TYPE WCR—POLYCARBONATE/FILM WRAP

Characteristics similar to polystyrene, but often preferred. With a high operating temperature range from —55°C to +85°C without derating, and to +125°C with 50% voltage derating, overcomes polystyrene limitation. Excellent capacitance stability. Tt 1000 Hz average capacitance change is within +1%; —3% of the +25°C value.

SUBMINIATURE MONOBLOC CERAMIC CAPACITORS

Monobloc construction allows volumetric efficiency up to 20mf/cu. in. Tolerance within ±10% for capacitance from 10 pf to 100 pf when measured at 1mc with 5 to 1 VRMS across the capacitor including COG dielectric. For values greater than 100pf tolerance is within ±10% —when measured at 1kc with 5 to 1 VRMS across the capacitor. Maximum capacitance change ±15% of the 25°C value over temp. range —55°C to 125°C. Size: .260 max. lead length 1.5 min. Leads 22AWG sodder coated copper.

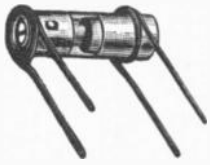
JFD Trimmers

JFD precision bore solid dielectric Piston Trimmer. Capacitors with special anti-corrosion metalizing. Meets or exceeds MIL-C-14409B. Glass operate from —55°C to 125°C; quartz from —55°C to 150°C. Features: 6 patented precision anti-backlash drive mechanisms; Hi-Life standard panel mount; MCD; Miniature Telescoping sliding piston and direct transverse. Five dielectric materials and matched metalized for homogenous bond of metalizing to dielectric. Low T.C., low loss of inductance. All have highest level shock and vibration resistance. Green Glass "N" prefix units with higher Q increase delta C's 50% over other comparably sized units, and have Hi-Life "Y" mechanism. Low cost "Y" suffix units combine Hi-Life adjustment mechanism with standard glass dielectric are physically interchangeable with corresponding standard units. JFD trimmers have been exclusively selected for the Apollo, Gemini, and Minuteman programs.

MINIATURE SERIES



JFD Miniature Trimmer Series features exclusive telescoping tuning assembly for miniaturization. Up to 50% savings in length for a given capacitance range. Mechanical stops at both ends of adjustment. NVC and VC glass dielectric, ¼ dia. NMQ quartz dielectric, 5/16" dia. "Y" series directly interchangeable with standard VC units, and NMQ units with standard MQ units with added feature of longer life and lower cost. Uses 7104-5 tool.

DUR-MICA CAPACITORS

The Dur-Mica is a silvered mica capacitor with a plastic coating. It combines excellence in stability, dielectric strength, "Q", dielectric constant, chemical inertness, moisture resistance and puncture resistance. Operating temperature range —55°C to 150°C. Standard tolerance ±5% except (*) Min. tolerance ±1.0 Pf. DM5 capacitors are stamped with capacitance values in pf. followed by a letter signifying capacitance tolerance. (J) means ±5%, while (A) signifies ±1% pf. All ELMENCO dipped mica capacitors meet or exceed requirements set forth in MIL-C-5C specificaeoins. Portions of the ELMENCO DM series are the specific values and case sizes tabulated in the MIL-C-5/18 detail specifications.

CENTRALAB TYPE DD DISC CERAMIC CAPACITORS

Primarily intended for by-pass coupling or filter service where high capacity is necessary and controlled stability is secondary. Disc ceramic capacitors have a higher dielectric constant, greater voltages, and higher capacities in less space than paper or mica types. Construction enables these units to operate for long periods of time under extreme moisture, temperature, and vibration 1000 volts DC working except #, which are 600 volts DC working. POLYSTYRENE CAPACITOR KIT

Model CPK-150 Kit. Contains 150 sealed polystyrene foil capacitors, rated at 500VDCW and with a ±5% tolerance. Included are 17 selected values in a range from 22 pF to 10,000 pF. There are 5 to 20 pieces per value, based on estimated frequency of use. The polystyrene film dielectric of these units permits use in place of mica, Mylar, paper, and ceramic capacitors. They not only substitute for the above types of capacitors but generally outperform them. Capacitance drift: .05% max. @ +25°C. Insulation resistance is 100,000 megohms. "Q" factor is over 2,000 at 1 mc, +25°C. operating temp. range is from —40° to +85°C.

The assortment in this kit is packaged in a 1-drawer Equipto cabinet finished in blue baked enamel. Contents are fully labeled.

Precision Metal Film & Wirewound Resistors

ELECTRA

For all industrial or military requirements. The application of metal film "across the board" for all film resistor types means it is possible to reduce the numerous classes of film resistors to just four. The four classes cover all requirements from the most precise (1%, 100 PPM/°C) down through the types formerly covered by carbon film and tin oxide.

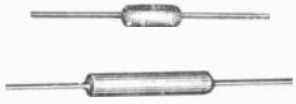
SPRAGUE RESISTORS



AXIAL-LEAD "BLUE JACKET" POWER WIREWOUND RESISTORS

Designed for industrial applications demanding utmost stability under extreme operating conditions. Well suited for printed circuits, terminals boards, and point-to-point wiring applications. Unique all-welded end-cap construction eliminated moisture paths along the leads and anchors the leads securely to the resistor. Power rating is based on a max. temperature rise of 300°C above a 40° ambient at full rated wattage. Will meet performance characteristics of MIL-R-26C. Available only in values shown.

Note: Fixed series VK200 has core size of 10½" x 1⅛". Adjustable series core sizes are as follows: VP50KA, 4" x 9/16"; VP25KA, 2" x 9/16"; VK100NA, 6½" x ¾"; VP10FA, 1¾" x 5/16". **(All series above are furnished with lug terminals and mounting brackets.)**

AXIAL LEAD VITREOUS RESISTORS

Axial lead resistors are available in three sizes; 3, 5, and 10 watts, Series VC3D, VC5E, and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point to point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ±5% for 1 Ohm and higher. Attractively packaged in a newly designed carton particularly adapted to this new type resistor. Finished in vitreous shade of teal green. Designed for critical applications, these resistors will operate with stability and reliability under the most variable environmental conditions. Economically priced for quantity selector.

YSI Thermistors

YELLOW SPRINGS INSTRUMENT CO.
YELLOW SPRINGS, OHIO

PRECISION THERMISTORS

Thermistors which match a published resistance-temperature curve and thus each other to ± 1% not only at 25° C but over most of their useable range of —80° C to +150° C. Each thermistor is provided with resistance-temperature data for each degree C and with tolerance curves both in resistance variation and temperature sensing interchangeability. Base resistance from 100 ohms to 1 Megohm at 25° C available to ease circuit design impedance matching problems. Useful as transducers for measurement and control circuits where precision of YSI thermistors allow interchanging of transducers and multiple monitoring from single circuits. In control circuitry direct dialing of set points is possible as is trigger action at a specific temperature since resistance at any usable temperature is known to close tolerances. Also useful as temperature compensating devices for transistors, meters, circuits, etc. Physical size: .095" maximum dimension #32 solid tinned copper leads, 3" long. Thermistors are epoxy encapsulated for ruggedness and long life. Each thermistor supplied with data and with dissipation information, time constant and instructions. Rated at 25° C.

- Low Cost Precision Thermistors
- Matches Standard Curves—80°C to 150°C

TEFLON® PRECISION THERMISTOR PROBES

YSI interchangeable thermistors in chemically imprevious form for sensing or control use. The interchangeable precision thermistors listed above, but additionally encased in a 2" length of chemically impervious Teflon. 3" leads extend 1" beyond the probe for convenience in attaching leads. Leads are insulated from each other by a smaller Teflon tube around one lead. Probes can be used straight or can be bent by finger pressure to exact configuration required for placing the thermistor where you want it. 11" max. in diameter.

- Precision — ± 1% at 25°C.
- Easily bent to required shape
- Chemically impervious Teflon casing

Can be assorted for quantity prices.

THERMILINEAR® THERMISTOR DEVICES

Linear Output Thermistor Networks

A composite precision thermistor device which, in conjunction with the precision resistors supplied, provides linear voltage output or linear resistance change with change of temperature. Sensitivities of 20 mv/°C. and more are common, 400 times the sensitivity of an IC thermocouple. Linearity deviation is as little as 2 parts in 1000 from 0 to 100°C. Combined absolute accuracy, linearity and interchangeability specifications of as little as 3 parts in 1000 from 0 to 100°C. Greater accuracies, interchangeabilities, and linearities available for shorter standard ranges. Parts guaranteed to stay within tolerances for three years. Useful for direct digital temperature indication with DVM or linear recorder. Provides linear temperature compensation with thermistor sensitivity. Time constant: 1 second, in well-stirred oil bath. Parts consist of composite thermistor and resistor assembly. Thermistor composites are manufactured to absolute accuracy tolerances of ±0.15°C from —30 to +100°C. For complete information and technical data, write Newark. Type 44018: additional thermistor composites for replacement or multiple input work.

(*) Indicates an SPST switch rated 2 amperes at 125VAC, UL approved. Printed ckt, MTC has open screwdriver slot. Supplied in resistance values from 100 ohms to 3 1/2 megohms, in standard linear taper.

Taper No. 1: Logarithmic used in audio circuits where percent of change is small at start of rotation.
Taper No. 2: Reverse logarithmic used where percent of change must be large at start of rotation.
Taper No. 4: Linear taper where percent of resistance change is directly proportional to rotational change on a straight line.

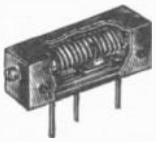
SERIES 76 SUPER SET TRIMMING POTENTIOMETERS



SUPER SETABILITY made possible through 10 times the resolution — 15 times greater winding length ever offered in this configuration. Trimming costs in critical circuits drop, performance of circuit improves. Because of small size, packaging size decreases. Mechanical travel: 14 turns approx. Effective travel: 11 turns ±¼ turn. Resistance Range: 100 ohms to 20,000 ohms. Resistance tolerance ±5%. Power Rating: .75 watts @ 85°C—derated linearly to 0 power @150°C.

● NEW JRM MINIATURE DRY REED RELAYS

JRM relay employs dry reed glass capsules with 2 types of contact arrangement: Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a B (SPST-NC), using a 2-cavity bobbin and requiring the observation of coil polarity. Combining Form A with B results in a single Form C (SPDT) break-before-make; using a 3-cavity bobbin. A "True" Form C (SPDT)† uses a reed switch with 2 stationary and 1 movable contact, using a single-cavity bobbin. 1.125" long; .468" high; width varies with contact arrangement. Oper. time: 1ms. Release time: .05ms. Pickup: 75% nom. @ 25°C. Rating: 10 watts (or 4 watts*).

JML NON-BRIDGING MERCURY-WETTED CONTACT RELAYS

JML relays employ a Form C non-bridging (break-before-make) contact arrangement. They provide greater sensitivity, faster operation, and somewhat lower contact ratings than the JMP relays. JML relays have a sensitivity approximately six times that of the JM1. Speeds from 3 ms to 1.1 ms are possible, depending upon coil power. Contacts are rated 2 amps max., 500V max. with contact protection. All JML relays mount in Amphenol 77-MIP-8 sockets. Size: Diameter 1.312" max.; Seated height 2.640" max.; Overall height 3.303" max. Weight: 4 ozs.

JMF PRINTED CIRCUIT MODULE RELAYS

JMF relays utilize the same capsule as the JML series, but are designed for mounting on printed circuit boards. They employ a Form C SPDT break-before-make non-bridging contact arrangement. Contacts are rated 2 amps max.; 500 volts max. with contact protection. Details of a simple protection circuit are packed with every relay. Size: Width .612"; Mounted height .625" max.; Length 2.062". Weight 1.25 ozs.

JMP POLARIZED MERCURY-WETTED CONTACT RELAYS

JMP relays utilize the same capsule with the same general ratings as the JM series. However, greater sensitivity is achieved by permanent magnet biasing. These magnets are factory adjustable over a wide range of operating characteristics. All JMP relays mount in Amphenol 77-MIP-8 sockets. Size: Diameter 1.31⅜" max.; Seated height 3.105" max.; Overall height 3.665" max. Weight: 4 ozs.

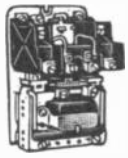
TYPE MCL AC LATCH RELAYS



Modular construction feature with mechanical latch and electrical reset. Typical application; logic functions involving "memory"; control circuits which must function regardless of power failure; hold contacts open or closed for long periods without using coil power; and when AC hum is objectionable. When operating coil is energized, roller engages metal latch on relay yoke. Armature remains closed even with power failure or vibration. Energizing latch coil releases roller—armature drops out. Wt. 3 lbs.

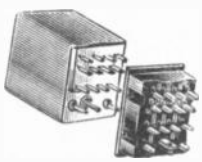
MINIATURE WIRED OR PLUG-IN RELAY



Contacts: Configuaration: 4PDT single break. Ratings: 3 amps at 30V DC or 120V AC, resistivt loads. Coil Data Power: AC coils: 2.4 Va. max., 1.2 Va. nominal DC coils: 2.0 watts max. 0.9 watts nominal. Duty Cycle: Continuous Ambient Operating Temp. Range: —45°C to +70°C. Operating time: 15 millisec. max. Life Expectancy: 50 million mech. oper. min. 750,000 elec. oper.. min. Mounting: (Solder Terminals) single #3-48 stud. (Sockets) single #3-48 screw. Ground clip maintains contact between relay mounting stud and socket mounting screw. Materials: Gold-flashed fine silver 3/32" diameter. Temperaturt Rise: Approximately 35°C at nominal voltage. **Model 281XDX.** Light duty 4PDT relay contains in-line contacts and is enclosed by a removeable nylon cover. The basic relay has solder brass terminals and a single mounting stud for directly-wired applications; converts easily to plug-in by adding sockets. Both sockets (Printed circuit and solder term.) have hold down retainers and ground clips. High contact packaging density makes it ideal for applications requiring large banks of relays. Contacts are fine silver buttons, gold flashed. Contact overtravel makes contacts self-cleaning. Magnetic structure provides high-speed operation at a low power dissapation.

● NEW SERIES 8 LIGHT-ACTUATED

Two-part systems employ integral receiver units (containing photo-cell and relay) and prefocussed light sources. Three-part systems have miniaturized light sources and receivers, for use where space is limited; receivers connect to remote amplifier-relay units.

TWO-PART (INTEGRAL RECEIVER) SYSTEMS

All units operate from 115 VAC, 50/60 hz, and are housed in NEMA type 1 & 12 enclosures. Complete system consists of 8L3 light source plus receiver unit appropriate to application. Operate over a 12 foot range; no inter-wiring necessary.

8P3, 8P5 & 8P6 General-Purpose Receiver. For switching rates up to 600 operations/minute contacts rated 10A or 28VDC/115VAC. Wt., 13 oz.

8P8, 8P9 and 8P10 High-Speed Receivers. Operate 1200 times per minute. Relay contacts rated 5A at 28VDC/115VAC, 2.5A at 230-VAC. 8P8 comes with wire leads, ½" conduit bushing and mtg. bracket; 8P10 has bracket and octal plug. Wt., 13 oz.

8RCO1A & 8RCO2A Miniature Low-Cost Receivers. 120 cycles/minute switching. Plug-in units fit standard 5-pin socket; SPDT relay contacts rated 3A at 28VDC/115VAC. May be used for beam-breaking or fluctuating-intensity applications: 8RCO1A relay picks up at 5 foot-candles, drops out at .1 fc.; 8RCO2A for high-ambient-light conditions, picks up at 5 fc; opens at .5 fc. Supply voltage 115V 60 Hz, UL approved. Wt., 3 oz.

8L3 Light Source. Provides actuating beam for all 8P and 8R receivers. Set to span up to 12 feet. With mounting bracket, ½" conduit bushing, and 16" leads (18 AWG). Wt., 13 oz.

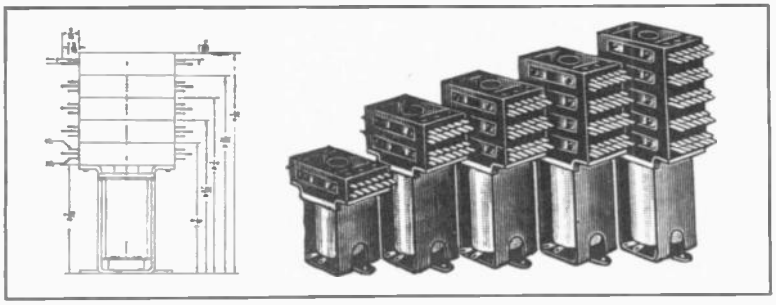
T-BAR RELAYS

- Stock-up Contact Wafers Switch up to 60 Poles at Once
- Easily Mounted — With Only 2 Screws — In Any Orientation
- Easily Wired — Snap-on Crimp Terminals Fit into Block Connectors



SERIES 801 T-BAR RELAYS

Reliable, ultra-compact, solenoid actuated relays with a unique design employing stacked-up enclosed contact wafers for up to 60-pole switching. Ideal for aircraft, telemetry, communications, computers. Gold bonded silver contacts are rated to carry 500 watts resistive (5 amps), make or break 3 amps. Less than 30 milliseconds operate and release time. Min. life: 20 million mechanical operations. 1000 VAC dielectric strength, terminal-to-case; temperature range —55 to +85°C. Terminals will mate with T-Bar Connectors (below), which simply push onto contact wafers for quick, easy wiring, or solder connections may be made. Contact assemblies are in dust-tight plastic enclosures which measure 1 1/32" wide by 2 3/8" long; height is 1 3/32" per wafer.

T-BAR RELAY COIL CHARACTERISTICS

All characteristics are nominal and subject to normal manufacturing tolerances. All are for continuous duty. 115 VAC units have a full-wave bridge rectifier and use the same coils listed under 110 VDC. Operate at 80%, release at 20% of nominal voltage. Actuator assembly size: 1.375" mtg. centers x 2 1/32" high, except one-wafer relay use a shorter actuator (1 15/32" high).

Fig. B

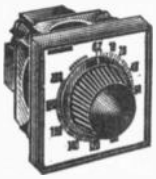

Fig. E

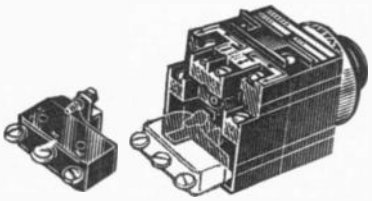

Fig. D

Type 2412, 2452. Time delay on pull-in. Timing cycle begins when coil is energized. Coil kept energized throughout time setting preceding DPDT contacts transfer from de-energized to energized position. Coil de-energized: contacts retransfer immediately (25 m-sec). Coil de-energized during timing cycle, contacts remain de-energized & timing mech, resets to start position for full time cycle on next energization of coil.

Moodel 2422. Time delay on drop-out. Coil energized: DPDT contacts transfer & stay in transfer position. De-energization coil: Time delay begins. Timing cycle: contacts stay energized. End time delay setting: contacts transfer back to de-energized position. Coil re-energized during timing cycle; contacts energized produce full time delay upon next de-energization if coil remains de-energized through time setting.

Type 2422, 2462. Double head unit provides independent delay of contact transfer on both energized & de-energized cycles of coil, 6⅝"x3⅜"x3⅛". Shpg. wt. 2½ lbs. **Auxiliary Switch Kits:** Type "T" SPDT contacts rated 10A/120V, 60 cy. attached to Model 2412 or 2422. 2412 units: "T" switch provides 2-step timing. Switch transfers time delay up to 30 sec. Type "L" switch gives immediate transfer of contacts both on energization and de-energization cy. of coil. *Needle valve.

HOW TO ORDER CAM TIMERS

Locate desired time cycle duration in "Gear Assemblies" chart below, and order gear-and-rack assembly listed in left-hand column. Appropriate foundation (motor-switch) units appear at top of "Time Cycle" columns: CM types are single-cicuit, recycling; MC types are multi-circuit recycling; RC types are multi-circuit, single-time-cycle (see detailed descriptions below): Example: Suppose 4 circuits are to be controlled, with a 30-second time cycle, recycling. Order gear-and-rack assembly A12, stock number 24F315, and note that foundation unit MC2 is required. At bottom of page, locate MC2 under heading "4 SWITCH CHASSIS" and order stk. no. 62F2010. All units U/L & CSA approved.

Note: in some cases RC0, RC1, MC0 and MC1 units may require a special high-torque motor. Multiply time cycle (in seconds) by 2/3; result will be maximum number of switches that can be operated by a standard unit. For example, with a time cycle of 9 seconds, up to 6 switches may be operated by a standard motor; if more circuits are to be controlled, order a high-torque motor. On RC0 and MC0 units, add $27.50 to listed price for high-torque motor; on RC1 and MC1 types price must be increased by $29.50.

Alternate Ordering Information: specify desired time cycle, number of switches, operating voltage and frequency. Such information may expedite delivery by allowing NEWARK to ship model in stock with desired time cycle.

DRY REED AND MERCURY SWITCHES

TILT-TYPE MERCURY SWITCHES

Contacts are sealed, protected and can be observed! Hermetically sealed contacts in a glass envelope containing high purity mercury. Use for float and level control, alarm systems, motion detection and other applications where quiet operation, reliability and low cost are important factors. (*) Differential angle is the required tilt angle to move mercury from a definite make circuit switch position of a definite break circuit switch position in SPST switch and break-to-make circuits in SPDT. Operating temperature is limited by mercury freezing point of —35°F to +300°F. Ratings are 115 VAC resistive. 8" long insulated leads.

MAGNETIC DRY REED SWITCHES

Contacts sealed in glass with inert gas . . . unique design prevents contact contamination! Contacts can be actuated by either magnets or coils; not position sensitive. Units ideally suited for use in relays, crosspoints, logic elements, scanners, liquid level counters. etc. All switches have "Di-Met" contacts. Exclusive "Di-Met" feature consists of a plating of dissimilar materials; combines gold for stability, copper for low resistance and added alloys for hardness and exceptional durability. (*) Diffused gold for lowest drop-out with maximum contact force and minimum contact balance. (†) Di-Met tungsten for power switching. Center gap except (#) offset gap, excellent for magnet operation or biasing.

Fig. E. The Treadlite. A small, yet versatile and rugged foot switch designed to give instantaneous and accurate control at low amperage loads. Less cord and plug set. 7 Amps at 110-250 Volts. 3½x2⅝x1". Shipping weight, 8 oz.

Model T-51-S. Single pole, double throw, momentary contact only. Can be used normally open or closed, as desired.

Model T-51-SC. As above with 2-prong series plug and 6' cord set.

Model T-51-SC3. As above with 3-prong series plug and 8' cord set.

Model T-51-S1. Replacement interior for T-51-S.

Model T-52-S. Has interiors so constructed and positioned that a partial downward stroke of the treadle actuates one interior and either opens or closes a circuit. Continued heavier pressure will either open or close a second circuit. Both are SPDT.

Fig. F. The Clipper. A rugged Unit designed for continued operation under heavy loads. Rated 20 Amps at 125-250 Volts. SPDT. 4½x3½x1½". Shipping weight, 2¼ lbs. Two models. 6325 momentary, 632-D maintained contact.

Fig. G. The Lektro-Lok. L-2-S. This switch operates on the teeter-totter principle with selective circuits. Mechanical interlock prevents both circuits from being operative at the same time. SPDT. Can be wired normally open or normally closed. Rated 15 amps at 125-250 Volts. AC only. 10 oz.

Fig. H. Model 476S. Two SPDT switches in double-pressure housing. Light spring for seated operation, may be wired as Single Pole, normally open or closed, are 8½x3½x2". Shipping weight, 1¾ lbs.

● *NEW* SPLIT DIECAST TYPE 30 ENCLOSED LIMIT SWITCH — SIDE MOUNT

"Easy-wire" split diecast version of the Licon Type 30 above offers all the features and advantages of the regular diecast version with one important added feature: the entire bottom half of the protective case can be removed for ease in wiring. Bottom half enclosure is made of high impact, chemically resistant polyvinyl dichloride which eliminates any possibility of shorting out the basic switch.

SERIES 300 SB AND DB PLUGS AND SOCKETS

DB

SB

Designed for medium duty applications small in size with good separation between contacts. Arranged for either cap or panel mounting. All plugs and sockets are polarized. Plugs with 24 to 33 contacts have a special polarizing pin to facilitate correct positioning of mating plug and socket. Insulating material is molded bakelite. Phosphor-bronze "knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. All contacts are cadmium plated. Plug prongs are 5/32" wide and 3/64" thick. Formed metal caps are finished in black wrinkle. Feature MONO-BLOCK construction which is compatible with the old two-piece types. New construction eliminates internal moisture traps and permits external pre-wiring as well as removal and replacement of individual contacts if necessary. Contacts are "locked-in" to withstand wiring stress. Rated Voltage: 730 Volts rms; Contact Resistance: 016 Ohms max. Rated Current: (2-12 contacts) . . . 7.5 amperes, (15-33 contacts) . . . 4.5 amperes; Rated Wattage: (2-12 contacts) . . . 1875 watts, (15-33 contacts) . . . 1125 watts.

Type SB. Sockets with shallow bracket for flush mounting.

Type DB. Sockets with deep bracket for recessed mounting.

AMPHENOL BLUE RIBBON® CONNECTORS

Barrier polarization type connectors are designed for interconnecting electronic sub-assemblies, circuit switching, rerouting and other multi-contact applications. Interlocking design of mating dielectric bodies provide positive polarization. The dimensional stability and high tensile strength of Amphenol "Blue" dielectric make this type of polarization possible. Float mounted receptacle corrects misalignment of plug and receptacle. Corrosion resistant, stainless steel molded-in mounting plates and housing. Rated: 5 amps, 800 volts DC at sea level, 300 volts at 70,000 ft. altitude. Av. Shpg. Wt., 3 oz.

SOCKETS FOR RCA 8072, 8121, 8122, AND SIMILAR TUBES

For high frequency tubes. Continuous heat resistance to 500°F. Glass-filled silicon base. Heat treated beryllium copper contacts. Base material of low dielectric constant, which results in low pin-to-pin and shunt capacity. Teflon chimney. Elevation pads. Socket contacts grip tube pins at base of tube—providing minimum inductance. Barriers between terminals. Large center hole and basic configuration results in low capacity; three mounts provide stable mounting. With numbered terminals. Low inductance screen by-pass capacitor available for VHF and UHF operation.

FIT-221 — POLYOLEFIN HEAT SHRINKABLE TUBING

FIT-221. This improved all purpose extruded tubing shrinks 50% (2:1 ratio) with only 5% longitudinal shrinkage. Fewer sizes cover more applications. When a temperature of approximately 275°F is applied for seven seconds, the tubing returns to predetermined size and forms permanent tight fitting mechanical bond, even over irregularly shaped materials. Tubing retains form stability throughout its temperature range of —67°F to +572°F. Shrinking done by Heat Gun, oven radiant heat, dipping in hot liquid, or hot iron. Clear tubing may be used where jacketed, printed components or cable data is visible and inspection of components is desired. Supplied in lengths of 4 feet and 6 inches. *6 inch package colors: black, white, red, yellow, blue, clear. Specify color. **4 foot lengths stocked in black and clear. ● *NEW* IRRADIATED POLYOLEFIN FIT-CAPS

Sealed on one end, these short lengths of shrinkable tubing act as effective termination caps over wire, cable, and splices. Caps form a tight-fitting, moisture-resistant mechanical bond over terminations. Shrinkage (ratio: 2:1) takes place within seven seconds at 275°F to 300°F.

- **Will not Crack or Become Brittle During Aging!**
- **Will not Shrink During Soldering!**
- **Conforms to MIL-1-22129B**

Unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures; continuous operation at 250° C. retaining its flexibility throughout temperature range. At high frequencies, dielectric strength is many times that of other insulating materials; is chemically inert having a moisture absorption. Thin wall tubing, **TFT 200.** permits miniaturization and compactness. Application where high heat resistant, flexible, non-flammable, chemical solvent and erosion-resistant material is required. Electrical and chemical properties conform to MIL-1-22129B. **Natural only.** Standard wall tubing, **TFT-250** has characteristics similar to TFT-200, but for use in application where additional dielectric values and mechanical strength are necessary. Colors: **Natural only. Min. order 100 feet.**

MICRODOT
COAXIAL CABLES

The variety of Microdot coaxial cables now being stocked at Newark offer design solution for your application. Features: light weight, small diameter, convenient bend radius and high operating temperatures. The dielectric material is "Teflon" for most types. 50-3804 is polyethylene. *At 400 mc. (db/ft). Av. Shipping wt., 2½lbs. per 100 ft.

Constructed with an inner conductor surrounded by a dielectric which is enclosed by an outer conductor that also acts as a shield. A protective jacket covers the outer conductor and acts as insulation.

Cable is composed of two insulated single conductor cables or hookup wires twisted together, having a common shield and protective jacket.

Microphone and Instrumentation Cable BELDEN

MICROPHONE AND INSTRUMENTATION CABLES—SHIELDED

General purpose shielded cables, for all stage, studio and instrumentation applications. Rubber types have rubber-insulated tinned copper conductors, tinned copper-braid shield, black rubber jacket overall, except black neoprene jacket. 8402 & 8408 have brown hypalon jacket. Vinyl types are similar, but have polyethylene-insulated conductors, chrome vinyle jacket. *Miniature cables having tinned cadmium-bronze conductors. Rubber cables have greater abrasion and impact resistance, are extra-flexible—will lie flat without kinking. Plastic cables have lower capacitance, greater ozone and oil resistance, lighter weight. Delivers 3 to 136 times more power than ordinary flat lead-in for strong, clear signals on all channels despite industrial contamination, salt spray, wet weather, rain, ice, fringe area reception. An excellent color, UHF, VHF cable. See Antenna Hardware page for "E-Z" standoff insulators.

Fig. 3. Type 8275. CELLULINE. 2 parallel Copperweld conductors with inert-gas-filled unicellular polyethylene core. Lower losses because of lower dielectric constant. Uniform electrical characteristics, because moisture between conductors is eliminated. Thick polyethylene outer jacket and less wind-resistant round shape result in longer lasting, more efficient line for UHF, VHF and color. No end sealing required.

Fig. 4. Type 8230. WELDOHM. Copperweld conductors have 1½ times greater strength than plain copper for long-lasting installation.

Type 8225. 300-ohm flat twinlead with bare copper conductors, brown polyethylene insulation for best weathering.

Fig. 5. Type 8222. 72-ohm transmission line. 2 parallel copper conductors, brown polyethylene insulation.

Fig. 6. Type 8464. 4-conductor flat rotor cable. Bare copper conductors, one tinned for polarity. Chrome vinyl insulation. **Type 8488.** Eight-conductor round rotor cable. Bare copper conductors, color-coded insulation, chrome vinyl jacket.

POLYFOAM COAXIAL CABLES

Cellular polyethylene dielectric material provides lower weight, cost, capacitance, and attenuation than standard RG types. Widely used in commercial transmitter applications such as community TV and in ham stations. The dielectric constant is 1.50 as compared to 2.25 for solid polyethylene. It has a specially compounded non-contaminating black polyethylene jacket providing improved weather and abrasion resistance. *Sweep tested—1000 ft. min. order.

Display of 0-9 numerals and some alphabetic indications by illuminating a combination of lamps is accomplished through a simple diode-matrix or encoding switch (not supplied). Decimal points, before and after figures can be used as a colon when 2 units are placed together. High illumination display is provided with low voltage, and low intensity lamps. Closely interlocked illuminated segments provide a bright, wide-viewing angle of approx. 150°. Indicator is compact and requires minimum space. Lightweight cast aluminum has excellent heat dissipation. Plug-in is accomplished through a standard 10-terminal printed circuit connector.

NEON SUB-MINIATURES MS25257

Uses T-2 Neon Glow Lamp (designated as NE-2D). Since Neon lamps require resistor to limit the lamp current, resistor is built-in. For use on 105-125 volts AC or DC with 62K resistor. Stovepipe lens is plastic with 180° lens spread. Shank of lens holder is crimped in 3 places to secure the lamp. Lens holder unscrews from front of panel for easy replacement of lamp. An anti-rotation notch on face of flange prevents rotation of unit while mounting nut is being tightened. Mounting bushing is aluminum with black anodize finish. Steel internal tooth lockwasher and hex mounting nut are cadmium plated and coated with iridite. Terminals are brass, hot-tinned, with elongated slots. Less lamp. Size 1½x5/8". Shpg. wt. 2 oz.

FERRAMIC CUP CORE ASSEMBLIES

Temperature Compensated Cup Core Assemblies. Designed for filter applications requiring precision tuneable inductors having low loss characteristics over a wide temperature range. Used at frequencies from audio to 500 KC with Q value as high as 850. Specific inductance (L/1000 turns) is accomplished by inserting a precision ground air gap in center post of one or both cup cores in a matched pair. Size and tolerance of air gap controls inductance per 1000 turns. Adjustment beyond specific inductance of cup cores is provided by trimmer assembly. All cup cores have a positive linear temperature coefficient of effective permeability and inductance. Over a given temperature interval this is expressed as:

$$TC. = \frac{\Delta L\ (10^6)}{L\ (\Delta T)} PPM/°C$$

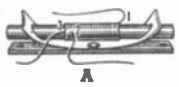
J. W. Miller Antennas - If's - Coils - Chokes



A

B

C

E

Ferrite Rod loop antennas designed to receive the standard broadcast band (540-1850Khz) when used with proper tuning capacitor. Figures C, D & E are supplied with a mounting board which can be easily removed if an alternate method of mounting is desired, others have mtg. bracket. They make excellent antenna for conventional vacuum tube and transistor receivers. Type 705-A has adjustable inductance to permit peaking antenna stage by sliding coil along ferrite rod. The 2000 series have a secondary which is over-coupled for maximum gain stability with a variation of output and are designed to match an input impedance of approximately 600 ohms. FREQUENCY SELECTIVE R.F. CHOKES

Designed for maximum efficiency and highest impedance at specific operating frequencies. Eliminates the designer's task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major amateur, industrial and citizens bands and will also operate efficiently at frequencies approximating the recommended frequencies.

ADAPTERS AND EXTENDERS

Basic plug and socket structure used in standard test adapters. Circuits can readily be opened for current measurements, or cross-connected in many ways for experimental purposes. Models 1262, 1263, and 1264 are socket extenders. These shift wear from the socket itself to the extender. Sockets have highest grade beryllium copper contacts. Av. shipping wt., 2 oz.

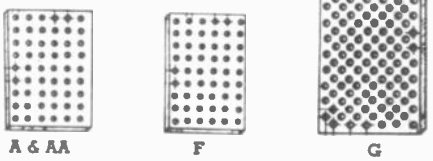
Vector Structures For Circuitry

VECTORBORD AND MICRO VECTORBORD



A & AA F G

Vectorbord and new Micro Vectorbord pre-punched terminal boards provide overall grids of holes especially useful in bread-boarding as well as production. New Micro Vectorbord patterns accept flat pack leads spaced multiples of .05" and is useful for cordwood packaging. Fig. A and AA have 0.093" holes on .265" centers. Fig. F; 0.062" holes on 0.2" centers. Fig. G; 0.062" holes on alternate intersections of 0.1" grid. Pattern H (not shown) has 0.062" holes on 0.1" centers. "B" has 0.062" holes on 3/16" centers. Pattern M has .025" holes on .05" centers. "P" has .042" holes on 0.1" centers. #4 self-tap screws can be engaged in the .093" holes or #2 in the .062" holes. Boards may be broken off along the hole lines as desired. Pattern G is especially useful for subminiature circuitry. The holes on alternate intersections of a standard 0.1" grid make it possible to mount most "top-hat" transistors base down by passing the leads directly through the holes. *2 oz. copper, 1 side. **2 oz. copper, 2 sides.

● NEW MICROVECTORBORD TERMINALS

"Inbord" Terminal Pins press fit in Microvectorbord. Pins phosphor bronze nickel plated and gold flashed. Knurled body flange in middle of pin cuts into insulating board and lightly holds pin. Pins protrude from both sides of board and serve as terminal post, test point, or male connector pin. Retainer eyelets or soldering will hold pins permanently inboard.

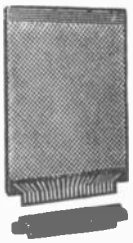
PLUGBORDS AND RECEPTACLES



Plug-In Test Circuits. Prototype of To-Be-Printed Circuit Cards. Modular Plug-In Cards — Standard Plugboards made from 1/16" thick Epoxy Paper material or Epoxy Glass (WE) with all-over grid of .062" holes on alternate .1" centers. Locate Vector T-28 Push-In Miniclip Terminals and eyelets where required and lay out components to exactly duplicate printed card, if desired. For making manually wired prototypes which can later be made as etched or welded circuits. For short production runs, hand-wired boards (soldered or welded) can be made faster than etched boards. For general use epoxy paper boards may be punched, sawed or drilled if desired; —1 GN series has nickel plated gold flashed contacts and equally spaced notches in connector mounting: Elco Varicon contacts come attached to board or etched connector supplied on 838A and 838. Different sizes, hole patterns and materials readily available to order.

SILVER OXIDE BATTERIES

Provide a higher voltage and greater milliwatt-hour ratings than existing batteries of similar size. Silver oxide batteries have good low temperature characteristics compared to existing batteries and their impedance is low and uniform. Silver oxide batteries are well suited, for example, for use in hearing aids, electric watches and as reference voltage sources.

GENERAL ELECTRIC

● *NEW* SEALED RECHARGEABLE NICKEL CADMIUM BATTERIES

Typical C4 Cylindrical Cell

Typical Oval Cell

Typical Button Cell Battery

General Electric now incorporates its own thin sintered plate construction into its nickel-cadmium batteries to produce a cell ideal for instruments, appliances, photo-flash and all portable devices. Sporting a 1.2 average voltage, these batteries can perform 5000 cycles at discharge depths not exceeding 25% of rated capacity. Will operate in temperatures ranging from —40°C to +60°C, with an optimum range of —20°C to +40°C. May be stored indefinitely at a range of —60°C to +60°C.

Button Cell

Cylindrical Cells

Button Cells. Compact size permits easy stacking to form multiple cell battery configurations with resulting optimum space utilization and power-volume ratio. Particularly suited for low-drain, high capacity applications.

Cylindrical Cells. Provides maximum discharge rates and capacity. Suited for cordless consumer and electronic products.

Rectangular Cells. Special-purpose sealed, pressure-relieved and vented rectangular cells provide higher discharge capability and permit faster charging rates than the button and cylindrical configurations. For communications equipment, tools.

HOW TO USE CHART

To determine the recommended ECC battery charger to be used 2 things must be known. (1) number of cells, and (2) amp hour capacity of cell. For example: a 4 cell battery with an amp hour rating of 1.0 ampere hours on each cell—charger to be used from chart would be No. 4 which denotes number of cells. Charge rate would be 1/10 of an amp hour rating or 100MA. Top to bottom (left side of chart) where number of cells and MA ratings cross is recommended ECC charger is used.

BATTERY CHARGERS FOR NICKEL CADMIUM BATTERIES

Charger design provides complete isolation from line voltage and hence maximum safety to user. By means of an isolation transformer tested at 2000 volts RMS as well as complete potting, all possibility of shock and hazard due to accidental immersion in water or other liquid is eliminated. This unit consists of transformer, rectifier, and current limiting resistance which produces half wave rectification with constant current. UL and CSA approved.

Chemelec Components

CHEMELEC STAND-OFF INSULATORS

Applied as insulated tie-points in circuit wiring, offering low-loss, high-frequency service in radar TV, and other electronic equipment. They are unaffected by humidity, mechanical shock and vibration, and are designed for ambient temp. from —110°F to +500°F; pressure altitudes from 0 to 80,000 feet. Turrets are machined from brass rod, hot tin dipped. Bases are hex brass cadmium plated per QQP-416 Type 2, Class C and iridite dipped in compliance with military specifications. Formerly Metal Base Style (*) TE400. (†) TE401. (**) TE402. Average shpg. wt. 3 oz.

Has a hollow-threaded metal body which fits through bed plate and is secured by a hex nut. Terminal passing through hollow body is spaced by a force-fitted plug. Terminal is brass, hit tin dipped. Formerly Metal Body Style CF405. Average wt., 3 oz.

CHEMELEC COMPRESSION INSULATORS

Chemelec Stand Off and Feed Thru compression insulators can be compressed into mounting holes and are self fastening. Insulators are shock and vibration proof; they can be soldered without damage because of high heat resistance. Electrical characteristics make them adaptable to miniaturization and high frequency, high voltage circuits. Insulator body is TFE. Solder terminal is brass except (*) electro tin plated terminal (†) Silver plated terminal. Finish is hot tin dip except where noted. All flashover point readings are short time tested at sea level. Capacitance values are based on a frequency of 1000 KHz with units mounted on 1/16" aluminum panel. Shipping weight, 3 oz.

DUROTHERM NON-FREEZING TIPS

Iron coated and immunized. Anti-scaling and anti-corrosion design absolutely prevents tips from sticking. Note: also available, XTRADUR Iron-Coated Pre-Tinned Tips: Multi-coating immunizes shank of tip from solder, preventing creeping and spilling of solder. Use type numbers shown, but substitute X for D. Do not use Newark's stock numbers. Cost approx. 10% less than DUROTHERM. For HEXCLAD Iron Coated Pre-Tinned Tips, use type-numbers, but omit D. Cost approx. 30% less than DUROTHERM.

LOW VOLTAGE MINIATURE PRODUCTION EQUIPMENT

Small, lightweight instruments for close-quarter precision soldering of printed circuits, miniature component parts, semiconductors, and fine assemblies. Feather weights of ¼ to 1 ounce virtually eliminate hand fatigue. All Oryx soldering irons utilize a unique element-in-the-tip design principle. Use of this principle enables these irons to provide high efficiency, quick heat recovery, and cool handles. In addition all irons are polarzied, making it possible to directly ground the shaft, tip, and one side of the heating element for maximum safety.

Conductive silver epoxy combines the adhesive characteristics of epoxy with the electrical conductivity of silver. Epoxy "solder" can be used at room temperature for components which are heat sensitive; it can be used to bond dissimilar materials and it has no flux or residue to contaminate sensitive electronic components. When used with dissimilar materials, epoxy "solder" provides a strong bond where soldering or brazing is often impossible.

GUIDE FOR SELECTION OF PROPER GRADE

Measure engaged length of screw (L in diagram), and diameter of screw (D in diagram). Divide L by D to get engagement ratio. Select proper grade letter from table below. Use A on snug fits; D or V grades on loose fits Grade D has same strength as A but higher viscosity. Suffix V indicates higher viscosity of grade.

"CHIEF" REDI-POWER MASTER STATIONS

"Chief" Redi-Power Master Stations have built-in extra power. This added power (up to 20 watts), gives you the additional volume required when calling a number of stations at one time or calling noisy locations. Satisfies need for power boost without eliminating return speech. Volume is self-compensating whether 2, 6 or 12 stations are called simultaneously. Each station receives its pre-determined volume with no division of output when more stations are called at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and staff stations in same system. Other features include: (1) Incoming call chime. (2) Monitoring signal. (3) Dynasonic selector that permits intermixing of Master and Staff Stations and variation of performance. (4) Volume Control. (5) Noise-free voice range power. (6) Multi-magic station selector which enables selection of up to 30 stations with only 12 push buttons. (7) Uni-trans dictation control. (8) Operation on 110-120V. (9) External relay control for use in extremely high noise level areas. (10) In modern, custom-designed cabinets. Charcoal gray and brushed chrome. Size: 13x8¾x3⅛".

"CHIEF" MASTER STATIONS

Can be used in any combination—with all Masters—one Master and Staff Stations—or a number of Masters combined with Staff Stations. 6, 12, and 20 Station Masters, together with Staff Stations can be intermixed in same system. Masters can talk with any other Master, as well as with Staffs. Staff Stations can answer all Masters and can orginate calls to one or two Masters, depending upon Staff's capacity. Staff Stations are not connected to electrical outlet.

Exclusive Features: (1) Dynasonic Design enables stations to perform "privately" (so no one can listen in) or "non privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non private" to others, and retain full communication facilities. (2) Monitoring signal visually indicates to a "non private" station that it is being monitored. (3) Busy signal visibly indicates when station you call is "busy". All units have facility to override "busy signal" for important calls. (4) Multi-magic station selector enables selection of up to 30 stations with only 12 push butons. (5) Unitrans dictation control. (6) External relay control enables Master to activate external relays for operating siren, gong, light, etc. (7) Reciprocal Power supply—Each Master operates on 100-120 volts AC only and should be plugged in. Where no electrical outlet is available up to 30% of the Masters in the system can operate without being plugged in. (8) Noise free voice range power. The exclusive patented circuit enables perfromance without noise, hum or distortion, when used with talk-a-phone cable. (9) Hi power staff stations and horns. T-HP-3 provides more than twice the volume of universal Staff. T-C-20 provides about 4 times greater valume . . . more with Redi Power Master. (10) Wall switch combines with Talg-a-phone Horn or Hi Power staff to add origination of call feature. (11) Incoming call chime. • *NEW* "SYNCHRO-LAB" SERIES TURNTABLES

• Combines Advontoges of Synchronous & Induction Types
The high cost of eliminating synchronous motor performance problems, such as low starting torque and excessive rumble, explains why even the finest turntables have been using induction motors. Now, GARRARD has combined the synchronous and induction types into one motor with the advantages of both. An induction section of the rotor provides high torque

• Speed Connot Fluctuote—High Torque—Low Rumble
and fast acceleration to the correct speed, at which point the synchronous section "locks in" to the 60 hz line current: voltage may vary from 25 to 250V with NO EFFECT WHATEVER on speed! The Synchro-Lab design also offers a high degree of torsional damping, running smoothness, and freedom from rumble.

SL55 4-SPEED AUTOMATIC TURNTABLE

Provides features and performance of far more expensive units. Synchro-Lab motor guarantees uniform record speed and exceptional freedom from rumble. Manual cueing and pause control; tone arm may be placed in any position on the record, or lifted off as long as desired at any point in the playing cycle. Two interchangeable spindles, one for manual single-record operation, the other a center drop spindle for automatic operation. In automatic mode, records of any size may be intermixed. Lightweight tubular tone arm has built-in stylus pressure adjustment. Super-sensitive trip with DuPont Delrin to offet friction. VIKING "MATCHBOX" ANTENNA MATCHING UNITS

Bandswitching antenna matching units match a wide range of impedances and tune out large amounts of reactance on all amateur bands 80 thru 10 meters. Also provide separate matching of receiver. Heavy-duty relay switches antenna and grounds receiver antenna terminals during transmitting. Directional coupler for SWR measurements may be used separately. Tuning is broad enough to cover large portion of band with one setting. 20 db harmonic suppression. Maroon and grey finish. Approved for FCDA matching funds.

KILOWATT MATCHBOX

Model 250-30-3. Kilowatt Matchbox designed to handle unbalanced line impedances from 50 to 2000 ohms, balanced line impedances from 50 to 1500 ohms. The antenna change-over system includes a time delay circuit for the relay, providing "fast make—slow break" action to prevent arcing or sticking of relay contacts. The feature also protects the transmitter and the receiver components from possible damage by high voltage transients during antenna change-over switching. Feed-through insulators are provided for connecting balanced or unbalanced lines. A standard SO-239 connector is provided for 52 ohm coaxial lines. Unit is also capable of tuning out large amounts of capacitative or inductive reactance. Revolutionary design of circuit does away with the annoying use of "plug-in" coils and completely eliminates "load-tapping" necessary in other couplers. In SSB mode, the unit is rated up to 3 kilowatts P.E.P. input. (With directional coupler). Dimensions: 17¼ x 12⅛ x 10⅞". Shipping weight, 27 lbs.

FANON SELECTIVE CB CALL SYSTEM

One of the most annoying aspects of CB operation—that of continually having to listen to unwanted calls and constant "hash" (noise) on the air, now has been eliminated Model CT5 is a compatible unit that plugs into built-in sockets on the base of Fanon models L-2000 and DCL-50 transceivers. From the completely quiet "standby" position, these units are always ready to selectively call or receive from other CT-5 equipped transcievers. Any one other unit can now be called without distrubing the others. Simply choose the designated number for the unit being called and a frequency control tone will alert just that party, bypassing the other units. Once alerted, transcievers go into normal voice transmission. The other units, not being alerted, remain in "standby" and are not disturbed by the conversation. Up to 10 Fanon transceivers can be selectively called with the CT-5 (5 on Channel A plus 5 on Channel B). Shpg. wt. 1 lb.

FAIRCHILD INSTRUMENTATION

FAIRCHILD MODEL 7050 MULTIMETER

The 7050 represents a true breakthrough in the cost/performance ratio of digital multimeters. Only the most recent advances in integrated circuits, packaging, and manufacturing techniques make it possible to offer an instrument of such substantial capabilities at so low a price. The 7050 is a three-digit instrument with both DC voltage and resistance measurement capabilities. DC current measurement is an available option. It incorporates as standard such high-price features as input impedance greater than 1000 megohms, floating input, and readout storage (non-blinking display). Yet its low cost makes it an economical replacement for analog type meters, panel indicators, and more expensive digital instruments. It can be used on the production line, in quality assurance, in service applications, in educational laboratories, and in a variety of test and control systems.
