycles, A.C., 25 amps. 120 volt.

Model PC-30-IReach **\$113.33**

Model PC-20-FR — Fluorescent

Fluorescent dimming control with 2000 watt capacity. Control fits any standard 2" deep, single gang switch box. Burnished brass face plate included. Dimmer remote mounted. Operates from 2 to 40 forty-watt rapid start lamps. No jumps, flickers or striations. 120 volt, 60 cycle, A.C., 16.6 amps.

Model PC-20-FReach **\$113.33**

Model PC-30-FR — Fluorescent

Similar to PC-20-FR except with 3000 watt capacity (up to 60 forty-watt lamps) also available.

Model PC-30-FReach **\$140.00**

Control stations RS 1A **\$13.27** or RS 2 **\$20.00** MUST be ordered as separate item.

SUPERIOR ELECTRIC LUXTROL® LIGHT CONTROL EQUIPMENT
MOUNTING-IN-WALL TYPES

WBD450

LUXTROL Light Controls are designed to replace an ordinary "on-off" wall switch in any standard 4" wall in either new or existing buildings. They are continuously adjustable transformers (not rheostats). Rotating the knob produces any lighting intensity from full bright to off or any level between. Smooth, flickerless, stepless control of either incandescent or 40-watt rapid-start fluorescent lamps.

Except for fluorescent lighting, no external switch is required. A built-in input switch disconnects the unit and load when the knob is in the "off" position. An automatically resetting current protector and a temperature protector link assure complete safety of operation. Knob and wallplate are smartly styled to blend with any room decor. LUXTROL Bulletin L463W available on request.

Underwriters' Laboratories Approved. Operation cool, safe and economical. Only current required to produce desired illumination is used.

Input: 120 Volts, 60 Cycles A.C.

Type*	Watts	—Wallbox Dimens. In.—			Plate Size	Each
		H.	W.	D.	Inches	
WBD200	200	4 1/8	3 1/8	2 1/8	5 x 5	\$12.80

D1000R, D2000 AND D5000-B SERIES

D2000

MD5000-B

Manually operated units are offered in capacities from 1,000 to 30,000 watts and in motor-driven types from 2,000 to 45,000 watts. The D1000R Series is available for manual operation only. The D2000 and D5000-B Series are available in manual or motor-driven units and in ganged assemblies consisting of two or more units operating in unison on a common shaft. Motor-driven types offer effortless,

"finger-tip" control by means of momentary contact switches of either the lever-action or pushbutton type or by positioner control. Motor-driven types permit remote control with the dimmer installed in out-of-the-way space and the control station placed at the location most convenient for control. All types are for 50/60 cycle operation.

Individual units in a ganged assembly are usually electrically independent for control of separate lighting loads. The ratings given in the charts for these "E" connected assemblies are for operation with units in the assembly equally divided between phases. Ganged assemblies of the D5000-B Series having individual unit outputs connected in parallel ("P" types) are also available for use where capacities greater than 5000 watts per load circuit are required. All except parallel connected ganged assemblies are UL listed; all are CSA listed if parallel connected assemblies are enclosed. Full information in Bulletin L1064.

BELL SPECIALTY WALL PLATES

Custom wall plates are available in any number of gangs up to 10, in any combination of openings, for either standard or interchangeable devices, in a choice of over 30 different metal, plastic or painted finishes. Prices on application.

Oversize wall plates are available in 12 different one and two gang styles and in 25 finishes.

Engraved plates are available in choice of 7 finishes, engravings as specified, lettering color as desired. Write for prices.

Narrow plates, telephone hardware plates, framed plates, and standard plates in 26 different device openings are available. Write for prices.

BELL WIRING DEVICES

FLUSH MOUNTING RANGE AND DRYER POWER OUTLETS

No. 160

No. 162

For all electric range, dryer and industrial applications, indoor and outdoor. Has sliding back-plate. Ears scored at corners for easy breakoff. Can be used in single gang box, 4" or 4 1/4" square boxes with raised 1/2" plaster cover. Rugged pressure type terminals accommodate up to #6 wire. Multiple screw holes in yoke permits varied types of mounting.

One unit per carton.

Cat. No.	Description	Std. Pkg.	Per 100

**STRAIGHT BLADE 3-WIRE SAFETY GROUNDING DUPLEX OUTLETS — SPECIFICATION GRADE
15 Amp., 125 Volts A.C. or D.C.**

No. SG-62

Allows current to flow only when conventional plug cap is inserted. Internal construction shunts current harmlessly away when any other metallic object is inserted into slots.

Hubbell	Cat. No. A-H&H	Description	Ctn./Pkg.	Per 100 Ctn.	Std. Pkg.

**STRAIGHT BLADE 3-WIRE GROUNDING LIGHTED FACE DUPLEX OUTLET — SPECIFICATION GRADE
15 Amp., 125 Volts A.C. or D.C.**

No. 5262-IL

This outlet has all of the quality construction features of No. 5262 except its Melamine base is yellow to distinguish it from No. 5262-I. Pre-wired with a neon glowlamp behind each pair of slots. In the dark, the soft red glow of these lamps shines through the ivory phenolic between the slots, making it easy to plug in equipment in darkened areas. Doubles as a night-light where one is needed. A natural for hotels, motels, hospitals, sickrooms, nurseries, projection booths and emergency circuits.

STRAIGHT BLADE 2-WIRE SAFETY-PLUS DUPLEX OUTLETS — SPECIFICATION GRADE
15 Amp., 125 Volts A.C. or D.C.

Hubbell	Description	Ctn./Pkg.	Per 100 Ctn.	Std. Pkg.
SP-49	Brown	10/100	\$ 99.75	\$ 86.45
SP-49-I	Ivory	10/50	107.63	93.28

The heart of the Hubbell SP-49 Safety-Plus is four insulated rollers, two of which have to be engaged simultaneously by standard cap blades in order to energize the unit. This outlet operates in a conventional manner, yet the rollers are located within the unit in such a way as to prevent activation with knife blades, wires, pins or other foreign objects.

Standard cap (1) operates rollers (2), moves silver plated shunts (3) against contacts (4), completing circuit.

Left blade completes circuit for right blade and vice versa, preventing foreign objects from completing circuit.

No. SP-49-I

CIR-CHEK® OPEN CIRCUIT DETECTOR

CIR-CHEK open circuit detector was developed specifically to solve the problem of detecting an open circuit. Prior to this development, a relay and pilot light could be used to indicate which switch in a series of switches had opened, but in the more complex circuits this type of installation was expensive and in some cases the cost was prohibitive. With CIR-CHEK any switch can be monitored at a low cost; can be installed into existing control circuits without modifying these circuits in any manner. CIR-CHEK need only be wired with the load terminals connected across the switch being monitored; does not interfere with the control circuit operation.

Hubbell	Cat. No.	Description	Ctn./Pkg.	Each

SP-109		Cir-Chek Name Plate	1/10	.52

HUBBELL WIRING DEVICES

EXPLOSION-PROOF "HUBBELL" DEVICES
 Designed for Hospital Operating Rooms and All Other
 Class I, Groups C and D Atmospheres
 3-Wire, 20 Amp., 125 Volts A.C. Only

STANDARD UNIT

LOW-PROFILE UNIT

Cat. No. Hubbell	Description	Each
Standard Units		
24309	Complete Receptacle Assembled, Sealed and Ready for Installation, Plus Shallow Condulet and a 0" to 5/8" Adjusting Ring With Plaster Shield, UL Listed	\$ 74.38
24303	Same as 24309 Less Condulet	68.00
24310	Complete Receptacle Assembled, Sealed and Ready for Installation, Plus Deep Condulet and a 0" to 1 1/4" Adjusting Ring With Plaster Shield, UL Listed	77.35
24304	Same as 24310 Less Condulet	69.28
24305	Condulet (box only) Shallow. Same as Crouse-Hinds No. CPS-301, With Plaster Shield and 3 Pipe Plugs	6.49
24306	Condulet (box only) Deep. Same as Crouse-Hinds No. CPS-303, With Plaster Shield and 3 Pipe Plugs	8.00
24311	Complete Receptacle Assembled, Sealed and Ready for Installation, Plus Special Plate. Fits Single or 2-Gang Standard or Shallow Switchboxes	69.70

Cat. No. Hubbell	Description	Each
Low Profile Units		
24353	Complete Receptacle With Threaded Adjusting Ring and Unilet	88.00
24352	Same as 24353 Less Unilet and Ring	74.00
24351	Unilet and Adjusting Ring With Plaster Shield and 4 Pipe Plugs	14.00
24354	Adjusting Ring for Adapting 24352 to Existing Unilets	5.00
Portable 3-Outlet Cluster		
24720	Polished Aluminum, Explosion-Proof	285.00
24721	Plain Aluminum, Explosion-Proof	224.00

No. 24312

Epoxy Sealed "Hubbelock" Cap		
24312	For Use With All Explosion-Proof Units	17.00
Note: Carton and Standard Package 1 on above.		

CORROSION RESISTANT 3-WIRE GROUNDING DEVICES

15 and 20 Amp., 125 Volts A.C. or D.C.
 For Industrial and Marine Application Where Corrosion Is a Problem

74CM25	Same as 7425 but Yellow Fiberglas	2/10	361.50	313.30
Super Stainless Steel 302 Plate				
93101	Single Gang for Duplex Outlets	10/100	52.88	45.83

POWER CENTERS
Completely Pre-Wired — Corrosion Resistant

Designed for outdoor use where power is required for portable or mobile equipment. Ideally suited to meet the requirements of marinas, mobile home parks, refrigerated truck docks, railroad yards, temporary power for construction sites, etc. All power centers, whether standard or custom, automatically include branch circuit breakers of the same ampere rating as the outlets. Yellow boxes, gray doors.

LEVITON SPECIFICATION GRADE AC QUIET AND T-RATED SWITCHES

BACK & SIDE WIRED AC QUIET SWITCH — STANDARD TOGGLE

No. 53501

- Meets U.L., NEC, & Fed. Spec. W-S-896c requirements.
- Designed to Withstand High Inductive Fluorescent Loads — approved for full-rated capacity on tungsten filament and inductive (fluorescent) lamp loads; up to 80% of rating for motor control.
- Captive Mounting Screws — speeds installation.
- Large Silver-Alloy Contact Points.
- Large Brass Screw Terminals — Backed-out & Staked, accommodate up to No. 10 conductors.

McGILL LEVOLIER SWITCHES

Underwriters' Laboratories, Inc. Listed. CSA Approved.
PULL CHAIN — SINGLE CIRCUIT

3 Amp. "T," 125V—1 Amp., 250V

Especially durable, yet inexpensive 3 Amp., 250 Volt switch with single pole, double break mechanism, enclosed in plastic case. 6 in. wire leads secured to terminals by pressure connections — no soldered terminals. Equipped with 6 ft. cord and bell. Size 1 x 1 1/4 inches.

Cat. No.	Stem, Inches Diam. Length	Carton	Std. Pkg.	Pkg. Wt.	Per 100
21	3/8 1/2	10	100	7	\$89.10

LEVER OPERATED — SINGLE CIRCUIT

10 Amp. "T," 125 Volt—5 Amp., 250 Volt

Smallest 10 Amp. pull switch made yet the No. 1010 has the ability to withstand the same loads as switches much larger in size. Single pole double break mechanism with 6 ft. cord and bell. 1-piece molded phenolic casing.

Cat. No.	Stem, Inches Diam. Length	Carton	Std. Pkg.	Pkg. Wt.	Per 100
1010	1/2 3/8	10	100	20	\$231.00

HEAVY DUTY CABLE REELS

For: Portable Electric equipment, trouble lights, portable generators, mining equipment, job booms, overhead cranes and hoists, electromagnets, trucks, mobile equipment, monorails.

JOY FLEXITITE PENDANT PUSH BUTTON STATIONS

Designed for safety, bright orange neoprene construction insulates against shock, provides high visibility. Resilient neoprene reduces chance of injury or damage to products from swinging pendent.

Completely sealed against dirt and dust, corrosion resistant. Ideal for use in foundries, warehouses, over plating tanks, in packing houses, indoors or outside.

Includes grommets to fit your choice of control cables and a full assortment of legends.

JOY FLEXITITE MOUNTABLE PUSH BUTTON STATIONS

JOY FLEXITITE PUSHBUTTON STATION'S exclusive one-piece molded neoprene design provides a completely safe, completely sealed enclosure when mounted on standard FS or FD box. There is absolutely no way for any foreign matter to work its way around the buttons to cause jamming or short circuits. And a layer of reinforced neoprene protects the operator from all electrical circuits.

The Flexitite diaphragm-like button insures a unique push-button station that meets the following NEMA standards: NEMA 1 General Purpose, NEMA 3 Weatherproof, NEMA 4 Watertight, NEMA 5 Dust-tight, NEMA 12 Oil-tight. They can be used by food processors, meat packers, fertilizer plants, dairies, breweries . . . anywhere maintenance is a problem.

JOY NEOPRENE LAMP SOCKETS

Shatterproof to reduce bulb breakage. Vibration free to prolong lamp filament life. One-piece molded construction for absolute watertightness. Pay for themselves in prolonged lamp life and reduced maintenance.

Mounts on standard 4-inch outlet box. Each socket individually packed; has 6-inch insulated wiring lead. Mounting screws included.

X8360-2 \$ 3.19

VULCANIZERS

Eliminate cable waste. Permanent molded splices can easily be made on the job or in the shop with a Joy vulcanizer.

PORTABLE TYPE

Weighing only 16 lbs., the Joy portable vulcanizer is perfect for on the job repairs. 1000 Watt heaters deliver thermostatically controlled temperatures from 220° to 325° F. Splice capacity up to 1.625 inches.

JOY CHANGE-OUT CONNECTORS

ELIMINATE COSTLY WIRING AND EQUIPMENT DOWNTIME
WATERTIGHT • DUSTTIGHT
• CORROSION RESISTANT
• EASILY INSTALLED • BUILT TO LAST

Joy changeout connectors dramatically reduce the time required to replace electrical equipment in production lines.

Power to equipment wiring becomes a one time job. Worn or defective equipment can be changed out in minutes without costly rewiring and downtime.

One piece molded-to-cable construction . . . vibration proof . . . shatter proof. Aluminum couplers provide positive connection guard against accidental disconnect.

CONNECTORS FOR ELECTRO-MAGNETS

WATERTIGHT • DUSTTIGHT • SHATTERPROOF • UNBREAKABLE

Built for the rugged duty of an electro-magnet, the molded - to - cable design provides a disconnectable electrical connection impervious to the harsh environments of the steel mill, foundry, or scrap yard.

**GENERAL ELECTRIC
REMOTE CONTROL WIRING SYSTEMS**

GE Remote Control Wiring is a modern and entirely different kind of wiring system. It eliminates the 120 volt wiring to all switches and replaces it with inexpensive, low-voltage wire. The heavy work of switching is done by dependable relays that can be controlled from various remote points. Individual switches are normally open, SPDT momentary-contact units; any number can be connected in parallel. Master Switches give control of many lights, from one or several convenient locations.

GE Remote Control Wiring provides safer, more convenient lighting control for homes, apartments, commercial and industrial buildings.

RMS-4A

RFS-8

RR-3

REMOTE CONTROL COMPONENTS

Cat No.	Each	Description
RR-3	2.47	relay, std. } 20A 1/2HP 125VAC
RR-4	3.25	relay/pilot sw } 20A 277VAC
RR-5	3.76	plug-in relay — same rating
RR-6	3.45	same as RR-5 with pilot switch
RT-1	9.75	35VA transformer, 115V pri/24V sec.
RT-2	13.00	same, except 277V pri.
RA-9	1.95	selenium rectifier, .4A 25V AC
RFS-6	.44	standard switch, ivory, 3A 25V AC
RFS-7	.98	same, with locator light
RFS-8	1.11	same, with red pilot light
RTS-4	1.82	interchangeable line switch, brown, 10A 25V AC
RTS-5	1.82	same, ivory
GE5935-1	2.01	H.D. switch, brown, 15A (fits standard boxes)
RMS-4A	11.70	12-pos. Master Selector Sw., ivory
RA-12	8.45	pilot-light assembly for RMS-4A
RMS-5R	11.38	motor master/red leads for "ON"
RMS-5B	11.38	same/black leads for "OFF" control
RRF-34	1.17	frame to hold 1 to 6 RR-3 & RR-4
RRF-56	2.28	frame to hold 1 to 6 RR-5 & RR-6
RBS-1	6.50	box for 1 frame, surface
RBS-2	8.32	box for 2 frames, surface
RP-1	.22	ivory plastic wall plate 1 switch, 1 gang, w/o bracket
RP-2	.22	same, except 2 switches
RP-3	.22	same, except 3 switches
RP-111	.47	stainless steel wall plate 1 switch, 1 gang, w/o bracket
RP-112	.47	same, except for 2 switches
RP-113	.47	same, except for 3 switches
RA-4	.09	mounting bracket for RFS switches
GE7690-0	.11	mounting bracket for RTS switches

ART METAL LIGHTING FIXTURES

RECESSED WEATHER-PROOF LIGHTING

Suggested uses include showers, bathrooms, marquees, stoops, porches, etc.

Designed specifically for service in wet locations, the cork gasket seal between glass and face trim and between face trim and insert housing excludes moisture, dust and dirt.

Pressed White Ceramic Glass has high light transmission efficiency and is scientifically contoured for uniformly white surface brightness and spread light on ceiling. Resists impact breakage.

Face Trim and Insert Housing are made of 18 Ga. (.040") aluminum. Moisture-proof Cork Gasket seal between glass and face trim and between face trim and insert housing excludes moisture, dust and dirt. Vertical slotted mounting holes in Insert Housing provide adjustment for ceiling thicknesses up to 2 3/4". Three chrome plated brass thumb nuts for attaching Face Trim to Insert Box are corrosion-proof. 4" Outlet Box is attached. Porcelain Socket included.

Cat. No.	Max. Watts	Face Dia.	Insert Dia.	Insert Depth	O.A. Depth on Ceiling	Each
Glass Size: 5 1/4" Dia. x 3/4"						
3356AA	60	6 1/2"	4 3/4"	5"	1"	\$6.20
Glass Size: 7 1/2" Dia. x 1 1/2"						
3357AA	100	8 7/8"	7 1/2"	5 1/2"	1 3/4"	8.06

RECESSED WEATHER-PROOF AREALENS

Extended light distribution provides effective horizontal and vertical illumination over wide areas. 80% of total output directed into 40°-85° zone. Heavy pressed clear glass resists impact breakage.

Effective horizontal light coverage area around each unit is 35 feet outward at 10 foot mounting height. Vertical illumination for protective-disinfection of objects or intruders is effective at 100 feet or more. Moisture-proof gasketing and aluminum construction provides weather-proof protection. Vertical slotted mounting holes in insert housing provide adjustments for ceiling thicknesses up to 2 3/4". 4" Outlet Box and Porcelain Socket are furnished.

Suggested applications include: Canopies, Yard Areas, Driveways, Locker and Shower Rooms, Loading Docks, Warehouses, etc.

Recessed—Anodized Aluminum Face Trim

Cat. No.	Max. Watts	Face Dia.	Insert Dia.	Insert Depth	O.A. Depth on Ceiling	Each

ART METAL LIGHTING FIXTURES

CORRIDOR RECESSED AMCOLENS

Clear Asymmetric Amcolens is specifically designed for most effective illumination in narrow areas such as Corridors, Entrances, Covered Walkways, Aisleways, etc.

Two-way parallel and transverse prisms on bottom and ends of lens extends light distribution in length and narrows it in width for maximum light utilization and illumination uniformity over the entire floor area.

Prisms on deep curved sides direct light outward and downward to wall surfaces for effective lighting in lockers, on wall displays, etc., and to enhance overall brightness balance in corridor appearance.

Prewired Recessed Housing with 42 cubic inch junction box. Porcelain socket. Elliptisquare full reflector and with Clinch-Cleat mounting equipment. Front equipped with Touch-Latch hinged door, gasket seal on trim prevents dust and light streaks.

Cat. No.	Max. Watts	Front Finish	Each

ROUND RECESSED AMCOLENS

All-aluminum recessed unit. Housing, reflector made of 20 gage aluminum, trim and door made of 18 gage aluminum. 18 gage steel painted socket strap adjustable to positively locate both 150 and 200 watt lamps. The all-aluminum reflector with a chemically polished and anodized finish, when tightened to the housing by a single wing nut, secures the door and trim in proper position. Door hinges from aluminum trim with cadmium plated steel hinge. Spring-Lock Safety Touch Latch secures aluminum door in proper position and provides finger-touch operation with one hand relamping.

Cat. No.	Max. Watts	Housing Insert— Dia. Depth	Face Dia.	Each

3652	200	11 7/8" 3 3/8"	13"	17.45

ROUND SURFACE AMCOLENS

All-aluminum surface unit. Housing consists of one piece, precision-spun 18 gage aluminum with a satin finish. 18 gage steel painted socket strap adjustable to positively locate both 150 and 200 watt lamps. The all aluminum reflector, chemically polished and anodized, when tightened to an outlet box cover plate by a single wing nut, draws the one-piece housing snugly to the ceiling surface. The door hinges from the housing by a cadmium plated steel hinge. The Spring-Lock Safety Touch Latch secures door in proper position and provides finger-touch operation with one hand relamping.

Cat. No.	Max. Watts	Overall Depth Incl. Lens	Housing Diameter	Each

**ART METAL OUTDOOR
LIGHTING FIXTURES
ASYMMETRIC AREALENS WALL BRACKET**

The housing and trim ring are of die-cast aluminum for strength and performance. The carefully selected Universal Metallic finish blends with any building interior. Resilient closed-cell sponge rubber gaskets between lens, ring, housing and junction box, provide tightest seal against moisture and dust. An inconspicuous release lets the trim ring and lens hinge down for quick and easy relamping.

Fan-shaped asymmetrical light distribution is specifically designed to provide uniform illumination over wide areas adjacent to building walls. 90% of light output is directed downward and outward away from wall to double useful illumination coverage. 10% of light output is softly diffused toward adjacent wall surfaces for pleasantly lighted background effect.

Back plate permits installation of either 3 1/4" or 4" outlet box, and has slot holes which permit bracket to be leveled up to (plus or minus) 6° from horizontal to compensate for outlet box being out of alignment.

Available with Intermediate base socket for 10W. S-11 or 25W. T-8 lamp. For Night add suffix NL. Housing Extension, 1 5/8" deep, for surface wiring, made of aluminum. Universal Metallic finish. 4 removable knockouts for 3/4" conduit at 90°. Gasket furnished for outlet box. Specify No. 3674.

Cat. No.	Max. Watts	Overall Width	Overall Height	Extension From Wall	Each
3670	150/200	8 1/8"	8 5/8"	9 1/4"	\$16.43

ASYMMETRIC AREALENS CEILING UNIT

A ceiling mounted unit that matches the 3670 wall bracket. Gasketed, weatherproof and uses the same exclusive Art Metal lens as the wall bracket. Excellent for use under canopies and walkways where asymmetrical distribution and controlled brightness are desired. The housing is 18 ga. aluminum. The finish is Universal Metallic. Lens and trim hinge for quick and easy relamping.

Available with Intermediate base socket for 10W. S-11 or 25W. T-8 lamp. Night Light, add suffix NL. Housing Extension, 1 5/8" deep, for surface wiring available. Made of aluminum. Universal Metallic finish. 4 removable knockouts for 3/4" conduit at 90°. Gasket furnished for outlet box. Specify No. 3679.

Cat. No.	Max. Watts	Overall Dimensions Including Glass	Each
3675	150/200	7 1/8" Dia. x 7 3/4" Deep	\$13.27

\$10.80

Model No. B30TT
\$19.80

Model No. PB10TT
\$23.40

Model No. PB5B
\$17.40

Designed for use with powerful 200W PAR-46 and 300W PAR-56 lamps, they offer the "Punch Light" intensities needed to overcome window reflections and higher levels of general illumination. Ideal for medium or long range "throw". For startling pinpoint high intensity lighting, 6V PAR-46 lamps in Pin Beam (PB) models, produce the equivalent light output to the 300W PAR-56 spot in less than 30W.

Dramatic display lighting, vivid color effects with filters, good lamp life, ease of adjustment and relamping are a few outstanding features. Available in models to suit most every standard lighting and mounting requirement: for Bulldog "ULD Lighting Duct", GE "LW Busway" and Wiremold Plugmold Raceway Systems. Plus professional accessories for special effects. Black, Alum., White.

Note: Prices do not include lamps.

AMPLEX DRAFTING, DESK, MAGNIFYING LAMPS

For Office, Factory, Laboratory & Professional Use

TROMBOLITES

A special combination hood blends incandescent and fluorescent lighting, using 60W I.F. & 22W T9 Circline lamps. Provides more and better light, better color, and better distribution than any other fixture of its type sold today. Features unique "Trombone-Slide" arm action, available in six mounting types and Executive Grey, Decorator Blue, Sahara Tan, Tropic Green and White decorator colors. Incandescent model also available.

**TROMBOLITE INSPECTION-LITE
For Magnification-Plus Light**

Magnifying Inspection-Lite Model
No. MF-200-DSK \$31.17

Incorporates brilliant high-intensity lighting with high power distortion-free magnification for detailed examination of all precision and close work. Uses 22W circline fluorescent tube and 3-diopter standard magnifying lens. Available with 5-diopter lens for greater magnification. Six mounting styles: Clamp-on, screw-down, desk, draftsmen's, wall-mount and pedestal. Available in Executive Grey, baked enamel finish.

Note: Price does not include lamps.

E-Z-GLIDE LAMPS

Distinctive design, ease of operation and adjustment, rugged construction, beautiful decorator colors and variety of different head types make these fixtures the most versatile and popular on the market today. 5 different mounting styles, which include non-adjustable clamp or screw-down, adjustable clamp or screw-down or wall mount, adjustable draftsman's desk and pedestal models — are all offered in a "stud" style, permitting universal interchangeability. Dual 12" arms or dual 18" arms direct the light that's correct for the task.

Note: Prices do not include lamps.

BENJAMIN FLUORESCENT LIGHTING

ENCORE SERIES — ROWS AND PATTERNS

1500 MA lighting is available in the new, quiet extruded aluminum Encore series for both single and twin-lamp installations. In addition to the Row and Pattern systems, Encore is also available for Valance and Spline applications. The unique design of Encore and methods of installation make it possible to design literally hundreds of new and different designs.

Features

- Encore offers three times as much light
- Requires fewer lamps and ballasts
- Has new, exclusive sound attenuator
- Plug-in electrical connectors
- Aircraft cable suspension
- Easy access to control equipment

Row Systems

The conventional widely accepted method of mounting the units in parallel continuous rows. Often this system is used when replacing obsolete lighting installations using existing outlets.

Patterns

Encore reduces the number of fixtures required, offering unique new ideas in illumination. Squares, U-shapes, 90° angles, rectangles, etc.

Specifications

Side Panels — Power-Pack — (& Illuminated Center "V") — Extruded high strength aluminum alloy. Finish is etched and anodized Alcoa type #201 (colors as specified).

Corner Box — Aluminum alloy. Has removable closure cover on bottom. Finish to match side panels.

Reflector-Covers — 22 gauge steel. White baked enamel finish. Single-lamp unit with center "V" has reflector covers of extruded aluminum finished in white baked enamel.

Diffusers — As specified.

Sound Attenuator — Extruded aluminum alloy.

Cable Hanger — Made of 3/8" dia., 7 x 7 stranded, stainless steel aircraft cable (length as specified) with factory applied compression fittings. Sliding clamp hanger for Single-Lamp available when specified.

Stem Hanger — 45° swivel top and bottom with 1 1/2" vertical adjustment. White finish.

Ballast — Thermally-protected 60 cycle 110-125V. UL listed, CBM approved. ETL certified.

Wiring — All units pre-wired.
