The best "independent testing laboratory" in the whole world is your own living room — because it represents the actual conditions under which you will listen to your hi-fi system.

The best instruments for you to judge sound quality are your own ears — because sound is a very personal thing.

So, if you wish, read the so-called "Best Buy Reports," remembering that they do not consider your desires, your ears, the characteristics of your home and your pocket book.

We at Lafayette are conscious of all these factors and invite you to either visit our sound salons if you are able to do so, or to avail yourself of Lafayette's "LISTEN AT HOME GUARANTEE" described on the right.

Over a year of research, planning and engineering went into the design of this superb Stereophonic Tuner. Designed against obsolescence, it incorporates every practical and worthwhile feature necessary for all present and future types of broadcasting. The KT-500 will receive simultaneous FM and AM stereo broadcasts or since the two sections are completely independent it may be utilized for normal FM or AM reception. The Tuner also provides an output for the new multiplex FM stereophonic reception. Apart from its unique flexibility, the KT-500 offers noise-free, drift-free, distortion-free performance the equal and in many instances superior to the highest priced tuners. It has been engineered without compromise of any kind—only the finest component parts have been employed. Each FM & AM section is tuned with its own 3-gang tuning capacitor and is provided with individual cathode follower outputs. This means that long output cables can be used to connect tuner to amplifier or control center without fear of high frequency loss. Also, separate volume controls are provided for each channel so that when used for stereophonic reception, a proper balance between channels can be achieved. Convenient front panel switch changes from stereo to monaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control "locks in" FM signal permanently. Ferrite rod antenna with loading ring is supplied to bring in weak AM stations for quality reproduction. Designed for easy assembly, the kit is built around two printed circuit boards and prealigned IF's insuring fast accurate construction even for the beginner. Beautifully styled, the KT-500 is finished with a copper anodized aluminum front panel plus matching maroon knobs with copper inserts set in a beige finished vinyl enclosure.

LAFAYETTE TAPE HEAD DEMAGNETIZER

• REMOVABLE POLEPIECES • EXTRA CONVENIENT

3.95

Lafayette Tape Head Demagnetizer uses removable polepieces. Three complete sets are furnished: straight, 45°, and 90° (right angle), permitting quick and easy use with any tape head. Far from being a luxury, a tape head demagnetizer is necessary for best tape recorder performance. Although unmagnetized when new, tape heads gradually become magnetized by sharp switching pulses occurring while switching the recorder from play to record or vice versa. The solution is to use a demagnetizer to re-

move this permanent magnetism from the head, thus reducing the noise level. Periodic head demagnetization is required for all tape recorders to insure optimum signal-to-noise ratio. Now Lafayette enables anyone with even the most modest budget to perform this necessary demagnetization with a minimum of effort. For 110 volts 60 cycles. Shpg. wt., 1 lb.

NOW IT IS POSSIBLE TO HAVE ALL THE ADVANTAGES OF A HIGH EFFICIENCY 12" SPEAKER IN A BOOKSHELF SIZE ENCLOSURE.

- ▶ SPECIALLY DESIGNED 12" COAXIAL SPEAKER WITH SHEEPSKIN CONE EDGE SUSPENSION AND 1 1/4 LB. MAGNET PROVIDE A RESPONSE FROM BELOW 30 TO 15,000 CPS.
- ▶ ENCLOSURE BEAUTIFULLY FINISHED ON FOUR SIDES IN HAND RUBBED VENEERS.

The "Eliptoflex" is the result of an intensive research program whose 3-fold purpose was to:

- 1 Develop a speaker system that would meet the space requirements of stereo.
- 2 Utilize the full advantages of efficient 12" speaker performance.
- 3 Provide optimum performance without the use of large wattage expensive amplifiers.

The Results Were Remarkable... The Eliptoflex utilizes a unique elliptical port which broadens frequency response and provides better transient response. A specially engineered diffracting ring eliminates cancellation effects between front and rear radiation. These engineering advances are coupled with the famous Lafayette free edge SK-58 12" coaxial speaker with 3" cone type tweeter, 1 1/4 lb. TSK-5 high-flux density magnet special 3/4" wide sheepskin cone-edge suspension and built-in and crossover network level control.

"Eliptoflex" achieves a degree of natural smoothness, low distortion and rich robust bass hitherto found only in large enclosure speaker systems or inefficient bookshelf speakers many times its price requiring high powered amplifiers. Due to its highly efficient design characteristics the "Eliptoflex" does not require costly high wattage amplification.

The "Eliptoflex" speaker system is beautifully finished on 4 sides in a variety of hardwood veneers for attractive room placement either horizontally or vertically. Dimensions are 14"H x 23-7/16"W x 13-5/16"D. Shpg. wt., 35 lbs.

PERFORMANCE EXPLANATION

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provide an extremely smooth transition from duct to free air; broadens the frequency response and provide better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstratively superior throughout the audio spectrum.

COMPLETELY ASSEMBLED

Lafayette has indeed wrought a small miracle in engineering such acoustic excellence into so small a package. Smooth, distortion free response with a deep fundamental bass and clean pure highs that give no indication of its small size and price. The perfect speaker for that high quality installation in your home, office or restaurant—two are ideal for stereo.

The speaker features unique dual cone construction with extra heavy magnets. Both tweeter and woofer "float" on flexible, corrugated edges with the outer edge of the tweeter cone attached to the mid-section of the woofer cone. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. The same type of wide-range frequency response normally found only in true coaxial or multiple speaker systems is provided. Frequency response of 40-16,000 cps. Impedance 8-16 ohms. Cabinet is finished on 4-sides in hand-rubbed mahogany and walnut for attractive horizontal or vertical placement anywhere in the room. Dimensions are 10 3/4" H x 18 3/8" L x 8 3/4" D. Eccentric Tweeter Mounting & Unique Elliptical Baffle Completely Eliminates Interaction Between Woofer & Tweeter

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even, coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. The specially treated woofer cone has a unique "Conical Stiffener" at the apex which, coupled with its high compliance, enables the cone to operate in a piston-like manner—delivering a clean, powerful bass response. The 2-inch tweeter has its own voice coil and magnetic field. Special treatment of cone and cone edge provides even distribution of the high frequencies, with no peaks or resonances. The unusual off-center mounting of the tweeter and its elliptical baffle minimizes interaction between tweeter and woofer and insures an overall response free of intermodulation distortion. Electrical crossover from the woofer cone to the tweeter unit is provided by a

built-in network. An adjustable brilliance control permits matching of sound to room acoustics. Efficiency of the speaker is such that it will operate from any amplifier with an output of 1 watt or more. Installed in a bass-reflex type of enclosure, it performs outstandingly, and is recommended for all high-quality music systems—whether monaural or stereophonic. At long last the breakthrough in High-Frequency Speaker design. Here is a tweeter with unequalled performance, engineered for today's high compliance stereo speaker systems. The Lafayette Sphericon represents a complete departure from Electrostatic tweeters, which are extremely inefficient — indeed so much so that it is often necessary to utilize an L-pad on the woofer in order to hear the tweeter properly, thereby lowering the efficiency of the woofer to the same level as that of the Electrostatic tweeter. In the case of many high compliance low effi-

ciency units this is disastrous, as an already inefficient speaker is made even less efficient. The Lafayette Sphericon, due to its high sensitivity may be coupled to any speaker system with no loss in speaker efficiency. As a result less amplification is needed assuring lower distortion. Equipped with a built-in 3000 cycle crossover network the Sphericon produces a smooth linear response from 3,000 cps to beyond 40,000 cps; within plus or minus 1 db from 3000 cps to supersonic frequencies. A specially designed domed phenolic diaphragm delivers

- 12" High Compliance Dual Voice Coil Woofer With 2 lb. Alnico V magnet
- 3-Channel Wide Panoramic Sound Ends "Hole In The Middle" or "Ping Pong" Effect
- Special Crossover Network Kit
- Frequency Response 20-16,000 cps.

Lafayette research and engineering facilities have evolved a new conception in stereo speaker systems. Research has established that the low bass frequencies are nondirectional. By employing a newly designed high compliance 12" dual voice coil woofer with 2 lb. Alnico V magnet, Lafayette engineers have utilized this phenomenon. Bass frequencies below 300 cps. are directed from respective stereo channels to two electrically separate voice coils. In this manner both bass signals are blended through the single woofer cone assembly, while the two satellite speakers consisting of 2 SK-98 dual cone 8" speakers reproduce all the bass overtones, middle and high frequencies.

The Celestial-Satellite speaker system utilized with a normal 2-channel amplifier achieves 3-channel wide panoramic stereo without the annoying "hole in the middle" or "ping pong" effect so often found in conventional

stereo speaker systems. A large symphony orchestra spreads across the entire area, while a soloist or small musical group is properly located near the center. Conventional stereo speaker systems require large areas of space with the distance between speaker and location of the listening area in relation to these speakers extremely critical — Not so the Lafayette Celestial-Satellite Stereo system. Complete balance controls are provided for balancing low, middle and high frequency contours to individual listening tastes and room acoustics. Satellites may be placed in any position along the room (high or low) and may be separated by as much as 20 feet, with the Celestial low frequency bookshelf unit located any distance between Satellites as room decor permits. Power Handling Capacity 30 watts. Impedance 8 ohms. Shpg. wt., 25 1/2 lbs. Complete with necessary instructions and hook-up cable.

CELESTIAL-SATELLITE SYSTEM WITH 8" DUAL VOICE COIL WOOFER
This economical 3 channel speaker system provides 3 channel wide panoramic sound from a normal standard 2 channel stereo amplifier and is essentially the same as the larger 12" Celestial-Satellite Speaker System (described above). Speakers consist of a new high compliance 8" dual voice coil woofer with 2 lb. Alnico V magnet, two

SK-98 8" dual cone speakers and a special crossover network with balance controls. Frequency response 25-16,000 cps. Power handling capacity 30 watts. Impedance 8 ohms. Shpg. wt., 23 1/2 lbs.

High Compliance Dual-Voice Coil Stereo Woofers

THE VERY SAME STUDIO QUALITY WOOFERS EMPLOYED IN THE LAFAYETTE CELESTIAL-SATELLITE STEREO SPEAKER SYSTEMS

Acoustical studies have shown that low frequency response is not directional... indeed the stereo effect we hear is determined by frequencies above 350 cps. This dual voice coil woofer features two electrically separate voice coils on a single woofer chassis. Each voice coil receives low frequencies from its respective stereo channel. Both of these signals are blended through the single woofer cone. This advance in woofer design now makes possible 3-channel stereo without the need of complicated costly control filters or adapter networks.

Now Lafayette offers these advanced design dual voice coil woofers for the high-fidelity enthusiast who wishes to build his own 3-channel stereo speaker system—or use it as the basis of a manual system now and eventually work into a 3-channel stereo system.

- EXTRA-HEAVY MAGNETS, EXTREMELY HIGH FLUX
- RESPONSE 40-16,000 CPS
- SPECIAL PATENTED CONE CONSTRUCTION AND MATERIAL FOR SMOOTH, DISTORTION-FREE RESPONSE
- EXCELLENT FOR STEREO

9.95

A most unusual dual-cone construction is used in these extra-high-quality 8" speakers to economically provide the same type of wide-range frequency response normally found only in true coaxial speakers or multiple speaker systems. There are 2 separate cones, acting through a common voice coil. The outer edge of the tweeter cone is attached to the mid-section of the woofer cone; both cones "float" on flexible, corrugated edges. This mounting, plus apertures provided behind the woofer cone, results in mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional

characteristics and minimum distortion. The patented cone materials provide extremely smooth reproduction. Magnets are large and heavy, with flux density of 10,500 gauss and total flux of 56,000 maxwells. Their high efficiency means good transient characteristics, low distortion, and good response at either high or low sound levels. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; resonance is 55-70 cps; voice coil is 8 ohms. Size is 8" diam., 4 1/4" deep; requires 6 1/2" diam. baffle opening. Shpg. wt., 5 1/2 lbs. THESE ARE THE GAUGES DETROIT LEFT OUT!

Lafayette AMMETER & OIL PRESSURE GAUGES

4⁶⁵

DON'T trust flashing indicator lights—a burned out bulb can ruin your motor or strand you with a dead battery. All cars with warning lights for oil and battery need these precision gauges. Lights only indicate when oil pressure falls below 15 lbs. or whether or not the generator is working. These Lafayette gauges are not a replacement but an addition to the panel lights and are designed to keep a constant check on the condition and performance of your car's electrical and oil pressure systems. The ammeter calibrated in a 60-0-60 scale measures the actual rate of current flow... helps prevent generators from burning out

and overcharging or discharging the battery. Exact oil pressure from 0 to 80 lbs. is indicated by the calibrated oil pressure gauge thus assuring safe engine operation. Easily installs in any 6 or 12 volt car below the dash, without drilling or can be mounted right in the dash. Both meters are mounted in an attractive chrome panel. Easy to read meters feature 1 3/4" diam. black dial faces with calibrations in white. Size: 5 1/8" W x 2 7/8" H x 2 1/8" D. Supplied with all necessary fittings and wire plus full instructions. Lafayette SPECIALS ON RESEARCH AND PRECISION EQUIPMENT -- Telescopes, Binoculars, Spectroscopes

NEW! Achromatic BARLOW LENS

4.95

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Improves Definition!
- Provides Greater Eye Relief!
- Greater Illumination—Wider Field!

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharper definition and reduced image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb.
