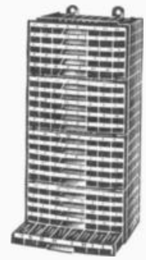
● NEW OHMITE "LITTLE DEVIL" RESISTOR ASSORTMENTS



Seven new engineering prototype lab assortments of "Little Devil" composition resistors in handy cabinets. Resistance values from 2.7 ohms to 22 megohms. Each drawer has 8 sections individually marked with ohmic values. Quantities per ohmic value vary between 5 each and 30 each, depending on the popularity of the value. The ±5% assortments have 160 different ohmic values while the ±10% assortments have 80 values. Cabinet mounts on wall or stands on bench.

PRECISION THERMISTORS

Thermistors which match a published resistance-temperature curve and thus each other to ± 1% not only at 25° C but over most of their useable range of —80° C to +150° C. Each thermistor is provided with resistance-temperature data for each degree C and with tolerance curves both in resistance variation and temperature sensing interchangeability. Base resistance from 100 ohms to 1 Megohm at 25° C available to ease circuit design impedance matching problems. Useful as transducers for measurement and control circuits where precision of YSI thermistors allow interchanging of transducers and multiple monitoring from single circuits. In control circuitry direct dialing of set points is possible as is trigger action at a specific temperature since resistance at any usable temperature is known to close tolerances. Also useful as temperature compensating devices for transistors, meters, circuits, etc. Physical size: .095" maximum dimension #32 solid tinned copper leads, 3" long. Thermistors are epoxy encapsulated for ruggedness and long life. Each thermistor supplied with data and with dissipation information, time constant and instructions. Rated at 25° C.

THERMILINEAR® THERMISTOR DEVICES

Linear Output Thermistor Networks

A composite precision thermistor device which, in conjunction with the precision resistors supplied, provides linear voltage output or linear resistance change with change of temperature. Sensitivities of 20 mv/°C. and more are common, 400 times the sensitivity of an IC thermocouple. Linearity deviation is as little as 2 parts in 1000 from 0 to 100°C. Combined absolute accuracy, linearity and interchangeability specifications of as little as 3 parts in 1000 from 0 to 100°C. Greater accuracies, interchangeabilities, and linearities available for shorter standard ranges. Parts guaranteed to stay within tolerances for three years. Useful for direct digital temperature indication with DVM or linear recorder. Provides linear temperature compensation with thermistor sensitivity. Time constant: 1 second, in well-stirred oil bath. Parts consist of composite thermistor and resistor assembly. Thermistor composites are manufactured to absolute accuracy tolerances of ±0.15°C from —30 to +100°C. For complete information and technical data, write Newark. Type 44018: additional thermistor composites for replacement or multiple input work.

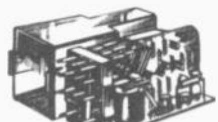
● NEW IR-PROTECTION SENSORS



Voltage, frequency and phase rotation sensors provide repeat cycle characteristic of solid state input sensors, plus 3PDT, 10 amp relay output. Electrical latching can be obtained. Mounting: accepts printed circuit socket, chassis mount, clip or chassis-mounted socket. 3PDT contacts rated 115 VAC. With plastic dust cover.

● NEW 3-PHASE VOLTAGE SENSOR — 4 WIRE

Detects from 3-phase source of 95 VAC when sufficient voltage available and loss of any line of drop in average of 50 VAC. Used as warning or lockout device to protect 3-phase motors and systems. Specified for pull in and drop out, but will repeat close values, allowing for unevenly loaded lines which can cause other lines to rise and fall drastically.

24F2957. IR-AV2-621. 115VAC 400Hz. **NET** **34.20**

● NEW OVER-VOLTAGE SENSOR

This voltage level sensor is actuated when the selected level is reached. De-energizes as input voltage drops 2.5% below set trip-point. Functions as under or over voltage detector.

24F2958. IR-VS1-610. 115VAC 60Hz. **NET** **42.90**

24F2960. IR-VS1-410. 24VAC 60Hz. **NET** **42.15**

● NEW UNDER VOLTAGE SENSOR

Similar to over-voltage sensor above except for following inverted operation: when sufficient voltage is applied relay will energize and stay pulled in until the trip point and then will drop out.

24F2961. IR-VS2-610 115VAC 60Hz. **NET** **42.90**
24F2962. IR-VS2-410. 24VAC 60Hz. **NET** **42.15**
24F2963. IR-VS2-300. 24VDC **NET** **41.70**

● NEW CLOSE DIFFERENTIAL VOLTAGE SENSOR

The Adjustable Differential Sensor performs the same operation as the Over-Voltage Sensor with the added feature of broadening the differential to a desired set point. Both sense point and differential are adjusted through top of cover. Non-latching output; energizes when voltage is returned to normal. The repeat accuracy of the pull in and drop out is less than 1%.

24F2964. IR-VS3-610. 115VAC 60 Hz. **NET** **54.80**

24F2966. IR-VS3-410. 24VAC 60Hz. **NET** **54.15**

● NEW PHASE ROTATION SENSOR—3 PHASE—4 WIRE

The Phase Rotation Sensor will detect the relationship of the 3 phases in a phase sequence ABC, thereby assuring the proper rotation of motors. Output relay is energized by 75 VAC balanced phase inputs. Non-latching. The unit is solid state controlled, designed for environments in excess of the specification, assures a reliable unit. The 3 "C" 10 amp. output switch lends itself to a 3-phase power requirement.

24F2967. IR-PR1-610. 115VAC 60Hz. **NET** **39.95**
24F2968. IR-PR1-620. 115VAC 400 Hz. **NET** **39.95**

● NEW ADJUSTABLE FREQUENCY SENSOR (OVER-FREQUENCY)

The frequency sensor gives, by an output switch closure, an adjustable preset indication of frequency. The adjustable range allows the user to indicate high or low frequency conditions. Useful in equipment which is supplied A.C. power from a portable generator. This unit allows the system to be monitored for a minimum or maximum frequency output. The unit energizes when the adjustable trip point is exceeded, and de-energizes one hertz below the trip point. Independent of control circuit and remains energized until frequency rises to the adjusted sense-point.

24F2969. IR-FS1-610. 115VAC 45-66Hz. **NET** **55.20**

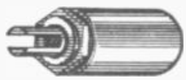
● NEW TUBULAR SOLENOIDS



Tubular Solenoids from a 7/16 to a 1½" Diameter available in both Intermittent and Continuous Duty 24VDC. Clear design allows side by side mounting, and permittnig easy installation just insert threaded bushing through chassis hole and tighten furnished nut. Computers, Aircraft and missels, Office Equipment and Copy Machines are some of the typical applications for these products. Intermittent Types cannot be energized for more than 1 minute or be permitted to rise more than 85°C above 25°C ambient, without giving sufficient time to cool between operations. Continuous Duty Types are designed so that they will not rise more than 85°C above the 25°C ambient temperature when operated at rated load. Life expectancy at rated load is 10 million cycles.

JRM MINIATURE DRY REED RELAYS

JRM relay employs dry reed glass capsules with 2 types of contact arrangement: Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a B (SPST-NC), using a 2-cavity bobbin and requiring the observation of coil polarity. Combining Form A with B results in a single Form C (SPDT) break-before-make; using a 3-cavity bobbin. A "True" Form C (SPDT)† uses a reed switch with 2 stationary and 1 movable contact, using a single-cavity bobbin. 1.125" long; .468" high; width varies with contact arrangement. Oper. time: 1ms. Release time. .05ms Pickup 75% nom. @ 25°C. Rating: 10 watts (or 4 watts*).

JML NON-BRIDGING MERCURY-WETTED CONTACT RELAYS

JML relays employ a Form C non-bridging (break-before-make) contact arrangement. They provide greater sensitivity, faster operation, and somewhat lower contact ratings than the JMP relays. JML relays have a sensitivity approximately six times that of the JM1. Speeds from 3 ms to 1.1 ms are possible, depending upon coil power. Contacts are rated 2 amps max., 500V max. with contact protection. All JML relays mount in Amphenol 77-MIP-8 sockets. Size: Diameter 1.312" max; Seated height 2.640" max; Overall height 3.303" max. Weight: 4 ozs.

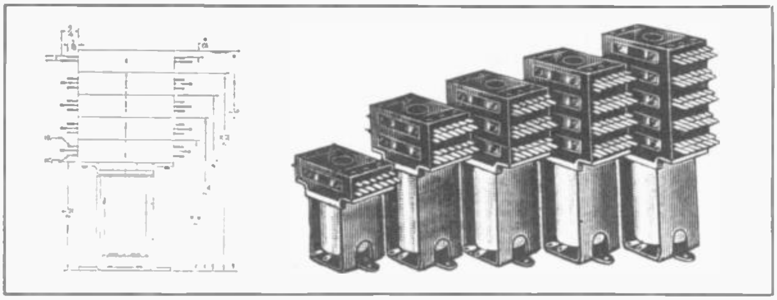
ECI T-BAR® RELAYS

- Stock-up Contact Wafers Switch up to 60 Poles at Once
- Easily Mounted — With Only 2 Screws — In Any Orientation
- Easily Wired — Snap-on Crimp Terminals Fit into Block Connectors



SERIES 801 T-BAR RELAYS

Reliable, ultra-compact, solenoid actuated relays with a unique design employing stacked-up enclosed contact wafers for up to 60-pole switching. Ideal for aircraft, telemetry communications, computers. Gold bonded silver contacts are rated to carry 500 watts resistive (5 amps), make or break 3 amps. Less than 30 milliseconds operate and release time. Min. life: 20 million mechanical operations. 1000 VAC dielectric strength, terminal-to-case; temperature range —55 to +85°C. Terminals will mate with T-Bar Connectors (below), which simply push onto contact wafers for quick, easy wiring, or solder connections may be made. Contact assemblies are in dust-tight plastic enclosures which measure 1⅟₃₂" wide by 2⅜" long; height is 13⁄32" per wafer.

T-BAR RELAY COIL CHARACTERISTICS

All characteristics are nominal and subject to normal manufacturing tolerances. All are for continuous duty. 115 VAC units have a full-wave bridge rectifier and use the same coils listed under 110 VDC. Operate at 80%, release at 20% of nominal voltage. Actuator assembly size: 1.375" mtg. centers x 21⁄32" high, except one-wafer relay use a shorter actuator (115⁄32" high).

SERIES 8 LIGHT-ACTUATED

Two-part systems employ integral receiver units (containing photo-cell and relay) and prefocussed light sources Three-part systems have miniaturized light sources and receivers, for use where space is limited; receivers connect to remote amplifier-relay units.

TWO-PART (INTEGRAL RECEIVER) SYSTEMS

All units operate from 115 VAC, 50/60 hz. and are housed in NEMA type 1 & 12 enclosures Complete system consists of 8L3 light source plus receiver unit appropriate to application. Operate over a 12 foot range, no inter-wiring necessary.

8P3, 8P5 & 8P6 General-Purpose Receiver. For switching rates up to 600 operations/minute contacts rated 10A or 28VDC/115VAC. Wt., 13 oz.

8P8, 8P9 and 8P10 High-Speed Receivers. Operate 1200 times per minute. Relay contacts rated 5A at 28VDC/115VAC 2.5A at 230-VAC. 8P8 comes with wire leads, ½" conduit bushing and mtg. bracket 8P9 has bracket and octal plug. Wt . 13 oz.

8RC01A & 8RC02A Miniature Low-Cost Receivers. 120 cycles/minute switching. Plug-in units fit standard 5-pin socket; SPDT relay contacts rated 3A at 28VDC/115VAC. May be used for beam-breaking or fluctuating-intensity applications: 8RC01A relay picks up at 5 foot-candles, drops out at .1 fc.; 8RC02A for high-ambient-light conditions, picks up at 5 fc; opens at .5 fc. Supply voltage 115V 60 Hz, UL approved. Wt., 3 oz.

8L3 Light Source. Provides actuating beam for all 8P and 8R receivers. Set to span up to 12 feet. With mounting bracket, ½" conduit bushing, and 16" leads (18 AWG). Wt., 13 oz.

Time Delay and Mercury Plunger Relays

AGASTAT PNEUMATIC TIME DELAY RELAYS

Fig. A

Fig. B

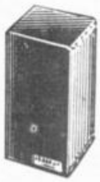

Fig. C

Fig. D.

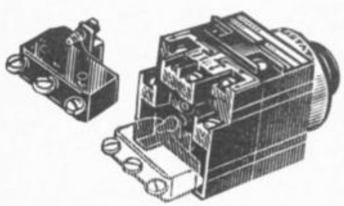

Fig. E

Type 2412, 2452. Time delay on pull-in. Timing cycle begins when coil is energized. Coil kept energized throughout time setting preceding DPDT contacts transfer from de-energized to energized position. Coil de-energized: contacts retransfer immediately (25 m-sec). Coil de-energized during timing cycle, contacts remain de-energized & timing mech. resets to start position for full time cycle on next energization of coil.

Model 2422. Time delay on drop-out. Coil energized: DPDT contacts transfer & stay in transfer position. De-energization coil: Time delay begins. Timing cycle: contacts stay energized. End time delay setting: contacts transfer back to de-energized position. Coil re-energized during timing cycle; contacts energized produce full time delay upon next de-energization if coil remains de-energized through time setting.

Type 2422, 2462. Double head unit provides independent delay of contact transfer on both energized & de-energized cycles of coil, 6$\frac{5}{8}$"x3$\frac{3}{8}$"x3$\frac{1}{8}$". Shpg. wt. 2$\frac{1}{2}$ lbs.

Auxiliary Switch Kits: Type "T" SPDT contacts rated 10A/120V, 60 cy. attached to Model 2412 or 2422. 2412 units: "T" switch provides 2-step timing. Switch transfers time delay up to 30 sec. Type "L" switch gives immediate transfer of contacts both on energization and de-energization cy. of coil. *Needle valve.

HOW TO ORDER CAM TIMERS

Locate desired time cycle duration in "Gear Assemblies" chart below, and order gear-and-rack assembly listed in left-hand column. Appropriate foundation (motor-switch) units appear at top of "Time Cycle" columns: CM types are single-cicuit, recycling; MC types are multi-circuit recycling; RC types are multi-circuit, single-time-cycle (see detailed descriptions below): Example: Suppose 4 circuits are to be controlled, with a 30-second time cycle, recycling. Order gear-and-rack assembly A12, stock number 24F315, and note that foundation unit MC2 is required. At bottom of page, locate MC2 under heading "4 SWITCH CHASSIS and order stk. no. 62F2010. All units U/L & CSA approved.
Note: in some cases RC0, RC1, MC0 and MC1 units may require a special high-torque motor. Multiply time cycle (in seconds) by 2/3; result will be maximum number of switches that can be operated by a standard unit. For example, with a time cycle of 9 seconds, up to 6 switches may be operated by a standard motor; if more circuits are to be controlled, order a high-torque motor. On RC0 and MC0 units, add $27.50 to listed price for high-torque motor; on RC1 and MC1 types price must be increased by $29.50.
Alternate Ordering Information: specify desired time cycle, number of switches, operating voltage and frequency. Such information may expedite delivery by allowing NEWARK to ship model in stock with desired time cycle

SERIES "DUAL TROL" RECYCLING TIMERS

The Dual-Trol is a compact recycling timer that continuously closes and opens a SPDT load switch. A complete unit consists of two TM timer modules—one to set the ON interval. The second to fix the OFF interval—and a control cabinet. Any two modules from the listing below may be used to achieve the desired combination of time cycles. The TM modules are complete timing mechanisms, with 4-prong plugs that match receptacles within the cabinet, for easy installation. Isolated SPDT load switch connects to terminal strip within cabinet; switch is rated 10A non-inductive at 115 VAC. 115 VAC/60 hz. 4½x5⁹⁄₁₆x7½" Wt. 2 lbs.

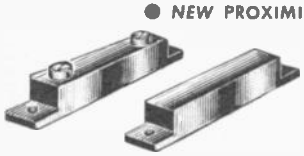
● *NEW* PROXIMITY MAGNETIC SWITCH



The inherent simplicity of the basic dry reed switch is the key to a long life and a very reliable proximity switch. An encased Alnico 5 permanent magnet provides the force to actuate the reed switch within distances of 1" apart (cen- to center). Some of the uses for these magnet-switch combinations are as interlocks, counters, and burglar alarms. Supplied as a normally open switch.

SPLIT DIECAST TYPE 30 ENCLOSED LIMIT SWITCH — SIDE MOUNT

Plunger Switch

Roller Arm

"Easy-wire" split diecast version of Type 30 above offers all features with one added feature: entire bottom half of protective case can be removed for ease in wiring. Bottom half enclosure is made of high impact, chemically resistant polyvinyl dichloride which eliminates any possibility of shorting out the basic switch.

Wood Electric Circuit Breakers

Wood Electric thermal and magnetic circuit breakers are precision calibrated and inspected to rigid quality control standars. All have unique trip free mechanism which prevents contacts from closing as long as overload persists. Meet requirements of Mil-E-5272C for humidity and salt spray. Withstand vibration of 10 g's at 10-55 hz, shock of 25 g's.

SINGLE POLE MAGNETIC—TOGGLE TYPE

Model 122. Designed for use on circuits requiring protection up to 50 amps on voltages up to 250 volts AC 60 hz. Calibrated to carry 100% of rated load and to trip between 101% and 125%. Trip times at 200% of rated load are 3-10 seconds.

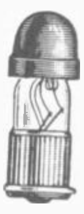
SILIKROME COLORED FILTERS



Silikrome colored filters can change the colors of clear incandescent miniature lamps instantly! Eliminates need for large inventories of colored lamps. Non-breakable, lightweight silikromes will operate at 500° for 1000 hours without appreciable change in color or the properties of the elastomers. Establishes parameters of color intensity and transmission which will define your requirements. Temperature range: —160°F to 500°F. Flexible, acts as a shock mount; resistant to weather, sunlight, ozone, most acids and salt spray. **Mil. Spec. models available on special order.**

Switchcraft's "Quick-Ground" connectors feature a separate "Ground-Terminal" electrically integral with the connector shell. Ground continuity between mating plugs automatically accomplished through the exclusive "Ground Contactors." Possible loss of insert screw is eliminated by "Captive Design" Insert Screw. Socket and pin assemblies utilize "wedge-action" to insure firm, reliable positioning in connector shell. Q-G series 3 and 4-contact audio connectors offer 4 and 5-contact versatility when "Ground Terminal" is utilized. Can be used interchangeably with Cannon type XLR-3, XLR-4 and Amphenol type 91-850 Series.

SERIES 300 SB AND DB PLUGS AND SOCKETS

DB

SB

Designed for medium duty applications small in size with good separation between contacts. Arranged for either cap or panel mounting. All plugs and sockets are polarized. Plugs with 24 to 33 contacts have a special polarizing pin to facilitate correct positioning of mating plug and socket. Insulating material is molded bakelite. Phosphor-bronze "knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. All contacts are cadmium plated. Plug prongs are 5/32" wide and 3/64" thick. Formed metal caps are finished in black wrinkle. Feature MONO-BLOCK construction which is compatible with the old two-piece types. New construction eliminates internal moisture traps and permits external pre-wiring as well as removal and replacement of individual contacts if necessary. Contacts are "locked-in" to withstand wiring stress. Rated Voltage: 730 Volts rms; Contact Resistance: 016 Ohms max. Rated Current: (2-12 contacts) . . . 7.5 amperes, (15-33 contacts) . . . 4.5 amperes; Rated Wattage: (2-12 contacts) . . . 1875 watts, (15-33 contacts) . . . 1125 watts.

Type SB. Sockets with shallow bracket for flush mounting.

Type DB. Sockets with deep bracket for recessed mounting.

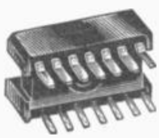
● *NEW* DUAL-IN LINE INTEGRATED CIRCUIT SOCKETS

● HIGH CONTACT RETENTION

● LOW CONTACT RESISTANCE

● HIGH ENVIRONMENTAL STABILITY



These sockets are designed for testing, prototype, or production applications. They offer excellent resistance to corrosive atmosphere and to extremes of temperature and humidity. The unique bowed contact provides high contact forces yet permits easy insertion or removal of the D.I.P. Contact resistance is .006 ohms maximum. They will accept any standard 14 or 16 dualinline package with round or flat heads. The socket leads are on the same centers as the D.I.P. leads, so they can be used with PC boards that are designed for direct insertion.

* Indicates Black Phenolic insulator, cadmium plated contacts.

AMPHENOL BLUE RIBBON® CONNECTORS

Barrier polarization type connectors are designed for inter-connecting electronic sub-assemblies, circuit switching, rerouting and other multi-contact applications. Interlocking design of mating dielectric bodies provide positive polarization. The dimensional stability and high tensile strength of Amphenol "Blue" dielectric make this type of polarization possible. Float mounted receptacle corrects misalignment of plug and receptacle. Corrosion resistant, stainless steel molded-in mounting plates and housing. Rated: 5 amps, 800 volts DC at sea level, 300 volts at 70,000 ft. altitude. Av. Shpg. Wt., 3 oz.

TYPE UHF CONNECTORS

Series UHF RF connectors will operate satisfactorily at frequencies up to 200 megacycles without any special precautions, and used at frequencies up to 500 megacycles under certain conditions. These connectors will also handle all peak votages up to 500 without danger of breakdown. Large single and twin-contact connectors are provided with rubber sealing gasket for weather-proofing, while small single and twin-contact types can be waterproofed by application of Amphenol 307 Silicone Compound to mating insulator surfaces. Metal surfaces are silver-plated. Beaded chains for caps are nickel-plated brass. Shipping weight each, 4 oz. approx.

SOCKETS FOR RCA 8072, 8121, 8122, AND SIMILAR TUBES

For high frequency tubes. Continuous heat resistance to 500°F. Glass-filled silicon base. Heat treated beryllium copper contacts. Base material of low dielectric constant, which results in low pin-to-pin and shunt capacity. Teflon chimney. Elevation pads. Socket contacts grip tube pins at base of tube—providing minimum inductance. Barriers between terminals. Large center hole and basic configuration results in low capacity; three mounts provide stable mounting. With numbered terminals. Low inductance screen by-pass capacitor available for VHF and UHF operation.

CRADLECLIP WIRING SYSTEMS

The Electrovert Cradleclip Wiring System consists of Binders and Endless Extensible Clips for unsupported wiring and Cradles and Endless Extensible Clips for supported wiring. Both the Binders and Cradles are molded from special nylon material and are virtually unbreakable. The Endless Extensible Clips are molded Neoprene which combines the right degree of toughness with the necessary flexibility to hold any type of cable securely and without damage. Temperature range of the system is approximately —76°F to +212°F. Wiring systems are in accordance with MIL-STD-202A. Methods of attaching Cradles to panels include: Conventional Bolt and Nut, Speed Drives, Drive-Rivets, and Special Cradle with Captive Nut.

FIT-221 — POLYOLEFIN HEAT SHRINKABLE TUBING

FIT-221. This improved all purpose extruded tubing shrinks 50% (2:1 ratio) with only 5% longitudinal shrinkage. Fewer sizes cover more applications. When a temperature of approximately 275°F is applied for seven seconds, the tubing returns to predetermined size and forms permanent tight fitting mechanical bond, even over irregularly shaped materials. Tubing retains form stability throughout its temperature range of —67°F to +572°F. Shrinking done by Heat Gun, oven radiant heat, dipping in hot liquid, or hot iron. Clear tubing may be used where jacketed, printed components or cable data is visible and inspection of components is desired. Supplied in lengths of 4 feet and 6 inches. *6 inch package colors: black, white, red, yellow, blue, clear. Specify color. 4 foot **lengths stocked in black and clear. Also supplied in packaged assortments.**

Microphone and Instrumentation Cable BELDEN

MICROPHONE AND INSTRUMENTATION CABLES—SHIELDED

General purpose shielded cables, for all stage, studio and instrumentation applications. Rubber types have rubber-insulated tinned copper conductors, tinned copper-braid shield, black rubber jacket overall, (†)except black Neoprene jacket. **8402 & 8408 have brown hypalon jacket. Vinyl types are similar, but have polyethylene-insulated conductors, chrome vinyl jacket. *Miniature cables having tinned cadmium-bronze conductors. Rubber cables have greater abrasion and impact resistance, are extra-flexible—will lie flat without kinking. Plastic cables have lower capacitance, greater ozone and oil resistance, lighter weight. Neoprene and rubber types are recommended for outside use, cold weather applications. All types available only in spool sizes listed.

Fig. 5

Fig. 2.

Fig. 4

Fig. 6

Type 8290. SHIELDED & JACKETED ENCAPSULATED TWIN LEAD. TV lead-in for best color and 82 channel reception. Low losses per 100 ft., eliminates interference caused by line pick up, can run thru gutters, conduits, and underground. No matching transformers. Terminals on both ends.

Fig. 2. Type 8285. PERMOHM All-Weather 300-ohm twinlead. 2 parallel Copperweld conductors, orange polyethylene insulation and web between conductors, encapsulated in cellular polythylene oval jacket. Delivers 3 to 136 times more power than ordinary flat lead-in for strong, clear signals on all channels despite industrial contamination, salt spray, wet weather, rain, ice, fringe area reception. An excellent color, UHF, VHF cable. See Antenna Hardware page for "E-Z" standoff insulators.

Fig. 3. Type 8275. CELLULINE. 2 parallel Copperweld conductors with inert-gas-filled unicellular polyethylene core. Lower losses because of lower dielectric constant. Uniform electrical characteristics, because moisture between conductors is eliminated. Thick polyethylene outer jacket and wind-resistant round shape result in longer lasting, more efficient line for UHF, VHF and color. No end sealing required.

Fig. 4. Type 8230. ..WELDOHM. Copperweld conductors have 1½ times greater strength than plain copper for long-lasting installation.

Type 8225. 300-ohm flat twinlead with bare copper conductors, brown polyethylene insulation for best weathering.

Fig. 5. Type 8222. 72-ohm transmission line. 2 parallel copper conductors, brown polyethylene insulation.

Fig. 6. Type 8464. 4-conductor flat rotor cable. Bare copper conductors, one tinned for polarity. Chrome vinyl insulation. **Type 8488.** Eight-conductor round rotor cable. Bare copper conductors, color-coded insulation, chrome vinyl jacket.

POLYFOAM COAXIAL CABLES

Cellular polyethylene dielectric material provides lower weight, cost, capacitance, and attenuation than standard RG types. Widely used in commercial transmitter applications such as community TV and in ham stations. The dielectric constant is 1.50 as compared to 2.25 for solid polyethylene. It has a specially compounded non-contaminating black polyethylene jacket providing improved weather and abrasion resistance. *Sweep tested—1000 ft. min. order.

FERRAMIC CUP CORE ASSEMBLIES

Temperature Compensated Cup Core Assemblies. Designed for filter applications requiring precision tuneable inductors having low loss characteristics over a wide temperature range. Used at frequencies from audio to 500 kHz with Q value as high as 850. Specific inductance (L/1000 turns) is accomplished by inserting a precision ground air gap in center post of one or both cup cores in a matched pair. Size and tolerance of air gap controls inductance per 1000 turns. Adjustment beyond specific inductance of cup cores is provided by trimmer assembly. All cup cores have a positive linear temperature coefficient of effective permeability and inductance. Over a given temperature interval this is expressed as:

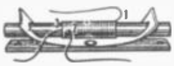
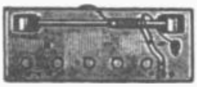
FERRITE ROD LOOP ANTENNAS



A

B



C

D

E

Ferrite Rod loop antennas designed to receive the standard broadcast band (540-1850Khz) when used with proper tuning capacitor. Figures C, D & E are supplied with a mounting board which can be easily removed if an alternate method of mounting is desired, others have mtg. bracket. They make excellent antenna for conventional vacuum tube and transistor receivers. Type 705-A has adjustable inductance to permit peaking antenna stage by sliding coil along ferrite rod. The 2000 series have a secondary which is over-coupled for maximum gain stability with a variation of output and are designed to match an input impedance of approximately 600 ohms. Type 6300 antenna coil replaces a loop antenna and is supplied with 18" of antenna wire. It is screw adjustable. Average Shpg wt.: 3 oz.

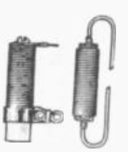
FREQUENCY SELECTIVE R.F. CHOKES



Designed for maximum efficiency and highest impedance at specific operating frequencies. Eliminates the designer's task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major amateur, industrial and citizens bands and will also operate efficiently at frequencies approximating the recommended frequencies.

Pre-punched terminal boards provide overall grids of holes especially usefull in bread boarding as well as production. Holes on alternate intersections of a standard 0.1" grid make it possible to mount most "top-hat" transistors base down by passing the leads directly through the holes. *2 oz. copper 1 side **2 oz. copper, 2 sides.

MICROVECTORBORD TERMINALS

"Inbord" Terminal Pins press fit in Microvectorbord. Pins phos-phor bronze nickel plated and gold flashed. Knurled body flange in middle of pin cuts into insulating board and lightly holds pin. Pins protrude from both sides of board and serve as terminal post, test point, or male connector pin. Retainer eyelets or soldering will hold pins permanently inboard.

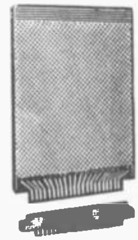
PLUGBORDS AND RECEPTACLES



Plug-In Test Circuits. Prototype of To-Be-Printed Circuit Cards. Modular Plug-In Cards — Standard Plugboards made from 1/16" thick Epoxy Paper material or Epoxy Glass (WE) with all-over grid of .062" holes on alternate .1" centers. Locate Vector T-28 Push-In Miniclip Terminals and eyelets where required and lay out components to exactly duplicate printed card, if desired. For making manually wired prototypes which can later be made as etched or welded circuits. For short production runs, hand-wired boards (soldered or welded) can be made faster than etched boards. For general use epoxy paper boards may be punched, sawed or drilled if desired; —1 GN series has nickel plated gold flashed contacts and equally spaced notches in connector mounting: Elco Varicon contacts come attached to board or etched connector supplied on 838A and 838. Different sizes, hole patterns and materials readily available to order.

SILVER OXIDE BATTERIES

Provide a higher voltage and greater milliwatt-hour ratings than existing batteries of similar size. Silver oxide batteries have good low temperature characteristics compared to existing batteries and their impedance is low and uniform. Silver oxide batteries are well suited, for example, for use in hearing aids, electric watches and as reference voltage sources.

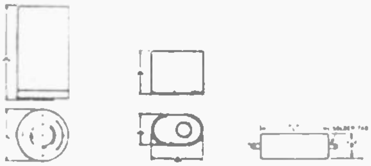
SEALED RECHARGEABLE NICKEL CADMIUM BATTERIES



Typical Cylindrical Cell

Typical Oval Cell

Typical Button Cell Battery

General Electric incorporates its own thin sintered plate construction into its nickel-cadmium batteries to produce a cell ideal for instruments, appliances, photo-flash and all portable devices. Sporting a 1.2 average voltage, these batteries can perform 5000 cycles at discharge depth not exceeding 25% of rated capacity. Will operate in temperatures ranging from —40°C to +60°C, with an optimum range of —20°C to +40°C. May be stored indefinitly at a range of —60°C to +60°C.

Button Cell

Cylindrical Cells

Button Cells. Compact size permits easy stacking to form multiple cell battery configurations with resulting optimum space utilization and power-volume ratio. Particularly suited for low-drain, high capacity applications.

KURZ-KASCH

● *NEW* SPECK-O-LITE

The amazing Speck-O-Lite takes advantage of a new breakthrough in the science of optics: the fiber optic light guide. The Speck-O-Lite can effectively bend light around corners, take light into tiny crevices, and slide light through narrow slits that completely frustrate conventional lighting devices. Use the shock-proof Speck-O-Lite to illuminate impossible-to-reach parts in a sophisticated assembly; read code markings on small parts without removing them from the recesses of an enclosure; light enclosed components from the inside if you have an opening as small as ⅛" thick.

HOW TO USE CHART

To determine the recommended ECC battery charger to be used 2 things must be known. (1) number of cells, and (2) amp hour capacity of cell. For example: a 4 cell battery with an amp hour rating of 1.0 ampere hours on each cell—charger to be used from chart would be No. 4 which denotes number of cells. Charge rate would be $^{1}/_{10}$ of an amp hour rating or 100MA. Top to bottom (left side of chart) where number of cells and MA ratings cross is recommended ECC charger to be used.

BATTERY CHARGERS FOR NICKEL CADMIUM BATTERIES

Charger design provides complete isolation from line voltage and hence maximum safety to user. By means of an isolation transformer tested at 2000 volts RMS as well as complete potting, all possibility of shock and hazard due to accidental immersion in water or other liquid is eliminated. This unit consists of transformer, rectifier, and current limiting resistance which produces half wave rectification with constant current. UL and CSA approved.

CAMBION Coils, Coil Forms & Components

VARIABLE COILS

CAMBION tunable coils are available on either ceramic or phenolic forms, or in unitized housings offering both electromagnetic and electrostatic shielding. Tunable ranges provide overlapping inductances. Listing covers more popular ratings—if inductance range you want is not listed, order by Part No. and specify range desired.

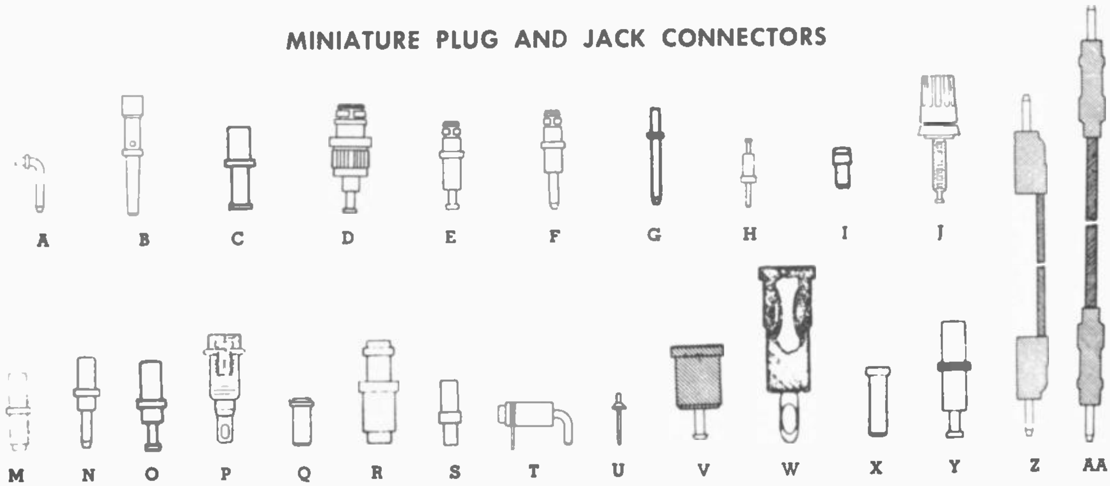
MINIATURE PLUG AND JACK CONNECTORS



Wide variety of plugs and jacks make possible tight space-saving connections; offers reliable "pluggability" for individual components. Positive grip, with low contact resistance after many repeated insertions.
Terminals are available for boards with different thicknesses. Suffix in type number indicates the size available. Order from Board Thickness Chart at right adding the proper suffix to Type number for thickness desired.
Example: Type 1521-1 thru 3 is available for boards 1/32" thick (1521-1), 1/16" thick (1521-2) and 3/32" thick (1521-3)
Gold plated except (*) Electro-Tin (†) Electro-solder and (**) Bright Alloy plating. Available with (††) black or red insulation, (‡) black, red or blue wire insulation (#) black, red or white insulation.

LOW VOLTAGE MINIATURE PRODUCTION EQUIPMENT

Small, lightweight instruments for close-quarter precision soldering of printed circuits, miniature component parts, semiconductors, and fine assemblies. Feather weights of 1/4 to 1 ounce virtually eliminate hand fatigue. All Oryx soldering irons utilize a unique element-in-the-tip design principle. Use of this principle enables

these irons to provide high efficiency, quick heat recovery. and cool handles. In addition all irons are polarzied, making it possible to directly ground the shaft, tip, and one side of the heating element for maximum safety.

ENERGY RESERVE THRU TEMPERATURE CONTROL

Have a self-contained automatic switching system which is activated when the tip temperature deviates from the pre-selected level that you set. When tools are idling the heating element is on only as required to maintain the idling temperature. When applied to a load the tool's switching system automatically delivers the level of reserve energy needed.

Permanent magnet is attracted to ferromagnetic insert when tip is cold, activating the power "on" switch. When tip approaches pre-selected temperature the insert loses its magnetic characteristics causing the magnet to retract and turn the switch off. As the tip begins cooling the ferromagnetic insert again attracts magnet to resume the heating process. "Temperature Sensing" tips make the system work!

EPOXY SILVER E-SOLDER

Conductive silver epoxy combines the adhesive characteristics of epoxy with the electrical conductivity of silver. Epoxy "solder" can be used at room temperature for components which are heat sensitive; it can be used to bond dissimilar materials and it has no flux or residue to contaminate sensitive electronic components. When used with dissimilar materials, epoxy "solder" provides a strong bond where soldering or brazing is often impossible.

MAXIMAT 7 — PRECISION LATHE, VERTICAL MILLER AND DRILL PRESS

COMPLETELY ADJUSTABLE — slides and feed screws adjust to eliminate play

INSTANT SPEED SELECTION — 8 lathe and 4 milling head speeds

PRECISION GEARED HEADSTOCK — totally enclosed, milled gears run in oil

COMPLETELY SAFE — all gears, pulleys and electricals totally enclosed

Maximat 7 does the work of a lathe, milling machine and drill press, yet occupies a minimum of space—only three square feet. Offers choice of eight lathe spindle speeds, from 65 to 2800 rpm, **without changing drive belts.** Gearing in headstock delivers a maximum of power to lathe spindle and eliminates annoying loss of power found with V-belts. Vertical column turns thru a full 360° arc and head swings 360° with height adjustment via precision leadscrew with micrometer collar. Push button switches select 2 motor speeds, forward, reverse, verticle spindle and stop. A push-pull feed knob gives two carriage feeds for rough or fine cutting, .005" to .002". Cuts all popular threads in either inch or metric pitch. Vertical spindle is spring loaded for drilling operations and the spindle travel is 1 3/16 inch. Lathe spindle is driven by a 115V, 1-P, 60C 1/2 hp motor which is built into the rear of the headstock casing. Basic equipment supplied is: 3 ft. bed, Lathe Headstock motor unit, vertical column, Milling Head, M to R unit, tailstock, carriage, cross slide, compound, single tool holder, set of nine change gears, face plate, 2 dead centers, lathe dog, set of wrenches, grease gun, operating instructions. "CHIEF" REDI-POWER MASTER STATIONS

"Chief" Redi-Power Master Stations have built-in extra power. This added power (up to 30 watts), gives you the additional volume required when calling a number of stations at one time or calling noisy locations. Satisfies need for power boost without eliminating return speech. Volume is self-compensating whether 2, 6 or 12 stations are called simultaneously. Each station receives its pre-determined volume with no division of output when more stations are called at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and staff stations in same system. Other features include: (1) Incoming call chime. (2) Monitoring signal. (3) Dynasonic selector that permits intermixing of Master and Staff Stations and variation of performance. (4) Volume Control. (5) Noise-free voice range power. (6) Multi-magic station selector which enables selection of up to 30 stations with only 12 push buttons. (7) Uni-trans dictation control. (8) Operation on 120V. AC. (9) External relay control for use in extremely high noise level areas. (10) In modern, custom-designed cabinets. Charcoal gray and brushed chrome. Size: 13x8¾x3⅛".

ALL TRANSISTOR INTERCOMS

"CHIEF" MASTER STATIONS

Can be used in any combination—with all Masters—one Master and Staff Stations—or a number of Masters combined with Staff Stations. 6, 12, and 20 Station Masters, together with Staff Stations can be intermixed in same system. Masters can talk with any other Master, as well as with Staffs. Staff Stations can answer all Masters and can orginate calls to one or two "private" Masters, depending upon Staff's capacity. Staff Stations are not connected to electrical outlet.

Exclusive Features: (1) Dynasonic Design enables stations to perform "privately" (so no one can listen in) or "non privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non private" to others. (2) Monitoring signal visually indicates to a "non private" station that it is being monitored. (3) Busy signal visibly indicates when station you call is "busy". All units have facility to override "busy signal" for important calls. (4) Multi-magic station selector enables selection of up to 30 stations with only 12 push buttons. (5) Uni-trans dictation control. (6) External relay control enables Master to activate external relays for operating siren, gong, light, etc. (7) Reciprocal Power supply—Each Master operating on 100-120 volts AC only and should be plugged in Where no electrical outlet is available up to 30% of the "Chief" Masters in the system can operate without being plugged in. (8) Noise free voice range power. The exclusive patented circuit enables performance without noise, hum or distortion, when used with talk-a-phone cable. (9) Hi power staff stations and horns. K-HP-3 provides more than twice the volume of universal Staff. K-C-20 provides about 4 times greater volume . . . more with Redi Power Master. (10) Wall switch combines with Talk-a-phone Horn or Hi Power staff to add origination of call feature. (11) Incoming call chime. All "Chief" and "Chief Redi-Power" Master Stations come complete with junction box and built in power supply attached by 6' flexible cable. Master size: 14" width, 3⅛" height, 8¾" depth. To inter-connect Master Stations, measure from first Master to second Master only, from 2nd to 3rd Master only, etc., until last unit in system is reached and total. For K-C-4920 use two lengths to 6226 Cable. To connect K-C-41, K-C-20, or K-HP-3 Staff Stations, measure from Staff Station to one Master to which Staff Station originates calls. To connect K-C-42 Staff Stations measure separate length of cable from Staff Station to each Master Station to which staff originates calls.

David Clark Company sound power systems provide a light weight, dependable, interference-free method to communicate. Batteries, power supplies or amplifiers are not required. Your voice supplies all the power necessary to operate these maintenance-free units. All headsets shown can be used in same system.

Temporary or permanent installations can be made by using the J-6 junction box, J-2 jack plate or C4009 jumper cord. By using 19AWG or heavier cable, clear transmission can be obtained for two headsets up to a distance of 30 miles. For shorter distances, up to 2 miles, as many as 10 headsets may be used.

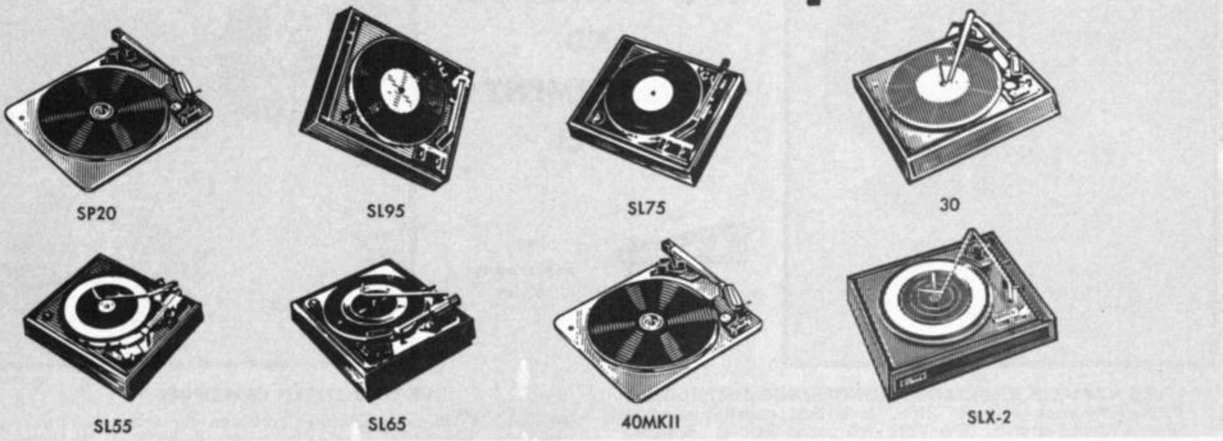
Garrard®



"SYNCHRO-LAB" SERIES TURNTABLES

• Combines Advantages of Synchronous & Induction Types
The high cost of eliminating synchronous motor performance problems, such as low starting torque and excessive rumble, explains why even the finest turntables have been using induction motors. Now, GARRARD has combined the synchronous and induction types into one motor with the advantages of both. An induction section of the rotor provides high torque

• Speed Connot Fluctuate—High Torque—Low Rumble
and fast acceleration to the correct speed, at which point the synchronous section "locks in" to the 60 hz line current: voltage may vary from 25 to 250V with NO EFFECT WHATEVER on speed! The Synchro-Lab design also offers a high degree of torsional damping, running smoothness, and freedom from rumble.
