Meissner 8C FM Tuner

Typical Meissner quality and construction, built with all the precision and circuit wizardry of years spent strictly in communications engineering. This Meissner 8C FM tuner brings in your favorite FM program sensationally free of static, station interference and fading—gives you realistic high fidelity, distortion-free reception. Music and voice are reproduced with amazing clarity that gives the listener every glorious tone and overtone. This high quality FM tuner has numerous applications in the home or wherever a truly good FM tuner is desirable.

Bogen PH 10 Amplifier

This amplifier was chosen to correctly match the Meissner tuner and together they form the heart of the high fidelity system. Because it is designed to give practically humless output, without the distracting noises usually associated with high amplification, the Bogen PH10 amplifier is especially useful in the home. The amplifier is designed with the remarkable newly designed "Multi-Range Tone Control" which provides four separate laboratory selected response curves of audio output.

The Meissner 8C tuner and Bogen PH10 amplifier form a combination especially suited to the exacting requirements of high fidelity reproduction. The audio fidelity of the tuner is flat within plus or minus 2 db in the audible range of 50 to 15,000 c.p.s. A modern slide-rule type dial is calibrated in megacycles and in channel numbers making it easy for you to select your favorite station. Two finger tip controls, one for tuning and one for on-off volume. The tuner contains the most modern circuits and employs 1-6AL5, 2-6BA6, 2-6AG5 and 2-6C4 tubes and 1-6X5GT/G rectifier. Overall chassis dimensions: 7½"x11"x5".

The first position of the selector gives a deep bass response; the second, a mellow bass with a broadened high frequency response; the third, an essentially flat response with greater coverage of the high frequencies; and the fourth extends the range to cover FM and other wide range music programs and records. There is no guesswork for the user. Four sharply defined frequency response coverages are at your command to provide the finest performance, regardless of the program material. The unit has a power output of 10 watts with a gain of 72 db plus or minus 1 db over the range of 40 to 15,000 c.p.s. Uses 1-6SL7GT and 2-6V6 tubes and 1-5Y3GT rectifier. Dimensions: 5"x11"x6".

GE Preamplifier and Speaker

Preamplifier Model M5C for use with high fidelity reluctance pickup. Employs shock mounted 6SC7 in an equalizing circuit. Matches perfectly GE pickup and covers full audio range of 20 to 20,000 cps. Gain 35 db at 1000 cps. Speaker Model S1201D. Excellently constructed 12" Alnico V PM speaker specifically selected to match the Bogen amplifier. HIGH FIDELITY REPRODUCTION—MICROPHONE, WIRE RECORDER, PHONO, TUNER

Fisher Dynamic Noise Suppressor—Wide Range Amplifier

1. Precision designed and laboratory tested to insure the finest reproduction of voice and music. Provides excellent frequency response flat within 1 db from 20 to 20,000 cps. Room filling 20 watts output at less than 1% distortion. Hum level less than 0.5 microwatts for 1 watt output. Built-in phono preamplifier is compensated for GE and Pickering pickups.

SEPARATE BASS AND TREBLE TONE CONTROLS provide 15 db of boost or cut. Separate frequency range and gate sensitivity adjustments regulate the dynamic noise suppressor. Frequency range control determines the range and amount of suppression. Five position suppressor switch: on the 20 KC position the suppressor is inoperative and amplifier is set for full range; on 10 KC position undesired frequencies above 10 KC are attenuated; on the other three positions the suppressor action operates in conjunction with the gate sensitivity control. Action of gate is shown visually by indicators located on front panel. As low and high frequency noise level of recording increases, frequency range and gate sensitivity controls can be adjusted for optimum performance. Response on 1st position with gate closed 70-4000 cps, with gate open 20-20,000 cps; 2nd position covers 90-3200 cps, closed and 20-20,000 cps open; 3rd position covers 120-2700 cps closed and 50-6000 cps open. Choice of 2 audio or 1 phono input from selector switch on front panel.

NEW HALLICRAFTERS 16x12-inch picture television system

DESIGNED FOR CUSTOM INSTALLATIONS—WITH 192-SQUARE-INCH SCREEN

This shows how the various elements go together. The 2½" tube is inserted into optical system. Mirrors and lenses magnify and project image. A 31" throw results in a 16x12" picture of intense clarity.

1. Magnetic Projection Triode

Tube is 10½" long, 2½" diameter. Has 5 prong base, fitting special socket. Second anode contact is surrounded by glass cup near tube face. Molded thermo-plastic cable carries 25kv second anode potential. The tube face plate is optically correct, made of specially developed glass, not discolored by 25kv electron bombardment. Aluminum coating on phosphor screen of face plate increases light output and prevents ion spots. Both focusing and deflection are magnetic. Full deflection possible using only excitation required to deflect a 10BP4 10" direct viewing tube at 9 kv available from 10" TV chassis.

2. Highly Efficient Optical System

This compact metal "box" consists of a highly efficient optical unit and alignment assembly, mounted together by four screws permitting rapid tube replacement and service inspection. With it an 8.6 linear magnification of the picture and an effective aperture of f0.62 is obtained.

Complete compactly-designed case measures only 8½" high, 8½" wide and 9" long, and is finished in Black crackle enamel. The optical unit contains three optical elements: (1) a 6" spherical mirror with 200mm radius of curvature, (2) an aspherical corrector lens of 4½" diameter, and (3) a special plane mirror to "fold" the light beam. These three elements form an optical triangle within the optical unit and are adjusted at the factory. Under normal use and handling the unit will remain as factory preset and need no further adjustment.

The optical unit is completely enclosed and dustproof! Only the upper face of the corrector lens is exposed, and it can easily be dusted with an ordinary cloth without scratching. A throw distance of 31 inches from the corrector lens to the viewing screen is required for proper focussing of the picture.

3. 25 KV, High Voltage Unit

This new, compact unit combines the advantages of light weight, small size, extreme reliability and stability. New design eliminates all electrical radiation. Only 8½" high, 4½" wide and 7" long, it weighs only 5 lbs. Input requirements are: Filament supply, 6.3 volts at 1.2 amps; Plate supply, 350 volts B at 50 millamps maximum. Mounted on compact 7" x 4½" chassis are a 6SR7 duplex-diode triode, a 6BG6G beam power amplifier, other circuit components and sealed transformer assembly. The transformer assembly is 4" high, 3" wide and 3" long and consists of transformer and three rectifier diodes.

4. Model T-60 Receiver Chassis

Specifications of the receiver chassis are: 22 tubes plus selenium low voltage rectifiers and 3 high voltage rectifiers. 12 channel push-button selector switch covers all assigned TV frequencies. RF amplifier for improved signal-to-noise ratio and for increased sensitivity. 3 IF amplifiers for proper band width and best picture definition. 2 video amplifiers to provide full picture contrast under weakest signal conditions. Improved synchronizing circuits incorporate the latest developments to assure positive synchronization even under bad noise conditions.

Automatic gain control assures constant brightness—picture will not increase or decrease in intensity despite variations in signal strength. Single picture control for all contrast factors. Inter-carrier FM (Frequency Modulation) sound system provides easier tuning and full natural static-free sound reception.

Front panel controls include the following: channel selector, fine tuning, horizontal hold, vertical hold, volume and picture on-off. Rear panel controls include: vertical size, vertical linearity, horizontal size, horizontal linearity, brightness, electrical focus, optical focus, vertical centering and horizontal centering.

A powerful system for use in noisy locations. Conservative rating of 60 watts will cover up to 60,000 sq. ft. in such places as boiler factories, large stadiums, armories, auditoriums, outdoor street advertising and political rallies.

Reproducers supplied with this system are suitable for applications where they will not be subject to weather. If your application requires speakers outside for extended periods, use either system 2N167 or 2N168 at right. Save money by buying this system if your installation does not require the speakers to be subjected to constant heavy industrial fumes or be left in the open indefinitely.

System is ready to set up, complete with Model 2N162 Hi-Power 60 watt amplifier guaranteed for one full year, four 12-inch 25 watt General Electric PM speakers already mounted in Kainer all-steel horn-type baffles with 140 feet of cable and plugs attached, to speakers, Shure 707A20 crystal microphone (A) with 20 feet of cable and plug, and adjustable floor stand. Deluxe Hi-Power Outdoor Systems

The ideal system for use where the reproducers must remain in the open. Increases the effective wattage of your sound system! With these non-resonant, storm-proof reproducers you can direct sound over long distances in the open air to cover exactly the areas you desire. All trumpets, brackets and driver units are finished in high lustre Gray enamel. Universal brackets permit mounting atop roofs, light towers, on walls or under eaves of buildings.

Switching from one voltage to the other is automatic—nothing can get out of order to cause a burn-out. HOW TO SELECT THE CORRECT SOUND SYSTEM

Have Enough Power To Do The Job

Choose an amplifier with enough wattage for your purpose. Determine seating capacity or room volume in cubic feet for indoor systems, or area in square feet for outdoor systems. Then refer to the chart at right for recommended wattage.

The "Quiet" column in the chart gives you the required wattage for installation with low noise levels, such as funeral homes, hospitals, quiet offices and warehouses.

The "Normal" column covers installation where normal room noise is encountered, as in small restaurants, large offices, light or medium manufacturing and residential areas.

The "Noisy" column gives required wattage for locations with very high noise levels, such as heavy manufacturing (including boiler factories, pneumatic riveters, steel mills), large stadiums, outdoor street advertising and announcing.

Be Sure To Use The Right Microphone

Different types of microphones are designed to perform specific jobs best. Select the one best suited to your needs.

Crystal microphones are least expensive, usually have good frequency range, can be used for reproduction of speech or music. They are good for all ground work in or outdoors except where temperatures of 120 degrees or more are encountered. Dynamic microphones are more rugged, most satisfactory for general purposes indoors or out, generally more expensive than crystal microphones. They are not affected by climate.

Fidelity is the accuracy with which a microphone reproduces sound. The wider the range, the more normal the sound from the speakers. Be sure the fidelity of your microphone is high enough to give you the quality of reproduction you desire.

Be Sure To Use Sufficient Wattage

Seating Capacity	Area Coverage		Required Watts		
	Indoors	Outdoors	Quiet	Normal	Noisy
750	280,000 cu. ft.	15,000 sq. ft.	7.5	11.25	15
1500	600,000 cu. ft.	30,000 sq. ft.	15	22.5	30
3000	1,200,000 cu. ft.	60,000 sq. ft.	30	45	60
4500	1,800,000 cu. ft.	90,000 sq. ft.	45	67.5	90
6000	2,400,000 cu. ft.	120,000 sq. ft.	60	90	120
7500	3,000,000 cu. ft.	150,000 sq. ft.	75	112.5	150
9000	3,600,000 cu. ft.	180,000 sq. ft.	90	135	180

Select And Locate Speakers As To Need

Total wattage ratings of speakers should be equal to or greater than wattage output of amplifier. All speakers shown in this book have power handling rating indicated in watts.

Sound can be distributed by wire more easily than it can by air. Consequently, an announcement or call made into a microphone at a location such as a telephone switchboard can be conveyed to various selected locations in a large building by merely placing the speaker in the proper area. Remember, it is best to use more speakers in order to distribute sound evenly throughout the area rather than have it blast from one speaker and thereby cause unnatural effects.

NEW TALK-A-PHONE INTERCOMMUNICATION SETS

Master Selective System. An excellent intercom system for use where one person must be in contact with personnel at several locations. Two models available. LM-5 Master has capacity of 5 sub-stations, LM-10 will carry 10 sub-stations. The master station can talk individually with any one of the Sub-Stations or all at one time. Famous "Silent Feature" permits connecting "privately" so sub-stations are silent except when switch is operated, or "supervisory" so Master always hears Sub-Stations. Sub-Stations can originate calls, but need not operate switch and can reply from a distance when "supervisory" connection is used. The sub-stations do not consume electric current and can be installed anywhere you wish.

Walnut finished bakelite cabinets measure 8 1/4" x 6 1/4" x 7 1/2". Master Station operates universally on 110-115 volts AC or DC. Tested and approved by Underwriters' Laboratories. See Fig. 1 for cable measuring information.

The LS-5 can accommodate two private two-way conversations at the same time, the LS-10 up to 5 separate two-way conversations. All Master Stations are strictly private. Stations cannot listen in on each other, nor can a third station listen in on a conversation of two others.

Volume control adjustable at each unit, provides for the incoming volume to be adjusted from a bare whisper to full room volume. Powerful amplifier permits operating stations up to 2000 ft. apart. Saves cable expense as no return cable needed from last to first unit. Power need not be on in the station being called.

SEMI-DIRECTIONAL MICROPHONES

Semi-directional microphones are pressure microphones that respond to variations in sound pressure. They include Crystal, Dynamic, Carbon and Condenser generating elements. They are substantially non-directional though they tend to become directional at higher frequencies. For a microphone of 1½" dia., directivity starts at about 2000 cps. and increases with frequency.

Pressure microphones are excellent all-purpose instruments where conditions of room reverberation, acoustic feedback and ambient noise are not too severe. The better quality types are desirable for broadcast announcing and remote pick-up, public address, amateur communications and recording. Semi-directional microphones are also recommended for use with outdoor systems,

VITREOUS ENAMELED FIXED RESISTORS

Lug type resistors, wire-wound on porcelain cores. The vitreous enameled coating both protects and insulates the wire. The best alloy and largest possible wire size are used for each resistance. Vitreous enameled coating retains the uniform spacing. Wire is mechanically locked and soldered to the terminal lugs. Tolerance is 10%.

CONTINENTAL "NOBLEOY" X-TYPE RESISTORS

New 1-watt resistor involving metal film principle, with accuracy of wire wound unit. No carbon used. Metallic resistance film is formed on the surface of a low loss ceramic tube, then hermetically sealed by a layer of vitreous enamel. Ceramic tubes are hollow and allow greater area for heat dissipation. Excellent resistance stability and negligible noise characteristics. Will withstand overloads of 200% and temperatures of 400°F. without change in value upon return to room temperature. Critical tolerance within 1%. Size 9/32" x 1". 1 1/2" tinned copper leads.

PLATE SUPPLY TRANSFORMERS

Designed primarily to deliver the rated DC voltage and current outputs when used with full-wave mercury-vapor rectifier tubes in conjunction with a two-section filter employing choke input and two mid condensers working into a resistive load. Phenolic terminal boards and heavy duty ceramic insulators assure protection from voltage breakdown.

May be used to provide perfect burglar and fire protection for homes, stores, offices or factories in addition to its numerous industrial applications such as safety devices on machines, such as conveyor controls, electric door openers and counters.

Detect-O-Ray Electric Eye projects a light beam which is reflected by a small external mirror to the photo cell in the unit. Any object coming within their path and breaking either beam instantly activates an alarm, bell, camera, safety device, or sets into action any other unit you may wish to perform work automatically. Effective range of the white beam is 60 feet; range of the "unseen" beam is approximately 35 feet. Switch on front panel offers selection of beams, depending on type of operation desirable. Sensitivity dial regulates reaction of unit to purpose and conditions for which it is employed. AUTOMATIC LOCK RELAY ELECTRIC RELEASE

Employs two coils—one to operate relay and another to release the lock. Includes ¾" fine silver dome-shaped contacts rated conservatively 4-20A.

When circuit to operating coil is closed momentarily the normally closed contacts open and the normally open ones close with the relay in this position even when current is removed. To return positions to normal, current is applied to "release" coil removing automatic lock.
