## MEISSNER "ANALYST"

THE MODERN SERVICE INSTRU.
 MENT-Undoubtedly the most modern conplete serpicing instrument on the ceivers of yesterday, today and toceivers of yesterday, today and to-
morrow with equal efficiency and facility! Fntirely iundaniental in its testing procedure. Will never berome
obsolete. SAVES TIME - SAVES obsolete. SAVES TIME - SAVES
MONEY- I'lie use of the new גieissner MONEY-The use of the new Mels you to make more money by bandling a greater number of sersice jobs in a given time but it will give you additional assurance that these johs will NAL TRACING', The Meissner ANALYST tests receirers and locates faults by the "Signal tracing" method -proven to be the fastest and most rellable method known at the present
time. It is NOT, however, just another signal tracer! It is completely he needed to make simultancous checks on rarious parts of the receiser circuit. Five separate at distingt "channels" provide as many difterent functions all controls are accurately calibrated with functions clearly indicated.

## Complete-Ready to Go to Work

The Meissner ANALYNT is eompleiely wtred. aliuned and laboratory tested. Furnished complete with a full set of 12 tubes, it is all ready to the but into service the minute it is umpacked and connected the instructions, hook it un anil go to work!
Complete Hook of Instructions, supplied with the new Meissner ANALYST, gires cetailed directions for use of this instument in locating all kinds of radio troubles.
No. $9-1040-$ New Meissner ANALIST, complete with tubes, prods, and $I_{n}$ struction Book; ready to operate. Net Price.

## NEW MEISSNER <br> WAVE-TRAPPERS

AVAILABLE IN 5 mODELS 6 to $13 \mathrm{mc}, 13$ to 27 mic. 27 to 54 $\mathrm{me}, 54$ to $108 \mathrm{me}, 108$ to 216 mc You can now attenuate interfering slenals on fundamental or harmonic frectuencics with these new. Wighly effleient tunable wave trans. Severa may be conncried in series if inter ferente exists on nore than one ireor unbalanced line from 50 to 400 ohms impedance.
.$\$ 5.00$

NEW MEISSNER LINE FILTERS

(Grounded \& Shielded)
Reject interference from clectric shaters, electric fans, food mixers, pacuum elcaners, etc. 300-watt rating.
List Prise.

## IRON-CORE R-F CHOKES

Universal-wound on special jow dered-iron cores. llaese chokes provide inaximum efficiency-lower DC resistance per MII. Coils are wax-impregnated; laminated bakelite terminal base: singlehole monnting; without shielding.

## GUD ENCLOSED METER PANEL

PS－439 Meter Panel is designed to give maximum protection to meters．The steel panel has a large cut－out，behind which panel has a large cut－out，behind which． is mounted a blank Masonite sub－panel． This sub－panel has a meter mounting a meters are proted by ient space to mount four 3 ＂meters．The meters are protected by a glassininsert that mounts in slides．Due to danger from breazage during shipment，this glass is not supplied with the panel．The glass insert should be cur Wrinkle．

| or Grey Wrinkle． |  |  |  |
| :--- | :---: | ---: | ---: |
| Cat．No． | Length | Width | Dealer Cost |
| PS．439 | $19^{n}$ | $54 / 4 \pi$ | 54.68 |

## BUD METER PANELS

 STEEL AND MASONITEAll meter panels are $51 / 4^{\prime \prime}$ high， $19^{n}$ wide，available in either black or grey wrinkle finish．Small holes fit either $2^{10}$ square or round meters large holes fit either $3^{\prime \prime}$ square or round meters．

| Catalog No． | Number of Holes | Diameter | Type Material | Dealer Cost |
| :---: | :---: | :---: | :---: | :---: |

## BUD GENERȦL SPEAKER CABINETS

In making permanent or portable public address installations, this line of speaker cabin ets will be found very useful. No baffle re quired with these speaker housings. Quality of reproduction is equal to that of fine wood speaker cases. Construction is of heavy, coldrolled steel. A carrying handle is attached to each cabinet for portable purposes. Finished in Black Wrinkle Enamel only.

| Cat. | Hole | Speaker |  |  |  | Dealer |

No. RS-7140 Machine Screws, $1 / 2^{\prime \prime}$ ong, threaded 10-32, Oval Head, inished in Nickel Plate.
No. RW-7161 Cup Washers, to fit 10-32 Screws. Nickel plated, finish. These are available in packages of
$100,250,500$ and 1000 .
Description Screw

Dealer Cost .90 per 100 RW-7161 Washer 1.00 per 100

## BUD CABINET RACK DOLLIES

These dollies have been introduced to overcome the difficulty of moving heavy relay racks when repairs are necessary. They will fit cabinets having bases measuring from $14^{\prime \prime} \times 18^{7}$ to $17^{\prime \prime} \times 21^{\text {n }}$ and are especially suited for our Standard Relay Racks. No. RD-505 Dolly is furnished with light duty casters. No. RD-506 is furnished with heavy duty casters. Finished in Black Wrinkle only. Bud De Luxe Relay Racks require four RC-7756 casters only.

## BUD STREAMLINED AMPLIFILR

## FOUNDATIONS

Use this unit to obtain beauty in an amplifier and similar apparatus. Each foun dation consists of a standard chassis on which is mounted a removable top cover Chromium trim is used to add addi ional attractiveness to the equipment All chassis are $3^{n}$ high and complet units are 9" high. Sturdy Easy Grip handles are attached to chassis, except ing No. 1750 where handle is attached to top. Finished in either Black or Grey Wrinkle

| Cat. No. | Width | Depth | Dealer Cost |

## BUD MOUNTING BRACKETS

These Brackets are designed to permit the mounting of Midget Condensers, volume controls, etc., at any desired position under or on top of a chassis, at the proper distance from the chassis. Bracket is made of steel, cadmium-plated. AB-550 same as AB-549 except that slot does not have $1 / 2^{\prime \prime}$ hole in center.
 AB-550 ANGLES AND BRACKETS
A wide selection in sizes of these angles provides for numerous uses as brackets in all types of radio transmitter and receiver construction, and other electronic equipment. Made of Brass, Nickel Plated.

Where materials are specified Black Wrinkle Finish, and Grey is desired, a charge of $15 \%$ additional will be made.
Prices slightly higher west of the Mississippi River

## BUD INSTRUMENT \& RECEIVER. CABINETS

Each cabinet has an evenly recessed hinged cover with convenient finger lift. The panel on front of cabinet is readily attached with self-tapping screws. Louvers provide ample ventilation. These Cabinets are finished in Black Wrinkle only. For chassis to fit these cabinets see Open End Chassis listed on other page.

## BUD METAL CARRYING CASES

These carrying cases have many uses. An easy grip handle is fastened

BUD CODE PRACTICE OSCILLATOR AND MONITOR

The BUD CODEMASTER is a real money-saver. No longer do you have to consider your code practice oscillator useless after you have learned the code. A fip of the switch and you have a good CW monitor. This is a really versatile instrument
It has a 4 " built-in permanent magnctic dynamic speaker and will operate up to twenty earphones.
A volume control and pitch control permit adjustments to suit individual requirements. Any gror group practice.
speaker on 110 volts A.C. or D.C. An external er. All controls plugged in without the use of an output transform are in the rear are placed on the front of the unit and all jacks It is finished in black unit is $61 / 2^{\prime \prime}$ high, $51 / 2^{\prime \prime}$ wide and $31 / 2^{\prime \prime}$ deep.

Catalog Number CPO-1 28
Dealer Cost $\$ 12.50$

## BUD STREAMLINED SCOPE AND UTILITY CABINETS

These are attractive cabinets that are adaptable to a variety of uses. All cabinets are supplied with chassis. Prices shown be low include chassis. The chassis height on all except CU-1991 and CU-1992 is $11 / 2^{\prime \prime}$. CU. 1991 is designed for $3^{\prime \prime}$ cathode ray tube and has a hinged cover to provide easy access to tube or other components. Chassis height is $2^{\prime \prime}$. CU-1992 is designed for a $5^{\prime \prime}$ cathode ray tube and also has a hinged cover. Chassis height, $3^{\prime \prime}$.

| Catalog |  |  |  | Dealer |
| :---: | :---: | :---: | :---: | :---: |

This shield has many uses: Shielding power transformers and chokes, and for covering and protecting various other components in power supplies, transmitters, receivers and other electronic units.
Top and sides are one-piece steel. No. BS- 1244 has perforated steel ends for ventilation. BS-1891 has solid ends. Flanges at bottom provide for mounting. Finished in Black Wrinkle Enamel only.

BUD VERNIER DIAL-GEARED TYPE Freedom of back-lash is obtained by the use of spring-loaded laminated steel gears with a ratio of ten to one. Dial furnished with three paper dial scales on which calibralion marks can be printed. Dial scales are printed with five calibration arcs for wave-band identification and each arc is divided into five equal sections over 180 degrees, which makes each section the equivalent of one rotation of the circular dial, or 100 dial divisions. Automatic clutch and stop prevents pointer from being turned off scale and eliminates possibility of damag to the gears.
The dial is furnished mounted, complete with all hardware. An escutcheon outlines the dial scale, which is further protected by a "Plastacele"' window. Dial scale assembly mounts independent of the gear unit, and may be removed when desired without disturb-
ing the dial drive.
Mounting area of the dial $51 / 4^{\prime \prime} \times 58 / 4^{\prime \prime}$. Depth behind panel $11 / 2^{\prime \prime}$ D-1729.

Where materials are specified Black Wrinkle Finish, and Grey is desired, a charge of $15 \%$ additional will be made.
Prices slightly higher west of the Mississippi River
bUD MINIATURE UTILITY CABINETS with attached Chassis Filling a long wanted need for a small cabinet with a chassis attached to the front panel, these cabinets are indispensable when building electronic devices using miniature tubes. Front and rear panels are removable and fastened with self-tapping screws, permitting easy accessibility. Especially useful for HF converters, television amplifiers and power supplies. Finished in black wrinkle.

## BUD STREAMLINED METER CASES

Designed for all applications requiring a modern meter case. All cases have a sloping front with top corner rounded. Meter cases CM-1241 and CM-1242 have insulators on top for leads to meter. CM-1965 and CM-1966 are furnished without indicators. Finished in Black Wrinkle

Prices slightly higher west of the Mississippi River.

HEAT RADIATING PLATE AND GRID TUBE CONNECTORS

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element.
Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 heat radiation All radiators are machined from special aluminum rod. watts. Al radiators are machined from

## BUD BUTTERFLY TRANSMITTER CONDENSERS

These Butterfly condensers are unequaled for mechanical and elec rical balance in puah－pull amplifier circuits．Where space behind he panel will not permit the use of our Giant or Master condensers these dual condensers are ideal．
Rotor and Stator plates are made from ． $062^{\circ \prime}$ thick，highly pol． shed aluminum with all edges rounded and surfaces highly polished to minimize corona loss and danger of peak voltage flash－over Steatite bars are used as insulators．

These condensers are so designed that a pair of single plate neu traltzing condensers can be fastened to the end plate．Brackets for mounting coil jack bars are furnished with the condensers．All con densers that have an air gap of $.5^{\prime \prime}$ are furnished with brackets for kilowatt coils and the condensers that have． $3^{\text {＂}}$ air gap are furnished with brackets for the mounting of 500 watt coils．The height of the condensers is $61 / 4^{n}$ and the width is $7^{7}$ ．

BUD GIANT TRANSMITTER CONDENSERS—SINGLE SECTION

Modern design，plus preciaion produc－ tion methods，makes BUD GIANT TRANSMITTER CONDENSERS the firat choice of critical engineers for use in such applications as broadcast trans． mitters，high－power trans－oceanic com－ munications equipment，and many other types of highly specialized electronic devices．
BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of $3 / 16^{n}$ thick aluminum end plates，con－ top and bottom of end plates provide for mounting these units，and permit placing of associated inductances directly on the condenser
Rotor and stator plates are accurately stamped from $0.064^{\prime \prime}$
Ric hick highly polished aluminum with all edges rounded to minimize orona toss and danger of peak－voltage hash－over．The plates are eparated by accer the
constant air gap throughout the entirenger
The large two－linger rotor contact spring made from plated Steatite Steatite bars fine atator，and are placed well outside the lectrostatic field to keep dielectric losses at a minimum．

BUD GIANT TRANSMITTER CONDENSERS－DUAL SECTION

These GIANT DUAL－SECTION TRANS－ MITTER CONDENSERS compare in quality with the GIANT SINGLE－ SECTION TUNING CONDENSERS de－ scribed above，and have the same genera constructional features．Insulated tie－rods in these split－stator units eliminate closed loops in the frame．
The rotor－contact consists of four fingers made from heavy－plated spring brass，placed in the center of the rotor assembly under heavy pring tension．This construction reduces series resistance and im proves the efficiency of the unit at the higher frequencies．
When these dual condensers are used in split－stator circuits，the capacity is reduced to one－half the listed value and the voltage ratings are doubled．

## BUD MASTER TRANSMITTING CONDENSERS－SINGLE SECTION

Each condenser is built in a rigid and sturdy frame consisting of two highly polished $1 / 8^{n}$ thick aluminum end plates connected by $1 / 8{ }^{\prime \prime}$ thick aluminum end plates connected by
four $5 / 16^{\prime \prime}$ diameter tie－rods．The end－plates have formed diameter tie－rods．The end－plates facilitate facilitate mounting and to enable the asso ciated inductance to be attached directly to the condenser itself．
The rotors and stators are assembled with plates made from $0.051^{11}$ thick aluminum on which the edges have been rounded and highly polished．These plates are separated by accurately ma－ chined spacers．Large surface cone bearings assure proper align ment and smooth running of rotor with correct tension．Laminated， phosphor bronze wiper springs are placed at each end of the con－ denser bracket to assure positive rotor contact and noise－free opera tion．The stator assembly is insulated from the unit by large Steatite bars which are placed outside the electrostatic field．Rotor shaft is $1 / 4^{n}$ diameter．

BUD MASTER TRANSMITTING CONDENSERS－DUAL SECTION

While the general style and conatruction is identical with the single Master units all tie－rods in this series are insulated by glazed Steatite pillars，thus completely eliminating all closed metallic loops in the condenser frame．A special outstanding that of placing the positive double wiping rotor contact between the two pections at the center of the rotor These features contribut to perfect circuit balance and eliminate the majority of difficultie encountered in ultra－high frequency equipment due to parasitics， circulating currents and poor neutralization．Use BUD condensers throughout and be trouble free．

BUD JUNIOR SINGLE SECTION CONDENSERS
Construction of these condensers features BUD electro－soldered plate assemblies，assuring correct plate spacing，overall rigidity，and light weight Losses are reduced to a minimum by this method of assembly．End－plates are rigidly constructed． Frame has formed angles on top and bottom for mounting the condeaser in any position，allowing associated tuning inductance to be mounted on the condenser frame．The edges of the brass rotor and stator plates are round－ ed and the assemblies are finished in cadmium plating．Steatite insulation is used throughout．Large surface front sleeve bearing， and ball and cup rear bearings，provide consistently smooth rpera－ tion A two－finger spring brass pressure contact wiper assures noise－free and positive rotor contact at all times．

The low minimum capacities of these units make them especially suitable for multi－band applications where a high maximumsto－ minimum capacity is desirable．

## BUD JUNIOR DUAL SECTION

 CONDENSERSRotor contact is made by a four－finger plated pressure spring placed at the center of the rotor shaft between the two sections， thereby providing perfect balance and im． proving the high frequency characteristics．
The tierods are insulated at both ends with Steatite insulators to prevent inductive loops in condenser frame．All other constructional features and materials are the same as used on Junior single sec－ tion condenser．

Panel Space for mounting Junior Condensers， $23 / 4^{\prime \prime}$ wide by $27 / 8^{\prime \prime}$ high．

## BUD MIDGET CONDENSERS

Small size，sturdy construction and high mechanical and electrical efficiency are the outstanding features．Insulation used is Steatite．Rotor and Stator plates are brass and are electro－soldered to their respective rods．All metal parts are cadmium plated． These condensers have both front and rear bearings and are furnished in either mid－line type plates（straight line wave length），or semi－circular plates（straight line capacity）．

## BUD＂CE＂MIDGET CONDENSERS

 SINGLE SECTION DOUBLE BEARINGThese Midget Condensers were designed to meet the rigid requirements in design of efficient ultra－high frequency electronic devices and precision laboratory equip ment．Brass rotor and stator plate stacks are assembled into permanent units by means of electro－soldering，which assures ong life and accurate plate spacing． End－plates of Steatite insulate the mount ng bushings and angles from the rotor and stator assemblies．A arge front sleeve bearing and rear ball thrust bearing provide for mooth rotation．Special wiper contact provides noise－free tuning． All metal parts are cadmium plated

Rotor plates are semi－circular shaped．
Provision for either panel or base mounting．

## BUD TINY MITE TUNING CONDENSER

## SINGLE SECTION

This series of condensers has been designed for applications where space or weight are limiting factors and for tuning of ultra－high frequency ircuits．Rigid construction，close fitting bear－ ing，positive rotor contact and Steatite insulation are the outstanding features．Cadmium plated， soldered，brass plates and rods insure high frequency efficiency．

## BUD FEED－THROUGH AND BASE MOUNTED

 NEUTRALIZING CONDENSERSIn circuits utilizing tubes with the grid lead termi－ nated in the base，feed－through type of neutralizing condenser is particularly suited．One hole is required for mounting of feed－through condensers．Neutraliz－ ing condenser illustrated is feed－through type．Plates are made of aluminum，rounded at edges to cut down losses．After proper tuning is attained，mov－ able plate can be locked with the knurled nut．
No． 890 and No． 852 are ideal neutralizers for popular low power beam tubes．No． 890 condenser is base mounted only

TRANSMITTING CHOKES

Here are two heavy duty R．F．Chokes that can really take it in high powered transmitter plate circuits． Each choke is wound on $9 / 16^{\prime \prime}$ dia．Steatite rod，has connection lugs and a mounting foot

All chokes have a heavy ceramic coating which orevents moisture absorption and enables them to withstand momentary overloads with－ out collapsing the individual pies．

Consists of five graduated pies wound in continu－ ous winding．Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum． Overall height $31 / 4^{\prime \prime}$ ．

## ULTRA HIGH FREQUENCY R．F CHOKES

These chokes were designed to meet the re－
 quirements of builders of ultra－high frequency receivers and transmitters．Consists of ceramic rod with a single layer winding terminated with strap leads at each end．Particularly suitable for use on 2 or 6 meters．CH－ 570 is supplied with a mount－ ing foot and is sometimes used as a filament choke in certain types of high frequency oscillator and amplifier circuits．

## IRON CORE R. F. CHOKES

The efficiency of any circuit requiring an $R$. $F$ choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved " $Q$ "' possible with this lic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to $50 \%$ less for a given the D C. than for regular air-core typea. Thus, the D.C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small aquare shield cans measuring $13 / 6^{n} \times 13 / 3^{n} \times 1^{7} / 6^{n}$.

SINGLE CONTACT CABLE CONNECTORS
Positive unbreakable contacts for single. conductor microphone cabie are provided by these shielded connectors. Body is made of brass, bright nickel-plated. Accidental disconnections are rendered impossible by coupling ring which, when tightened, insures perfect contact between soldered connections. Cord protectors of steel spring wire will take cablea up to $1 / 4^{n}$ diameter.

## PANEL BEARING ASSEMBLIES

Nos. PB-530 and PB-531 consist of a regular $1 / 4^{" ~}$ shaft bearing with $6^{\prime \prime}$ and $3^{n}$ length of $1 / 4^{" 1}$ brass rod inserted and held in place by washers to prevent shaft from shifting. These two assem. blies will facilitate the panel control of condensers, potentiometers, etc., which must be mounted a distance from the
panel. Bearing fits in $13 / 32^{\prime \prime}$ hole and on panels up to $5 / 16^{\prime \prime}$ thick. No. PB-532 is bearing only without shaft.

## BUD PHONE PLUGS

All metal parts on these excellent phone plugs are machined from brass and are nickel plated. Unshielded plugs have handles of black bakelite; shielded types have attrac. tive brass knurled handles, bright nickel plated.
No. FP-1946 is supplied Without a Handle, and is used as an adapter between a female microphone cable connector and a regular plug jack.

| Catalog |  |  | Overall | Bushing | Dealer |

## BUD 75-WATT TRANSMITTER COILS

These coils are distinguished by their rigid conatruction, attractive appearance and conservative power rating. The ceramic mounting base keeps the coil a safe distance from the chassisit also permits casy coil removal without disturbing the winding. All coils are
mount in 5 prong tube sockets.

OEP and OCP Coils are designed for use in circuits using Pentode tubes with high output capacity such as 6L6, 807, etc.

OEL coils have fixed link and are not tapped.
OCL have fixed center link with main winding center tapped.
OLS have adjustable center link, main winding center tapped.
OES have adjustable end link and are not tapped.
OEP have adjustable end link and are not tapped
OCP have adjustable center link main winding center tapped.

## BUD 50 WATT BAND

## SWITCH ASSEMBLY

ONS-1 - 50 watt, 10-15-20-40-80 meter band switch assembly, ideal for all low-power oscillators, buffer or amallifier stages where the input power does not exceed 50 watts and where capacity coupling is used. A 5 -position dial plate with suitable marking is furnished.

| Catalog Number ONS-1 | Width $51 / 2 \mathrm{n}$ | $\underset{21 h^{\prime}}{\substack{\text { Height }}}$ | Depth | Dealer Cost $\$ 5.40$ |
| :---: | :---: | :---: | :---: | :---: |

## BUD VARIABLE LINK

 TRANSMITTER COILSThe most effective method of varying the loading of an R. F. Stage is by the use of a variable link to the plate tank, feature incorporated in all Bud Vari ble Link Coils. The link winding is connected to the jack bar into which the coils are plugged, and this link may be used with any of the coils regardless of the band being worked. The link winding is so arranged that it may be readily controlled from the panel by means of an extension shaft if recuired. 150 WATT RATING

## BUD 100 WATT BAND

SWITCH ASSEMBLY
Made in two types, XCS-1 and XES- 2 Each unit covers the $10-15-20-40$ and 80 meter bands. XCS-1 is designed for use in push-pull plate or grid circuits or where plate neutralization is used. The coils in this assembly are center-tapped and center-linked. A dual section 200 mmfd . condenser is required to tune all bands. The JC-1569 condenser is especially recommended for circuit applications in order to obtain the highest possible efficiency on the high frequency bands.

XES-2 is designed for use in single-ended plate or grid circuits. The coils in this assembly are end-linked. A 100 mmfd condense such as Bud JC-1534 is required to tune all bends.

* Denotes tube plus circuit plus tank plus output coupling capacity required to resonate coil at low frequency end of band.

## PLUG-IN COIL FORMS

Three sizes are available in these Plug-in Coil Forms to suit all requirements. The material used is a special bakelite having a very low loss factor. Eight ribs are molded on the walls of each form to hold the winding away from the form itaclf and give the coil higher efficiency. Each form has a molded flange at the top to aid in removing the coil from ita socket, and the pins fit standard tube sockets.

## TYPE "C" CABINET RACKS-for 19" Rack Panels

These are professional type racks that have been used on many commercial installations, and make a DeLuxe job of any amateur or broadcast transmitter. The racks are of all-steel construction, welded into an integral unit, to give a lifetime of service.

All panel mounting screws are concealed by means of a full length corner trim on each side at the front. In keeping with modern design, this front trim is rounded on the vertical corners. The rear corners are finished with regular angle trim. The front of the rack is trimmed with chrome moulding top and bottom. The door has a grille at top and bottom, and is hung on sturdy loose-joint hinges; it is held closed by two flush snap-action catches. Additional ventilation is provided
by louvres at the sides. The panel mounting angle irons are $3 / 16^{\prime \prime}$ thick, with mounting holes accurately drilled and tapped $12 / 24$ thread on multiple $11 / 4^{\prime \prime}-1 / 2^{\prime \prime}$ spacings. The rack is made from $1 / 16^{\prime \prime}$ thick cold rolled steel, rigidly braced and reinforced throughout; the bottom is $7^{7}{ }^{\prime \prime}$ thick steel. A rectangular opening is provided in the bottom for conduits, leads, etc. A duplex receptacle and outlet box are provided in the back under the door.

FINISHES: Either black ripple or slate grey ripple enamel. Corner trims are supp'iec in dull black, slate grey smooth enamel, or aluminum grey lacquer at extra cost.
RACKS WITHOUT LOUVRES: To permit racks to be set up in gangs or rows of two or more, the louvres at sides are omitted. Racks may be joined by a flat trim fastened to front of adjacent racks, overlapping both racks. Shipped with corner trim as illustrated; where specified, front joining trim will be substituted in place of corner trim at same price. Front joining Trims cannot be used on racks with front doors.

## TYPE "C" TRANSMITTER RACKS

STANDARD TYPE for 19" \& 30" Rack Panels

Similar to standard type "C" racks listed on page J-85 except that they have been reinforced at rear corners for use with heavier apparatus. At the rear, knockouts are provided for conduit and 4 " square duct, as well as a double convenience outlet with receptacle. Knockouts are also supplied at sides for conduit, suitable for entry of cables when units are ganged. The rear door, which is removable, has ample louvres for ventilation, and is covered on the inside with mesh screening. Front trim rounded on vertical corners. Racks are regularly supplied with corner trim for use as a single unit, but will be furnished with suitable front connecting strips for ganging in rows of two or more without additional charge.

FINISH: Black ripple enamel with dull black corner trim is standard. Slate grey ripple enamel furnished without additional charge, if so specified. For aluminum grey lacquer finish, add $10 \%$ to prices.

PANELS: Type "C" panels to fit the C-2218 and G-2219 racks are listed on page J-89. For cost of $30^{\prime \prime}$ blank panels to fit the C-3024 rack, add $100 \%$ to prices of $19^{\prime \prime}$ panels on page J-89.

| Catalng | Overall | Panel | Clear | Ship. | Net |

## DELUXE TYPE-for 24" Rack Panels

This rack is undoubtedly the finest standard transmitter rack which we have ever made. It is constructed of $1 / 16^{\prime \prime}$ sheet steel, with a base of $1 / 8^{\prime \prime}$ steel, and is reinforced for use with heavy duty apparatus. The meter panel at the top is $7^{\prime \prime}$ high, has a glass front, and is provided with a blank bakelite sub-panel. The inner sides of the rack are reinforced with $1 / 8^{\prime \prime}$ steel channels, to which may be attached angle brackets to support the chassis. These channels may also be used as wiring ducts.

The rack will accommodate panels $24^{\prime \prime}$ wide; the front panel mounting angles are recessed to allow $2^{\prime \prime}$ clearance behind the front door for dials, knobs, etc. The front door is mounted on concealed hinges; the rear door has loose-joint hinges so that it may be removed. Both doors are equipped with handles, and the front door also has a lock. Blank panels $24^{\prime \prime}$ wide can be supplied at prices listed on page J-89 plus $50 \%$.

No. G-8024
Overall dimensions: $831 / 8^{\prime \prime} \times 301 / 2^{\prime \prime} \times 27^{\prime \prime}$.
Available panel space: $70^{\prime \prime} \times 24^{\prime \prime}$.
Clear inside width at front: $24^{\prime \prime}$
Clear inside width at rear: $261 / 2^{\prime \prime}$.
Clear inside depth behind front panels: 23".
Shipping weight: 540 lbs .
Net Price: \$225.00.
Black ripple enamel finish is optional.

## TYPE "A" ENCLOSED RELAY RACKS FOR 19" RACK PANELS

All of the racks on this page are shipped "knockeddown" for easy assembly with all necessary bolts supplied. Made for standard 19" wide panels, they are substantially constructed from $1 / 16^{\prime \prime}$ cold rolled steel; panel mounting angles are of $\frac{711}{64}$ steel, accurately drilled on universal centers for either "Amateur" or type "C" panels, tapped for $10 / 32$
machine screws. Panels fit into a recess, so that edges are not exposed. Louvres in sides and screen sections in rear door provide ample ventilation. Rear door is hung on sturdy loose-joint hinges, and closed by a flush snap catch. Ample panel mounting screws and washers supplied with each rack.

## STANDARD TYPE

This completely enclosed rack will give your job the "professional appearance" so desirable on transmitters, test equipment, public address systems, etc. lt is made in three heights in accordance with specifications below:

## *BLACK RIPPLE ENAMEL

| Cat. No. | Overall Size | Panel Space | Shpg. Wt. Ibs. | Net Price |
| :---: | :---: | :---: | :---: | :---: |
| ER203 | $42 \times 21 \times 16 \frac{1}{2 \prime}{ }^{\prime \prime}$ |  | 85 | \$24.00 |
| ER205 | $661 / 2 \times 21 \times 161 / 2^{\prime \prime}$ | 611/4" | 120 | 36.00 |
| ER207 | $821 / 4 \times 21 \times 161 / 2^{\prime \prime}$ | $77^{\prime \prime}$ | 145 | 44.10 |

## ROUNDED CORNER TYPE

The ideal streamlined rack for your next transmitter or P.A. system. The vertical corners at the front of the rack are rounded, and the top and bottom are nicely trimmed with red striped chrome finished mouldings. The uniform slate grey ripple finish gives the assembly a superb exterior appearance. Combines modern styling and an aftractive price.

## *SLATE GREY RIPPLE ENAMEL

| *Black ripple is optional. |  |  |  |  |

## DELUXE TYPE

Produced in the new "streamlined" style, this rack is fully in keeping with modern design. The removable vertical corner mouldings are rounded and cover the panel mounting screws, the same as is used on our Type "C" commercial racks. The top, which has also been "streamlined," is perforated at the back to provide additional ventilation. The top and bottom are trimmed with red striped chrome finished mouldings.

These panels are made so that the meters may be recessed from the front of the panel. Meters are protected by a plate glass insert. allowing $3 / 4 / 4$ clearance in back of panel. A blank bakelite sub-pane! is provided. The clear sub-panel space is $41 / 3^{\prime \prime} \times 15^{\prime \prime}$ on the $19^{\prime \prime}$ wide panel which is sufficient for $4-3^{\prime \prime}$ meters. On the $24^{\prime \prime}$ and $30^{\prime \prime}$ wide panel the clear sub-panel space is $53 / 4$ " $\times 20^{\prime \prime}$ and $53 / 4$ " $\times 26^{\prime \prime}$ respec. space is $5 \frac{1}{4} \times 20^{\prime \prime}$ and $53 / 4 \times 26$ respec.

## BLANK STEEL CHASSIS BASES

STANDARD TYPE
Construction is the same as our heavyduty chassis. Stamped from one piece of cold rolled steel, and have four solid sides with welded corners. Bottom edges are flanged in on four sides to provide additional reinforcement, and they are drilled for bottom plates. The chassis are made from $\# 20$ gauge steel, except those marked (*) which are stamped from $\frac{1}{1}$ " steel exactly like our heavy-duty type.

## TBS-50 TRANSMITTER

 America's Most Versatile Small Transmifter
## 50 WATTS - 8 BANDS - PHONE OR CW NO PLUG-IN COILS

80, 40, 20, 15, 11, 10, 6 and 2 METERS
(Completely wired and tested-not a kil)
Everything about the TBS-50 was designed to please any operator of this 50 Watter Crystal controlled on all hands, yet requires no oscillator or multiplier tuning. Eight bands from 80 to 2 meters with band switch and no plug-in coils. Compact, the TBS-50 serves equally well for fixed station or mobile operation. Will operate from AC power packs un to 450 volts at 275 . ma. or dy namotor supply for portable mobile operation. As an exciter unit, R.F. output is capable of Iriving 1000 watt Class C amplifier. Separate winding on modulation transformer permits audio system to be used to drive 500 watt modulator, Employs Pi antenna matching net work. Separate coaxial output terminal for $144-148 \mathrm{Mc}$. antenna. Power input to final is Separate coaxial output terminal for $144-148$ Mc. antenna. Power input to final is
50 watts with 450 volt power supply on Bands 1 through 7 , 30 watts on 13and 8. All 50 watts with 450 volt power suppiy on Bands 1 through ?, 30 watts on Rand 8 . Al
circuits are sufficiently broad to tune completely over any band with adequate excitation for any frequency on the first six bands. Retuning may be necessary to cover the entire 6 and 2 meter bands. No tuning adjustments are necessary except those necessary to resonate the final output to the antenna. TBS-50 may be mounteit on rack panel with power supply.
CONTROLS: Band Switch, Excitation Control, Antenna Loading, Amplifier Tuning, Power On Switch, Carrier On Switch, Meter Switeh, CW-Phone Switch. Antenna network will match non-reactive feeder of approximately $50-500$ ohms. Microphone input desigued to use inexpensive single button carbon type microphone. Frequency calibration chart on front panel as well as 0-10 ma. DC miliammeter. TUBES: 6AQ5 Crystal Oscillator, 6AQ5 Buffer-Multiplier, 807 Final Amplifier, $2-6 \mathrm{~L} 6$ Class B Modulators. In sturdy steel cabinet, $8^{\prime \prime}$ wide by $12^{\prime \prime}$ high by $8^{\prime \prime}$ deep. TBS-50 Complete with Tubes

## TBS-50A WITH CRYSTAL-MICROPHONE AMPLIFIER

The TBS-50 amateur transmitter was originally designed to use a simble, inexpensive button carbon microphone. ... There have been so many requests, however, for a crystal microphone model that we have developed a small three-tube preamplifier which is incorporated in the TSS-50A at time of manufacture. This preamplifier has sufficient gain so that any high impedance microphone having an output level of approximately - 50 db can be used.
The first speech amplifier tube ( $6 A U 6$ ) is pentode connected and feeds the second speech amplifier ( 6 AU6) triode connected. which drives the grids of the regular 6 L 6 modulators. TBS-s0A Complete with Tubes.

## POWER SUPPLIES

Developed specially for use with the TBS-50 and TBS-50A

APS-50

Delivers 425 volts at 275. ma. and 6.3 volts at 4 amps. With Hi - Lo switch. May be mounted on Rack Panel as shown at right.

APS-50-for 110 volt AC input $\$ 39.50$

DPS. 50
For portable operation. Delivers same voltages and current as APS-50.

DPS-50-for 6 volt operation 300 volts 275 ma ............ $\$ 87.50$

DPS-50-for 12 volt operation, same as APS-50

RACK PANEL

TBS-1A
Size $121 / 2^{\prime \prime}$ by $19^{\prime \prime}$ - Specially drilled for mounting TBS-50 or TBS-50A and Power Supply APS-50. In new black crackle finish.
$\$ 5.75$

## TELEVISION KITS, CABINETS

 INSTRUMENTS COMPONENTSEliminate the Variables in

Television Installation with the TRANSVISION FIELD STRENGTH METER

Do not depend on picturesUse absolute measurementsDirect Meter Readings!

Improves Installations!! Saves $1 / 2$ the Work!!
Has numerous features and advantages: including - (1) Measures actual pieture signal strength ... (2) Permits actual picture signal measurements without the use of a complete television set... (3) Antenna orientation can be done exactly... (4) Measures losses or gain of various antenna and lead-in combinations $\therefore$. (5) Useful for checking receiver re-radiation (local oscillator) ... (6) 12 CHANNEL SELECTOR . . (7) Amplitudes of interfering signals can be checked... (8) Weights only 5 lbs....(9) Individually calibrated ... (10) Housed in attractive metal carrying case (11) Initial cost of this unit is covered after only 3 or 4 installations ... (12) Operates on $110 \mathrm{~V}, 60$ Cycles, AC.
Model FSM-1, complete with tubes

TRANSVISION "SERYICE NOTES"

The Key to
Successful Television Servicing

[^12]
## TRANSVISION TELEVISION and FM

## SWEEP SIGNAL GENERATOR

Complete frequency coverage from 0.227 MC with no band switching. . Sweep width from $0-12$ MC completely variable. . Accurately calibrated built-in marker generator

ADOITIONAL FEATURES: (1) Dial calibrated in frequency. . . (2) Self-contained markers readable directly on the dial to $.5 \%$ or better. (No external generator required to provide the marker signals.) . . . (3) Crystal controlled output makes possible any crystal controlled frequency from 5-230 MC. (4) Plenty of trequency from voltage output-permits stage-by-stage alignment. . (5) Output impedance 5-125 ohms . (6) Directly calibrated markers 20-30 MC or trap, sound and video IF alignment.
(7) RF for alignment of traps for IF channels when a DC volt meter is used as the indicati~g medium. . . (8) Unmodulated RF signals to provide marker pips simultaneously with the be controiled as to output strength in thers can oscillator. (10) Power supply completely oscillator. . (10) Power supply completely shielded and filtered to prevent leakage. (1) All active tubes are the new modern minature type.

TRANSVISION ALL-CHANNEL

TELEVISION BOOSTER

CONTINUOUS TUNING

To assure television reception in weak signal areas, or areas which are out of ronge of certain broadcasting stations, Transvision engineers have designed this new booster. It increases signal strength on all television channels. Tunes all television channels continuously. Can be used with any type of television receiver. Unusually high gain in upper television channels.
Model B-I
List
TRANSVISION Complete Line of TELEVISION COMPONENTS Essential units for building a quality tele vision set . .. Transvision makes available a complete line of high quality parts comFilter Chpriced. Included in this line are Focus Coils, Difypes of Transormend of course major units such as Picture Tubes, Antennas, Lenses, etc., etc
WRITE FOR COMPONENTS FOLDER P-I

## TRANSVISION'S NEW REMOTE CONTROL UNIT - for use with ANY TELEVISION SET

OPERATES ANY TELEVISION SET from a DISTANCE up to 50 feet.

Now you can sit back in your easy chair, a comfortable distance away. and operate your TV set. This new Transvision REMOTE CONTROL UNIT turns ANY SET on, tunes in stations, controls contrast and brightness, turns set off. Especially ideal for commercial installations where the TV set is
 inaccessible

TUNER UNIT is a high gain, all-channel, CONTINUOUS TUNING UNiT (about 50 microvolt sensitivity).

Model TRCU Remote Control Unit with $25-\mathrm{ft}$. cable.

15" Picture Enlarging Lens

$10^{\prime \prime}$ Lens ( 52 sq . in. picture) $12^{\prime \prime}$ Lens ( 75 sq . in. picture) $15^{\prime \prime}$ Lens ( 125 sq. in. picture) All lenses are provided with mounting brackets.

## TRANSVISION All-Angle LENSES for ALL TV SETS

Give picture sizes up to 150 sq. in. Exclusive patented feature makes image visible from wide angle. Lenses come with adapter for installation on ANY $7^{\prime \prime}$ or $10^{\prime \prime}$ picture tube, and with color kits. All Angle Lens for $7^{\prime \prime}$ tubes (gives 75 sq. in. picture)................. All-Ançle Lens for $10^{\prime \prime \prime}$ tubes (gives 150 sq. in. picture) Net

TRANSVISION "SOLDETRON"

FEATHERWEIGHT SOLDERING IRON 3 Ounces-Does Job of 200 Watt IronInterchangeable Tips: No Cleaning or Filing: Easy to Use for Every Type of Soldering.

## "Flip-Up" TV ANTENNA

- PRE-ASSEMBLED, ready for use. Just "flip-up" (like an umbrella) and install.
- PRE-WIRED-just connect your lead-in to the two terminals.
- RECEIVES ALL CHANNELS.
- ALL-DIRECTIONAL; can be oriented for the weakest station in an area with assurance that all other channels will be brought in equally well.
- EXTREMELY SENSITIVE. Unusual high gain on upper channels. Ideal for fringe areas.
Completely assembled with rotatable base, 7-it. mast, guy ring and guy wire.
Additional 7 - ft . masts, to build antenna up to 19 ft ., at small extra cost.

## INDOOR TV <br> \section*{ANTENNA}

For Ideal Reception on Al! Channels - - All-directional Transvision's sensational new "Telebird" is the ideal indoor antenna. Excellent reception on all channels. Eliminates "ghosts". Install
 "TELEBIRD" in thy, place it on window sill or anywhere the room. Will out-perform many outdoor put it away.

## VISION FILTER

For $77^{\prime \prime}, 10^{\prime \prime}$ or $12^{\prime \prime}$ sets. For $10 B L$ or $15^{\prime \prime \prime}$ sets.

## MAGIC EYE KIT

Magic eye kit-for $12 / 15^{\prime \prime}$ deluxe kits only. Includes eye, assembly, escutcheon, instructions.

## Dhimore perkimed TELEVISION KIT

## TUNER, VIDEO and SOUND CHANNELS

 are completely wired and PRE-ALIGNED by PhilmoreAll components are mounted by Philmore

Experience has canvinced us that pre-alignment of the vital channels is the only satisfactory method of kit assembly. That is why the Tuner, Video and Sound channels are completely wired and fully aligned in our labaratory. We also assemble ta the chassis transformers, electrolytic candensers, tubes, high voltage shields, valtage divider shield, chokes. Sockets and other parts are riveted to the chassis which insures gaod contacts and eliminates any possibility of loose connections.

## Similar to famous RCA 630TS and 830TS Circuits

## Designed for $10^{\prime \prime} 12^{\prime \prime} 15^{\prime \prime} 16^{\prime \prime}$ PICTURE TUBES

SIMPLIFIED STEP-BY-STEP INSTRUCTIONS 36 page manual of instructions on assembly and operation generously illustrated. Six full scale lithographed schematic and pictorial diagrams. All small parts packaged in individual envelopes, clearly numbered and identified on blueprints.

When balance of simple wiring is completed, no further alignments are necessary.

Features:

- New, WIDER-SCREEN television for BIGGER pictures on all size tubes.
- 30 RCA tubes (inc. rect. and video).
- New, improved daylight viewing.
- Increased voltage power pack.
- Long range reception.
- Complete All-channel tuning.
- PM Speaker with choke (better tone and volume-no hum).
- Special mounting bracket for $16^{\prime \prime}$ tube available.
- Ideal for custom-built installations.
(Philmore IV receivers also available completely wired and assembled.)

## Model 511 - AM-FM RADIO CHASSIS

> A Low-Priced Replacement Chassis.
> Fits All Types of Console Cabinets.

## DEALER - SERVICEMAN. <br> Net $\$ 98.00$

L Model 511 is a Superheterodyne AM-FM Radio Receiver chassis designed to operate on : $105 / 125$ volts $\mathrm{AC} ; 50 / 60$ cycles. Power: consumption: 85 watts.
II. FEATURES: 1. AC Superheterodyne AM-FM receiver. - 2 . Improved Frequency Modulation Circuit. Drift Compensated. 3. 12 Tubes plus Rectifier and Tuning Indicator. - 4. 3 Dual Purpose Tubes give added performance. - 5. Treble Tone Control. - 6. 6-Gang Tuning Condenser. - 7. Full-range Bass Tone Control. - 8. High-Fidelity AM-FM Reception. - 9. Automatic Volume Control. - 10. 13-watt (maximum) Push-Pull Audio Output. - 11. 12-inch PM Speaker with Alnico V Magnet, 25 watts. 12. - Indirectly Illuminated "Slide-Rule" Dial. - 13. Antenna for AM and Folded Dipole Antenna for FM reception. 14. Provisions for external antennas. - 15. Wired for Phonograph Operations. - 16. Licensed under RCA patents. - 17 RMA listed. - 18. Multi-tap Output Transformer, 3.2, 8 and 500 ohms.
III. DESCRIPTION: Model 511 receiver features the latest in postwar engineering design. The FM circuit includes a tuned RF Amplifier stage, 2 stages of high gain Intermediate Frequency Amplitication and an advanced design Ratio Detector circuit Which provides low noise level between stations, freedom from AM interference, ease of tuning and ample gain for satisfactory operation with an indoor antenna in most urban locations. The AM circuit includes a Tuned RF Amplifier for improved selectivity and freedom from spurious responses. High Fidelity reproduction on FM and AM is insured through well-engineered circuits and the use of hirh quality parts. The tuning ranges are : Standard Broadcast - 535 to 1720 lic. FM Band - 88 to 108 Mc .
The large easy-torend "slide-rule" type dial is illuminated by two pilot lights which also provide illumination for the red plastic dial pointer. A high ratio flywheel drive on the tuning condenser provides smooth tuning throughout the range of the receiver.
The receiver has two antennas: a Loop antenna for Standard Broadcast and a Folded Dipole antenna for the FM band. Provision is made for connecting an external Phonograph Pickup to the high-fidelity audio amplifier system of the receiver. The Multi-tap output transformer will permit the use of Most Popular Type Hi-Fidelity Speakers and dividing networks, or to match a standard $500-$ ohm line for Remotẹ installations.
IV. TUBE COMPLEMENT: 1 AM-RF Amplifier tube. - 1 FM-RF Amplifier tube. - 1 AM Oscillator, Mixer tube. - 1 IF Amplifier tube. - 1 FM Detector Driver tube, - 1 FM Detector tube. 1 FM Oscillator tube. -1 FM Mixer tube. -1 AM Detector, Audio Amplifier tube. - 1 Audio Amplifier-Inverter tube. - 2 Push-Pull Power Amplifier tubes. - 1 Rectifier tube. - 1 Electron Ray Tuning Indicator tube.
V. ACCESSORIES: The Model 511 chassis is supplied ready to operate, complete with tules, antennas, speaker and all necessary hardware for mounting in a table cabinet or console, including escutcheon.

VI, CFASSIS DIMENSIONS AND WEIGHT: Chassis Dimensions : $131 / 2^{\prime \prime}$ wide $\times 81 / 2^{\prime \prime}$ high $\times 10^{\prime \prime}$ deep. Carton Dimensions: (2 units) $20^{\prime \prime} \times 141 / 4^{\prime \prime \prime} \times 10 \frac{1}{\prime \prime}$. Net Weight: $161 / 2 \mathrm{lbs}$. each.

## Model 512 - AM.FM TUNER

Outstanding AM-FM TUNER, self-powered for use with all types of Audio Amplifiers.

## DEALER - SERVICEMAN

$\qquad$ .Net \$82,15
I. Model 512 Superheterodyne AM-FM Radio Tuner chassis is dcsigned to operate on: $105 / 125$ volts AC; $50 / 60$ cycles. Power Consumption: 66 watts.
II. FEATURES: 1. AC Superheterodyne AM-FM tuning circuit. - 2. Improved Frequency Modulation Circuit, drift compensated. -3. 9 Tubes plus Rectitier and Tuning Indicator. - 4. 3 Dual Purpose Tubes give added performance. - 5. Automatic Volume Control, -6. 6-Gang Tuning Condenser. - 7. High-Fidelity AM FM Reception. - 8. Indirectly Illuminated "Slide-Rule"' Dial. 9. Antenna for AM and Folded Dipole Antenna for FM Reception. - 10. Provisions for external antennas. - 11. Wired for Phonograph Operations. - 12. Licensed under RCA patents. 13. RMA listed. - 14. High and Low Level Audio Output. - 15. Utility Socket provides power for magnetic reluctance pickup pre-amplifier.
III. DESCRIPTION: Model 512 Tuner features the latest in postwar engineering design. The FM circuit includes the tuned RF Amplifier stage, 2 stages of high-gain Intermediate Frequency Amplification, and an advanced design Ratio Delector circuit which provides low noise level between stations, freedom from AM interference, ease of tuning and ample gain for satistactory operation with an indoor antenna. The AM circuit includes a spurious responses. High-Fidelity selectivity and freedom from spurious responses. High-Fidelity reproduction on FMM and AM is insured through well-engineered circuits and high-quality parts.
Line Voltage is made available at two outlets at the rear of the tuner; these are actuated by the tuner on-off switeh To facilitate custom installations, $\mathrm{L}+$ and Heater Voltages are made available at a utility socket mounted in the tuner. This is suitable for powering auxiliary pre-amplifiers as used with variable reluctance type pickups. Holes for 2 additional controls are available for the convenience of the user. The tuning ranges are: Standard Broadeast - 535 to 1720 Kc . FM Mand - 88 to 108 Mc . The receiver has two antennas: a Loop antenna for Standard Broadcast and a Folded Dipole antenna for the FM Band.
Provision is made for connecting an external phonograph pick-up to the tuner audio system, for use with all types of amplifier installations. Two audio output channels are provided, one at high level, the other at low level; both are controlled by the tuner. volume control.
IV. TUBE COMPLEMENT: 1 AM-RF Amplifier tube. - 1 FM-RF Amplifier tube. - 1 AM Oscillator, Mixer tube. - 1 FM Detector Driver tube. - 1 IF Amplifier tube. - 1 FM Detector tube. Audio Amplifier tube. - 1 Electron Ray Tuning Indicator tube. - 1 Rectifier tube.
V. ACCESSORIES: Model 512 chassis is supplied ready to operate, complete with tubes, antennas, and all necessary hardware for mounting in a table cabinet or console, including escutcheon.
VI. CHASSIS DIMENSIONS AND WEIGHT: Chassis Dimensions: $1311 / 2^{\prime \prime}$ wide $\times 81 / 2^{\prime \prime}$ hiph $\times 9^{\prime \prime}$ deep. Carton Dimensions :

## Model 513

## I. FEATURES:

1. Superheterodyne AM-FM circuit.
2. Improved Frequency Modulation Circuit, stabilized against drift.
3. 10 Tubes plus Tuning Indicator.
4. Tuned RF Circuits on AM and FM.
5. 6-Gang Variable Tuning Condenser.
6. Automatic Volume Control.
7. Full Range Bass Boost Control.
8. Full Range Treble Control.
9. Indirectly Illuminated 'Slide-Rule' Dial.
10. Fly Wheel Tuning Drive.
11. Antenna for $A M$ and Folded Dipole Antenna for FM.
12. Provision for external antennas.
13. Wired for Phonograph Operation.
14. Utility Socket provides power for magnetic reluctance pickup pre-amplifier.
15. Licensed under RCA.
16. RMA listed.
II. Model 513 AM-FM Tuner employs 10 tubes plus a tuning indicator tube in a superheterodyne circuit. It is designed to operate from an external power supply and feed into an external audio amplifier. (Model 514 DeLuxe Power SupplyAudio Amplifier is specifically designed to work in conjunction with the Model 513 Tuner.) The power requirements for the tuner are 6.3 volts AC or DC at 3.5 amperes, and 200 volts DC at 60 milliamperes.
III. DESCRIPTION : The Model 513 Tuner incorporates the latest developments in engineering design. It is intended for the discriminating listener. Separate, Tuned RF stages are employed on both the AM and FM bands to provide extreme sensitivity and minimize spurious responses. The FM circuit also includes two stages of high-gain intermediate frequency amplification to drive a ratio detector circuit of advanced design. AM : 535 Kc . to 1720 Kc . $\qquad$ FM: 88 Mc . to 108 Mc .
IV. TUBE COMPLEMENT: 1 6BA 6 AM-RF Amplifier tube. - 1 6BAG FM-RF Amplifier tube. 1 6BE6 AM Converter tube. - 1 6BE6 FM Mixer tube. - 1 6C4 Oscillator tube. - 1 6SG7 AM-FM IF Amplifier tube. - 16 SH 7 FM-Ratio Detector Driver tube. - 1 6.55 AM-Detector AVC tube. - 1 6SQ7 AM-FM 1st Audio tube. - 1 6AL5 FM Ratio Detector tube. - 16 U 5 Tuning Detector tube.
V. CHASSIS DIMENSIONS: $131 / 2^{\prime \prime}$ wide $\times 81 / 2^{\prime \prime}$ high $\times 9^{\prime \prime}$ deep. Weight: $91 / 2 \mathrm{lbs}$.

Model 514 Amplifier \& Power Supply.

## Model 514

1. Model 514 DeLuxe Power Supply and Audio Amplifier contains 6 tubes, plus 2 rectifiers in a high gain push-pull amplifier circuit. It is desibned specifically for use in conjunction with the Model 513 Tuner, but may he used wherever a high quality audio amplifier may be required. Power requirements are : 105/125 volts AC; $50 / 60$ cycles; power consumption: approximately $\mathbb{1}: 0$ watts.

## II. FEATURES:

1. Parallel Push-Pull Output Circuit.
2. Self-Balanced Phase Inverter System.
3. Extended Range High-Fidelity Response
4. Inverse Feedback Circuit.
5. 6 Tubes plus 2 Rectifiers.
6. Output Impedance selective for any speaker requiremet ( 4 to 500 ohms ).
7. License under RCA.
8. RMA listed.
III. DESCRIPTION: The Model 514 Power SupplyAudio Amplifier employs the best in proven engineering design. Six tubes are incorporated in a balanced phase inverter parallel push-pull amplifier. By the use of an inverse feedback circuit, high-fidelity performance is obtained.

## IV. TUBE COMPLEMENT:

 2 6.J5 Audio Driver tubes. 4 6V6 Audio Output tubes. -2 5 Y3 Rectifier tubes.V. $131 / 2^{\prime \prime}$ wide $\times 7^{1 / 2^{\prime \prime}}$ high $x$ $7^{\prime \prime}$ deep. Weight 18 lbs .

## SPECIALISTS IN TELEVISION

## TELEVISION ANTENNA AMPLIFIER <br> Model TVA

For improved television reception in fringe areas and indoor antenna installations. Model TVA contains two type 6AK5 special high frequency tubes in a unique dual amplifier circuit. Antenna connects through automatically when booster is turned off thus providing normal reception. Supplied complete with tubes in attractive walnut or mahogany cabinet
$\$ 28.50$ List*

## TELEVISION ANTENNA AMPLIFIER

Model TVX
Similar to Model TVA except for extra stage of amplification on the high frequency channels. Model TVY is popular for installations that require unusual gain in the high fregnency TV channels ( $7-13$ ). Complete with instructions.
\$37.50 List*

## DE LUXE TELEVISION PREAMPLIFIER Model TVZ

A three stage gang tuned booster for special installations. Especially useful in extreme fringe areas where quiet noise conditions prevail Model TVZ contains 3 type 6 AK5 tubes in a special patent applied for inductance-capacity tuning system. Housed in walnut or mahogany cabinet with illuminated dial
\$54.50 List*

## GENERATOR TSW-50

One of the first popularly priced broad bathd sweep generators on the market. The TSW-50 employs an electio me chanical type of sweel
 circuit providing for excellent linearity and wide sweel, widtl. Frequency range from 4 to 220 mc . sweep width range 500 lsc to 12 me. Supplied complete with tubes and cables, housed in an attractive grey crackle cabinet with etched aluminum front plate
$\$ 68.50 \mathrm{Net}$

## TELEMARKER Model TM-100

An absorption type marker unit for use in conjunction with the TSW-50 or similar sweep signal generators, as a frequency marker on the visual alignment trace

Model TM-100 is connected externally to the sweep generator output lead, covers a frequency range of from 9.5 to 28 mc . Each telemarker is individually calibrated, housed in an attractive grey crackle cabinet with etched aluminum dial and furnisherl complete with connecting cables
$\$ 12.50$ Net

## FM TELETUNER

A novel converter unit that adds FM reception to your 'TV receiver. The FM Teletuner connects in series with the TV antenna providing FM reception when receiver is tumed to an unused TV channel (2 or 3). Anterna connects through when tuner is off
 so as not to effect normal TV recention. Will work on any TV set that does NOT use an intercarrier circuit
$\$ 29.95$ List*

## FRONT END TUNER Model TF 701

A unique and compact continuous type television front end tuner featuring a revolutionary method of inductancecapacity variation. Model TF-701 may be
 used whenever application requires a continuous type tuning system. Contains 6AK5 RF amplifier, 6AK5 mixer, 6C4 oscillator. Each unit supplied completely aligned with calibrated. illuminated dial, complete with teclinical data but less 6AG5 and 6AK5.

## $\bullet$ ENGINEERS • JOBBERS • SERVICEMEN

 all agree: RMMS VIDEO ANTENNA $\square-3 \bigcirc \bigcirc$ BOOSTER OUTSTANDNG PERFORMANCE MODEL SP-2 $\$ \square 50$for ALL CHANNELS

* Just plug in to work, it has a self contained power supply.
$\star$ Boosts weak station to give you clear, easy to look at pictures.
* Pulls in distant stations with a gain of SIX to TEN TIMES in signal strength!
$\star$ Cuts down off-channel interference.
$\star$ For most local installations any simple indoor aerial in conjunction with RMS VIDEO ANTENNA BOOSTER will give you Television Picture reception as clear as that obtainable with an outdoor antenna!

# RCA ELECTRONIC COMPONENTS <br> TELEVISION PARTS 

CONTROLS
\#201R1 Width Control. Screwdriver-adjusted vari-able reactor. Powdered iron core. For usewith RCA 211T1 where kinescope anode po-tential not over 9 KV $\$ 0.70$
\#201R2 Projection Width Control. Features same as201 R1. For use with RCA 211 T 2 in circuitswith kinescope anode potentials up to 27 KVdesign center . . . . . . . . . . . . . . . . . . . . . . $\$ 2.20$
\#201R3 Horizontal Linearity Control. Featuresspring clip mounting. For deflection circuitsusing RCA 211T1 and 201D1.......... $\$ 0.80$
\#203R1 Horizontal Oscillator and SynchronizingControl-Coil. A permeability tuned center-tapped oscillator coil for use in Televisionreceivers employing a 6SN7-GT as a com-bination horizontal blocking oscillator andsynchronizing control tube.............. . $\$ 1.80$

## TRANSFORMERS

\#201T6 Power Transformer. For use in 30-tube TV receivers requiring rectified current of 295 ma. at voltage of approx. 385 volts... . $\$ 26.00$
\#201T7 For 24-Tube Receivers................. $\$ 21.00$
\#201T8 For 21-Tube Receivers................ . $\$ 19.00$
\#201T9 For 27-Tube Receivers. . . . . . . . . . . . . . $\$ 21.00$

\#204T1 Horizontal Output Transformer. Moistureresistant. For deflection circuits with $50^{\circ}$ mag. deflection kinescopes using RCA 201D1 or 201D2
. $\$ 20.00$
\#204T9 Vertical Output Transformer. Quiet operation. For use with RCA 201D1 or 201D2 where kinescopes require $50^{\circ}$ magnetic deflection
. $\$ 4.50$
\#204T3 Horizontal Output Transformer. Powdered iron core. For use where electro-magnetic deflection kinescopes with RCA 201D1 yokes are employed ............................ $\$ 12.00$
\#208T1 Horizontal Blocking-Oscillator Transformer. Powdered iron core. For use where electromagnetic deflection kinescopes with RCA 201D1 yokes are employed.............. $\$ 3.90$
\#208T9 Vertical Blocking-Oscillator Transformer. Generates 60 cps pulses required to drive the grids of horizontal discharge tubes.... $\$ 2.50$
\#208T3 Horizontal Blocking-Oscillator Transformer. Similar to 208 T 1 except that bracket mounting is used in place of potted can construction
.\$2.75
\#208T8 Horizontal Sync-DiscriminatorTransformer. Provides automatic horiz sweep freq control. Couples horiz-sweep oscillator to horiz-sync discriminator
. $\$ 2.30$
\#211T1 Horizontal Output Transformer. For use with RCA 201D1 and directly-vicwed kinescopes requiring $50^{\circ}$ magnetic deflection using typical circuits.................... $\$ 9.50$
\#211T2 Horizontal Output Transformer. Designed for use in recommended circuits employing projection kinescope RCA 5TP4. Powdered iron core.
. $\$ 19.00$

## YOKES

\#201D3 Deflection Yoke. For use with directlyviewed kinescope requiring $50^{\circ}$ magnetic deflection such as RCA 7DP4 and 10BP4 \$14.90
\#201D2 Deflection Yoke. For use with projection kinescopes requiring $50^{\circ}$ magnetic deflection such as RCA 5TP4.
. $\$ 13.00$

## COILS

\#202D1 Focus Coils. For magnetically focused kinescopes with deflection angles up to $50^{\circ}$, such as 10BP4. Utilizes large conductor size for long life.................................... $\$ 7.50$
\#204L1 Filament Choke. Eliminates undesirable RF currents from filament circuit. Consists of self-supported 16 -turn coil on $1 / 4^{\prime \prime}$ inside diameter
. $\$ 0.20$
\#204X1 Television I-F and Video Coil Kit. Contains all the coils for building a high quality receiver. 15 individual items.

TELEVISION-FM ANTENNAS - ACCESSORIES

## ALL.CHANNEL ANTENNA KIT

Designed for INDOOR use. Combination of low band and high band anteunas of the flexible dipole tylre. Includes bakelite double pole double throw knife switch. Bach antenna may be separately oriented for the maximum recep. tion of either high or low hand. Kinife switch permits quick changing from antenna to antenna without disconnecting.
No. 6095
List $\$ 6.95$

## ALL-CHANNEL ANTENNA KIT

An outdoor television antenna kit of the flexible dipole tyre, featuring simplicity of installation. May he placed on roof or other convenient location. Yields effective reeeption of all tele--ision channels. Complete with generous 60 ft . 300 ohm twin lead; special weather-resistant nylon supporting strings; insulated screw eyes.

No. 6096 List $\$ 5.95$

## The New ICA

## TELEVISION FILTER

A sensational improvement that adds to the enjoyment of television reception. A scientitically compounded Filter . . . easy to install ... suitable for every type of receiver.

The ICA Filter offers these outstanding television viewing features bissolves fuzzy grays . Snaps up blacks . . . sharpens detail restiul inting cuts down eyestrain... eliminates glare and roomlight interference. . miuces flickering and picture grain unlureakahle. Excelicont for daylight reception.

## ica turnbuckles

Sturdy, steel turnbuckles that afford balanced tension of supporting wires. Especially suitable for antenna guv wires. Assure slack-free, rigid support.
No. $6150-3^{\prime \prime}$ (closed)
No. $6151-3^{\prime \prime}$ (closed)
List $\$ .25$
List .35

## ICA U-BOLTS

Offer a firm and rigid clamping action for affixing antemna of support ing masts to metal or wooden surfaces. Futs and wasber's included. Overall measurements: width $1^{\prime \prime}$; length $21 / 2^{\prime \prime}$.
No. 6153
List $\$ .30$

## PIPE STRAPS

A useful accessory for suporting antenna masts, ete, asainst Chimness, gahles, walls or other flat surtaces. Suitable for all masts up to $1^{\prime \prime}$ in diameter.
No. 6152
List $\$ 10.00 \mathrm{C}$

## GUY WIRE CLAMP

Ideal for set-ups requiring gus-wire support. May be located at any position on antenma mast for maximum rigidity. This rugged adjustable steel clamp is suitable for masts ranging from $3 / 4$ " to $11 / 4^{\prime \prime}$ Ujameters. Jucludes nuts and lockwashers.
No. 6144
List $\$ .50$

## TELEVISION RECEIVER TURNTABLE

Designed for table model receivers. Permits multi-angle television viewing witbont liftinir or disconnecting set. Eliminates furniture moving, re-connecting of set, etc.

Set is marely placed on turn-table-reaty for oleration. Finger-tip pressure. Makes complete circle for all-ansle viewing. Heary gauge steel in beautiful "hatmmered-tone" finish. Finely engineertid swivel hase unit.

No. 6184.
List $\$ 16.50$

## ICA TELEVISION SERVICING KIT

A compact handy kit containing 13 of the newest servicing tools especially engineered for general television installation and servicing. Neatly packed in leatherette case. Includes high voltage test prods, dual-hladed trans-aligning tool; coil and trimmer aligner-slim diam. TV "Channel Tuner"; spring-controlled Safe-T-Tester; 4 in 1 Aligning tool; narrow shaft trimmer aligning tool; flexible screw driver and socket wrench; thin-bladed neut. tool for "Admiral," ete., TV sets; slim flexible tuning wand for Zenith, etc., TV sets; tuning wrench for Zenith, etc., TV sets; slim, dual-bladed aligner for "Almiral," etc., TV sets.

# CCO - CRYSTAL CONTROLLED OSCILLATOR — MODEL $2 A$ 

## For 2-6-10-11 Meters

With this basic oscillator, employing a 6AG7 tube, the advantages of VHF crystal control are easily achieved. Has direct output on 6-10-11 meters and ample output to drive tripler stage on 2 meters. Single tuning control, bandswitch and crystal socket are mounted on outside of painted metal subchassis with power and output
terminals at back. Uses Bliley AX2 20meter crystals for output on 10 and 11 meters, new Bliley AX3 crystals for 6 and 2 meter operation. Ideal as nucleus for new construction or conversion of existing equipment.

Supplied less tube and crystal . . . . . \$9.95

## AMATEUR FREQUENCY CRYSTALS

TYPE AX2
These high stability advanced design crystals are plated to insure long term precision and reliability. Calibrated to $\pm .002 \%$ with drift less than $.0002 \%$ per degree Centigrade Holder pins spaced on $.486^{\prime \prime}$ centers.
Supplied

|  | R |  |
| ---: | ---: | ---: |
| $\pm 2 \mathrm{Kc}$ | $3500-4000 \mathrm{Kc}$ | $\$ 2.80$ |
| $\pm 2 \mathrm{Kc}$ | $7000-7425 \mathrm{Kc}$ | 2.80 |
| $\pm 30 \mathrm{Kc}$ | $12500-13500 \mathrm{Kc}$ | 3.95 |
| $\pm 30 \mathrm{Kc}$ | $13580-13714 \mathrm{Kc}$ | 3.95 |
| $\pm 30 \mathrm{Kc}$ | $14000-14850 \mathrm{Kc}$ | 3.95 |

TYPE AX3
A new third overtone crystal unit
 produced for use in the Bliley CCO2A. Has exceptionally high activity at operating frequency. Calibration accurate to $\pm .003 \%$ in CCO-2A with drift less than $.0002 \%$ per degree Centigrade. Plated crystal is mounted in gasket sealed holder with pins spaced .486" centers.

| Supplied | Range | Price |
| :---: | :---: | ---: |
| $\pm 5 \mathrm{Kc}$ | $\mathbf{2 4 0 0 0}-\mathbf{2 4 3 3 3} \mathrm{Kc}$ | $\mathbf{\$ 3 . 9 5}$ |
| $\pm 5 \mathrm{Kc}$ | $\mathbf{2 5 0 0 0} \mathbf{2 5 5 0 0 ~ K c}$ | $\mathbf{3 . 9 5}$ |

## TYPE CF6 455 Kc

Single signal filter crystal unit. Exceptionally low holder capacity permits sharp signal discrimination in filter network of general communications receivers. Frequency 455 Kc free from spurious responses within $\pm 7 \mathrm{Kc}$.

Price $\$ \mathbf{4 . 5 0}$

## TYPE CF3 455 Kc

Single signal filter crystal unit. Frequency $455 \mathrm{Kc}, \pm 5 \mathrm{Kc}$-free from spurious responses within $\pm 7 \mathrm{Kc}$ of fundamental. Designed for intermediate frequency filter in general communications receivers.

This unit is suggested for use in private aircraft transmitters operating at 3105 Kc . The crystal is guaranteed to be within $\pm .02 \%$ of 3105 Kc at any temperalure between $0^{\circ} \mathrm{C}$ and $50^{\circ} \mathrm{C}$ and is faclory tested for performance over this temperature range. Plug-in type holder is gasket sealed against moisture and humidity.

$$
\text { Price } \$ 5.50
$$

## TYPE VX2 3105 Kc

Designed for applications where space is at a premium, this unit is recom mended for private aircraft communication at 3105 Kc . Guaranteed to maintain frequency within $\pm .02 \%$ at any temperature between $\mathrm{O}^{\circ} \mathrm{C}$ and $50^{\circ} \mathrm{C}$. Solder lug connections permit mounting under chassis and assembly is gasket sealed against moisture and humidity.

Price $\$ 5.00$
TYPE KV3 100 Ke
A precision crystal designed for use in secondary standards. Crystal is silver plated and mounted between wire supports which are soldered to the plated surfaces. Exceptionally low drift crystal is adjustable to exactly 100 Kc at $25^{\circ} \mathrm{C}$ when used in recommended oscillator circuit.

Price $\$ 6.95$

## TYPE SMC100 100-1000 Kc

Dual frequency crystal provides either 100 Kc or 1000 Kc frequency source. When used in recommended oscillator circuit 1000 Kc frequency is within $\pm .05 \%$ at $25^{\circ} \mathrm{C}$ and 100 Kc frequency can be adjusted to zero beat at $25^{\circ} \mathrm{C}$. Suggested for signal generators used in alignment of radio receivers.

Price $\$ 8.75$

For complete dimensional information consult Bulletin 35 available at any Bliley distributor.

## Bliley CCO <br> CRYSTAL <br> CONTROLLED OSCILLATOR

For instant channel selection and frequency accuracy, radio service technicians use this Bliley test instrument. letin 32
Complete with 7 Bliley crystals, tubes and concentric output cable..... $\$ 69.50$

## CHECK SUPERIORITY OF <br> PR

Stability . . .
Drift characteristics of PR Crystals limited to less than 2 cycles per MC per degree. You get low drift, combined with high output, dependable frequency control. XRay orientation guarantees uniform cut for maximum low-drift performance.

Accuracy . . .
Guaranteed accurate within .01 per cent of specified frequency or better. When doubling and quadrupling accuracy is absolutely essential. You KNOW where you are with PRs.
Power Output ...
PRs are designed to give maximum power output from the exciter stage when operating at the highest permiscible voltages. PR Crystals can "take it."

Activity ...
PRs give you high activity. They "come in" instantly on phone . . . key without chirps, even at high bug speeds, without excessive "backing off."

Unconditional Guarantee ...
Every PR Precision CRYSTAL is guaranteed unconditionally, by the makers of fine crystals since 1934.

 AMERICA'S FINEST TELEVISION KITSThe Only TV Kits with "Circuit-Aligned" Components
$\star 3$ times picture area of $10-\operatorname{INCH}$ TUBE

* 31 Tubes - Voltage Doubler
$\star$ Ultra-Simplified Wiring Instructions
$\star$ Easily Wired Over a Week-End
$\star$ Tech-Master Integrity
(Only Perfection Is Acceptable)
Tech-Master, pioneer in the TV kit field, scoops the industry again with this "Super-16" TV kit that produces big, BIG pictures of superlative quality. Our engineers utilized our fanous 630-TK De Luxe kit as a basis. An 11T5 flyback transformer, a 2D2 focus coil, a 1R4 width control and other fine components PLUS our new Universal Brackets to accommodate kinescopes up to 16 inches liave been added.

A clever, and thoroughly sound, voltage double circuit using two 1133's has been designed by our engineers to provide full voltage and current to drive up to 20 -in kinescopes with excellent brilliance, definition and sweep. Ultra-simplified instructions make it possible for practically anyone to wire this kit over a week-end. The famous "Circuit-Aligned" components supplied with our kits keep final adjustments down to a negligible minimum, and these can be performed without additional equipment.
"SUPER-16" 630-TK De Luxe TV Kit, complete with all tubes, parts and instructions.
Less Kinescope . . . . . . Net \$177.50

< ใ ใ K
Build your own duplicate of the famous RCA $630-\mathrm{TS}$ with this superfine, 1949 model Tech-Master 630 -TK television kit. You will enjoy television at its finest - and save plenty. The TechMaster kit is complete in all details - major components, all controls, all sockets and terminal strips are mounted in place. Only the interesting and instructive wiring remains to be clone from the ultra-simplified wiring diagrams - easily accomplished over a week-end. Furnished with RCA 13 -channel front end tuner completely wired, aligned and tested. "CircuitAligned" components mean all final adjustments can be made without additional equipment.
630-TK De Luxe TV Kit, all components mounted, complete with all tubes, parts, instructions, less kinescope

Net \$163.50

## 630-TK STANDARD TV KIT

The 630-TK Standard $10^{\prime \prime}$ TV kit is identical with the De Luxe, described ahove, except that it is offered at a low, economy price because no components are mounted. In every other respect it is the same as the De Luxe model, same quality front end and components, complete instructions. 630-TK Standard TV Kit, complete with all tubes, parts, instructions; less kinescope

Net \$144.50

## TECH-MASTER TELEVISION CABINETS

$10^{\prime \prime}$ Table Modell Cabinet (illustrated at light), for either $630-\mathrm{TK}$ TV kit. Handsome, sturdy, mahogany finish. With safety glass and k゙inescope mounting slides. Completely drilled, ready for installation. $243 / 4^{\prime \prime} \times 20^{\prime \prime} \times 14^{\prime \prime}$ high. . . . . ## electrolytic condenser kit

Consists of our part numbers $338,367,368$, 369, 370, 371 listed below
EK Kit
$\$ 7.98$
bleeder resistor kit
Consists of our part numbers $439,458,459$, 876 listed below.
BK Kit
$\$ 4.25$
IF \& VIDEO COIL KIT
Consists of $21 \mathrm{~K} 1 \mathrm{~s}, 2 \mathrm{~K} 2$, $2 \mathrm{~K} 3,2 \mathrm{~K} 4,3 \mathrm{~K} 1$, 2 2L1s, 3L1, 3L2, 2 3L3s, 2 3L4s, 54 L 1 s listed below.
4X2 IF \& Video Coil Kit . . . . $\$ 12.00$ MICA CAPACITOR KIT
Consists of the 14 mica capacitors used in the 630-TS circuit.
MK Kit
CERAMICON CAPACITOR KIT
Consists of the 25 ceramicon capacitors used in the $630-\mathrm{TS}$ circuit.
CK Kit

TUBULAR BY-PASS KIT
Consists of the 38 by-pass moulded capacitors used in the 630 -TS circuit. TK Kit

## RESISTOR KIT

Consists of the $1071 / 2,1$ and 2 -watt resistors used in the $630-\mathrm{TS}$ circuit.
RK Kit . . . . . . . . $\$ 8.48$
COMPLETE METAL CHASSIS KIT
Consists of our part numbers 1SC, $104,107,115,116,123,129,131,172$, 174, 308, 442, 445, 789, 4860 s, 2004, 2009, 3415, listed below. (Less cord.) No. 1950 Metal Kit
\$29.50

630-TK Chassis Assembly (No. 1950 Metal Kit)

## BASIC METAL CHASSIS KIT

Consists of our part numbers 1SC, $129,172,174,308$, listed below.
No. 500 Metal Kit . . . . . $\$ 7.70$
"SUPER-16" CONVERSION KIT
Consists of all components and instructions for converting 630 type TV receivers for use with $15^{\prime \prime}$ or $16^{\prime \prime}$ kinescopes. Includes 11 T 5 flyback transformer, 2D2 focus coil, 1R4 width control, DS2 voltage doubler socket, UB universal mounting
brackets, 1B3 rectifier, all necessary resistors, condensers, etc., and instructions.
16CK Conversion Kit . . . $\$ 33.30$ Conversion Instructions, separately, 25c UB ADJUSTABLE MOUNTING BRACKETS Kinescope mounting brackets for tubes from $121 / 2^{\prime \prime}$ to $16^{\prime \prime}$. Mounts on 630 chassis so that face of all tubes up to $16^{\prime \prime}$ is in line with front controls.
UB Brackets
$\$ 4.65$

## 630-TK TELEVISION REPLACEMENT PARTS

## MALLORY ROTARY SWITCHES

## Multi-Section Rotary Switches

APPLICATION-Ideally suited for test equipment, meter switching, and low current switching in industrial applications, including machine tool equipment. Also miscellaneous electronic devices, such as medical equipment, navigation instruments, and radar.
DESCRIPTION-All contacting members are silver plated, except rotor contact slugs, which are solid silver. This insures low contact resistance. The high lift of the contact springs provides a wiping and self-cleaning action to insure good electrical contact. The index spring, made of durable phosphor-bronze reinforced with web, prevents fracture failure and insures long-life operation.
An adjustable stop feature permits selection of the desired number of positions for extremely flexible use. The insulation used in all sections is high-grade phenolic resin. All switches supplied with 3/8" diameter, $3 / /^{\prime \prime}$ long brass bushing, and $2^{\prime \prime}$ long shaft, grooved for easy cutting at popular lengths.

All switches have $1 / 2^{\prime \prime}$ spacing between sections, excepting the three and four-section, which have $1^{\prime \prime}$ spacing. If closer spacing is required between sections, the switch can be dis-assembled and spacers cut to proper length.
ACCESSORIES-One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch. See Miscellaneous Items section for Dial Plates.
PACKAGING-One switch and accessories per display carton.

| 1266L | 1366 L | 2 | 12 | 2 to 6 | 6 |

*These switches are provided with an "off" position which is in addition to the number of positions listed in the fifth column. $\dagger$ Will be discontinued when present stocks are exhausted.

## Single Section Rotary Switches

APPLICATION-For use in small receivers as tone controls, band selector and antennae switching; also ideal for meter switching in test equipment and many other electronic devices where space is at a premium.
DESCRIPTION-Available in single section only, and in two sizes: $11 / 4^{\prime \prime}$ diameter, $30^{\circ}$ indexing, and $11 / 16^{\prime \prime}$ diameter, $20^{\circ}$ indexing. All combinations made in both shorting and
 3l00J-3200J SERIES positive non-shorting action. The $1^{11 / 16 " ~ b a s e ~ s w i t c h ~ i s ~ a v a i l a b l e ~}$ with the adjustable stop feature. High quality XXX grade of phenolic resin insulation conforming to JAN specifications P-13. All switches supplied with ${ }^{3 / s^{\prime \prime}}$ diameter, $38^{\prime \prime}$ long brass bushing and $2^{\prime \prime}$ long shaft grooved for easy cutting at popular lengths.
ACCESSORIES-One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch. See Miscel. laneous Items section for Dial Plates.
PACKAGING-One switch and accessories per display carton.

$\dagger$ Replaces No. 2762 by using adjustable stop.
$\ddagger$ Replaces No. 150 J by using adjustable stop.

UNIVERSAL MOUNTING BRACKET-RB254

# MALLORY SELECTOR, TAP AND LEVER ACTION SWitches 

## Ceramic Section Selector Switches

APPLICATION-These switches are ideal for highly efficient critical radio frequency circuit applications. Suitable for radio receivers and low-power transmitter circuits. They find widespread use in laboratories, by manufaclurers of transmitters, receivers, test equipment and other electronic apparatus, and by experimenters and amateurs.
DESCRIPTION -Ceramic insulation minimizes IzF losses and retards moisture absorption. Indexing mechanism is the "hill-andvalley" type providing a definite "snap" indexing action. An adjustable stop feature is designed into the index assembly to permit a choice of 2 to 11 positions. All current-carrying parts are heavily silver-plated. The contacts are of the double-wiping, self-cleaning type, which insures low contact resistance over an extended femperature range. All switches supplied with 3 " ${ }^{\prime \prime}$ diameter, $3 /{ }^{\prime \prime}$ " long brass bushing and $2^{\prime \prime}$ long shaft grooved for easy cutting at popular lengths. All types non-shorting.

The two-section switch has $1 / 2^{\prime \prime}$ spacing between sections. The three-section switch has $1^{\prime \prime}$ spacing.
ACCESSORIES-One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch.
PACKAGING-One switch and accessories per display carton.

# DON'T MISS THE MALLORY CONTROL DEALS 

Turn to Page 3, Mallory Controls, for Full Information

## Lever Action Switches

APPLICATION-These switches are particularly adapted to centralized radio, sound distribution, public address equipment, and intercommunication equipment ior school installations of loudspeaker systems and ollice communication systems.
DESCRIPTION-The housing and mounting bracket of these switches are one integral part, which assures rigidity, and the design lends itself to the support of the section, thus preventing warping of the section or distortion in alignment of contacts. A smooth contact surface is guaranteed by the use of the exclusive Mallory "wrap-around" method of securing the terminal through the holes in the phenolic resin section. The phenolic resin is high grade for maximum insulation. The 5000 series have elongated mounting holes in the bracket, spaced from $2^{3} / 16^{\prime \prime}$ to $23 / /^{\prime \prime}$ apart. The 6000 and 7000 series have mounting brackets with round holes spaced 1 \%/" apart. Switches may be mounted singly or grouped in multiple mounting with $3 / 4$ " hetween lever arm centers to facilitate conventional rack and panel installations.
ACCESSORIES-One knob, two $6-32$ bolts and nuts are furnished with each switch.
PACKAGING-One switch and accessories per display carton.

## 24-Point Non-Shorting Tap Switch

APPLICATION-This switch is particularly useful in test equipment applications where more than the conventional 12-pointswitch is required.
DESCRIPTION-The single circuit 24-point is accomplished through the use of two sections similar in design to the 1300L series switch. The indexing mechanism has no stops and is capable of continuous rotation with a $15^{\circ}$ indexing action between positions. Furnished with $3_{8}$ " diameter, $3^{\prime \prime}{ }^{\prime \prime}$ long brass bushing and $2^{\prime \prime}$ long notched sbaft. ACCESSORIES-One Mallory No. 366 knob , one No. 232 nut, one No. 227 lock washer, and one No. 394 Mallory Dial Plate furnished with each switch.
PACKAGING-One switch and accessories per display carton.
Catalog No. 13124 L

## MALLORY <br> CIRCUIT-OPENING, "HAM", AND PUSHBUTTON SWITCHES

## Circuit-Opening Switch

APPLICATION-This switch has found wide application in the construction of test sets, tube checkers, analyaers, and other apparatus where it is desirable to use only one meter
DESCRIPTION--This is a special design of the series 1200 L switch to provide for wiring of multiplying resistors to the switch, so that the switch not only opens the line but also automatically cuts in the proper multiplying resistor. The switch employs the standard $30^{\circ}$ index, and is supplied with 3/6" diameter, "3/" long brass bushing and a $2^{\prime \prime}$ long shaft grooved for easy cutting to proper lengths. ACCESSORIES-One Mallory No. 366 knob, one No. 232 nut, one No. 227 lock washer, and one No. 382 Mallory etched Dial Plate. PACKAGING-One switch and accessories per display carton.
Catalog No. 1400 L

## Two-Section <br> Five-Position <br> "Hamswitch"*

APPLICATION-This switch provides a method of using a single meter to measure current or voltages up to and including 5 circuits of an amateur transmitter.
DESCRIPTION-This switch has the basic design of the 1200L series switch. It is of two-section construction with $21 / 4^{\prime \prime}$ spacing between sections to permit multiplying resistors to be soldered directly to the switch terminals. High insulating qualities and low loss construction permit a conservative rating of 1000 volts RMS AC or 1500 volts DC. $60^{\circ}$ indexing between positions and provided with the adjustable stop feature, giving a maximum of 5 positions Supplied with 3 " diameter, $3 / 6^{\prime \prime}$ long brass bushing and 2" long shaft grooved for easy cutting at popular lengths.
ACCESSORIES-One Mallory No. 366 knob, one No. 237 nut and one No. 227 lock washer, furnished with each switch.
Refer to Misc. Items Section for special dial plate No. 487.
PACKAGING-One switch and accessories per display carton.
Catalog No. 151 L

## Two-Section

Twoocircuit
Six-Position
"Hamswitch"

APPLICATION-Where all unused terminals are to be connected together and automatically shorted out.
DESCRIPTION - This switch is of the basic design of series $170 \mathbf{C}$, excepting a phenolic resin insulation is used in the two-section assembly. Through the use of the $330^{\circ}$ shorting shoes, all unused terminals are automatically connected. The spacing between sections is $1 / 2^{\prime \prime}$. Switch is supplied with adjustable stop feature for 2 to 6 positions. Supplied with $3 / 6^{\prime \prime}$ diameter, $36^{\prime \prime}$ long brass bushing and $2^{\prime \prime}$ long shaft grooved for easy cutting at popular lengths.
ACCESSORIES-One Mallory No. 366 knob , one No. 232 nut, and one No. 227 lockwasher furnished with each switch.
PACKAGING-One switch and accessories per display carton.
Catalog No. 152L

## Mulfiple Push-Button Switches

APPLICATION-This switch is ideal for applications requiring a device for making, breaking, or transferring multiple circuits in
 automatic station selector tuning, inter-omice command telephone and annunciator systems, set analyzers, tube tems, telephone and ann
DESCRIPTION--Available from four to eight buttons with 5 " spacing between center lines of plungers. Each plunger actuates a phenolic resin slider supporting the various combinations of shoes which engage the stationary contacts. Arrangement of the plunger and latch bar mechanism provides an inter-locking action whereby one or more plungers may be pressed simultaneously, and will remain latched until released by depressing another plunger. Available in both shorting and non-shorting types, and with contact arrangement for both circuit closing and circuit transfer.
ACCESSORIES-Each switch furnished with brown phenolic resin nnobs, one attractive statuary bronze escutcheon plate with blank designation inserts, and transparent strip for windows.
PACKAGING-One switch and accessories per display carton.

## Ceramic Section <br> "Hamband" Switches

APPLICATION-For transmitter band switching of low power transmitter circuits.
DESCRIPTION-A special ceramic switch designed for transmitter plate circuits using up to 1000 volts DC with power up to 100 watts inclusive. Ceramic insulation is employed in both the section watts inclusive. Ceramic insulation is employed in both the section and spacers between sections to obtain highest insulation qualities, and to provide low losses at high frequencies. Available in one to five sections, with each section having one circuit. $90^{\circ}$ indexing between positions, and capable of continuous rotation. Supplied with $3 / 8^{\prime \prime}$ diameter, $3 / 8^{\prime \prime}$ long brass bushing and $2^{\prime \prime}$ long shaft grooved for easy cutting at popular lengths. All types non-shorting.
ACCESSORIES-One Mallory No. 366 knob, one No. 232 nut, and one No. 227 lock washer furnished with each switch.
Refer to Misc. Items Section for special dial plate No. 488.
PACKAGING-One switch and accessories per display carton.

# MALLORY PUSH-BUTTON AND JACK SWITCHES 

Single<br>Push-Button Switches

APPLICATION-These switches are ideal for a wide variety of applications requiring momentary or permanent contact. Especially adapted for use in laboratories, on test panels, in meter circuits, etc.

DESCRIPTION-Eight different circuit combinations available in either the locking or non-locking types. The locking types keep the circuit closed until the button is pulled out. The non-locking types maintain contact only while the button is held in the depressed position. Excellent electrical characteristics are achieved through the use of the phosphor bronze contact springs and the low resistance silver-plated contacts. The switch frame is steel cadmium plated, and the mounting bushing is nickel plated brass. Will mount in single hole $7 / 16^{\prime \prime}$ diameter on panels up to $1 / 4^{\prime \prime}$ thick.

ACCESSORIES-One polished phenolic resin knob, one Mallory 232 nut and one No. 225 washer furnished with each switch.

PACKAGING-One switch and accessories per display carton.

| 2008 | Double-Throw-Make before break-Non-locking type |
| 2008-L | 2-Pole-Double-Throw-Make before break-Locking type |

## Jacks

APPLICATION-These jacks provide a conventional receptacle where it is desirable to open or close auxiliary circuits by use of a combination of spring assemblies actuated by insertion of connection plugs. Excellent for head sets, hand sets, or microphone cord and plug connections, for meter testing cord and plug connections, or as a receptacle for any device where desirable to connect or disconnect by cord and plug. Fit all Mallory \#75 and 76 plugs.
DESCRIPTION-The long frame jacks are provided with a variety of spring combinations. The spring stackups are mounted horizontally to the frame. The jack is designed to mount in a single $7 / 16^{\prime \prime}$ hole in panels up to $5 / 16^{\prime \prime}$ thick. Fits all standard Mallory plugs of two and three conductor types.
The Junior Jack (sometimes called "short frame" jack) is made with the frame supporting the spring stack at a right angle with the short springs requiring only $1^{5} / 16^{\prime \prime}$ space back of panel for mounting. Bushings are made to mount in single $7 / 16^{\prime \prime}$ diameter holes in panels up to $5 / 16^{\prime \prime}$ thick. Fits all standard Mallory plugs.

The Midget Jack is very compact (with shorter frame and springs than the Junior types), being extremely useful where bare minimums of space exist. Will mount in a single $3 / 8^{\prime \prime}$ diameter hole in panels up to $1 / 4^{\prime \prime}$ thick.
The Infant Jack (sometimes referred to as a "pup" jack) is the smallest single circuit jack manufactured to accommodate the conventional 2 -way phone plug tip and sleeve connection.

All jacks are made with cadmium-plated frames. Brass bushings and phosphor bronze springs are nickel plated. Fine silver contacts provide a jack with excellent electrical contact and low-contact resistance.
ACCESSORIES-One Mallory No. 232 nut and one No. 225 washer furnished with each long frame Junior and A-1 (Infant) Jack. Two nuts and one washer furnished with all Midget Jacks.

PACKAGING-One switch and accessories per display carton.

## MALLORY VIBRATOR DATA BOOK

Complete . . . original . . . easy to read. Answers all your questions about vibrator power supplies. It's packed with information that cannot be duplicated anywhere else; information gained by Mallory in sixteen years of specialized power supply experience. The demand for this book is large-so order your copy now through your Mallory Distributor.
$\left.\begin{array}{|l|l|l} & \begin{array}{c}\text { Long } \\ \text { Frame } \\ \text { Cat. No. }\end{array} & \begin{array}{c}\text { Junior } \\ \text { Jacks } \\ \text { Cat. No. }\end{array} \\ \hline \text { Infant and } \\ \text { Midget } \\ \text { Cat. No. }\end{array}\right]$
*Commonly referred to as "Infant" Jack.
"GROUNDING"' JACK-(Type GJ-1), for "grounding" airplanes while refueling. Similar in construction to A1 Jack except for insulation.

## Jacks

APPLICATION-Ideal for telephone switchboard types of applications, as well as industrial applications where a more compact jack is required for close strip panel mounting.

DESCRIPTION-Although limited to three circuit combinations, these jacks serve the same purpose as the Mallory Standard Long Frame Jacks, but employ a special frame angle to provide greater support. The bushing is plain, unthreaded, and the jack is mounted by means of a screw through the panel mounting plate at the base of the bushing. Bushing fits all standard Mallory plugs of two and three conductor types. The springs are assembled horizontally to the frame. The frames are steel cadmium plated. Brass bushings and phosphor bronze springs are nickel plated. The fine silver contacts provide an excellent electrical contact and low contact resistance.

## ACCESSORIES-Noņe furnished.

PACKAGING-One jack per display carton.

## SC Jacks

No. SC-1A Phone Jack-Equivalent of Signal Corps Jack No. JK-34A. Same spring arrangement as No. 1 Long Frame Jack. Designed to receive following plugs: Mallory No. 75, Western Electric Nos. 47A and 47B; Signal Corps Nos. PL-47, PL-48, PL-55, PL-148, PL-155.

No. SCA-2B Microphone Jack-Equivalent of Signal Corps Jack No. JK-33A. Same spring arrangement as No. 2B Long Frame Jack. Designed to receive following plugs: Western Electric No. 109 and Signal Corps Nos. PL-46, PL-68 and PL-168.

# . SMALL SWITCHES, LIMIT SWITCHES, AND MAGNETIC RELAYS 

## SMALL SNAP-ACTION SWITCH, G-E SWITCHETTE CR1070-C103

This new, lightweight switch mechanism lends itself especially to applications where space is limited and long life is required.

The Switchette is operated by movement of the spring-return button located in the housing. This button can be actuated by a lever, bellows, or other means. Snap-action, double-break-contact construction gives the G-E Switchette a high current rating and makes it suitable for applications where the vibration is severe.

## FEATURES AND ADVANTAGES

1. Small (approximately $11 / 4$ in. by $1 / 2$ in. by $1 / 2 \mathrm{in}$.) and weighs only 9 grams ( 0.02 lb ).
2. Resists vibration and corrosion.
3. Phenolic-resin operating button provides safety from live parts during operation.
4. Contact tips are 99.95 per cent pure silver.
5. Particularly suited to electronic applications because of negligible amount of contact bounce.
6. Five terminal arrangements are available, including the two shown above.
7. Wide variety of forms available, for example, three basic contact arrangements: single-circuit, normally open; singlecircuit, normally closed; and two-circuit, normally open and normally closed. Also many special forms.
Switchettes are available in ratings up to 10 amperes at 115 or 230 volts a-c. Write for Bulletin GEA-3S18.

Enclosed magnetic relay

## GENERAL PURPOSE RELAY, CR2790-E

The CR2790 relay is a compact, attractively finished device for use either as a motor starter or a relaying unit. Available in either an open form or enclosed in a general-purpose or ex-plosion-proof housing. Three contact arrangements available: single-pole, single-throw; dou-ble-pole, single-throw; and double-pole, doublethrow. In the open form, all three contact arrangements use the same base, which facilitates mounting. In the enclosed form, the U-shaped cover makes wiring and servicing convenient. Rated 10 ainp. continuous, $110 / 120$ volts a-c.

## Applications

Control of pilot circuits in response to remote control switch or thermostat, or for direct control of small motors.

As a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits, and signal systems. Bulletin GEC-257.

## CONTROLS

## CAM-LEVER SWITCHES

Compact lightweight switches designed for long life and trouble-free service under heavy-duty requirements. Added features include shielding between contact sections, mounting provisions for single hole and standard mounting centers plus availability of all popular as well as special build-up variations.
Quotations will be given promptly on your switch problems. Common types are in stock for immediate shipment.

MASTER PUSH-BUTTON SWITCH Model MPB

A single unit type push-button switch with high power handling ability to give direct push-button control. Furnished in from two to a maximum of twelve positions. Standard frames are: (1) locking, (2) non-locking, (3) release-lock, and (4) accumulative locking with singlebutton release. Pure silver contacts, phosphor bronze springs. Rating: 5 amps., 125 volts a-c (non-ind.).

## HEAVY DUTY ELECTRONIC TIMERS

Convenient and compact units for either full or semi-automatic control of industrial processes. Two or more timers control a number of individually timed operations in a predetermined sequence with either self-recycling or manual recycling. Handle 10 amps. at 125 volts, 60 cycles, on DPDT power control contacts. Five ranges: 0.06 -
 $1.2,1 / 2-8,3 / 4-15,1.5-30$, and $3-60$ seconds. Plug-in capacitors give ready selection of timing range. Adaptable to use as photoelectric or sensitive relay in non-timing use. $\$ 32.00$ List

## FOOTSWITCHES

Models to meet every need. Type MI has large, inclined foot treadle; type MC operates by pressure of finger, elbow,
knee, or foot anywhere on its top plate. Each switch will handle 10 amperes at 125 volts a-c.

## COAXIAL RELAY

This relay, for use with 52 ohm RG coaxial cable, has SPDT internal contacts, rated at 880 watts maximum. If desired, DPDT auxiliary contacts (as illustrated) may be had. Tests on a 52 ohm line show VSWR of 1.02:1.0 at 100 meg .

*For higher voltages up to 440 V A.C. or 240 V D.C., or for other Advance Coaxial Relays. see your nearest jobber.

```
Size (without auxiliary contacts) : \(13 / 8^{\prime \prime} \times 27 / 8^{\prime \prime} \times 31 / 2^{\prime \prime}\)
```

Type 5203A
"A" denotes
5-amp. contacts

## MIDGET TELEPHONE RELAY

This small, yet sturdy relay is offered in any contact combination from SPST to 4PD' ; with $1 / 8^{\prime \prime}, 1.5 \mathrm{amp}$. contacts, or with $\mathrm{T}^{\prime \prime}$ ", 5 amp . contacts. Coils draw from .1 to 2 watts D.C. or 1 to $11 / 2$ watts A.C. List prices below are for coils up to 115 V A.C. or 1000 ohms D.C.

| A.C. | D.C. |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 5201 | 6201 | SPST | N. 0. | \$3.85 |
| 5201 A | 6201A | SPST | N. O. | 4.07 |
| 5203 | 6203 | SPDT |  | 4.12 |
| 5203A | 6203A | SPDT |  | 4.56 |
| 5204 | 6204 | DPDT |  | 4.95 |
| 5204A | 6204A | DPDT |  | 5.83 |

For higher voltage coils, up to 220 V A.C. or 16,000 ohms D.C. see your nearest jobber. He can also show you other Advance Telephone Relays.

## TINY MITE RELAYS <br> (FOR D.C. ONLY)

In these tiny relays, which require less than $1 / 2$ cubic inch mounting space, all switching is above ground. Contacts are rated at .35 amperes at 115 V A.C. (non-inductive). Power required is .2 to .5 watt. Coils are available for any D.C. voltage 1 to 80 ; resistances up to 5000 ohms. Weight: 10 grains. ( 45 relays per lb.). List prices below are for any coil up to 800 olims ( 24 V D.C.). For higher resistances see your nearest jobber.

| Type |  |  | List |  |
| :---: | :---: | :---: | :---: | :---: |
| 003 | SPST | N. 0. | \$2.91 | (Overall dimensions with lugs as illustrated). |
| 005 | DPST | N. O. | 3.19 | If desired, can be supplied with leads. |

## ULTRA-SENSITIVE D.C. RELAYS

Type 1200

This relay combines many superior features - transparent plastic cover-molded Bakelite base - counter-balanced armature - high overall sensitivity . . . 5 milliwatts for positive operation - $21 / 2$ milliwatts with careful adjustment, and light contact load .
Three adjustments with vernier screws: spring, and each contact. Contacts are SPDT, pure silver rated at 1.5 amperes at 115 V A.C. (non-inductive).
Supplied in coil resistances up to 40,000 ohms. Be sure to specify resistance desired! List Prices:

| Up to 2200 ohms | \$9.07 | 8700 ohms | \$ 9.90 | 30000 ohms | \$12.65 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3500 ohms | 9.35 | 14000 ohms | 10.45 | 40000 ohms | 15.40 |
| 5500 ohms | 9.62 | 20000 ohms | 11.00 |  |  |

Type K1604P

## PLUG-IN RELAYS

Any Advance Relay can be Supplied with Standard Speaker Plugs!
To designate that plug-in is desired, add the letter " $P$ " to the type number when ordering. For example type K1604 (illustrated) becomes type K1604P.
To compute list prices, add to the prices shown elsewhere as follows:

| 4-5-6-7-8 prong. | \$2.20 | 11 prong | \$3.63 |
| :---: | :---: | :---: | :---: |
| 9 prong | 2.80 | 12 prong | 4.07 |
| 10 prong | 3.19 |  |  |

# Adhance HBLIIS 

Isolantite model Antenna Change-Over. Designed for use in Amateur Transmitters.

The contact system is Double Pole-Double Throw, using 1/4" Pure Silver contacts, with exceptional wiping action. Three and four pole arrangements ar'e available on special order.

For higli radio frequency control. Entirely hum-

Type 400
free where intended for A.C. operation, and highly efficient on D.C. supplies. All metallic parts are cadmium and chromium plated.

Standard coils are for 110 V A.C. and may also be used for 24 V D.C. However, they will also be supplied for lower A.C. or D.C. voltages at no increase in price.

Type 300-N.O.
Type 350-N.C.

Type 101 K -A.C.
Type $201 \mathrm{~K}-\mathrm{D} . \mathrm{C}$.

Designed expressly for use in Keying Circuits where it is desired to use low voltage across the key to control high voltage transmission througli the Relay contacts. The heavy duty coil and strong return spring makes possible an exceptional keying speed. Two sets of $1 / 4^{\prime \prime}$ Pure Silver contacts in series allow a carrying capacity of 2500 volts. The complete unit, mounted on a $3 / 16^{\prime \prime}$ Bakelite base with binding posts for coil connections, has over-all dimensious of $3^{\prime \prime} \times 2^{\prime \prime} \times 13 / 8^{\prime \prime}$ and is obtainable for A.C. operation to 115 volts or D.C. operation to 60 volts.

List Price
$\$ 6.05$

Particularly suited for use where short time delays ( 10 sec to 1 min .) are required, these Relays are available with both normally open and normally closed thermostats. Types 300 and 350 respectively, the former being widely used for pre-heating tube filaments, etc. The contact combination on both models is Double Pole Single Throw with $1 / 4^{\prime \prime}$ Pure Silver contacts. Mounted on $3 / 16^{\prime \prime}$ Bakelite bases measuring $33 / 4^{\prime \prime} \times 23 / 8^{\prime \prime} \times 11 / 2^{\prime \prime}$ with binding posts for coil connections. Standard operating voltage is 110 A.C.

List Price $\$ 9.07$
Low voltage units are available on special order.

## LATCHING RELAYS

These Relays are lighly desirable for applications where it is impractical to have the holding coil in constant service. When the coil actuating the contact arrangement is momentarily energized, the armature is locked in the closed position, and may be released electrically (Type
 600 ) or manually (Type 650).

The above list prices are for $1 / 4^{\prime \prime}$ contacts. For $3 / 16^{\prime \prime}$ points deduct $25 \mathrm{c}-$ for $1 / 8 "$ points deduct 50 c . When ordering these types SPECIFY THE VOLTAGE.

# Adhance RELIIS 

## OVERLOAD RELAYS

These Relays are designed to provide accurate and positive protection against current surges and continuous overloads, and both the Manual Reset (Type 700) and Electrical Reset (Type 750 ) are divided into two classifications: Type "A" allows the Relay to attract on any current value between 250 and 500 mills, and Type " $B$ " for any setting between 500 mills and 1 ampere. When the current flow passes the satety setting, the Double Pole-Single Throw $1 / 4$ " Pure Silver contacts are opened, breaking the power supply circuit until reset.

List Price

\$11.16
Type 750 -Base dimensions $4^{\prime \prime} \times 21 / 2^{\prime \prime}$

Series K1 500 and K1600

## MIDGET RELAY

Of particular interest where size and cost are factors, this new series of Midget Relays, of improved design, incorporates all of the fine construction features typical of the ADVANCE line. This unit measures only $11 / 2^{\prime \prime} \times 3 / 4^{\prime \prime} \times 11 / 8^{\prime \prime} \mathrm{high}$. Phre Silver contacts are used, $1 / 8^{\prime \prime}$ in diameter. Standard coils are obtainable from 2 to 32 V D.C. and 1 to 115 V A.C. The following switch combinations can be supplied

TYPE

## ELECTRONIC RELAY

An ultra-sensitive unit for use in electronic tube circuits, providing positive, dependable control on as little as 12 milliwatts. Adjustment screws to change the air-gap between the armature and the pole face, allow operation on a voltage differential of $30 \%$, a condition ideal for electronic applications. The contact combination is Single Pole-Double Throw, employing $1 / s^{\prime \prime}$ Pure Silver points to safely handle 100 watt non-inductive loads. Obtainable in resistances of $2500,3000,5000$ and 10,000 ohms at no increase in price

List Price $\$ 7.86$

## GENERAL PURPOSE RELAYS

Types 951B - 952B - 953B

These Relays afford maximum power and efficiency at very low cost. $1 / 4^{\prime \prime}$ Pure Silver contacts are standard on the Single Pole-Single Throw (N. O.) Type 951B-Single Pole-Single Throw (N. C.)—952B-and Single Pole- Double Throw-953B-switch combinations. Adequately insulated and entirely above "ground," these Relays nay be mounted on any type of panel, quickly and easily, by means of the metal mounting bracket. Coils are obtainable to 115 V A. C. or 60 V D. C.
List Price
\$4.23

## GEN-E-MOTOR STARTING RELAY <br> Type 951C

An exceptionally sturdy power transfer Relay, easily capable of handling the heavy current surge encountered on "cold" starts in motorgenerator systems. The contacts are $3 / 8^{\prime \prime}$ Pure Silver and have ample carrying capacity for the usual $200-500 \mathrm{~V}$ converters. Heavy-duty in every phase of construction, this unit is not to be compared with the common five and ten ampere circuit controls. Base dimensions are $3^{\prime \prime} \mathrm{x} 2^{\prime \prime}$ and each unit is complete with a braided generator-cable pig-tail and binding posts for all connections. Coils for $51 / 2$ to 32 V D. C. or 1 to
 115 A.C.

List Price $\$ 7.26$

## MIDGET TYPE CIRCUIT CONTROLS

These Relays are designed for general circuit control applications where the space for mounting is limited, and measure only $21 / 2^{\prime \prime}$ in length, $11 / 2^{\prime \prime}$ in width, and 11/4" in height. A.C. operated Relays in this series require but 4 watts on $50 / 60$ cycle current, and the D. C. models from $1 . .5$ to 2 watts, affording maximum effi-

ciency without sacrifice of power and dependability. Metal brackets (not shown in the illustration) are supplied with all Relays of this type, and except on special order, these models are limited to the following contact arrangements and the usual standard operating voltages:

Type Numbers Contact Sizes and List Prices

| List | $1 / 4 "$ | List |
| ---: | ---: | ---: |
| $\$ 6.05$ | 104 BM | $\$ 66.65$ |
| 5.72 | 105 BM | 6.32 |
| 5.72 | 106 BM | 6.32 |

The above chart lists type numbers for A.C. operated Relays. D. C. coils may be obtained by changing the series number from 100 to 200 . Prices apply to both.

## INDUSTRIAL CONTROL RELAYS

Series 960

Designed mainly for industrial applications - air conditioning, lighting, and nower transfer systems, the Series 960 Relays embody all of the rugged construc tion features demanded in units of this type without sacrificing the desirable qualities of the midget style. Available in the-following contact combinations, and to operate on standard A. C. and D. C. voltages.

## Having the

 same characteristics as the Series 960 Relays, these Three Pole units, Series 970, may be used for fractional h/p 3 phase motor controls, etc. The area required for mounting $25 /{ }^{\prime \prime}$ x $17 / 8^{\prime \prime}$ for TypeSeries 970

970 Relays, as against $21 / 2^{\prime \prime} \times 11 / 4^{\prime \prime}$ for the Type 960 's, is due to the slightly larger frame. The metal brackets are the same in both instances-2-5/16" long, and $2^{\prime \prime}$ between centers of the $6 / 32$ mounting holes. Available in the voltages indicated in the preceding series, and in the following contact combinations:
Type 977B—Three Pole-Single Throw (N. O.) .................. $\$ 6.32$ Type 978B-Three Fole-Single Throw (А. C.) ….................... 6.32 Type 979B--Three Pole-Double Throw .............................. 76 For smaller contacts, deduct 50 c for $3 / 16^{\prime \prime}$ or 75 c for $1 / 8^{\prime \prime}$ points from the ahove list prices.

## IMPULSE RELAYS

This is another type of Relay for use where it is not feasible to have the holding coil in constant service, but differs from the latching types in that it may be controlled with a single pusli-button. Coils to operate this type of unit are extremely heavy-duty, and are for intermittent (impulse) use only. Available for standard A. C. and D. C. voltages in the following combinations:

|  | $\begin{aligned} & \text { D.P.S.T. } \\ & \text { List } \end{aligned}$ | $\underset{\substack{\text { List }}}{\text { D.P.D.T. }}$ |
| :---: | :---: | :---: |
| With 1/8" Pure Silver contacts | \$10.28 | \$10.89 |
| With 3/16" P'ure Silver contacts | 10.89 | 11.49 |
| With $1 / 4$ " 1 'ure Silver contacts | 11.49 | 12.70 |

When ordering siver contacts, $1 / 4$ rure to specify the input voltage contact combination, and size of points.

## MIDGET TYPE R.F. RELAYS

These models are sturdy, compact Double Pole - Double Throw Trans. mitter Relays, designed expressly for use in all types of mobile - portable communications

Series 1000 -A.C. Series 2000-D.C. equipment where space is at a premium. The insulation on this, as on the Type 400 's, is Isolantite for both the cross-arm and end pieces, with all holes adequately well spaced to prevent structural weakness and possible "creepage." Coils are obtainable for all A. C. and D. C. voltages, and will operate in any position, the former consuming approximately four watts-the latter, two watts of power. Dimensions are $23 / 4^{\prime \prime} \times 11 / 2^{\prime \prime} \times 11 / 4^{\prime \prime}$.

U-100 AND U-200 ADJUSTABLE UNDERLOAD RELAYS

Sensitive, precise, designed and constructed for long, trouble-free service. Relays are encased in attractive black finished metal containers, protecting them from dirt, dust and maladjustment. Normal current through the coil on the U-100 is 300 milliamperes with an adjustable range of 100 to 200 milliamperes DC. Normal current through the coil on the U-200 is 600 milliamperes with an adjustable range of 200 to 400 milliamperes. Oversize contacts of fine silver, rated for the AC primary of any power supply delivering up to 500 watts.
Radio Application-protection of class " $B$ " audio equipment in case of class " C " load failure, also class " C " amplifier in case of excitation failure.
Industrial Application-Any DC circuit where it is desirable to maintain currents above a set value $\mathrm{U}-100$ and U-200 are $3 \frac{1^{\prime} 6^{\prime \prime}}{}$ in diameter, $2^{1 / 4^{\prime \prime}}$ high. Shipping weight 14 oz....

## T-100 AND T-110 TIME DELAY RELAYS

T-100-51/4" long, $3^{\prime \prime}$ wide, $2 \frac{1}{4} 4^{\prime \prime}$ high. Shipping weight $11 / 4 \mathrm{lbs}$. Laminated construction. List Price
$\$ 17.15$ ea.

The $\mathrm{T}-110$ is a compact, sturdy, economical time delay relay for use in applications not requiring the capacities of the T-100. Contact capacity - 1250 watts on 115 volt, 60 cycle non-inductive $\bar{A} C$. Can also be used in the AC primary circuit of any power supply delivering up to, and including, 1 KW. Adjustable time delay between 10 and 60 seconds.
T-110-5 $\frac{5^{\prime \prime}}{32}$ long, $3 \frac{1^{\prime \prime}}{18}$ wide, $2 \frac{7}{16}{ }^{\prime \prime}$ high. Shipping Weight 8 oz . List Price............ $\$ 10.75$ ea.

Standard coils operate on 115 volts, 50-60 cycles non-inductive A.C. Coils available on other voltages on specification. Oversize contacts rated at 1500 watts on 115 volts, $50-60$ cycles non-inductive. Can also be used in the AC primary of any power supply delivering up to 1 KW . Adjustable time delay for any period between 10 and 60 seconds.
Applications-Radio. In transmitter circuits to prevent damage of rectifiers and tube filaments by application of plate current before filaments are sufficiently heated. Industrial. Any control problem requiring the changing of circuits after a predetermined interval.

A COMPLETE LINE OF AMATEUR AND INDUSTRIAL RELAYS

SERIES R-100
H.F. RELAY

## HIGH FREQUENCY RELAYS

The Series R-100, R-100B, and A-300 Guardian Relays are primarily designed for high frequency applications. They are low-loss insulated, compact, economical and sturdily constructed. The R-100 and R-100B are AlSiMag insulated, while the A-300 is mounted on a mycalex base with polystyrene contact mounting bar.

Radio Applications - Antenna changeover, break-in, high voltage keying, grid controlled rectifier keying, remote control of receiver and transmitter, and other high frequency applications.

SERIES A-300 H.F. RELAY

Industrial Applications - Oven control, remote motor control, short wave therapy and diathermy, heating equipment.
list

## X-300-ER <br> ADJUSTABLE OVERLOAD RELAY <br> with Electrical Reset

This relay offers positive, precise protection against current surges and continuous overloads - remote panel installation of the control potentiometer simplifying adjustment of relay to operate on any current value from 250 to 750 milliamperes - auxiliary contacts for pilot light indication of "overload" or "clear" position - reset relay can be operated from any convenient point. Voltage drop across overload coil is less than 10 volts at any current value. Insulation between coil and ground rated at 3000 volts.
X-300-ER—43/4 long, $1-15 / 16^{\prime \prime}$ wide, $2^{\prime \prime}$ high. Shipping

weight 12 oz.
List Price.

## B-100 BREAK-IN RELAY

Specially designed for breakin operation on amateur transmitters. Low current drain and compact construction, plus the use of a laminated field piece and
 armature insuring efficient operation, make the B-100 an ideal relay for this application. Standard coil operates on $115 \mathrm{~V} ., 50-60$ cycle AC. Silver contacts rated at 1500 watts, 60 cycles AC non-inductive, and in AC primary circuits of any power supply delivering up to 1 KW .
B. $100-23 / 4^{\prime \prime}$ long, $21 / 8^{\prime \prime}$ high, $21 / 4^{\prime \prime}$ wide. Shipping weight 11 oz.

List Price
$\$ 10.75$ ea.

## K-320 KEYING RELAY

A standard coil operates on 6 volts AC. Coils for other voltages on specification at $10 \%$ additional to list price. Contacts - special over-size silver. Can handle 5,000 watts on 60 cycle non-inductive 115 volts $A C$ and in AC primary circuit of any power supply delivering up to and including 1 KW . Control capacity - up to 2,000 volts with clean make and break.

Applications--Control of filament center tap keying of any stage having up to 2,000 volts on plate; primary keying or control of power supplies up to and including 1,000 watts; and grid-controlled rectifier keying of 3,000 volt power supplies.
K-320-3" long, $11 / 2^{\prime \prime}$ wide, $1-15 / 16^{\prime \prime}$ high. Shipping weight 4 oz .
List Price $\$ 4.50 \mathrm{ea}$.

Designed for such power circuits as motor starting up to 1 HP., heater loads up to 20 amperes, remote break-in control of transmitters, electro plating devices, elevator controls, or any control circuit requiring fast positive switching. AC types operate on approximately 10 volt amperes. DC types require approximately 2 watts. Relay contacts on PR3A, PR3D, PR4A and PR4D rated at 20 A , non-inductive load 115 V AC or $1 \mathrm{HP}, \mathrm{AC}$. All other relay contacts rated at 15 A , non-inductive at 115 V AC. Size approximately $25 / 8^{\prime \prime} \times 29 / 16^{\prime \prime} \times 21 / 4^{\prime \prime}$ high. Specify coil voltage and frequency.

FR11A
FR11D
FR11A

The newly developed electronic photo flash units using a high voltage discharge through a xenon gas filled bulb require a relay of extraordinary characteristics. When the bulb is flashed the contacts must carry an extremely hibh surge of current without sticking, burning or pitting. The repetitive accuracy must be as uniform as a precision built shutter on a fine camera. Unfailing positive contact is vital 10 synchronization of the shutter with the 2500 volt capacitor discharge.

The Potter and Brumfield FR relay has been tried and proven under the most severe conditions of temperature, humidit $y$ and shock. Special contact material and the finest quality of baked varnish impregnation of coil and other insulating parts combine to give a reliable relay at economy prices. The FR is ayail able in all the contact combinations listed under the MR Series shown on this page up to and including Double Pole Double Throw. Coils are available in all AC voltages up to 230 volts and DC voltages up to 115 . Power requirements for coil operation is 1.5 to 2 watts DC and 3 to 4 volt amperes AC. Overall di mensions for single pole types are $215 / 16^{\prime \prime}$ $\pm 11 / /^{\prime \prime} \times 1 \frac{5}{8} 8^{\prime \prime}$ high. Double pole types $284^{\prime \prime}$

## POTTER \& BRUMFIELD

## LM Series PIATE CIRCUIT RELAYS

Designed to meet demand for high grade medium cost plate circuit relays in both single and double pole contact arrangements. Large coils are particularly sensitive. The single pole LM operates on as low as . 015 watts, the double pole types on .070 watts. Applicable to smoke control, packaging, counting and other electronic control circuits. Contacts supplied are $3 / 16^{\prime \prime}$ fine silver. Approximate size of single pole units $21 / 4^{\prime \prime} \mathrm{x}$ $13 /{ }^{\prime \prime} \times 23 / 8^{\prime \prime}$ high. Double pole units $21 / 4^{\prime \prime} \times 21 / 8^{\prime \prime} \times 23 / 8^{\prime \prime}$ high When ordering, specify coil re sistance.

This subminiature relay weighs less than $1 / 2 \mathrm{oz}$. and is less than $1 / 4$ cubic inch in volume. Contacts are SPDT pure coined silver rated at 25 amp . pure coined silver rated "at. 25 amp .
115 V 60 cy . load. The " D " or voltage operating types can be wound for any specified DC voltage up to 115 and draw approximately . 5 watt. The "L"' or current operating types can be wound to maximum of 8000 ohms which gives minimum pull-in of 3 ma at 75 milliwatts. " $G$ " version hermetically sealed in miniature tube glass envelope with
standard 7 pin base standard 7 pin base.

KR Series small Light Duty

A relay designed for applica tion where size and weight are important. Sturdy and effi cient. In applications where operating current is not too imited, the DC types can be adjusted to withstand the vibration encountered in most aircraft applications. Ideal for sub-chassis mounting and switching of RF or AF cir cuits. Contacts are rated at 3 amperes 110 volts, 60 cycle non-inductive. Approximate size of KR11D $13 / 16^{\prime \prime}$, $111 / 16^{\prime \prime} \times 114^{\prime \prime}$ high. When ordering, specify coil voltage and frequency

## SU Series MULTIPLE LEAF RELAYS

Unique construction provides many valuable features at low cost. Larger coil space permits most efficient winding for higher voltages and lower consumption. May be mounted either vertically or horizontally, terminals easily accessible in either mounting. Suitable for applications such as signal or alarm controls, remote indicators, temperature controls, overload or underload protective devices, etc. Contacts rated at 4 amperes 115 volts AC noninductive load. Contact combinations up to and including 4-pole double throw. DC types require 1.5 watts actuating power. Dimensions of SU17A (illustrated) are $21 / 2^{\prime \prime} \times 17 / 16^{\circ} \mathrm{x}$ $21 / 2$ " high. When ordering, specify coil voltage and frequency.

# POTTER \& BRUMFIELD 

PRINCETON, INDIANA
EXPORT SALES AT 2020 ENGINEERING BLDG., CHICAGO 6, U.S.A.

## 

BASE DIMENSIONS: $1 \frac{1}{2} 2^{\prime \prime} \times 2-9 / 16^{\prime \prime}$, overall height 1-11/32"

WEIGHT: $41 / 2$ ounces.
RESISTANCES: 5,000 Ohms or 10,000 Ohms. Type
No.
1037 Double Pole, Double Throw, 5,000 Ohms.
1037 Double Pole, Double Throw, 10,000 Ohms.
Be sure to specify coil resistance when ordering.

These Leach Relays are considered standard items within the trade. These relays are maintained in shelf-stock supply in order to expedite shipment to jobbers throughout the United States.

For more than thirty years Leach has manufactured quality relays. This vast experience in engineering design and manufacturing ability is incorporated in these standard relay designs.

## SENSITIVE METAL BASE RELAY <br> TYPE 1037 SERIES

This Relay is constructed for sensifive operation, and has $1 / 8^{\prime \prime}$ pure silver contacts mounted on screws to provide adjustments on top contacts which are capable of carrying 1 Ampere af 115 Volts, AC, Non-inductive. With these adjustment screws, the air gap can readily be adjusted so that the Relay can be set to pull in at some predetermined coil current. It is supplied at DPDT only. Nothing is grounded to the metal base. The minimum reliable coil consumption is .040 watts. It will operate on a good deal less, but the adjustment becomes fairly critical on these low values.

## SENSITIVE DIRECT CURRENT RELAYS

## TYPE 1032 SERIES

This Relay is used extensively in closed circuit burglar alarm systems, in the plate circuit of electron tubes, as secondary Relays for micro-ampere Relays, etc. It is a very fine all-around low current, high resistance Relay, capable of withstanding considerable vibration without affecting its operation. It is equipped with an adjustable spring and adjustable stationary contacts, fitted with set screws. All contacts are pure silver and capable of carrying I Ampere, 115 Volts, AC, Non-inductive. This Relay is pigtailed to prevent current passing through the hinge part. The contact system is SPDT, and minimum practical coil wattage is .015 watts.

Type Number
6-C 7-C Single Pole, Double Throw. 6-2C 7-2C Double Pole, Double Throw. 6-4C 7-4C 4-Pole Double Throw.

BASE DIMENSIONS: $2^{\prime \prime} \times 23 / 4$ ", overall height, 1-11/16."
WEIGHT: 6 ounces.
RESISTANCES: 5,000 Ohms or 10,000 Ohms. Type
No.
1032 Single Pole, Double Throw, 5,000 Ohms. 1032 Single Pole, Double Throw, 10,000 Ohms. Be sure to specify coil resistance when ordering.

## MULTIPOLE RELAYS

## TYPE 6 \& 7 SERIES

This Relay is the most versatile Relay for its size in the Leach line, and is ideal for industrial and radio applications where currents to be handled by the contact systems do not exceed 8 Amperes at 115 VAC, Non-inductive. By using the desired stationary contacts, many combinations are available. For example, on the 7-4C Relay one could have various combinations of double-pole, single-pole open, single-pole closed, etc., as required. All contacts are pure silver and are mounted on heavy-plated phosphor-bronze pole pieces, which are designed to give a wiping action and positive contact, pressure. Relay provides solder lugs for connecting coil and contact systems.
COILS: 6 Volt Direct Current Coils consume approximately 3 watts, 6 or 115 VAC Alternating Current Coils consume $6 \mathrm{~V} / \mathrm{A}$ approximately.
CONTACTS: Heavy fine silver contacts $1 / \mathrm{s}^{\prime \prime}$ diameter. Will carry loads up to 0 Amperes at 115 VAC , Non-inductive.

## 

## MIDGET RELAYS

## TYPE 223-227 \& 323-327 SERIES

ENGINEERED in miniature to weigh less than 2 ounces and measures from one to $13 / 4$ inches in length, Leach Midget Relays dependably handle contact loads of up to 2 Amperes at 115 Volts $A C$, Non-inductive. Because of their space and weight saving factors, Midgets expand the range of control by Relays in many products where previous methods are considered unprofitable.

Supplied in a variety of contact arrangements, with moving contact poles insulated from the armature and frame, and with coils for operation on either AC or DC. The high quality, well-known in our standard and larger size Relays, is used throughout.

STANDARD COILS: 6 Volt Direct Current Coils consume approximately .750 watts of Alternating Current 6 or 115 Volts, approximately $4 \mathrm{~V} / \mathrm{A}$.
CONTACTS: $1 / 8^{\prime \prime}$ diameter Fine Silver, rated 2 Amperes at 115 VAC, Non-inductive.

DIMENSIONS: SP $-15 / 16^{\prime \prime} \times 1-13 / 16^{\prime \prime}$.

$$
D P-1-3 / 16^{\prime \prime} \times 1-13 / 16^{\prime \prime}
$$

Overall height-11/4" not including mcunting stud.

MOUNTING: Single No. 6.32 stud, $7 / 16^{\prime \prime}$ long.
WEIGHT: 1.5 ounces approximately.
Type Number

| DC | AC |  |
| :---: | :---: | :---: |
| 223 | 323 | SPDT |
| 227 | 327 | DPDT |

BASE DIMENSIONS: $15 / 8^{\prime \prime} \times 23 / 4^{\prime \prime}$; overall height $13 /{ }^{\prime \prime}$.
WEIGHT: 5 ounces.
Type Number
DC AC
$1057 \quad 1157$ DPDT

## METAL BASE STYLE TYPE 1057 \& 1157 SERIES

THESE RELAYS are ruggedly built for industrial uses and are fitted with $1 / 4^{\prime \prime}$ fine silver contacts for handling heavier currents. Phosphor-bronze, nickel-plated, is used for the pole pieces. Nothing is grounded to the frame. All parts and pieces are so constructed that nothing can twist or turn out of alignment.

DIRECT CURRENT: Coil consumption 1.5 watts, 6 Volts.
ALTERNATING CURRENT: Coil consumption $50-60$ cycles, 6 or 115 Volts, approximately $4 \mathrm{~V} / \mathrm{A}$.
CONTACTS: $1 / 4^{\prime \prime}$ diameter Pure Silver. 12.5 Amperes at 115 Volts AC, Noninductive.

## STANDARD SIZE CIRCUIT CONTROL RELAYS

TYPE 1257 \& 1357 SERIES
This excellent Relay has many applications where it is not desirable to use solder terminal connections. They are highly insulated and made of the best materials obtainable. The magnetic circuit is exceptionally high grade of magnetic iron, heavily cadmium-plated. The contacts are $1 / 4$-inch pure silver, slightly crowned, and are rated at 12.5 Amperes, 115 Volts AC, Non-Inductive.

Ac coils consume $6 \mathrm{~V} / \mathrm{A}, 6$ or 115 Volts AC .
DC coils consume 1.5 watts, 6 Volts DC.

BASE DIMENSIONS: $1 / 4$ " black Bakelite, 2-3/16" $\times 3^{\prime \prime}$; overall height, 1-7/16"
WEIGHT: 7 ounces.
Type Number

## 

## RADIO AND HIGH FREQUENCY RELAYS—ANTENNA TRANSFER

TYPE 1623-59 \& 1723-59
These Relays are exactly the same as above, except that a $1 / 8$-inch fine silver SPST Normally Open auxiliary contact has been added. Usually one these relays is paired with one of the above types*, in order to provide the auxiliary contact for the power supply. This may also be used to close a power Relay, for grounding, or for controlling light power circuits.
AC coils consume approximately $6 \mathrm{~V} / \mathrm{A}, 6$ or 115 Volts , 50-60 cycles.
DC coils consume approximately 3.5 watts, 6 Volts DC. DIMENSIONS: $1 \frac{1}{\prime \prime} 2^{\prime \prime} \times 45 / 8^{\prime \prime}$; overall height, $13 / 4^{\prime \prime}$.
WEIGHT: $6 \frac{1}{4}$ ounces, approximately (each relay).
Type Number

| DC | AC |  |
| :--- | :--- | :--- |
| 1623 | 1723 | SPDT |
| $1623-S 7$ | $1723-S 9$ | SPDT, with $1 / 8^{\prime \prime}$ Aux. Cont. |

*Usually one No. 1723 and one No. 1723-S9 are paired for AC use or one No. 1623 and one No. 1623-S9 are paired for DC use.

## MYCALEX AND ISOLANTITE

TYPE 1623 \& 1723
This new idea for antenna change-over eliminates the major drawback of most Relays now used for this purpose. The spacing between leads, heretofore has been limited to the spacing between the Relay contact strips. A pair of the above matched Relays permits any desired spacing between antenna lead-out wires whether 6 inches, or 6 feet.

Maximum high frequency insulation is provided through the use of heavy Mycalex panels, and Isolantite insulators. The Relays are designed with a wide air gap, $1 / 4$ inch pure silver contacts with a SPST arrangement.

They will withstand over 4000 volts RMS, 60 -cycle hi-spot test between contacts and between contacts and frame on ground.

CONTACTS: $1 / 4^{\prime \prime}$ Pure Silver-Double Pole, Double Throw.
COIL DATA: 6 Volts DC, $2 \frac{1}{2}$ watts, 6 or 115 Volts $A C, 50-60$ cycles, $6 \mathrm{~V} / \mathrm{A}$.

DIMENSIONS: $11 / 2^{\prime \prime}$ wide by $23 / 4^{\prime \prime}$ long by $11 / 2^{\prime \prime}$ high.

Mounting hole centers, $23 / \mathrm{g}^{\prime \prime}$.
Center holes tapped 6-32.
Outer holes clear 6-32.

## 

## RADIO AND HIGH VOLTAGE RELAYS MYCALEX

## TYPE 1601.MX \& 1701-MX

This Relay was designed to control a high voltage radio frequency circuit. Contacts are $1 / 4^{\prime \prime}$ pure silver, SPST normally open, double break. Metal spacers are supplied for mounting.
AC coils consume $6 \mathrm{~V} / \mathrm{A}$, or $115 \mathrm{Volts}, 50-60$ cycles AC .
DC coils consume approximately 3.5 watts, 6 Volts DC.
DIMENSIONS: $13 / 4^{\prime \prime} \times 3^{\prime \prime}$ overall height, not including studs or mounting spacers, $11 / 2^{\prime \prime}$. WEIGHT: 8 ounces.

Type Number
DC AC
1601-MX 1701-MX SPST-DB Normally open.

BASE DIMENSIONS: $31 / 4^{\prime \prime} \times 23 / 4^{\prime \prime}$, overall height, 1-7/16".
Type Number
DC AC
1057-T 1157-T DPDT.

## LATCH TYPE ELECTRICALLY RESET

## TYPE 2417

This type Relay fits many applications where it is not desirable to have current continuously on the coil. The mechanical arrangement is such that after the pull-in coil is energized the armature closes and locks, closed by a mechanical latch on the armature of the Relay coil. The pole pieces are phosphor-bronze, and canvas-base natural Bakelite is used for the end panels and the pole mounting strip. The entire Relay is mounted on a metal base. The contacts are $\frac{3}{3}^{\frac{3}{6}}$ diameter pure silver rated 8 Amperes at 115 Volts AC. Noninductive. This Relay is supplied with $2-6$ or 115 Volt $A C$ coils or with 2-6 Volt DC coils.

## time delay relay

## TYPE 1057 \& 1157 T SERIES

This Thermo Element Time Delay Relay is primarily for use on vacuum tube transmitters, but may also be used for a wide variety of other applications. They are all made DP, which may be used as normally open, normally closed or DT. The contacts are $1 / 4$ " pure silver, rated $12 \frac{1}{2}$ Amperes, 115 Volts $A C$, non-inductive. The center pole, as shown, always is used for controlling the thermo element, which provides a variable delay of from 20 seconds to 1 minute. After the coil is energized, the Thermo element drops out of the circuit, cooling for the next cycle.
STANDARD COILS: AC- 6 and 115 Volts $(6 \mathrm{~V} / \mathrm{A})$
DC- 6 Volts-(1.5 Watts)

DIMENSIONS: $15 / 8^{\prime \prime} \times 35 / 8^{\prime \prime}$; height $2-1 / 16^{\prime \prime}$. WEIGHT: 8 ounces.
Type Number
2417 DPDT.
Specify voltage and whether for $A C$ or $D C$.

Type

## Number

1042 SPST Normally closed-double break. Contact rating 10 Amp., 115 Volts AC.

## LIGHT DUTY OVERLOAD TRIP RELAYS

 TYPE 1042 SERIESThe Relays shown are used as safety devices on electronic apparafus for the protection of the equipment against excessive currents. When current reaches a predetermined value the Relay is pulled in allowing the contacts to snap open and at the same time locking the armature closed. To reset the contacts, the coil circuit must be opened before pressing the Bakelite first finger. These Relays are supplied with the coil circuit highly insulated from the contacts; however, to use them as circuit breakers the coils and contacts may be connected in series.
Commonly used for the protection of power tubes. In this service the coil is put in series with the negative side of the plate supply and the contacts are in series with the fransformer primary or the coil of the power contactor.
These Relays are all adjustable for the trip-out setting to approximately $20 \%$ plus or minus of their designated rating. In ordering it is necessary that you specify the approximate current on which they are to operate. Supplied in 2 standard coils: 250 MA or 500 MA .

WARD LEONARD.
RADIO AMATEUR and INDUSTRIAL RELAYS

## RELAYS FOR AUTOMATIC CONTROL

Representative samples of the comprehensive line of relays made by Ward Leonard. The ones illustrated are those particularly adaptable to electronic and the more common industrial applications.

MIDGET MAGNETIC RELAY - TYPE No. 106. -
For remote control of A.C. or D.C. circuits. Has wide application for use on power circuits or electronic circuits in which the currents to be controlled do not exceed the ratings of the contacts. May be energized from main line or from an independent circuit. Built on a molded Bakelite base. Front or back connected terminals.

Coil Voltages -
D.C. $-6,8,12,24,32,115$ volts.
A.C. ( 60 cycles) $-6,8,12,24,32,115$ volts 115 volts.
Contract Arrangement -
Single Pole, Double Break, Normally Open, Normally Closed and Double Throw.
Double Pole, Single Break, Normally Open, Normally Closed and Double Throw.
Double Pole (Common Feed), Single Break, Normally Open, Normally Closed and Double Throw.
Contact Ratings, in Amperes -

| Volts | D. G. |  | 60-Cycle A.C. |  |
| :---: | :---: | :---: | :---: | :---: |

*0.7 Amperes if Double Throw.
Dimensions - $2^{\prime \prime}$ wide; $21 / 4 "$ high; $21 / 8^{\prime \prime}$ deep.
Type No. 106 Relays for 3 -wire control are also available. Details will be furnished on request.
heavy duty midget relay - TyPE No. 105. A general purpose relay de-
 signed for remote control of the ordinary type of electrical appliances, such as electric heaters, electric signals, electric lights, electrically operated pumps, and most types of electronic equipments. The Heavy Duty Midget Relay is sturdily built on a molded Bakelite base. Heavy, front connected terminals are provided. The Heavy Duty Midget Relay, as a standard unit, is of the open type, but it can be furnished with a steel knock-out box enclosure.
Coil Voltages -
D.C. $-6,10,12,24,32,115$ volts.
A.C. ( 60 cycles) $-6,10,12,24,32,115,230$ volts. Contact Arrangement -
Single Pole, Single Break, Normally Open, Normally Closed and Double Throw.
Double Pole, Single Break, Normally Open, Normally Closed and Double Throw.

| 1 | 0.5 | 0.5 | 15 | 15 |

Dimensions - Single Pole: $17 / 8^{\prime \prime}$ wide; $23 / 8^{\prime \prime}$ high; $1^{1 / 2^{\prime \prime}}$ deep. Double Pole: $21 / 2^{\prime \prime}$ wide; $23 / 4^{\prime \prime}$ high; $13 / 4{ }^{\prime \prime}$ deep.

SENSItIVE RELAY - TYPE No. 250. - For use in applications where a high degree of sensitivity is required such as in electronic circuits. Built on a Bakelite base with large knurled heads and nuts to facilitate adjustment of the contacts and the spring tension on the armature. The use of nickel alloy in the magnetic circuits insures good contact torque at pull-up and crisp drop-out. Contact Arrangement -

Single Pole, Double Throw.

Contact Rating, in Amperes -

| Volts | D.c. | 60-Cycle <br> A.C. |

| 230 | 0.5 | 1.5 |

Dimensions - $25 / 8^{\prime \prime}$ wide; $25 / 8^{\prime \prime}$ high; $15 / /^{\prime \prime}$ deep.
MIDGET METAL bASE RELAY + TYPE No. 104. - For use in small radio transmitters, sound equipment, aircraft control circuits, and other similar applications. Available with Bakelite insulation or ceramic insulation. Small size permits installation in limited spaces. Built on a metal base. Vibration resistant up to 10 times gravity when energized. Front connected, solder type terminals.

Coil Voltages -
D.C. $-6,10,12,24,32,115$ volts.

A.C. ( 60 cycles) $-6,10,12,24,32,115$ volts.

Contact Arrangement -
Single Pole and Double Pote. Various combinations with or without auxiliary contacts.
Contact Ratings, in Amperes -

| Volts | D.C. | 60-Cycle <br> A.C. |
| :---: | :---: | :---: |
| $0-24$ <br> $25-115$ | 4 | 4 |

HEAVY DUTY RELAY - TYPE No. 130. - A relay that has heavy current carrying and rupturing capacities for use in A.C. or D.C. circuits. Contact fingers are heavy stiff metal blades with large stainless steel springs for pressure. Large gap contacts with adequate surfaces. As high as four separate circuits may be opened simultaneously with the closing of up to four other circuits.

## Coil Voltages -

D.C. $-24,32,115,230$ volts.
A.C. ( 60 cycles) $-24,32,115,230,440$ volts.

Other voltages and frequencies available on special order.

## Contact Arrangement -

Various combinations of contacts from one to four poles.
Contact Ratings, in Amperes -

| Volts | Direct <br> Current | D.C. with <br> Blowout | A.C. <br> 25 Cycles | A.C. <br> 60 Cycles |

| $125-250$ | 1 | 10 | 25 | 25 |
| $251-440$ | $\ldots$ | $\ldots \ldots$ | 10 | 15 |

Note: Blowouts required for relays that control Direct Current circuits in excess of 23 volts or a current of 1 am pere.
Dimensions - Base dimensions vary according to size of relay. Maximum depth, $31 /$ ' $^{\prime \prime}$.

## RELAYS FOR THE RADIO AMATEUR

A few examples of Ward Leonard's popular line of relays for use in radio circuits are illustrated here. Information on specifications and prices are detailed in Catalog D-11 which will be furnished on request made to Ward Leonard directly or through one of its agents or distributors.
R. F. BREAK-IN RELAYS. -

Otherwise known as
Push-to-Talk" Relay for' phone transmitters. Pushing button in control circuit connects proper transmitter circuits and disconnects proper receiving circuits to transmit. Releasing button

Midget Type

Heavy Duty Type switches all circuits back to normal position for receiving. Furnished in two sizes, Midget Type for light duty and the Heavy Duty Type.

KEYING RELAYS.-Low voltage type for centertap or grid-bias keying High voltage type for use with grid controlled high voltage rectifie tubes. Use of Keying Relays reduces length of circuit wiring and permits control of keying with key located in convenient position for operating. Capable of keying up to 40 words per minute.

UNDERLOAD RELAY, - Protects against damage to tubes and other components of amplifiers when load failures occur, due, for example to inability of one or more vacuum tubes to hold the load because of loss of excitation. De-energizing of relay coil when load drops opens contacts and prevents damage to transformers or tubes. Available from stock with coil adjusted to pick up at $100 \mathrm{~m} . \mathrm{a}$. to $200 \mathrm{~m} . a$. DC or with coil adjusted to pick up at 200 m.a. to 400 m.a. DC.

Midget Type

Intermediate Type

Heavy Duty Type

ANTENNA CHANGE-OVER RELAYS. - Switches antenna to transmit or receive. May also be used to switch transmitter or receiver to either of two antennas. Available in three sizes - Midget Type, Intermediate Type, and Heavy Duty Type, Midget Type built on Mycalex base. Contacts and terminals on intermediate and Heavy Duty Types (except coil terminals) supported by ceramic blocks. Lucite crossarm used on all types.

ANTENNA GROUNDING RELAY, - For grounding transmitting or receiving antenna when not in use Contact arms supported on Lucite crossarm. Circuit contacts and terminals sup ported on ceramic insula tion block Coil terminals and grounding terminals mounted on Bakelite base Double pole, double throw contacts, with fixed or ad ustable normally closed contacts.

MIDGET LATCH-IN RELAY.- A multis purpose relay especially useful in circuits where interference might be caused if relay coils were continually energized. Momentary energizing coil "pulls in" armature which is locked in position by mechanical latch. Momentary energizing reset coil releases latch allowing armature to drop to normal position.

BAND SWITCHING RELAYS.- Automatically changes frequency bands through two-wire control circuit. Installation on the relay in the set near the coils eliminates the need for long R. F. leads, such as are required when a panelmounted switch is used. Mycalex insulation used for base and contact arms. Contacts and terminals spaced to insure against leakage or creepage of high frequency and high voltage in the circuit.

The use of Ward Leonard Relays in an Amateur Rig not only modernizes it, but also improves its efficiency and stability. Short r.f. leads prevent stray currents. Convenient control is provided. $\qquad$

THERMAL TIME DELAY RELAY. - Delays the application of voltage to the plates of vacuum tubes until the filaments have heated. The relay illustrated is adiustable over a range of from 15 seconds to 45 seconds. Other time delay relays - thermal type and motor driven type - are also avail able. Furnished with 110 volt, 60 -cycle AC coil.

SAFETY RELAY. - A relay that should be installed in every amateur rig. It gives automatic protection against the hazards of high voltages in filter condensers when power supply unit is turned off. Furnished with resistor through which condensers are
 discharged. Furnished with normally closed contacts which open when transformer primary circuit is closed, energizing relay coil.

EXCLUSIVE FEATURES of A MPERITE THERMOSTATIC<br>DELAY<br>RELAYS

- Actuated by a heater.
- Operates on A.C., D.C., or Pulsating Current.
- Hermetically sealed, Amperite Relays are not affected by altitude, moisture or other atmospheric conditions.
- Compact, lightweight and inexpensive.

## TECHNICAL CHARACTERISTICS

CIRCUITS: SPST only - Normally open or normaily closed.
HEATER WATTAGE: 2.W prox. - Heaters can be operated continuously.

CONTACT RATING: $115 \mathrm{~V}-3 \mathrm{~A}$ A.C. (or $440 \mathrm{~V}-1.5 \mathrm{~A}$ A.C.): maximum voltage across contacts 1000 V . Maximum voltage between contacts and heater - 1500 V .

AMBIENT TEMPERATURES: Relays are compensated for temperatures of $-55^{\circ}$ to $+70^{\circ} \mathrm{C}$.

LIFE: With $115 \mathrm{~V}-3 \mathrm{~A} A . C$., non-inductive, at least 25,000 operations.

BASE WIRING: Heater - Prongs 2-3; Contacts - 5-7.
LIST PRICE: Standard types of relays - $\$ 4.00$ each.
DELIVERY: The types shown in bold type are most popular, and usually available from stock. Other types delivered in approximately 3 weeks.

| DelaySeconds | Tolerance Seconds | NORMALLY OPEN CONTACTS |  |  |  |  |  | NORMALLY CLOSED CONTACTS |  |  |  |  |  |

# RELAYS <br> FOR AMATEUR AND INDUSTRIAL USES 

## MINIATURE RELAYS

These units are very compact and are especially designed for plate circuit and general purpose control application. Overall dimensions: MR17/8"x $13 / 8{ }^{\prime \prime} \times 7 / 8^{\prime \prime}-M R D 17 / "^{\prime \prime} \mathrm{x}$ $13 / 8^{\prime \prime} \times 11 / "^{\prime \prime}$. Contacts are fine silver rated amps at 115 V . All AC relays are free chater. The MR-2 and MRD-2 have 2500 ohm coil, will pick up at 6 ma. and 12 ma. respectively. The MR-5 and MRD-5 have 5000 ohm coils. will pick up at 3 mia and 7.5 ma respectively. The frop out value of these relavs is approximately $50 \%$ of the pick up rabue.

| Type | A.C. | D.C. | Contacts | $\begin{gathered} \text { Net } \\ \text { N'rices } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| MR-2 |  |  |  | 81.50 |
| MR-5 |  | Platc Circuit | SPDT | 2.10 |
| MR-6 |  | 6 V . | SPDT | 1.50 |
| MR-7 | 6 F |  | SPDT | 1.59 |
| MR-1] MRD-2 | 110 J |  | SPDT | 1.59 2.70 |
| MRD-2 |  |  | DPDT | 3.60 |
| MRD-5 MRD-6 |  | Plate Circuit 6 V . | DPDT | 3.60 2.70 |
| MRD-6 | 6 V . |  | DPDT | 3.00 |
| MRD-11 | 110 V . |  | DPDT | 3.00 |

## OVERLOAD RELAYS

Adjustahle overload relays provide accurate and positive protection against current surges and continuous overloads. Contact arrangements SPDT using ${ }^{3 / 16}{ }^{\prime \prime}$ fine silver contacts. This allows the use of either audible or visual sipmal to advise of overload. AII models are of the electrical reset type which allows remote control
$33 / 44^{\prime \prime} \times 2^{\prime \prime} \times 11 / 22^{\prime \prime}$.

| Type | Current Range | Reset Coil | $\begin{aligned} & \text { Net } \\ & \text { N'rices } \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| OA-2 | 250-500 ma. | 110 V. A.C. | \$4.50 |
| OA-5 | $5065-10100$ пиa. | 110 V. A.C. | 4.50 4.50 |
| $\bigcirc \mathrm{OC}-2$ | 250-500 ma. | 6 V. A.C. | 4.50 4.50 |
| $\mathrm{OC}^{\text {c } 5}$ | 500-1000 ma. | 6 V. A.C. | 4.50 4.50 |
| OD-2 | $250-500 \mathrm{naa}$ $500-1000 \mathrm{ma}$ | 6 V D.C. | 4.50 |

## LATCHING RELAYS

These relays are employed where it is not desirable to have curcent continuously on the coil. The latching arrangement is such that when the relay coil is energized the armature mechanical latching. an electrical impulse on the reset coil releases the armalufe from the lateh and allows the relay to assume its initial position. $3 / 16^{\prime \prime}$ fine silver contacts. Bakelite Base. Size- $33 / 4 / 4$ $\mathrm{x} 2^{\prime \prime} \times 3 / 4$ ".

|  |  |  |  |
| :--- | :---: | :---: | :---: |
| Type | Reset Coil | Pull-in Coil | Net <br> Prices |
| L.EA | 110 Volts A.C. | 110 Volts A.C. | 8.75 |
| L.EA-6 | 6 Volts A.C. | 6 Volts A.C. | 3.75 |
| LED | 6 Volts D.C. | 6 Volts D.C. | 3.75 |

COMMUNICATION RELAYS
Ideally suited for use in telephone, remote control, signaling, com
 mancations circuits etc. High speed opera tion plus high sensitivity with high contilct pressure. Contacts will handle 4 amps at 115 Y. non-inductive load. Each relay has one make and one break contact sets. Size-3 $3 / 4^{\prime \prime} \times 13 / 16^{\prime \prime} \times 15 /{ }^{\prime \prime}$.

| Type | Res. of <br> Coil Ohms | Volts <br> Pick-up | M.A. <br> Pick-up | Net <br> Prices |
| :---: | :---: | :---: | :---: | :---: |
| T10G | 10,000 | 31 | 3.2 | $\$ 3.30$ |
| T63F | 6,300 | 24 | 4.0 | 3.30 |

| T10F | 1,000 | 10 | 10.0 | 2.85 |
| T25E | 250 | 5 | 20.0 | 2.55 |

## ANTENNA CHANGE-OVER

Micalex Insulation is satisfactory for operation up to 60 MC . Triple-X insulation for operation up to 15 MC. All models use $3 / 10^{\prime \prime}$ fine silver wiping action contacts rated at 4 amps. These relays are designel With bali-bearing amature pivot and have large contact splacing to assure minimnm capacity between contact arms. The amnature is de simed so as to eliminate AC chatter. Si\%e-3 $1 / 8^{\prime \prime} \times 31 / 8^{\prime \prime} \times 2816$

Sime type of relay as above only two additional poles are added, one normally open, one normady closed. This arrangement is perfect for PUSH-TO-TALK control. Contacts etc. identicil with Antenna (Change-Over Kelay. Size-41/2" x $31 / 8^{\prime \prime}$ x $23 / 10^{\prime \prime}$

| Ty | Insulation | Coil Soltage | Net Prices |

## MERCURY-SWITCH RELAY

This type relay is used for controlling inductive loads and may be safely used in the presence of explosive dust, gas and vapor. This unit will safely handle a $1 / 4$ H.P. motor or its equivalent. This single pole single throw mercury relay can easily be changed from normally open to normally closed by reversing the mercury tulue in the clip. In addition this relay is equipped with SPST doulbe break $3 / 10^{\prime \prime}$ fine silver contact sets which can le used to electricaly lock this relay, or other applications. Mounts vertically with adjusting
 $\times 31 / 2 \prime$ ".

## TIME-DELAY RELAY

low cost Thermostatic Time delay relays designed for transmitting and industrial use. Prevents damage to tube filaments due to application of plate current before filaments are thoroughly heated. TD-11 is equipped so that it automatically compenastes for ambient temperature changes. Time delay can le ad. justed by means of serewifriver. Stock models TD-11 ( $10-60 \mathrm{Sec}$.)-With compensator ...... Net $\$ 4.75$

## SPEEDX

SPEED-X keys. formerly made by Les Logan Co. of San Francisco, Calif., have attained a pre-eminent position as the leading complete line. Now manufactured by JOHNSON, their reputation will be maintained, and improved wherever possible.

## HIGH SPEED SEMI-AUTOMATIC KEYS

SPEED-X Semi-Automatic Keys are designed and constructed to rigid specifications and are approved by the experienced professional and amateur C. W. operators. They are fully adjustable from lowest to highest speeds. Manufactured in four distinctive and attractive models. Fully guaranteed against any defect in material or workmanship. Bases of all models drilled for stationary mounting.

STANDARD MODEL 114-500. New-Improved Standard Model Semi-Automatic Key mounted on extra heavy steel base $31 / 2^{\prime \prime} \times 61 / 4^{\prime \prime} \times 1 / 2^{\prime \prime}$ finished in attractive wrinkle baked enamel. Mounted on four rubber feet to insure stationary position at all times. The finish will not scratch or chip and will last indefinitely. The frame is finished same as base and has five adjustments with lock nuts, assuring dependable operations at all speeds. Vibrator arm, posts, switch and all machine parts heavily plated in beautiful satin chromium. Complete with adjustable weight, $1 / 8$ " parts heavily plated circuit-closing switch and two paddles adjustable to any desired height. Net weight $41 / 2 \mathrm{lbs}$.

114-500. $\qquad$ List Price $\$ 17.50$
114-500-L (Left-handed model). $\qquad$ List Price 19.50
MODEL 114-501. Beautiful Chrome finish. Heavy steel base $61 / 4^{\prime \prime} \times 31 / 2^{\prime \prime} \times 1 / 2^{\prime \prime}$ with four non-slip rubber feet. Heavy brass connector strips mounted under base. Heavy die cast frame with same finish as base and with five screws for sensitive adjustments. Vibrator is designed to obtain slowest and fastest speeds required by high speed operators. Pure silver $1 / 4^{\prime \prime}$ contacts. Pigtail connections to vibrating arm. Perfectly aligned free acting vibrator bearings. Lock nuts on all adjustments. Paddles adjustable to any required height. All machine parts heavily chrome plated, which makes this the most outstanding semi-automatic key on the market. Furnished with circuit closing switch. Net weight $41 / 2 \mathrm{lbs}$.

## MOULDED BAKELITE KEYS, BUZZERS, PRACTICE SETS

SPEED-X Moulded Bakelite and Metal Hand Keys, Practice Sets and Buzzers are used throughout the world as standard equipment in amateur and commercial work. Each unit is built according to rigid specifications and is fully guaranteed. All models have holes for stationary mounting. Code card supplied with each individually packed unit.

114-301

AMATEUR KEY 114-301-A general purpose key with moulded black bakelite base. Perfect insulation-adjustable smooth acting bearings - improved spring - nickel key arm pigtail connections-no current on bearings-i/8" pure silver contacts. Net Wt. 6 oz. 114-301

List Price $\$ 3.00$
 114-301-SL with $1 / 4^{\prime \prime}$ Contacts...

List Price 3.75
PRACTICE KEY 114-300-A well-built and inexpensive practice key for the beginner. Moulded Brown Bakelite base and knob. Spring bearings, perfect action, simple adjustments Moulded Brown Bakelite base and knob. Spring bearings, periect action, simple adiustments
$1 / g^{\prime \prime}$ pure silver contacts. All machine parts nickel plated. Standard Code card furnished. $1 / 8^{\prime \prime}$ pure silve
Net Wt. 5 oz.

PRACTICE KEY 114-312-Heavy die cast base finished in Gray Wrinkled Enamel. Smooth adiustable contacts. $1 / 8^{\prime \prime}$ pure silver contacts. Has provision for plugging in our semi-automatic keys when desired. Net Wt. 9 oz.

PRACTICE SET 114-450-Consists of one constant frequency adjustable buzzer and a standard hend key with $1 / 8$ " pure silver contacts mounted on a moulded brown bakelite light-weight base $6^{\prime \prime} \times 4^{\prime \prime}$. Adjusting screws, key arm and all machine parts nickel plated. Light Spring for perfect keying. A complete sending and receiving set. Three hook-up diagrams on carton show how this Practice Set may be used singly for code practice and in pairs for point to point communications. Standard Code Card included. Net Wt. 12 oz.

114-450.....................................................................................................................

CONSTANT FREQUENCY BUZZER 114-400-Moulded Black Bakelite Base and Cap eliminates insulation problems. Large pure silyer contacts--precision parts hold adjustments. Additional adjustment on vibrator. Resistance 2 ohms. Operates on two dry cells or one "C" battery. A high quality buzzer for all purposes. Net Wt. 3 oz. 114-400.

List Price \$2.00

# Vibroplex 

## A SEMI-AUTOMATIC TELEGRAPH AND WIRELESS TRANSMITTING MACHINE

## Embodying the latest exclusive features

Prominent features which have been contributed to the success of the Vibroplex are:

## Simplicity • Durability

Perfect control - Easy adjustment
Strong carrier - Ease of manipulation Adaptability to changing wire conditions Ability to transmit perfect Morse and

Continental signals at high speed
These features, which are found only in the genuine Vibroplex models illustrated on these pages, make for clear, rapid, easy transmission; relieve the arm of strain caused by sending on the ordinary key; rest
and strengthen the overworked muscles, and prevent telegrapher's paralysis.

## CLEAR, RAPID SENDING MADE EASY

The Vibroplex transmits the same grade of Morse and Continental code as the strongest clearest hand sender, faster than is possible on the ordinary key, and with less than half the labor.

There is no tensing of the muscles, no nerve strain. no pounding on the key in order to make clear, rapid signals. You simply press the lever - the machine does the rest.

Your name engraved on base, $\$ 1.50$ Additional engraving. 15c per letter

## New SUPER DE LUXE "PRESENTATION" VIBROPLEX

> The Finest Bug Ever Built! 24K Gold-Plated Base Top, Patented Jewel Movement and Super-Speed Control! New patented adjustable main spring affords wider range of speed than ever obtained before in semi-aulomatic trans nitting key. Beautifully designerl with polished chom um machine parts mounted on a 24 K gold-plated base top coloriul red switch knob, finger and thumb piece and precision-machined. This new Super-DeLuxe "Presentation" Vibroplex key at $\$ 2 \%$ antoras a hite-time of sending enjoyment. Harder than metal, the jewels in this key reduce friction. maintain smoother, easier oneration and prolong life

Amateur Net Price
$\$ 27.50$

## THE Improved "ORIGINAL"" VIBROPLEX

Suitable for All Classes of Transmitting work Where Speed and Perfect Morse Are Prime Essentials
This great new Vibroplex is a smooth and casy working IBUG. It has won fame on land and sea for its clarity, precision and ease of manipulation. Can be slowed down to 10 words per minute or less or geared to as high rate of speed as desired. Maintains the same high quality signal at whatever speed, insuring easy recention under all conditions.

## SPECIFICATIONS

The improved model, single lever. Two pairs of contact points: one for dots, the other for dashes. Weight, 3 lbs. 8 oz. A handsome and efficient transmitting machine, with unlimited sending possibilities. Complete with cord and wedge

Standard - Polished Chrom ium top parts, black base. Amateur Net Price........... DeLuxe-Polished Chromium base and top parts, with jewbase and top parts, with jeweled
Price
19.50

THE ''LIGHTNING BUG'' VIBROPLEX

## SPECIFICATIONS

Single lever, with improved flat pendulum, instantly adjustable dot contact spring, circuit breaker parallel with pendulum. Two pairs of contact points, one for dots, the other for dashes. Complete with cord and wedge. Weight 3 lbs .8 oz .

Standard-Polished Chromium top parts, black base.
$\$ 13.95$
DeLuxe-Polished Chromium base and top parts, with jeweled movement.
Amateur Net Price
17.50

## Vibroplex

## THE ''ZEPHYR'' VIBROPLEX

A Genuine Vibroplex. Slightly Lighter in Weight. Having Plenty of "Pep" and "Power" Smaller and more compact but designed in most details the same as the "Lightning Bug" model. Planned to meet the demand for a low priced, efficient and high speed transmitter for telegraph use.

SPECIFICATIONS
Single lever with standard size contact points. Mounted on slightly smaller base. Weight 3 lbs. 2 oz . Equipped with circuit closer, cord and wedge. Standard finish only. Chromium finished top parts, with black crystal base.
Amateur Net Price

THE 'CHAMPION'" VIBROPLEX
For Radio Use Only

Designed to Fulfill the Demand for a Low Priced Radio Transmitter

The new "Champion" is an inexpensive transmitter having exceptional sending qualities ...clarity . . . speed . . . sending ease, which will appeal alike to amateur and professional radio operators. Designed to meet the demand for a low priced Vibroplex in the radio field.

## SPECIFICATIONS

Single lever with two pairs of contact points. Mounted on large standard size base. Weight 3 lbs. 8 oz . Without circuit closer, cord and wedge. Standard finish only. Chromimm finished top parts, with black crystal base.
Amateur Net Price
$\$ 9.95$

## THE ''BLUE RACER'' VIBROPLEX

Very similar to the Original Vibroplex except that it is only half the size. Suitable for all classes of telegraph work and in high favor with wireless men.

Small and compact, the "Blue Racer" Vibroplex can be carried around and never be in the way. Embodies the same sending possibilities, the same carrying qualities, the same strength and durability as the larger models. Built especially to meet the demand of telegraphers requiring a snall. lightweight and efficient sending machine.

## SPECIFICATIONS

Single Lever. Two pairs of contact points-one for dots, the other for dashes. Weight, 2 lbs. 8 ozs. Complete with cord and wedge. Standard-Polished Chromium top parts, black base ... Amateur Net Price
$\$ 15.95$
DeLuxe-Polished Chromium base and top parts, with jeweled movement. Amateur Net Price

## VIBROPLEX CARRYING CASE

Keeps the Machine Free from Dust, Dirt and Moisture Insures Safe-keeping When Not in Use

A cloth-lined case, finished in handsome simulated black norocco. Corners are reinforced. adding to its durability and attractiveness. A flexible leather handle makes it more convenient to carry. Has lock and key.
PRICE
$\$ 5.50$

The JEWELS used in the DeLuxe Model Vibroplexs are the same as placed in the world's finest precision made watches and instruments.

A JEWEL bearing main lever insures o "LIFETIME" of service and an ease of operation that can only be referred to as "FEATHERTOUCH" sending.

Model 63 Amplifier is a specially engineered, highest quality unit. It enjoys wide preference as it efficiently meets 95 per cent of industrial requirements and replaces the need of costly individually engineered equipment. Technical details on request.
Model 63 Master Amplifier
each $\$ 85.00$

## MODEL 64 ECONOMY AMPLIFIER

This Amplifier is an economical unit for practically any industrial application where economy is a factor or requires a light beam distance of not more than 50 feet or where the Relay is not required to operate in
 excess of 250 times a minute. Can be furnished for greater distances or speed, technical details furnished on request.
Model 64 Economy Amplifier
..each \$56.00

## MODEL 62 R \& L AMPLIFIER AND LIGHT SOURCE SET

Model 62-R Amplifier

This "two-unit" set has specially designed Light Source unit and an Amplifier unit that includes the Photo-Cell Receiver, Relay and other electrical controls. This combination has proved efficient for countless simple applications for distances from a few inches to 75 feet or where Relay is not required to operate in excess of 300 times a minute.

The "two-unit" set will supervise efficiently on a simple application, such as: Counting or sorting large objects; limit switches; start and stop operations; light density; fire protection; flame control; opening doors, etc.
Model 62 R \& L "Two-Unit Set... Model 62-R Amplifier only.

## FOTOLECTRIC ANNOUNCER

Automatically Announces the Entrance or Passing of Any Object

Model 61-A

The Fotolectric Announcer unit is designed to project a "beam of light'across any entrance to any room, building or premises. The breaking of this light beam by any person entering will activate a chime or other sound to automatically announce the entrant. Can serve countless purposes and solve most entrance problems efficiently.

Model 61 Fotolectric Announcer includes Light Source and sensitive Photo-Cell units in one compact metal case, finished in black crackle lacquer. Size, $10^{3 / 4} \times 7 \frac{1 / 2}{} \times 23 / 4$ inches.
Model 61 Announcer with Chime.
each $\$ 31.25$
Model 61-A Fotolectric Announcer, the same unit as described above except that it is equipped with an optical system to arrest unwanted light.
Model 61-A Announcer with Chime each $\$ 34.25$

## LIGHT SOURCE UNITS AND PHOTO-CELL RECEIVER UNITS

Model 31

Model 21

The Light Source unit is designed to project the light beam and the Photo-Cell Receiver is designed to pick up the beam and convert its light into electrical energy through the Amplifier unit.

Model 33 Light Source is "standard" for general applications and is most generally recommended. Its light beam covers a distance from a few inches to 50 feet from Light Source to Receiver. Heavy duty, cast iron unit with $1 / 2$-inch conduit fittings. Gray finish.

Model 23 Photo-Cell Receiver is engineered for use with Model 33 Light Source and has the same case specifications.

For use in damp surroundings, Models 33 and 23 can be made water-proof at slight additional cost.

Model 31 Light Source is "standard" where a lighter weight case is practical. Its light beam covers a distance from a few inches to 25 feet from Light Source to Photo-Cell Receiver. Case is 18 gauge steel, gray crackle finish. Has $1 / 2$-inch knockout.
Model 21 Photo-Cell Receiver is engineered for use with Model 31 Light Source and has the same case specifications.

| Model No. | Description | Size, Inches | Price, Each |
| :---: | :---: | :---: | :---: |
| 33 | Light Source Housing | $41 / 4 \times 23 / 4 \times 23 / 4$ | \$11.00 |
| 23 | Photo-Cell Receiver... | $41 / 4 \times 23 / 4 \times 23 / 4$ | 16.00 |
| 31 | Light Source Housing | $65 / 8 \times 2 \times 13 / 4$ | 9.00 |
| 21 | Photo-Cell Receiver | $65 / 8 \times 2 \times 13 / 4$ | 14.00 |

This series consists of One Master Control Panel operating with one or more (up to 4) Fotolectric Light Source and Amplifier sets. The combination may be used with traps, foil systems and other equipment as used by professional burglar alarm companies, to operate audible or visible alarms.

Any interruption of the light beam operates whatever alarms the user wishes to install. The complete alarm circuit is supervised by the Master Control Panel which is remotely located for operator's convenience.

All Model 9000 series Amplifiers contain the following: Heavy duty transformers $110-120$-volt, 50 to 60 cycle, A.C. with dual secondary. Potentiometer type sensitivity control. Meter Jack to determine correct cut-off and plate current in Relay circuit. Electrolytic condensers. Double pole, double throw 5 -amp. relay.

Constructed of 18 -gauge steel, welded, gray wrinkle finish. Size: $7 \times 61 / 4 \times 41 / 4$ inches. (Not weatherproof.)

| Model No. | Description | Range per Set | Price, Each |
| :---: | :---: | :---: | ---: |

| $\mathbf{9 5 0 0}$ | Master Trespass Trap | $500 \mathrm{ft}$. | $\mathbf{2 2 5 . 0 0}$ |

Model 9000 Control Panel, $\$ 45.00$ list, supplied with plate relays equal to the 9000 series Amplifiers ordered. If 9000 series Amplifiers are ordered without Control Panel, plate relay is supplied with Amplifiers to be mounted in Control Panel.

## MODEL 7000 SERIES FOTOLECTRIC BURGLAR ALARM SYSTEM

The Model 7000 series operates in conjunction with professional independent burglar alarm company's central office or local equipment.

The 7000 series Amplifiers are complete with the following scientifically engineered equipment: Tubes. Lenses. Heavy duty shielded Amplifier transformer 110-120 volt, 50-60 cycle, A.C. with dual secondary. Potentiometer sensitivity control. Meter Jack to determine correct cut-off and plate current in relay circuit. Electrolytic condensers. Single-pole, doublethrow relay, self-wiping contacts rated at 5 amp . noninductive at $110-120$ volts, 50 to 60 cycle.

| Model No. | Description | Range per Set | Price, Each |
| :---: | :---: | :---: | ---: |
| 7100 | Remote Cont. Trespass Trap | 100 ft | $\$ 70.00$ |
| 7150 | Remote Cont. Trespass Trap | 150 ft. | 90.00 |
| 7250 | Remote Cont. Trespass Trap | 250 ft. | 130.00 |
| 7500 | Remote Cont. Trespass Trap | 500 ft. | $\mathbf{2 2 5 . 0 0}$ |

## MODEL 5000 SERIES FOTOLECTRIC BURGLAR ALARM SYSTEM

Model 5000 series consists of a Light Source unit and an Amplifier unit. This combination is designed for interior use where a single beam is considered ample protection; it is not intended for use with protective devices such as foil systems, etc. Furnished for 110 volts. Amplifier Model 5150-R (illustrated) is equipped with a scientifically engineered "unwanted light rejector," which materially increases the day-light range of the unit and makes it equal to the night-time range, if equipment is installed so that 90 per cent of the light reaching the Photo-Cell is that guaranteed by the Light Source.

| Model No. | Description | Range | Price, Each |
| :---: | :---: | :---: | ---: |
| $\mathbf{5 1 0 0}$ | Single Beam Trespass Trap | 100 ft | $\mathbf{\$ 7 5 . 0 0}$ |
| $\mathbf{5 1 5 0}$ | Single Beam Trespass Trap | $\mathbf{1 5 0} \mathrm{ft}$. | $\mathbf{9 5 . 0 0}$ |

All WORNER units operate efficiently as far as 2000 feet unit. Persons at or near Sub-stations when called may answer without leaving their work, from as far away as 25 feet. "Silent feature" shuts out noise in vicinity at Station. 110 volt to 120 volt, A.C. or D.C. Units are shipped complete with wiring diagrams and instructions for easy installation.

Model P-359 Selective Master Station. Handles 1 to 5 Sub-stations. Has 3 -tube amplifier. 1 watt output. Contains 5 -inch speaker for maximum input without talking directly into unit. In substantial all-metal cabinet; size: $9 \times 61 / 4 \times 6$ inches. Finished in hammered walnut lacquer finish. Complete with tubes and instructions
each $\$ 34.75$
Model P-353 Combination Master Station, 2 to 5 units may be used, in any combination of Masters to Masters, or Masters to Sub-stations. Contains 3tube amplifier. Complete with tubes and instructions each \$47.50

Model P-360 Sub-station. Has 5 -inch speaker. Talklisten switch used by Sub to originate call; not used after Master answers. In substantial all-metal cabinet as illustrated; size: $7 \frac{1}{4} \times 4 \times 6$ inches; finished in attractive hammered walnut lacquer finish.
each $\$ 11.50$

# EVEREADY Dry Batteries 

"EVEREADY" "IGNITOR" DRY CELL NO. 6-
For extra long life and heavy service in all Dry Cell applications. Its exceptionally high quality and recuperative powers have made the "Eveready" "Ignitor" dry cell famous for ignition, radio, bells, buzzers, electric games, toys, lanterns and other battery operated devices.
"EVEREADY" R.R. AND INDUSTRIAL NO. 6-
Especially designed for Raitroad and Industrial use where o wide range of service conditions, from extremely heavy to extremely light are encountered.
"EVEREADY" "COLUMBIA" "GRAY LABEL" TELEPHONE CELL NO. 6-Especially designed for telephone service. Noted for its lang life on light drain service.

Standard Packages Contain One Type of 6.Inch Dry Cell or "Hot Shot" Battery Only.

GENERAL dry batteries contain many outstanding advancements such as extra heavy seamless extruded zinc cups, the famous paper thin separator permitting more mix and more active zinc area by utilization of the cell bottom, the curled rim lock seal which seals each cell individually. These features, found only in Generals, assure long shelf life as well as the maximum in dry battery performance.

## GENERAL A \& B RADIO FARM PACKS

General A-B packs are made with $L$ size cells in the $A$ section. These cells are $40 \%$ longer than the largest conventional $11 / 4^{\prime \prime}$ diameter cell. This construction assures the perfect balance between these " $A$ " and " $B$ " sections for current drains established by the Radio Industry.

## GENERAL ABC HOME RADIO BATTERIES

All cells used in General batteries are filled with active mix by loading equipment developed by General which automatically puts the right amount of mix into each cell and pocks it uniformly. General home radio botteries are accepted for their uniformity, dependability and long service.

## GENERAL PORTABLE A \& B PACKS

The small size cells used in portable batteries greatly reflect the benefits derived from General's patented construction. General Batteries deliver more service hours per dollor, therefore you will find them used as original equipment in more boltery radios than any other brand.

## GENERAL ''Duromite'' BATTERIES

New General DuroMite batteries are the finest in battery design and assembly. Thin, well-balanced flat cells are stacked like a roll of wafers. Each stack of cells sealed in its own plastic case, keeping the cells frest until put in use. Maximum service life can be obtained from minimum of space used.

## GENERAL "Leakproof" \& LANTERN BATTERIES

The New General "Ceakproof" nashlight cell comes to the market to fulfill the demand of practically every user. This demand is for extra long service, years of shelf life and protection against corrosion damage. The Industrial cell is recommended when light is needed frequently and for long periods.

## GENERAL IGNITION \& ELECTRIC FENCE BATTERIES

All General batteries are designed to use the most efficient cells available. The 641 is made with 12 L cells and this construction has proven to produce exceptional performance when used on Electric Fence controls and other ignition applications.

# DESCRIPTIVE CATALOG OF RADIO BATTERIES 

WITH NEW INTERLOCKED FLAT CEIL
"B" Batteries that give... MUOH LONGER HI-VOLTAGE LIFE!!!

## CORRECT SERVICE

For 3 Major Markets

## OLIN INDUSTRIES, INC.

Êlectrical Division, New Haven. Conn. ond Branches

## Latest development in

## Pontir!

## ONLY OLIN "B" BATTERIES HAVE THIS new interlocked flat cell construction

already standard equipment with is rado set manufacturers

## EXCLUSIVE

## NOTE:

## OLIN Interlocked flat cells

have no waste space and
hold more power producing
chernicals than previous
conventional " $B$ " battery
assemblies.

## Result: <br> LONGER HI-VOLTAGE LIFE!

## Mucellerilectictor

THE SNAPPER
A Long Insulated Test Clip and A 'Triple Threat' Radio Tool

U. S. Patent No. 2,074,324

No. 99-7" Long Insulated
The long tube is of insulating material and is fitted with spring contact jaws on the far end.
The jaws are operated by a push of the thumb on the near end. Wire is quickly and easily connected in a hole in the insulator knol binding post on the near end,
May be used as (1) A "Deep Sea" Electric Test Clip-test contacts with ease, deep in the recesses of radio chassis with no danger of short circuits; (2) An Electric Contact Prod-clip jaws may be used to make quick prod contacts, or clip one Snapper on ground circuit and prod with another; (3) A Retriever-start small screws and nuts or pick up odds and ends that may accidentally be dropped into inaccessible places.
PRICE..$\$ 0.90$ EACH Dealers' Wholesale Price, each $\$ 0.54$ Net Snappers are generally used in pairs- 1 red and 1 black.

## CLAMPIPE GROUND CLAMP

No. 58

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a to the ClamPipe that cannot be found in any other make.
The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be tact. The Clamp may be installed on a pipe ying not spread open.
The best ground clamp value on the market. Applicable to pipe $3 / 8$ " to $13 / 8$ " outside diameter. Packed 10 in a box
EACH NET.................... $\$ 0.13$ LOTS OF 10.

$\$ 0.09$ or wire bands. of wire across the roof. in the clear.

## THE "TENNA.CLAMPIPE"

(ClamPipe Trade-mark Reg. U. S. \& Can. Pat. Off.)
A Standoff Insulator that clamps on Quickly-Easilyalmost anywhere for Television and FM Antenna Lead-Ins.

Quickly and
Permanently Supports
Lead-Ins

- On antenna masts \& crossarms.
- On pipes, Ibeams, etc., on basement ceil. ings.
- On any rigid object up to $13 / 8^{\prime \prime}$ in diameter or thickness.

SIMPLY TURN THE SCREW-EYE BY HAND FORA SOLID. PERMANENT GRIP.

A great timesaver - the installation man's third hand.

Consists of an assembly of the famous Mueller Clampipe Ground Clamp and a steel screv-eve with an insulating grommet. Holds lead-in wire from $1^{1 / 4^{\prime \prime}}$ to $21 / 2^{\prime \prime}$ away from clamp. Can be applied to any antema mast, pipe or other object up to $13 / \mathbf{B}^{\prime \prime}$ in diameter or thickness.
All metal parts are completely weatherproofed.
Insulating grommet is molded of high quality plastic having superior dielectric and non-absorptive properties. Will withstand exposure to weather.

No. 130 for all types of Flat Twin-lead.
No. 131 for all Coax Cables up to $1 / 2^{\prime \prime}$ O.D.
Packed 100 in a carton
EACH NET $\quad \$ 0.16$ LOTS OF 10........... $\$ 0.11$

$$
\text { LOTS OF } 100 \ldots \quad \$ 0.098
$$

## THE 'TENNA-CLAMP''

A New 3-in-1 Stand-off Insulator Clamp! Supports TV and FM Lead-ins on MASTS, PIPES, GUTTERS AND GUY-WIRES
Has same general features and specifications as Tema-ClamPipe de scribed above except different type clamp channeled on end to rake standard guy-wire in addition to pipes.

HAS THESE USEFUL FEATURES -- One standard size solves many lead-in problems - far more useful than straps

- Brings lead-in to edge of roof - right where you want it - no more "draping"
- On those high jobs, come right down a guy-wire - and get around the gutter

## LOW PRICES!

All packed 100 in a carton
No. 135 For all types of Flat Twin-Lead. No. 136 For Coax Cables un to $1 / 2^{* \prime} 0 . D$. EACH NET, $\$ 0.13$ LOTS OF 10, $\$ 0.09$

LOTS OF 100, $\$ 0.078$
Also in these Double Lead-in Types: No. 135-DB For Flat Twin-Lead. No. 136-DB For Coax Cables up to $1 / 2$ "O.D EACH NET, $\$ 0.25$ LOTS OF $10, \$ 0.18$

$\star$ Complete descriptions of these parts will be found on the following pages.

## THE MALLORY 2448 VIBRATOR DEAL

## Here's What You Get:

(1) Six popular Mallory vibrators

2 Twelve Mallory buffer capacitors
(3) Services $75 \%$ of your replacement needs
(4) Simplifies your inventory control
(3) Extra space for flexible inventory
(6) Cabinets firmly "stack" together; use as many as you need to handle your stock

## You Get the Cabinet

 at no Additional Cost... When You Purchase the Vibrators at Your Regular Discount

Picture at right shows how your vibrator cabinet nests with any Mallory Control Deal cabinet. Your vibrator cabinets nest together, too, to hondle your complete stock of vibrotors. The Mallory Radio Service Encyclopedio Is purchased separately.

APPLICATION-The Mallory 2448 Vibrator Deal cabinet assures more speed in vibrator replacement work . . . gives you the advantage of work-bench accessibility . . . simplifies your inventory problems . . . gives you wide coverage with a minimum selection of Mallory vibrators.
GENERAL DESCRIPTION-Consists of 6 of the most popular type Mallory vibrators. Cabinet contains 12 individual compartments, enabling you to make 6 additional selections. A large drawer is divided into 6 sections to hold a large stock of Mallory buffer capacitors. Twelve capacitors come with the 2448 Deal. Cabinet constructed of 28 -gauge sheet steel, neatly finished in blue with white lettering and orange trim.
USE IN INVENTORY CONTROL-With the Mallory 2448 Vibrator Deal cabinet in your shop, inven-
tory control is simplified. You keep similar type vibrators together. You determine at a glance which vibrators you need to re-order. This assures an adequate, up-to-date supply of Mallory vibrators you need.

CONTENTS-(Complete descriptive information on each of the following vibrators and buffer capacitors may be found on the following page and in the Mallory Capacitor Section page 9 , respectively.
Mallory Vibrators, 1 each:
$248,716,859,870,1100,1501$
Mallory Buffer Capacitors, 2 each:
OT-371, OT-372, OT-373, OW-344, OW-345, OW-346
PRICE-When you purchase the vibrators and buffer capacitors included in the Mallory 2448 Vibrator Deal, at your regular discount, you get the cabinet at no additional cost!

NOTE 1. To make this substitution certain wiring changes are necessary. See instruction sheet packed with vibrator or installation note in the Mallory Vibrator Guide and the 6th Edition Mallory Radio Service Encyclopedia.
NOTE 2. An exact duplicate is no longer available. Every effort is being exerted to determine a satisfactory sulstitute. If a substitute can be made available, your Mallory Distributor will be advised.
NOTE 3. To make this substitution the six-prong socket must be changed to a 4 -prong UX base socket and wired to match base diagram 8 .

## MALLORY TECHNICAL MANUAL

This simply written, practical book bridges the gap between radio theory and practice. Designed for the radio serviceman, engineer, amateur or experimenter who wants the latest technical information. . . presented so that he can easily apply it to everyday problems.

Contains page after page of information profusely illustrated. It's worth far more than its price.

## MAlLORY

These Mallory Vibrators Meet $90 \%$ of Your Replacement Needs

- The 12 basic vibrator types listed at right cover $90 \%$ of your replacement needs. The entire line of Mallory Vibrators has been simplified so that replacements can be made easily and quickly. By effecting substitutions, Mallory is materially reducing the number of vibrators needed to meet your requirements.

This Mallory standardization program means that your distributor stocks fewer vibrator types and more units of each-thus delivery is tremendously speeded up.

The vibrator replacement problem is being simplified but Mallory quality remains the same. Mallory precision vibrators, backed by years of outstanding performance, still offer the dependability, the long life and the trouble-free service that you and your customers expect. It pays to insist on Mallory Approved Precision Products.

## Type VF-223 Audio Filter

- A complete audio filter system for use with all single-unit Vibrapacks. Designed to give maximum suppression of hum with minimum voltage drop. Especially recommended for applications which are sensitive to hum, or where voltage regulation is important as in Class " B " audio amplifiers.

Type VP-552 • VP-G556

Type VP-553

## NOISE SUPPRESSION

- Vibrapacks are equipped with built-in noise suppression equipment. Type VP-555 also includes an efficient low-frequency hum filter. Type VP-557 incorporates the first input filter condenser only. Other Vibrapacks do not include the high-voltage hum filter. Highvoltage filter requirements are similar to equivalent AC power packs.

## *Includes complete audio filter.

$\dagger$ Maximum ratings are for mobile transmitter service. For continuous duty with radio receivers where longer vibrator life is essential, reduce maximum output watts ratings to $75 \%$ of listed values.

## MALLORY battery chargers

## OVERNIGHT

APPLICATIONS-Mallory Automotive and Marine Battery Chargers provide convenient, efficient and economical charging of any storage battery used in automobiles, buses, trucks, tractors, taxicabs, small boats, airplanes, and on the farm. Taper charging (an automatically decreasing charging rate) is designed into all Mallory chargers to prevent damage to battery plates and to insure maximum battery life. These chargers also are ideal for charging any 6 or 12 -volt storage battery used in industrial applications, engineering and reindustrial applaries, test equipment, and service benches, etc.
Although designed principally for storage battery charging, Mallory Automotive and Marine Battery Chargers may be used for numerous other applications. They provide an ideal power source for electroplating, model and toy trains, telegraph systems, relays and solenoids, vending machines, electric organs, generator fields, etc. In conjunction with an adequate filter they may be used as a power source for farm and portable radio filaments, auto radio receivers, telephone systems, loud speaker fields, exciter lamps, scientific apparatus, etc.
DESCRIPTION-The heart of these chargers is the Mallory Magnesium-Copper Sulfide all-metal rectifier. Unaffected by temperature and able to withstand phenomenal abuse, they provide stable output without adjustment over long life. With an exclusive self-healing feature, Malory rectifiers have been time-tested and proved to be the most rugged dependable rectifier for battery-charging applications.
Mallory Automotive and Marine Battery Chargers are made in five models to cover
the complete charging field from battery boosters to fast chargers. All chargers are conservatively designed with circuit protection and meters where required, and large capacity battery clips for ready connection to battery posts. All models are designed for operation from 115 -volt $60-$ cycle power lines and are equipped with ample leng ths of both AC and DC cables. MOUNTING-All chargers are readily portable. They may be placed anywhere: in the car, on the garage floor, on a bench, etc. The small models are equipped with two holes for wall mounting where desirable. ACCESSORIES-Although equipped with battery clips, a readily attachable polarized dashboard plug and receptacle (No. R-652) or cigarette lighter plug ( $\mathrm{R}-655$ ) are available as accessories for simple installation in an automobile. The addition of one of these receptacles makes possible simple plugin connection of the charger to the car battery. Extra battery clips (No. R-653) are available. Automatic timer control (No. R-654) is offered for use with battery chargers to control the charge. It may also be used with many household appliances.
PACKAGING-One charger per cardboard shipping carton.
No. R-652-Polarized Dashboard Receptacle, for use with these chargers.
No. R-653-Extra Battery clips.
No. R-655-Cigarette lighter plug. No. MMF-12-Specially designed filter for use in conjunction with 6-AC-4, 6-AC-6. 6-AC-10 chargers. Efficiently reduces AC ripple when these chargers are used as a DC power supply. May also be used with 6-AC-60 where max. current does not exceed 20 amps.

## PORTABLE FAST CHARGER

- The Mallory 6-AC-60 Quick Starter is a portable unit providing 2 minute starting service or fast charging of batteries in a few hours.
A Mallory 80 amp Magnesium-Copper Sulfide rectifier stack insures dependable and rugged service. A 6 step charge control switch and ammeler allow charging rate adjustment. To provide automatic charging use the Mallory Automatic Timer Control (R-654).
Rectifier stack and transformer are efficiently cooled by a quiet running fan with an oil-less bearing motor. A convenient rack holds both AC and DC cables. The
entire unit weighs only 45 lbs. entire unit weighs only 45 lbs.
The Mallory Quick Starter will provide approximately 100 amp. hrs. charge in 2 hours. It also provides a convenient power supply for test and service equipment for horns, heaters, radio receivers, and electroplating.

## Catalog No. 6-AC-60

Automatic Timer Control for 6AC60 Charger. Variable time set ting up to 60 minutes. Contacts rated 20 amperes, 115 volis AC or 10 amperes, 230 volts, isuitable for DC loads). Also ideally suited to control lights, sunlamps, radios fans, heating devices and numerous DC loads). Also ideally suited to con trol lights, sunlamps, radios, fans heating devices and numerous other electrical household appliances,
Catalog No. 654

## MALLORY MAGNESIUM-COPPER SULFIDE RECTIFIERS

APPLICATION-Mallory MagnesiumCopper Sulfide Rectifiers are time-tried and proved to be the most rugged, dependable rectifiers for those applications requiring low DC voltages at medium and high currents such as battery chargers and eliminators, electroplating, motion picture projector arcs, welding, engine starting, circuit breaker reclosing, solenoid and relays operation, etc.
DESCRIPTION-Mallory MagnesiumCopper Sulfide Rectifiers are all metal in construction, ruggedly assembled under high pressure to withstand severe vibrations and shock. There are no bulbs, liquids, moving parts or sparking contacts. Unlike all other types of rectifiers, they contain no tempera-ture-sensitive films or layers, and have phenomenal ability to withstand abuse and extremes of temperature ( $-90^{\circ}$ to $+265^{\circ} \mathrm{F}$.). Constant output without circuit adjustments is assured over many years of useful life. Should an accidental voltage surge occur, the rectifying film will "self-heal."
SCOPE AND SIZES-Many sizes are available to supply low DC voltages from watts to kilowatts. A new rectifier engineering data folder is available upon request, covering other sizes for single phase and three phase applications, both convection and fan cooled. In addition to rectifier stacks, P. R. Mallory $\&$ Co., Inc. also manufacture a complete line of Rectoplaters (distributed exclusively by the Udylite Corporation, 1651 East Grand

Boulevard, Detroit 11, Michigan), Rectotruck Chargers (industrial electric truck chargers available through truck agents).

## REPLACEMENT RECTIFIERS—The

 Mallory Magnesium-Copper Sulfide Rectifiers listed on page 53 are only those popular sizes regularly carried in stock, principally for replacement purposes. These same rectifiers, however, may be used for numerous other applications. For example, the IB8R and IB12R rectifiers are ideal for reversing the direction of HO and O gauge model train locomotives respectively, using wound field motors (as illustrated in the wiring diagram, following page). 1B12C1J, IS16CB7, and IS16B9 rectifiers may be readily used to assemble tapering battery chargers as illustrated in the wiring diagram. The IS24B9 rectifier may be used to make up a battery eliminator to operate and test modern automobile radio receivers as shown. Other applications immediately suggest themselves, such as electroplating, model and toy train DC power sources, radio filament supplies, chatter-free relay and solenoid operation, electric organ, automotive electrodynamic speaker field supplies, generator fields, telephone and telegraph system power supplies, etc.MOUNTING-Rectifiers are available in either foot, bolt, or stud mounting, the latter two insulated from mounting means. Refer to note helow table for type of mounting on replacement rectifiers.

HARDWARE - Wherever possible or practical, universal mounting hardware is included to assist in the ready replacement of old rectifier types.
PACKAGING-Rectifiers are packed one per display carton.

## MALLORY special components and miscellaneous items

Mallory Inducłuner*
Type 8301

- The Inductuner is a three-gang, infinitely variable inductance tuning device, designed to provide continuous frequency selection over a range of frequencies from approx. 50 to 240 megacycles, covering the $11 / 4,2$, and 6 -meter bands, as well as all television and FM bands.

Various tuning ranges can le selected by varying the circuit constants, as required. The ten-turn, or $3600^{\circ}$ rotation, permits convenient selection of the frequency desired without the use of a bandspread mechanism or intricate gear drive. Band width can be easily controlled by the use of a suitable bandpass circuit.
At the present time the Inductuner has acceptance as the tuning unit in television recelvers that offer $F M$, police, aircraft and amateur reception, as well as the full 13 channels assigned for video transmission.
The complete assembly is substantially mounted in a die-cast frame, completely shielded. Size $73 / 16$ " long x $1^{13 / 16 " ~} \times 1^{13 / 16}{ }^{\prime \prime}$
A technical information bulletin is availahle on request, containing complete details, electrical characteristics, and suggested circuits. Inductuner* - Regisfered trade mark for Mallory variable inductance tuning devices. Manufactured and sold under one or more of the following Paul Ware and Mallory patents: $2,163644,2,163645,2,163646,2,163647,2,260877$, $2,377789,2,377790,2,399060,2,405890$. Other patents applied for,

## TYPE VC-101 Videocoupler

The Mallory VC-101 Videocoupler is a compact inter-stage coupling unit for use in the wide-band amplifiers commonly found in teleision, radar and oscilloscope equipment. It consists of peaking
inductances and a load resistance which provide an essentially flat frequency response to 4 mc. per second. It is designed to work into a terminating capacity of 22.5 mmfd . When used with a $6 \wedge C 7$ tube in a proper circuit, a stage gain of approximately 25 may he realized. Mounting space fini high pation 2 watts; finish, high-temperature enamel. Use a No. 6 bolt
through the core for mounting. through the core for mounting

## Yard-Ohm Resistance Kits

Each Yard-Ohm Resistance Kit consists of all necessary materials to construct flexible resistors of a wide range of values. The YardOhm Kit provides a real solution to the odd-value resistor problem. In addition to replacement applications, resistors made from the Yard-Ohm Kit are ideal for meter shunts, and for use wherever a high quality flexible resistor is desired.
Each Mallory Yard-Ohm Kit consists of the following: 1 yard spiral wound resistance wire; 1 yard insulated braid; 24 spiral wire leads. The kit is available in eight resistance values.

Dissipation-all types: $1 / 2$ watt per inch.

## Grid Bias Cells

- The Mallory Grid Bias Cell is a small acorn-shaped, self-contained device. The metal container or cup is the negative electrode. The black disc is the positive electrode.

## Application

The principal use of Mallory Grid Bias Cells is in the biasing of the first audio amplifier tube in modern high-gain receivers. Diagram of a typical circuit is shown at right. The bias cell does not need to be by passed to ground.

Correspondence is invited regarding the application of Mallory Grid Bias Cells. Special Technical Bulletin No. GBC746 may be obtained on request.

## Characteristics

The no-current potential of Mallory Grid Bias Cells is within plus or minus $10 \%$ of their rated voltage.

Current-The cell is strictly a potential or voltage cell for biasing class "A" amplifier tubes and should not be used for biasing power tubes or oscillators; or for any circuit where direct current may flow through, or be drawn from, the cell.

Temperature - The cells may be used at temperatures from $0^{\circ} \mathrm{F}$ to $140^{\circ} \mathrm{F}$. The voltage of the cell remains reasonably constant throughout this wide temperature range. It is recommended, however, that wherever possible the bias cell be placed in the coolest location.

Humidity-The cell exhibits no change in characteristics when exposed to a relative humidity of $90 \%$ at $120^{\circ} \mathrm{F}$.

Impedance-Mallory Grid Bias Cells are non-reactive at audio frequencies. The DC resistance of the cell ranges between 10,000 and 40,000 ohms.|

Noise-The cells do not cause noise.

# ATR " $A$ " BATTERY GLIMInATORS 

Specially Designed for Testing

and Operating Auto Radios
and D. C. Electrical Apparatus
on Regular A. C. Lines, 10.)-
125 Volts 50-60 Cycles.

Illustrates Lleavy Duty "A" Battery Eliminator, Type 62OC.ELIP, Equipped with Volmeter, Ammeter and Voltage Control.

- Fully Antomatic and Fool-Proof.
- Eliminates Storage Batteries and Battery Chargers.
- Operates the Equipment at Maximum Efficiency at all Times.
- Delivers Filtered Direct Current at the Correct Voltage for Proper Operation.

## SUGGESTED USES:

As a power supply for radio sets, aircraft instruments, relays, motors and other electrical and electronic equipments. In the laboratory, for supplying various low D. C. voltages.

Battery Eliminators may be treated as batteries in the sense that they can be connected in series for higher voltages at the same current output per mait or in parallel for the same output voltage per unit at higher currents.

Equipped with Full-Wave Dry Disc Type Rectifier, Assuring Noiseless, Interference-Free Operation and Extreme Long Life and Reliability.
TYPE 610 ELIB—Rated output 6 volts at 10 amperes. Size $61 / 2^{\prime \prime} \times 91 / 8^{\prime \prime} \mathrm{X}$ $81 / 2$ "; shipping weight, 22 lbs . Code word, "SELIB".
Net Price
$\$ 29.70$
TYPE 620 C ELIP—Uses dual rectifiers. Size $61 / 2^{\prime \prime} \times 127 / s^{\prime \prime} \times 81 / 2^{\prime \prime}$. Shipping weight, 33 lbs . Code word, "HELIN"

Rated Output: 6 volts at 18 amperes or 12 volts at 9 amperes. Either output obtainable by means of simple output terminal switching arrangement.
Net Price
$\$ 45.90$
All ATR Eliminators have as standard equipment: On-Off Switch, Voltage Control, Meter (s), Fuse Protection, Rubleer Mounting Feet, 6-Ft. All-Rubber Cord Set, and Cabinet of heavy gauge metal having attractive grey-wrinkled finish.

Illustrating Standard "A" Battery Eliminator, Type 610 ELIB, Equipped with Voltmeter and Voltage Control.

## ATP stanampo ano HEAVY DUTY RADIO InVERTERS

Specially Designed for Operating A. C. Radios, Public Address Systems, Television Sets, Amplifiers, Intercall Systems, and Radio Test Equipment from D. C. Voltages in Vehicles, Ships, Trains, Planes, and in D. C. Districts.

Illumiraten all fiandard ATIR Radio Inverters except typea 6 and $1 \underline{2}$ RSB.
This group of ATR Inverters is specially recommended for use with A. C. radios, amplifiers, and similar electronic equipment, being exceptionally well filtered to insure interference-free radio reception. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life radio operation. All models indicated are equipped with an ATR ten-contact plug-in Inverter Vibrator of new design and construction having dual arms and utilizing eight $1 / 4^{\prime \prime}$ diameter tungsten power contacts and two silver alloy driver contacts, insuring increased long life and reliable service. These Inverters also come equipped with four point voltage regulators, which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal: the operating efficiency is in excess of $85 \%$.

## ATR Low Power InVerTers

For Operating Small A. C. Motors, Electric Razors, Radios, and Devices of Approximately 35 watts Consumption from $6,12,24,32,110$, and 220 volt D. C. Lines.

This line of ATR Low Power Inverters was specially brought out to meet the insistent demand for a good, low power, inexpensive portable Inverter for operating phonograph and other A. C. motors and a host of small A. C. devices from D. C. voltage sources. These Inverters operate at an efficiency in excess of $90 \%$ and are designed for operation of loads having a power factor as low as $60 \%$. They are ruggedly built and powered by a special ATR six-contact plug-in Inverter Vibrator utilizing four $1 / 4^{\prime \prime}$ diameter tungsten power contacts and two silver alloy driver contacts.

Radio frequency interference suppressed,
Any of the above type Low Power lnverters are available with 220 volt A. C. output at urices $25 \%$ higher". In ordering, specify "S" after the type number and substitute for the last letter in the code word " T "; that is, if a 110 volt D. C. Low Power Inverter having a $2 \geqslant 0$ volt A. O. output is desired, this would be ordered as Type 110 S covered by code word, "DLIDT". Dimensions, $53 / 8^{\prime \prime} \times 4^{\prime \prime} \times 65 / 8^{\prime \prime}$; shipping weight, 7 lbs.
Replacement Viblators for any of the ahove Low Power Inverters are available. Be sure to mention the type number as well as model number when ordering. Consult Inverter Vibrator Guide

## ATR STANARPD AND IDDUSTRIAL INVERTERS

#### Abstract

For Operating A. C. Motors, Electronic Apparatus, Electrical Testing Equipment, and A. C. Electrical Appliances from D. C. Lines.

These units are specially designed for applications as indicated, permitting the use of standard A. C. equipment on D. C. lines. These Inverters operate at an efficiency in excess of $80 \%$ and are carefully built and equipped to give the longest possible life and operating satisfaction. All Inverters indicated utilize ATR ten contact plug-in vibrators, and are also equipped with four point voltage regulators as fully described above. These Industrial Inverters are recommended for use with loads having power factors as low as $60 \%$, and as low as $50 \%$ for the " $P$ " Inverters indicated. These Inverters should not be used with Neon signs.

## BATTERY ELIMINATORS Distinction

## ELECTRIFY wish ELECTRO

Now battery radio reception can be enjoyed at its best without the usual grief and expense incurred when using batteries. Radio can be used for unlimited periods without fading. Costs but a few cents per hundred hours of operation.
FOUR TYPICAL MODELS are shown on this and

## MODEL "S" COMPACT With Selenium Rectifier

Operates Any 1.4 Volt - 4, 5 or 6 Tube Battery Radio from 115 Volt, 60 Cycle Source
Designed for sets using 1A7, 1E4, 1N5G, 1Q5G, tubes to convert battery radio to an efficient AC receiver with low operating cost. Fits in battery compartment of most radios. Ideal for use in home, hotel, camp or any place where normal AC is available.

## Technical Data

"A" Supply Output
5-6 tubes (average)
1.4 V.@320ma.

4 tubes $\quad 1.4$ V. $\varrho_{2} 250 \mathrm{ma}$
4 tubes
.1.4 V.@200 ma.
"B" Supply Output
90 Volts DC @ 12 ma. max.
Primary
115 Volts AC@ 60 cycles.
Specifications
Six foot cord and plug - switch in cord.
Size: $23 / 8^{\prime \prime} \times 31 / 2^{\prime \prime} \times 63 / 4^{\prime \prime}$.
Weight packed: $31 / 2$ pounds.
On and Off switch for permanent mounting - becomes part of the radio.

## LIST PRICE $\$ 16.75$

## MODEL "P" COMPACT

Same as MODEL "S" except has tube rectifier. Also available for 220 Volt operation.

## LIST PRICE $\$ 15.00$

the following page. These are ruggedly constituted units of unusually long life-easy to install-no liquids to spill-no moving parts to get out of order and wear out-operate in any position. Completpl-filtered, hum free and silent in operation. Univi rsai plugs and sockets are provided to accommodate any radio. All units durably finished in blue hammerloid.

## MODEL "F" COMPACT

Operates Any 2 Volt - 4, 5, 6 or 7 Tube Battery Radio from 115 Volt, 60 Cycle Source
For receivers using 1A4, 1C7, 1D5, 1E5, 1F5, 1F7, 1H4G, etc., tubes to change radio into an all-electric set. Inexpensive to operate.

## Technical Data

"A" Supply Output
7 tubes $\quad 2 \mathrm{~V}$ @ 480 Ma - 500 ma max.
6 tubes 2 V @ 420 ma .
$4-5$ tubes (average) 2 V . @ 325 ma .
"B" Supply Output
67, $90,112,135$ Volts DC @ 18 ma .
Primary
115 Volts AC@60 Cycles. Also available for 220
Volt Operation.
Specifications
Six foot cord and plug, switch in cord.
Size: $23 / /^{\prime \prime} \times 4 \frac{1}{2}{ }^{\prime \prime} \times 8 \frac{1}{4}$ ".
Weight packed: $51 / 2$ pounds.

## LIST PRICE \$17.95

## MODEL 'R" SYNCRO POWER

Same as Model "F" but operates from 6 Volt DC source. Supplied with cord and battery clips. On and Off switch in eliminator turns power on.

LIST PRICE $\$ 20.75$

## ELECTRO PRODUCTS LABORATORIES

## BATTERY ELIMINATORS Distinction

## ELECTRIFY with ELECTRO

Now battery radio reception can be enjoyed at its best without the usual grief and expense incurred when using batteries. Radio can be used for unlimited periods without fading. Costs but a few cents per hundred hours of operation.
FOUR TYPICAL MODELS are shown on this and

## MODEL " $Q$ " SYNCRO POWER

Operates Any 1.4 Volt - 4, 5, or 6 Tube Battery Radio from 6 Volt DC Source

This Eliminator is to be used where 115 Volt AC lines are not available. Will provide all " $A$ " and " $B$ " voltages more efficiently and at lower cost from 6 Volt battery. Will operate a 4 -tube radio three weeks at 3 hours a day on a single storage battery ( $100 \mathrm{~A} . \mathrm{H}$. ) charge.

## Technical Data

"A" Supply Output
5-6 tubes (average)

1.4 V. @ 320 ma .

4 tubes 1.4 V. @ 250 ma .

4 tubes
"B" Supply Output
90 Volts DC@12 ma.max.
Primary
6 Volts DC @ 0.8 Amp. (for 4-tube radio).
Specifications
Cord and battery clips on primary.
On and Off switch in Eliminator turns power on.
Size: $23 / 8^{\prime \prime} \times 31 / 2^{\prime \prime} \times 63 / 4^{\prime \prime}$.
Weight packed: $31 / 2$ pounds.
LIST PRICE $\$ 18.00$
the preceding page. These are ruggedly constituted units of unusually long life-easy to install-no liquids to spill-no moving parts to get out of order and wear out-operate in any position. Completely filtered, hum free and silent in operation. Universal plugs and sockets are provided to accommodate any radio. All units durably finished in blue hammerloid.

## MODEL "A" POWER SUPPLY

Operates latest type auto radios with solenoid tuning and tone controls - also 12 Volt marine and aircraft radios from 115 Volt, 60 Cycle Source. In parallel supplies 6 Volts at 15 Amps. In series 12 Volts at $71 / 2$ Amps.

## Separately, 6 Volts at $71 / 2$ Amps.

Designed especially to do away with the bother of old-fashioned storage batteries. Ideal for the radio service man. Two separately filtered DC output sources are provided for convenience. Heavy duty transformer and chokes; and two large capacity condensers provide excellent voltage regulation.

## Technical Data

Output
6 Volts - 15 Amps. continuous.
6 Volts - 25 Amps. max. instantaneous.
12 Volts - $71 / 2$ Amps. continuous.
6 Volts - $71 / 2$ Amps. two sections continuous.
Primary
Taps on transformers for $105,115,125$ Volts, 60
cycle AC. Each completely filtered section is sep-
arately fused for heavy overloads.
Specifications
Six foot rubber cord and plug.
Size: $73 / 4^{\prime \prime} \times 73 / 4^{\prime \prime} \times 113 / 4$ ".
Weight packed: 31 pounds.
Electrostatic shield with R.F. line filter.
Large capacity bridge type rectifiers.
Two 2,000 M.F.D. condensers.
Terminals on front of panel with wing nuts
LIST PRICE $\$ 67.50$

ELECTRO PRODUCTS LABORATORIES

For quick, easy conversion of all standard radios and electrical appliances to 220 voit $50-60$ cycle operation. Designed for continuous and reliable perfarmance. $100 \%$ safety factor for momentary overloads. Vacuum

PRIMARY 235 VOLTS - SECONDARY 117 VOLTS
*Primary has 3 taps at 200, 220 and 240 volts; Secondary 117 volts.

## GENERAL TRANSFORMER CORPORATION

MAKERS OF BETTER ELECTRICAL PRODUCTS FOR 20 YEARS

## ELECTROX "Master" BATTERY ELIMINATOR

Today's Outstanding D.C. Power Supply Unit, the ELECTROX, Model AR-2, provides the ultimate in humless Direct Current for all-around servicing and demonstrating automabile radios and for all similar applications.
It will operate practically any type or size of automobile radio-whether push button or manually tuned.
It delivers 6 volts of Direct Current free of hum; (less than $3 \%$ ripple).
Its D.C. output is adjustable-smooth, humless Direct Current, at the correct voltage is delivered to the individual radio being operated.
Turning the rheostat adiusts the output to 6 volts for any laad current between 3 and 15 amperes. This is indicated by the easily read voltmeter located on top of the case. Made by instrument craftsmen to give dependable, troublefree service.

Model AR-2

Overall Dimensions— $111 / 2^{\prime \prime}$ long, $71 / 4^{\prime \prime}$ wide, $65 / 8^{\prime \prime}$ high.
Weight-20 pounds.
A.C. Input- 115 volts, 1 phase, 60 cycle.
D.C. Output-6 volts, at from 3 to 10 amperes, continuous rating; and from 10 to 15 omperes, intermittent; selectively determined. Negligible hum level, (less than $3 \%$ ripple).
Voltmeter-accurote; mounted on top of case for visibility.

Cartridge-type Fuse-easily accessible from outside of case. Taggle Switch—for A.C. current supply.
Long-life Selenium Rectifier; Condenser; Transformer; Filter Choke.
6 ft . A.C. cord and plug. Wing nut binding posts for connecting DC. leads. Rubber feet. Steel case-attractive, metallic-brown finish.

## ELECTROX "Standard" BATTERY ELIMINATOR

ELECTROX, Model AR-1, is a practical, low-cost D.C. power-supply unit for servicing and demonstrating automobile radios. It is an exceptionally high-grade battery eliminator-compact, rugged, dependable. It delivers Direct Current with very low ripple component, but does not have the adjustable output features embodied in the ELECTROX "Master", Model AR-2.

Overall dimensions-111/2" long by $71 / 4^{\prime \prime}$ wide by $65 / 8^{\prime \prime}$ high. Weight-20 pounds.
A.C. input- 115 volts, 1 phase, 60 cycle.
D.C. output- 6 volts at appraximately 15 amps, low ripple component.
Equipped with six foot A.C. cord and plug. Heavy binding posts are provided for connecting D.C. leads.

Toggle switch for "ON and OFF."
Cartridge type fuse-easily accessible from outside of case. Equipment-Condenser, transformer, filter choke, Selenium rectifiers, rubber feet.
Finish-Attractive, well ventilated steel case.

## ELECTROX BATTERY BOOSTERS

Designed for safely recharging single starage batteries-small, compact, light in weight but strong. Can be set on floar, shelf or counter or hung on wall. Under ordinary conditions, will recharge battery overnight.
Rectifiers are rugged, long-life Selenium. Ammeter is located in front of case and is easily read. A circuit breaker is supplied to protect against shorts and overloads, having a reset button conveniently located in the front of the case. Complete with 6 ft . A.C. cord and plug, and 5 ft . cord with battery clips for easy connection to botteries. Size: $61 /^{\prime \prime} \times 6^{\prime \prime} \times 7 \frac{1}{4^{\prime \prime}}$.
MODEL BX ELECTROX BATTERY BOOSTER, copacity 6 amperes.
MODEL CX ELECTROX BATTERY BOOSTER, capacity 10 amperes.
MODEL CX has $2 / 3$ more charging capacity than the Model $B X$ at less than $1 / 3$ higher cost.

RECTIFIER DIVISION

Model BX the schauer machine co.

## The oldest name in Rotary Power Supplies for Mobile Radio

## THE ORIGINAL CARTER GENEMOTOR FOR POLICE-TAXICAB MARINE AND SMALL AIRCRAFT MOBILE COMMUNICATIONS

## OUTSTANDING FEATURES

## SMALL SIZE --

Simplicity of design permits minimum mounting space. RELIABILITY -

Designed to deliver over 100,000 ten second transmissions without servicing for most mobile applications.
INSTANT POWER -
Full output in less than $3 / 10$ seconds. No loss of messages due to Dynamotor slugishness.
ARMATURE -
Finest design incorporates transformer laminations, triple insulated wire. Static and dynamically balanced. DiamondFinished commutators.

## VERSATILE -

Carter Genemotor available in any input voltage from 5.5 to 115 volt DC.

## SPECIFICATIONS

3" Frame Genemotor-71/8" Long, 41/8" Wide, $31 / 2^{\prime \prime}$ High, Weight 10 lbs.

The Carter Original Genemotor is the result of over 15 years continuous improvement of design, performance and dependability. Unequalled power for most Police, Marine, Taxicab, Forestry, and small aircraft two-way mobile radio equipment.

The $11 / 2^{\prime \prime}$ Frame Genenotors are the lowest cost Dynamotors available for mobile radio receiver operation. Equipped with oil-less bronze sleeve bearings, lubricated for the life of the unit. The 2" Frame Genemotors are also sleeve bearing equipped and are designed for mobile Public Address amplifier operation. The 3" Frame Cenemotors fulfill the majority of mobile transmitter requirements. Ball bearing equipped, this model furnishes dependable power to more mobile equipment than any other Dynamotor Power Supply.

Average efficiency $60 \%$, voltage regulation load to no load $25 \%$, ripple $1 \%$ unfiltered.

## FILTERS-STARTING RELAYS

## FILTERS-

Any of the above Carter Genemotors can be furnished with complete filter mounted in metal hox mounted below unit. Add " X " to plete filter mounted in metal hox mounted below unit. Add ${ }^{\prime \prime}$ to end of code number $\$$ and following prices. ${ }^{\prime \prime} / 2^{\prime \prime}$ and $2^{\prime \prime}$ Frame $\$ 25.00$ list.
STARTING RELAYS-
Heavy Dury solenoid contactor starting relays are available for 5.5 , 6, 12, 24, 28, 32 and 115 yolt DC input. Add " $R$ '" to end of code number and $\$ 8.00$ to list price (Relay draws 1.3 amps at 6 volts)

DUTY RATINGS--
Intermittent duty shall be considered 10 seconds on 20 seconds off. Continuous duty is considered 24 hours per day.

## INPUT VOLTAGES

Any Carter Genemotor can be supplied for special input voltages other than 6 volts. For $5.5,12,24,28,32$ or 64 volt input add $\$ 2.50$ to list. For 115 volt DC input add $\$ 3.50$ to list.
MARINE IMPREGNATION
Special Marine Impregnation available on all Genemotor models upon request, add $\$ 2.00$ to list price.

See replacement parts reference chart page for other special models, parts and prices.

The oldest name in Rotary Power Supplies for Mobile Radio

## THE CARTER MAGMOTOR FOR POLICE-TAXICAB-MARINE AND AIRCRAFT RADIO RECEIVERS-GEOPHYSICAL AND RESEARCH ELECTRONIC EQUIPMENT <br> OUTSTANDING FEATURES

Curter Mignotor-55/8" Long, 3-11/16" Wide, $21 / 2^{\prime \prime}$ High, Weight $43 / 4$ lbs

## ALNICO FIELDS

Eliminates field coils and increases efficiency

## SMALL SIZE -

Compact design permits minimum mounting space.
MOUNTING
Rigid mounting furnished. Rubber shock mounting as illustrated available upon request at no extra cost.

## FLEXIBILITY

Extended shafts available for small power take off. Also available as an AC or DC external driven Generator.

Carter Magmotor is the ideal Rotary Power Supply for Police and Taxicab receivers. PM fields reduce size and increase efficiency. Normal brush life of 2000 to 3000 continuous running hours on models up to 25 watts output. Interintent duty models are designed for transmitter operation as well as geophysical and research applications. Ball bearing equipped. Average efficiency of receiver types $50 \%$, transmister types to $65 \%$. Output voltage regulation $20 \%$. AC ripple $1 \%$ unfiltered. The Magmotor is also available on special order in extended shaft models as AC or DC generators for 30 watt continuous duty and 50 wait intermittent duty. Special Geophysical models possess high humidity impregnation at no extra cost.

## CARTER MAGMOTOR

$55 / 8^{\prime \prime}$ long, $3-11 / 16^{\prime \prime}$ wide, $21 / 2^{\prime \prime}$ high, weight $43 / 4 \mathrm{lbs}$

## AC AND DC GENERATORS

The Magnotor is available on special order for AC output up to 220 volts at 120 cycles. DC output up to 400 volts 30 watts continuous, 50 intermittent, depending upon armature speed.
EXTENDED SHAFTS -
Available on all Magmotor models add " S ' to end of code number and $\$ 5.00$ to list
FILTERS -
Available on all Magmotor models, Add ' X ' to code number and $\$ 24.00$ to list.
STARTING RELAYS
Low power models seldom require starting relays because of low drain consumed. Heavy Duty solenoid contactor relays recommended on high output models. Add " R " to code number and $\$ 8.00$ to list for $6,12,24,28,32$ or 115 volt DC relay. ( 6 volt relay draws 1.3 amps .)

## INPUT VOLTAGES -

All Magmotors can be supplied for special input voltages other than 6 volts. For 5.5, 12, 24, 28, 32, 64 volt input add $\$ 2.50$ to list. For 115 volt DC input, add $\$ 3.50$ to list.
DUTY RATINGS
Intermittent duty shall be considered 10 seconds on 20 seconds off. Continuous duty, 24 hours per day.

## MARINE IMPREGNATION

Available on all Magmotors upon request, add $\$ 2.00$ to list. Furnished on Geophysical models as standard feature.

## MOUNTINGS -

Rigid type mountings furnished as standard base Rubber shock mounts available upon request at no extra cost.

## The oldest name in Rotary $P_{\text {over }}$ Supplies for Mobile Radio

## THE CARTER SUPER DYNAMOTOR FOR AIRCRAFT, MARINE, POLICE AND RAILROAD COMMUNICATIONS

## OUTSTANDING FEATURES

## ARMATURE-

Triple insulated windings. Additional silk insulation on models over 600 volts. Transformer grade lamination. Static \& Dynamically balanced.
ONE PIECE FRAME -
Exclusive cast frame simplifies construction and reduces losses.

## COMMUTATORS -

Hard drawn silver alloy copper segments, diamond finshed.

## BRUSHES -

Engineered for long brush and commutator life, beryllium springs.

The Super Dynamotor is designed for larger mobile transmitters requiring 150 to 250 watts of Denamotor power. Specified by leading Airlines, Marine ard Police mobile communication manufacturers. Constructed of finest materials and designed to withstand heavy overloads. Triple insulated and baked to assure dependable operation at high voltages. Triple or Quadruple insulated silk covered windings are used above 600 volts output to afford maximum insulation.
Average efficiency, $65 \%$, voltage regulation $25 \%$ or less, $1 \% \mathrm{AC}$ ripple unfiltered. Cast aluminum mounting base less grommets supplied.

## SUPER DYNAMOTOR

$81 / 4^{\prime \prime}$ long, $41 / 2^{\prime \prime}$ wide, $43 / 4^{\prime \prime}$ high, weight $113 / 4$ lbs.

## HIGH VOLTAGE SUPER DYNAMOTOR

$101 / 4^{\prime \prime}$ long, $41 / 2^{\prime \prime}$ wide, $43 / 4^{\prime \prime}$ high, weight 18 lbs .

| CS7550 | 32 | 18 | 750 | 500 | Int. | $\$ 118.00$ |

[^17]drain permits) and 12, 24, 28, 32, 64 volt. Add $\$ 2.50$ to list. Add $\$ 3.50$ to list for 115 volt DC input.

## DUTY RATINGS -

Intermittent duty shall be considered 10 seconds on, 20 seconds off. Continuous duty, 24 hours per day. MARINE IMPREGNATION -

Available on all Super Dynamotors upon request, add $\$ 2.00$ to list. Furnished on Marine models as standard feature. The oldest name in Rotary $P_{\text {over }}$ Supp ties for Mobile Radio

CARTER SUPER CONVERTER-Changes DC to AC for
Amplifiers -Radios - High Power Factor equipment

Carter Super Converter, Less Filter, 81/4" Long, $41 / 2^{\prime \prime}$ Wide, $5^{\prime \prime}$ High, Weight 13 lbs.
Wherever DC to AC Conversion is necessary, the Carter Super Converter provides an efficient and reliable source of AC power. Standard models are designed for high power factor, non-inductive AC loads such as amplifiers, radio receivers, (requires filtered converter), etc. Ball hearing equipped, 3600 RPM. CAUTION: Standard Super Converters will not satisfactorily operate inductive loads such as AC motors, low power factor transformers, etc.
Manually operated frequency controlled Converters available on special order. Maintain 60 cycle output with $\mathrm{a}+$ or - $10 \%$ input voltage fluctuation.
Special custom-matched Converters are also available for Wire and Tape Recorders, Sound Projectors, 7" Television Receivers, etc. See Carter Selector Chart on next page.
Overall efficiency $60 \%$ AC voltage regulation $15 \%$.

## HEAVY DUTY SUPER CONVERTER

101/4" long, $41 / 2^{\prime \prime}$ wide, $5^{\prime \prime}$ high, weight 19 lbs .

## OUTSTANDING FEATURES

SMALL SIZE
Smallest Rotary Converter. Lightweight.
CARRYING HANDLE
Easier to carry, no more "juggling" with a hot unit. OUTPUT RECEPTACLE

Convenient plug in AC outlet.

## ARMATURE

Double wound, insulated ungrounded winding. Built-in cooling fan.
BALL BEARINGS
Sealed ball bearings require no lubrication or attention for life of unit.

## SPECIFICATIONS

Carter Super Converter, 40 to 150 watt models $81 / 4^{\prime \prime}$ long, $41 / 2^{\prime \prime}$ wide, $5^{\prime \prime}$ high, weight 13 lbs.
High power factor, 85 to $100 \%$. Less filter.

FILTERS -Available on all Super Converters. Eliminates Converter noise on most frequencies from 560 KC to 54 MC . Filter mounted in noise on most frequencies from Converter. Add " X " to Code Number cast aluminum thous $\$ 25.00$ to list.
FREQUENCY CONTROL-Manually operated frequency control available on all models. Complete with vibrating reed meter, and rheostat control in aluminum housing. Add $\$ 60.00$ to list.
VOLTAGE-FREQUENCY- 220 volt output or 50 cycle available on special order. Add $\$ 5.00$ to list for each.

See Carter Selector Chart for Wire and Tape recorder, $7^{\prime \prime}$ Television receivers, etc, custom-matched Converters.

## The oldest name in Rotary Power Supplies for Mobile Radio

Whenever DC to AC Rotary Converters are used to power wire or tape recorders and other similar recording equipment, output frequency must be perfectly matched to assure proper playback performance. All of the equipment listed has been laboratory-tested and Carter Converters custom-designed for each model. Use this Chart to select the Converter designed for each model. l'rices of Selector Chart Converters are the same as standard models of similar code number.
Code letter "W" indicates a recorder type Converter.
Average efficiency $60 \%$. Voltage regulation $15 \% .70 \%$ Power Factor on wire and tape recorder models. Converters require NO FILTER, except when recorders have radio receivers

## RADIART VIBRATORS

## RADIART AERIALS

VIBRATOR BASE DIAGRAM CROSS INDEX
Symbols Used in Vibrator Base Diagrams A - A hot line into vibrator. $\mathrm{B}_{\mathrm{B}}$ - Br r -pass for drivint point

- External coil lead in shunt ribrator
$\mathbf{P}_{1}$-Irimary eontaet, usualls, but not necessarily con-
nected to the magnet coil in shunt ribrators.
$\mathrm{P}_{2}$ - Primary contact, may bo the magnet coil connection
$\mathrm{PP}_{2}$-Dual primary contact, closed when $\mathrm{P}_{2}$ is closed.
R -Vibrating reed in single-reed vibrators
RP-Primary ribrating reed in split-reed ribrators.
RS-Sccondary vibrating reed in spit-reed vibrators.
St - Secondary contact, closed when $P_{1}$ is elosed
$\mathrm{S}_{2}$-Sccondary contact. closed when $\mathrm{P}_{2}$ is closed.

## GOTHARD DYNAMOTORS

The GOTHARD Model " HP '. 26 " is especially designed and built for Mobile Transmitter applications, intermittent duty. Length $71 / 4^{\prime \prime}$, Diam. $3^{1 / 2 \prime \prime}$. Height $4^{\prime \prime}$, Weight $81 / 4 \mathrm{lls}$,

| INPU' |  | outrut |  |  | Approx. Eflic. | App. Reg. | List |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Volts | Amps. | Volts | MA | Watts |  |  | l'rice |
| 5.6 | 24 | 400 | 200 | 80 | 60\% | 17\% | \$77.00 |
| 5.6 | 26 | 600 | 150 | 90 | 61\% | 18\% | 79.50 |
| 5.6 | 29 | 400 | 250 | 100 | 61\% | 19\% | 79.50 |
| 5.6 | 31 | 620 | 170 | 105 | 61\% | 20\% | 79.50 |
| 5.6 | 33 | 500 | 225 | 112 | 61\% | $21 \%$ | 79.50 |
| 5.6 | 34 | 420 | 280 | 118 | 62\% | 22\% | 79.50 |
| 6.0 | 40 | 400 | 375 | 150 | 63\% | 25\% | 82.00 |

Also supplied for $12,14,24,28$, or 32 Volt input
For cont inous duty applications, Models GP-12, GP-17 and GP-26 cover wattage ratings from 20 to 50 Wats. Input voltares $6,12,24$, or 32.
GP-12: Length $53 / 4^{\prime \prime}$, Diam. $31 / 2^{\prime \prime}$, Ileight $4^{\prime \prime}$,' Weight $5^{1 / 4}$ lhs.
GP-17: Length $61 / 4$ ", Diam. $31 / 2{ }^{\prime \prime}$, Height 4", Weight 6 Ils.
QP Models have steel mounting bases; width $4{ }^{\text {P }}{ }^{\prime \prime}$ ".

CONSTANT VOLTAGE
TRANSFORMER
TYPE 3

Constant Voltage Transformers are designed to provide a constant output voltage which is unaffected by changes in input voltage. Stabilization is instantaneous and automatic and there are no moving parts. Constant Voltage Transformers also provide isolation between input and output circuits. Low output voltage wave distortion and small size make these transformers especially attractive for use with all types of electronic equipment.

## CONSTANT OUTPUT

 vOLTAGE

SOLA CONSTANT voltage TRANSFORMER TYPE 21

SOLA CONSTANT VOLtAGE TRANSFORMER TYPE 1

Output capacities up to 15 VA , with output at either 6.3 volts or 115 volts. Both types are immersion proof and capable of tropical service. Type 12 furnished withseparate condenser. Prices include condenser.

TYPE 12

SOLA CONSTANT VOLTAGE TRANSFORMER

TYPE 22

PROTECT THE INVESTMENT IN YOUR EQU|PMENT Recent advances in the electrical field have made more critical the need for precise voltage control equipment designed to protect and to operate highly sensitive and expensive apparatus. Whether the application involves the control of light, heat, sound, power or electronic equipment, there's a POWERSTAT variable transformer to suit every requirement.

## POWERSTAT Variable Transformers

are auto-transformers of toroidal core design, with a movable brush-tap which rotates to deliver a con-tinuously-adjustable output voltage from a-c power lines. Into each POWERSTAT are incorporated superior qualities of top electrical performance, rugged mechanical construction, compact design and durability. POWERSTATS feature zero waveform distortion, excellent regulation, conservative ratings, standard mountings, smooth control and high efficiency. POWERSTATS are available with motor drives for pushbutton remote control, or for use with automatic controllers. A variety of motor speeds is offered.

WRITE FOR COMPLETE

# STABILINEAutomatic VOLTAGE REGULATORS 

## DELIVER CONSTANT OUTPUT VOLTAGE REGARDLESS OF VARIATIONS IN INPUT VOLTAGE OR LOAD CURRENT

Two types of automatic voltage regulators are built by The Superior Electric Company, designed to maintain constant output voltage to large loads or as a means of obtaining a constant output voltage with zero waveform distortion. Type IE (instantaneous electronic) gives instant correction; Type EM (electromechanical), while not instantaneous, corrects faster than most types of constant voltage regulators.

Because of differences in basic design, it's possible to order a STABILINE voltage regulator to meet the requirements of any problem in voltage regulation. If you have a particular problem, write The Superior Electric Company. Our staff of voltage control engineers is available for consultation - at no obligation to you. It's through this engineering service that we can best serve you; that we can design and build voltage control equipment second to none in the electrical industry.

## INSTANTANEOUS ELECTRONIC STABILINES

Completely electronic voltage regulators, instantaneous in action; no moving parts; waveform distortion never exceeds $3 \%$ output voltage is stable within $\pm .1$ of $1 \%$ for wide line variations. Available in cabinet, portable or rack-mounting models.

| Input <br> Voltage Range | Output <br> Voltage Range | Frequency <br> in Cycles | ATINGS Load Range in Amperes | Load Power Factor Range | Rated Output KVA | Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 95.135 | 110-120 | $60 \pm 10 \%$ | 0.2 .2 |  | 0.25 | 1E51002 |
| 95-135 | 110-120 | $60 \pm 10 \%$ | 0-4.4 | . 5 lagging | 0.5 | IE51005 |
| 95-135 | 110-120 | $60 \pm 10 \%$ | 0-8.5 |  | 1.0 | [E510] |
| 95-135 | 110-120 | $60 \pm 10 \%$ | 0-43.5 | to | 5.0 | IE5105 |
| 195-255 | 220-240 | $60 \pm 10 \%$ | 0-11.0 |  | 2.5 | IE5202 |

| 195-255 | 220-240 | $50 \pm 10 \%$ | 0-4.5 |  | 1.0 | IEL5201 |

## ELECTROMECHANICAL STABILINES

Consist of an electronic detector circuit controlling a motor-driven POWERSTAT variable transformer. Features: zero waveform distortion, insensitivity to magnitude and power factor of load, no effect on system power factor, no critical âdjustments, high efficiency, adjustable output voltage.

The Stancor units listed on the following pages are representative of the most complete stock in the industry available for 48 hour delivery the most complete stock in the industry available for 48 hour delivery
from Stancor distributors. In addition to maintaining the Stancor from Stancor distributors. In addition to maintaining the Stancor
stock line of more than 400 part numbers, a large part of Stancor's
modern production -acilities is devoted to the fabrication of special design component: for leading manufacturers of radio, television and other electronic equipment. Your inquiries are invited. Quotations will be furnished promptly.

## STANCOR TELEVISION COMPONENTS

## VERTICAL DEFLECTION OUTPUT TRANSFORMER

Stancor No. A-8115. Interchangeable with RCA type 204T2. Designed for use in typical vertical deflection circuits to couple the vertical output tube to the deflection yoke. May be used in conjunction with RCA type 201D1 yoke and kinescopes such as RCA types 10BP4, 7DP4 and 5TP4. Type N mounting. Dimensions: $311_{6}^{\prime \prime} \mathrm{H} \times 21 / 2^{\prime \prime}$ W x $21 / 2^{\prime \prime}$ D. Mtg. ctrs., $1^{19} / 32^{\prime \prime} \times 2^{\prime \prime}$. Shpg. wt., 2.5 lbs. List Price $\$ 6.00$. Stancor No. A-8116. Interchangeable with RCA type 204T9. Designed to couple the vertical output tube to the deflection yoke in typical deflection circuits. For use in conjunction with RCA type 201D1 deflection yoke and kinescopes such as RCA types 10BP4 and Mtg. ctrs., $1^{19} \mathrm{~m}^{\prime \prime} \mathrm{x} 134^{\prime \prime}$. Shpg. wt., 2.2 ibs. List Price $\$ 4.40$.

VERTICAL BLOCKING-OSCILLATOR TRANSFORMER
Stancor No. A-8111. For use in vertical blocking-oscillator circuits for generation of 60 cps . required to drive grids of vertical discharge tubes. Type A mounting. Dimensions: $112^{\prime \prime} \mathrm{H} \times 212^{\prime \prime} \mathrm{W} \times 112^{\prime \prime} \mathrm{D}$. Mtg. ctrs., $2^{\prime \prime}$. Shpg. wt., 0.4 lbs. List Price $\$ 2.50$.
Stancor No. A-8121. Interchangeable with RCA type 208T2. For use in vertical blocking-oscillator circuits for generation of 60 cps. required to drive grids of vertical discharge tubes. Type TD mounting. Dimensions: $134^{\prime \prime} \mathrm{H} \times 25 / \mathrm{IN}^{\prime \prime} \mathrm{W} \times 11 / 2^{\prime \prime} \mathrm{D}$. Mtg. ctrs., $115 / \mathrm{hb}^{\prime \prime}$. Shpg. wt., 0.4 lbs. List Price $\$ 3.20$.

HORIZONTAL DEFLECTION OUTPUT AND HV TRANSFORMER
Stancor No. A-8117. For replacement of RCA type 211T1. For use with RCA type 201D1 deflection yoke and kinescopes such as RCA types 7DP4 and 10BP4. Used with one 6BG6-G deflection amplifier, types 7DP4 and 10BP4. Used with one 6BG6-G deflection amplifier, pulse rectifier (may require filament resistor, adjusted for proper voltage). Auto-transformer primary provides voltage for pulse rectifier supplying kinescope anode potential. Filament winding for pulse rectifier included. Tap on secondary permits connection of width control. Powdered iron core. Max. current rating (RMS): Pri. (1-2). control. Powdered iron core. Max. current rating (RMS): Pri. (1-2),
80 ma; Sec. (4-6), 250 ma. DC resistance @ $25^{\circ} \mathrm{C}$ (Approx): Pri. (1-2),
 107 ohms; $(2-3), 200$ ohms; Sec. (4-6), 10.1 ohms. Turns: Pri. (1-2),

Stancor No. A-8118. For use with one 6BG6-G deflection amplifier, one 6AS7-G or one 5V4-G scanning booster and one 1B3-GT/8016 pulse rectiffer (may require filament resistor, adjusted for proper voltage). Use with Stancor DY-1 deffection yoke or equivalent and direct viewing kinescopes, such as RCA types 7DP4 and 10BP4. Max. current rating (RMS): Pri. (1-2), 100 ma ; Sec. (4-6), 250 ma . DC resistance @ $25^{\circ} \mathrm{C}$ (Approx.): Pri. (1-2), 160 ohms; (2-3), 130 ohms; Sec. (4-6), 12.5 ohms. Turns: Pri. (1-2), 1100 ; (2-3), 660; Sec. (4-6), 345 ; (5-6), 15. Type HO mounting. Dimensions: $3^{\prime \prime} \mathrm{W} \times 33^{\prime \prime} \mathrm{H} \times 2^{1} \mathrm{~m}^{\prime \prime} \mathrm{D}$. Shpg. wt., 1.2 lbs. List Price $\$ 9.75$.

HORIZONTAL BLOCKING-OSCILLATOR TRANSFORMER
Stancor No. A-8110. Interchangeable with RCA type 208T3 Vacuum wax impregnation for quiet operation. Type A mounting Dimensions: $111^{\prime \prime} 2^{\prime} \mathrm{H} \times 21^{\prime \prime} \mathrm{W} \times 112^{\prime \prime} \mathrm{D}$. Mtg. ctrs., $2^{\prime \prime}$. Shyg. wi., 0.4 lbs. List Price $\mathbf{5 2 . 7 5}$.

Stancor No. A-8120. Interchangeable with RCA type 208T1. Generates $15,750 \mathrm{cns}$. pulse required to drive grids of horizontal discharge tubes. Type TD mounting. Dimensions: $134^{\prime \prime} \mathrm{H} \times 2^{5} 6^{\prime \prime} \mathrm{W} \times 112^{\prime \prime} \mathrm{D}$. Mtg. ctrs., $1^{15} /$ is $^{\prime \prime}$. Shpg. wt., 0.4 lbs. List Price $53.90^{\prime \prime}$.

## PLATE AND FILAMENT TRANSFORMER

Stancor No. P-8150. For use with trve 2 N 2 rectifier tubes in a conventional hall-wave circuit to obtain high voltage supply. Contains filament winding for the rectifier tube. H.V. Secondary: AC volts, 1550; DC ma., 1.5. Rec. filanent: $2.5 \mathrm{v}-\mathrm{I} .75$ amp. Type TD mounting. Dimensions: $3^{1,1 \prime^{\prime \prime}} \mathrm{H} \times 3^{\prime \prime}$ WV $\times 212^{\prime \prime} \mathrm{D}$. Mtg. ctrs., $23 / 8^{\prime \prime} \times 112^{\prime \prime}$. Shpg. wt., 1.8 lbs. List Frice $\$ 9.75$.
Stancor No. P-8151. For use with type $2 \times 2$ rectifier tube in a conventional half-wave circuit to obtain high voltage supply. Contains an extra 2.5 volt filament winding. H.V. Secondiry: AC volts, 2400;

 $2^{3} 4^{\prime \prime} \times 2^{11}$ 价" $^{\prime \prime}$. Shpg. wt., 6.4 lbs . List Price $\$ 14.80$.
Stancor No. P.8152. For replacement of RCA type 201T6, used in RCA model 630TS receiver. High voltage winding designed to deliver 405 volts DC at 295 ma into an 80 mfd condenser input filter following two type 5U4-G tubes in a full-wave rectifier circuit. Copper shorting band reduces image distortion to a minimum by cutting down external
magnetic field. Plate supply: AC volts, $365-0-365$ : DC ma, 295. Rectifier filament: $5 . \mathrm{C}$ v- 6 . C amp. Auxiliary filaments: $5.0 \mathrm{v}-2.0$
 $45 / 8^{\prime \prime} \mathrm{L} \times 61$ 的"
Price 526.25 .
Stancor No. P-8153. For replacement in RCA model 721 TS receiver. High voltage winding delivers 360 volts at 250 ma into an 80 mfd condenser input filter following a type 5U4-G tube in a full-wave rectifier circuit. Copper shorting band around core minimizes image distortion by reduction of external magnetic ficld. Plate supply: AC volts, $365-0-365$; DC ma, 250. Rectifier filament: $5.0 \mathrm{v}-3.0 \mathrm{amp}$. Auxiliary filaments: $6.3 \mathrm{v}-6.0 \mathrm{amp}, 6.3 \mathrm{v}-.8 \mathrm{amp}, 5.0 \mathrm{v}-2.0 \mathrm{amp}$, Type M mounting. Dimensions: $378^{\prime \prime}$ W $\times 48^{\prime \prime} \mathrm{L} \times 5^{\prime \prime} \mathrm{H}$. Mtg. ctrs., $3 \%_{16}^{\prime \prime} \times 41 / 6^{\prime \prime}$. Shpg. wt., 12.5 lbs . List Price $\$ 22.00$.
These two transformers are designed to work together as a more economical power supply than is possible with one unit.
Stancor No. P-8154. Plate supply: AC volts, 375-0-375; DC ma, 205. Rectifier filament: $5.0 \mathrm{v}-3 \mathrm{amp}$. Auxiliary filaments: $5.0 \mathrm{v}-2$
 Stancor No. P-8155. Plate supply: AC volts, 225-0-225; DC ma, 90. Rectifier filament: $5.0 \mathrm{v}-2 \mathrm{amp}$. Auxiliary filament: $6.3 \mathrm{v}-5.15$

Stancor No. P-8156. Exact duplicate replacement for RCA type 201 T 6 used in RCA model 630 TS receiver. High voltage winding designed to deliver 405 volts DC at 295 ma into an 80 mfd condenser input filter following two type 5U4-G tubes in a full-wave rectifier circuit. Copper shorting band around core minimizes image distortion by reduction of external magnetic field. Plate supply: AC volts,
$365-0-365$; DC ma, 295. Rectifier filament: $5.0 \mathrm{v}-6.0 \mathrm{amp}$. Auxiliary $365-0-365 ; \mathrm{DC}$ ma, 295. Rectifier filament: $5.0 \mathrm{v}-6.0 \mathrm{amp}$. Auxiliary
filaments: $5.0 \mathrm{v}-2.0 \mathrm{amp}, 12.5 \mathrm{v} \mathrm{CT}-5.0 \mathrm{amp}$. Type M mounting
 Shpg. wt., 16.5 lbs. List Price $\$ 25.50$.
Stancor No. P-8157. Exact duplicate replacement for Motorola Dart number 25C484095 used in models VK106, VT105 and VT107 Designed for use with dual full-wave rectifiers and filters to supply two outputs simultaneously: 5 4-G (395 volts DC at 195 ma across 40
mfd input) and 5 Y3-GT ( 212 volts DC input). Plate supply \#1: AC volts, $385-0-385 ; \mathrm{DC}$ ma, 195 . Rectifier input). Plate supply \#1: AC volts, 385-0-385; DC ma, 195. Rectifier (ilament: 5.0 v-3.0 amp. Plate supply $\% 2:$ AC volts, 235-0-235; DC ma, 105 . Rectifier filament: $5.0 \mathrm{v}-2.0 \mathrm{amp}$. Auxiliary filaments: $6.3 \mathrm{v}-7.65 \mathrm{amp}, 6.3 \mathrm{v}-0.6 \mathrm{amp}, 5.0 \mathrm{v}-2.0 \mathrm{amp}$ Type M mounting.

## OUTPUT TRANSFORMER

Stancor No. A-8114. Matches single type 6 K 6 tube ( 7,600 ohnis$32 \mathrm{ma})$ to a 3.2 olun voice coil. Type A mounting. Dimensions:
$13 / \mathrm{m}^{\prime \prime} \mathrm{H} \times 23 / 8^{\prime \prime} \mathrm{W} \times 13 / 8^{\prime \prime}$ D. Mtg. ctrs., $2^{\prime \prime}$. Shpg. wh., 0.4 Ibs. List

## FILTER CHOKE

Stancor No. C-2325. Rated inductance, 2 hy. (min.). Rated DC, 200 ma. DC resistance, 60 ohms. Test volts, 1500 RMS . Core, $7 / 8^{\prime \prime} \times$
$78^{\prime \prime}$. Type A mounting. Dimensions: $214^{\prime \prime} \mathrm{H} \times 33^{\prime \prime} \mathrm{W} \times 234^{\prime \prime} \mathrm{D}$. Mtg. $7 / 8^{\prime \prime}$. Type A mounting. Dimensions: $21 / 4^{\prime \prime} \mathrm{H} \times 334^{\prime \prime}$,
ctrs., $318^{\prime \prime}$. Shpg. wt., 1.8 lbs. List Price $\$ 2.90$.
Stancor No. C-2326. Rated inductance, 1 hy . (min.). Rated DC, 300 ma. DC resistance, 43 ohms. Test volts, 1500 RMS. Core, $7 / /^{\prime \prime} \times$,

## DEFLECTION YOKE

Stancor No. DY-1. Replaces RCA type 201D1. For use with direct viewing kinescopes requiring 50 magnetic deffection, such as RCA deflection circuits employing horizontal put retrace time when used with to RCA types 211 T 1 and 211 T 3 , and vertical output transformers equivalent to RCA types 204 T 2 or 204 T 9 . Performance checked to close linearity limits. Type DY mounting. Shpg. wt., 1.2 lbs. List Price $\$ 7.50$.

## FOCUS COIL

Stancor No. FC-10. Interchangeable with RCA type 202D1. Designed for magnetically focused kinescopes with deflection angles up to $50^{\circ}$, such as RCA type 10BP4. The large center hole of the coil provides ample clearance between core and kinescope neck, allowing for tipping and displacing axis when necessary. For best performance. a rheostat adjustment of the operating current should be used. Tyne FC mounting. Shpg. wt., 2 lbs. List Price $\$ 7.50$.

May be used as plate to grid; push pull input or push-pull interstage replacement transformers. Have $3: 1$ over all ratio, however, primary is center-tapped and secondary has split winding, thus permitting
ratios of $1: 1,3: 1$ and $6: 1$. Transformers may be used in either step-up or step-down applications.

## Tone Control Unit

The necessary components for a dual tone control circuit to provide both bass and treble attentuation when used in conjunction with two dual 250,000 ohm potentiometers. Contained in Hi-Fi-type w-1 cast case for shiclding against hum pickup and provided with 12 Flexible

Coded Leads for direct connection in the circuit. Dimensions H. $31 / 2^{\prime \prime} \times \mathrm{W} .234^{\prime \prime} \times$ L. $3^{1 / 66^{\prime \prime}}$. Packed with complete instructions for installation and use.

＊Mounted in special can and equipped with cord，phug and receptacle．

## Isolation Transformers

These transformers are designed with an electrostatic shield to isolate line noises and interference from the apparatus being used．They are suitable for screen test booths，electrical therapeutic machines，medical instruments，beauty parlor equipment，electric furnaces，amateur
transmitters，etc．Each unit complete with a 6 ft ．cord and plug and a female receptacle．Units in first group are straight isolation types；second group are step－down isolation units．Tap switch controls primary voltage，except on Nos．P－6123，P－6125，P－6389 and P－6390．

## Plate Transformer:

This group of transformers is designed primatily to deliver the rated D.C. voltage and current outputs when used with full-wave mercury vapor rectifier tubes in confunction insers working into a resistive load.

Generous coil and core design result in a transformer with above average regulation and efficiency. Phenolic terminal boards and heavy duty ceramic insulators assure protection from voltage breakdown

Other voltage and frequency combinations available on special order. Write for quotations

## Stancor's Power Pack - Model 752

CONTINUOUS OUTPUT RATING-6 Volts @1 12.5 Amperes D.C.-5\% max. ripple at full load

INTERMITTENT OUTPUT RATING-25.0 Amperes D.C. For use with push-button or floor-switch magnetic tuning of all popular car radio receivers.
CONTINUOUS VOLTAGE CHECK - Built-in voltmeter for visval checking of output voltage.
ADJUSTABLE VOLTAGE CONTROL-Tap switch provides selection of proper output voltage for various loads.
CONSERVATIVE RATING-Built with heavy duty components throughout.
HIGH OVERLOAD CAPACITY-Low internal resistancegood voltage regulation provide high output current capability for intermittent loads:
CONTROL PANEL—Readily accessible at front of case. STURDY STEEL CASE-Featuring mechanical strength-neat appearance.

User's Net $\$ 43.90$

Filament Transformers-Single Secondary

This group of filament transformers represents a complete listing of all commonly used electrical and plysical specifications for units of this type. All transformers except those especially indicated have center laps. They are designed to provide accurate voltage output
at rated loads with good resulation. Generous insulation provides a safety factor over and above the test voltage as indicated. Each group of transformers by voltage ratings is a vailable in several convenient mounting styles which lend themselves to most applications.

Listings cover two distinct groups of transformers, universal or Polypedance and specific types. The latter group covers the most frequently used ratios, core sizes and mounting styles. They should be used in permanent installations whenever possible since their design permits the best efficiency and fidelity for units of this type. Poly-pedance
transformers are ideally suited for use in experimental or temporary equipment, such as schools, laboratories, etc., since they are provided with a large number of taps to permit the user to secure the widest practical range of impedance match. All units represent outstanding values.

# transformers <br> <br> REACTORS POWER PACKS TRANSMITIERS 

 <br> <br> REACTORS POWER PACKS TRANSMITIERS}

Two distinct groups of driver transformers are shown. Tapped or Poly-pedance and specific or fixed ratio types. Poly-pedance units are especially designed for experimental and laboratory work where it is desirable to change the turns ratio to optimum value. Two power ratings one of which is applicable to circuits employing inverse
feedback and two line drivers are available. Specific types are listed in the most frequently used ratios, core sizes and mounting styles. They should be used wherever possible in permanent installations because their design permits the best efficiency and fidelity for units of this type.

## STANCOR'S HF-WF HIGH FIDELITY AUDIO TRANSFORMERS

These new units will enhance the performance of the finest amplifier circuits, speakers, microphones and pickups. Vacuum impregnation and potted construction insure long life due to excellent protection against moisture. Sturdy cast cases are finished in flat gray enamel and contain four threaded holes at each end for flush mounting. Stud type terminals are provided on a phenolic panel with all terminals plainly marked for casy identification.

Wide range frequency response from 20 to $20,000 \mathrm{cps}$. within $\pm 1 \mathrm{db}$ for the HF units and from 30 to $20,000 \mathrm{cps}$. within $\pm 2 \mathrm{db}$ for the $W F$ units.

Proper coil and core design reduces harmonic and intermodulation distortion to a negligible amount.
Special coil construction reduces leakage inductance and distributed capacity; results in niform high response.
Balanced hun-bucking construction and/or high permeability magnetic shielding minimize
Nickel alloy laminations result in improved low frequency response in the smaller units where

# BHIRABO <br> NEW EQUIPMENT POMER TRANSFORMERS FILTER REACTORS 

POWER TRANSFORMERS
The power transformers in the CHICAGO New Equipment Line are designed to provide plate and filament supply for from two to sixteen tubes in a wide range of applications. They are conservatively rated and will deliver full rated nuly and voltage with minimum temperature within RMA-rerommended limits.

## FILTER REACTORS

The CHICAGO filter reactors listed below have current ratings particularly suited for use with the power transformers above them, but will give equally satisfactory service in any other correct application. Their design provides maximum inductance for given current rating in the smallest practical size of unit.

## FILAMENT TRANSFORMERS - S-Type Mounting

CHICAGO New Equipment filament transformers provide voltage and current ratings for heating a wide range of popular tubes.
Those with secondaries rated for less than 6 amps. have solder-lug terminals as shown in the S-type mounting ; those with secondaries rated at
more than 6 amps . have screw-type terminals. Filament Transformers Nos. F'-210 and F-210H are specially designed for high voltage rectifier filament supply. They have screw-type terminals, insulated on the secondaries with ceramic bushings

| NSI-2 | 2.4 hy. | 7.50 |

FULL FREQUENCY RANGE AUDIO TRANSFORMERS Frequency Response within $\pm 1 / 2 \mathrm{db}, 30$ to 15,000 Cycles

The frequency response curves at left are typical of these CHICAGO transformers. This, plus a very low percentage of distortion over the full range and their high grade construction, recommends them to all users of fine, broadeast quality audio components.
Input units have hum-bucking core construction and inner alloy cesses for extra hum shielding.
For Full Frequency Range DRIVER and MODULATION TRANSFORMERS, see page N-20

## DETAILS OF NEW EQUIPMENT LINE MOUNTINGS

The New Equipment Line offers these exclusive features: (1) Uniformity of mounting - all but the largest units have CHICAGO's famous Sealed in Steel constructions; (2) Choice of two alternate mountings, the S-Type and C-Type, in most categories.

A third construction, the B-Type mounting, is used for the Full Frequency Range audio units, where fine wire windings deserve the highest degree of sealing against moisture.

All three mountings achieve: 1. "Steel wall" protection against corrosive moisture; (2) Efficient shielding : (3) Unsurpassed strength to withstand shock and vibration; (4) Compactness; (5) Clean, streamlined appearance.

C-TYPE MOUNTING - Moisture-resistant compound surrounds coil and core. Ten-inch, RMA-color-coded leads, ends stripped and tinned for easy soldering. Flange-mounted drawn steel cases.
S-TYPE MOUNTING - Precision-fitted steel base-covers and terminal boards, plus compound filling, keep moisture out. Solder-lug terminals are clearly identified, easy to use. Drawn steel cases are flange-mounted.

B-TYPE MOUNTING - Steel bases are bonded into the drawn steel cases by deep-seal soldering to make units completely moisture proof. Stud-mounted cases take minimum chassis space. Convenient, compact, pin-type terminals.

# PUBLIC ADDRESS RANGE AUDIO TRANSFORMERS <br> Frequency Response within $\pm 1 \mathrm{db}, 50$ to 10,000 Cycles 

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or $150-\mathrm{hm}$ lines, 16,8 , and 4 -ohm speakers.
(16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary mizes distortion inverse feedback that mini without loss of fidelity.

## COMMUNICATIONS RANGE AUDIO TRANSFORMERS

Frequency Response within $\pm 1 \mathrm{db} ., 200$ to 3,500 Cycles

These transformers are specifically designed for use in receiving and transmitting equipment use in receiving and transmitting equipment such as amateur, police, railroad, and aircraft All units, excepting one, are offered in both

S- and C-Type mountings. Check the advantages of these Sealed in Steel mountings for protecting the units against deterioration from atmospheric moisture in the field, and for add ing to the appearance of any gear.

## MODULATION TRANSFORMER CMS-1

CHICAGO's No. CMS-1 Modulation Transformer and matching Driver Transformer No. CDS-1, at left, are ideally suited for use in ham and commercial speech transmitters. No. CMS-1 will deliver 250 watts of Class $B$ audio power from $P-P$ $203 A^{\prime} \mathrm{s}, 211 \mathrm{~s}, 805$ 's, 75 TL 's, etc. to a Class $C$ load with response varia. tions not exceeding $\pm 1 \mathrm{db}$. over the stated frequency range. Primary impedances, 90006700 ohms ct ; secondary $8000 / 6000 / 4000$ ohms. Case size F13. Wt., 22 lbs.
No. CMS-1 . . . . . . . List Price, $\$ 40.00$

## DRIVER AND MODULATION TRANSFORMERS

## For Full Frequency Range Broadcasting

Ideally suited to the small-to-medium size, nigh fidelity broadcast station, three matched sets of driver and modulation transformers provide of driver and modulation transformers provide
frequency response within $\pm 1 \mathrm{db}$. over the full

30 to 15,000 -cycle range. A uniformly low percentage of distortion proven in use. Three specially designed modulation reactors complete the sets.

## CONSTRUCTIONS

BX-TYPE MOUNTING - Flange mounted case vith steel base solder-sealed in. Bushing-insuated screw terminals in the tops of the cases. SX-TYPE MOUNTING - Flange mounted cases with precision-fitted steel bases. Bushing-insulated screw terminals out the bases of the units. FS-TYPE MOUNTING - Heavy duty frame-
and-shield construction. Screw terminals on the primaries ; bushing-insulated terminals on the secondaries.
WC-TYPE MOUNTING - Large oil-filled cases, made of heavy, welded steel plate. High voltage type, bushing-insulated terminals.

## ISOLATION TRANS FORMERS

CHICAGO Isolation Transformers are designed for a dual purpose (1) To supply 115 volts isolated from line of above/below normal, or normal, voltage - primary switch ets for $125 / 115 / 105$ volts, cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground, (particularly important on "hot" AC-DC television sets.) Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

| Cat. No. | Capacity | List Price |
| :--- | ---: | ---: |
| IS-50 | 50 VA | $\$ 8.00$ |
| IS-150 | 150 VA | 21.00 |
| IS-250 | 250 VA | 35.00 |

## OUTPUT TRANSFORMERS

SPEAKER MATCHING TRANSFORMER
No. SM-1. For matching one, two, three, or four 6 -ohm speakers from a $500-0 \mathrm{hm}$ line. Primary tapped for 1000,1500 , or 2000 -ohms. 500, Pri. d-c, 80 ma. Delivers 12 audio watts to each speaker. U-type mtg. H$28 / 8, \quad \mathrm{D} 2 \pi / \mathrm{s}, \mathrm{W}-18 / 4$. Wt., $1 \underset{.}{1 \mathrm{~b}}$.

## POWER TRANSFORMERS

No. TP-365. Supplies 405 volts d-c @ 295 ma . into an 80 mfd . cond input filter with two 5U4G's. Plate supply: $362-0-362 \mathrm{v}$, a-c, 295 ma . d-c. Filaments: $5 \mathrm{v} ., 3 \mathrm{amp}$ (Rec.) ; $5 \mathrm{v} ., 2 \mathrm{amp}$; 12.6 v., 5 amp, CT. Type TH mtg. 17 lbs . No. TP-383. Supplies 390 volts d-c $(230 \mathrm{ma}$, into an 80 mfd . cond. input filter with a 5 U 4 G . Plate supply: $383-0-383$ v. a-c, 230 ma. d-c. Filaments: 5 v., 3 amp (Rec.); 5 v. 2 amp ; $6.3 \mathrm{v}_{.1} 9 \mathrm{amp}$. Type TH mtg. Wt., $131 / 2 \mathrm{lbs}$. No. TP-393. Supplies 393 volts d-c @ 270 ma . into a 90 mfd . cond. input filter with two 5U4G's. Plate supply: $366-0-366 \mathrm{v}$. a-c, 270 ma . d-c. Filaments: 5 v., 3 amp (Rec.); 6.7 v ,, 4.5 amp . Type TH mtg. Wt., $101 / 2 \mathrm{lbs}$.

No. TP-400. Supplies 400 volts d-c (a) 205 ma . into a 90 mfd . cond. input filter with a 5 U 4 G . Plate supply: $374-0-374$ v. a-c, 205 ma . d-c. Filaments: 5 v., 3 amp (Rec.); $5 \mathrm{v.}$,2 amp ; 6.3 v. 5.6 amp . Type TH mtg. Wt., 9 lbs. No. TP-210. For use with T'P-400. Supplies 210 volts d-c (9) 90 ma . into a 40 mfd . cond. input filter with a 5Y3. Plate supply: 233-0-233 v., $\mathrm{a}-\mathrm{c}, 90 \mathrm{ma}$. d-c. Filaments: $5 \mathrm{v}, 2 \mathrm{amp}$ (Rec.) ; 6.3 v., 5.3 amp. Type TH nitg. Wt., $41 / 2 \mathrm{lbs}$. No. TP-410. Supplies 390 volts d-c (a) 240 ma . into a 40 mfd . cond. input filter with a 5 U 4 G . Plate supply: $385-0-385 \mathrm{v}$. a-c, 240 ma. d-c. Filaments: 5 v., 3 amp (Rec.); 5 v., 2 amp 6.3 v., 8.6 amp. Type TH mtg. Wt., 12 lbs.
 delivers 395 volts $d-\mathrm{c}$ @ 195 ma. with a 5 U 4 G 212 volts d-c $\Theta 105 \mathrm{ma}$ with a 5 Y 3 GT . Plate 212 volts d-c (a) 105 ma . with a 195 ma 229-0-229 v supply: $364-0-364$ v. a-c, 195 ma; 229-0-229 v. a-c, 105 ma. A-c. Rec. Fim 6,3 v. 8.25 amp ; $6.3 \mathrm{v} ., 0.6 \mathrm{amp}$. Type TH mtg .12 lbs .

## VERTICAL SCANNING OUTPUT TRANSFORMERS

No. TSO-1. Couples vert output tube to deflection yoke. Pri. Imped: 19,000 ohms (a) 30 v., 60 cycles, with 13 ma. dec. Ratio (Pri :Sec) is $10: 1$. Mtg. Type FV, Wt., $21 / 1 \mathrm{lbs}$.
No. TSO-2. Similar to TSO-1. Ratio (Pri:Sec) $8: 1$. Mtg. Type FH, Wt., $21 / 2 \mathrm{lbs}$.
No. TSO-3. Very similar to TSO-1. Mtg. FV. No. TSO-4. Similar to TSO-1. Pri. Imped: 18,000 ohms @ 30 v., 60 cycles, with 10 ma . d-c. Mtg. Type FV, Ft., 2 lbs.

AMPLIFIER AND EQUIPMENT TYPES-TUBE TO LINE AND VOICE COIL

MODULATION TRANSFORMERS - THE "FIVE" SERIES
SNC universol modulation tronsformers ore specificolly designed to provide moximum opplicotion possibilities per type. All units ore provided with two indentical secandary windings, permitting series or parallel aperation. Changes in the ratio can be reodily occomplished, when desired, without removing the unit fram the chassis. Mast units ovoiloble in either oir cooled or campound filled cases. UNIVERSAL TYPES

PLATE TRANSFORMERS-THE "SEVEN" SERIES
All SNC plate transformers have dual secondary ratings. Most units available in either air cooled or compound filled cases. All units contain electrostatic shields between primary and high voltage windings.

*All units may be operated with simultaneous loads-provided the total D.C. current of the two loads does not exceed the rating listed.

## FILAMENT TRANSFORMERS - THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to pravide twa identical center tapped secondary windings and offer a minimum of
Most SNC Filament Transformers are constructed to pravide was in apple applications of ordinary filament types. A few are single sesondary units and are so designated. Alt have $117 \mathrm{~V} .50 / 60$ cycle primary.

## VOLTAGE CHANGER AND ISOLATION - THE "NINE" SERIES

All Units Have Primary Cord and Secondory Plug and Are Far 50/60 Cycle Operation
VOLIAGE CHANGER (ISOLATION)

## s i g manufagturing go., ING., OSHKOSH, WISGONSIN

## THORDARSON TRANSFORMERS

## NEW STREAMLINED SERIES

This is the new Thordarson post-war series of Transformers and Chokes. Every unit has been designed for utmost efficiency and adaptability. Many of the engineering and production advancements developed by Thordarson during the war, are used in producing this line.
The new lamination alloys and insulating material, incorporated in this series, results in superior performance and a greater factor of safety without an increase in size or weight. Consequently, some types are smaller and more compact
without sacrificing efficiency or performance.
Finished in baked grey enamel and fitted with matched mounting styles, the units present a uniform appearance. This is especially desirable where several Transformers and Chokes are mounted on the same chassis.

Types for Radio Receiver Replacement, Amateur Radio, Sound Systems and allied applications, can be selected from
this listing.

## PLATE TRANSFORMERS

The new Thordarson plate transformers are designed to Service", (CCS) and "Intermittent Commercial or Amateur deliver the rated D.C. voltage from a two-section filter which includes the voltage drop in the rectifier tubes and chokes. Two current ratings are indicated, "Continuous Commercial Service" (ICAS). These dual ratings make it possible to select the plate transformer exactly suited for each application.

## CHOKES-REACTORS

## Universal Types-Swinging and Smoothing

Thordarson Universal Chokes are designed for use both in the input and smoothing positions. Where the current taken from the power supply is essentially constant (not varying more than a few percent) the chokes should be selected so as not to exceed the rated D.C.-M.A. If the current fuctuates considerably, as is the case where the power supply furnishes a class B modulator stage, the chokes should be selected so
state of operation, and not to exceed the Max. D.C.-M.A. rating when the modulator stage is fully excited.
These are truly universal chokes suitable for use in power supplies requiring either input, swinging or smoothing types. The tapped Splatter Chokes are used between the modulator and Class $C$ stage for eliminating objectionable side band splatter. Full instructions and circuit diagrams are supplied with each unit.

* Furnished with primary eord and secondary receptaele. t Output is proportional to voltage applied to input.

lower Supply $12^{\prime \prime}$ and $15^{\circ}$ Receivers.

## THORDARSON LITERATURE

TRANSFORMER MANUAL: A complete book containing
literature on Radio receiver replacement transformers, Sound
amplifiers, amateur transmitters and current Thordarson catalogs.
$\begin{aligned} & \text { Bound in heavy blue and orange loose leaf cover permitting addi- } \\ & \text { tion of future Thordarson releases. Manual No. } 340-50 \text { cents. }\end{aligned}$
TRANSFORMER CATALOG: A complete listing of Thor-
darson transformers, chokes, voltage changers, and regulators for
receiver replacement, amateur radio and sound amplifiers. Tables
and curves give complete dats on application and characteristics
of output, modulation and other transformers and chokes
Catalog 400 -Free.
technical deta on ThansFonmer arits. Includes audio
technical data on Thordarson broadcast units. Includes audio
transformers, filters, line equalizers, filament transformers, filter reactors, plate transformers, and modulation reactors and transormers. Highest quality units that satisfy the requirements of discriminating engineers, broadcast stations and laboratories. Catalog 500-Free.
AMATEUR RADIO: Carefully prepared and edited to make learning of Radio, by all beginners, easy and interesting. Presents undamental theory and instructions for making eode practice oscillators, receivers and transmitters. Has 160 pages and over 100 illustrations and drawings. Heavy book cover, finished in wear-resistant blue cloth and imprinted with gold lettering. Amateur net price- 75 cents.

LS-1 CASE

The ever increasing use of wide range equipment for broadcast service has reached the point where the major limiting factor is the frequency range of the transformers employed. UTC Linear Standard components represent the closest approach to the ideal Iransformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

## LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FAEQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leakage reactance.
UTC INEAR STANDARD transformers are the ONLY audio units with a GUARANTEED uniform response . . . $\pm 1$. DB from 20 to 20,000 cycles.
MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semitoroidal, coil structure which affords moximum neutralization of external fields. In addition, aH law level units employ an internal high permeability alloy case as well as the high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in $X$ employ quadruple alloy shielding, making possible a transformer with the lowest inductive pickup commercially available.
NEGLIGIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching. minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortion at 30 and 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value in some instances up to 50,000 cycles.
MULTIPLE TAP WINDINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of $.1 \%$. . . perfect balance of inductance and capacity . . . exact impedance reflection. For all practical uses, 500 ohm termination may be used for 600 ohm requirements. For moximum efficiency and balance, 250 ohm lines are recommended to be connected to 200 ohm terminations.
DEPENDABLITTY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole- will clear all terminals. Coils are vacuum baked and impregnated. Semi-hermetic sealing is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

## LOW IMPEDANCE TO GRID TRANSFORMERS

The ever increasing use of wide range equipment for broadcast service has reached the point where the major limiting factor is the frequency range of the transformers employed, UTC Linear Standard components represent the closest approach to the ideal transformer from the standpoint of uniform frequency response, low wave form distortion, high efficiency, thorough shielding, and dependability.

## LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in $a$ semi-toroidal coil structure. This, plus special winding methods and insulations, assures $\alpha$ minimum of distributed capacity and leakage reactance,
UTC LINEAR STANDARD transformers are the ONLY audio units with a GUARANTEED uniform response . . . $\pm 1$. DB from 20 to 20,000 cycles.
MININUM HUM PICKUP . . . is accomplishęd through the use of a hum balanced, semitoroidal, coil structure which affords maximum neutralization of external fields. In addition, af low level units employ an internal high permeability alloy case as well as the high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in X employ quadruple alloy shielding, making possible a transformer with the lowest inductive pickup commercially available.
NEGLIGIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching. minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortion at 30 and 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value in some instances up to 50,000 cycles.
MULTIPLE TAP WINDINGS . . . mako possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of $.1 \%$. . . perfect balande of inductance and capacity . . . exact impedance reflecfion. For all practical uses, 500 ohm termination may be used for 600 ohm requirements. For maximum efficiency and balance, 250 ohm lines are recommended to be connected to 200 ohm terminations.
DEPENDABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole will clear all terminals. Coils are vacuum baked and impregnated. Semi-hermetic sealing is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

## OUTPUT TRANSFORMERS

Linear Standard output and matching transformers employ large cores of high permeability steel and precisely balanced, highly interleaved coil structures. The fequency response and harmonic distortion are unequalled in commercially available material.
The mulfiple top windings afford a wide range of impedances for every application. The impedance values given are for one load. Where it is desired to feed two loads simulta. neofusly, with equal power, it is necessary to connect the loads to terminations of half the impedance value. For exomple, if it is desired to split the output between a 500 ohm line and a 15 ohm voice coil, connect the the 500 ohm line to 250 ohm termination and the 15 ohm speaker to the 7.5 ohm termination. If the bulk of the output is desired in one of the loads, connect this load to its correct termination and the other load to a termination of $20 \%$ rating or less. For example, if in the above case, the speaker were used solely for monitoring, connect 500 ohm line to 500 ohm termination and 15 ohm voice coil to 2.5 ohm termination.

In choosing power components for broadcost and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise $40^{\circ}$, and high insulation safety factors. Only the tinest of materials and workmanship are used throughout.
The low power components of the Linear Standard series are housed in the familiar rectangular LS case with top or bottom mounting facilities. High power components are housed in end castings which completely protect the winding, while directly exposing the laminations for maximum heat transfer All units have a deep grey finish to obtain the highest heat radiation co-efficient. Lorge components (up to 250 KVA ) are housed in oil tanks.

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of $+90 \%$, $-50 \%$ from mean value is obtainable. Setting is positive. Effective $Q$ for $\alpha$ wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case $1^{11} / 2^{\prime \prime}$ long, $11 / 4^{\prime \prime}$ wide and $17 / 18^{\prime \prime}$ high with mounting centers on terminal board side ${ }^{13 / 166^{"}}$ by $29 / 32^{\prime \prime}$ Weight is $51 / 2 \mathrm{oz}$.

## UNCASED HIGH 0 TOROIDS

We can supply any of the Toroids listed withou: case. Deduct $\$ 1.50$. Specify type and inductance value when ordering.

## SPECIAL TOROIDS

Sizes other than those shown in our stock list can be supplied on special order at price of next highest value.

[^22]There are many appications in the audio, carrier, and supersonic fields requiring inductors of high $Q$ and great stability. The HQ series of permalloy dust toroid units developed for these applications have remarkable characteristics.

HQA coils have moximum $Q$ (100) at approximately 5,000 cycles. HQB coils have maximum Q (200) at approximately 4,000 cycles. HQC coils have maximum $Q$ (200) at approximately 30 Kc . HQD coils harve maximum $Q$ (200) at approximately 60 Kc. The stability is excellent and types are available for all high $Q$ applications from 300 cycles to 300 Kc .

Stability is excellent. For the HQA-7 coil illustrated inductance change is less than $1 \%$ for applied voltages from 1 to 25 volts. For the HQB-5 coil illustrated the inductance change is less than $1 \%$ for applied voltage from . 1 to 50 volts. DC is permissible through the coil. Inductance is virtually independent of frequency, temperature, and vibration.

Hum pickup is extremely low due to the toroidal winding structure . . 70 microvolts per gauss for the $\mathrm{HQA}, 140$ microvolts per gauss for the HQB. The cased toroid structure permits close spacing of units, effecting a coupling attenuation of approximately 80 DB .

All HQ coils are hermetically sealed. Units are laboratory adjusted to $1 \%$ tolerance.

Case for interstage filters same as HQB illustrated on preceding page.

## UTC INTYERSTAGE FILTERS

Interstage filters lend themselves to effecting gain simultaneously with their frequency discrimination. UTC manufactures three basic types of filters for such application with a nominal impedance of 10,000 ohms to be used in a circuit as illustrated.

Type BPI (band pass). LPI (low pass), and HPI (high pass) interstage filters are not carried in slock, but are available from standardized designs and components. They are available for any frequency from 200 to 10,000 cycles. Order by type followed by frequency as: LPI-2500, which designates a low pass filter-2500 cycles cutoff frequency. For low impedance circuits ( $500 / 600$ ohms), order as BPL, LPL or HPL in similar manner. Output of BPL is to grid; LPL and HPL to $500 / 600$ ohms.

All interstage filters are housed in hermetically sealed cases identical in dimensions to HQB , but cutout is $5 / 8 \times 2$ inches. Dual alloy shielding reduces hum pickup to 150 MV per gauss at 60 cycles.
BPI units have $2: 1$ gain. They ore sharply peaked, having approximately 2 DB attenuation at plus or minus $3 \%$ from mean frequency and attenuations of approximately 40 DB per octave. They are adjusted to zero phase shift at mean frequency.
HPI units have loss of less than 6 DB at cutoff frequency. At 67 cutoff frequency the attenuation is 35 DB and at .5 cutoff frequency, 40 DB .

LPI units have loss of less than 6 DB at cutoff frequency. At 1.5 cutoff frequency the attenuation is 35 DB and at twice cutoff frequency, 40 DB .

# BROADCAST AND RECORDING EQUALIZERS AND FILTERS <br> 500/600 ohms 

## 3AX UNIVERSAL EQUALIZER

The universal characteristics of the UTC 3AX equalizer have made it the most popular item for broadcast and recording equalization. This unique unit, with which most communications engineers are already familiar, is an accurately calibrated, quickly adjustable. combined low and high frequency equalizer. The low frequency controls include a switch or adiusting the maximum equalization frequency to 25,50 , or 100 cycles and a calibrated T-pad for exact adjustment of the amount of equalization. The high frequency portion of this unit includes a switch to set maximum equalization point at 4000, 6000, 8000, 10,000 or 15,000 cycles, and a similar calibrated control reading directly in DB. Equalization up to 25 DB available at any frequency selected.
Through a unique arrangement of compensating pads, changes in adjustment of the 3AX equalizer do not affect the insertion loss ( 50 DB ). This permits rapid changes in tone color, with negligible change in volume. Where rapid change-over is required in service from one line to another, or from recording to play back, it is merely necessary to predetermine the required selting. The actual adjustment of the controls can be taken care of almost instantaneously. The construction is of the depressed chassis, etched panel, rack mount type. Thoroughly shielded against inductive pickup with UTC Trialloy Shielding. Dimensions of panel $31 / 2^{* \prime} \times 19^{\prime \prime}$. Depth $71 / 2^{\prime \prime}$. Weight 15 lbs .

## 3A UNIVERSAL EQUALIZER

The $3 A$ equalizer is identical to the $3 A X$ described above, except that it does not incorporate the compensating pads for constant insertion loss. The insertion loss is roughly proportional to the amount of equalization employed. All other characteristics identical with the $3 A X$ unit, this item weighs 10 lbs .

## 4C SOUND EFFECTS FILTER

The use of filters to obtain unusual sound effects is now finding wide application in broadcast technique. The Model 4C Filter was originally developed for one of the large broadcast chains, and is now used extensively by most broadcast stations. Two controls are provided on the $51 / 4^{\prime \prime} \times 19^{\prime \prime}$ panel, which is similar in appearance to the $3 A X$ unit. The weight of the 4 C unit is 20 lbs .
The low pass switch can be set for cutoff frequencies of 100, 250, 500, 1000, 2000, 3000. 4000 , or 5000 cycles. The high pass switch has identical frequency points. The great number of cutoff frequencies provides for a wide latitude of tone control. If desired, though not normally necessary, external potentiometers mary be inserted in the circuit for attenuation control.

## 5A BOOST-DROP EQUALIZER

The 5A equalizer, ideal for recording and reproduction, incorporates the $3 A$ equalizer with control for drooping highs and lows where required. Up to 15 DB attenuation can be effected at 25,50 , or 100 cycles for the low end and $4000,6000,8000$. or 10,000 cycles for the high end.

## UTC CUSTOM TOROID COIL FILTERS

UTC manufactures permalloy dust toroid filters for all applications. The stability of the inductors plus precision adjustment makes these filters ideal for all critical applications in the audio, carrier, and supersonic fields.

The curve illustrated shows a group of filters affording sixteen separate bands in the audio and supersonic region with 35 $D B$ attenuation at the cross-over points. These have also been supplied spaced further apart (40 DB cross-over), with intermediate bands, permitting flat top band pass action for any selected range from 100 cycles to 200 KC .

## SUB-OUNCER PERMALLOY DUST TOROIDS

Weight $1 / 2$ ounce uncased 8 ounce hermetically sealed. These miniatured HQE coils have characteristics similar to our standard HQA, C and D coils with little reduction in $Q$ considering minute size.

## SUB-OUNCER TOROID FLLTERS

Filters employing SUB-OUNCER toroids and special condensers represent the optimum in stable miniaturized filter performance. The unit shown...l x 1 $\times 2 \ldots$ employs 5 coils and 6 condensers for a complete band pass filter... weight 6 ounces.

## UTC SATURABLE REACTORS

Saturable reactors are used extensively for both power control and phase control. The left curve is that of a smail (1" cube) sensitive unit indicating the variation of induclance with saturaling DC. The right curve is that of a moderate size power control reactor indicating power to the load with saturating DC.
These units are supplied to customer's specifications only...for all applications.

10 c -ma
 CONTROLUNITS For controlling: Rectifier output . . . motors . . . heaters . . . lights . . . line voltage

The UTC Varitran is a simple autotransformer whose turns are arranged on one layer with the insulation removed so that every exposed turn may be used as a tap of the winding. A special ron-fusing contact can be moved to any position on the winding, permitting the exact vollage desired to be obtained. The regulation and efficiency are excellent and no distortion of wave form occurs. The output voltage is independent of load. In addition to its many laboratory uses, the Varitran is widely employed for controlling electric ovens, lans, soldering irons, furnaces and heaters, for photographic and enlaraing lighting control, for life tests ol lamps and for dimming illumination.

## VARITRAN RATINGS

Standard Varitrans are designed for 115 or 230 volt service. The respective output voltages are $0-130$ and $0-260$ volts. The Varitran autotransformer current and wattage rating is based at 115 volts ( 115 V . models). As the voltage is reduced, the wattage output is reduced carrespondingly. The maximum current can be taken at any point from 0 to 20 volts and from 95 to 130 volts. Between 20 and 95 volts the current capacity tapers off from the two ends to approximately $60 \%$ of the rated maximum current at the 65 volt point. The mounting facilities are at both top and bottom of each unit to assure ease of mounting on panel, chassis or for laboratory bench sérvice.

## UTC HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is moximum unbalanced.

## UTC MICROPHONE CABLE TRANSFORMERS

UTC cable transformers are designed to be inserted in the cable circuit, and are ruggedly constructed to withstand mechanical abuse. The cable connections (supplied less cable) are made through spring strain relief to terminal boards inside the end caps. $11 / 2^{\prime \prime}$ diameter $.21 / 2^{\prime \prime}$ long ... $1 / 2 \mathrm{lb}$.

Type MC-1—primary tapped $30 / 50$ and $200 / 250$ ohms, secondary to grid, standard fidelity Type MC-2—primary tapped $30 / 50$ and $200 / 250$ ohms, secondary to grid, high fidelity.

UTC MIKE/HIGH IMPEDANCE ADAPTOR is designed to match low impedance sources to an amplifier horving high impedance input. Will match any source from 50 to 600 ohms, effecting a $15: 1$ step up ratio ( $225: 1$ impedance ratio). The plug on MA-1 goes into jack on amplifier. .the plug from mike goes into jack on MA-1. Flat 40-10,000 cycles. Rugged die casting $7 / 8 \times 11 / 8 \times 21 / 8$ -
Type MA.1—primary 50 to 500 ohms... 15.1 ratio . . jack input... plug output.

The UTC Ultra compact audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being $\pm 2 \mathrm{DB}$ from 30 to 20,000 cycles.
All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast TType A) case provides for top or bottom mounting Maximum operating level +10 DB.

PLUG-IN (P) CASE
Diameter
Height
Socket

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing 7/8" diameter .. mounting opposite terminal board.
Ouncer items are ideal for portable brogdcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, unitorm from 40 to 15,000 cycles, except for $0-14,0-15$, and units zarrying DC which are intended for voice frequencies from 150 to 4,000 cycles. Maximum operating level 0DB.
" P " series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets, even when used upside down in portable equipment.

# SUBOUNCER UNITS FOR HEARING AIDS . . . VEST POCKET RADIOS . . . MIDGET DEVICES 

UTC Sub-Ouncer units weigh only $1 / 3$ ounce. Through unique construction, however, these miniature units have performance and dependability characteristics far superior to any other comparable items. The coil is uniform layer wound of Formex wire . . . On a molded nylon bobbin. ., insulation is of cellulose acetate.... leads mechanically anchored ... core material Hiperm-alloy . entire unit triple (waterproof) sealed The frequency response of these standard items is $\pm 3$ DB from 200 to 5,000

## (viectut commercial grade componemts

The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. The CG line was developed to replace our very popular PA series in a more rugged construction, with professional appearance. Type numbers are identical with the PA units except for the prefix "CG".
CG-134, 135 and 136 are of the him-bucking type to assure low hum pick-up. All cudio components are linear. $\pm 11 / 2$ DB from 60 to 8,500 cycles (no unbalanced D.C.). Parallel feed low level interstage units with 50,000 ohms and .25 mfd .200 ohm windings on input transformers are balanced and may be used for 250 ohm circuits.

## UNIVERSAL INTERSTAGE EQUALIZER

This new UTC unit is the ideal device for any application requiring frequency response correction. Designed to be connected between two triode audio stages or will match a hign impedance ( 5000 to 30000 ohms) source to grid.
The CGE-1 equalizer is not a simple R-C tone control, but employs resonant circuits to permit low or high end equalization without effecting mid-frequencies. With controls in center, no equalization is effected. Moving one control to left increases bass; to right, drops bass. Moving other control to ieft increases highs to right drops highs. dent so that bass may be raised and highs dropped simultaneously, etc Amsertion loss effected is equal to the combined low frequency and high frequency settings plus 6 DB, or a maximum of 36. DB. Unless existent gain of equipment to which CGE-1 is added is high, an additional audio stage may be required.
This unit comes complete so that controls with etched panel (calibrated in DB) can be mounted on a chassis ( $21 / 2$ inch minimum) or a panel with case containing the electrical elements held by etched panel screws. CGE-1 Panel Dim. 23/8 x 4. Wt. 2 Lb .

DYNAMIC NOISE SUPPRESSION INDUCTOR
Incorporates two accurate High $Q$ coils ( .8 hy . and 2.4 hy .) for use in dynamic noise suppression circuits. Excellent circuit accomin dynamic noise suppression circui
panies unit, Type CG-50. RC-75 Case.

## CG VARIMATCH LINE

## TO VOICE COIL TRANSFORMERS

The UTC VARIMATCH line to voice coil transtormers will match any voice coil or group of voice coils to a 500 ohm line. More than 50 voice coil combinations can be obtained, as follows:

$$
\begin{aligned}
& .2, .4,5,62,1,1.25,1.5,2,2.5,3,3.3,3.8,4,4.5, \\
& 5,5.5,6,6.25,6.6,7,7.5,9,10,11,12,14,15, \\
& 16,18,20,25,28,30,31,40,47,50,63,69,75 .
\end{aligned}
$$

Where speckers are to be connected in groups to one transtormer it is preferable that parallel connection be used to eliminate the possibility of multiple resonance. If two speakers of different impedances are connected connected in series, the higher impedance speaker will develop greater power.

| power. <br> Type No, | Audio <br> Watts | Primary <br> Impedance | Secondary <br> Impedance | Case <br> No. |

| CVL.1 | 15 | 500 ohms | .2 to 75 ohms | RC-87 |
| CVL-2 | 40 | 500 ohms | .2 to 75 ohms | RC-125 |
| CVL-3 | 75 | 500 ohms | .2 to 75 ohms | RC-150 |

## CG VARIMATCH LINE AUTOFORMERS

UTC Varimatch Line Autoformer will match one to ten 500 ohm lines or CGL windings to the 500 ohm output of an audio amplifier. The CGA-10 1012 auto
50 ohms.

| S0 ohms. |  |  |
| :--- | :---: | :---: |

| CVL-11 | 30 | RC-125 |
| CVL-12 | 60 | RC-150 |

UTC CG power transiormers, Varimatch units and chokes are designed to A.I.E.E. commercial standards. Ratings are conservative for continuous duty. Designs provide temperature rise less than 55 degrees C Units are tested for breakdown at twice maximum working voltage plus 1000 volts. Plate transformers are given a surge test of $250 \%$ normal voltage at 200 cycles. All jitems are vacuum impregnated and sealed with special insulating compound.
The conservative design and mamulacturing procedure of these units make them suitable for virtually all types of commercial equipment as well as ideally suited for quality amateur and public address service

## CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load
The ever increasing number of vacuum tubes available for cudio and RF for matching to the various correct tube loads. It a standard transformer hoving a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is fnevitable. While a $20 \%$ mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistortod power crailable from a class B modulator because optimum plate load is not culty through the use of a combination of tapped windings aftording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class $C$ plate current can be carried by secondary winding

Primary impedances from 500 to 20,000 ohms
Secondary impedances from 30,000 to 300 hms
Secondary impedances from 30,000 to 300 ohms

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are, finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring The universal windings provided on driver, matching and outpui transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio the impedances to any RF load within the power rating of the transformer. Lorge components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated - compound filled

- Abover manufacturers' rating, but frequantly employed by amsteurs

## UTC SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are de signed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for intormittent service. For commercial applications, CG or LS grade components should be employed. Tapped coil structures on power and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Do not affect standby service by interrupting high voltage center tap.

CHANNEL FRAME FILAMENT TRANSFORMERS
Pri. 115 V. $50 / 60$ Cycles- 1500 V. Breakdown

The UTC replacement type transformers represent the culmination of years of development in this field All anits are vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel
The JTTC shells and universal brackets employed make possible a latitude in mounting dimensions never approached heretofore Using Varitap coil construction a minimum number of tronsformers have been developed to cover any requirement in the replacement field.

Through unique construction the five UTC VARITAP DUPLICATE replacement transformers will service as many types of radio receivers as the 15 or 20 units more customarily employed for horizontal mounting, or eliminated for flush mounting.

UTC FLUSH TYPE transformers are husky units designed for low temperature rise and good reaulation. By employing a Varitap universal coil structure, the five units described are universal in application. The rugged solder terminals pe.mit ease of circuit change for the experimenter.

UTC VERTICAL power transformers are unusually attractive in appearance, having smooth drawn cases finished in high lustre black enamel. The Varitap coil structure assures flexibility of application.

Channel frame chokes, audios, and filament transformers are conservatively designed. Standard black enamel mounting channels are employed. Coils are tropic-sealed by vacuum-pressure method.

Varitap Duplicate audio units are extremely attractive, the double shells and universal mounting brackets being inished in high lustre black bracket. This bracket makes possible universal bracket. This bracket makes possible four hole channel type, horizontal or verticat and two hole, coils of these units, in addition to efficient design and mechanical shielding, are vacuum impreg. nated and sealed with a special compound to assure complete protection against adverse climatic conditions

## STEP DOWN AUTO-TRANSFORMERS

With 6 toot cord and fomale receptacle
$220-240$ to 110.120 Volts $-50 / 60$ Cycle:
$\left.\begin{array}{lll}\begin{array}{c}\text { Type } \\ \text { No. }\end{array} & \text { Application } & \text { Wot. } \\ \text { LDSt }\end{array}\right]$

## ISOLATION TBANSFOBMERS

Ideal for isolating line noise, AC-DC sots, otc. Excellent olectrostatic shielding. 2000 volt breakdown test. Six foot cord and female receptaclo.

Primary 110:120 volte. 50/60 cycles-Secondary 110-120 volts

## LINE VOLTAGE ADJUSTERS WITH METER

The perfect answer to abnormal or fluctuating line voltage. Adjust awitch so that meter reads at red line and you know that your equipment is working at correct voltage.
These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly.
The nine tap switch provides for line voltages of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output models. All units are designed lor 50/60 cycle service and come complete with 6 foot input cord and plug. and outlet receptacle

## PHOTO FLASH TBANSFORMERS

Can be used for either standard (Amglo type) or trigger (Sylyania type) multiple flash bulbs. Circuit details in cluded with transformer, or on request.

PF. 1 Primary for 115 volts, $50 / 60$ cycles. Secondaries for power supply delivering 2200 volts DC to condenser up to 100 Mid . ( 30 Mid . charges in 4 Sec .) Compound sealed in $\mathrm{G}-3$ case $21 / 8 \times 23 \times 21 / 2$ inches high. Weight 2 Lbs.

PP-2 For portable photoflash service. Primary tapped for 4 volt or 6 volt battery (full wave vibrator). Secondary for power supply delivering 2200 volts DC to condenser up to 60 Mid . 30 Mid . charges in 8 sec . with 6 volts or 14 Sec. with 4 volts). Compound sealed in G-3 case. Weight 2 Lbs.

PF-3 Trigger Transtormer 15 KV peck

The above transformers are designed for primary operation of 115 volts $50-60$ cycles．They ore olso ovailable for 220 volts 60 cycles and 115 valts 25 eycles．

TELEYISION TRANSFORMERS Used in television receivers，oscilloscopes，test equipment and high voltage，low current power supplies．

Designed for delivering the maximum audio frequency power from an amplifier to a load (voice coil or line). Good frequency response and low harmonic distortion are the quality factors of the H.O.T. output transformers. Fully enclosed shielded type with leads. All H.O.T. series transformers have multiple secondary impedances.

## AUDIO TRANSFORMERS

 Receiver and Amplifier VIBRATOR TRANSFORMERS
RECEIVER AUDIO TRANSFORMERS
Designed for use in receiver audio circuits where a reasonably good frequency response is required. To be used for Class A applications, i.e., where no great current is drawn.

## AMPLIFIER AUDIO TRANSFORMERS

Designed for amplifier and transmitter audio circuits. To be used for Class "A" applications.

Fully enclosed shielded type construction, conservative design and good frequency response are the quality features of the amplifier audio transformers.

## PARALLEL FEED AUDIO REACTORS

Designed to eliminate the direct current component in the primary of audio transformers to be used as plate coupling reactor where the use of a high resistance is objectionable． Low distributed capacity insures excellent high frequency response．

# FREED TRANSFORMER CO., INC. 

## AUDIO TRANSFORMERS - C SERIES

A quality line of transformers used in Public Address amplifiers and transmitters. Uniform case design, universal mounting, conservative ratings, vacuum impregnation of coils and moisture proof sealing of all these transformers is one of the outstand-
ing features of the $C$ Series Audio Transformers. Low level input and output transformers have a balanced hum bucking coil construction. The frequency response of all these units is flat within $\pm 2 \mathrm{db}$ from 60 to $10,000 \mathrm{cps}$.

## THERMADOR TRANSFORMERS

Superior materials, workmanship and performance have established these Thermador transformers as America's finest. Designed, engineered and produced by the West's largest manufacturer of transformers, the name Thermador guarantees their rugged, precision construction and their longer life.

## REPLACEMENT TRANSFORMERS

Adaptable to a Particular Job: The transformer models listed have been engineered to cover the replacement field for both the old and new home radio receivers. The new line affords the widest range of application for use in receivers, amplifiers and small transmitters.
Thermatite Treated to Withstand Heat and Humidity: THERMADOR transformers are Thermatite treated, which is a well tested and approved form of vacuum impregnation. This treatment, proved on thousands of transformers under severe climatic conditions, gives these units the resistance to withstand extreme conditions of humidity and heat.

## STUDIO QUALITY TRANSFORMERS

The HI-Fidelity series of audio equipment listed above represents the highest degree of quality yet attained in audio transformers. In addition to the absolute moisture elimination provided by "Thermatite" treatment, THERMADOR hi-fidelity transformers have the following advantages:

Wide Frequency Range: Transformers of the SQ series are hnear within one db. from 20 to 20000 cycles.
Balanced Winding. THERMADOR transformers are constructed to give the best practical magnetic, capacity and resistive balance. In designs where capacity balance is important, each winding is made up of two symmetrical coils. Input transformers are supplied with a static shield between primary and secondary.

Low Harmonic Distortton: THERMADOR transformers are designed to offer the proper load impedance to the tubes with which they operate. Maximum primary inductance, low leakage reactance and low flux densities in the core permit unusually low harmonic levels.

Catalog with case types illustrated is available upon request. For full information write to:

5TACO Transformers are compact and modern in design. Only the highest quality silicon famination steel is used which assures cool operating transformers. Each coil is layer wound with the best quality enameled wires, each layer is insulated with heavy insulating material, each co il is varnished impregnated and high temperature baked. High Voltage Breakdown Test is performed on each coil and transformer in accordance with existing RMA Specs. This combination of high quality materials plus the finest workmanship is assurance of better and lasting performance at highest operating efficiency, yet costs no more than average.
Finishes: Mount type \#1, Black baked enamel, Mount type \#2, Black baked enamel, Mount type \#3, Natural Buffed Aluminum, Mount type \#4, Black Wrinkle baked enamel.

Peerless Electrical Products Division of Altec Lansing Corporation presents two new lines of transformers. The standard commercial line includes power, filament, plate, isolation, television, input, interstage, bridging, output, impedance matehing transformers and power chokes. The commercial line of audio transformers have a flat frequency response within $\pm 1 \mathrm{db}$ from 30 eycles to 15,000 cycles, the power transformers are conservatively ratel for a maximum heating rise of $55^{\circ} \mathbf{C}$., and the output transformers are conservatively rated
to give full rated power within $\pm 3 \mathrm{db}$ from 30 cycles to 10,000 cycles.

The superb new audio line of 20-20 transformers covers input, interstage, bridging, output and impedance matching transformers which are unsurpassed in any market. The $20-20$ line of audio transformers have a flat frequency response within $\pm 1$ db from 20 cycles to 20,000 eveles and have good transmission up to 50 KO . The ontput ransformers are conservatively rated to give full rated power within $\pm 3 \mathrm{db}$ from 20 cycles to 20,000 eveles.

## TUBULAR CAN－TYPE DRY ELECTROLYTIC CAPACITORS

＂BLUE BEAVER＂＊CAPACITORS
Types BR and BRD＂Blue Beavers＂are the most popular electrolytic capacitors employed for all applications where units are required for convenient mounting in small spaces beneath a chassis or connected directly in the wiring assem－ bly．They are small in physical size and self－supporting by means of strong，bare tinned－copper wire leads，while the larger sizes may be mounted with a metal strap．

## MINIATURE TUBULAR CAPACITORS

Type BBR＂baby BR－type capacitors＂are designed for use in compact apparatus such as hearing aids，pocket radios and other small assemblies．They are hermetically sealed in tubular aluminum containers and ideally suited to meet requirements in low voltage circuits．

## 

## ROUND CAN DRY ELECTROLYTIC CAPACITORS

PLUG-IN TYPE CAPACITORS
Type QC Capacitors are hermetically sealed in round alum inum containers and provided with a four-pin octal base mounting in order to be readily removed and replaced in standard octal base tube sockets.

## SCREW-NECK TYPE CAPACITORS

Types KR and KRC single-hole mounting units are compact etched foil type dry electrolytic capacitors furnished in round (inverted mounting) aluminum cans. Available in single, dual and triple sections with color-coded leads. Made in all popular voltage ratings for use in A.C.D.C. or voltage-doubler midgets and A.C. operated sets.

REPLACEMENT DRY ELECTROLYTIC CAPACITORS

## REPLACEMENTS FOR WET-TYPE UNITS

These dry electrolytic capacitors furnished in round aluminum cans are offered as substitutes for replacement of wet electrolytic units which have been discontinued in manufacture during the war. The limited range of capacities listed below cover practically all applications in standard radio receivers and other equipment in which wet type electrolytic capacitors were originally employed.

WET ELECTROLYTIC REPLACEMENT TYPE WR

450-Volt D.C. Replacement Capacitors

| $\begin{aligned} & \text { Cat. } \\ & \text { No. } \end{aligned}$ | Cap <br> Mid | Replacement | $\begin{aligned} & \text { Size-Ins. } \\ & \text { Dia. } \times \text { Lth. } \end{aligned}$ | $\underset{\text { Price }}{\substack{\text { List }}}$ | $\underset{\text { Price }}{\substack{\text { Net }}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| WR 10 | 10 | 4 to 12 mfd . | $18 / 8 \times 21 / 2$ | \$1.45 | \$0.87 |
| WR 20 | 20 | 16 to 20 mfd . | $138 \times 21 / 2$ | 2.25 | 1.35 |
| WR 30 | 30 | 20 to 30 mfd . | $18 \% \times 314$ | 2.60 | 1.56 |
| WR 40 | 40 | 30 to 40 mfd . | $18 / 8 \times 31 / 4$ | 2.90 | 1.74 |

For one-inch diameter can wet electrolytic replacements we recommend employing C-D Type KR capacitors in one-inch diameter cans at equivalent capacity and voltage ratings.

## FILTER REPLACEMENT UNITS

Type EB electrolytic capacitors are especially suited for replacement purposes in radio receivers to replace units of larger physical sizes. They are identical in mounting hole dimensions and general construction to Type WR capacitors except they are provided with insulated colorcoded wire leads $8^{\prime \prime}$ long brought through the threaded neck of the unit.

## "ELECTROLYTIC CAPACITORS"

## By PAUL McK. DEELEY

Here in one masterly volume, "Electrolytic Capacitors," you will find a wealth of thr most practical information ever published on the subject of electrolytic capacitors.
Never before has the technician been offered a manual so complete and so comprehensive at this price- $\$ 1.00$ net, formerly $\$ 3.00$. "Electrolytic Capacitors" should be in every radio man's professional library and technical file.
This instructive book supplies the reader with specific information concerning the many factors involved in the theory, design and construction of electrolytics. It is profusely illustrated and describes all applications of electrolytic capacitors. 300 pages, size $51 / 2^{\prime \prime}$ $\times 77 / 8^{\prime \prime}$, cloth bound hard cover. Every page is a gold mine of facts and data.

This 300 -page book is yours postpaid-for only

## METAL TUBULAR TYPE CAPACITORS

These compact C-D etched foil electrolytic capacitors have been especialiy designed for all applications requiring high capacity units operating in low voltage D.C. circuits. They are widely employed in portable radio power rectifying circuits, electric fence devices, telephone and D.C. timing circuits. Units are available in standard capacities and voltage ratings for all uses.

Hermetically sealed in pure aluminum cans with an external cardboard insulating sleeve, these units are provided with metal mounting strap and bare wire leads for convenient wiring into any circuit assembly. They are constructed identically the same as Type BR "Blue Beavers" except all units are provided with a mounting strap.

## INSULATED CAN CAPACITORS

Type FB capacitors in round aluminum cans are designed for high capacity, low voltage applications, and are especially popular as replacements in motion picture sound equipment, and other low voltage circuits. All units are provided with lug terminals on a moulded bakelite cover and furnished with an external cardboard insulating sleeve for protection against short circuits.

Type FB is same as FA except lug terminal.

## CARDBOARD TUBE DRY BLECTROLYTIC CAPACITORS

CARDBOARD TUBE UNITS（Formerly Type BRL） Type EDL Capacitors are dual and triple common negative units in cardboard tube containers with wax－filled ends． Capacities，voltages and polarity of the leads are clearly defined by color coding stamped on the cardboard tube casing．Units are provided with insulated wire leads brought out at both ends of the unit．A mounting strap around the center of the cardboard tube casing enables mounting the unit with one screw under the chassis assembly．

## UNIVERSAL－MOUNTING UNITS

Type EZ capacitors are especially popular for radio ser vicing where low cost replacements are required．They are designed with mounting feet for upright mounting to re－ place inverted can－type units，spade－lug units，or may be mounted beneath the chassis by means of the mounting strap provided around the center of the cardboard tube casing．In any instance，the unused mountings may easily be cut off．

These units are without doubt the most practical all－around replacement capacitors available and incorporate C－D etched foil features in design and construction．They are completely sealed in moisture－proof cardboard tube casing， filled with special wax compound，and provided with in－ sulated wire leads eight inches long．All units are clearly stamped with capacities，voltages and color code desig． nation of leads．

${ }^{*}$ First section separate, others common negalive.

## Explanation of Terminal Connections

In all cases only a single common negative lead is provided to all sections in multiple section capacitors listed under the heading of Common Negative Units. Separate Section Units are provided with separate negative and separate positive leads.

In triple and quadruple section capacitors with separate sections, indit cated with an asterisk ("), the very first capacity listed is a separate section, having separate negative and positive leads, while all other capacities shown are connected to a single common negative lead with separate positive leads to each section.

CAPACITOR MOUNTING HARDWARE

Additional hardware for mounting all types of electrolytic capacitors as well as tubular paper units is available as shown in the accompanying diagrams and listed below.

## 

## TUBULAR PAPER CAPACITORS

## MINIATURE TUBULAR CAPACITORS

Types ZYW，ZZW，and flat type ZNW，tiny tubular paper capacitors are especially suited for use in very small elec tronic assemblies，such as hearing aids，pocket radios，etc． where minimum space and weight are essential．These capacitors are the result of Cornell－Dubilier developments for the VT radio proximity fuze for shells and bombs made for the Navy during the War and today find many applica tions in ultra compact electronic equipment of all kinds． All units are non－inductively wound，wax impregnated by special process，and sealed in a laminated paper wrapper with plastic compound ends．They are additionally pro tected against moisture with a complete wax coating

## ＂BLUE CUB＂MOULDED CAPACITORS

These＂Blue Cub＂moulded plastic tubulars are especially designed for use in television sets，auto radio，a．c．－d．c．sets and other equipment where high temperatures are en－ countered．No shock，no vibration is too much for them． They are Vikane＊impregnated with leads weided to the capacitor section and sealed in solid mold construction with final seal－dip of special moisture－proof compound． Capacity remains constant within $5 \%$ under most severe conditions of humidity and temperature from $70^{\circ} \mathrm{F}$ ．to $212^{\circ} \mathrm{F}$ ．

＂For units provided with insulating sleeve over metal tube add 10 c to list price．When ordering add＂-6 ＂to Cat．No．（Example TVC 4D5－6）．

## OIL－FILLED METAL TUBULAR UNITS

Type MTV capacitors are impregnated and filled with oil in hermetically sealed metal tube containers and provided with an insulating cardboard sleeve cover．They are small size units especially designed for use in assemblies where high temperatures are encountered，such as television receivers and similar high voltage equipment．

TYPE MTV－Oil－Filled Capacitors

## ＂BLUE CUB＂＇PLASTIC TUBULAR UNITS

Type PTE capacitors are Vikane＊impregnated to withstand high voltage breakdown test at low power factor and moulded in plastic for permanency and durability to with－ stand humidity and temperatures up to $300^{\circ} \mathrm{F}$ ．without softening．They are provided with wire leads securely welded to the capacitor section which insures against possible opens and intermittents．

TYPE PTE－Moulded Plastic Capacitors

## DRAWN METAL SHELL PAPER CAPACITORS

## WAX－FILLED CAPACITORS

Types DA to DC capacitors are non－inductively wound and wax－potted in drawn metal shell containers．They are available in a large variety of ratings for radio frequency bypass，audio frequency coupling and bypass functions Lug terminals are amply insulated．Integral with casing， the mounting feet allow ease of assembly．

In the single and dual section capacitor units，the terminals are insulated from the container．The duals have three terminals，the common lug being on the left．In the triple section capacitors，the common terminal connection is grounded to the metal case．
All units are wound with the highest grade pure aluminum foil and multi－laminated kraft tissue，thoroughly dried under vacuum pressure，impregnated in the finest grade wax compound，oil－cooled，and potted in a special wax com－ pound．Conservative D．C．ratings of these capacitors by triple testing assure dependable service in operation．

## DYKANOL－FILLED CAPACITORS

Type DYR Dykanol Bypass Capacitors are non－inductively wound and meet the need for dependable capacitors of fractional capacities that will operate efficiently in R．F．and A．F．bypass，audio frequency coupling and A．C．circuits under all humidity conditions and at temperatures up to approximately $85^{\circ} \mathrm{C}$ ．$\left(185^{\circ} \mathrm{F}\right.$ ．）．They are built to stand an immersion test in hot water and have been specially designed to fill the severe requirements of aircraft，sub－ marine，marine and tropical applications for maximum capacity and voltage in minimum space，where quality and reliability are of paramount importance．They are impregnated and filled with Dykanol＂ G ＂and sealed in metal cases with leakproof riveted terminals．

## DRAWN METAL SHELL PAPER CAPACITORS

## COMPACT DYKANOL CAPACITORS

Types YAT and YAB are impregnated and filled with Dy－ kanol＂$G$＂（chlorinated diphenyl）a sỳnthetic，non－inflam－ mable，non－oxidizable liquid compound which is unaffected by wide latitude of temperature changes or voltage stresses． They are especially suited for use in bypass，audio fre－ quency coupling circuits and other applications where conditions of high humidity and temperatures are en countered．
Units are sealed in drawn metal shell containers and pro－ vided with leakproof terminals either on top or bottom of the can containers，designated as Types YAT and YAB accordingly．All units are provided with rugged metal mounting brackets which provide rigid mountings．Two or more units may be mounted close together in an assembly． Single section units are provided with two terminals while dual and triple section units have three terminals．In single and dual section units terminals are insulated from the metal container．The third terminal of dual section units is the common terminal and marked for identification．In triple section units the common terminal connection is grounded to the metal case

Types WAT and WAB Capacitors are smaller size units of similar construction and electrical characteristics but only supplied in single section units with two terminals．These units are ideally suiled for use in assemblies where space is limited and multiple units may be mounted close together for compactness．

## 

## REPLACEMENT PAPER CAPACITORS

## UNCASED PAPER CAPACITORS

Type RMJ uncased capacitors are made available to repair paper dielectric filter blocks which were used in the early models of A.C. operated radio sets. Also useful in the elimi nation of electrical interference caused by pushbuttons, bells, buzzers, and similar applications in radio, electronic and electrical devices.

Special capacitor units can be made up and potted into suitable containers by servicemen to fulfill many require ments.

 and tinned

## 

## DYKANOL TRANSMITTING CAPACITORS

## TYPE T CAPACITORS WITH VARIOUS TYPES OF MOUNTINGS

Type T-series Dykanol transmitting capacitors are the finest and most dependable units obtainable for use in all amateur, broadcast and commercial equipment. Units are provided with well insulated terminals, and mountings desired as shown in the accompanying.illustrations. These units are standard in thousands of broadcast and government stations all over the world, and also employed in all types of sound equipment, television receivers and transmitters, and other electronic apparatus.

Type T capacitors are thoroughly impregnated and filled with Dykanol "G" (chlorinated diphenyl), a non-inflammable, fireproof, non-oxidizable liquid compound which provides a high factor of safety and exceptionally long life at high temperatures.

In the past, organic oils, resins, and waxes were used as paper impregnants in eleetrical insulation. Because of the variation of thëse natural materials, uniformity of results could be desired only and not attained. The concenfrated attention of chemists and electrical engineers was turned toward the development of non-organic, synthetic substitutes and new substances, the properties of which could be. controlled and modified ${ }^{-}$as desired. The chlorinated diphenyls were recognized as outstanding among the rapidly increasing number of synthetics available. Of these compounds, continued research pointed to one narrow group, that known as Dykanol " $G$," the characteristics of which were particularly suited to the capacitor art. This material, having the lowest power factor compatible with the highest dielectric constant, is used as the impregnant in Type $T$ capacitors.

For the dielectric separator in Type T capacitors, only the highest grade of kraft paper is used, ranging in thickness
from .0003 to .001 of an inch for a single sheet. Three or more layers of paper dielectric as a separator between foil members are always used. The higher voltage units use as many as six or more layers. This multiple lamination builds a high safety factor into Type T capacitors.

All paper is manufactured to meet rigid specifications and is subjected to a series of tests at the C-D laboratories before acceptance for use in these capacitors. The paper must be of exceptionally high quality to pass the tests. In order to determine its many characteristics, tests are made for porosity, tensile strength, effect of heating, conducting particles, dielectric strength, ash conlent and ash analysis, acidity or alkalinity, soluble impurities, general appearance, and mechanical considerations such as yield, thick. ness, width, etc.

Due to the use of Dykanol " $G$ " and multi-layer kraft capacitor tissue in these units, many oulstanding advantages are thus gained, i.e., small size, light weight, low dielectric stress and long life at higher operating temperatures. The size is reduced due to the high dielectric constant of Dykanol " $G$ " which also affords reduction in weight. A low dielectric stress is obtained as the result of efficient use of container volume, and the high specific inductive capacity of the impregnant. And since the dielectric stress is low, the life of the unit in operation is greatly increased. The synthetic liquid impregnant employed in these capacitors does not oxidize or deteriorate like commonly used organic oils. For complete listing of Type T-series, see next page.

For higher voltage units, ranging from 6000 to 25,000 v.d.c., write for data and prices on Type TK capacitors.

## 

## DYKANOL TRANSMITTING CAPACITORS

TYPE TJL
TYPE TJH
TYPE DESIGNATIONS -Type T (basic units) are without mountings. To order Types TJH, TJL or TJU with mountings as shown above, add letter symbols of type mountings desired to Cat. No. as follows:

TYPE T-(Basic unit) without mountings.
TYPE TJH-With screw spade-lug brackets.

TYPE TJL-With mounting foot brackets.
TYPE TJU-With universal mounting strap.

Prices below include mounting brackets or universal mounting strap
when ordered according to these type numbers.

NOTES- Type TlU units are not furnished in these larger sizes.

+ TYPES TJL and TIH units furnished with two mounting holes or spadelugs $38 / 8^{\prime \prime}$ apart. All other units furnished with a single mounting hole or spade-lug centered on each bracket.

For higher voltage units, from 6000 to 25,000 v.d.c., write for data and prices on Type TK capacitors.

## Notes On Ordering Special Units

The listing above gives the range of capacities available Irom stock. Intermediate capacities, not exceeding the maximum as histed for each type, can also be furnished upon request.
Standard capacity tolerance is plus or minus $20 \%$. Also available, on order, in plus or minus $10 \%, 5 \%, 3 \%$ and $2 \%$ tolerance ratings (or within 1 mmfd . -whichever is greater). For capacity tolerance of: $10 \%$ add $10 \%$ to list prices; $5 \%$ add $20 \%$ to list prices; $3 \%$ add $40 \%$ to list prices; $2 \%$ add $75 \%$ to list prices.

HIGH-STABILITY "SILVER-MIKE", UNITS
Types IR, IDR, 2R and 5R "Silver-Mike" silvered mica capacitors are designed for use in high $Q$ electronic circuits where frequency stability and minimum loss must be maintained. They are ideally suited for use in circuits where the LC product must be maintained constant, and particularly adapted for use in tuning IF transformers, push button tuning circuits and other similar applications. Stand ard units are moulded in low-loss red bakelite

 BAKELITE CASED MICA TRANSMITTING CAPACITORS

BAKELITE CASED MICA CAPACITORS

Types 6, 15L and 30B Mica Capacitors in moulded bakelite cases are designed for a wide variety of radio frequency applications where size and weight are at a premium, such as in aircraft, portable equipment, low-power transmitters and the earlier stages of high-power transmitters. They are specially suited for use as grid, plate, coupling, tank and by-pass functions. These units are among the smallest types employing the patented series-stack construction permitting their use on higher r.f. voltages.

## Notes on Ordering Special Capacitors

Type 15 L units are available only in low-loss Bakelite (BM-262 or equivalent) cases. Types 6 and 30B may be had in either standard (brown) or low-loss (yellow) Bakelite cases. When ordering low-loss units, add "L" to Cat. No. (example: 217-6L; 604-30BL). Add $\$ 1.00$ to list price for Type 6. Add $\$ 1.50$ to list price for Type 30B.
STANDARD CAPACITY TOLERANCES-Plus or minus $5 \%$. Tolerance of $2 \%$ can be furnished on special order or minus $5 \%$. Tolerance Types 6 and 15 L . Add $\$ 2.00$ to list price for Type 30 to list price for Iypes 6 and $15 L$ A Add $\$ 2.00$ to list price for Type $30 B$.
OPERATING AMBIENT TEMPERATURE-Up to $60^{\circ} C_{\text {. maximum. }}$
SALT WATER IMMERSION SEAL-To order, add " $S^{\prime}$ " to Cat. No. (example: $246-6 S ; 726-13 L S$; $11330 B S$ ). Add to list: $\$ .30$ for Types 6 ' H ", Type- The units $\$ .50$ for Type 30 B
Type-These units have been developed for use where excellent retrace and low temperature coefficient are required. Over a range of 40 . $003 \%$. nately $+.003 \%$ per degree $C$. A limuited range of capacity and voltage atings is avaliable. Made only in low loss Bakelite and sealed for mmersion test. To order, add H to Cat. No. (example: $6 \mathrm{H}, 15 \mathrm{H}$ 30BH). Add to list: $\$ 4.00$ for Type 6. Add to list: $\$ 2.00$ for Type 15L. Add to list: $\$ 5.00$ for Type $30 B$
YPE GK-This unit is a still further refinement being a compensated unit which can be made with a positive. zero or negative coefficien within the limits of $+.003 \%$ to $-.005 \%$ per degree C . over a temperature range of from $-40^{\circ} \mathrm{C}$. to $+70^{\circ} \mathrm{C}$. Type 6 K is available in a low loss Bakelite and immersion and ow-loss Bakelite and immersion seal. Then ordering Type 6K, tem perature coefficient must be specified. (Type 6 only) Add to list Price: or plus or minus $5 \%-\$ 12.00$; for plus or minus $3 \%-\$ 13.00$; for plus or minus $2 \%-\$ 14.00$; for plus or minus $1 \%-\$ 18.00$.

## CORNELL-DUBILIER POWERCON VIBRATOR CONVERTERS

Think of the new sales opportunities open to you now that you have the dependable name of C-D in back of a complete line of converters. More TV installations! More work on farm power supplies! Marine work! And always you work with confidence in the quality, dependability and trouble free performance of these converters, because they' re typical C-D products.

## CAPACITOR TEST INSTRUMENTS

## CAPACITOR ANALYZER

The Model BF-50 Capacitor Analyzer quickly and accurately measures all important characteristics of all types of capacitors. It offers the most accurate and thorough capacitor test of any instrument of its type, and may be operated on any 110 -volt, $50-60$ cycle power line.
The analyzer will determine the true condition of all paper, mica and electrolytic capacitors, including A.C. motor starting types.

## Features of Model BF-50 Analyzer

1. Measures Capacity-Accurately measures capacity of paper, mica, air, electrolytic and motor-starting capacitors from 00001 to 240 mtd.
2. Measures Power Factor-Measurements of power factor trom zero to 50 percent on all types of electrolytic capacitors including motor. starting types.
3. Employs Wien Bridge-Assures permanent accuracy of capacity and power factor measurements. Readings not affected by line
voltage variations.
4. Indicates Insulation Resistance-Insulation resistance measurements of paper and mica capacitors up to 1500 megohms. Also measures many types of insulation.
5. Indicates Leakage-Measurements of leakage of electrolytic capacitors by means of built-in direct current power supply.
6. Visual Eye Leakage Indicator-Provides simplified and reliable leakage tests on all types of capacitors. Enables measurements to be made rapidly
7. Detects Defective Capacitors-Character measurements, such as leaky, shorted, open, high and low capacity, and high power factor on all capacitors.
8. High Sensitivity on All Measurements-Amplitier for capacity. power factor and leakage tests provides sharp and accurate read power factor and leakage tests pr
ings. Amplitier built-in Analyzer.
9. Balance Sensitivity Control-Provides sharp or broad balances tor quick and accurate readings. All readings are made simply and directiy.
10. Direct Reading Linear Scale Calibration-Provides simplified measuremenis. All scales on panel uniformly spaced, easy to read thus avoiding possible errors in using multipliers or charts.
11. Push-Button Switching-For convenient and simplified adjustments, all tests and circuit changes are made by means of modern push-button switches
12. Visual Eye Bridge Balance-Visual detector gives positive indication of bridge balance for convenient, simplified and accurate capacity and power factor measurements.
13. Six Color-Coded Scales-Accurately calibrated, siz color-coded scales. Uniformly spaced over total spacing of sixty inches. Easy to read. No "blind" spots.
14. General Purpose Instrument-May be used to check continuity capacity between circuits, insulation of transtormer windings and capacity between circuit
other types of coils, etc.
15. Self-Contained-Portable-An instrument complete in itself, re quiring no external standard, headphones, meters or accessories A portable unit, for 110 volt, $50-60$ cycle operation, supplied in walnut cabinet, removable cover, with carrying handle. Size, $61 / 2 \times 12 \times 98 / 4$ inches. Weight, 9 pounds.
MODEL BF-50 CAPACITOR ANALYZER Net Price complete with tubes
$\$ 42.65$
Replacement Tubes for Use in Model BF-50:

## CAPACITOR BRIDGE

## Features of Model BN Capacitor Bridge

1. Measures Capacity-Accurately measures capacity of paper mica electrolytic and air capacitors from .00001 mfd to 50 mfds .
2. Indicates Power Factor-Power factor of electrolytic capacitor ndicated by means of visual eye detector tube.
3. Detects Defective Capacitors-Detects open and short circuits, high and low capacity, and high power factor.
4. Checks Circuit Continuity-May be used as continuity meter. A handy instrument for checking circuits, coils, transformers and many other uses. For operation on 110 volts, 60 cycles.
5. Employs Wien Bridge-Employs Wien Bridge circuit for all measurements. Accuracy independent of line voltage variations.
6. Visual Eye Bridge Balance-Dual type visual bridge balance for 7 accurate measurements facilitates quick tests on service jobs.
7. Direct Reading Scale-Direct reading ranges with all scale markings directly in microfarads. Clear reading dial scale. All capacity calibrations marked on panel. No charts or multipliers required
8. Self-Contained-The Capacitor Bridge is complete in itself and requires no headphones, standards, external meters, etc
9. Extremely Compact-The unusually small size of this bridge makes it particularly handy for portable use- $35 / 8^{\prime \prime} \times 5^{\prime \prime} \times 3^{\prime \prime}$ weight 2 pounds.
O. Attractive-Supplied in attractive walnut Bakelite case complete with detachable test leads and useful instruction booklet

MODEL BN CAPACITOR BRIDGE

## ЧAPACITOR DECADES

C-D Capacitor Decades provide accurate standards over a wide range of capacity. May be used in groups of the three decades, shown above or used individually for maximum flexibility. Each decade is furnished with calibration chart giving exact capacity values for all scale markings, extending use to more precise measurements.

Rated Voltage 600 D.C. - 220 A.C.

## GOininht (C) DUETh

## QUIETONE INTERFERENCE FILTERS

RADIO AND APPLIANCE QUIETONES

Most satisfactory results are obtained when Quietones are installed at the source of the interference. A Quietone in stalled in connection with an offending appliance corrects the noise caused by that appliance.
Where source of interference cannot be located a Quietone corinected in the electric supply line of the radio receiver will alleviate, if not fully correct, the condition. When a Quietone is installed, interference will be greatly reduced. Remaining interference usually enters receiver through the antenia system.

## Quietones for Use at the Radio Receiver

TYPE IF-4 For use on small radio receivers, such as A.C.-D.C. midget sets, etc., where noise level is not too severe. Connects in power line between the radio receiver plug and wall receptacle. Rating: 110 V.A.C.-D.C. 5 amps. Colors-Furnished in ivory, walnut, or green finish

$$
\text { List Price } \$ 1.10 \text { Net Price } \$ 0.66
$$

TYPE IF-18-For use in connection with all radio receivers where noise level is severe. Furnished in Bakelite cáse (see colors). Employs highly effective all-wave capaci-tive-inductive type filter. Ratings: 110 V.A.C.-D.C. 5 amps. Colors-Furnished in ivory or walnut Bakelite.

List Price $\$ 8.35$ Net Price $\$ 5.01$

## Quietones for Use at Appliances

TYPE IF-5-For small electrical appliances such as food mixers, hair dryers, etc., where radio interference is of low intensity. Plug type filter. Convenient to install. Rating 110 V.A.C.-D.C. 5 amps . Colors-Furnished in ivory, walnut or green finish. List Price $\$ 1.10$ Net Price $\$ 0.66$

TYPE IF-6-For all types of home electrical appliances where interference is of moderately low intensity. Installed between appliance and power supply line with short return lead which reduces radiation: Rating: 110 V.A.C.-D.C. 5 amps. Colors-Furnished in ivory, walnut or green finish.

List Price $\$ 1.75$ Net Price $\$ 1.05$

TYPE IF-18-An efficient all-wave capacitive-inductive sectional band type filter for use in connection with all types of electrical appliances where interference conditions are severe. Provided with frame connection for reduction of radiation. Furnished in Bakelite case (see colors). Rating: 110 V.A.C.-D.C. 5 amps. Colors-Bakelite case, walnut finished.

List Price $\$ 8.35$ Net Price $\$ 5.01$
TYPE IF-19-Capacitive-inductive type filter for use where interference is severe. Frame connection provided. Furnished in Bakelite case. Rating: 110 V.A.C.-D.C. 5 amps. Colors Bakelite case. Ivory or walnut finish. List Price $\$ 7.00$ Net Price $\$ 4.20$

TYPE IF-20-For use on small electrical appliances where interference is very low. Simply connected to cord plug of appliance and plugged into wall receptacle. Rating: 110 V.A.C.-D.C. 5 amps. Colors-Bakelite case. Ivory or walnut finish. List Price $\$ 0.75$ Net Price $\$ 0.45$

TYPE IF-21-All-wave capacitive-inductive type filter for use on appliances where return lead to the frame of appliance cannot be made, such as shaver, barber clippers, etc. Furnished in Bakelite case. Rating: 110 V.A.C.D.C. 1.6 amps . Colors-Bakelite case. Ivory or walnut finish. List Price $\$ 4.00$ Net Price $\$ 2.40$

TYPE IF-22 For use in connection with electric shavers of all standard types. Line cord and plug provided with Schick and Packard type adapters which fit practically all type shavers. (Specify type desired when ordering.) Type IF-22A for Schick, Knapp Monarch, and similar type shavers. Type IF-22B for Packard, Zephyr, RemingtonRand and Ronson type shavers. Rating: 110 V.A.C. 5 amps. Colors-Bakelite case. Ivory or black finish.

List Price $\$ 2.75$ Net Price $\$ 1.65$

## QUIETONE INTERFERENCE FILTERS

## INDUSTRIAL QUIETONES

Although atmospheric disturbances in many instances cause radio noises, this condition is not the principal source of annoying noises. With the average radio receiver, noise is generally caused by the operation of electrical appliances or apparatus which create high frequency oscillations known as "man-made static". Many types of equipment cause minute sparks as a result of a change in electrical conditions within the device, which are essential to its operation. In effect these appliances act as miniature radio transmitters, setting up a disturbance which may affect radio receivers at a considerable distance.
It is highly desirable to correct noise conditions at the source as one filter properly installed at this point may eliminate the noise in a number of radio receivers. Where it is impossible to locate the equipment which is causing the interference a Quietone installed at the receiver will correct the noise in that receiver.
The Quietones listed below will correct radio noise conditions caused by motors, generators, elevators, stokers and many other types of industrial electrical apparatus. They are designed for convenient mounting, and contain highest quality capacitors, with lowest possible impedance internal connections. There are no current limitations for (CP) Capacitive Quietones.

## Fluorescent Light Quietones

Among the Quietone Interference Filters especially suited to correct noise conditions caused at fluorescent lights, as well as other electrical appliances, are types IF-6, IF-24 and IF-54, the former being a very convenient plug-in arrangement that fits the receptacles of floor and table lamps.
Type IF-24 Quietone is a dual capacitive type filter for use on fluorescent light and other electrical equipment where noise conditions are not too severe. It is contained in a round metal casing $7 / 8^{\prime \prime}$ diameter by 2 " long and provided with insulated wire leads $8^{\prime \prime}$ long.

## Oil Burner Ignition Quietones

For heavy duty filtering service on oil burners and other equipment such as stokers, motors, refrigerators, etc., Quietone type IF-7A is recommended for efficient results. This unit is mounted close to the equipment causing the interterence with wiring in BX or conduit.

Type IF. 54 Quietone is a capacitive-inductive filter which provides extremely high attennation over a wide range of frequencies. This unit is housed in a drawn metal container $2^{\prime \prime} \times 2^{\prime \prime} \times 11 / 8^{\prime \prime}$ high, and provided with insulated wire leads $6^{\prime \prime}$ long. It is rated at 2 amps. $110-220$ V.A.C. or D.C.

Fluorescent Light Quietones

| Type | Volts A.C.D.C. | Connections | Housing | $\underset{\text { Price }}{\text { List }}$ | Net Price |
| :---: | :---: | :---: | :---: | :---: | :---: |

| IF-25 | 110-220 | Flex-Leads | Metal | \$4.50 | \$2.70 |
| IF-26 | 110-220 | Flex-Leads | Metal | 6.00 | 3.60 |
| IF-11 | 110 | BX | Cutout Box | 12.00 | 7.20 |
| \|F-12. | 220 | BX | Cutout Box | 16.50 | 9.90 |
| IF-14** | $110-220$ | BX | Cutout Box | 22.50 | 13.50 |

** All Quietones listed above with exception of IF-14 are for single phase circuits. IF-14 is for 2 or 3 phase circuits. The Quietones listed below are for the more severe radio noise conditions caused by motors, generators, elevators, diathermy, oil burners, etc. They are designed for convenient mounting and quick connection to these machines. They consist of low-loss coils and highest quality capacitors which correct noise conditions in both broadcast and short wave receivers. They are the most efficient filters available for heavy duty application. All capacitive-inductive (CI) Quietones are for single phase circuits.

## A. C. MOTOR STARTING CAPACITORS

## A.C. MOTOR STARTING REPLACEMENT CAPACITORS

Types ETB and JDS Electrolytic Motor-Starting Capacitors are universal replacement units for use in standard makes of oil-burners, refrigerators and other motor driven equipment. The list of units below simplifies the selection of the capacitor required when the capacity, voltage rating, and size are known.
In many cases where a round can-type unit is to be replaced a smaller size capacitor of the same capacity and voltage rating may be selected as a replacement. The smaller size unit may be wrapped tightly with ordinary corrugated paper and fitted into the capacitor housing on the motor. While only the most widely used range of capacities are listed below, Type ETB 110 V.A.C. capacitors can be supplied in intermediate capacities from 10 mfds . to 480 mfds .

Write for complete A.C. Motor Starting Replacement Capacitors, Catalog No. 163.

TYPE JDS - 110 VOLTS A.C. 50-60 CYCLES

| Cat. No. | Cap. Mfd. | Dimensions-Ins. L. x W. x T. | List Price | $\begin{aligned} & \text { Net } \\ & \text { Price } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| JDS70 | 70 | $31 / 2 \times 31 / 2 \times 2$ | \$3.20 | \$1.92 |
| JDS80 | 80 | $31 / 3 \times 31 / 2 \times 2$ | 3.20 | 1.92 |
| JDS90 | 90 | 31/2 $\times 31 / 2 \times 2$ | 3.20 | 1.92 |
| JDS100 | 100 | $31 / 2 \times 31 / 2 \times 2$ | 3.34 | 2.00 |
| JDS115 | 115 | $31 / 2 \times 31 / 2 \times 2$ | 3.79 | 2.27 |
| JDS130 | 130 | $31 / 2 \times 31 / 2 \times 2$ | 3.79 | 2.27 |

Type ETB and JDS units are furnished with tightly fitted in sulating tube or paper box casings with screw terminals. Type ETB units are available with black lacquered steel end caps, designated as Type ETBC, or with both end caps ard black lacquered steel mounting bracket designated as Type ETBCB (see illustration above). Units must be designāted accordingly upon ordering. (See note below.)

NOTE-For units with metal end caps, Type ETBC, add 60c to list price. For units with metal end caps and mounting bracket, Type ETBCB. For units with metal
add $\$ 1.00$ to list price.

## SENIOR AND JUNIOR "SERVICE MIKES"

These capacitors are designed for emergency replacements of A. C. motor starting electrolytic capacitors from 18.75 to 300 mfds . They enable the motor repair man to determine correct capacity required for a given motor and eliminate necessity of carrying stock of assorted sizes Each capacitor provides a range of twelve separate capacities by meanso. changing external connections at four terminals, two at each end. Both units are for $110-120$ V.A.C. 60 cycle duty.
JUNIOR "SERVICE MIKE", 18.75 to 150 mfds., size $1^{18 / 16 "}$ dia. $\times 34 / 8$ " long. Complete with leads, clips and jumpers. Net Price $\$ 4.65$

SENIOR "SERVICE MIKE", 37.5 to 300 mids ., size $21 / \mathrm{s}^{\prime \prime}$ dia. x $41 / 2$ " long. Complete with leads, clips and jumpers. Net Price $\$ 5.50$

## Metal Tubular Dry Electrolytic Capacitors Single Section

APPLICATION－For under－chassis mounting in filter and audio bypass circuits where long life and small size is desirable．
DESCRIPTION－Single section dry electrolytic type encased in hermetically sealed aluminum tube with external insulating sleeve． For extreme dependability at high voltage，types TC82 and＇IC92 employ the special Mallory balanced series unit construction．
TERMINALS－One $3^{\prime \prime}$ hare solid tinned copper lead at each end． Positive lead marked（ + ）on insulating sleeve．
MOUNTING－Designed for mounting by its own leads or with applicable hardware listed on page 17.
PACKAGING－25，50，or 100 capacitors per display carton．Fur－ nished in individual display cartons on orders for less than 25 or when specified．

## Metal Tubular Dry Electrolytic Capacitors Dual Section

APPLICATION－For under－chassis mounting in filter and audio bypass circuits where long life and small size is desirable．
DESCRIPTION－Dual section dry electrolytic type encased in hermetically sealed aluminum tube with external insulating sleeve． Type TCD is dual common negative，＇ICS dual separate section． TERMINALS－Type TCD is supplied with $3^{\prime \prime}$ bare solid tinned copper leads，both positive leads at one end and common negative lead at opposite end．＇Type＇FCS is supplied with soldering lugs， positive and negative of one section at one end and the other section at the opposite end．
MOUNTING－Type TCD is designed for mounting by its own leads or with applicable hardware shown on page 17．＇Type TCS is supplied with the Mallory TH clips for mounting，further described on page 17
PACKAGING－Individual display carton．

MALLORY DRY ELECTROLYTIC CAPACITORS

FP ${ }^{\dagger}$ Dry Elecirolyiic Capacitors
APPLICATION-For top chassis mounting in filter and audio bypass circuits. Extremely dependable under heavy ripple current, high surge voltage and high temperature (up to $185^{\circ} \mathrm{F}$.) conditions.
DESCRIPTION-Single, dual, triple and quad section units encased in compact hermetically sealed aluminum cases with self-contained mounting feature. 'Type Fl' is supplied with famous Mallory Fab)ricated Plate (metalized cotton gauze) anodes, type WP with etched plate anodes. Special internal design provides low RF impedance and minimum coupling between sections. Case at negative potential.
TERMINALS-Solder lug type all at one end. Positive terminals identified by symbols in terminal board corresponding to case marking. Mounting ring provides negative terminal connection.
MOUNTING-Primarily designed for twist prong mounting through suitable chassis slots and may also be mounted as follows:

1. Type MP metal wafer providing the necessary slots without actually punching the chassis for grounded negative circuits.
2. Type BP bakelite wafer for insulated mounting, otherwise similar to Paragraph No. 1.
3. Type 'TH clip for horizontal mounting.
4. Type PS socket for plug-in mounting. (Remove blank ear with diagonal pliers to polarize unit in relation to socket.)
See pare 17 for applicable hardware.
PACKAGING-Individual display carton.

| $\dagger$ Only Mallory can supply genuine Fabricated Plate (metalized cotion gauze) capacitors. |  |  |  |

*For Photoflash Applications.

## Surge Voltage Data

- Due to the many multiple section listings on FP capacitors, it is not practical to show surge voltage ratings without consuming considerable space in the chart. The surge voltage ratings are, therefore, given separately in the small chart.

| Wkg. VDC. | Surge Volts |
| :---: | :---: |
| 6 | $\mathbf{1 0}$ |
| 10 | 15 |
| 15 | 20 |
| 25 | 40 |
| 150 | 200 |
| 200 | 275 |
| 250 | 325 |
| 300 | 375 |
| 350 | 425 |
| $400-450$ | 525 |

## Threaded Neck Dry Electrolytic Capacitors

APPLICATION - Designed for replacement of wet or dry electrolytic threaded neck type filter capacitors originally employed in any type of electronic filter or bypass circuit.

DESCRIPTION-Type RS are single section, RM multiple separate section capacitors encased in aluminum cans equipped with threaded necks for mounting. Both types are internally insulated from their aluminum can. Type HD is for heavy duty, type HS for high surge voltage conditions. Type SR638 is lug type dual. Type SR645 has special internal connections, one terminal common anode, one terminal negative to one section and case negative to the other section.

TERMINALS—RS, RM and HS have $8^{\prime \prime}$ flexible insulated stranded copper leads all out through the threaded neck part of the case. Type HD has one solder lug terminal for positive and case is negative. Type SR has two positive lug terminals with case common negative.

MOUNTING-Types RS, RM, HD and HS have threaded necks ( $5 / 6 \times 16$ for $1^{\prime \prime}$ dia.- $3 / 4 \times 16$ for $13 / 8^{\prime \prime}$ dia.) supplied with palnut and special washer providing installation in various chassis hole sizes. All $1^{\prime \prime}$ diameter units in these types are also supplied with a special turned-over washer for $13 / /^{\prime \prime}$ clamp mounting. Type SR has $7 / 8-16$ thread molded necks with solid nut. See page 17 for other hardware.

PACKAGING-Individual display carton.

## Cardboard Tubular Dry Electrolytic Capacitors

APPLICATION-Low cost filter and bypass units for above or below-chassis mounting where humidity conditions are not extreme.
DESCRIPTION-Single, dual, triple and quad section units in cardboard tubes with extra inner seal and ample wax seal at ends. Dual, triple and quad section units are common negative or separate section type, as indicated in chart.
TERMINALS - All types are supplied with flexible covered leads out one end except those marked (*) which have negative lead out opposite end.
MOUNTING-All units (except TN111) are supplied with an adjustable horizontal mounting strap (MS-1) and all units with leads out one end have special feet for vertical mounting in addition to the strap.
For other hardware, see page 17.
PACKAGING-Individual display carton.

High Capacity Dry Electrolytic Capacitors and Non-Polarized Dry Electrolytic Capacitors

APPLICATION-Type HC are for filtering dry disc rectifiers and for electric fence controls, talking picture equipment, and other high-capacity low-voltage applications. Type HC1060A is especially designed for replacement in fence control equipment.
Type NP are non-polarized units for use where polarity may be applied in either direction, but are not suitable for continuous AC applications. Useful in welding and control equipment as a stored energy device.
DESCRIPTION - High quality etched plate electrolytic capacitors supplied in moisture-proof plastic cases requiring no external insulation. Type HC are polarized, and NP are non-polarized type.
TERMINALS-Two solder lug terminals at one end.
MOUNTING—Supplied with type VIR bracket for vertical mounting, and design permits horizontal mounting with protector end cap (sold separately). See page 17 for hardware details.
PACKAGING-Individual display carton.

## Bathtub Dry Electrolytic Capacitors

APPLICATION-For filter and bypass circuits in marine, aircraft, geophysical and other applications where extreme operating conditions are encountered. BS81 and BS91 are ideal for power amplifier and other high voltage applications.

DESCRIPTION-Dry electrolytic capacitors where cartridges are first sealed in aluminum tubes and then encased in sturdy corrosion-resistant, hottinned steel cases providing complete hermetical seal under all weather conditions. All units internally insulated from outer case. BS81 and BS91 employ the special Mallory balanced series unit construction for extreme dependability at high voltage. Temperature range, $-40^{\circ} \mathrm{F}$. to $+185^{\circ} \mathrm{F}$.
TERMINALS-Two solder lug terminals on one side
MOUNTING-Provided with mounting flanges at each end having $3 / 16^{\prime \prime}$ holes.
PACKAGING-Individual display carton.

## MALLORY VIBRATOR GUIDE

Long recognized as one of the most useful publications in the radio service field. Up-todate, completely organized for quick, accurate reference. Contains all available information through 1947 automobile and batteryoperated home radio receivers as well as vibrator power supplies. See your Mallory Distributor.

## MAllory dry electrolytic capacitors

## AC Motor Starting Capacitors Dry Electrolytic

APPLICATION-For replacement of rectangular case type motor starting capacitors.

DESCRIPTION-Dry electrolytic intermittent duty AC capacitors housed in rectangular cases and provided with terminal arrangement similar to the design of the original capacitors they replace.
TERMINALS-Equipped with two capacitor terminals and two dummy terminals. The $L$ and unmarked terminal are the capacitors, while T and TL are dummies for convenience in wiring.

MOUNTING-Designed to mount in the original clamps or boxes used for the original capacitors.

PACKAGING-Individual display carton.

## Japacitor Selector

For determining correct capacity to use in making replacements of defective motor starting capacitors which have lost their identity.

For checking capacity ranges from 26 to 161 mfd . $1.10-125 \mathrm{VAC}$ Catalog No. MSS-100.

For checking capacity ranges from 25 to 645 mfd .110 -125 VAC Catalog No. MSS-101.

## AC Mofor Starting Capacitors Dry Electrolytic

APPLICATION-For intermittent duty in starting AC capacitor motors in any application where round type cases are required.

DESCRIPTION-Dry electrolytic non-polarized type capacitors housed in round cases. Rated at the minimum capacity value with a plus tolerance of $20 \%$ unless otherwise indicated by reference to old mini-mum-maximum capacity rating. Type $P$ furnished in moisture-proof plastic containers, and type MSU in aluminum cases with external insulating sleeve.

TERMINALS-Two solder lug terminals at one end.
MOUNTING-Both type $P$ and MSU may be mounted interchangeably in any original mounting for units of equivalent size. Type $\mathbf{P}$ may also be mounted by means of a plastic end cap (type PL) and sturdy metal snap-in type bracket (type HB) furnished separately when desired. See page 17 for these and other mounting hardware.
PACKAGING-Individual display carton.

## MALLORY PAPER CAPACITORS

## Continuous Duty-Oil ImpregnatedAC Capacitors

APPLICATION - Designed primarily for heavy duty AC applications. May he used as motor running capacitors, fluorescent light ballast, etc. where continuous duty and dependability are required
DESCRIPTION-Supplied in metal cases, these units may be safely operated at voltages up to $10 \%$ above the rated values and at temperatures as high as $75^{\circ} \mathrm{C}$. The impregnating oil is non-inflammable and non-oxidizable, which accounts for the high safety factor and long life of these capacitors.
TERMINALS-Two solder lug terminals at one end. Terminals feature a new all welded construction.
MOUNTING-Mounting may be accomplished by using the original housing or by means of type VR brackets. Complete description of available hardware is on page 17 . Order separately as required.

PACKAGING-Individual display carton.

## Tubular Paper Capacifors

APPLICATION-For use in radio and electronic circuits, especially RF bypassing, where low cost and small size are paramount. Well protected from moisture but not hermetically sealed.

DESCRIPTION-Both TP and OW are compact paper tubular construction. Type TP is wax impregnated and filled. Type $O W$ is oil impregnated and wax filled.
TERMINALS-Two bare tinned copper leads, one at each end.
MOUNTING-By means of their lead wires or TH clips of applicable size. See page 17 for mounting hardware.
PACKAGING-25,50 or 100 capacitors per display carton.

## Mefal Cased Oil Impregnated Paper Capacitors

APPLICATION-For vihrator buffer, coupling, and other circuits where highest quality tubular type capacitors are required.
DESCRIPTION - Mineral oil impregnated hermetically sealed aluminum tubulars with external insulating sleeves.
TERMINALS-Two bare tinned copper leads, one at each end. MOUNTING-Designed for mounting by its own leads, may also he mounted by use of the 'TH clip, furnished with each capacitor. See page 17 for description of the TH clip and other hardware.
PACKAGING-10 capacitors per display carton.

## Vibrator Buffer Capacitors

APPLICATION-Intended for replacement of original vibrator buffer and hash suppressor capacitors of similar design.

DESCRIPTION-Type VB is oil impregnated and housed in small rectangular metal case. Section is insulated from case. Type VD is dual wax impregnated unit in small rectangular waxed cardboard case. Type VO is wax impregnated and filled in oval waxed tube.

TERMINALS-VB has two bare tinned copper leads out one end. VD has two bare tinned copper leads out one end and one similar common lead out the other end. Vo has heavy copper braid at each end.

MOUNTING-In recess or clamp used in the original equipment. PACKAGING-Individual display carton.

## Miniature Mefal Tubular Capacifors

APPLICATION-For hearing aid, personal radio, and other uses where very small size tubulars are desirable.

DESCRIPTION-Oil impregnated tubular capacitor in minute hermetically sealed metal tuhes with insulating sleeve.

TERMINALS-Two bare tinned copper leads, one at each end. MOUNTING-By means of its own leads.

PACKAGING-Ten to a display carton.

## MALLORY aUTOMOTIVE NOISE SUPPRESSION CAPACITORS

## Automotive Noise Suppression Capacitors

APPLICATION-For suppressing radio interference emanating from auto generators, oil gauges, ammeters, and other automotive, aircraft, or marine equipment.

AM - For ammeter and gauge suppression.
FM - For Ford generator suppression.
DL - For domelight suppression.
RF - For vibrator hash suppression.
CA-For general suppression in aircraft and marine application.
DESCRIPTION -- Wax impregnated cartridges assembled in various style housings, as pictured. 'Type AG is round type with flexible lead, well protected from moisture, but not hermetically sealed. Type AS is hermetically sealed, provides low impedance, and is ideal for extreme climatic conditions.

TERMINALS-Various, as pictured.
MOUNTING-'Гypes AM 454 and RF 481 are held in place by the connecting wires or with TH clips. All others have own self-contained mounting features.

PACKAGING-Individual display cartons.

## Steel Cased Oil Filled Capacitors

APPLICATION-For general use in aircraft, marine, geophysical and industrial electronic equipment where extreme dependability under severe conditions is desired.
DESCRIPTION-Oil impregnated single, dual, and triple section units housed in rugged, hermetically sealed, hot-tinned steel cases.
TERMINALS-Single section has two terminals. Dual section units have three terminals with left terminal common, and both are internally insulated from case. 'l'riple units have three terminals with common grounded to case. All terminals protrude in a row on one long side of case.
MOUNTING-By means of flanges at each end.
PACKAGING-Individual display carton.

*W—Width; L-Length; H-Height; X-Mounting Centers.

## Uncased Wax Capacitors

APPLICATION-Designed for replacement of defective sections in large paper capacitor blocks or other applications where sealing pitch is applied for final seal.
DESCRIPTION-Wax impregnated section wrapped in varnish paper for moisture protection until finally potted when installed. TERMINALS-Two flexible insulated leads out one end.
MOUNTING-Held in place by pouring with hot pitch.
PACKAGING-Individual display carton.

## MALLORY CERAMIC CAPACITORS

## Ceramic Capacitors

APPLICATION-The small size and rugged construction of these capacitors make them ideal for by-passing, coupling, and other AM and FM-TV applications. The general purpose types "UC" may be used in all receiver applications except frequency determining circuits. They are particularly suitable for general replacement of molded mica and paper tubular capacitors. The zero temperature coefficient types " ZT" are ideally suited for use in precision radio and electronic circuits where a truly stable capacitor unaffected by temperature change is required. Negative temperature coefficient types "NT" are designed for use in precision radio and electronic circuits requiring a negative temperature coefficient of capacity.
DESCRIPTION-All Mallory ceramic capacitors are of low-loss ceramic construction, having a dipped phenolic coating for maximum protection from moisture. Their amall physical size makes them ideal for replacement purposes when space is at a premium. Type "ZT," while similar in construction to the general purpose types "UC" have the important additional characteristic that their nominal capacity rating is substantially unaffected by a change in temperature of from $-55^{\circ} \mathrm{C}$ through $85^{\circ} \mathrm{C}$.
Type " NT "' bave a negative temperature coefficient of capacity of 750 parts $/$ million $/{ }^{\circ} \mathrm{C}$. temperature change. As a matter of convenience, they are rated in micro-microfarads at a temperature of $25^{\circ} \mathrm{C}$. A rise in ambient temperature above $25^{\circ} \mathrm{C}$ will result in a proportional decrease of rated capacity. With lowering of temperature an automatic increase of capacity will be observed. In practical applications these capacitors should be mounted adiacent to the circuit components which require capacity compensation.
NERMINALS-One radial bare tinned copper lead $11 / 4^{\prime \prime}$ long at each end.
MOUNTING-By means of their wire leads.
PACKAGING-Five capacitors per display carton.

| Volfage Rafing-500 V DC |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Ceramic Trimmer Capacitors

APPLICATION-Their small size and stable electrical characteristics make these capacitors ideal for use in high frequency FM-TV circuits.
DESCRIPTION-Each capacitor consists of fired silver electrodes on a ceramic rotor and base. They have a $360^{\circ}$ rotor with a substantially constant capacity change and are completely sealed from dust and dirt. Single or dual units are available.
TERMINALS-Solder lug type at each end of capacitor.
MOUNTING-Two clearance holes are provided in each capacitor for screw mounting.
PACKAGING-One capacitor per display carton.
Single Units-Overall size ${ }^{21 / 32^{\prime \prime}} x^{27} / 32^{\prime \prime} x$ $3 / 3^{\prime \prime}$ thick.
Voltage Rating-500 VDC

| Catalog No. | Capacity Range <br> (mmfd) | Temperature Coefficient |

## Disk Ceramic Capacitors

Because of their small physical size, rugged construction, and excellent electrical characteristics these unique capacitors are particularly suitable for replacement of molded mica and paper tubular units. They have a dipped phenolic coating for maximum protection from moisture. Equipped with radial bare tinned copper wire leads they are easily and quickly mounted. Ten capacitors are packaged in each display carton.

| Catalog <br> Number | Capacity (mfd) | DC Work ing Volts | Size <br> Dia. Thickness | Length of Leads |
| :---: | :---: | :---: | :---: | :---: |

## High Voltage Ceramic Capacitors

With a rating of 500 micro-microfarads at 15,000 volts, this capacitor may be used as an exact replacement in the high voltage power circuit in many TV sets. A rigid case and built-in corona shield give an added safety factor. The capacitor is supplied with No. 6 copper terminals $1 / 2^{\prime \prime}$ long. Interconnecting
leads may be soldered or clipped to these terminals without damage to the capacitor. Overall dimensions are $1 / 8^{\prime \prime}$ diameter by $7 / 8^{\prime \prime}$ long excluding terminals. Each capacitor is packaged in an individual display carton.
Catalog number HV-15035.

## MAlLORY choke coils and noise filters

## Radio Frequency Choke Coils

APPLICATION-General purpose radio frequency choke coils for all circuits.
DESCRIPTION-Hour-glass wound for low distributed capacity and housed in compact insulating tubes.
TERMINALS-Two bare tinned copper wire leads, one at each end.
MOUNTING-By means of its leads or with TH clips, as described on hardware page. Also may be mounted by means of a stud through a hole provided through the core of the choke coil.
PACKAGING-Individual display carton.

| Mallory <br> Cat. No. | Turns | Wire | Inductance <br> Microhenries | Size <br> Dia. Length |
| :---: | :---: | :---: | :---: | :---: |

| RF583 | 55 | 12 | $25-30$ | $15 / 15 \times 15 \%$ |

Motor Brush Noise Filters (Type W)

APPLICATION-Type W filters, while primarily designed for installation on motor brushes, may be used wherever a permanently installed dual capacity filter is desired. Where un-grounded motor frames or appliance cases are involved, type WSP is recommended for elimination of possible shock hazard.
DESCRIPTION-Dual wax impregnated capacitors housed in sealed metal tubes and specially designed to have low RF impedance. Case is grounded to common terminal of the included sections except in SP type where a shock limiting capacitor is employed between the common lead and case.
TERMINALS-Two flexible covered leads, case common ground.
MOUNTING-By means of attached tangential strap.
PACKAGING-Individual display cartons.
Type W7-115-220 Volts AC-DC for Light Interference Size $7 / 8^{\prime \prime} \times 2^{\prime \prime}$
Type W9-115-220 Volts AC-DC for Medium Interference Size $1^{\prime \prime} \times 3^{\prime \prime}$
Type W 11-115-220 Volts AC-DC for Severe Interference Size $13 / /^{\prime \prime} \times 3^{\prime \prime}$
Type W7SP-115-220 Volts AC-DC for Light Interference Size $78^{\prime \prime} \times 2^{\prime \prime}$
Type W9SP -115-220 Volts AC-DC for Medium Interference Size $1^{\prime \prime} \times 3^{\prime \prime}$

## Appliance Noise Filters (Type X)

APPLICATION-For use with plug-in type appliances where straight capacity type filters are sufficient to produce desired noise suppression.
DESCRIPTION-Single and dual type capacitor filters in round metal housings designed for insertion between appliance cord and wall outlet. X-6 is furnished in attractive compact brown plastic case.
TERMINALS_-Male prongs for insertion into wall outlet and slots for appliance plug.

MOUNTING-Self-supporting by its prongs.
PACKAGING-Individual display carton.
Type XI is for relatively slight interference. Size $13 / 6^{\prime \prime} \times 13 / /^{\prime \prime}$, rated 110 volts, 5 amperes.
Type X 3 is a capacitor type filter having greater efficiency than Type XI. Size $13 / 6^{\prime \prime} \times 2 \frac{1}{4}$ ", rated $110-220$ volts, 5 amperes.
Type $X_{5}$ is a triple capacity filter with provision for return lead to appliance. Special safety feature prevents possibility of shock and makes this unit ideal for use with vacuum cleaners, food mixers, etc. Size $13 / 8^{\prime \prime} \times 21 / 8^{\prime \prime}$, rated $110-220$ volts, 5 amperes, and equipped with binding post for connection to appliance or motor frame.
Type X6 for medium interference. Furnished in an attractive, compact, rectangular brown plastic case. Size $11 / 4^{\prime \prime} \times 21 / 16^{\prime \prime} \times 1^{\prime \prime}$. Rated at. 110 volts AC -DC, 5 amperes.
Type X6D same as X6 except packaged on an attractive counter display card, six to a card.

## IMPORTANT

## General Noise Elimination Information

- All radio noise suppression devices should be applied at the source of the noise. Filters inserted in radio receiver cords are usually ineffective.

The filters described herein are, therefore, designed for insertion at the offending device. They incorporate many improvements accomplished through the extensive research and war production experience of the P. R. Mallory Company. While there will be some exceptions, most of the types of interference found in the home can be effectively reduced by the Mallory filters described. Unusual cases should be referred to the Mallory Engineering Department for advice.

Each filter is supplied with a complete instruction sheet for proper installation.

## Appliance Noise Filters (Type Z)

APPLICATION-For use with plug-in type appliances where inductance-capacity continuation filters are necessary to accomplish desired noise suppression.
DESCRIPTION-Single and dual inductance-capacity filters housed in round metal containers designed for insertion between appliance cord and wall outlet.
TERMINALS-Male prongs and female receptacles. Types 24, 6 and 8 have extra provision for return lead to ground or appliance frame.
MOUNTING-Self-supported by its prongs.
PACKAGING—Individual display carton.
Type $\mathbf{Z 2}$ is a capacitor-inductance filter for medium interference. Use with electric razor or small appliances. Most effective on grounded line systems where reversal of plugs will affect operation. Size $13 / 3^{\prime \prime} \times 233$ ", rated $110-220$ volts, 3 amperes.

Type Z4 is a dual inductance-capacity filter for severe interference on appliances where a return lead from the filter is inconvenient. Ideal for electric razor, vibrators and household appliances. Size $138^{\prime \prime} \times 3^{\prime \prime}$, rated $110-220$ volts, 3 amperes.
Type $\mathbf{Z 6}$ is a dual inductance-capacity filter with provision for return lead to ground. Recommended for suppressing severe interference. Size $1 / 8^{\prime \prime} \times 33 / s^{\prime \prime}$. Rated $110-220$ volts, 3 amperes.
Type $\mathbf{Z 8}$ is same as $\mathbf{Z 6}$ but with provision for return wire connection to motor or appliance frame rather than ground. An efficient filter equivalent to box type within 3 ampere rating

## Heavy-Duty <br> Appliance Noise <br> Filfers (Type LC)

APPLICATION - For portable plug-in applications where severe interference is involved and ampere rating ex-
 ceeds that of type $Z$.
DESCRIPTION-Combination inductance-capacity filter housed in rectangular metal case.
TERMINALS-Ample line cord with male plug for insertion in wall outlet. Female receptacle for appliance cord plug. Binding post for return wire lead to appliance or motor frame.
MOUNTING-Two metal flanges (when permanent mounting is desired).
PACKAGING-Individual carton.
Type LC5 rated 115-220 volts AC-DC, 5 amperes.
Type LC10 rated $\mathbf{1 1 5 - 2 2 0}$ volts AC-DC, 10 amperes.

## Fluorescent Lighting Noise Filter

APPLICATION-Specially designed for fluorescent lights where permanent installation on or in the light fixture is desired.

DESCRIPTION-Dual inductance-capacity filter housed in round metal tubes. Contains shock limiting capacitor.

TERMINALS-Flexible covered wire leads; two at one end for input-three at other end for output of which the red lead is for grounding to light frame.
MOUNTING-By means of attached tangential strap.
PACKAGING-Individual display carton.
Type 28A, $115-220$ volts, AC-DC, 3 amperes. For fluorescent lights

## Heavy-Duty <br> Appliance Noise Filters (Type LB)

APPLICATION-For permanent installation wherever heavy-duty filters are required, such as outdoor signs, large motors, or at meter board.
DESCRIPTION-Heavy-duty choke-capacity combination filters sealed in rectangular case and housed in standard heavy gauge metal cut-out boxes.
TERMINALS-Heavy, flexible insulated wire leads for splicing with house or motor wiring.
MOUNTING-Mounts by means of screws through bottom of cut-out box.
PACKAGING-Individual carton.

| Type | Rating |
| :---: | :---: |
| LB-10 | 220V-10 Amp. |
| LB-20 | $220 \mathrm{~V}-20 \mathrm{Amp}$. |
| LB-40 | $220 \mathrm{~V}-40 \mathrm{Amp}$. |

## Mica Receiver Capacitors

APPLICATION-Designed primarily for radio receiving applications, they may be used in television and other electronic circuits within their voltage range.
DESCRIPTION-Made with carefully selected mica and foil and housed in high quality compact rectangular bakelite case with standard RMA color coding for identification.
TERMINALS-Bare tinned copper leads.
MOUNTING-By means of its leads.
PACKAGING-5 or 10 capacitors per display carton only.

Case Size—7/16" $\times{ }^{25} / 32^{\prime \prime} \times 7 / 32^{\prime \prime}$ with $1 / 8^{\prime \prime}$ Wire Leads Voltage Rating $=500$ VDC Working - 1000 VDC Test

## New RMA Color Code

- The new RMA color code, shown below, permits positive identification of the mica capacitors listed.

Reading across the top from left to right with the arrow pointing to the right, the first dot shall always be white to indicate standard RMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.

The key to color significance is as follows:

Example shown above $=1300 \mathrm{mmfd} . \pm 2 \%, 500$ V.W.
Note: When any Mallory mica capacitor has a white dot in the upper left hand corner (when the arrows point to the right) that capacitor is coded under the new RMA color code, as shown above. Any other color in the upper left hand corner indicates the old color code, which may be found in Catalogue No. 467-A.

| Color | Sig. <br> Fig. | Mult. | Tol. | Class.* |
| :---: | :---: | :---: | :---: | :---: |
| Black | 0 | 1 | $\pm 20 \%$ | A |
| Brown | 1 | 10 |  | L |
| Red | 2 | 100 | $\pm 2 \%$ | C |
| Orange | 3 | 1000 | $\pm 3 \%$ | D |
| Yellow | 4 | 10000 |  |  |
| Green | 5 |  | $\pm 5 \%$ |  |
| Blue | 6 |  |  |  |
| Violet | 7 |  |  |  |
| Grey | 8 |  |  | I |
| White | 9 |  |  | J |
| Gold |  | 0.1 |  |  |
| Silver |  | 0.01 | $\pm 10 \%$ |  |

*Denotes various electrical characteristics.
Voltage ratings vary with capacitance as shown in RMA Specifica-tion-April, 1946.

## Mica Transmitting Capacitors (Type MH)

APPLICATION - For use in transmitting and power amplifier circuits where voltage exceeds the 500 -volt rating of type MC.

DESCRIPTION_Made with accurately gauged highquality India mica in bakelite molded case providing insulated mounting. Capacity tolerance $\pm 20 \%$. Only size variation for various ratings is the thickness as shown in the chart.

TERMINALS-Short, heavy tinned copper solder lugs for minimum RF and contact resistance.

MOUNTING-Insulated mounting by means of screws through holes molded in case.

PACKAGING-Individual display carton.

## Mica Transmitfing Capacitors (Type MX)

APPLICATION-Ideal for amateur transmitting equipment. They may also be used in coupling, tank, and bypass circuits at radio frequencies within their rating. (Note that the maximum amperes for several radio frequencies are given in the chart. The operating current should be kept within these limits.)

DESCRIPTION-Heavy-duty mica construction, supplied in attractive rectangular porcelain cases.

TERMINALS-Two screw type with complete washer and nut assembly.

MOUNTING-Two flanges with ample holes for machine screw mounting.

PACKAGING-Individual display carton.

## MALLORY OIL filled and impregnated capacitors

## Transmitting Capacitors (Type TX)

APPLICATION-For radio, television, transmitting, and all circuits requiring high voltage capacitors.
DESCRIPTION-Compact rectangular oil filled capacitors of sturdy construction.
TERMINALS-Suitable standoff insulated terminals at one end to safely cover maximum voltage rating of each unit.
MOUNTING-Base dimensions less than $31 / 2 \times 51 / 8$, by rectangular clamp providing either upright or inverted position. Base sizes of $31 / 2 \times 51 / 8$ and above, by permanent flanges at the unit base.
PACKAGING-Individual carton.

## Transmitting Capacifors (Type TZ)

APPLICATION-For filter and bypass circuits in power amplifiers, television and transmitting equipment where compact round can units are desired.

DESCRIPTION-Oil impregnated type capacitor furnished in round containers for upright or inverted mounting. All units internally insulated from case.

TERMINALS-The $13 / 8^{\prime \prime}$ diameter units have two solder lug terminals with ample insulation for the voltage ratings involved. The $2^{\prime \prime}$ diameter units have special standoff insulated terminals.

MOUNTING-Supplied with type VR bracket for inverted or upright mounting.

PACKAGING—Individual carton.

## MALLORY <br> TECHNICAL MANUAL

- This simply written, practical book bridges the gap between radio theory and practice. Designed for the radio serviceman, engineer, amateur or experimenter who wants the latest technical information . . . presented so that he can easily apply it to everyday problems. Contains page after page of information profusely illustrated. It's worth far more than its price.

## MAllory capacitor hardware

Type "MSU"' Hardware

Iype MP-Metal plates for grounded mounting of FP and WP capacitors.
Type BP-Bakelite plates for insulated mounting of FP and WP capacitors.
Type PS-Molded plastic sockets for plug-in mounting FP or WP capacitors. (Blank ear on capacitor should be removed to permit polarization with resject to socket.)
Type MW-100-Special wrench for twisting mounting ears on FP or WP capacitors.

Type MS-1 - Adjustable metal strap for horizontal mounting tubular types up to $13_{8} "$ diameter.
Type A-016-Terminal connector or anchor strap for general use where required.
Type 015-1 - Washer for IRS type "fork when used in over-size chassis hole.
Type 015-2-Washer for use with IRS, IRM or HS units where chassis hole is too large for regular mounting. Use two washers, one above and one below chassis.
Type A-017-_Special washer with turned-over edge for ring clamp mounting $1^{\prime \prime}$ IRS type in $136^{\prime \prime}$ ring clamp.

| Cat. No. | Description | Size |
| :---: | :---: | :---: |
| 015-1 | Washer for 59" neck in $7 / 8$ " hole. | Var. |
| 015-2 | Washer for $3 / 4$ " neck in $1^{\prime \prime}$ hole. | Var. |
| MS-1 | Adjustable mounting strap.. | Var. |
| A-016 | Terminal connector.......... | Var. |
| A-017 | Washer for clamp mounting neck cans | Var. |

Type "P" Hardware
Types PL and PLAPlastic end cap to protect terminals on $\mathbf{H C}$ or NP units when desired.

Type HB-Horizontal bracket for mounting HC and NP units. Using end cap type PL or PLA.

| Cat. No. | Description | Size |
| :---: | :---: | :---: |
| PL-3 | Plastic end cap For "On Motor" | 17/16 |
| PL-6 | Plastic end cap mounting | $113 / 16$ |
| ${ }^{\text {PLL-8 }}$ | Plastic end cap, | 21/16 |
| PLA-3 | Plastic end cap (For "Off Motor" | 17/16 |
| PLA- 8 | Plastic end cap Plastic end cap | ${ }_{2}^{11 / 16}$ |
| HB-4 | Horizontal bracket | 3\%/8 |
| HB-8 | Horizontal bracket (plastic cases) | $43 / 8$ |

Type TH-Special clips for horizontal mounting of any tubular or FP unit within the diameter range shown. Designed primarily to mount without tools under special chassis lances in original equipment, they may also be attached to chassis with $5-32$ screw and nut in any 堭" hole.
Type VR-Brackets for vertical mounting round units.
Type 104-1-Special bracket with spade bolt for mounting IRS and RM units where spade bolt mounting was used.

| Cat. No. | Description | Size |
| :---: | :---: | :---: |
| TH-13 | Spring clip for TC | $3 / 6$ |
| TH-15 | Spring clip for TC | 1/2 to 9/16 |
| TH-17 | $\underset{\text { Spring clip for TC }}{ }$ |  |
| TH-19 | Spring clip for TC and FP Spring clip for TC | 3/4 to $13 / 16$ |
| TH-23 | Spring elip for TC ${ }^{\text {Spring clip for } \mathrm{TC} \text { and } \mathrm{FP}}$ | \%/8 to $15 / 16$ |
| TH-25 | Spring clip for TC and FP | $13^{3 / 8} \text { to } 1^{1 / 16}$ |
| VR-1 | Clamp for vertical mounting | $1 \text { to } 11 / 16$ |

| CE-6 | Closed end FP insulating sleeve Closed end FP insulating sleeve | 13\% ${ }^{13 / 2} \times 3$ |

＂ILLINI－HYCAPS＂are now manufactured in a new and madern plant designed especially for the manufacture of capacitors． Our thorough engineering，plus old manufacturing skills and a rigid policy of quality control enables us to produce a product that is of unexcelled quality．
＂ILLINI－HYCAPS＂are again available，and you will agree after using them that they meet every requirement a superior condenser should have for long life and dependable service．
＂ILLINI－HYCAPS＂are guaranteed unconditionally for a period of one year，from date of purchase．

1．Short proaf－ample separation af foils by highest purity cellulase separatar plus taugh anadic film－will withstand the highest surge voltages．
2．Condenser hermetically sealed and anchored in an alu－ minum shell．Completely resistant ta changes due to temperature and humidity．Built to withstand all kinds of vibrations and shocks 3．Attractive kraft tube spun over condenser ends ．．．prevents shorting of pig tail leads to condenser or other components． Aluminum lock－washers hold leads securely in place，will not loosen or break off．
4．Low power factor，low leakage，excellent shelf life．
5．Extremely longer life－due to our use of C，P．chemicals and highest purity foils and insulation materials available．A balanced non－corrosive electrolyte contributes to quiet，stable operation．

## Clamp Mounting Tubulars "ILLINI-HYCAPS"

Thraugh careful selection af high temperature sealing campaunds and superiar engineering design, these campletely hermetically sealed, campact tubular electralytic candensers are the acme af dependabilty. They aperate efficiently under high temperatures and wil give lang life under all climatic canditions.

The small size and canvenient maunting features af aur Type IHC "ILLINI-HYCAPS" make them papular in bath manufacturing and replacement wark.

Leads are calar-caded and securely anchared in the hard wax seal. Dual units have faur leads far universal replacement wark and are campletely insulated.

Clamp may be maved ta any pasition an tube far rapid maunting.

# 置ILINOIS condensers <br> TIME TESTED QUALITY 

## TYPE UMP

Illinois standard, twist prong mounting condensers offer a wider range of voltage and capacity types than have heretofore been possible in units of comparable size. They are designed to give maximum efficiency, both in operating characteristics and ease of mounting and wiring.

The electrical characteristics of our type UMP are superb. Capacities are always plus. This, coupled with low power factor and low leakage, makes them ideal for use in all electronic circuits.

Units are hermetically sealed in seamless drawn aluminum cans. Mounting and soldering lugs are sturdy and heavily tinned. Cathode tabs are electrically welded to mounting ring. Each unit is vibration proof-and they will stand up in any climate.

Arranged in a variety of can sizes and capacity combinations, the attached listing represents the majority of condenser types in use today.

NOTE: Outer Insulating sleeves are available upon special order for all of the above can sizes. A metal and bakelite mounting washer is supplied with each unit. Individually packaged in a sturdy, attractive varnished box.

## 固 lllindic condensers

time tested Quality

## TYPE LN <br> Inverted Screw Mounting ALUMINUM CAN CONDENSERS

Type LN aluminum can condensers are manufactured to operate satisfactorily under the severest conditions. Units are completely sealed in an inner impregnated tube then resealed. Correct design has allowed for maximum hat dissipation with resultant ability of the condensers to operate at higher temper-
atures and higher voltage surges.
Separate negative and positive leads for each section for universal replacement work. Palnut furnished with each condenser, individually packaged in attractive, varnished outer box. These units are ideal for long life and continuous service.

## SPRAGUE ATOMS

## THE UNIVERSAL MIDGET DRYELECTROLYTICS

Sprague Atom Capacitors-"Mightiest Midgets of All"-are the answer to $90 \%$ or more of all radio ervice requirements for replacement dry elctrolytic units. A small stock of different caracities and voltages equips you for quick, dependable service on practically every job.

Sprague atoms will fit anywhere. The smaller units can be mounted by means of their sturdy, Cinned-copper leads. Metal mounting straps are provided with all dual units and are available for the larger single units. (See Hardware page P-62.) Or if desired, you can mount thern by any other suitable means. Despite their extromely small size, Atoms will last longer and stand far more punishment than much larger, old-style dry electrolytics.

Atoms are guaranteed to have low leakage, to withstand high surge voltages, and to have exceptionally long shelf life. They are fully sealed arainst moisture and blow-ups by an exclusive Sprague

## SPRAGUEUHC high-CAPACITY, LOW-VOLTAGE TUBULARS

These miniature high-capacity, low voltage tubular dry electrolytics are specifically constmucted for use as cathode by-pass capacitors and as smoothing filters for low-voltage, high-current bower suppies. Whereas ordinary high-capacity, dry electrolytics have high leakage current and relatively high power factor, Type UIIC provides exceptionally low leakage current and low power factor, In by-pass applications, this means unusually high filtering action,

without the introduction of shunt resistance across low-resistance bias units, and it is particularly important in controlled feedback amplifiers.

## sprague ELS SELENIUM

 RECTIFIER ELECTROLYTICS IN $\quad$ '"TWIST-LOCK"' CANSElctrolytic Capacitors used in filter circuits for selenium rectifiers should be specifically designed for the job. As normally used in radio receivers, the use of selenium rectitiers results in the full 115 volts AC being applied to the filter for some 5 to 15 seconds each time the set is switched on. Even in normal operation. ripple currents as ligh as 400 milliamperes are not uncommon.

Conventional filter capacitors are not designed to handle these situations. High ripple current is detrimental to electrolytic capacitors because of heating due to power losses in the unit, and the tendency toward film formation on the cathode. Sprague Type ELS capacitors have been specifically designed to withstand the high ripple currents and reverse currents encountered in selenium rectifier circuits.

IWO typlcal selenium rectifier circuits

line lwo circuits slown alove are typical of the type often used with selenum rectifiers. To protect both the filler capacitors as well as the rectifier, a protective resistor", Rp, shotald be used as shown in the diagram. This is particularly necessary in replacement work where the orisinal circuit used a tuhe as a rectifier. A normal value of $\mathrm{Rp}_{\mathrm{p}}$ is 50 ohms, and with normal ratings of selenium rectifiers availahle should not be less than 10 ohms.

Even though the protective resistor is used, the filter capacitors are subjected to severe ripple currents. For safe performance of the circuit, it is essential that these capacitors be specifically designed and produced to withstand these extreme conditions.

## TOps for Television!

3 Sprague serves the service industry first again with the most complete line of television electrolytics. Engineered especially for tough TV replacement applications, Sprague's new Type TVA Atom ${ }^{(8)}$ and Type TVL Twist-Lok ${ }^{\text {* }}$ electrolytics stand up under the extremely high temperatures, high ripple currents and high surge voltages encountered in TV receivers.

Like all Sprague Capacitors, Types TVA and TVL Television Electrolytics have the extra dependability that has helped make Sprague the largest capacitor supplier to the television and electronic industry.

- The most popular replacement units for RCA, Philco, Dumont, Admiral, General Electric, Motorola, Emerson, Zenith, Westinghouse and other leading set brands are in the comprehensive listings on this page.

## TYPE TVA ATOMS ${ }^{\circledR}$

Small sized, metal-encased dry electrolytic tubulars. . . All are suitable for $85^{\circ} \mathrm{C}$ operation.... TVA-11 through TVA- 14 are specially designed miniatures for TV and FM defector circuits.

## INSULATING TUBES

These closed-top black insulating sleeves ore made of tightly fitting Kraftboard. Order with capacitors as required.

[^25]
## SPRMCUE caracions ${ }^{\text {T }}$

## S PRAGUEPLS "tiny mike" 450V

## SPRAGUELS

## ALUMINUM CAN TYPES, 450V

Iopular units for replacing older can type capacitors. May be mounted in any position. Standard mounting through chassis by threaded bushing on can. Packed with mounting hardware and insulating washers for use where can must be insulated from chassis. Special ring mountifg clamps are available for upright mounting with can partly extending through panels or chassis. (Sce Hardware, page P-62.)

TYPE LS UNITS have the can as negative terminal, and lug terminals for anode connections.

Type PLS Capacitors can he used with complete dependability on applications where much larger, old-style can-type dry electrolytics were previously necessary. Their exceptional quality and dependability in minimum size are made possible by the exclusive Sprague etched foil process which permits high capacity with very small leakage currents and low power factor. Aluminum cans have threaded bushing and locknut at one end for mounting. Separate positive leads bushing and locknut at one end for mounting. Separate positive leads
and common negative leads are provided for capacitor sections. Special ring clamps are available for capacitor sections.
Special ring clamps are available for upright mounting. (See Hardware, page P-62.)

## (WITH CAN AS NEGATIVE TERMINAL)

Can type dry electrolytics especially designed for the exacting continuous duty requirements of public address and power amplifier work. High surge voltage rating provides extra safety in high. current power supplies where high peaks often occur. Unexcelled for "extra tough" service replacement uses. Provided with threaded bushing for standard mounting in any position. Can is the negative terminal in all units. Positive terminal is lug connection. Supplied with mounting nut, and insulating washer to insulate can from chassis. Special ring clamps are available for upright mounting. (See Hardware, page 1' ${ }^{\prime}$ 62.)

CONTINUOUS WORKING VOLTAGE 475 VOLTS MAXIMUM SURGE VOLTAGE 600 VOLTS

SPRAGUECLINVERTEDSCREW CAN MOUNTINGTYPE, 475 C (WITH CAN INSULATED FROM SECTIONS)

These can-type dry electrolytics are similar to Type SC Capacitors except that the can is insulated from the filter sections. Separate positive and negative terminal leads for each section. Especially positive and negative for high gain, ligh power amplifiers where minimum recommented for high gain, how porser supply is desired. Special ring inter-stage coupling through power supply is desired. Special ring
clamps are available for upright mounting. (See Hardware, p. $\mathbf{l}^{\prime}$-62.) CONTINUOUS WORKING VOLTAGE 475 VOLTS

## SPRAGUEAPHIGH-VOLTAGECANTYPES, 600 O

These sturdy can-type units are outstandingly popular for all public address and theater applications where the working voltage is high and surges run well over 600 volts. These high capacities and high voltace ratings are obtained by use of balanced dry electrolytic sections conneeted in series, assuring long. trouble-free performance. Full capacity, full working voltage and low power factor are GUARANTEED.

## NEW!

 SPRAGUETO-3DELUXE

Universal Capacitance and Resistor Analyzer with Built-in DC Volt-milliammeter

This fast, simplified operation is the keynote of the new TO-3 De Luxe Tel-olmike. "Speedy check" locates open, intermittent, or shorted condensers WITHOUT R THEM FROM THE CIRCUIT, One pair of plainly marked binding posts and a total of only five controls assure quick, effective operation on all tests. Dial is of direct-reading, calibrated type, color coded to correspond to selector switch. It is easy to see, eusy to read. In addition to all of its uses in radio work, Tel-ohmike checks motor-starting condensers, and measures insulation resistance of motors, transformers, etc.

SPRAGUE PRODUCTS COMPANY, NORTH ADAMS, MASS.

## SPRAGUE MOLDED TELECAPS

Greatest Paper Tubular Advance in 20 Years！

Highly Heat Resistant<br>Moisture Resistan<br>Non－Inflammable<br>Conservatively Rated<br>Small in Size<br>Mechanically Rugged

Completely Insulated
The new Sprague Molded Tubulars listed here are the result of more than four years＇intensive research－and one of the largest retooling programs inSprague history The unique high－temperature molded construction of these units assures maximum depend maximum depend－ ability，even under humidity of heat， cul stress and phys cal stress．They＇re secial focom mended for use in uto radios，in smal ac－de sets that get hot，or for any ap－ ＂plication which is ＂tough＂on normal， waxed paper units．

## SPRAGUE 68 PIDGET＊tubulars Where space is at a premium

Sprague 68P type capacitors are the ultimate in extra small paper tubular capacitors．These midget capacitors are especially designed for miniature radio applications where space saving is a prime factor．These units are of fundamentally new engineering design and construction．The outstanding humidity performance which these capacitors exhibit is a result of this new construction．

## SPRAGUEPX HERMETICALLY-SEALED OIL-IMPREGNATED METAL TUBULARS, 600V AND 1000 V DC

Here is your answer to every need calling for higher-voltage tubular capacitors in the smallest possible size for real dependability under difficult operating conditions. Sprague Type PX Capacitors consist of specially wound sec. tions. impregnated with an exclusive Sprague oil and hermetically sealed in metal containers for long trouble-free service. Each unit is supplied with an external sleeve to insulate it from the chassis and other metal parts. Mounting may be made by means of the timned copper leads $21 / 2{ }^{\prime \prime}$ long, or by standard Sprague Mounting straps (see Hardware page 1'62).

OIL－FILLED TRANSMITTING CAPACITORS

## Filled with

## K VO

（KILO－VOLT－OIL－The Sprague wartime research oil development）

## SPRAGUECR

## IWith Universal Mounting Feature）

An oil－flled transmitting capacitor is no better than the oil with which it is flled－and Sprague brings you the best！KVO＊－Kilo Volt Oil－is the result of extensive laboratory research and enginsering tests and has proved its excellence throughout the world during the war in capaci－ tors used on practically every type of equipment．KVO retains its di－ electric efficiency at low tempera－ tures to a preater extent than any other type of oil in common use． High insulation resistance and low power factor are maintained over a very broad range of operating temperatures．Oil－filled capacitors are es－ sential for high－voltage use，and you can rely upon Sprague KVO units under all conditions．Terminals are insulated from the cans for AT LEAST TWICE the work－ ing voltage．Capacitor sections are her－ metically sealed in sturdy rectangular metal cans which can the automatically grounded through the mounting clamps．

For special industrial applications，where extremely high insulation resistance re－ quirements must be met，Sprague can supply special dielectric materials．

CR Capacitors are of convenient rectan gular shape and have handy adjustable universal flanges for mounting in any position．Each unit is labelled with oper－ ating information based on industry stand－ ards and，in accordance with Sprague custom，ALL RATINGS ARE CONSER－ VATIVE．No need to＂play safe＂by buy－ ing most costly，higher－voltage transmit－ ting capacitors than you actually need．

Unconditionally guaranteed against breakdown when used as specified．

## SPRAGUEPC INVERTED ROUND SCREW CAN TRANSMITTING TYPES， $600 V$ TO $1500 V$

These popular Syrague TVPE IC inverted round screw can capaci tors are filled（not just impregnated）with KNo the famous Sprague $500^{\circ} \mathrm{F}$ ．ham protection on that has the added advantage of retaining its dielectric efficiency at low temperatures．The PC Capac－ itors flind a wide field of usefulness in such applications as public address sustems，medium－voltage transmitters，television and high－ gain amplifers．THI：Y ARE，RATED COXSERVATIVELY and lahelled according to industry standards．Ample safety factor is assured． Units include spade washer and insulating lug to insulate the round nietul can containers from the chassis．Ring clamp is available for upright mounting．（See page P•62．）

## INTERFERENCE FILTERS

Sprague $\dagger$ FILTEROL Radio Interference Filters are a direct out growth of highly successful Sprague wartime engineering retearch and offer for civilian use a war-tested, practical filter that sup presses man-made radio noises and television "scraml/les" on sractically any application. They are small, completely self-contained, and easily installed. Applicable to any electrical device withit their current and voltage ratings, they provide maximum noise suppression on radio broadcast bands. A study of the Attenuation Euppression on radio broadcast bands. A study of the Attenuation
Curve (available on request) illustrating typical FILTEROL noise curve (avalable on request) illustrating typical FILTEROL noise suppression performance will shatly available in the past.

SPRAGUE FILTEROL TYPES 1, 2 and 3 are designed for connection in series with power supply lines to interference-producing devices. Their basic circuit is a special thre-terminal network of which the can is one terminal. The filter selected should have a rating higher than the continuous running current of the device. A single FILTEROL connected in one side of the line is usually suff. cient. however, in severe interference cases a FILTEROL in each power line may be necessary. For three-or-four wire systems, a FILTEROL in each wire is necessary.

FILTEROL TYPE 4 is a new, exclusive Sprague invention incorporating a Sprague *HYPASS capacitor and provides exceptionally high attenuation at frequencies alove 5 MC . It is effective up to 150 MC or more. Intended for all small devices with continuous current ratings $u_{p}$ to 20 amperes. Applied by mounting directly on the frame of the device to be filtered, and connecting the power supply line in series through the filter. In severe cases, a FILTEROL may be necessary in each line wire.

## SPRAGUE IF TYPES

IF-15-A TRIPLE-SECTION FILTER for all small motor-operated devices. Especially designed to prevent accidental shocks from discharge of filter capacitors.

IF-21-COMPACT DUAL METAL-ENCASED TUBUIAR FILTER for use across brushes of fractional horsepower motors with can grounded to motor frame. Also across line terminals of motors.

FF-11-A DUAL HIGII-CAl'ACII'Y FILTER with completely en closed safety construction. Designed for motors over 1 horsepower and up to 220 volts AC or DC. Also used on F-S1-SINGLE 2-LEAD FILTER SECTION wit
insulated. For use across make-and-break contocts pletely insulated. For use across make-and-brak contacts. F-37-SECTE rego fire
Also effective on make-and-hreak governor-type motors.

[^27]Sprague Mica Capacitors provide maximum quality for R-F applications where exacting requirements involving low-power factor and high-insulation resistance at high frefuencies must be met. The line includes types for every requirement ranging from the tiny "toothpick" 1FM types to the giant ceramic-jacketed types 4CC. Each type incorporates outatanding developments based on far-reaching Sprague wartime engineering.

Mica units are perhaps the most critical of all capacitor types to produce properlyand it is in the handling of these essential details that Sprague engineering and production excels. Beginning with selection and handling of the mica itself, extreme care is taken in every operation to assure completed units which, although they look like conventional units on the surface, will far surpass ordinary mica capacitors in actual service.

Stocks of raw mica are carefully selected. So critical are Sprague requirements that far more mica is rejected than is actually selected for use. The selected mica is then hand split and each piece electrically graded hy exclusive Sprague methods.
Particular care is exercised in the interleaving of gection foils and in connecting them to terminals through specially designed low-resistance $R-F$ bonds. Perhaps most important of all is the fact that each and every Sprague Mica Capacitor section receives a painstaking radio frequency test before being encased in its mold. After this test, each section is carefully impregnated and moisture-proofed prior to the molding operation.
Upon completion, all Sprague Mica Capacitors required to carry large R-F currents are actually R-F current tested or their peak ratings. This test comhined with thorough testing before molding assures the serviceman, amateur experi menter or industrial user of units of ut most dependability for any application or any condition of use

## THE RESISTORS WITH THE CERAMIC-COATED WIRE INSULATION

Sprague Koololim Wire-Wound Resistors are wound with wire that is insulated before it is wound with a flexible, ceramic coating that is impervious to heat as high as $1000^{\circ} \mathrm{C} \cdot$ In addition, each resistor is doubly protected by a glazed ceramic coating and new type of end seals which guard it effectively against any moisture or other climatic conditions. Ordinary resistors may be designed to provide some degree of "tropicalized" protection at extra cost. STANDARD Koolohms give FULL protection at regular prices!

## No Other Resistors Have These Features

Because of the complete protection afforded by both their wire insulation and outer ceramic shells, Koolohms may be mounted anywhere, even flat against a chassis or against grounded parts. They can safely be used at full wattage ratings, even on the high-resistance values because of the excellent insulation at high temperatures. No danger of shorts

STANDARD RESISTANCE TOLERANCE $\pm 5 \%$
or current leakage! Thanks to their ceramic wire insulation, Koolohms can be wound in layers. This means ligher ratings in much smaller physical sizes. Even more important, larger, sturdier wire sizes can be used. Actually, the wire sizes in Koolohm Resistors average $21 / 4$ times greater in cross-sectional area than those in ordinary resistors of the same size!

## High Insulation Resistance

Also standard Koolohms have the high insulation resistance to ground required for television and other high-voltage uses- 10,000 volts from the surface of their sturdy ceramic jackets to their resistance elements!

The following listings include only the Sprague Koolohm Wire-Wound Resistor types commonly supplied for radio repair service and amateur radio applications. Various other types are also regularly produced in large quantities and to the most exacting standard or special applications. All have been thoroughly proved and tested for the most exacting military, naval and aircraft applications.

Other types not listed in this catalog include:
Hermetically-Sealed, Ferrule Terminal, Power Wire-Wound Resistors, with power ratings of 15,20 , $40,50,90,120$ and 150 watts. These are the famous Sprague Koolohm "Grade 1, Class 1" resistors that are impervious to salt water, thermal shock, and corrosive atmospheres.

Precision Meter Multiplier Resistors, Wire-Wound, Hermetically-Sealed. Resistance values up to 7.5 megohms per unit. Three types, MFA, MFB, and MFC. Resistance tolerances of $\pm 0.5 \%$ and stability of $\pm 0.1 \%$. The most rugged meter multipliers in the world!

Voltage Divider Resistors. Wire-wound power resistors with ratings of 10,15 , and 25 watts. Designed for through bolt mounting as individual units, or in multiple sections of any size to provide tapped voltage dividers.
*MEGOMAX, High-resistance, High-Voltage, Resistors. Ferrule terminal, hermetically-sealed, composition resistors of pressed and sintered ring construction, capable of high-temperature operation to $150^{\circ} \mathrm{C}$. Three types with resistance values to 1000 megohms; power ratings of 6,12 and 22 watts and voltages up to 20,000 volts.

BOBBIN Wire-Wound, Semi-Precision Resistors. Wound with ceramic-insulated wire on high-temperature plastic forms. Five high stability types with
power ratings of $1,2,2.5,3$ and 5 watts, and resistance values to 500.000 ohms. Resistance tolerance down to $\pm 0.5 \%$.

Complete details on the above and other new types are contained in the Sprague Koolohm Industrial Catalog No. C-551, copy of which will gladly be sent on request by industrial users. Sprague engineers welcome the opportunity to be of assistance regarding industrial resistor applications.
*Trademark applied for.

## PYRANOL Capactrops

In accordance with Joint Army-Navy Specification JAN-C-25 Amendment-1.

Ease styles CP 53, 54, 55-Bathtub Style
CP 70-large Rectangular
CP 61, 63, 65-Miniature Rectangular
All case styles are available in characteristic $E$ and $F$. Single-section units are supplied with a capacitance tolerance of $\pm 10$ per cent ( K ), and two- and three-section units with a capacitance tolerance of +20 per cent, - 10 per cent (V). Spade-lug and footed mounting brackets are available for use with capacitors on which the mounting bracket is not an integral part.
Write for Bulletin GEA-4357

## Energy-storage discharge capacitors

G-E light-duty energy-storage capacitors are made in a wide range of ratings to fit practically every requirement of high-speed flash photography, as well as home and industrial welders for light metals. Careful corstruction, high-quality materials, and skillful design contribute to long life and efficient operation.

Capacitor networks

General Electric pioneered in the development of mineral-oil-treated paper dielectric capacitor networks for air, sea, and land radar, and was a prime supplier for the government services. The products supplied varied from the miniature types used with aircraft radar to the large land station designs.
All of the general facilities and the highly specialized test equipment involved ale being retained for further work in this field and inquiries on new requirements are solicited.

## PYRANOL CAPACITORS

## Case Style 70

Case style 70 units with various types of terminals.
These Pyranol fixed-paper-dielectric capacitors in case style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds. All are of single-section construction, with a capacitance tolerance of $\pm 10$ per cent. Cases are isolated and the two bushings are brought out through the cover. Units are available with either solder-lug terminals or with pillar-insulator terminals in $600-, 1000$-, and 1500 -volt ratings. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

[^28]

Case style 70 units with various types of removable mounting brackets.
Bushings with solder-lug terminals are made of molded Textolite, and those which have pillar-insulator terminals are of the highest-quality porcelain. All bushings are thoroughly bonded to the container to provide a permanent liquid-tight seal.
All units can be supplied with removable mounting brackets, as illustrated above. In addition to the screw-spade-lug brackets, two types of footed brackets are also available-one with a straight "L"-shaped foot and the other with a "U"-shaped foot that grips the bottom of the unit. The brackets can be attached to either the top or bottom of the unit, permitting either upright or inverted mounting.

PYRaNOL CAPACTTORS
*Trade-mark reg, U. S. Pat. Off

Case styles 50, 51, and 52

These fixed-paper-dielectric "bathtub" capacitors are of small and compact construction, and will fit into very restricted places in radio and electronic equipments.
All three case styles are constructed with solder-lug terminals, and are available in single-section, twosection, or three-section construction for all circuit diagrams.
The hermetically sealed metallic containers are of drawn construction and include two integral mounting lugs.
The only difference in construction of the three case styles is in the location of the bushings, which are brought out through the side for case style 50 units, through the top for case style 51 units, and through the bottom for case style 52 units.
Write for Bulletin GEA-2621.

## PYRANOL CAPACITORS

## FOR GENERAL-PURPOSE A-C APPLICATIONS

Small a-c Pyranol capacitors are recommended for use with motors, luminous-tube transformers, industrial control, and other equipment.
The use of Pyranol* as a treat. hig material, because of its high dielectric strength, high permittivity, and exceptional stability, has made possible a marked reduction in physical size, as well as a capacitor far superior to those formerly avail able.

## Design advantages

(1) Small and compact units, because of the use of Pyranol. (2) Wide range of ratings available in rectangular, eylindrical and oval cases.
(3) Three styles of mounting makkets are avaliable and suppied separate from the units. Units may be operated in any position.
Write for Bulletin GEA. 2027

## CAPACITORS FOR OSCILLATOR TANK CIRCUITS

This line of fixed-paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-leating equipinents. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance ( 0.01 mu f) for high-frequency units, and yet they are more economical than conventional highfrequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

## features

Hermetically sealed in metallic cases.
Single-bushing construction for minimum size.
Removable mounting brackets.
Internal lead connections arranged for minimum inductance,

## SATGAMO CAPACITORS

## TYPE CS

ELECTROLYTIC CAPACITORS

#### Abstract

These capacitors are contained in a cardboard tube and have 8 inch insulated leads extending from both ends sealed in pitch to insure permanency. Each unit is supplied with a mounting strap around the tube to facilitate mounting to the chassis.

## TYPE CS—Dual Common Negative Sections

NOTE: Packaring 10,25 or 50 Capacitors per display carton.

## TYPE CF

## Hoache

Vertical or horizontal mounting made possible by the mounting feet and strap. Ends permanently sealed.

Enas permanently sealed.

TYPE CF

NOTE: Packaging 10, 25 or 50 Capacitors per display carton.

| Black Orange Red | Common Negative <br> Positive, Highest voltage or capacity Positive, next highest voltage or capacity | Blue Yellow Brown | Positive, next highest voltage or capacity Positive, next highest voltage or capacity Negative, in separate section unit |
| :---: | :---: | :---: | :---: |
| NOTE: Lcad colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same rapacity, the lead colorwill be determined by the voltage; with the same vollages and unequal capacities the lower capacity takes the next color in the sequence. |  |  |  |

[^29]Here is an entirely new concept in paper tubular construction: capacitors which are molded in plastic-just like micas! The immediate results are obvious: more stable capacity values, excellent seal characteristics, and application at higher ambient temperatures. In the long run, too, the result is obvious: a new standard of permanence. Halowax impregnation is suitable for operation in ambient temperature ranges from $-55^{\circ} \mathrm{C}$. to $+55^{\circ} \mathrm{C}$.

## SANGAMO Capacitors

## TYPES 20 AND 21 metal <br> cased mineral oll paper CAPACITORS

Designed for by-pass and coupling applications, Types 20 and 21 capacitors are non-inductively wound paper capacitors impregnated in mineral oil of greatest stability and housed in metal tubes. The Type 21, having terminals insulated from the case, is covered with a cardboard sleeve. The Type 20, having one terminal grounded to the case, is similarly covered unless specified without sleeve. The Type 20, priced the same as the Type 21, has the same diameter as the Type 21 but is $1 / 8^{\prime \prime}$ shorter in length.

## TYPES 50 AND 59 bypass PAPER CAPACITORS

TYPES 50 AND 59
Types 50 and 59 paper capacitors are non-inductively wound paper dielectric sections sealed in seamless containers. Primarily intended for bypass applications, their characteristics are excellent for R.F. and A.F. bypass, audio frequency coupling and A.C. circuits. The Type 50 capacitors are vacuum impregnated and filled with the finest mineral oil available for use; the Type 59 capacitors are vacuum impregnated and filled with diaclor; a chlorinated dielectric providing maximum capacity and voltage in minimur space.

## SANGAMO CAPACITORS

## TYPE 71 DIACLOR IMPREGNATED TRANSMITTING CAPACITORS

Sangamo Diaclor impregnated capacitors have the advantage of longer life, lighter weight, and smaller size. Diaclor is a specially compounded, chemically purified chlorinated liquid dielectric. This synthetic impregnant, whose characteristics can be controlled with great uniformity, assures a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is noninflammable and non-explosive.

Type 71 Diaclor impregnated capacitors are supplied with Type A universal bracket, Type B footed bracket, or Type C spade lug bracket. Mounting dimensions of these brackets are given from center to center, in inches, in column " $F$ " below. Terminals: composition rivet or screw; pyrex glass; or, stand-off porcelain. Prices include choice of brackets and terminals.

## SANGAMO CAPACITORS

## TYPE 75 diaclor impregnated A.C. CAPACITOR

TYPE 75

Type 75 Sangamo Diaclor Impregnated Capacitors are designed for continuous A.C. duty in ambient temperatures up to 75 degrees centigrade. These capacitors are recommended for use with capacitor motors-as power factor correction capacitors-and other similar A.C. applications. They are supplied with either the composition rivet or screw terminal, or with stand-off porcelain terminal. Type mounting bracket desired should be specified when ordering.

Inquiry should be directed to the factory as to the avail-
ability of capacities and voltages other than those listed.

## TYPES FI AND F2 mica capacitors

Types F1 and F2 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low oss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing.

Type $G$ ceramic cased capacitors are intended for service where highest voltage and $R$. current ratings are required, such as in commercial transmitting or induction heating applications. All posuible steps are taken in desion and manufacturing operations tc insure insure permanence of quantion the Type $G 5$ wili be supplied as well as detailed information on the request. Terminal plates are designed to permit any usual "pon request. Terminal plates ar

## PLASTICONS

By the use of synthetic plasicic film alectrics，PLASTICONS can be made smaller，lighter，more efficient and more economical than older twoes of cajacitors mate with paper and mica insulation．Plasticon nlms are chen－ ically purer and more uniform．＇lasti－ con capacizors have a longer life and dittons

## SPECIAL PLASTICONS

Taking advantage of the wide varlety of plistic fllm dielectric character－ istics，Plasticons are engineered to meet many special abritications．We can furnish capactors for $200^{\circ} \mathrm{C}$ for pulse network duty：close tolerances ultra high resistance．Nend us your specitications．

GLASSMIKES ASG

Type ASG are Plasticon A dielectric－sllicone fuld impregnated capacitor elements in hermetically $\pm 125^{\circ}$ C．The smallest and lightest high voltage low frequency AC applications．

## TYPE "SA" OIL FILLED

1. INCCO OIL "A" IMPREGNATED AND FILLEDpermitting efficient operation over widest range of temperatures.
2. HERMETICALLY SEALED CASE-is unaffected by time, humidity, or operating temperatures.
3. Use of HIGHEST GRADE CONDENSER TISSUES insures a long uninterrupted life.
4. HIGH-GLAZE PORCELAIN INSULATORS-insure low moisture absorption and high terminal to case flash over.
5. CONSERVATIVELY IRATED-SAFE FOR CONTINUOUS OPERATION AT io PER CENT OVERLOAD.
6. Use of "SPACE SAVER" UNIVERSAL MOUNTING BRACKET provides adjustable capacitor heights.
7. LEAD COATED STEEL CASE-IS NON-COR. ROSIVE and lacquer finished
8. TESTED FOUR TMES BEFORE SHIPMENTguarantees a 100 per cent perfect product electrically and mechanically.
If riveted terminal construction is wanted in place of porcelain stand-off insulators add "IB" to catalog number. For example, 6SA50 changes to 6SAR50. Submersion proof terminal construction to meet Army and Navy Specifications is optional; specify on order. Standard capacity tolerance plus or minus 10 per cent. Mounting hrackets supplied in accordance with following catalog designations: TYPE SA-No mounting brackets. TYPE SAU_-_'Space Saver" universal bracket. TYPE SAJ--Sollered vertical mounting bracket. Type SAL-l eversible mounting foot bracket. TYPE SAH-Re-

versible spade bolt bracket.
For example: The 8 mfd .600 V . type with "Space Saver" bracket has catalug number 6SAU800
NOTE: To facilitate delivery we have standardized on container heights. In many cases units can be supplied in shorter containers if required.

## TYPES "GA" and "HA" OIL FILLED

These inverted mounting capacitors fill a definite need where chassis space is the prime factor.

Types "GA" and "MA" are lNCCO Oil "A" impregnated and filled.

## supplied on each bracket

The case is a one-piece metal extrusion with a "locked-in" molded neck. This construction meets and surpasses the Army and Navy requirements for a submersion-prooi capacitor.
Jype "GA" is available in the seven standard rating listed below. but can also be supplied in other capacities and/or voltages to manuacturers' specifications.

In the standard "GA" and "HA" types the container is insulated. A grounding lug can be supplied for connecting one terminal to the case. Fiher washer for insulating container from chassis, when case is grounded, and insulating cover for insulating the container from adjacent equipment, can also be supplied on special order.

Type "HA" differs from "GA" in container and mountinc neck size, and also in the fact that it has three insulated terminals. size, and also in the fact that it has three insulated terminals. to meet special requirements of multiple-section and multipleto meet special requirements of multiple-section and multiple-
terminal capacitors, with either insulated or grounded container.

## DRY ELECTROLYTICS

Type "B", electrolytic capacitor is the first commercially available unit of this type with the reliahility of the total submersion type, oil filled capacitors.

Wound with the highest purity aluminum foil and cellulose separators available; impregnated in electrolyte having excellent temperature characteristics, these units will outlive their associated equipment.

SEND FOR BULLETIN No. 1075 WHICH LISTS OUR OIL FILLED MOTOR RUNNING CAPACITORS

## INDUSTRIAL

## CAPACITORS TO 250,000 V.D.C.W.

INCCO OIL "A" IMPREGNATED AND FILLED assures smaller size, low power factor, and widest range of operating temperatures.
ELECTRIC ARC WELDED HEAVY GAUGE HOT TINNED STEEL CASES are non-corrosive-finished in durable lacquer.
GLAZED WET-PROCESS PORCELAIN INSULA-TORS-low moisture absorption and high terminal to case flash over.
WOUND WITH HIGHEST GRADE CONDENSER TISSUES-insures a long, uninterrupted life.
CONSERVATIVELY RATED-Safe for continnous operation at 10 per cent overload.
HERMETICALLY SEALED STEEL CASE - muaffected by time, humidity or operating temperatures.
AVAILABLE TO MEET U. S. SIGNAL CORPS AND NAVY SALT WATER SUBMERSION REQUIREMENTS.

## ET SERIES ELECTROLYTIC CAPACITORS

"ET"' series capacitors have been designed for ease in installation and reliability. They are constructed to withstand the most severe operating conditions encountered in industrial and electronic equipment. Especially controlled manufacturing processes insure that the equipment in which these capacitors are used will function without interruption. Capacitors can be supplied for operation at temperatures ranging from minus 40 to plus 85 degrees Centigrade. Mounting is effected by inserting the capacitor through the slots in either the chassis or mounting plate, and twisting the mounting prongs 90 degrees.

## TELEVISION AND TUBULAR PAPER CONDENSERS

TYPE PT
INDUSTRIAL By-Pass Capacitors are non-inductively wound and designed for maximum efficiency up to the highest frequencies. The units themselves are completely impregnated and sealed with a special non-hygroscopic sealing compound, thus preventing moisture penetration under the most humid conditions.

## RADIO INTERFERENCE ELIMINATORS

INDUSTRIAL CONDENSER CORP. has made a special study of the suppression of noises caused by fluorescent lighting. No. 7249 capacitor is designed with three leads, two leads to be connected across the 110 volt line and the single lead to be grounded. No. 4219 is housed in a metal container and is self grounding. It is supplied with strap mounting for easy installation. No. 4252 and No. 4253 are flat type units designed to mount on the ballast support of circline ballasts. The convenient mounting flap grounds the unit when the stem of the lamp is placed through the mounting hole.

## DIRECT REPLACEMENT

## For Either Dry or Wet Types

## No Drilling - No Changes

The "IL" type capacitor is a dry electrolytic assembled in an aluminum container having a threaded mounting neck which is an integral part of the container.

Our "IL" type capacitors may be used as replacements for the old type wet or dry electrolytic capacitors and will mount in the same mounting hole as the part replaced, eliminating the use of adaptors or auxiliary workmanship.

Electrically and mechanically this condenser is designed for heavy duty service. It incorporates the exclusive INDUSTRIAL etched foil process of construction.

Although these capacitors are not hermetically sealed, they are highly superior to the paper type units generally used for this kind of replacement.

These units are supplied with Underwriters Approved $75^{\circ} \mathrm{C}$ rubber covered leads. Individually boxed in attractive carton with instruc-
 tions.

To replace $13 / 8^{\prime \prime}$ diameter screw neck type

| Price |

[^35]An extremely popular type of con－ denser due to its exceptional high quality and midget size．Hermetic－ ally sealed in a small metal case and scientifically vented，to protect against adverse operating condi－ tions of voltage，temperature and lumidity．Container is insulated by a high grade tube which is spun over the ends of the can to elimi－ nate shorts when wires are bent close to container．Easily mounted by their rigid wire leads．

All Type＂MM＂units are avail－ able with mounting strap．Recom－ mended in cases of extreme vibra－ tion or when advisable to have unit solidly anchored．When ordering add the letter $S$ before the catalog number．

Each unit is completely embedded in a high grade wax and then sealed in an impregnated carton to insure efficient operation under the most adverse conditions．New，high volt－ age formation，gives complete pro－ tection against surges and high peak voltages．Supplied with color coded，Underwriters＇Approved，rub－ ber covered leads．Universal lugs permit easy mounting in any posi－ tion．

Type MC

Type MM

Type MMs

Spade bolt type＂SB＂of mounting has been very popular due to its wide use in many radio sets．Wach unit is embedded in a high tem－ perature wax and then sealed in a thoroughly impregnated cardboard tube，affording complete immunity to moisture penetration．New high voltage formation gives complete protection against surges and high peak voltages．

Type＂SM＂has identical charac－ teristics as＂SB＂．The addition of the strap mounting bracket has proved favorable in its use due to its wide application in AC－DC and portable sets in the replacement field．The strap can be moved to the best mounting position and then bolted or soldered

Supplied with color－coded，Under－ writers＇Approved，rubber covered learls．

## MINIATURE MICA CAPACITORS

Known the world over for their reliability under all operating conditions，El－Menco Capacitors are chosen by manufacturers who want successful per－ formance and long life from their products．
El－Menco fixed mica dielectric capacitors are compact，precision made Manufactured in accordance with American military standards to meet Army and Navy JAN－C－5 Specifications．All impregnated and JAN，RMA and RCM color coded．Standard specification limits are shown below．

Moulded in low loss bakelite，tested at double the working voltage． Tests for dielectric strength，insulation resistance，temperature co－efficient and capacitance drift，humidity and life tests according to JAN and RCM STANDARDS．All units are wax dipped for salt water immerison seal．

# ARCO ELECTRONICS, INC. EL-MENCOCAPACITORS 

## TELEVISION • TRANSMITTING • INDUSTRIAL HIGH VOLTAGE MICA CAPACITORS <br> DC WORKING VOLTAGES: FROM 1000 TO 3000 VOLTS <br> Molded in CM-20, CM-35, and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for Television, Power Amplifiers, Low Power Transmitters, and various Industrial Uses has increased. el-menco designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of Television Receivers.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. No Special Mountings are Negessary; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

## Single and Dual PADDERS

El-Menco Padding, Condensers have been acclaimed by engineers as the finest development in adjustable mica condensers.
The construction is such as to completely enclose and protect the delicate edges of the mica films, made of the finest quality clear India ruby mica.
The phosphor bronze adjusting plates assure permanent resilience and freedom from mechanical fatigue. All parts are heavily plated to resist corrosion.

# ARCO ELECTRONICS, INC. EL-MENCO CAPACITORS 

## TYPE 46 TRIMMER

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.
The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.
El-Menco Thimming Condensers are treated for resistance to humidity and for permanence of capacity setting.
Trimmers shown here are standard sizes and capacities.

## EL-MENCO FUSED PLUC

They're all saying again, "It's a wonder no one thought of it before." Here's a plug that carries its ou'n fuses.
It attaches to the cord just as any standard plug, looks pretty much the same, light-weight, but easier to handle because of finger grips. However, it contains two small fuses, which provide complete protection against damage to the appliance and to the main line.

Blown fuses are easily removable; replacements are available up to 10 amperes.

Fuses Available Wherever Electrical Supplles Are Sold

REMOVE FUSES
IN A JIFFY

REPLACE FUSES INSTANTLY

POLARIZED BLADE can be supplied instead of regular blades, upon request-no extra cost.

# DURANITE MOLDED TUBULAR 

 CAPACITORS

## Type P 88

Toughest capacitors ever offered critical operators of radioelectronic equipment．Not just another plastic tubular，DURANITE capacitors are entirely new－in design．im nlque provides glove．ftting contact and seal throughout．No danger of voides． DUPANITE providea a Derm
Dukan rock－bard casing smant，non surface DURANITE does not dry out lea not develop cracks or fissures．Pigtan leads firmly imbedded，won＇t pull out，won＇t work loose．Pull tests no longer are a problem． Wire will break before it can be loosened

DUZANITE capacitors are really mole cureproof．They stand up at high igmpera－ uures．Operation from sub－zero to over $212^{\circ} \mathrm{F}$ ．Exposure to temperatures of $280^{\circ} \mathrm{F}$ whin not impa！r life or performance．Tem－ perature co－efincient of capacities simitar to way and on capacitors．The new AEROL－ ENK impregnant eilminates necessity of stocking and uring both wax and oll capac－ tors．One impregnant does the work of both．DUHANITE capacitors show no deterloration in stock，may be atored in advance of actual use，with corresponding economy and conventence．Emaller dimen－ sions than the usual paper tubulars．

## HIGH－VOLTAGE

TUBULAR PAPER CAPACITORS OIL－IMPREGNATED WAX－SEALED

## Type 84

These Type 84 capacitors，rated from 2500 to 10,000 voits D．C．Working，are designed to meet the elevated peaks and transients encountered In television and other cathorte ray tube appltcations，and to redace the tects of corona．
This series of high－voltage，oil－impreg impregnated，to wer－valtage Type 84 llne described on pase 9 ratal up 101600 volt d．c．workiug．
Although these high－voltage unitg are sim ilar in general appearance－with impreg． nuted capacitor sections encased in tubular paper jackets and suppited with tinned wire seal for longer life under the operating con－ ditions to which they are subjected．
Type 84 is obtainable with a radial mount． ing band at no extra cost

## Type 89

Type 89 capacitors are immersion－proof． oll－impregnated，ofl filled untts in handy space－saving tubular form．They are ideal for use in vibrator applications，coupling and by－pass functions in transmitters，high－ voltage amplifiers，in r．f．by－pass circults， radar，televiston，sonar，broadcast trans－ mitters，interference eliminators for motors and generators，and in test equipment．
The oil－impregnated paper section is en－ closed in a corrosion－proof metal case filled with oll and hermetically sealed against on eakage or moisture penetration．
For voltages above 3500 to 6000 volts in． clusive DCW，special terminals are used to provide the necessary creopage distance without Increasing the length．

## INSULATED SCREWMOUNTING CAPACITORS

These capacitors are highest qual ity hermetically-scaled aluminum can units, used in all quality electronic, radio and communications equipment. Constructed with threaded cover, proviled with lock washer and hexagonal nut to provide simple means of mounting capacitor through hole in mounting surface. The capacitor may also be insulated from chassis by use of an insulating washer. Terminals are molded in cover. Single element units lave two terminals; dual-element units have three terminals. Cathode connection in made through one terminal in the cover.

## TUBULAR CARDBOARD CONTAINER CAPACITORS

TYPES PRS－A and PRS－B in Wax－Sealed Cardboard Tubes

PRS－A is multiple－element，common－cathode concen－ trically－wound，with insulated positive leads at one end， and common negative at other．PRS－B，separate－section dual units with separate positive and negative leads for each section．Both types supplied with riveted mount－ ing straps．

TYPE PRS．A
Multiple－Element Concentrically Wound Units with 3 or 4 Leads （One Lead Common）

ASE
CAPACITORS
TYPEAF TWIST-PRONG BASE CAPAC prongs which extend through the mounting surface and are twisted to hold the unit in place. These are high-quality units especially suitable in compact assemblies where space is limited All connections, except the cathode, are made through terminals in the cover. The cathode is connected to the container. Base prongs slip into fibre or metal elliptic washer that is riveted or eyeletted on chassis, and are bent over. Fibre washer provides insulated can; metal elliptic washer, grounded can. Metal or fibre washer supplied at 5 c each net. The terminal lugs slip through holes in washers for soldered connections.

## TYPE AEP PLUG－IN ELECTROLYTIC CAPACITORS

Quick change dry electrolytics．Facilitate testing and replacement in equipment where continuity of service is important Install merely by plugging into standard octal socket．Unit can be inserted only the right way．Key of octal base fits octal socket．Ultra－compact due to use of etched foil for higher capacities in the small can sizes．Aluminum internal construction Non－corrosive due to use of similar metals throughout．Fully vented for safety．

TYPE PWP

TYPE PWC

High－grade paper sections i standard inverted screw mounting aluminum can（PWC）or cardhourd case（PWP）similar in appearance to electrolytics．Used as replace． ments for standard electrolytics in－ dicated；applications subjected to high AO component or ripple par－ ticularly in first stage of filter cir－ cuit；or where excessive surges are encountered．No polarity to be ob－ served．Actual capacity indicated in each case．Capacity is less than electrolytic being replaced but will be foumd adequate in most file cireulits since filtering capacity in elirtmolytics is more than gener ous．PWP has cardboard mounting flanges；PWC similar to the in verted dry electrolytic types．

For most critical applications where precise capacity values must be attained and maintained, AEROrox silvered mica units are generally available. Encased in red mold. ed XM bakelite. Similar in external qpearance to standard lakelite molded mica units.

Unique construction. Only plus .0022 per degree F .-a remarkably low temperature coefficient. Excellent retrace characteristics. I'rac. tically no capacity drift with time. Exceptionally high "Q". Mechan ically protected against physical damage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for use in circuits where inductance and capacity product must remain constant under all operating condi tions. Specifically designed for use in push-hutton tuning, oscillator padding circuits, fixed tuned circuits, and als capacitance standards, etc., where accuracy and stability are of prime importance.

Standard tolerance $\pm 5 \%$. For $\pm 20 \%$ deduct $10 \%$ from price. For $\pm 10 \%$ deduct $5 \%$. For $\pm 3 \%$ add $10 \%$. For $\pm 2 \%$ add $15 \%$. For $\pm 1 \%$ add $25 \%$.

## - Broadensters

- Builders of Quality Radia and Electranic Equipment

## - Amateurs, Experimenters

With these capacitors Aerovox is contributing its share towards narrowing still more the small remaining gap between professional and amateur radio practices.

Due to the normally limited demand for these extra-heary-duty mica capacitors, as well as the considerable number of capacitance and voltage ratings in which they are made, this line is made to special order. However, your Authorized Aerovox Jobber is now able to order these commercial-grade capacitors for you.

Consult your Aerovox Jobber for specifications and quotations.

TUBULAR PAPER CAPACITORS

Type 84
Aerovox cartridge capacitors are especially desirable for use where high grade units are required at low cost. They are compact, noninductively wound and sealed in wax impregnated paper tubes with wax filled ends for longer life ana protection against moisture.

## MIDGET

TUBULAR METAL-CASED 'HYVOL" CAPACITORS

Type 38

These units are hermetically-sealed and are exceptionally compact. Orand are exceptionally compact. Or-
iginally designed as alternates for mica capacitors hut have since become a standard item in the Aerovox ail-filled capacitor line. Not only used as ruplacements in exist. ing equipment but are especially suitable for newly-designed equipment particularly where allowable weight of the finished assembly and allotteri space is at a minimum. Despite unusual ultra-small size for oil-impregnated, oil-filled capacitors, constructional and electrical characteristics meet many of the exacting conditions to which molded-in-bakelite mica capacitors are normally subjected. Type 38 units are normally supplied with case insulaten, and are provided
with outer insulating tube.

high-VOLTAGE TRANSMITTER TYPE D.C. CAPACITORS

## Type 20

$6,000 \mathrm{v}$. D.C. Work. to $50,000 \mathrm{v}$. D.C. Work.

These capacitors meet the exacting requirements of radio trans mitter service and ouher applications requiring high-voltage, heary duty, transmitter-type oil capacitors. Available in ratings from 6000 allel-section standards of capacitors. Type 20 units are critically checked to close stampards of physical and electrical perfection. Capacitor sections consist of muiti-layered capacitor tissues und high-purity aluminum foil uniformy and accuratels wound under critically-controlled tension, then vacuum-impregnated with Aerovox H wol to insure stability of full-rated capacitance, even at zero temperatures. Welded steel containers finished in non-corrosive, dark grey lacquer. Heavy-duty porcelain insulator assmbly is cork-gasketed and pressure sealed to prevent lakage of oil or entrance of moisture at the terminals Singlesection units rated at 30 KV or less are normally supplied with capacitor section insulater from ground. Additional information on Type 20 nnits rated at 37,500 volts and 50,000 volts, well an wolt doubler units rated at 25.000 volts output is available on application All Type 20 units are built to special order-not carried in stock. Submit full application information when ordering.

## COMPACT

HERMETICALLY-SEALED OIL-IMPREGNATED, OIL-FILLED "HYVOL" CAPACITORS

## Type 167

(Terminals on Top)
Compact, oil-
 filled, hermeticfor least space and $m$ in imum weight are essential. Corro-sion-proof metal container. Speproof terminals lesigned for equipment sulijected to severe atmospheric and climatic conditions. Suitable for by-pass and hiter applications in receiver's and low-power transmitters.

hermetically-sealed OIL-IMPREGNATED, OIL-FILLED "HYYOL" CAPACITORS Type 18B
(Terminals on Bottom)

Compact, oil-filled, hermeticallysealed units. Type 18 is smaller in height and depth than Type 16 . However, greater width makes Type 18 adaptable for applications where small-sized dual- and triple-section capacitors with three terminals are reguiret. Otherwise, similar to Type 16 with respect to construction and application.

## CUSTOM-BUILT PAPER CAPACITORS TO MEET YOUR SPECIAL NEEDS -

If your paper capacitor needs are most unusual, AEROVOX will work with you in designing and producing special types. With many basic types to draw upon-a wide choice of containers, terminals, mountings, sizes, etc,-we can quickly and economically proluce out-of-the-ordinary capacitors to meet those extraordinary requirements. Address your inquiry to Aerovox Engineering Department. New Bedford, Mass

# 'PYROHM JUNIOR' <br> Wire-Wound Vitreous-Enameled FIXED RESISTORS 

Types 931 and 933

Compact, genuine wite-waund units. Covered with vitreous-enamel. Highest quality materials used throughout. Correctly designed Note these features:

1. Crack-proof refractory tubing for the support. Adequate heat dissipation.
2. Quality resistance wire precisely space wound under tension.
3. Copper terminal band clamped to tubing. Wire ends wrapped about raised ear and brazed to same.
4. Ileavy vitreous-enamel coating for permanent seal against moisture, oxidation and mechanical damage.
5. Pig-tail of stiff wire 2 in . long soldered to terminal band for positive, non-breakable connection.

Type 933-20 Watts Size-Ins. 昜 $\times 2$

## TEST INSTRUMENTS

## AEROVOX CAPACITANCE AND RESISTANCE BRIDGE

AEROVOX MODEL 76 Resistance Capacitance Bridge is the new postwar general-utility instrument combining simplicity of operation, remarkable degree of accuracy, and modest price. Extrene ruggedness makes it equally suitable out on the job, in the shop, or in the laboratory

Sloping panel $10^{\prime \prime} \times 6^{\prime \prime}$. Aluminum, etched and anodized. Steel cabinet, black crackle finish. All readings taken from main $4^{\prime \prime}$ dial. Same calibrated scale eliminates trouble and chances for errors in reading. Linear scale, also an exclusive feature, means no crowding at high end to make readings difficult and inaccurate. Both the resistance and the capacitance readings are covered by six overlapping ranges, as aginst two or three in usual service instruments, for maximum sensitivity and accuracy. Positive "magic eye" indicator.

Here is what Model 76 Bridge does: (1) Measures capacitance from 100 numf. to 200 mfd . in six ranges. (2) Measures resistance from 10 ohms to 20 megohms in six ranges. (3) Measures power factor from 0 to $50 \%$. (4) Provides D.S. polarizing potential for leakage measurements, from 0 to 600 V . D.C., continuously variable and calibrated in volts. (5) Checks leakage or insulation resistance.

Instrument is provided with shockproof. color-coded test leads fitted with banana plugs for panel jacks, and with clips. Instructions. Measures $10^{\prime \prime} \times 73 / 4^{\prime \prime} \times 81 / 4^{\prime \prime}$. Weight 8 lbs 3 oz .

## AEROVOX L.C CHECKER

$\star$ This exclusive Aerovox development has no counterpart, much less an equal. Basically, it determines the effectiveness of any capacitance or inductance while actually connected in its circuit. Testing efficiency is greatly increased. Components may be tested singly or in combinations whereby to determine resonant frequency and effectiveness of given circuits. Circuit or systems may be adjusted by this checking means for proper operating efficiency. Certainly a "must" instrument for the radio worker.

## here's a partial listing of what the AEROVOX L-C CHECKER DOES:

It checks capacitance of capacitors at radio frequencies without removing them from circuit. - It checks alignment of r.f. circuits; also tracking of super-het. oscillator. - It checks alignment of broad and narrow band i.f. amplifiers. - It checks the tuning of wave traps and of image-rejection circuits; frequency ranges of receivers; frequency ranges of signal generators; calibration of wave meter. - Identifies harmonics of frequency standard in precision frequency calibration of radio equipment. - It checks natural resonant points of r.f. chokes making sure they are beyond operating range. - It traces resonant absorption trouble in "all-wave" receiver circuits-locating dead spots, etc. - It locates resonant points in shorted windings (unused coils) in multi-range oscillators, etc. - Locates resonant frequency of r.f. coupling chokes, making certain of placement to secure enough gain balance over tuning range of r.f.stage - It checks natural period of antennae and transmission lines in
order to have resonant peaks at certain frequencies. - It checks quartz crystals for frequency, false frequency, operation at harmonics, and for activity. - Checks FM i.f. transformers. - Checks alignment of FM i.f. channels. Checks leakage of paper capacitors. And it checks many other functions when used with auxiliary equipment. This checker operates from AC or from DC 120 volts source. It has a frequency range from 100 KC to 44 MC as follows:

## Model No. 96

 $\$ 44.75$Net, Each

Range: A - $75-225 \mathrm{KC}$

$$
\mathrm{B}-200-600 \mathrm{KC}
$$

$$
\mathrm{C}-550-1650 \mathrm{KC}
$$

$$
\begin{aligned}
& \mathrm{D}-1.5-5 \mathrm{MC} \\
& \mathrm{E}-4.5-14.5 \mathrm{MC} \\
& \mathrm{~F}-13-44 \mathrm{MC}
\end{aligned}
$$

Capacitance Range: . 00025 mfds. 1 mfd .
Inductance Range: $0-500 \mathrm{MH}$
Tube Complement: 6J5G, 25Z5, 6E5, VR105
Accuracy: Capacitance and Inductance $\pm 10 \%$
Frequency Ranges $\mathrm{A}, \mathrm{B}, \mathrm{C}: \pm 1 \%$
Other Ranges: $\pm 2.5 \%$
Dimensions: $101 / 2 \times 71 / 2 \times 51 / 2$
This new model L-C Checker has provisions for determining the insulation resistance of capacitors in addition to the measurements described in bulletin 995A.

Weight: (shipping) 6 lls .

# P <br>  

- This is a postscript. This page contains several new Aerovox products recently introduced and not as yet cataloged. These special-duty capacitors are of particular interest to advanced radio workers, builders of special equipment, experimenters and engineers.
Other new products are being announced from
time to time. Aerovox engineering is keeping abreast of the rapid advances of the racio-electronic art? Therefore, if you do not see what you need in these pages, tell us about. your unusual needs. Aerovox either has a type already developed and in production, or will consider an entirely new type if war: ranted by the anticipated demand.

## LOW-INDUGTANCE MICA CAPACITOR

AEROVOX SERIES 1690 is a molded-inbakelite mica capacitor designed for exceptionally low loss operation at ultra high frequencles. External evidence of tts efficiency is offered by the rounded hardware-round nuts, round washers and spherical lock nuts ellminating sharp edges and corners that cause corona losser. The use of fine threads for the terminal studs insures maximum contact and minimum r.f. resistance. Silver plating of all conducting members minimizes skim resistance. The body is of XM or sellow low-loss bakelite. Internally, the mica stack is designed for a straight-line path for high frequencles.
This type is sereral times larger than the conventional molded-in-bakelite transmitting
micas. Body dimensions are 23 "/alde $\mathbf{I}$ 2-3/16" deep $\mathbf{x} 13 / /^{\prime \prime}$ high, and $43 / 4^{\prime \prime}$ overall between rounded terminal tips.
Units are available in ratings up to 20,000 volts D.C. Test or 10,000 rolts operating. and in capacitance values up to .001 mid . at the highest roltage rating.
This type has been dereloped specifically for lower r.f. resistance and impedance, thereby providing increased KVA ratings for given size. Such units can be adrantageously applied as blocking capacitors in transmission lines, as tank capacitors for high-frequency oscillators, as by-pass capacitors for ultra-high-frequency energy, and as coupling or by-pass capacitors in induction-heating circuits.

## WATER-COOLED MICA CAPACITOR

AEROVOX SERIES 1780 water-cooled mica capacitor is available for extra-heary duty service such as high-power transmitters and induction furnaces. The watercooling feature boosts the KVA rating by a factor of five or more, or conversely, greatly reduces the bulk for given rating.

The higher KVA ratings ate obtained in two ways: First, by exceptional design such as eriticar arrangement and location of mica sections; critical selection of materials; specially-plated parts; large crosssection of conductors; attention to details. Secoud, by the use of a water-cooling system so designed as to provide maximum heat transfer from capacitor to cooling coils.

The mica stacks arc in an oil bath. Cooling coils in the oil luath provide for the efficient transfer of heat. What this cooling system means may be judged from the fact that a unit handling 200 KYA for
aircooled operations steps up to 1000 KVA with water-cooling.

The series-parallel mica stack is designed for uniform current distribution throughout. There is a large factor of safety. Silver-plated hardware minimizes skin resistance. Terminals are furnished with large radii of curvature to minimize and even eliminate corona. The steatite insulator is shaped to hold gradients below corona limits.

Heavy non-terrous welded metal case, hermetically-sealed and grounded. Sidemounted nipples for connecting watercooling hose. Sturdy mounting flanges. l'rovisions for making connectious with high-current-capacity conductors. Fourstud terminal for low-loss connections.

Available in ratings up to 25,000 volts A.C. Test, and in capacitances up to .01 mid .

## ULTRA-HIGH-FREQUENCY CAPACITORS

AEROVOX SERIES 1860 and 1805 are engineered and especially recommended for use in ultra-high-frequency radio equipment such as television and FM transmitter, as well as other miscellaneous applications in the u.h.f. field. In such applications they are readily adaptable for use as fixed-tuning capacitors, bypass blocking, coupling, neutralizing and antenna-series capacitors.

Losses are extremely low, due to the highly refined sulphur dielectric. Corona insses are ayoided by the unique construction design, the grounded case and the terminal on each type.

Series 1860 (not illustrated) is the smaller unit in an aluminum can, intended more for the radio amateur and experimenter, and for low-cost assemblies. It has a suitally plated brass terminal mounted on a mica insulating plate. Available in four types: . 0001 mfd ., $10,000 \mathrm{v} .$. ; $.000025 \mathrm{mfd} ., 10,000$ v.; . 00005,5000 v.; $.00005,10,000$ v. Voltage is Peak Working Volts.

Series 1865 (illustrated) is the larger unit, in a cast aluminum case with steatite insulator supporting the higher-voltage terminal. Available in capacitances from .00002 to .000125 mfd , at 10 . 000 v .

## SERIES 'M' COMPOSITION-ELEMENT CONTROLS

Compactness-yet without sacrificing operating efficiency and long service life. Only $11 / \mathbf{g}^{\prime \prime}$ dia. hy ${ }^{\prime \prime}{ }^{\prime \prime}$ deep (with iwitch, $7 / 8$ " deep)

Utilizes the exclusive Clarostat stabilized element, insuring the control's constancy in all weather and in all climates. Many years of painstaking research and experience are incorporated into the design of Clarostat Series " $M$ " controls, assuring the user of the lest results at all times.

The original Clarostat "Ad-A-Switch" feature makes it possible to adapt any of the Series "A" switches quickly to any M, AM, T and AT controls. Furthermore, for high-voltage television, oscillograph or other elec. tronic circuits, the new Clarostat Series 60 HighVoltage Coupling Unit can be attached to all Clarostat controls (illustrated below) to assure safety at elevated voltages. The cost of this added feature is quite moderate. High-voltage couplers are installed at Dia.: $11 / \mathrm{s}^{\prime \prime}$. Shaft:21/8". Soft factory only.

Standard Packing - 10 (ten) per carton

## SERIES 'T' TAPPED CONTROLS

## With the Original Ad-A-Switch Feature

$\star$ There are many circuits in which the use of a tapped control affiords special functional operation not possible or attainable with any other type of control. These standard units listed herewith permit replacement of tapped units with the assurance that the total overall resistance value as well as the taps satisfactorily substitute for the original.

| $\frac{\text { Cat, No. }}{\text { T-25 }}$ | $\frac{\text { Ohms }}{50,000}$ | Tap No. 1 | Tap No. 2 | Tap No. 3 | Cat. No. | Ohms | Tap No. 1 | Tap No. 2 | Tap No. 3 |

## CLAROSTAT

## SERIES "AM" AND "AT" UNIVERSAL PICK-A-SHAFT CONTROLS

 Standard and Tapped for Every Service Need- These universal controls are built to the same exacting specifications as Series "M" and "T". However, instead of having the usual integral shaft, these controls include the Clarostat "lick-A-Shaft" feature wherely a choice of shafts may be used with any of these controls. This ingenious feature elimi-
nates the stocking of special-shaft units. Instead, the Series "AM" or Series "AT" (tapped unit) takes the particular type of shaft desired by merely inserting such a slaft so that the spring washer suajs into the groove provided in the shaft.

One selected shaft furnished FREE with each Pick-A-Slaft control.

## CLAROSSTAT

## MIDGET (15/16" dia.) CONTROLS

* Yes, sir - Clarostat has it first - the smaller, handier f $^{\prime \prime}$ control for tight spots. And it's a beauty. Note the trim lines. Nothing sacrificed by way of electrical and mechanical sturdiness and dependability. This is an entirely NEW control, developed from scratch, to meet the need of a more compact control of standard performance. Dimensions: $\psi_{5}{ }^{\prime \prime}$ diameter $\times 29 / 64^{\prime \prime}$ deep. With switch, $49 / 64^{\prime \prime}$ deep. $1 / 4^{\prime \prime}$ long, $3 / 8-32$ threaded bushing. Knurled shaft $1^{\prime \prime}$ long beyond bushing. Switch units attached at factory.

LIST PRICE $\$ 3.10$
Standard packing-Individual carton

## ROTARY SWITCHES

$\star$ Compact, positive contact, bakelite molded and Underwriters' approved. Rated 1 Amp. 250 volt; 3 Amp. 125 volt. The physical dimensions of the switch are as follows:

Diameter $1_{3^{\prime}{ }^{\prime \prime}}$ ", body depth $\frac{9}{16 "}$, lug protrusion $1 / 4^{\prime \prime}$, locking projection on a ${ }^{3} z^{\prime \prime}$ radius, rotation for actuation 30 degrees.

All standard stock numbers have $\$ / 8^{\prime \prime}$ bushing, $11 / 2^{\prime \prime}$ length shaft, and one locking projection.

## POWER RESISTOR DECADE BOX

* A "Must" for Every Laboratory Power resistance measurements under actual load conditions. Just imagine being able to obtain ANY VALUE OF RESISTANCE from 1 ohm to 999.999 ohms IN STEPS OF ONE OHM, and at a POWER

NET PRICE \$90.00*
tories, engineering offices, plants, maintenance and service departments, and in schools.

Finish: Heavy-gauge metal case finished in frosted gray wrinkle. with etched black-and-aluminum front panel.

RATING OF 225 WATTS using a maximum of 1000 volts DC ( 660 volts AC ) !

Intended primarily for laboratory use and development engineering. Simplifies and expedites the selection of correct resistance values for given circuits and functions. These instruments are in daily use in labora-

Dimensions: 13 in. long; $81 / 2$ in. deep; $53 / 4$ in. high. Weight, 11 lbs.

Suggested Uses: Resistance determination. Load Resistance. Meter Multiplier. Calibrating Meters. Providing any desired ohmage as a universal power resistor.

## CLAROSTAT

## SERIES 43 MIDGET WIRE-WOUND CONTROLS

$\star$ A space-saving control of the wire-wound type. Similar in mechanical details and dimensions to the composition-element Series M control (page R-1). Pre-cision-wound alloy wire on bakelite strip. Rotor sweeps over inside face of winding. Special lubricant for minimized frictional drag and wear. Molded bakelite casing-high resistance to leakage. Protective metal cover (as shown in illustration). Only $11 / \mathbf{s}^{\prime \prime}$ dia. Body Depth, $\frac{9}{1 \hbar \prime \prime} ; 7{ }^{\prime \prime}$ deep with switch. $3 /{ }^{\prime \prime}$ bushing. Shaft $11 / 2^{\prime \prime}$ long. All switches perma-
 nently attached at factory.

## SERIES 58 WIRE-WOUND CONTROLS

* Sturdy and reliable in construction yet capable of use for delicate control work, Series 58 Controls are without equal. Noiseless in operation, these units are standard equipment in laboratories. fine instruments, electronic equipment, and especially in the control rooms of radio stations and networks.

The switch is located to operate at extreme counter-clockwise rotation of the shaft. Moving element is insulated from mounting bushing and shaft, and is tested at 500 volts A.C. There is no danger of accidental shock or short-circuit.

If power switch is desired, the type of switch must be specified (See page R-1). Order as 58S and add to list the price of switch selected. The S.P.S.T. switch is supplied as standard where no type is specified. All switches are permanently fastened to the control at the factory.

Standard packing-10 (ten) per carton.

* These units are $1^{\prime \prime}$ in depth and are the Clarostat Series 10.

## BEAM BENDER

* Simplicity and economy mark use of the Clarostat Beam Bender in connection with television cathode-ray tubes requiring some external means of controlling loose
 ions. Entirely self-contained. Applied without tools. Three spring fingers provide frictional yet adjustable fit on neck of usual $10^{\prime \prime}$ tube. Permanent ring magnets provide magnetic flux proportional to required beam-bending function in the tube. Individually packaged. Cat. No. TV-1 - List Price $\$ 3.00$

* Most replacements for least parts stock? Fastest moving items. No duds. Every item a "must" in evervday servicing. Neatly packed in handsome green steel box with hinged top. Handy as filing cabinet, strong box. odds-and-ends box, etc. Contains 6 ballast tubes; 12 volme controls; 4 AD-A-Switches; 5 Greenohms; Dural Hand-D-Wrench; Authorized Service plaque: Data. A $\$ 30.15$ value for only: Kit No. 5
\$15.07 Net Cost*

## CLAR(O)STAT

## CONSTANT IMPEDANCE CONTROLS

* Self-compeneating volume controls or attenuators known as L-pats and T-pads are essential in eliminating the distortion that arises from the mismatching of impedances in broadeast transmission, sound recorring or public address systems. With Clarostat constant-impedance L-parls and T-pads the input and output imperlances of associated equipment in a circuit can le kept within the limits of a constant required value.

These pads lave a continuous range from 0.5 to $\mathbf{3 0}$ decibels attenuation in $90 \%$ of rotation, the last $10 \%$ affording
infinite attenmation. Employable at either the source or the load in a circuit (see diagrams) these units are readily one-hole mounted. They afford a wide range of uses as mixers, faders, multiple-speaker controls, etc. Such controls can be used as individual volume controls for multiplespeaker systems, without affecting or changing the source impedance.

These units are rated at $21 / 2$ watts when used on DC or constant frequency signals. However, they have succesafully been used up to 10 watts on audio circuits.

Series CIL-58 L-pads are connected as her
shown.

## SERIES CIT Wire-Wound T-Pads

## SERIES CIL

 Wire-Wound L-Pads
db steps are 3, 6, 9 . 12, 15, 18, 21, 24 and 30. Absolutely noiseless and distortlonless in operation.
$\rightarrow$ Developed to meet the need for constant-impelance attenuator capable of handling considerable power without measurable insertion loss, Series CIB attenuators provide linear a ttenuation with ample power-handling capacity.
These units are rated at 10 watts when used on DC or constant frequency sirnals. However, they have successfully been used up to $\mathbf{3 0}$ successfuny been used
watts on audio circuits.

Compact, capable of safely han. dling the rated wattages at any setting of the dial, these units are
ecommended as an output leve control for power amplifiers or as an input attenuator tor individual or group speakers in a public address system. Linear attenuation is provided in steps of 3 decibels up to 30 , with final step to infinity.

Unit is furnished in black baked enamel metal casing, $2^{\prime \prime}$ in diameter by $23 / 4$ " long, equipped with dial plate and bar knob. Not available with power switch. One-hole mounting ${ }^{3 / 8} /{ }^{\prime \prime}$ diameter bushing. Shaft

## CONSTANT IMPEDANCE OUTPUT ATTENUATORS

## POWER RHEOSTATS

$\star$ Exceptionally rugged. Troublefree design. Withstand severe overloading without smoking, burning, charring. Element imbedded in cold-betting cement. Resistance winding supported on insulated metal core for maximum heat conduction and radiation, even at parial rotation settings. Singlehole mounting. Adjustable locking pin firmly anchors unit against bodily rotation. Shaft and bushing insulated from current-carrying anm for safety. 25 and 50 watt sizes.

$23^{*} 55-\mathrm{E}$
$23^{*} 55-\mathrm{F}$
$60^{*} 02-\mathrm{A}$
$60^{*} 92-\mathrm{F}$
$60^{*} 92-\mathrm{F}$
$03^{*} 105-A$

* Clarostat developed and pioneered the tube-type resistor for voltage-reduciny purposes ami for sup plying needed voltase for pilot lamp operation in AC-DC receivers. Strictly nor-inflammable, with the resistance element wound on a mica form firmly coured in tlement wound on conmected with thi ccured in the metal tabe and connecten with the ase pronos, the clarostat construction is notably

To simplify servicing of reersal numbers serving most r. sistor tubes of the most popula

In connection with listings, the

L denotes 6.3 volt 250 ma
M denotes 6.3 volt 200 ma .
The numeral indicates total roltage drop across resistance

UNIVERSAL RESISTOR TUBES

culfixes designate:
A-No pilot lamp taps
1B-1 pilot lamp tap for 1 lamp.
© - 1 pilot lamp tap for 2 lamps. D - 1 pilot lamp tap for 2 lamps. $\mathrm{D}-3$ pilot lamp tays for 2 lamps. $\mathrm{E}-3$ pilot lamp taps for 3 lamps.
$\mathrm{F}-1$ pilot lamp tap for 1 lamp.
Q - 1 pilot lamp tap for 2 pilot
lamps. (Tapped sections isolated from main rerlucing body.)
i[ -2 pilot lamp taps fur 2 pilot lamps. (Tapped section isolated from main reducing body.)
The letter " $J$ " following any of the suflixes denotes a shorted connection beween 2 prongs of the titbe, i.e., K-6T-BJ the short is located between Nos. 3 and 4 prongs.

Care must be exercised when replacing any tube whose number ends in " J ", as the shorted pins are not always as in above example. Some are letwen Nos. 6 ant 7 prongs, and others between 5 and 3.
When replacing any plug-in resistor tube with a Clarostat Eniversal type, note prongs missing on replaced tube and cut coff correspondiner prongs on the Universal Replacement tulo.
The numeral inrlicates total voltage frop across resistance unit.

## TELEVISION BALLASTS

* 17A470303 for Motorola Television Set No. VT-71. List Price $\$ 3.00$
**397021 for Emerson Television Set No. 571-606. List Price $\$ 3.00$ * This Emerson ballast tube is used as a protective resistor and any internal failure in the circuit may cause this unit to burn out and therefore this unit is expendable. Standard Packing - 10 (ten) per carton

## GLASOHMS* <br> Glass-Insulated Flexible Resistors

$\downarrow$ This is a new development in resistors which has found instant acceptance in widespread applications.
Glasohms consist of a wire winding on a fibreglass core, with a covering of braided fibre-glass, Each strand of glass is no thicker than usual cotton thread and just as flexible, so that the complete units can be bent or twisted and even knotted without breakage or weakening. Clarostat is the only manufacturer of Glasohms. These units are ideal for resistance boxes, attenuators, voltage-dividers, multipliers, step-bystep rheostats, and for use in point-to-point wiring jobs. Handy, inexpensive and very durable, these units can withstand heavy overloads without damage. There is nothing in them to burn or char. Glasolıms are also suitable for use as miniature heating elements serving in hair curlers, immersion heaters, soldering irons, electrically-heated ovens for crystal oscillators, etc., especially in longer lengths obtained on special orders.
*Registered trade-mark.

## AUTOMATIC LINE VOLTAGE REGULATORS

$\star$ To maintain constant line voltage and thus prevent burning out the tubes of a radio receiver or other tube-using device, this handy unit, operating effectively on 110 -volt A.C. or D.C. by simply plugging into the usual socket or outlet, safeguards against line voltage surges or increases even up to 140 volts. At the normal 110 -volt, the resistance of the unit is low and the voltage drop across it is negligible. How aver, as the line voltage inereases the resistance of the unit increases proportionately, with a constant increase in voltage drop across it. This automatic voltage control or ballast action insures a steady, practically constant and always safe operating potential.

## FAMOUS GREENOHMS - WIRE-WOUND FIXED POWER RESISTORS

$\star$ The toughest power resistors made. Will dissipate heat without change in resistance value. Will with. stand heavy overloads, humidity, high-heat, and severe heat shock (frequent on-and-off operation). Due to the exclusive CLAROSTAT inorganic-cement coating,
these resistors can be given the tourhest assignments and will come through with flying colors. Greenohms are found in the finest electrical, radio and industrial assemblies - in equipment that must stand up for functions where failure cannot be tolerated.

## GREENOHM JR. WIRE-WOUND RESISTORS

$\star$ Handy, inexpensive, ceramic-cased midget wirn-wound resistors for tight spots, especially with point-topoint wiring, These tiny resistors take the place of more cumbersome and costlier bracket-mounted units. This "junior", version of the well-known Greenolim power resistors features a wire winding on fibre-glass corr, $11 /{ }^{\prime \prime}$ " axial pigtail leads. and a statite protective casing sealed with exclusice Greenolm cold-setting inorganir cement. This resistor will not bister, crack, or change shape. Type C7GJ, $13 / 4^{\prime \prime}$ long by $\mathbf{5}^{5 / 1}$ dia., rated at $i^{\prime}$ watts. Smaller Type C4GJ, $1^{\prime \prime}$ long by ${ }^{\prime}{ }^{\prime \prime \prime}$ dia., rated at 4 watts. In claracteristic Greenohm green, with printed values on casing.

* These power resistors feature the exclusive Clarostat inorganic cement coating and are similar in rugged construction to the fixed types on page R-7. except for the bared section of the winding contacted at any ohmage by the adjustable slicler band. This band is permanently locked in place at the required resistance value by simply tightening a screw.

## GREENOHM KIT

- Here's a simple means of keeping 20 of the most popular 10 -watt power resistors always at your finger-tips. Each Greenohm is held by metal clip on the wall chart. Slide off unit and value appears on wall chart, for liandy reordering.
Cat. No. GK-1
LIST PRICE $\$ 11.00$

## DIMENSIONS

Fixed and Adjustable Greenohms are of the same dimensions, wattage for wattage, as follows:

| Rat | Dia. Lg |
| :---: | :---: |
| - watt | $\mathrm{fr}^{\prime \prime} \mathrm{X}$ 13/4" |
| 20-watt | $\frac{9}{111}{ }^{\prime \prime} \mathrm{x}$ |
| 25-watt | $\frac{9}{18}{ }^{\prime \prime} \times 21 / 2^{\prime \prime}$ |
| 40-wa | $3 / 4^{\prime \prime} \times 31 / 2$ |
| 50 -wa | $3 / 4{ }^{\prime \prime} \mathrm{x}$ |
| 80 -watt | $3 / 4{ }^{\prime \prime} \mathrm{x}$ |
| 100-watt | $11 / 8{ }^{\prime \prime} \mathrm{x}$ |
| 160-watt | $11 / 8^{\prime \prime} \times 81 / 2^{\prime \prime}$ |
| 200-watt | $11 / 8 " \times 101 / 2$ |

# LECIVitreots Enameled 

Quality—Accuracy—Dependability—Long Life

# WIRE WOUND ADJUSTABLE TYPES 

The same high quality and construction are used for LECTROHM Adjustable Resistors as are incorporated in LECTROHM fixed units.

These resistors are used for replacing voltage dividers in radio receivers, for radio transmitter power supply, and for general experimental work.

## COMPOSITION

"CARBOMITE" M-TYPE RESISTORS
(Actual size as Illustrated)

M2-2 WATT

## M $1 / 2-1 / 2$ WATT

- Meet JAN-R-11 Army-Navy Specification - Low Noise Level; Low Voltage Coefficient - Stamped With Value
- Extra Small Size

## - High Insulation 1000 volt Breakdown

Continental's New "CARBOMITE" bakelite insulated carbon composition resistors are now the standard of Electronic components used in the Radio and Electronic Industries. They meet all specifications of the joint Army-Navy-Jan-R-11 including the toughest of all tests the "Salt water immersion cycling." The "CARBOMITE" M type resistor consists of a solid molded carbon core, outer molded bakelite insulated shell and molded in leads. These resistors being well insulated can be mounted side by side or against any metal surface without shorting or grounding. They are recommended where space limits and insulating quality require a rugged reliable and small resistor capable of withstanding severe service. The lead wires are straight and are tinned with a tin composition heavy enough to give instant soldering with the touch of the heated soldering iron tip. The resistor values are easily identified by the bright non-rubbing off color code bands and the white ink stamped numbers of the value on the body of the resistor. The M2-2 watt, M1-1 watt and the $M 1 / 2-1 / 2$ watt are made in all the standard preferred RMA values as listed in the table below and are packed in quantities of 10 or 50 of each value to the box. Order in these quantities or multiples thereof.

CONTINENTAL D-TYPE

De Luxe Clear Plastic Boxes - Color Code in Each Kit - Strongly Hinged Covers - Values Stamped on Each

These "Pocket-Pac" Kit-Boxes are made of clear durable plastic. The contents can be easily seen thru the walls of the box. A Color Code Indicator and the Box are furnished free with each Kit.

FORTY RESISTOR "POCKET-PAC" KIT VALUES

- Heavy Duty Carbon
- Operate safely on overloads
- Non-inductive

The D-Type resistor with radial leads is made with solid molded carbon rods, copper sprayed on the ends to which are soldered No. 18 copper tinned leads. The soldered contact construction insures a noise-free and stable resistor. They are known as the heavy duty type units because of their size-having a larger radiating area they operate safely on overloads. A baked-on insulation is a protection against shorts to subpanel and wiring.

| Type | Wattage | Size | List Price Tolerance |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\pm 5 \%$ | \$0\% |
| D 4 | 3 Watt |  | $\$ 0.60$ .75 | $\$ 0.40$ .50 |
| D 5 | 5 Watt | $3^{\prime \prime} \times 1 \times{ }^{\prime \prime}{ }^{\prime \prime \prime}$ | . 80 | $\stackrel{.60}{ }$ |
| D 5ST2* | 5 Watt |  | 1.25 | 1.00 |

* D5ST2 units have heavy copper eyeletted and soldered strap terminals $8 / 8^{\prime \prime}$ wide with holes of $2 \mathrm{~g}^{\prime \prime}$ " spacing. The outer holes can be used with either 6-32 screw mounting or solder wire loops, while the inner holes are for $8-32$ screw mounting. The outer section of the terminal can be cut off or bent to any angle desired.

## Precision <br> NTE <br> $A \subset 1$ <br> RESISTORS

X-Type Resistors

## - A new Continental Development!

- Not Wire Wound
- Not carbon!
- Stability of Wire Wound and Equivalent

After several years of research work CONTINENTAL engineers have developed a new resistor involving the metal film principle, having the accuracy of a wire wound unit. Absolutely no carbon whatever is used in the fabrication of these resistors. The metallic resistance film is formed on the surface of a low loss ceramic tube using a patented pyrochemic process.

The metal film thus formed is hermetically sealed by a layer of vitreous enamel specially developed and patented by CONTINENTAL. The ceramic tube with its associated film is then spiralıed to give a long resistance path and to accurately calibrate the unit to value.

Since the ceramic tubes are hollow they allow a larger surface for heat radiation, thus permitting the resistor to withstand overloads of $200 \%$ or better.

The copper-tinned lead terminals are soldered to extremely low resistance metal contact films which in turn are integral with the resistance film, thereby reducing contact resistance to a minimum. This type of construction produces a resistor unit having not only excellent resistance stability but also a negligible noise characteristic.

## ELECTRICAL CHARACTERISTICS OF CONTINENTAL "NOBLELOY X" TYPE RESISTORS

## Voltage

The recommended voltage rating of Continental "NOBLELOY X" type resistors is the maximum r.m.s. voltage which the resistor is expected to withstand in continuous use and is determined from the formula:
$E=\sqrt{\mathrm{WR}}$ Where $\mathbf{E}=$ rated D.C. or r.m.s. A.C. Voltage, $\mathrm{W}=$ watts rating, $\mathrm{R}=$ resistance.
In no case shall the D.C. or r.m.s. A.C. voltage be greater than the maximum voltage shown in the table.

## Load Characteristics

Irrespective of value, Continental "NOBLELOY X" type resistors will not change more than $5.0 \%$ when the load is increased from $2 \%$ of rated wattage to $200 \%$ of rated wattage, and on cooling to room temperature returns to the original value. This is practically the temperature coefficient effect.

## Voltage Characteristics

Voltage coefficient does not exceed $\frac{1}{10}$ of $1 \%$.
Normal Load Life Characteristics (All Values)
The permanent change in resistance will not be more than $1.0 \%$ when the resistor is subjected to a normal life test of 1000 hours.

Overload Life Characteristics (All Values)
The permanent change in resistance will not be more than $2.0 \%$ when the resistor is subject to $200 \%$ of rated wattage for a period of 1000 hours.
Temperature Coefficient (All Values)
The temperature coefficient of resistance will not exceed 0.0005 (. 05 per degree Centigrade) Negative.
Humidity Characteristics (All Values 1.0 Ohm to 15 Megohms)
Continental "NOBLELOY X" type resistors will not change more than $1.5 \%$ when conditioned in an atmosphere of $100 \%$ relative humidity at $40^{\circ} \mathrm{C}$. ambient, for a period of 1000 hours.

## Shelf Life

When stored under normal conditions, the resistance will not change more than $0.1 \%$ during a period of 2000 hours. This is a negligible change.
Noise Characteristic
When tested for noise according to standard R.M.A. procedure, the inherent noise level will not exceed $1 / 4$ microvolt per volt, irrespective of resistance value. This level is equal to wire wounds.

## Finish

All "X" type resistors possess a smooth, uniform coating of a special rubberized enamel capable of resisting deterioration up to and including $400^{\circ} \mathrm{F}$.

## FILTERNOYS Paper Condensers

EE TYPE

CONTINENTAL Carbon Model E condensers are high quality, paper dielectric capacitors built in shapes and sizes equivalent to electrolytic capacitors commonly found in radio receivers. They are flash tested at 3 times their d.c. working voltage and have the advantage of low power factor at 60 cycles. They are noninductive, non-polarized, and are of permanent capacity. No active chemicals are used which could cause corrosion of the foil or leakage. The tabulations below show the actual capacity in microfarads and the rated sizes of electrolytic condensers occupying the same dimensions. Recommended for use on d.c. and rectified a.c. only. Model E, d.c. working volts, 600 ; peak volts, 1000.

## FILTERNOYS FO2GH <br> Most Popular and Universal Plug-in Type FOR ELECTRIC RAZORS

## SUPPRESSION TYPE

Handy plug-in type suppressor with two r-f chokes, two condensers, and a ground lead for use on electrical devices of 300 watts or less, creating interference of intermitten or temporary character, such as a sewing machine motor, small electric washing machines, electric shavers, drink mixers, cash registers, adding ma-
 chines, or electric typewriters. Size $25 / 8^{\prime \prime}$ by $13 / 8^{\prime \prime}$ diameter. 300 -Watt capacity on 120 volts, a.c. or d.c.
Filternoys F02GH . . . . . . . . . . . . . . . . . List Price $\$ 2.00$

## FILTERNOYS GO5D, G01D

Designed to Be Mounted Directly on Small Electrical Devices

Filternoys G05D has two 0.5 Mfd. condensers, one connected to each lead and the other ends grounded to the can at a common point. This Filternoys can be connected across each pair of brushes of generators, motors and the line wires of all stationary electric devices. Rating: 115-230 Volts a.c. or d.c.
G05D-Size $21 / 4 \times 1$,
List Price $\$ 1.50$

Filternoys Diverter G01D -Dual capacitors in a grounded container for any size electric motor operating on 120 v . or less. Through making use of the field coils as chokes, this is a most effective method to silence a noisy a.c. or d.c. motor. Size $1^{7 / 8 " x} 5 / 8^{\prime \prime}$ diameter. Shock Proof.
G01D . . . . List Price $\mathbf{\$ 0 . 7 5}$

## FILTERNOYS F18

Filternoys Diverter F18 is a compact 0.1 mfd capacitor in a conveniently small bakelite plug-in coupler for use across domestic power lines in which
 the neutral wire is grounded. The capacitor diverts interference from the high potential side of the power line to the grounded neutral side. Use on floor or table lamps, cigarette lighters, and the radio.

F18. $\qquad$

ALL SPARK PLUG SUPPRESSORS AND DISTRIBUTOR SUPPRESSORS EACH LIST PRICE \$0.30

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and hightension distributor-yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of $10,000 \mathrm{ohms}$ has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

## WIRT <br> WIRE WOUND FIXED RESISTORS

## WIRE WOUND FIXED RESISTORS

To satisfy the most exacting needs of the Radio and Electronic Industries, Wirt Fixed Wire-wound Resistors are regularly furnished in PHENOCOTE protective coatings, developed and steadily improved over a period of many years in the Wirt Laboratories. The resistor wire is space wound on low loss ceramic tubes. The PHENOCOTE covering is an exclusive organic cement coating offering maximum protection to the resistance winding against the detrimental effects of
 moisture, humidity and electrolysis. Absolutely inert chemically, it will not effect the most delicate windings. It is particularly recommended for fine wire sizes and all applications where the maximum temperature of the unit will not exceed $300^{\circ} \mathrm{F}$. These Resistors are universally used in the Radio, Electronic, Instrument, Public Address and Test Equipment fields.

[^37]
## WIRT wim ADJUSTABLE RESISTORS

WIRE WOUND ADJUSTABLE RESISTORS

WIRT Adjustable Resistors are space wound on low loss ceramic tubes to which the resistance wire is bonded, resulting in dependability and long life. Protection of the windings is afforded by the PHENOCOTE covering which is described fully on the preceeding page. One adjustable Slider Band, screw driver type, is furnished as standard. Bakelite knob type bands can be furnished on special order at slightly higher prices as shown below. These bands are made with small contact buttons located on the inside of the band so that a number of taps may be made without shorting out excessive resistance.

TABLE OF SPECIFICATIONS OF ADJUSTABLE RESISTORS

# WIRT MINIATURE RHEOSTATS and POTENTIOMETERS 

## MINIATURE RHEOSTATS AND POTENTIOMETERS

General: WIRT Metal Housed Rheostats and Potentiometers are rugged and compact affording high quality and dependability in operation. Due to size and construction these controls are moderately priced. Housings are made of tinplated steel. Highest quality resistance wire is space wound on specially treated $\downarrow$ laminated phenolic strips. The Phosphor Bronze contact-arm is grounded to the metal casing and all terminals are silver plated. Switches cannot be furnished. These Rheostats and Potentiometers are adaptable to a wide varieity of uses in the Radio Instrument, Electronic and Test Equipment fields. The types available are listed below:
Cat. No. WC801-Two Terminal Rheostat, 2 Watt rating. Resistance Range: 5 ohms to 10,000 ohms with linear winding and standard tolerance of $\pm 15 \%$. Diameter is $11 / s^{\prime \prime}$ and thickness $1 / 2^{\prime \prime}$. Shaft is Cadmium plated steel, grounded to housing. $5 / 32^{\prime \prime}$ from end of bushing and slotted for screw driver adjustment. Brass mounting bushings, $3 / 8^{\prime \prime}-32 \times 1 / 4^{\prime \prime}$ long are standard. Each control is equipped with one $9 / 16^{\prime \prime}$ hex mounting nut. List Price
$\$ 0.90$ Each Cat. No. WC802-Three Terminal Potentiometer. 2 Watt rating. Resistance Range: 5 ohms to 10,000 olms with linear winding and standard tolerance $\pm 15 \%$. All other specifications are the same as those listed under the WC801 control shown above. List Price
\$1.25 Each
Cat. No. WC803-Sensitivity Control, 2 Watt rating. Resistance Range: 5 ohms to 12,000 olms with linear winding and standard tolerance of $\pm 15 \%$. Diameter is $11 / 8^{\prime \prime}$ and thickness is $1 / 2^{\prime \prime}$. A slot is provided in the Rotor mechanism allowing for screw driver adjustment from front only. List Price $\$ 0.50$ Each Cat. No. WC804-Sensitivity Control. Identical with WC803 Control, except provided with an opening in back of control to permit screw driver adjustment from either front or back. List Price
\$0.55 Each
Cat. No. WC807-Miniature Sensitivity Control, 1.5 Watt rating. Resistance Range: 5 ohms to 3000 ohms with uniform winding and standard tolerance of $\pm 15 \%$. A slot is provided in the Rotor mechanism allowing for screw driver adjustment from either front or back. List Price
$\$ 0.50$ Each
Cat. No. WCB507-Insulating Bushing for $3 / 8^{\prime \prime}$ Brass bushing and used with
Cat. Nos. WC801 and WC802 Controls. List Price
$\$ .095$ Each
Cat. No. WCW508-Insulating Washer for $3 / 8^{\prime \prime}$ Brass bushing and used with Cat. Nos. WC801 and WC802 Controls. List Price
\$0.075 Each
 industrial use for control of voltage and to regulate speed or heat it can be wound with a maximum resistance of 300 ohms and can dissipate up to 20 watts with maximum resistance setting. It is adjustable to 8 positions. List..... $\$ 5.00$ Each

## VARIABLE VOLTAGE REGULATOR

Cat. No. 211 - Variable Voltage Regulator is wound with high quality alloy wire on an insulated metal core with the winding encased in Di-El-Ite. It can be used as a Radio Voltage Regulator where the Receiver draws not more than 65 watts. For industrial use it can be wound up to 600 ohms maximum and will dissipate up to 8 watts. It is adjustable to 5 positions.
List Price
$\$ 3.00$ Each
Cat. No. 211-B-Regulator has air-cooling features which promote rapid heat dissipation. When used as a Radio Voltage Regulator the Receiver must not draw more than 150 watts. In

## UTILITY CABINET

Cat. No. UC-Utility Cabinet is constructed of bass wood with corners dadoed and glued for strengtli; varnished and rubbed to give a beautiful finish. It has six drawers, each one liaving three removable partitions. The upper five drawers are $1^{\prime \prime}$ deep and the lower one is $11 / 2^{\prime \prime}$ deep. Overall dimensions of the cabinet are $7^{\prime \prime}$ wide by $55 / 8^{\prime \prime}$ deep by $9^{\prime \prime}$ high, Drawer guides, bottom and partitions are made of three ply laminated wood to prevent warping. Knobs are of wood and securely fastened, It is ideal for the storage of such parts as resistors, condensers, bolts, nuts, washers, small tools, etc. List.
$\$ 8.00$ Each

# SUPPRESSORS and SWITCHES 

## AUTO RADIO IGNITION SUPPRESSORS

Wirt Suppressors are made with moulded black bakelite housings. All metal parts are made of rugged unfinished brass. Terminals are securely fastened to casings and sealed with special moisture and neat resisting dielectric cement. Resistor pills are sprayed with zinc and then double impregnated with a special moistureproofing compound. Resistance value of all standard types is 10000 ohms $\pm 20 \%$; for FV8 types 50000 ohms $\pm 20 \%$. The distributed capacity is less than 1.5 mmf . Resistance values will not change more than $7 \%$ after being submerged in water for 100 hours. Test by sparking 1800 times per minute at 10,000 volts for 100 hours produces resistance change of not more than $3 \%$. Wirt Suppressors are impervious to heat, oil, moisture and mild acids, and will not change in resistance more than $10 \%$ in 50,000 miles of operation.

## WIRT ROTARY AND SLIDE SWITCHES

## Rotary Switches

General: Wirt Rotary Switches are of the quick break type, have positive contact, are rugged and neat in appearance. They are constructed with tin plated steel housings. The outside diameter of the switch is $11 / 8^{\prime \prime}$ and thickness $1 / 2^{\prime \prime}$. Standard bushings are of brass, $3 / 8^{\prime \prime}-32 \mathrm{x} 3 / 8^{\prime \prime}$ long. Steel shafts are $5 / 8{ }^{\prime \prime}$ from end of bushing, and made with a flat. Wiping contacts and terminals are silver plated. Terminals are securely fastened in place. Activating spring is positive in action. One $9 / 16^{\prime \prime}$ hex. nut is furnished. These switches are successfully used in conjunction with Radio, Phonograph, Signal and Instrument Circuits.
Cat. No. Type List Price
SW711 -SPST Rotary Switch, 3A-125V-AC-DC 2 Terminals $\$ 0.90$ Each SW711A-SPDT Rotary Switch, 3A-125V-AC-DC 3 Terminals 1.00 Each

## Slide Switches

General: All Wirt Slide Switches are compact and sturdy. Housings are made of steel and are cadmium plated. The plysical dimensions of the switches lave been standardized, width $35 / 64^{\prime \prime}$, length $1-13 / 32^{\prime \prime}$ and mounting centers $11 / 8^{\prime \prime}$. Standard buttons are of black bakelite. All contacts and terminals are silver plated. Switches SW723 and SW725 are supplied with a dot which indicates the "On" position. These switches are used in the Radio, Signal, Phonograph and Instrument industries.

## MALLORY CONTROLS AND RESISTORS • LIST PRICES

$\star$ Complete descriptions of these parts will be found on the following pages.

## You Get This Cabinet at no Extra Cost When You Purchase the Confrols and Switches af Your Regular Discount

- Treat yourself to a neat, heavy-duty stock cabinet, and simplify your inventory at the same time, with a Mallory Control Deal! Here's how:

You buy a carefully selected assortment of 15 fast-moving controls and 9 popular AC switches all at your regular price. Then, you get the handsome steel cabinet shown above at no extra cost to you! This cabinet contains 15 compartments for your controls, and a roomy drawer to hold your switches, extension shafts, idler pulleys and other accessories. A special built-in rack holds your Mallory Radio Service Encyclopedia which is purchased separately. And a hinged lid snaps shut to hold the controls in place during service calls.

When you use a Mallory Control Deal you get maximum coverage with minimum stock. In more than 9 out of 10 service jobs you will have on hand the control you need. And you can see at a glance which controls you immediately need to re-order.

Best of all-the revolutionary new Mallory Midgetrol is now available in a Mallory Control Deal. And a Mallory Midgetrol improves performance in any set where a $11 / 8^{\prime \prime}$ control was originally used. With your Mallory Midgetrol Deal you get, in addition to the cabinet, extra spring clips, extra U-clips, extra idler pulleys and extra extension shafts. Get started today with the Mallory Midgetrol. Order your deal today!

# THE MALLORY MIDGETROL 

APPLICATION: For volume and tone control in audio circuits. Tapped controls provide tone compensation when required. Special controls are for use as recommended in the Mallory Radio Service Encyclopedia.
DESCRIPTION: A very small diameter control ( $15 / 16$ ) to service radio sets requiring small parts. Available in full line of resistances, tapers, and taps. Special resistance element gives ample safety factor for current-carrying ability. New type contact makes control smoothest and quietest on market by laboratory tests.
SHAFT DESCRIPTION: New Type flat shaft easily cut to any required length with a pair of side snips. Clips furnished with each control permits its use with all three knob types-Set Screw, Push-On, and Knurled.
ACCESSORIES: One hex nut, one lock washer, one U-clip and one spring steel clip furnished with each control. Idler pulleys, extension shafts and AC switches are available when needed as listed hereon.
PACKAGING: One control plus accessories and complete instructions in each display carton.

## Attachable Mallory Midgetrol Switches

Entirely designed and manufactured by Mallory especially for use with Mallory Midgetrals. be aftached without disassembling control.

## MALLORY CARBON controls

## I $1 / 8^{\prime \prime}$ Dia. . Fixed Knurled Shaft Controls

APPLICATION-For volume or tone control in audio circuits.
DESCRIPTION-1/8" carbon control using same element as type MR.
SHAFT DESCRIPTION-Furnished with a $3^{\prime \prime}$ accurately finished, permanently attached knurled shaft for use in replacing original controls of this shaft construction.
ACCESSORIES-One hex nut and one lock washer furnished with each control. AC switches available as a special item. (See page 8).
PACKAGING-One control, plus accessories and complete instructions per display carton.

## 1 $1 / \beta^{\prime \prime}$ Dia. • Fixed Shaff - Single Tapped Controls

APPLICATION-For control of volume with tone compensation in audio circuits.
DESCRIPTION-11/8" carbon controls with a single tap. Available in a wide range of resistances. Taps are accurately located. Uses Mallory's special resistance element insuring quiet, long life and an excellent safety factor in current-carrying capacity.
SHAFT DESCRIPTION-An accurately finished channel shaft is permanently attached; measures $3^{\prime \prime}$ from lock ring.
ACCESSORIES-One hex nut, one lock washer and one shim furnished with each control. AC switches available as a special item. (See page 8.)

PACKAGING-One control, plus accessories and complete instructions per display carton.

## MALLORY CARBON CONTROLS

## 1 $1 / 8^{\prime \prime}$ Dia. . Fixed Shaft - Special Application - Single \& Dual Controls

APPLICATION-Special single and dual controls to be used as recommended in the Mallory Radio Service Encyclopedia.
DESCRIPTION - Type SM are single and type SMD are dual $11 / \mathrm{s}^{\prime \prime}$ diameter carbon controls. Both types are made in a wide range of resistances and tapers and with taps for special applications. The controls and their shafts are designed to exactly replace the original equipment control. Switches are provided as indicated.
SHAFT DESCRIPTION-Type SM have fixed shafts while type SMD have fixed concentric shafts. Each shaft varies according to the requirements of the control and its recommended application.

ACCESSORIES-One hex nut and one lock washer furnished with each control.

PACKAGING-One control, plus accessories and complete instructions per display carton.

## 1 $1 / 8^{\prime \prime}$ Dia. • Plug-In Shaft Conirols

APPLICATION - For volume or tone control in audio circuits.
DESCRIPTION-1/8" carbon control, available in a wide range of resistances and tapers. Has an excellent safety factor in current-carrying capacity accomplished by the use of Mallory's special resistance element, which also insures a long, quiet life.
SHAFT DESCRIPTION-The control is provided with a socket which will take 30 different types of shafts insuring maximum flexibility of stock. One SS-1 4" channel shaft furnished with each UM control. (See page 8 for other universal and special plug-in shafts available.)
ACCESSORIES-One hex nut, one lock washer, one shim, one lock ring, and one SS-1 shaft furnished with each control. An external variable resistance is furnished where required, as indicated below. AC switches available as a special item. (See page 8.)
PACKAGING-One control, plus accessories and complete instructions per display carton.

All Mallory plug-in shafts are now made with a small ring as shown in the drawing above. That's why they can't wobble or work loose-why they fit as securely as a fixed shaft.

## 1 $1 / 8^{\prime \prime}$ Dia. • Plug-In Shaft • Single Tapped Controls

APPLICATION-For use as a volume control with tone compensation in audio circuits.

DESCRIPTION-1 $1 / \mathrm{s}^{\prime \prime}$ carbon controls with a single tap. Available in a wide range of resistances. Taps are accurately located. Uses Mallory's special resistance element insuring quiet, long life and an excellent safety factor in current-carrying capacity.

SHAFT DESCRIPTION-The control is provided with a socket which will take 30 different types of shafts insuring maximum flexibility of stock. One SS-1 4" channel shaft furnished with each TM control. (See page 8 for other universal and special plug-in shafts available.)

ACCESSORIES-One hex nut, one lock washer, one lock ring, one shim, and one SS- 1 shaft furnished with each control. AC switches available as a special item. (See page 8.)

PACKAGING-One control, plus accessories and complete instructions per display carton.

## 11/8" Dia. • Plug-In Shaft • Double Tapped Controls

APPLICATION-For use as a volume control with tone compensation in audio circuits.

DESCRIPTION-1 $1 / \mathrm{s}^{\prime \prime}$ carbon controls with double taps. The basic resistance element of this control is the same as the element in MR controls. Taps are accurately spaced.

SHAFT DESCRIPTION-The control is provided with a socket which will take 30 different types of shafts insuring maximum flexibility of stock. One SS-1 $4^{\prime \prime}$ channel shaft furnished with each DTM control. (See page 8 for other universal and special plug-in shafts available.)

ACCESSORIES-One hex nut, one lock washer, one lock ring, one SS-1 shaft, and one shim furnished with each control. AC switches available as a special item. (See page 8.)
PACKAGING-One control, plus accessories and complete instructions per display carton.

Universal and Special Plug-In Shafts
for Use with Types UM, TM, and DTM Controls

KEY TO SHAFT CHART-*These Plug-In Shafts are designed as exact replacements for applications requiring a given predetermined length with special coupling slots or tongue or an insulated coupler. None of these require any cutting or special adjustment. **These Plug-In Shafts are of universal length and designed for many applications.

For Use With MR, MK, UM, TM, MRT, DTM Controls

## Explanation of Mallory Tapers

- Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.
Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.
Taper Number 3 is a combination left and right hand taper. Has a limited use in circuits where the control must perform both as a shunt and as a series circuit control as in combination antenna shunt plus bias circuits. This is the most common use for such a taper.
Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.
Taper Number 4A is a modification of the regular linear taper Number 4.
Taper Number 7 is made ouly in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

## 11/2" Dia. . Fixed Shaft • Carbon Controls

APPLICATION-For volume or tone control in audio circuits.
DESCRIPTION-1 $1 / 2^{\prime \prime}$ carbon control made available in a range of resistances and tapers to satisfactorily cover the field. Mallory's exclusive element curing process is used in the manufacture of these controls, as well as in the $11 / 8^{\prime \prime}$ dia. line.
SHAFT DESCRIPTION-A fixed channel or slotted shaft is provided, measuring $3^{\prime \prime}$ from lock ring, except as indicated below.
ACCESSORIES-One hex nut, one lock washer, and one shim furnished with each control. An external adjustable resistor is furnished where required, as indicated below. AC Switch available as special item. (See page 11.)
PACKAGING-One control, plus accessories and complete instructions per display carton.

## 1 $1 / 2^{\prime \prime}$ Dia. • Fixed Shaft - Single \& Double Tapped Controls

APPLICATION - For volume control with tone compensation in audio circuits.

DESCRIPTION-1 $1 / 2^{\prime \prime}$ carbon controls made available in a wide range of resistances, single and double tapped as indicated.

SHAFT DESCRIPTION-An accurately finished shaft is permanently attached, measuring $3^{\prime \prime}$ from lock ring.

ACCESSORIES-One hex nut, one lock washer, and one shim furnished with each control. AC switches available as a special item. (See page 11.)

PACKAGING-One control, plus accessories and complete instructions per display carton.

## Special Dual Controls

APPLICATION-For special applications, as recommended in Mallory's Radio Service Encyclopedia.
DESCRIPTION-Special controls of wire-wound and /or carbon construction available in a range of resistances and types as required by recommendations of Mallory Radio Service Encyclopedia. They are designed to provide exact physical and electrical characteristics of the original control.
ACCESSORIES-One hex nut and one lock washer furnished with each control.
PACKAGING-One control, plus accessories and complete instructions per display carton.

## 11/2" Dia. • Fixed Shaff • Wire-Wound Conirols

APPLICATION-Used as bias controls and voltage dividers in bridge circuits and test instruments.
DESCRIPTION-Rugged resistance strip and contactor assemblies are completely enclosed in a dustproof case. Will carry 4 watts of power.
SHAFT DESCRIPTION-Furnished with a fixed channel-type shaft, measuring $3^{\prime \prime}$ from lock ring.
ACCESSORIES-Mallory Dial Plate No. 396 is available for use with these controls. One hex nut, one lock washer, and one shim furnished with each control. An external variable resistor is furnished where required, as indicated below. Has adjustable stop plate for bias feature, as indicated below. AC switches available as a special item. (See this page.)
PACKAGING-One control, plus accessories and complete instructions per display carton.

8Have exclusive Mallory adjustable bias feature, providing 500 ohms in 100 ohm steps in all values over 1,000 ohms.

## Dimensions1/2/2" Dia. Wire-Wound Controls

NOTE: Controls having taper numbers 1, 2 and 7 are intended primarily for replacement in radio receivers. Be sure to check the taper curve and its effect (see chart on page 31) before ordering for other uses.

(Type LL Illustrated)

## Universal Dual Controls

APPLICATION-See "General Use" column below.
DESCRIPTION-Consists of two $11 / 2^{\prime \prime}$ Dia. wire-wound or carbon controls driven by a single shaft.
SHAFT DESCRIPTION-Furnished with fixed channel shaft; measuring $21 / 2^{\prime \prime}$ from lock ring.
ACCESSORIES-One hex nut and one lock washer furnished with each control. AC switches a vailable as a special item. (See this page.)
PACKAGING-One control, plus accessories and complete instructions per display carton.

## Attenuators

APPLICATION-For controlling the level of low impedance audio circuits and for volume control of microphones, talking picture amplifiers, and many varied sound amplifying and audio distribution systems.
DESCRIPTION-A high quality "T" and "L" pad that may be used with audio amplifiers having a peak audio rating of 15 watts. These attenuators have a continuous DC dissipation rating of 4 watta in any position. Bushing $3 / 6^{\prime \prime}$ Dia. by $3 / \mathbf{y}^{\prime \prime}$ long.
SHAFT DESCRIPTION - $2^{\prime \prime}$ long shaft, grooved at popular leng ths for easy cutting.
ACCESSORIES-No. 366 Bar Knob, No. 395 Dial Plate with matched rotation, one nut and one lock washer furnisherl with each control.
PACKAGING-One control, plus accessories and complete instructions per display carton.

The Mallory Business-Building Plan that effectively helps you get<br>new customers and hold<br>the ones you have!

## 4 Waft - Wire-Wound Potentiometers and Rheostats

APPLICATION-Used on bias controls and voltage dividers in bridge circuits and test instruments.
DESCRIPTION-Precision wire-wound potentiometers and rheostats with a 4 -watt rating for use in instruments where reliability is paramount. Rugged construction. Rheostats feature "off" position (no connection) type of construction, saving the cost of a switch. Furnished with insulated contact arm. Potentiometers have three terminals. Rheostats have two terminals. Total rotation $294^{\circ}$; effective electrical rotation $279^{\circ}$. No. 4 Linear Taper.
SHAFT DESCRIPTION-A short shaft is provided with a slot for easy screw-driver adjustment. Shafts will take standard knobs.
ACCESSORIES-No. 395 Dial Plate is available for use with these controls. One hex nut furnished with each control.
PACKAGING-One control, plus accessories and complete instructions per display carton.

## 7 Watt - Wire-Wound Pofentiometers

APPLICATION-Suitable for precision instruments such as resistance bridges and where a control of medium currents or voltages is required.
DESCRIPTION-Supplied with grounded contact arm. $310^{\circ}$ total rotation; $299^{\circ}$ effective electrical rotation. Will dissipate 7 watts. No, 4 linear taper.
SHAFT DESCRIPTION-A short shaft with a milled screw-driver slot is provided for easy adjustment. Shafts will also take standard knobs.
ACCESSORIES_No. 399 Dial Plate is available for use with these controls. One hex nut is furnished with each control.

PACKAGING-One control, plus accessories and complete instructions per display carton.

## MALLORY TECHNICAL MANUAL

- This simply written, practical book bridges the gap between radio theory and practice. Designed for the radio serviceman, engineer, amateur or experimenter who wants the latest technical information . . . presented so that he can easily apply it to everyday problems. Contains page after page of information profusely illustrated. It's worth far more than its price.
*"Open" or "Off" position counter-clockwise.

Shafts • Couplers • Bushings
Cat. No.
Description
EC240-Universal Combination Extension Shaft Coupling and Reducer:
Will couple two $1 / 4^{\prime \prime}$ shafts or one $1 / 4^{\prime \prime}$ shaft and one $3 / 16^{\prime \prime}$ shaft.

Universal Insulated Shaft Couplers:
Designed to connect fixed shaft controls to remote drive couplings popular in automotive radio equipment.
EC256-Slotted Insacup.
EC257-Square Insert Insacup (Motorola type).

EB247-Universal Extension Bushing:
Designed to screw on the present bushing of Mallory controls and switches, so that the body of the control or switch will be held $5 / 8$ " away from the mounting surface. For example, it is used with the correct Universal Control to service Philco Models 28, 29, 45 and 45 C .

UB241-Universal Bushing and Nut:
Designed to accommodate $1 / 4^{\prime \prime}$ shaft wherever a panel bushing is desired. Includes one No. 232 nut.

## THE MALLORY INDUCTUNER*

A continuously and infinitely variable inductance unit that supplies the need for a method of tuning the wide range of frequencies covered by the television-FM band. Provides unequaled simplicity, performance, and stability In service. For more complete information turn to Page 9, Mallory Special Components, of this catalog.

Inductuner*-Registered trade mork for Maliory variable inductance tuning devices. Manufactured and sold under one or more of the following Paul Ware and Mallory patents: 2,163644, 2,163645, 2,163646, 2,163647, 2,260877, 2,377789,2,377790. Other patents applied for.

## ERIE BUTTON STYLE SILVER MICA CAPACITORS

These are midget silver-mica capacitors, for use where compact size, minimum external inductance, and high internal

STYLE CB series resistance are essential. Erie button silver-mica capacitors are unmatched for V.H.F. and U.H.F. work. "Q" at I MC is not less than 1000 above 100 mmf; not less than 700 between 50 and 100 mmf ; not less than 500 below 50 mmf . Type 370-CB has ring type metal shell with three soldering ears. High potential terminal at either end for feed-thru connection. Type 370-FA is fastened to chassis with $3-48$ screw.

SPECIFICATION CHART

## ERIE CERAMICONS

## STYLE K

STYLE 335

## STYLE L

ERIE CERAMICONS* are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

Physical dimensions of styles illustrated are:
Style K length $.562^{\prime \prime}$ diameter . $250^{\prime \prime}$ Style 334 length $1.213^{\prime \prime \prime}$ diameter $.415^{\prime \prime}$ Style L length $.812^{\prime \prime}$ diameter . 250" Style 335 length $1.650^{\prime \prime}$ diameter $.415^{\prime \prime}$

Style M length $1.328^{\prime \prime}$ diameter . $340^{\prime \prime}$

## "GP" General Purpose CERAMICONS

"GP" general purpose Ceramicons are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important - in other words for all receiver applications except in frequency determining circuits. Working voltage - 500 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

## NPO Zero Temperature Coefficient CERAMICONS

NPO zero temperature coefficient Ceramicons are highly recommended for frequency applications where no capacity change with change in temperature is desired. " $Q$ " for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf " $Q$ " decreases slightly as capacity decreases. Working voltage - 500 volts D.C. Can be used as replacements for silver mica condensers.

## ERIE FEED-THRU CERAMICONS

This very practical feed-thru capacitor is highly recommended for bypassing R.F. to ground in feed-thru applications. Wire terminals are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point

STYLE 362 wiring.

## SPECIFICATION CHART

| Style | Capacity (MMF) | Tolerance | List Price |
| :---: | :---: | :---: | :---: |

## ERIE TUBULAR TRIMMERS

Here is a compact, economical tubular trimmer that is

STYLE 532 ideal for applications calling for a low minimum capacity and a high ratio of maximum to minimum capacity. Has molded plastic dielectric. Can be mounted on panels having a thickness of $.040^{\prime \prime}$ to $.065^{\prime \prime}$

## SPECIFICATION CHART

| Style | Capacity Range (MMF) | List Price |
| :---: | :---: | :---: |
| $532-08$ | $0.5-5$ | .55 |
| 532 | 1.8 | .55 |

## ERIE CERAMICON TRIMMERS

Erie Ceramicon trimmers give maximum stability and ease of adjustment. Capacity change is constant per degree of rotation. Silver electrodes are fired on to ceramic rotor and base. 360 degree rotor completely covers entire track on stator thus preventing dust and other foreign matter from affecting characteristics of the unit.

SPECIFICATION CHART

| Style | Capacity Range (MMF) | Temperature Coefficient | List Price |

## ERIE SUPPRESSORS

Erie Suppressors use a special resistance element that is superior because of its low voltage coefficient. These suppressors effectively eliminate ignition interference in auto radios, and in nearby F.M. and Television home sets. Erie Suppressors have a resistance value of 10,000 ohms. Style L-4 fits spark plugs, style L-7 for distributor cables.

SPECIFICATION CHART

## STANDARD RANGES

Standardization pays dividends! It can he an important profit factor for you, too

The great majority of radio parts manufacturers were quick to see the advantages in standardization and adopted the RMA Preferred Ranges some years ago. IRC las pioneered standardization of resistors because close contact with the radio industry has convinced us that such standardization is not only desirable but absolutely essential to carry out the tremendous development and production program of the industry.
This IRC policy will help servicemen prepare for better, faster and more profitable business.

Type BT and BW Resistors, in 10\% tolerance, are carried in stock in the RMA ranges listed below. Figures in heavy type are the standard RMA $10 \%$ tolerance values. Using $10 \%$ tolerance BT's and BW's, these 93 ranges give complete coverage of all values with the smallest resistor stock. Standardization of your stock on these values is recommended for economical, complete coverage, faster turnover nore profit for you!

However, the intermediate values listed below also are carried in the IRC stockroom, so that every RMA value is available to servicemer, when desired.

## JOBBERS' STOCK IN PREFERRED RMA RANGES

## BASIC KIT

Designed to meet your day-to-day resistor requirements, the IRC Basic Kit provides a wide variety stock in carefully selected values. Assortments are so arranged that a shortage of stock in one range can usually be compensated for by using two other ranges in series or parallel. Additional adjustable bands are included for use in making up bleeder sections.
The Basic Kit is sturdily constructed of heavy-gauge steel, and beautifully finished in blue and yellow. Hung on your wall or set on your service bench, the Basic Kit saves countless trips for supplies and provides your shop with a neat, carefully selected general purpose resistor stock.

The IRC Basic Kit is factory-packed with the following wide-variety resistor stock:
13TS - 10 each- $1,000,2.200,4,700,10,000,15,000,22,000$, $27,000,47.000,75,000$ ohm; 0.1 mes., 0.22 meg., 0.47 meg., 1.0 mer., 2.2 meg., 10.0 mes. 5.0 mer.
BTA - 5 each- $470,1,000,1,500,2,200,3,600,4,700,22,000$, 36.000, 75,000 ohm

10 each- $10,000,15,000,47,000 \mathrm{ohm} ; 0.1 \mathrm{meg} ., 0.24 \mathrm{meg}$. $0.47 \mathrm{meg} ., 1 \mathrm{meg}$
BW- $1 / 2$ - 10 each- $100,150,220,330,470,560$ ohm
BHT- 2 -5 each- $1,000,2,200,4,700,10,000,22,000,47,000 \mathrm{ohm}$; 0.1 mer.

BW-1 —5 each-47, 82, 100, 270 ohm.
BW-2 -5 each-47, 82, 100, 270 ohm.
AB — 2 each— $100,250,500,750,1,000,1,500,2,500,5,000$, 10,000 ohm 2 each- $15,000,25,000 \mathrm{ohm}$.
ABA - 2 each- $100,250,500,1,000,1,500,2,500,5,000$, $10,000 \mathrm{ohm}$.
EI'A - 1 each- $1,000,1,500,2,500,5,000$ ohm.
FS - 1 each- $10,000,25,000$ ohm
ESA - 1 each-1.600. $1,500,2,500,5,000 \mathrm{ohm}$.
1 each: $10,000,25,000,50,000$ ohm.
6 " X -3" Rands.
MW-2J-2 each—10, 20, 50, 100 ohm.
M1034-2 each.
All-Metal Cabinet Furnished at No Extra Cost List Price: \$160.53

## Serviceman's Special Assortment

## Available in Basic Kit

The Basic Kit is also available stocked with a special "Serviceman's Assortment." This assortment contains a complete stock of $1 / 2,1$ and 10 watt resistors, plus a selection of controls, shafts and switclies. The heavy-duty power wire-wound resistors are not furnished in this assortment-leaving space in the compartments and drawers for capacitors, lamp bulbs, solder, small tools and spare parts.
The "Serviceman's Assortment" is factory-packed with the following:

> 60-BTS resistors
> 15 -BTA resistors
> $60-\mathrm{BH} \mathrm{W}^{1 / 2}$ resistors
> $20-1 \mathrm{WW}-1$ resistors
> 22 -AB power resistors 2 ——

1-"' "II", shafts
$\$ 99.54$

The sturdy, IRC Resist.O-Cabinet is specifically desimned to hold resistors systematically and rafely without the bending of leads It puts an end to "cigar box contusion!" Its four "non-spill" drawers have seven ample-sized compartments in each which readily accommodate resistor sizes from $1 / 2$ to 10 watts.

Attractively finished in blue, yellow and silver. Ohm's Law formulas neatly and permanently lithorraphed on top of cabinet for handy reference. Cabinet measures 11 long, b1/2 high and 5 ta deep. Bases of Resisto-O-Cabinets are arranged for stacking so that several cabinets may be used to increase stock capacity. This handy Resist-O-Cabinet is FREE with the purchase of any of the three well-balanced IRC resistor assortments listed. (Cabinet is not sold separately.)

## ASSORTMENT No. 1-59 Resistors

Type BTS-One each $1,000,4,700,10,000,27,000,47,000$ ohms: 0.1 mes, $0.27,0.47$ megs.

Type BTA-One each $39,000,68,000$ ohms; $0.15,0.22$ megs. Two cach $1,000,1,500,2,200,2,700,4,700,15,000,27,000$ ohms $1.0,2.2$ megs. 'Three each $10,000,47,000$ ohms; 0.1 meg, 0.27 . 0.47 megs.

Type AB 10 Watt-One each $1,000,1.500,2,500$, 5,000 olimn. Two each 10,000 and 25,000 ohms.
Type ABA, 10 Watt Adjustable-One each 1.000, 2,500, 5,002, 10,000 .

List price of Resistors, $\mathbf{\$ 2 2 . 8 7}$
(Cabinet furnished at no extra charge)

## ASSORTMENT No. 2-100 Resistors

Type BW- $1 / 2$ —Two each $47,100,270$ ohms.
Type BTS-Two each $3,300,6.800,33,000,68,000,82,000$ ohms $0.22,0.33$ megs. Three each $470,1,500,15,000,22,000,39,000$ ohms; $0.15,1.0,2.2$ megs. Five each $2.200,2,700,27,000$ ohms: 0.27 megrs. Six each $1,000.4,700,10,000,47,000$ ohms; 0.1 0.47 megs.

## ASSORTMENT No. 3-83 Resistors

Type BW-1—Two each 47, 100, 270 ohms TYPE BTA-Two each $470,1,500,2,700,3,300,6,800,33,000$ $39,000,68,000$. 82.000 ohms; $0.15 .0 .22,0.33,1.0,2.2$ megs Three each $15,000,22,000,27,000$ ohms. Five each $1,000,2,200$ $4,700,10,000,47.000$ ohms; $0.1,0.27,0.47$ megs.

List price of Resistors, $\$ 20.75$
(Cabinet furnished at no extra charge)

## Check this fast-selling stock!

The IRC Volume Control Cabinet is factory-packed with the following 18 Type D All-Purpose Controls, switches and special shafts.

Switches: 5-No. 41 S.P.S.T.; 1-No. 42 D.P.S.T.
Shafts: 1-Type B Auto Radio; 4-Type E knurled and slottedwith thin web

IRC VOLUME CONTROL CABINET<br>For the Modern Service Shop

This handy stock of IRC Type D Universal Controls, quickly attached switches and easily installed shafts is factory-packed in an attractive all-metal cabinet. Proved by IRC Service Records to be a selection of the most popular controls-you can actually service over $87 \%$ of all replacements right from this cabinet. Here is your answer to speedier, more efficient ser-vicing-reduction of costly exact-duplicate inventories -and modern appearance for your shop.

Cabinet measures $141 / 2^{\prime \prime}$ long, $73 / 8^{\prime \prime}$ high and $41 / 2^{\prime \prime}$ wide. It is handsomely finished in yellow, blue and silver and provides separate compartments for controls and three handy drawers for switches, special shafts and spare parts. Each compartment and drawer is individually marked for identification. The hinged front cover snaps securely shut. The cabinet is furnislied at no extra charge when factory- packed with the IRC controls, switches and shafts listed on the left. It is not sold separately.

## ORDER YOUR IRC VOLUME CONTROL CABINET TODAY

List Price: $\$ 30.90$

## NEW IRC ALL-PURPOSE KIT

Here's how to sharpen the appearance of your shop without an additional outlay of cash! 9 "hot-number" IRC $1 / 2,1$ and 2 meg . controls are available pre-packed in the All-Purpose Kit with 4 switches and 4 special shafts. Every one a fast mover . . . and you pay only the standard net cost of the merchandise. At no extra cost you receive this attractive 12 compartment utility cabinet.
Buy your "hot-number" controls this way each week and accumulate a shelf of these neat cabinets-each pre-packed with the following IRC merchandise:

IRC Control

|  | Type No. |  | Resistance |
| :--- | :--- | :---: | :---: |
| Purpose |  |  |  |
| 5 | D13-133 | 500,000 | A |
| 1 | D13-133X | 500,000 | B |
| 1 | D13-137 | 1.0 | A |
| 1 | D13-137X | 1.0 | B |
| 1 | D13-139 | 2.0 | A |

Purpose: A-Tone or Audio Circuit control; B-Tapped for tone compensation.

## SWITCHES

## $\begin{array}{ll}\text { \#41 } & \text { S.P.S.T. } \\ \text { \#42 } & \text { D.P.S.T. }\end{array}$

## SHAFTS

1 Type "A" double-flatted tap-in shaft is included with each con-trol-plus:
3 Type "E" with universal knurl for special type push-on knobs. 1 Type "H" with universal groove for many Delco, RCA, Sears•Roe luck and Westinghouse models.

Sturdy utility cardboard cabinet measures $73 / 4$ " $73 / 4$ " $\times 41 / 2^{\prime \prime}$. It is attractively finished in yellow, blue and silver, and provides 4 drawers with 12 compartments. Ideal stocking arrangement for miscellaneous parts hardware, knobs, capacitators, shafts
 and dial fittings.

Cabinet furnished at no extra cost.
List Price $\$ 16.20$

## THE IRC ''CENTURY'' LINE 114 IRC CONTROLS THAT SOLVE $90 \%$ OF YOUR REPLACEMENT PROBLEMS

For miscellaneous service needs, i1 all-purpose controls are available for use with the pophar TIRC taprin shafts. An 1 shaft is included with each control and shafts
Each D) Control accommodates any of the eleven Tap-in Shaft types shown. Shaft fats may be located in any position. A few extra shafts greatly increase the uility of your D Control stock at a small investment, Of unusual convenience is the "Double-Flated" A shaft, included with each 15 Control. Accommodates popular push-on knobs
requiring either $\frac{1}{32 "}$ or $\frac{3}{32^{\prime \prime}}$ flats and all set-screw knobs without filing of shaft or use of inserts. Dimensions: $11 / 8{ }^{\prime \prime} \times \frac{17}{3}{ }^{\prime \prime}$. Single Control-Without switeh

- SILENT SPIRAL CONNECTOR--a positive connection between contactor and its terminal.
- STEEL COIL SPRING THRUST WASHER eliminates shaft wobble and end-play

## 8 CLUTCH-TYPE DC CONTROLS

## With Tap-in Shafts

Practical for auto radio use and many other applications. Controls have friction clutch drive-urm and are equipped with a special shaft for use where either a slotted or tongued trpe shaft is required. Instructions tell how to cut shaft for either application. Switches cannot be used with friction clutch controls. Size same as Type D.

## 8 STANDARD TAPERS

A—Used as potentiom. eter or rheostat in any circuit where uniform resistance change is re* guired.
B-A semi - logarithmic curve used as tone conrol or audio circuit control.
C-A logarithmic curve. Used as audio circuit control or antenna shunt control.
D-Tapered at both ends to provide control of grid bias and antenna circuit Used where control of grid bia is of prime importance in conrolling volume
$E$-Userl as a rheostat in cathode circuit to control grid bias. F-Tapered at both ends to pro ide control of grid hias and an enna circuit. Used where control of grid bias is ersential in con trolling volume. Generally used where the control changes the

grid bias of only one or two tubes. Must not be used with heavy currents.
G-A locarithmic curve with very gradual change in resistance from left terminal. Used as audio circuit control or antenma shunt control.
H-A tapped logarithmic curve used as audio level control for automatic bass compensation.

TYPE W WIRE WOUND CONTROLS

A dependable wire wound control of uniform resistance change for power requirements up to 2 watts. Tight, uniform windings assure utmost accuracy. Spiral Spring Connector between rotor arm and center terminal eliminates noise. Diameter $11 / 4$ ": (lepth behind panel $\frac{9}{16 "}$; shaft length $215^{\prime \prime}$ from control face. Illustration shows cover removed. although covers are supplied with controls.

## POWER RESISTORS IBC

'PREFERRED FOR PERFORMANCE'
Nut only do these famous resistors excel electrically, but their "eli-mate-proofed" cement coating provides the most dependable protection yet devised for resistors for heavy duty work. Both fixed ande adjustable types are available. Mounting Brackets are packed with all resistors from 25 watts and up. One Adjustable Band is furnished with each adjustable resistor. The new Type X Band (deseribed below) is included as standard on units of 25 watts and above. Extra bands supplied at prices indicated.

## PRECISION Wire Wound RESISTORS

IRC Precision Wire Wound Resistors are scientifically designed and constructed of highest quality materials to combine the utmost in accuracy with dependability. Winding forms are of a non-hyroscopic ceramic having high insulation qualities, high mechanical strength and low-coefficient of expansion. Because of the special sectional construction which permits the winding of adjacent sections in opposite directions, a noninductive windiner is made possible. Minimum tempervire coefficient of $.002 \%$ per temper ature coeflable on all tegree
Precisions at no exsed by the leading instrument manufacturers for dependable precision meter multipliers and
 rain eontrols. $1 \%$ accuracy is stand gain eontrols. $1 \%$ accuracy is standard. Closer tolerances available an for $1 / \frac{\%}{/ n}$ tolerance. add $10 \%$ : tor $1 / 4 \%$ accuracy, add $1 / 10 \%$ and $1 \%$ for $1 / 10$ of $1 \%$, add $25 \%$ to list prices. Tolerances of $1 / 10$ of $1 \%$ are measured to new Intermational Ohm, and so in

## Type NAB Parasitic Suppressors

1RC Type NAB Non-Inductive Wire Wound Resistors are designed for use, one in each grid of audio driver or power amplifier tubes when paralleled, to prevent parasitic oscilla
 tinns. 10 watts.

## Center Tap Insulated Wire Wounds

Completely enclosed in molded bake lite and capable of standing high temperatures. Due to hirh power rating these resistors may be used in
 balancing circuits for radio receivers or transmitters. Thev will carry up to flve watts if mounted on chassis, using the detachable mounting bracket and heat-dissipating chassis, usip: metal strip; or two and one-half watts if mounted from heat or May be mounted anywhere without danger to units from heat or grounding. Dimensions: Length of molded unit 10 ohins, 0 ohms, 50 ohms, 75 ohms, 100 ohms and 200 ohms. Type MW-2J-Center Tap Resistors

## Type MC and MCB Suppressors

Type M-1034-25,000 ohms, overall resistince, tapped at $7,500,10,000$, 12,500 and 15,000 olims. 18 watts rating attached fiat to chassis, 9 watts
 free air rating. Used as bleeder in any power supply up to 600 volts. Sealed in bakelite and insulated for 1,000 volts to ground. Rracket supplied.
M-1034-IRO Bleeder Resistor
List $\$ 1.25$ each

IRC Suppressors are designed for the elimination of ignition noise in automobile and motorboat radio installa-tions-and oil burner interference in home receivers.

## OHMITE RHEOSTATS

## All-Porcelain - Vitreous-Enameled

The design and construction of these sturdy, compact Ohmite Rheostats insure permanently smooth, gradual, close control. The wire is wound over a porcelain core, bonded to porcelain base, and permanently locked in place by special Ohmite Vitreous Enamel. Nothing to smoke, char, shrink, or shift. Dissipates heat rapidly. Insulated shafts and bushings. Copper graphite contacts. Ratings are for "free air" use. Time-proved through long trouble-free service in countless installations the world over. Underwriters' Laboratories Listed.

## DIRECTION INDICATOR POTENTIOMETER-MODEL RB-2

A compact, low cost unit which is used in a simple 6 volt potentiometer circuit as a transmitting element, to indicate, remotely the position of a rotary beam antenna, or other device. The indicating meter can be any ordinary 0-1 M.A., 0-1.5 M.A. or 0-2 M.A. direct current milliammeter (with marked scale). The potentiometer is $2-5 / 16^{\prime \prime}$ in diameter and extends $13 / 8^{\prime \prime}$ behind the mounting surface. Single hole mounted by means of a 3/8-32 threaded bushing. Complete $360^{\circ}$ rotation.

## OTHER OHMITE RHEOSTATS

Ohmite Rheostats are also available in Model G, 75 Watt; Model P, 225 Watt; Model R, 500 Watt; Model T 750 Watt; and Model U, 1,000 Watt units, in many resistance values. Special Rheostats with tapered windings, etc., can be supplied; also Special Rheostats for Model Train Control. Cages and other accessories also available. For more complete information on OHMITE PRODUCTS, ask for Ohmite Stock Catalog.

## RHEOSTATS•RESISTORS•TAPSWITCHES

## OHMITE DIVIDOHM RESISTORS

## OHMITE FIXED RESISTORS

All-Porcelain Vitreous-Enameled

You can adjust the resistance or secure odd resistance values quickly with these Dividohms; easily put on more taps where needed. Ideal voltage dividers. With one adjustable lug and with mounting brackets.

Extra-sturdy, wire-wound, all-porcelain resistors with the perinanent protection of Ohmite Vitreous Enamel. Widely used for heary duty applications to assure continuous trouble-free service. With mounting brackets.

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free servicetheir wide use in all climates of the world-prove their complete reliability and economy. All units can be conveniently mounted by means of their $1 \frac{1}{2 \prime \prime}$ tinned wire leads. The standard resistance tolerance is $\pm 10 \%$.

The all-welded construction of the 5 watt unit makes it possible to extend the resistance range to 10,000 ohms, an unusually high value for a vitreous enameled stock unit.

OHMITE "LITTLE DEVIL" RESISTORS

Ohmite "LITTLE DEVILS" are full $1 / 2$ Watt, 1 Watt and 2 Watt Insulated Composition Resistors and can be used at their full wattage ratings at $70^{\circ} \mathrm{C}$. $\left(158^{\circ} \mathrm{F}\right.$.) ambient temperature. They meet requirements of specification JAN-R-11. All units are color coded. Each resistor is marked with the resistance value, wattage rating and the Ohmite trade-mark. "LITTLE DEVILS" are available from stock in $1 / 2,1$ and 2 watt sizes with $\pm 10 \%$ or $\pm 5 \%$ tolerance. The standard RMA values, 10 ohms to 22 megohms can be furnished.

## 2 WATT MOLDED COMPOSITION POTENTIOMETER-TYPE AB

The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The unit is 1 $1 / 16^{\prime \prime}$ diameter and extends $9 / 16^{\prime \prime}$ behind the panel. The standard shaft length is $2^{\prime \prime}$ including the $3 / 8^{\prime \prime}$ long mounting bushing. A SPST switch, to be attached to the back of the control, can be supplied extra.

## NON-SHORTING TYPE ROTARY POWER TAP SWITCH

Single-pole, multi-position switch with all-ceramic insulation, silver-to-silver contacts and "slow-break" action designed especially for alternating current. Switch shaft is electrically "dead". A.C. rating 10 amps., 150 volts. Diameter $13 / 4^{\prime \prime}$ -Depth behind panel $11 / 8^{\prime \prime}$ Shaft diameter $1 / 4^{\prime \prime}$ - Recommended knob, stock number 4500 (round type) or 4516 (bar type).

## OHMITE R.F. PLATE CHOKES

The new series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The new chokes replace the former series of chokes, Z-0, $Z-1, Z-2$, and $Z-3$ with units that accomplish the same results but are much smaller in physical size with one exception, the new Z-7 choke, which is identical to the former $Z-3$, the number only having been changed.
The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

| Stock Number | Operating Range Megacycles | Microhenries | Core Dimension | List Price |
| :---: | :---: | :---: | :---: | :---: |
| Z-7 | 3 to 20 Mc . | 84.0 | $6^{\prime \prime} \times{ }^{\prime \prime} 16{ }^{\prime \prime}$ | \$1.56 |
| Z-14 | 7 to 35 Mc . | 44.0 | $2^{\prime \prime} \times{ }^{\prime \prime}{ }^{10}{ }^{\prime \prime}{ }^{\prime \prime}$ | . 68 |
| 7-28 | 20 to 60 Mc . | 21.0 | $13 / 4{ }^{\prime \prime} \times$ x $16_{16}{ }^{\prime \prime}$ | .44 |
| 7-50 | 35 to 110 Mc . | 7.0 | $7 / 8^{\prime \prime} \times 9 / 32^{\prime \prime}$ | . 33 |
| Z-1.14 | 80 to 200 Mc . | 1.8 | $84^{\prime \prime} \mathrm{x}^{3} \mathrm{SH}_{6 \prime \prime}^{\prime \prime}$ | . 3.3 |

| Z-460 | 320 to 520 Mc . | 0.20 | $1 / 2^{\prime \prime} \times 5 / 2^{\prime \prime}$ | . 33 |

Non-magnetic Brackets Furnished with Z-7.
All chokes 1000 ma . rating except $Z-14$ and $Z-28$. These are rated at 600 ma .

## OHMITE POWER LINE CHOKES <br> 

Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. Used as a filter in connection with two grounding condensers of 0.1 microfarad capacity each. The $\mathrm{Z}-20$ Choke is also used at radio receivers to keep out interference. All chokes consist of two single-layer windings on a single ceramic core-insulated and protected by moisture-proof coating. Recommended for use in suppressing radio (not audió) frequency interference.

 COLLINGDALE, PENNSYLVANIA
## SHALLCROSS AUDIO ATTENUATORS

## These Shallcross Features Mean $\checkmark$ better performance $\checkmark$ bigger value

- Off position attenuation well in excess of 100 db.
- $25 \%$ to $50 \%$ fewer soldered joints.
- Noise level ratings that are factual. ( 130 db or more below zero level).
- Non-inductive Shallcross precision resistors used throughout assure flat attenuation to and beyond 30 kc .
$\sqrt{ }$ Types and sizes engineered for all needs. Attenuation accuracies of $1 \%$, resistor accuracies of $0.1 \%$, on special order.

Shallcross Andio Attenuators are available in either variable or fixed units, the former often being referred to as a "control" and the latter, as a "pad".
Controls are available with as few as 5 steps or as many as 52 steps with an altenuation as small as $0,1 \mathrm{db}$ per step. The total attenuation for a single control does not exceed about 125 db since such high attenuation approaches the noise level of the switching mechanism,
The complete story of Shallcross attenuators may be found in Shallcross Engineering Bulletin \#4, copies of which are available on request. Specifications and prices are given below for a few of the most popular variable attenuators.
IMPEDANCE: 150, 500, 250/500, 600 ohms, except potentiometers, which are 100,000 and 250,000 ohms.
RESISTORS: All non-inductively wirewound, $\pm 5 \%$ tolerance, except types preceded with " C ", which are composition selected to $\pm 5 \%$.
ATTENUATION: Increases for counter-clockwise rotation of knob end of shaft.
FREQUENCY RESPONSE: Flat over entire audio range.
SWITCII MECHANISM: Multi-leaf wiper arms collector rings and contacts available in tarnish resistant silver alloy or brass, Noise level -130 db .
DETENT: Indexing mechanism available on any unit for $\$ 0.50 \mathrm{lish}$. Bark of panel depth is then increased $5 / 16^{\prime \prime}$,
DIALS: $\$ 1.00$ list each additional.
KNOBS (VA-16906) : $\$ 0.50$ list each additional.

I'rices shown are for Manganin Wire used in resistances to 1,000 ohms and for Nickel-Chrominm-Iron Wire used in resisiances ahove 1,000 ohms.

TYPES BX183A AND BX193-士 $1 \%$ IN COMMON VALUES—IN STOCK

In addition to the popular standard types listed here, Shalloross Akra-Ohm Resisturs are made in a complete line of standard and special designs for precise electronic equipment de. manding great stability and long life even under difficult conditions of tenperature and humidity. Shallcross achievements include the development of really practical hermetically-sealed
units; BX processed resistors "tropicalized" against moisture and fungus; the use of spun glass insulated wire for apolications where con siderable power nust be dissipated; bifilar weund resistors, 1000 ohms or less, for exacting instrument use; heavy-luty surge resistors; accurate heavy-duty power resistors, and vari ous others. Write for the Shalleross "Engineering Data" walt and tile Chart.

## UNMOUNTED DECADE RESISTANCES

In response to a demand from engineers, manufacturers and physicists who design and construct their own electrical measuring instruments, we have made the Shallcross Unmounted Decade Resistances available. They are of the same construction as those used in the popular Shallcross Resit:lance Decades described above and consist of ten Shalleross Resistors mounted on a ceramic instrument switch.

## SHALLCROSS AKRA-OHM PRECISION RESISTORS

for "Miniaturization" applications UNUSUAL ACCURACY IN SMALL SPACE

These new Shalleross Okra-Ohm WireWound Precision Resistors have been designed to meet the needs of mod. ern, miniature equipment. Standard tolerance is $1 \%$. Closer tolerances can be furnished on special order.
The units offer unusually high and accurate resistance values in small space and are light enough to be sus. pended by their own tinned copper leads, or may be secured with mount. ing screw.

## SHALLCROSS ROTARY SELECTOR SWITCHES

Like ot her Shalleross instrument components, these Rotary Selector Switehes ure designed to cover a very wide field of application in both shorting and nonshorting types, and can be moditied to control a variety of circuits. Details on any type for practically any application on request. Suffixes B and $S$ denote Brass and Silver contacts and contact arms.

WARD LEONARD and RHEOSTATS

## VITROHM RING TYPE RHEOSTATS

The core and base of Ward Leonard Ring Type Rheostats are made of the highest grade ceramic materials. The resistance wire is wound toroidally on the core, and is coated with a tough, heat resistant, acid resistant, crazeless vitreous enamel.
The contact is a special alloy and is of large area to avoid sticking, nitting, local heating, or oxidation when setting remains fixed for a long period of time.

## Watt Ratings

Based on continuous operation in free air with a temperature rise not to exceed $300^{\circ} \mathrm{C}$, which is within the limits specified by Underwriters' Laboratories and NEMA.

Number of Steps
Each turn of resistance wire on the core of a Vitrohm Ring Type Rheostat constitutes a step of change in the resistance value.

Vitrohm Ring Type Rheostats are made with three terminals with no "off" position, and can be used as potentiometers or rheostats, as desired. Rheostats with an "off" position can be furnished on special order.

## Heavy Duty Rheostats <br> Pressed steel plate type.

300 watts -1 to 2500 ohms, 20 steps, $6^{\prime \prime}$ diameter. 500 watts -1 to 5000 ohms, 33 steps, $8^{\prime \prime}$ diameter.

## VITROHM PLAQUE RESISTORS <br> 

Vitrohm Plaque Resistors are flat in form. The resistance
 wire is arranged on a rectangular ceramic base to give the lowest obtainable values of inductance and distributed ca pacitance. Inductance at frequencies up to 1000 kilocycles and distributed capacitance up to 5 megacycles are so low in valuc that they are negligible.
Vitrohm Plaque Resistors are rated 20,40 , and 125 watts with full ventilation. Since full ventilation is usually impossiblc to attain, the watt rating should be decreased to compensate for the reduction in ventilation, A single plaque resistor mounted on a panel should operate safely about $80 \%$ of the full watt rating.

WARD LEONARD

## ADJUSTABLE RESISTORS -- ADJUSTOHMS

Adjustohm Resistors are for use in any application where it is necessary or desirable to have one or more intermediate resistance values; or in circuits that need to be changed from time to time to meet varying electrical conditions.

Adjustohm Resistors are built of the highest grade low temperature coefficient materials, and are coated with Ward Leonard's tough crazeless Vitreous Enamel.

## WATT RATINGS

Nominal watt ratings for Adjustohm Resist. ors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approxi mately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Adjustohm Resistors, except the 10 -watt size, Type 10A.

Price of resistor includes brackets and one adjustable band.

## DISCOHM RESISTORS

18 WATTS Type 18D

Discohms are flat refractory discs having resistance wire arranged to minimize the values of inductance and distributed capacitance.

Discohm Resistors are especially useful in equipments where space is limited and where a power resistor having low value of inductance and distributed capacitance is requirc

They are mounted by means of ; No. 8 wood screw or bolt through the countersirk hole cast in the refractory base. Two or more units can be mounted together to obtain various resistance values and watt ratings.

Discohm Resistors are rated at 18 watts with free ventilation. A single Resistor mounted on a panel should operate safely at $80 \%$ of the full watt rating or $90 \%$ of the full current rating.

| Ohms | Current <br> m. a. | List <br> Price |
| ---: | ---: | ---: |
| 1.0 | 4240 | $\$ 1.95$ |
| 1.6 | 3350 | 1.95 |
| 2.5 | 2680 | 1.95 |
| 4.0 | 2120 | 1.95 |
| 6.4 | 1680 | 1.95 |

## VITROHM STRIP RESISTORS

Vitrohm Strip Resistors lend themselves readily to applications where space is limited, such as aircraft control circuits, radio instruments, and similar apparatus. Vitrohm Strip Resistors are built on a strong flat reinforced core that has no sharp angular surfaces, providing a smooth continuous form of the resistance

| LENGTH (Inches) |  | RESISTANCE |  | Watt Rating |
| :---: | :---: | :---: | :---: | :---: |
| Resistor Body | Mounting Holes | Min. Ohms | Max. <br> Ohms |  |
| $11 / 4$ | 2 | 0.45 | 6,300 | 30 |
| 2 |  |  |  | 40 |
| $31 / 2$ | 41/4 | 0.70 | 35,000 | 55 |
| $43 / 4$ | $51 / 2$ | 1.00 | 50,000 | 65 |
| 6 | $63 / 4$ | 1.40 | 66,000 | 75 | winding. The resistors are vitreous enamel coated.

Each unit is fitted with
 a self - sustained mounting bracket and spacer, the end pieces being riveted to a metal strip that passes through the core and serves as a conductor for the internal heat generated while the resistor is in service.

FLUORESCENT LAMP RESISTORS

Ward Leonard Fluorescent Lamp Resistors are designed for use in buorescent lamps operating on direct current. They meet the requirements of lamp and fixture manufacturers and are listed as standard by the Underwriters' Laboratories, Inc., and by the New York City Department of Water Supply, Gas and Electricity.
Ward Leonard Fluorescent Lamp Resistors are mounted in well-ventilated metal enclosures for installation on standard fixtures. They are made for use on 115 -volt, 120 -volt and 220 -volt circuits and in various resistance values to meet the requirements of the lamps with which they are to be used.

Long, flexible asbestos covered leads facilitate connections.

## Plug-In Type

## For Portable Fixtures

Ward Leonard also provides a Fluorescent Lamp Resistor in a me-
 tal enclosure for use with portable lamps operating on 120 -volt circuits. It is fitted with a plug on one end for inserting into the line receptacle and a receptacle on the other end into which the plug on the figure is placed.

The Plug-In Resistor is made for use on 15 -watt and 20 -watt lamp fixtures.

## LINE VOLTAGE REDUCERS

Ward Leonard Line Voltage Reducers protect radio sets, soldering irons, Christmas tree lamp strings, and other electrical appliances within the ratings of the Reducers, from high line voltage.
Line Voltage Reducers consist of a resistor network encased in a perforated metal enclosure provided with standard parallel prongs on one end and a standard receptacle on the other. Connection is made by plugging the Reducer into a receptacle and then inserting the plug on the appliance in the receptacle on the enclosure.

| Catalog Number | Length Inches | Resis. Ohms | Load | List Price |
| :---: | :---: | :---: | :---: | :---: |
| 507-109 | $11 / 2$ |  | For 35-65 watt 115 volt radio set on $115-140$ volts. | \$2.28 |

| 507-109B | $21 / 4$ | 4.5 | For 130-285 watt 115 volt radio set on 115-140 volts. | 2.73 |
| 507-109H | $51 / 4$ | 300. | For 60-watt 115 volt radio set on 230 volts ........... | 3.58 |

## AUTOMATIC

AMPERITE is an automatic rheostat designed to keep the current in a circuit at a definite value, for example, 0.5 amps. Should the supply voltage increase, the Amperite will automatically increase in resistance enough to take up the increase in supply voltage - keeping the voltage on the load constant.

PRICES: The moper AMPERITE Replacement may be determined by looking up the number under column "FOR" and noting, corresponding Amperite in the column "USE AMPERITE". Numbers in "FOR" column run consecutively and then alphabetically.
$\star$ The letter code in the center column is interpreted as follows:
a-For 110V. A.C.-D.C. Sets................ List Price $\$ 1.25$ b-For 2 V . Battery Sets... C-For 110 V . A.C. Sets........
r-For 110V. A.C. Sets having............................... 2.25 s-For s-For special apparatus.

## A C. - D. C. SETS

$\begin{array}{lllll}80 & 100 & 120 & \left.140 \quad \begin{array}{l}\text { and } 2 \\ \text { and } \\ \text { replace } 150-90 \% \text { oftal bases will }\end{array}\right)\end{array}$ so-called ballasts or resistors used in AC.-D.C. sets. No extra resistor required.
Pilot Lights-None, one or two of either 0.150A or 0.250A can be used with same Amperite. Should a pilot light burn out. the set will continue to operate properly without any damage to the Amprrite, tubes or other parts. The patented starting resistor in the Amperite prevents overloading and prenature burning-out of tubes and pilot lights. In some sets the hallast socket is purposely wired in such a way that the Pilot Tight Resistors of standard ballasts would be burned out if inserted. In such sets special Amperites are required, as shown in table. Avoid burnouts-use proper Amperite. <br> \section*{AMPERITES <br> \section*{AMPERITES <br> <br> FOR 2-VOLT BATTERY SETS} <br> <br> FOR 2-VOLT BATTERY SETS}

Two-volt tube fllaments are delicate and easily overloaded. Keeping the tube flaments at thefr proper voltage with a real regutator like Amperite invarlably results in considerably more battery ${ }^{\text {land }}$ tube life. The same Amperite can be used for dry cell, alr cell, or 2 volt storage battery operation. The proper Amperite is determined by the total filament-curreut draln of the set. e.g.-for 0.5 A use Amperite 5 F 1 , etc.

For A.C.-D.C. Sets The Amperite Regulators are designed to pass only $0.3 A$ through tube filaments. Filament voltages will be kept within $\pm 5 \%$ with line voltage variations of 85 to 140 volts. Due to the fact that Amperite is a real regulator, 2 types of Amperite with four prones

## RESISTORS by RESISTORS, INC. RESISTORSHAHAC.

Chicago 16, Illinois

#### Abstract

Resistors by RESISTORS, INC. - the choice of engineers and hams alike - enjoy wide acceptance because they are wound right - rated right - merchandised right. The complete range of fixed and adjustable resistors assures you maximum profits and service. Resistors are attractively packaged for eye appeal, a decided sales aid. Silver soldered connections - selected materials —precision fabrication. RESISTORS' Resistors are designed and produced under close personal supervision.

Manufactured by RESISTORS, INC., Chicago IG, IIIInois

TYPE 2462-F-Designed
for relatively low watt age requirements. Resistance wire is wound upon a heat resisting phenolic strip. The wound strip is rigidly attached to a refrac. tory base. Contact arm of beryllium copper gives uniform pressure, smooth action and long life

TYPE M (Style 2879 3TC)-Rugged and com pact. Has exceptional heat dissipatian. Re sistance wire is wound on a pure mica form, in a refractory base and embedded in vitre. ous enamel, bonding winding and base to gether. A small area of winding is free of enamel for contact purposes. Smooth action metallic contactor.

TYPES B.50, C. 100 , D-150, E-300 and F-500 embody the latest developments. Contact system separates current handling and contact pressure. Coppergraphite contact brush in porcelain holder travels on inside of winding. Wound ring and contact system as. sembled to metal base -gives great rigidity, lower panel temperatures.

## Shoft.

RATING-CURRENT RATINGS SHOWN FOR ALL RHEOSTATS ARE
FOR USE IN FREE AIR. WHEN UNITS ARE ENCLOSED VALUES SHOULD 8E REDUCED ABOUT $50 \%$.

DATA ON NON-STOCK RHEOSTATS-SPECIAL SHAFTS AND BUSHINGS; VALUES INTERMEDIATE TO THOSE LISTED; TARERED WIND. INGS; TANDEM ASSEMBLIES, ETC., FURNISHED UPON REQUEST.

## （2）HARDWMCK－MIN FIXED VITREOUS ENAMELED RESISTORS WITH MOUNTING BRACKETS

Five stock sizes fill a great variety of applications．
Ratings are in accordance with NEMA standards，being based on a temperature rise of $250^{\circ} \mathrm{C}$ ．in free air
Dala on types，sizes and values not listed herein，and for resistors with intermediate taps，special mountings，etc．，furnished upon request

## ADJUSTABLE VITREOUS ENAMELED RESISTORS WITH MOUNTING BRACKETS

Embodying features originated by Hardwick，Hindle，Inc．，resulting in a Resistor possessing the meny advantages of Vitreous Enamel Construction，plus an adjustable feature．
The winding is closely and evenly spaced，assuring ample insulation between turns．Where the winding appears exposed in the track，its underside is tightly embedded in the enamel，the upper surface only being exposed for contact with the adjustable band．
All sizes of Adjustable Resistors listed herein are furnished complete with mounting brackets and with one adjustable contact band．

The standard method of mounting Blue Ribbon Resistors is by means of an aluminum thru-bar, which is in intimate contact with the entire internal surface of the ceramic core. The presence of this thru-bar distributes the heat generated by the Resistor uniformly along its enire fength, sulbstantially spreading the hot spot normally encountered in tubular resistors with conventional mounting Mounting studs riveted to the ends of the thru-bar further tend to conduct the heat to the mounting surfaces. These mounting studs are also designed to act as spacers when two or more units ar stacked.

In comparison with tubular units of equivalent wattage rating Blue Ribbon Resistors have the following advantages: Higher wattage rating per unit space re quirement. Substantial reduction in depth bohind mounting surface. Ease and ecan omy of mounting-either singly or stacked. Lower Inductance, Light weight Resistor and mounting integral unit cannot rotate or become loose.

"This rating based on a maximum temperature rise of 250 degrees $C$. with the Resistor mounted horizontally on a $10^{\prime \prime} \times 10^{\prime \prime} \times .040^{\prime \prime}$ steel plate supported horizontally $1 / 2^{\prime \prime}$ above a wooden surface.
When Resistors are mounted on a non-metallic base the nominal watt rating should be reduced by approximately $15 \%$.
All stack numbers in each type listed above are available with adjustable feature complete with one movable contact band.

## 10 and 20 WATT FIXED VITREOUS ENAMELED RESISTORS

Designed particularly for radio service and replacement use-conservatively rated-wound upon Steatite Tube-combination lug and pigtail terminal connections - Hardwick, Hindle vitreous

enamel insulation, insuring permanence of value and proof against moisture. 10 watt and 20 watt sizes available in the range of resistance values shown.

## MADE TO ORDER PRODUCTS

In oddition to the standard line of resistor and rheostat products, which are in stock for immediate shipment, Hardwick, Hindle, Inc., is always pleased to receive orders for made to order products, such as, Non-inductive vitreous enameded resistors, Radio frequency chokes, Power line chokes and Soldering Iron controls. Non-inductive resistors are available in three standard sizes; 25,

## 50 and 100 watt.

Radio frequency chokes and Power line chokes are also avallable in three standard sizes
Soldering iron contrals and Photographic lamp controls are made to order in ten different sizes.
Data on the above products can be furnished upon request.

## ALPHA WIRE PRODUCTS

CONSTRUCTION: Single conductor, extra flexible stranded tinned copper, cotton serve, insulated with special low loss SIC rubber compound, braided tinned copper shield, cotton serve, tough black rubber jacket overall.

## CRYSTAL MICROPHONE CABLE

GENERAL PURPOSE: Low loss design for use with crystal, rib. bon. dynamic and velocity microphones, photo-electric cells. Use No. 1248 FOR LAPEL MICROPHONES and phonograph pickups.

| No. | Put-up | Size | Strond | Mox. Capocity <br> PerFt. Between <br> Cond. \& Shield | O.D. |

## Eriont

CONSTRUCTION: Two conductors twisted, each \#24 16/36 tinned cop. per, .015" vinyl insulation, color coded, very fine tinned copper shield overall.

## SHIELDED TWISTED PAIR CABLE

GENERAL PURPOSE: Where small diameter is required for sound recording, photo electric cell circuits, public address systems, etc.

| No. | Put-up | Conductors | O.D. |
| :---: | :---: | :---: | :---: |
| 1261 | 1000 Ft. Spool | 2 | $.115^{\prime \prime}$ |

## ALPHA WIRE PRODUCTS

## SHIELDED DUPLEX SPEAKER CABLE

GENERAL PURPOSE: For P.A. systems, photo-electric cell circuits, master control sound systems, etc.

| No. | Put-Up |  | TINNED SHIELD OVERALL |  |  | O.D. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Conductors | Maximum Capa Betwe Cond. \& Shield | city Perft. <br> Conds. |  |
| 1265 | 500 | Ft. Spool | 2 | 65 mmf . | 23 mmf . | .250" |
|  |  | WAXED | COTTON | BRAID OVER | SHIELD |  |
| 1266 | 500 | Ft. Spool | 2 | 65 mmf . | 23 mmf . | .280* |

CONSTRUCTION: Two conductors twisted, each No. 18-16/30 stranded tinned copper, 1/32" "Hi-Tension" rubber, color coded, paper wrap over both conductors, close tinned copper shield overall.
CONSTRUCTION: Same as $\rightleftharpoons 1265$
except with waxed cotton braid over shield.

## SHIELDED TRANSMISSION LINE

GENERAL PURPOSE: For inter.communication, short wave, P.A. systems, etc.

TINNED SHIELD OVERALL

| No. | Put-up | Max. Capacity Perft. | O.D. |
| :--- | :--- | :---: | ---: |
| 1267 | 500 Ft. Spool | 25 mmf. | $.135^{\prime \prime}$ |
|  | WAXED COTTON BRAID OVER SHIELD |  |  |
| 1268 | 500 Ft. Spool | 25 mmf. | $.165^{\prime \prime}$ |

Surge impedance is one-half the above when using shield as common conductor in dual transmission line.

CONSTRUCTION: Two conduc. tors twisted, each No. 20 solid tinned enameled copper, insulated, color coded, shielded braid overall.
CONSTRUCTION: Same as \#1267 except with waxed cotton braid over shield.

## ARMORED DUPLEX SPEAKER CABLE

GENERAL PURPOSE: For P.A. systems, oil burner installa* tions, automotive wiring, etc.

No.
Put-up

500 Ft . Spool
1272
$.132^{\prime \prime} \times .182^{\prime \prime}$
$\qquad$

CONSTRUCTION: Two conductors parallel, each No. 18-16/30 stranded tinned copper, rubber insulated, color coded, lacquered cotton braid, gal vanized steel armor overall.

## INTER-COMMUNICATION CABLE 3 CONDUCTORS

## (1 SHIELDED - 2 UNSHIELDED)

GENERAL PURPOSE: This cable is ideal for general wiring from station to station where a shielded single conductor is es* sential to eliminate cross talk.

CONSTRUCTION: Three conduce tors, each conductor No. 22 stranded tinned copper wire, vinyl plastic in. sulation, color coded; one conductor tinned copper shield and two conductors unshielded; cutton braid over. all.

## LEAD SHEATHED CABLE

GENERAL PURPOSE: For P.A. systems, communications, traffic control, mines, railroads and many other uses where severe moisture conditions are encountered. For all outdoor use including underground and underwater.

| No. | Put-up |
| :---: | :---: |
| 1271 | 1,000 Ft. Reel <br> ALL PRICES AND SPECIFICATIONS SUbject ro C |
| S-2 | NOTE: See Page S-12 for ALL ALPHA Prices |

## ALPHA WIRE PRODUCTS

CONSTRUCTION: Each conductor solid tinned copper wire, two cotton reverse serves paraffined, color coded, conductors twisted into pairs, then covered with an impregnated double paper wrap, and everall a cotton braid saturated with a moisture-proof, flame retarding, rodent-proof compound.

## BRAIDED COMMUNICATION CABLE

## (TWISTED PAIRS)

GENERAL PURPOSE: For interior use designed for connecting inter-communication systems, annunciators, telephones, etc.

| No. | Put-up | Size | Pairs | 0.D. |
| :--- | :--- | :--- | :--- | :--- |
| $1276 / 2$ | $1,000 \mathrm{Ft}$. Reel | 22 | $2(4$ Conductors $)$ | $.185^{\prime \prime}$ |
| $1276 / 3$ | $1,000 \mathrm{Ft}$. Reel | 22 | $3(6$ Conductors $)$ | $.210^{\prime \prime}$ |
| 1276 | $1,000 \mathrm{Ft}$. Reel | 22 | $6(12$ Conductors $)$ | $.240^{\prime \prime}$ |
| 1277 | $1,000 \mathrm{Ft}$. Reel | 22 | $10(20$ Conductors $)$ | $.300^{\prime \prime}$ |
| $1277 / 13$ | $1,000 \mathrm{Ft}$. Reel | 22 | $13(26$ Conductors $)$ | $.360^{\prime \prime}$ |
| $1277 / 15$ | $1,000 \mathrm{Ft}$. Reel | 22 | $15(30$ Conductors $)$ | $.380^{\prime \prime}$ |
| $1277 / 25$ | $1,000 \mathrm{Ft}$. Reel | 22 | $25(50$ Conductors $)$ | $.445^{\prime \prime}$ |

CONSTRUCTION: Similar to Com. munication System Cable above, but with lead antimony sheath instead of cotton braid over the twisted pairs.

CONSTRUCTION: Each conductor solid bare copper wire, thermo-plastic insulation, color coded, conductors twisted, waxed cotton braid overall.

## LEAD-COVERED COMMUNICATION CABLE

 (TWISTED PAIRS)GENERAL PURPOSE: For use indoors, outdoors, underground and in pipes for connecting inter-commnication systems, annun. ciators, telephones, etc.

| No. | Put-up |  | Size | Pairs |  |  | O.D. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1289 | 1,000 | Ft. Reel | 22 | 6 | (12 | Conductors) | .375" |
| 1291 | 1,000 | Ft. Reel | 22 | 10 | $(20$ | Coinductors) | .450" |
| 1293 | 1,000 | Ft. Reel | 22 | 15 | $(30$ | Conductors) | .510" |
| 1295 | 1,000 | Ft. Reel | 22 | 25 | (50) | Conductors) | . $5660^{\prime \prime}$ |

## INTER-COMMUNICATION CABLE (BRAIDED)

GENERAL PURPOSE: Designed for interior use for connecting inter-communication systems, annunciators, thermostat controls of oil burners, air conditioners, etc.

| No. | Put-up | Size | Conductors | O.D. |
| :--- | :--- | :--- | :--- | :--- |
| 1274 | 500 Ft. Spool | 18 | 2 | $.150^{\prime \prime}$ |
| 1275 | 500 Ft. Spool | 18 | 3 | $.165^{\prime \prime}$ |
| $1275 / 4$ | 500 Ft. Spool | 18 | 4 | $.180^{\prime \prime}$ |
| $1275 / 5$ | 500 Ft. Spool | 18 | 5 | $.200^{\prime \prime}$ |
| $1275 / 6$ | 500 Ft. Spool | 18 | 6 | $.220^{\prime \prime}$ |

CONSTRUCTION: Each conductor 19 solid tinned copper, $1 / 64^{\prime \prime}$ tele. phone compound lubber, heavy cot. ton braid with specially treated compound to make it weather-proof for resistance against rain, snow, hail and cold.

## OUTDOOR INTER-COMMUNICATION WIRE

GENERAL PURPOSE: For outdoor and indoor use or in any damp location, for connecting communication systems, telephones, etc.

| No. | Put-up | Size | Conductors | O.D. |
| :--- | :--- | :---: | :---: | :---: |
| 1279 | $500 ~ F t . ~ S p o o l ~$ | 19 | 2 | $.200^{\prime \prime}$ |
| 1280 | 500 Ft. Spool | 19 | 3 | $.300^{\prime \prime}$ |

## 3en ruchern

CONSTRUCTION: Two conductors twisted, each No. 20 solid tinned sopper, insulated, color coded.

## UNSHIELDED TRANSMISSION LINE

GENERAL PURPOSE: For short wave, inter-communication, annunciator systems, etc., where shielding is not required.

| No. | Put-up | O.D. |
| :--- | :---: | :---: |
| 1269 | 500 Ft. Spool | $.125^{\prime \prime}$ |

## ALPHA WIRE PRODUCTS

## MULTI-CONDUCTOR FLEXIBLE CABLE

(RUBBER JACKETED)

GENERAL PURPOSE: For indoor and outdoor speakers, per. manent or portable P.A. systems, sound recording and auto radios.

| No. | Capacity Per Ft. <br> Between <br> Conductors |  |  |  |
| :--- | :--- | :---: | :--- | :--- |
| 1244 | 100 Ft. Spool | 2 | 22 mmf. | O.D. |

| 1192 | 100 | Ft. Spool | 12 | 27.0 mmf. | $.340^{\prime \prime}$ |

CONSTRUCTION: Each conductor No. 20-26/34 flexible stranded tinned
copper, cotton wrap, 1/32" "Hi-TenNo. 20-26/34 flexible stranded tinned
copper, cotton wrap, 1/32" "Hi-Tension" rubber, color coded, conductors sion" rubber, color coded, conductors
twisted, cushioned with cotten fillers, cotton wrap, tough black rubber jacket overall.

## RUBBER SHEATHED SERVICE CORD

## (UNDERWRITERS APPROVED)

GENERAL PURPOSE: For amplifiers, sound systems, speakers, vacuum cleaners, electric tools, washing machines, refrigerators, appliances, trouble lights, garage lamps or wherever a rough usage power line is required.

Also Available with Additional Conductors.

## TYPE POSJ-E-Z STRIP LAMP CORD

## (UNDERWRITERS APPROVED)

GENERAL PURPOSE: For line cord on radios, lamps, electric clocks, food mixers and other small devices.

| No. | Put-up | O.D. |
| :--- | :--- | :--- |
| 1966 | 100 Ft. Spool | $.235^{\prime \prime} \times .130^{\prime \prime}$ |
| 1967 | 250 Ft. Spool | $.235^{\prime \prime} \times .130^{\prime \prime}$ |

Standard Colors: Brown, Black and Ivory

CONSTRUCTION: Two conductors parallel, each conductor No. 18-41/34 extra flexible bare copper, color coded cotton serve, $40 \%$ tough rubber jacket overall. Slit in jacket to permit "E-Z" separation.

## ALPHA WIRE PRODUCTS

## 

CONSTRUCTIUN: Very flexible tinned soft annealed copper, concen. tric strand, cotton wrap, $3 / 64^{\prime \prime}$ "Su. per Hi-Tension" rubber, satin finish.

CONSTRUCTION: No. $18 \cdot 65 / 36$ tinned soft annealed copper, concentric strand, cotton wrap, 7/64" "Su. per Hi-Tension" rubber, satin finish.

KINKLESS TEST LEAD WIRE
GENERAL PURPOSE: As test leads in analyzers, oscillators and all other types of testing apparatus or wherever an EXTRA FLEXIBLE insulated wire is required.

## LACQUERED HOOK-UP AND LEAD-IN WIRE

## (HIGH GLOSS LACQUERED BRAID)

GENERAL PURPOSE: For point to point soldering connections on transformers, amplifiers, panel hook-up, etc., where a low loss dielectric is required. It is not a pushback wire but will strip easily.

## 7 MM LACQUERED CABLE

GENERAL PURPOSE: For high voltage leads in television receivers, cathode-ray tubes, oscilloscopes, etc.

| No. | Put-up | 0.D. |
| :---: | :---: | :---: |
| 1981 | 100 Ft. Spool | $.275^{\prime \prime}$ |

CONSTRUCTION: Single conductor No. 16-19/29 stranded tinned copper, rubber insulated, cotton braid highly lacquered.

CONSTRUCTION: Stranded soft annealed tinned copper, insulated with rubber, over which is a highly lacquered braid. Oii, heat, and moisture resistant.

## 7 MM SHIELDED IGNITION CABLE

GENERAL PURPOSE: For automotive and aircraft ignition sys:ems requiring grounding to overcome interference.

| No. | Put-up | O.D. |
| :--- | :---: | :---: |
| 1193 ft. spool | $.300^{\prime \prime}$ |  |

Al.l. PRICES AND SPECIFICATIONS SIBJECT TO CHANGE WITHOUT NHTICE

## ALPHA WIRE PRODUCTS

CONSTRUCTION:: Two conductors parallel, each conductor 7/28 bare copper flexible stranding, low loss polyethylene plastia insulation, smooth satin finish. Standard color: brown.

TELEVISION AND FM TWIN-LEAD CABLE
GENERAL PURPOSE: For use especially in television and FM as the lead-in from the antenna to the receiver.

| No. | Put-up | Impedance (Ohms) | Capacity Per Ft. |  | O.D. |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 1171 | 50 Ft. Coil | $6 / 20$ | 470 Lbs. | $.105^{\prime \prime}$ |

CONSTRUCTION: Single conductor No. 22 solid copperweld, polyethylene insulation, bare copper shield, black vinyl plastic jacket overall.

## CO-AXIAL CABLE (RG-59U)

GENERAL PURPOSE: Co-axial cable is ideal for television, FM and facsimile reception. Is suitable for very high frequency and ultra high frequency ranges.

CONSTRUCTION: 6 feet E-Z Strip cord (Type POSJ-64), molded-on rubber plug attached to one end, TV molded-on rubber connector attached to other end.

## TELEVISION POWER CONNECTOR CORD

GENERAL USE: For replacement of worn out or damaged TV cords.

$$
\frac{\text { No. }}{2126} \frac{\text { Lenath }}{}
$$

## ALPHA E-Z STRIP LINE CORD

This is the modern and ideal power supply cord for replacement on radios, lamps, fans, etc. It is made of E-Z strip rub. ber parallel cord (UN. DERWRITERS APPROVAL) with a small unbreakable soft rubber attachment plug. Free end stripped and tinned ready to attach.

## FLEXIBLE VARNISHED TUBING AND SLEEVING

RADIO VARNISHED TUBING - (Spaghetti). A sleeving with a heary coat of varnish, in high gloss vivid calars. Average dielectric strength: 4,000 volts.

SATURATED SLEEVING - A fibre yarn sleeving saturated with high grade insulating varnish. Cuts clean and has a smooth interior wall. Average dielectric strength: 2,000 volts.

MAGNETO VARNISHED TUBING-The production of this type of tubing is under rigid control so as to insure a maximum in quality. It is thoroughly impregnated with a varnish of maximum insulating value. It is resistant to heat, oil, gas and acids. Colors are bright and vivid. Average dielectric strength: 7,000 volts.

Standard Colors: Black, Red, Yellow, Green and Brown Sizes follow the B \& S System of gauging wires. For instance, a No. 10 tubing will fit over a No. 10 bare wire or any wire with an insulation of which the O.D. is equivalent to No. 10 $B$ \& $S$ gauge. If in doubt, it is best to submit a sample of the wire or product to be covered.

Longer Lengths Available.

## SPACHETTI TUBING

A superior varnished tubing for radio work. It will retain its dielectric and flexibility indefinite. ly. Takes up to No. 14 wire.

Colors: Black, Red,
Yellow, Green and
Brown
No. 2091 - $36^{\prime \prime}$ Lengths

## ALPHA WIRE PRODUCTS

## NOTE: USEFUL INFORMATION FOR ORDERING

- All tests on specifications are approximate and subject to normal manufucturing tolerances.
- Lengths other than those regularly listed can be furnished.
- Other wires and cables made to specifications.
- Use the following symbols alongside catalog number for other than standard put-ups.

## BELDEN - microphone cables

Performance and appearance are the outstanding features built into Belden microphone cables. Polyethy'ene insulation is used for outstanding dielectric properties and vinyl plastic jackets for protection.

Dielectrically, Belden microphone cables have low capacitance, high insulation resistance, and low attenuation at audio frequencies. In addition, they provide resistance to physical abuse, aging, and moisture.

# BELDEN <br> transmission line cables 

Belden transmission cables are available for every receiving and low power transmitting antenna application. Coaxial, twisted pair, and parallel type lines are represented. These cables are designed to meet exacting electrical requirements and are mechanically strong, weather re-
sistant, and give long service life. Cables constructed with polyethylene insulation are especially suitable for very high frequency (VHF) and ultra high (UHF) range where the losses in ordinary types of transmission line cables are excessive.

frequencies.

## BELDEN - hookup and lead wires

There is a Belden hook-up and lead wire construction for every service requirement-for receivers, transmitters,
amplifiers, rectifiers, aircraft radio, geophysical instruments, and in all other types of electric equipment.

* Measurements for d-cinsulation resistance were made by neans of a megolim bridge at ano volts on specimens in mercury after subjection
to $90 \%$ relative humidity and 100 F for 24 hours
**Measuremenis for insulation breakdown were made on specimens in mercury by application of gradually increasing 60-cycle a-c potential.

## DISPLAY ASSORTMENT

PLASTIC INSULATED
General-use hook-up wire and as leads for radio components such as transformers, chokes, and controls. Furnished in the eight following colors: Block, Blue, Green, Red, Yellow, White, Brown, and Orange. SPECIFY COLOR.
Wires with $1 /$ on $^{\prime \prime}$ plastic insulation are designed for use within the chassis of radio receivers, amplifiers, instruments, controls, and other electronic devices. Wires with $025^{\prime \prime}$ plastic insulation are designed for use inside or outside the chassis but withir the radio cabinet. The operating temperature limit for these wires is $80 \mathrm{C}(176 \mathrm{~F})$.

# RADIO AND THLEVISION WIRE PRODUCTS 

## P-A WIRES and CABLES <br> HOLLYWOOD MICROPHONE CABLES (Shielded-Jacketed)

Substantially made to withstand rough usage. Special low capacity color coded conductors. Braided with tinned copper shield. Tough weatherproof polished jacket overall.
Single Conductor -- unusually low capacity. Can be used up to 100 ft . with high impedance ribbon microphones and up to 50 ft . with crystal microphones.

Two Conductor, for low impedance microphones and transmission lines.

## SHIELDED CABLES

## 

These cables are recommended for sound recording equipment and P.A. systems where a flexible shielded cable is necessary. Each conductor consists of multistrand copper wire cotton served, rubber covered and braided with color-coded cotton. Conductors No. 20 gauge unless otherwise specified.

## A BIRNBACH <br> Birmbach ACCESSORIES

## THE NEW MODEL No. 6000 CHIMNEY MOUNT ANTENNA BASE

Installation men hase for years shown their preference for Birnbach Products - now, once again Birnbach slows the way. The New Birnbach Climney Mount Antenna Base No. 6000 has received a ruady and sensational acceptance. Its ease of installation, its unusual durability, rersatility, and last but not least its very low price have all added up now once again, as in the past, that lirnliach has shown the way to quality at a low, low price.
Here it is ... The New Birnbach Chimney Mount Antenna Base Model 6000 for . . . FM - TELEVISION - AMATEURS

## A Few of Its Many Features:

- Simple - One Man Operation

Sharply reduces installation time and cost.

- No Drilling

No special tools - no special equipment.

- Fits All Chimneys and adaptable for posts, corners of buildinge, etc.
- Two Seperate Sections

Longer distance between sections allows maximum mast support.

- Base Castings Made of Strong CorrosionResistant Die Cast Aluminum Alloy highest possible tensile strength.
- Easily Installed at Highest Elevation.
- Fits Masts $5 / 8^{\prime \prime}$ to $11 / 2^{\prime \prime}$ O.D.
- Complete With All Hardware ${ }_{2}^{2} 12$-ft. steel strapping, etc., ALL COMILETELS RUST-RESISTANT.
- Simple Instructions.

No. 6000 - Complete
List Price $\$ 5.50$ Per Pair

## WOOD SCREW ANCHOR

Especially desizned to give permanent anchorace in any kind of masomry for insulated ribbon, coaxial or similur type standolls. Threaled to take No. 10 Wool Screws and to fit $3 / \mathbf{s}^{\prime \prime}$ dia. hole. After partially insert. ins the threaded end of the standoff into this wood screw anchor and then using a pair of pliers to dig deeprr into the anchor you have positive assurance of a permanent troublefree installation. Rustproof, galvanized steel. Free tanping tool with each 100 anchors.
No. 7039
Standard Package 100
List Price $\$ 11.00$ per C

## MACHINE SCREW ANCHORS

These anchors are tapred for $1 / 4^{\prime \prime}$ machine serew bolts. Takes a $1 / 2^{\prime \prime}$ dia. hole and comes with a $3 / 4^{\prime \prime}$ loner bolt. Gives permanent anchorage. Used for fastening wall mounts brackets and pipe straps to any type of masonry. Free tamping tool with each 100 anchors.
No. 7040 Stand. Pack. 100 List Price $\$ 20.00$ per C

## ANCHOR BOLT ASSEMBLIES

This is the standard anchor used by installation compunies for fasteniug wall mounts and pipe straps to masonry. Camot pull out. Rustproofed. The $1 / 4$ " bolt comes with anchor and nut complete. Hole dia. $1 / 2^{\prime \prime}$. A vailable in $\underline{Q}^{\prime \prime \prime}$ and $3^{\prime \prime}$ lengths of holt. Designed to rive permanent anchorage. Corrosion-proof. Fee tamping tool with each 100 bolts.
No. 7041-2"
No. $7041-2^{\prime \prime}$
No $7042-3 "$
Standard Package 100 List Price $\$ 15.00$ per $C$ Standard Package 100 List Price $\mathbf{1 5 . 0 0}$ per C

## PIPE HANGER

Made of palvanized steel, this pipe hanger can be used for fastening poles, masts and other objects to walls, toots, pahles, etc.
No. 7038 Stand. Pack. 100 List Price $\$ 0.10$ ea.

## LAG BOLTS

For permanently holding hrackets, etc., in place. Made of galvanized steel, this sturly bolt serews easily into wood, brick, etc. Available in four sizes: $1^{\prime \prime}, 11 / \mathbf{2}^{\prime \prime}, 2^{\prime}$ $3^{\prime \prime}$. Specify size.
No. 7043 Stanl. Pack. 100 List Price $\$ 9.00$ per $C$

## EYE BOLT ASSEMBLIES

Designed for permanent anchoring of guy wires, cables, brackets, etc., in brick or masonry. Cannot pull out. Made of $1 / 4^{\prime \prime}$ material. Overall length $21 / 2^{\prime \prime}$. Dia. of eye $3 / 8^{\prime \prime}$. Hole_dia. $3 / 8{ }^{\prime \prime}$. Rustproofed. Use tamping tool No. 7046 .
No. 7044 Stand. Pack. $100 \quad$ List Price $\$ 18.00$ per C

## PIPE BOLT ANCHORS

Used to mount pipe poles or antenna masts directly onto brick or masonry. Cannot pull out. Made of $1 / 4$ " stock for $1 / 2^{\prime \prime}, 3 / 4^{\prime \prime}$ :and $1^{\prime \prime}$ pipe. A very useful and superior bolt. Rustproofed. Use tamping tool No. 7046.

No. 7045 Stand. Pack. $100 \quad$ List Price $\$ 28.00$ per C

## TAMPING TOOLS

Special Tamping Tool for anchoring eye bolts and pipe bolts. No. 7046.

List Price $\$ 4.75$ ea.

Tamping Tool for $1 / 4$ " anchor bolts.
No. 7047
................................................. List Price $\$ 2.00$ ea.

## 3 IN 1 TOGGLE BOLTS

Strongest toggle boit obtainable. Used for bolting or mounting to wood, hollow concrete, tile partitions or plaster walls. Can be used with nut end or screw end in wall. Bolt dia. $1 / 4^{\prime \prime}$. Bolt length $3^{\prime \prime}$. Rust proofed. No. 7048 Stand. Pack. 100 List Price $\$ 22.00$ per C

## STAR DRILLS

Made of hand-tempered and hand-forged high-grade tool steel for hand drilling in brick, stone and concrete. Standaril package 12. No. 7049- $3^{\prime \prime \prime}$ " $\times 8^{\prime \prime}$ long. List Price $\$ 0.85$ ea. No. 7050-1/2" $\times 8^{\prime \prime}$ long List Price .90 ea.

List Price $\$ 2.95$ ea

## For Television (TV)

The flexilite folded dipole antenna for Television is perfect for indoor use. This anlemat can he placed in attics or in apartment houses: it catl be placed under rugs, behind large conches, behind drapes covering wimlows, etc. This acrial can be orjented for hest reception over all delevision stations. The new Bjrubach indoor Television Antemma should prove a real st-ller for bou. Transition loss measures 2.85 bis in television banul.
No. 7027 -Flexible Folded Dipole Antenna for Television (TV).
List Price (Individually Boxed)
$\$ 1.95$ ea. -List Price (Individually Boxed)
1.50 ea.

## For Frequency Modulation (FM)

The flexible folled dipole antenna for FM is excellent for all FM recevers. With the new FM Converters am lluners now on the market pou call elljoy a very hacrative sale on this low-priced antenna. Losses in line measure .85 DB per 100 feet ut 100 Ml
No. 7026-Flexible Folded Dipole Antenna for Frequency
Modulation (FM).
List Price (Individually Boxed)
$\$ 1.65$ ea.
For ahove antemas with 50 ft . lengths of 300 ohin Transmission Line ald $\$ 2.00$ to the list price
An attractive display card furnished to aid you in the sale of our two new products.

## GUY WIRE CABLE CLAMPS

(VIBRATION-PROOF)
New Vibration-I'roof Luck Clamps for positive grip on guy
wire. Veather-proofed throughout. Standird packase No. 762

List Price $\$ 0.20$.

## KNIFE SWITCHES

Made of special nickel-plated spring brass on a porcelain base. kerew terminals pocated conveniently for easy connec-

[^43]

## U BOLT

Useful for mountilg poles to steel phates, wooden sections, etc, Nuts and washers supplied. $21 / 4$ " overall; $1 / 4$ " thead length: $1 / 2^{\prime \prime}$ distance between legs, $1 / 4-20$ size thread.
No. 7035 ... Standard Package 50... List Price $\$ 0.30$ ea,

## TELEVISION LOOM

This is" Non Metallic Ionm is used for the protection of twin lead and Coax Cable on teleloom over that mart of the twin lead or coax cable which comes in contact with any slid'ty enges such as corners of buiblings, fire escapos, ete. Use frletion
 No $1015-100 \mathrm{ft}$

List Price 5.25 ea .

## PERFORATED HANGER STRAPPING

Can be used and adapted for mounting Antenna Masis to birious odd shaned objects; channeys, towers. etc. Made of $3 / 3^{\prime \prime} x .003$ gaivantzed steel
strap. pough that flexble. No.

## TELE-RAY FILTERS FOR BETTER TELEVISION IMAGE VIEWING

## Outstanding Feafures

- Scientifically compounded, optically perfected filtering for all
- Engineered to give a stereoscopic, life-like eifect t,o the Televisiu screet
- Instantly and easily attached by special arlhesire
- Picture Contrast increased ive emminalion of unwanted light softens grays - sharpens blacks
- Image becomes sharp and clear with increased detai] in room
- Glare fromition
- Glare from screen eliminated with resulting restfulness to eves
- Unbreakable.
- Bevelled edges (Super Quality)

Both gauges have the correct rigidity for volr viewime pleusure and are guaranteed not to bend or buckle under the most exteme operating conditions
Not to be confused with any cheap imitations of these quality crigineered products.

- Works on all Television sets
- Individually packed with simple instructions.

## RCA ELECTRONIC COMPONENTS

## TELEVISION ANTENNAS

COMPLETELY NEW DESIGN - BUILT TO LAST RCA 12-CHANNEL TELEVISION ANTENNA TYPE 204A1
BASED UPON YEARS OF FIELD EXPERIENCE

- Easily Assembled - Ruggedly Constructed - Uni-Directional Here's an RCA "Leader" to meet the majority of your cveryday antenna needs. Engineered and developed by RCA for plus-value service, RCA-204A1 is intended for use in most receiver locations where both high and low-frequency stations are in the sane general direction. Unique RCA "V" attachments provide uniform directional characteristics for all 12 channels.

RCA-204A1 12-Channel Television Antenna is simple in design and appearance. Sturdily built of aluminum, it will withstand high winds, sleet, and ice. Designed for use with 300 -ohm transmission line, the 204 A 1 rates " $A$ " for antenna achievement:- for over-all performance and unusually flat response over each of the two television bands. It can be readily combined with any of the RCA Stacking Kits for fringe or other difficult reception areas.
Supplied with all necessary hardware and sturdy $5 \mathrm{ft} x$ $11 / 4^{\prime \prime}$ a luminum mast which may easily be extended by addition of RCA-207A1 antenna mast sections. Completely illustrated instructions for installations are included.

## RCA "HIGH-LOW" TELEVISION ANTENNA ARRAY - TYPE 206A1

FOR 12-CHANNEL TELEVISION RECEPTION Here's an antenna that you can depend upon for optimum performance in locations where high and low-channel stations are widely separated. Sturdily built to provide long. dependable service, the 206 Al will withstand severe weather conditions.

RCA-206A1, thoroughly tested for over-all performance characteristics, provides superior reception. When used with 300 -ohm transmission line, it requires no external transformers nor matching stubs.
Comes complete with harness, all necessary hardware and sturdy $5 \mathrm{ft} \times 1 \mathrm{I} / 4^{\prime \prime}$ aluminum mast which may be easily extended by addition of RCA-207A1 antenna mast sections. Completely illustrated instructions included.

## ANTENNA ACCESSORIES

## Bright Picture Transmission Line

Especially designed for Television and FM. Special chemical-resistant plastic finish insures continued flexibility even in extreme heat or cold. Ultralow loss-less than 0.8 db per $100^{\circ}$ at 50 Mc ; less than 1.2 db per $100^{\circ}$ at $100 \mathrm{Mc} .4 .5 \mu \mu \mathrm{f}$ per foot capacitance. Propogation velocity $83 \%$. Extra strong-supports a mile of its own weight (75 ibs.) before breaking. Stock No. 201A1. Sugg'd List Price: $\$ 47.50$ per $1000^{\prime}$.

## Antenna Mounting Brackets

For use with RCA Antennas Stock \#225A1 and \#226A1. Readily adjustable to permit mounting on any roofregardless of overhang. Can be attached to brick, stone or wood. Entire bracket is plated with bright zinc, preventing rusting and subsequent staining of building surfaces. Special angular supports eliminate sagging. Stock No. 227A1. Sugg'd List Price: $\$ 7.50$ per pair.

## Twin-Lead Lightning Arrester

For use with FM and TV antennas. Easy to installcutting or stripping of transmission line is unnecessary. Fits any $1 / 2^{\prime \prime}-2^{\prime \prime}$ pipe. Continually dissipates static surges. Does not unbalance line. Brown plastic case. Stock No. 206X1. Sugg'd List Price: $\$ 1.10$.

No. 136-31 is a glazed porcelain transposition insulator which permits crossing transmission lines at frequent inter-: vals to prevent radiation and provide $2^{\prime \prime}$ line spacing.

136-122, -124,-126
 " AND JOHNSON "Q" BEAM he consistent results obtained by the thousands of users of the JOHNSON Q antenna system are due to the extremely high efficiency of this famous antenna. Applications include half-wave doublet, either horizontal or ver"al, harmonic or "long wire" radiator, radiator-reflector, radiator director,

解 Be and others. THNSON Q Beam is a special application of the $Q$ system. It consists and frequency of the two bands desired. For example if you want a $Q$ Beam to operate on 10 and 20 meters, order two JOHNSON Qs for 20 meters.

The -20 Q and -6 Q use aluminum tubing for the radiating portion as well as for the matching section. The 136-35 Jack Strip and 136-36 Plug Strip make an ideal feeder connection at the trans mitter $w^{-h} n n$ the antenna is suspended.

## "Q" SPACING BARS

Used for spacing tubing in matching transformer applications. Spacing is continuously variable from $7 / 8^{\prime \prime}$ to $35 / \mathbf{a}^{\prime \prime}$.
No. 136-33-Spacing Bar. $\qquad$ List Price $\$ 0.60$

## ENAMELLED COPPERWELD ANTENNA WIRE

OHNSON Enamelled Copperweld Antenna Wire will not stretch nor sag. Prices are per 100 feet. Carried by most suppliers in bulk, it is available from the factory in any specified length.

## JOHNSON UNIVERSAL ROTOMATIC ANTENNA ARRAY

New direction indicator and Beam control is Selsyn motor operated.

Heavy-duty drive unit is self-lubricating and fully enclosed.

Available with Parasitic or Phased Driven Elements.
Enjoy more QSOs - work more DX with the new JOHNSON Universal Rotomatic Beam.

The new symmetrical unidirectional beam employing phased driven elements is easy to tune - performs beautifully.

DeLuxe Models of the parasitic or phased arrays are available for two-band operation, employing two separate sets of elements but only one iransmission line.

## NEW JOHNSON PARASITIC ARRAY

When you see it you will realize it's in a class by itself! New, unique design allows an infirite variety of element lengths and spacing. Perfect impedance matching on two bands - any impedance from 50 to 600 ohms - coaxial or open wire line.

## NEW ROTATOR AND DIRECTION INDICATOR

The heavy-duty drive unit will take rain, sleet and high winds in its stride - will turn on the coldest mornings. Rotation is instantly reversible, $360^{\circ}$ at $11 / 2$ RPM. Motor control and antenna relay switch are contained in the selsyn indicator case.

The elements, rotator, direction indicator, etc., may all be purchased separately.
See your JOHNSON Jobber for Rotomatic catalog (includes prices)

## ROTOMATIC FEATURES

## V New Anienna Array

The entire unit is so sturdy that it will withstand heavy icing and high winds.
Two-band operation with Deluxe model. Two arrays fed with same transmission line, switched by low-loss RF relay.

## $\sqrt{ }$ New Matching System

New matching system permits efficient wide band operation and freedom to move about from the low to the high end of the bands. In addition either open wire line or coaxial cable may be used
$\sqrt{ }$ New Heavy Duty Drive Uni Powerful, smooth, continuous rotation either direction at $11 / 2$ RPM.
Mechanism is self-1ubricating and fully enclosed in weatherproof housing.

Universal bracket for mounting on pole or platform. May be driven with $1 / 20 \mathrm{HP}$ motor or larger rated at 1750 RPM.
$\sqrt{ }$ New Direction Indicator and
Beam Control

Selsyn motor controlled indicator. Indicating arrow glides through $360^{\circ}$, in either direction, over a map with compass graduations Stop beam anywhere instantly.

## JIFFY-RIG TELEVISION ANTENNAS

Taco Jiffy-Rig Antennas are the answer to the quickest installations without any electrical or mechanical sacrifice. These antennas come completely assembled, and are readied for installation by merely opening up and tightening a few screws. Elements are all securely
locked in place when antenna is installed.
For performance curves and field patterns on all Taco antennas, refer to Catalog No. 30. Tests are made on all models at the thoroughly equipped Taco laboratories and testing grounds in Sherburne, N. Y.

## LAZY X ANTENNA TYPE 950

First introduced by Taco in 1940, this antenna has a single forward lobe for both high and low channels. It has a high front-to-back ratio, high gain, and broad coverage. Available either as a stacked or single antenna. Stacked antenna has approximately twice the gain of single. Outstanding characteristic is stability of impedance and gain over far greater frequency range than most other types. Matches popular 300 ohm lead-in and receiver input.

CAT. No. 950-Stacked Lazy X Antenna for channels 2-13, 2 X Antenna-Reflectors, connecting line between antennas, bakelite terminal panel, mast swivel bracket, 2 five-foot mast sections. (Shipping Wt. : 11 lbs.) List Price $\$ 41.50$ CAT. No. 951_Stacked Lazy X Antenna. Same as No. 950 less 2 five-foot mast sections and mast swivel bracket. (Ship ping Wt.: $91 / 2$ Ibs.)....List Price $\$ 34.00$

CAT. No. 952-Single Lazy-X Antenna with five foot mast and accessories. (Shipping Wt.: 7 lbs.)

List Price $\$ 21.00$
CAT. No. 953-Single Lazy-X Antenna less mast and accessories. (Shipping Wt.: 5 lbs.)............List Price $\$ 16.50$

## ALL-CHANNEL REVERSIBLE BEAM ANTENNA TYPE 900

An entirely new and improved approach to co-channel interference caused by stations approximately $180^{\circ}$ apart, on the same channel. Uses four driven elements instead of parasitic elements, resulting in extremely high front-to-back ratio ranging from 5:1 up to 20:1. Antennas are connected in pairs, each pair with separate lead to receiver. Diplexer supplied with antenna eliminates any ghosts due to mismatch between receiver and lead. Diplexer incorporates a direction-reversing switch to reverse receiving direction $180^{\circ}$. Antenna receives equally well in either direction. Covers all channels 2.13 with a single lobe.

CAT. No. 900 - All-Channel Reversible Beam Antenna Array. Consists of: 4 seis dipole clements with wings; 4 dipole connecting links with terminal panel; 3 five-foot section masts; accessories, 1 diplexcr. (Shipping Wt.: 14 lbs.)

List Price $\$ 59.50$

CAT. No. 905 - High-Band Reversible Beam Antenna Array. Consists of: 4 highfrequency dipoles; 4 connecting links with terminal panel; 2 five-foot mast sections; 1 crossarm; accessories; 1 diplexer. (Shipping Wt.: 8 lbs.).......... List Price $\$ 32.00$

## STACKED HIGH-GAIN ANTENNA TYPE 995

For fringe areas where low-band channels are operating, this antenna has no equal as proved by its record-breaking history. Comes tuned for any one channel ( $2,3,4,5,6$ ) but will receive adjacent channels with slight attenuation. Order for weakest channel. Cleans up fuzzy signals with its high signal-to-noise ratio. Used in high-signal areas to eliminate interference. Extremely rugged mechanically. Used with Catalog 992-D ( ) director for extreme fringe areas.

CAT. No. 990-( )—Stacked High-Gain Antenna. Specify channel in bracket. Consists of: 2 sets tuned dipole-reflectors; transmission lines with center terminal panel; transmission linc brace. (Shipping Wt.: $91 / 2 \mathrm{lbs}$.)
ist Price $\$ 32.00$

CAT. No. 995-( )-Stacked High•Gain Antenna. same as No. 990 plus the following: 3 five-foot mast sections; 1 set 190-7 mast brackets; 6 screw-eye insulators; 4 mast insulators; 2 guy rings. (Shipping Wt .: 14 lbs.)

List Price $\$ 40.00$

## INDOOR ANTENNA TYPE 975

For strong signal areas where regular antenna is not feasible. May be located at receiver or in attic. Base made of mottled mahogany-finished bakelite. Dipoles nickel-plated with metal-balled tips. Mounting feet permit anchoring to rafter in attic. Dipoles may be set in any position or length, thus covering all channels. No knobs to tighten due to exclusive Taco ratchet design.

[^44]
## DIRECTOR TYPE 992-D-( )

For increased gain and sharper tuning on channels 2, $3,4,5,6$, this director has been designed to slip into the open end of Taco No. 995. Increases voltage gain by 3 db for tuned channel. For areas where sharper tuning and higher gain is desired, the addition of director greatly improves reception. Director may be added any time to an existing installation.

CAT. No. 992-D-( )-Director (Channel 2, 3, 4, 5, or 6). Consists of: 2 crossarm assemblies with director elements assembled by Jiffy-Rig construction. (Shippingr Wt.: 2 lbs.)

List Price $\$ 9.50$

## JIFFY-RIG TELEVISION ANTENNAS

## STACKED HIGH-GAIN ANTENNA TYPE 944 JIFFY-RIG CONSTRUCTION

The finest in high-frequency antennas. Used in fringe areas and areas of average signal strength with excellent results. Cleans up high-frequency signals through the use of two 600 ohm folded dipoles tapped at center terminal for a transmission line impedance of 300 ohms. Exceptionally flat field characteristics eliminates ground reflections. Broad banded, but may be peaked for additional gain on any high-frequency channel by the addition of directors.
CAT. No. 944 - Stacked High-Gain CAT. No. 947 D-H. F. Directors Antenna for high-band channels 7-13. Antenna for high-band channels 7.13 . Consists of: 2 600-ohm folded dipole antenna-reflector combination
mounted on crossarm; terminal panel; mounted on crossarm; terminal panel; 5-foot aluminum mast;
(Shipping Wt.: 5 lbs.)

List Price $\$ 16.50$
adjustable for any higl channel. Attaches to Cat. 944 antenna. (Shipping Wt.: 3 lbs.)

List Price $\$ 3.50$
2 packed per carton

## YAGI ANTENNA TYPE 957

## JIFFY-RIG CONSTRUCTION

An exceptionally high gain, sharply tuned antenna. Performance comparable to stacked antenna-reflector array for any one channel. Available in 3 models to cover the 7 upper channels. Model 957-8 covers $7,8,9 ; 957-10$ covers $9,10,11 ; 957-12$ covers $11,12,13$. Sharp tuning means elimination of much interference and ghosts caused by reflected signals. May be stacked with Type 958 Stacking Kit for a 9 db gain. Jiffy-Rig construction, fully assembled.

CAT. No. 957-(8, 10 or 12)-Yari
Antenna. Consists of: 1 folded dipole antenna; 1 reflector; 2 directors; 1 crossarm with mast-mounting clamp. 5 ft . mast (Shipping Wt.: 4 lbs .)

List Price $\$ 11.00$

CAT. No. 958-( (8, 10, or 12)-Yagi Antenna Stacking Kit. Same as above without mast but with transmission line for stacking. (Shipping Wt.: 3 lbs.) ..........................List Price $\$ 9.00$ Yayi Antenna. Combination of $\$$ CAT. No. 959-(8, 10, or 12)-Stacked Yagi Antenna. Combination of
a 957 and a 958 antenna. (Shipping Wt.: 6 los.)......... List Price $\$ 18.75$

## SINGLE HIGH-BAND ANTENNA TYPE 945

Ideal for use as higl-frequency adapter in average to strong signal areas. Jiffy-Rig construction matches 300 ohm antenna and permits use of common transmission line through use of matching network. Used as antenna in areas where only high frequency stations are operating. May be stacked in weak signal areas using Type 946 Antenna.

CAT. No. 945-Folded Dipole Antenna. Consists of: folded dipole with reflector; 5 -foot mast. (Shipping Wt.: 2 lbs.) List Price $\$ 7.00$

CAT. No. 946-Folded dipole Stacking Antenna. Same as above less mast. (Shipping Wt.: 1 1b.)...................................ist Price $\$ 5.75$

## HI-LO BAND ANTENNAS TYPE 920 AND 925 JIFFY-RIG CONSTRUCTION

An improved version of the famous Taco 465, original piggy-back Hi-Lo Band Antenna. The most popular types for areas of average signal strength where both high and low bands are in operation. Separate high and low band elements allow independent orientation of high and low-band antennas for elimination of ghosts and sharpness of picture. Matching network minimizes interaction between sections, and allows full freedom in orientation. Also available as a stacked high and single low-band antenna. Cat. No. 920 for increased gain usually needed in the high-band channels.

CAT. No. 925-5-5-foot Hi-Lo Band Antenna. Consists of: High and low-band folded dipole antennas-reflectors; 5 -foot mast; matching network; mast swivel base. (Shipping Wt.: 6 lbs.)............ List Price $\$ 17.00$ CAT. No. 925-10-10-foot Hi-Lo Band Antenna. Same as above plus extra 5 -foot mast section, guy anchor, extra mast standofl.

CAT. No. 920-Stacked High, Single Low-Band Antenna. Consists of : Stacked
high-band antenna-reflector combination; Low-band antenna-reflector; matching
netwerk; 2 fivc-foot mast sections; swivel base bracket; guy anchor. (Shippin\%

## FOLDED DIPOLE ANTENNA-REFLECTOR TYPE 940

An economical, dependable folded dipole antenna for prime service area use. Single lobe in low band, Jiffy-Rig construction assures quick erection. Matches 300 -ohm transmission line. For added gain a 992 -( ) director may be used.

# JIFFY-RIG TELEVISION ANTENNAS 

TWIN-DRIVEN YAGI ANTENNA

For fringe area reception a rotator often permits maximum results Taco twin-driven Yagi Antenna, due to its high gain, is the ideal antenna because of its low overall height. In sub-fringe areas use $980-($ ) stacked model with a gain of over 9 db . Special bulletin available on request. Tuned for each low band channel. Use 959-( ) for high band stations. The antenna and first director are driven elements for im proved impedance match.

CAT. No. 980-( ) -Two-l3ay Twin-Driven Yagri Antenna, less mast. List Price $\$ 49.50$

CAT. No. 981-( )-Single Bay TwinDriven Yagi Antenna, less mast.

List Price $\$ \mathbf{2 4 . 0 0}$

CAT'. No. 985-( ) -Two-Bay Twin-Driven Yagi Antenna with 15 -foot mast

List Price $\$ 59.50$
CAT. No. 986-( )-Single Bay TwinDriven Yagi Antenna with 5 -foot mast.

List Price $\$ 27.50$

## SINGLE-LOBE DOUBLE-DOUBLET TYPE 912

Originally designed as a low band antenna and well known as Cat. No. 435 Lazy H Antenna. Re-designed for high-low band operation by the addition of high frequency wings and $H$. F. reflectoris to give the one direction lobe necessary for most localities. High gain and excellent front-to-back ratio obtained by use of separate high frequency reflectors. Recommended for low signal strength areas. Good FM coverage. Available as a signal bay unit Cat. 910 for higher signal strength areas.

CAT. No. 912-Single-lobe Double Doublet Antenna. Consists of: 2 antenna-rcflectors on separate crossarms; high frequency reflectors; connecting network; 2 five foot masts; mounting accessories; high frequency wings. (Shipping Wt.: 8 llbs.) ..........................List Price $\$ 25.00$

CAT. No. 910-One-Bay Single Lobe Antenna for high and medium signal strength areas. Consists of: antenna-re flector combination on one crossarm; high frequency reflector; high frequency wings; 5 -foot mast; mounting accessories. (Shipping Wt.: 6 lbs.)

List Price $\$ 15.00$

## HI-LO BAND IN-LINE ANTENNA TYPE 930 AND 932

Designed for areas of average-to-strong signal strength where both high- and low-band channels are in the same direction. Gain is high in both bands. Directivity lobes show this antenna as having one main forward lobe in both the high and low band. Matching network eliminates troublesome interaction between elements. Perfect match for 300 -ohm lead-in. A stacked model Cat. No. 932-10 is available where additional gain is required in either band.

CAT. No. 930-5-5-foot In-Line An tenna. Consists of: High and low-band antenna sections with low-hand reflector; 5 -foot mast; jumper network; 3 screw-eyes; mast standoff; mast swivel bracket and mounting screws. (Shipping Wt.: 6 lbs.)...List Price $\$ 17.00$

CAT. No. 930-10-10-foot In-Line Antenna. Same as 910 plus one extra 5 foot section of mast. (Shipping Wt.: 7 lbs.)......................Lits Price $\$ 20.00$ CAT. No. 932-10-foot Antenna. Consists of: 2 high-low antenna-reflectors; 2 crossarms; 2 five-foot mast sections; mounting accessories. (Shipping Wt.: 10 lbs.)................. List Price $\$ 34.00$

## FM ANTENNAS

## FM OMNIDIRECTIONAL ANTENNA TYPE 624

This antenna has nearly the same gain as a single dipole in the FM band, which is unique for an antenna of the non-directional type. Covers FM band with practically equal gain throughout, due to its 300 -ohm impedance. Gain and band-width greater than that of turnstile antenna. For areas with less signal strength, the 624 may be stacked $1 / 2$ wave-length between elements for maximum gain and minimum interaction. In a stacked array it is possible to peak the antennas for weaker stations.

CAT. No. 624-Omnidirectional Antenna. Coneists of: 1 S -Type folded dipole with terminal panels; 15 -foot aluminum mast; 2 mast insulators; 60 -foot transmission line; 2 ribbon-type standoff insulators; 2 mast clamps; mounting screws. (Shipping Wt.: $43 / 4 \mathrm{lbs}$.)

List Price $\$ 11.00$
CAT. No. 624-L-Omnidirectional Antenna. Same as above less transmission line. (Shipping Wt.: 4 lbs.)............................List Price $\$ 8.00$

CAT. No. 624ST-Stacked Omnidirectional Antenna. Consists of: 2 S -Type antennas; 1 stacking transmission line with terminal panel and mounting clamp; 25 -foot aluminum mast sections; 1 coupling for mast with mounting panel; 60 -foot transmission line; 2 ribbon type standoff insulators; 2 mast clamps with mounting screws. (Shipping Wt.: $61 / 2 \mathrm{lbs}$.)

List Price $\$ 18.00$
CAT. No. 624ST-L-Stacked Omnidirectional Antenna. Same as above less transmission line. Antenna. Same as above less transmission line.
(Shipping Wt.:
6 lbs.)............ist Price $\$ 15.00$

## FM FOLDED DIPOLE ANTENNA-REFLECTOR

The folded dipole is the best type FM antenna inasmuch as the spread is only $10 \%$ above and below the mean frequency. Has a flat response of 3 db over entire FM band. Unidirectional characteristic is ideal for pinpointing in noisy locations. Mechanically rugged. Electrically perfect.
CAT. No. 620-Folded Dipole Antenna-Reflector. Consists of: 1 folded dipole; 1 reflector with crossarm; 5 -foot aluminum mast; 2 mast insulators; 2 mast-mounting straps with mounting screws; 2 standoff insulators; 60 -foot 300 -ohm transmission line. (Shipping $\mathbf{W} t .: 4{ }^{4} / 4 \mathrm{lbs}$.)

CAT. No. 620.L-Folded Dipole Antenna Reflector. Same as above less transmission line. (Shipping Wt.: $33 / 4 \mathrm{lbs}$.)..................List Price $\$ 10.50$ CAT. No. 621-Folded Dipole Antenna. Consists of: 1 folded dipole with terminal block; 00 -foot 300 -ohm trinsmission line; 15 -foot mast; 2 mountine straps 00 -1oot 300 -ohm transmission Wt.: $3^{1 / 2}$ traps and mounting screws; 3 special screw-eyes. (Sist Price $\$ 10.25$ Wt.: $3^{1 / 2}$ CAT. No. 621-L...................................................... mission line. (Shipping Wt.: $21 / 2$ lbs.)..........................List Price $\$ 7.25$

## FM STACKED HIGH-GAIN ANTENNA

For low-strength signal areas. Maximum gain through proper spacing and matching. Impedance at terminal panel is 300 ohms, assuring good match. Designed to retain broad band coverage despite gain. Front-to-back ratio approximately 15:1; gain about 6.5 db over reference dipole in FM band. Built to withstand all kinds of weather. May be used with a rotator for pinpointing reception in fringe areas.

CAT. No. 635-Stacked Folded Dipole Antenna-Reflector. Consists of: 2 folded dipoles; 2 reflectors with crossarms; 2 transmission lines with terminal panels; 25 -foot mast sections; mounting hardware. (Shipping Wt.: $91 / 2 \mathrm{lbs}$.) ............List Price $\$ 25.00$

## ANTENNA SYSTEMS

## ALL-WAVE NOISE REDUCING ANTENNA SYSTEM

Taco AM antenna kits have been designed and manufactured to perform the important function of delivering as much signal strength to the receiver as possible, and at the same time to hold back undesirable background noises. The signal-to-noise ratio is extremely high, due to the matching transformers incorporated in the following systems.

## DOUBLET ANTENNA SYSTEM TYPE 220 FM

Balanced doublet type covering the standard broadcast, shortwave and FM bands. Completely wired, soldered and tested. Includes Type 221 antenna transformer, two 30 -foot coils of aerial wire, 60 -foot transmission line, and all necessary hardware. Standard Package: 6.
CAT. No, 220-FM-(Shipping Wt.: 4 lbs.)............List Price $\$ 13.50$ each CAT. No. 220-Antenna, AM only......................................List Price $\$ 12.75$

## MULTIPLE OUTLET SYSTEM

Master antenna system for connecting $10-30 \mathrm{AM}$ or FM receivers to one antenna using one or several transmission lines. Used extensively in schools, hospitals and apartment houses. Special type antennas for school public address installations.

INFORMATION ON FM AND AM ANTENNAS IS CONTAINED IN SPECIAL TACO CATALOG.

Premax Adjustable Tubular Antennas have been widely used in radio fields for a long period of years and have shown exceptionally efficient, dependable performance under most severe climatic and shock conditions, both in continental United States and abroad. They are available in various lengths to meet all requirements, in monel, aluminum and steel. Mountings and insulators will be found on page S-48.

## MONEL ANTENNAS FOR CORROSION RESISTANCE

Premax Monel Antennas have an outstanding combination of strength and corrosion resistance that is vital to trouble-free communications, whether at land or at sea... in the tropics or the aretics. The monel used in these Premax Antennas. two-thirds nickel and one-third copper . . is twice as stiff as bronze, strong as structural steel. Yet it will not corrode or lese its strength in salt-water installations, Polished chrome-plated finish on all sizes.
Premax Monel Antennas are built up of multiple sections of harddrawn monel tubing of a tensile strength exceeding 125,000 pounds per square inch. They are available in five standard units, fully telescoping and adjustable to any height between the minimum and maximum shown. The locking device employs a special knurled thimble and split friction clutch sleeve and holds the sections firmly at any desired height, also providing perfect electrial contacts.

## ALUMINUM ANTENNAS FOR LIGHT WEIGHT

Premax Adjustable Type Aluminum Antennas are designed to provide light-weight with corrosion resistance and adeauate strength to meet the most exacting conditions, for marine. mobile and commercial installations where convenience in erection and dependable performance are important considerations. They are ideally adapted for use in radio telephone installations on fresh-water craft and commercial installations where convenience in extending and collapsing are important considerations.
These Antennas are built up of tubing that is specially drawn seamless tempered aluminum with dingeters, gauges and temper engineered to withstand wind velocitics up to $60 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. The locking device is simple and positive and provides low-resistance contact between sections. Six units are available, all fully telescoping.

## HEAVY-DUTY NON-ADJUSTABLE

Another type for special installations under extraordinarily trying conditions is aneavy-Duty. Non-Adjustable Aluminum Antenna in either $171 / 2^{\prime}$ or $35^{\prime}$ length. This is a specially heat-treated Antenna designed to withstand wind velocities up to $100 \mathrm{~m} . \mathrm{p} . \mathrm{h}$. The on the $35^{\prime}$ mast and a base of $32^{\prime \prime \prime}$ to a top of $1 / 2^{\prime \prime}$ on the $171 / 2^{\prime}$ mast.

## STEEL ANTENNAS FOR LOW COST

The Iow initial cost and general satisfaction of Premax Tubular Steel Antennas have made this equipment within all budget of high-tensile, for commercial, municipal, amateur and other types of installations. In construction these Antennas are made highly resistant to corrosion. When pref carefully engineercd diameters and wall thicknesses, heavily cadmium-plated and generally advisable to support them by guys or standoff insulators withstand all ordinary stresses without guying, but it is against abnormal winds or them by guys or standoff insulators Standard Premax Adjustable Tubular Steel A
in two, three, four five and six-section Steel Antennas are available in two, three, four, five and six-section models. All units are fully telesconing and adjustable within the lengths shown for the paraction type. The locking device is simple in operation, positive in the sections. While these Ant and efficient electrical contact between the sections. While these Antennas possess unusual tensile strength, use in fixed in weight and easily portable. They have widespread use in fixed and mobile installations. NOT recommended for
marine use on salt water.

## Unit

Premax Corulite Elements are designed to meet the need for lightweight but sturdy elements for use in horizontal arrays and similar applications. They are unusually light in weight and their special corrugated or reed design provides exceptional strength and rigidity so essential in horizontal types of installations. All parts are heavily electro-plated to provide corrosion resistance and high electrical conductivity. A positive clamp, spot-welded to the tubing, permits adjustment in length and assures rigid joints and positive electrical contact between the telescoping sections. Ease of adjustment between the two halves of each component element is provided by the Premax
of each component element is provided by the Premax "Hairnin" Tuning Bar. By its use it is possible to have all of the elements set at a single physical length and the variation in their electrical length may be accomplished by the "Hairpin."
Corulite Elements are available in one, two, three or four-section units as shown in the specifications at the right. These elements meet all requirements for the arious five to twenty-meter arrays in general use and are ideal for combinations in commercial, FM, televi sion or amateur bands.

|  |  | Extended | Collapsed | Base | Recommended | Weight |

PREMAX PRODUCTS, DIVISION OF CHISHOLM-RYDER COMPANY, INC., NIAGARA FALLS, N. Y.

Television transmitters emit horizontally polarized waves. However, near the receiving antenna, due to reflections from tall trees, buildings and other obstructions, there is bound to be a vertical component which, when combined with the horizontal component, will run the angle of polarization somewhat above the original horizontal plane.
Thus a "direct" and a "reflected" signal often combine at the receiving antenna and where an ordinary horizontal type dipole antenna is used this combination of signals produces only a minimum of desired signal because one signal tends to cancel out the other.
With the Premax Adjustable V Dipole Antenna the proper vertical or horizontal adjustment of the elements will correct this condition and make the two signals combine in phase, thereby increasing rather than reducing the received signal.
Premax dipole elements are designed to permit any desired adjustment of the angle for strongest reception (usually $35^{\circ}$ to $45^{\circ}$ above the horizontal plane) and they can be securely locked in the position deemed best.
Another feature of the Premax Adjustable V Dipole Antenna is that, properly mounted, it permits a sufficient signal energy at the antenna terminals to minimize the importance of the otherwise difficult task of perfect impedance matching.
Many leading radio engineers who have tested the Premax Adjustable V Dipole Antenna, mounted reasonably high and in the clear, find it insures optimum reception of signals from all of the TV stations which come within the line of sight.

## COVERS ALL TELEVISION \& FM CHANNELS

Simpler: Lower in cost ! Easy to erect! Oversize elements Adjustable $V$ Dipole design! Two completely separate arrays on one mast, each of dipole and reflector. Pro vides maximum signal pickup for all channels in HF and LF bands as well as for FM. Fully adjustable in both horizontal and vertical planes. Interconnected by patented AAK divider coil system. Can also be had in individual antennas for either HF or LF. Then at any time, the other array may be added to give full two-band at any time
T-448-LF-HF Antenna complete, less transmission line.
TL-448-LF-HF Antenna complete with 75' 300-ohm. transmission line.
TA-4481-LF Antenna and reflector only, ineluding mast, less transmission line.
TAL-4481-Same as TA-4481 but with $75^{\circ} \mathbf{3 0 0 - o h m}$ transmission line.
TB-4482-HF Antenna and Reflector only, ineluding mast, less transmission line.
TBL-4482-HF Antenna and Reflector only, ineluding mast and
75' line.
TC-4483-HF Conversion Unit, less mast, less transmission line TD-4484-LF Stacked Array, with $9^{\prime}$ mast, less line.

## ROTARY BEAM ANTENNA FOR 6-10-11 METER BANDS

RB-6309

A high-gain directive Antenna with many distinctive features and high degree of flexibility for use on 6, 10 or 11 meter bands. Aluminum supporting frame. Seamless duraluminum tubing elements readily adjustable in length for oper-
ation at optimum efficiency in any band listed. Light in weight with slight wind resistance.
RB-6309 Kit includes frame, 3 pr . Elements with necessary insulators and hardware including T-mateh accessories but no transmission line. Weight 30 pounds.
309-A Extra Elements only, no frames, insulators or hardware included. Packed in pairs. Weight 2 lbs. per pair.

FM-230

## FM and TV ADJUSTABLE "V" ANTENNAS

Designed for maximum response for FM and TV bands. Dipole arms of heat-treated aluminum with wire terminals for lead-in connections. $50^{\prime \prime}$ tubular steel support mast. Arms may be locked at any designed angle. Simple, light-weight design is simple to erect and install. Provides better recention than any straight dipole in congested areas.

No. FM-130-FMAntenna completewith mounting, less transmission line.

No. FML-130-Same as FM-130 but with $75^{\prime} 300$-ohm twin-lead transmission line.

No. FM-230-Same as FM-130 but with reflector, less transmission line.
No. FML-230-Same as FM-230 but with $75^{\circ} 300-\mathrm{ohm}$ twin-lead transmission line.

## HAND-OPERATED TURNTABLE

Will support the largest type of Rotary Beam Assembly and permits rotation for full $360^{\circ}$ in either direction. Formed of heavy sheet steel, spot welded. Stee angles spot-welded inside housing for
 additional strength. Platform or turn-

BM-46 table is $10^{\prime \prime} \times 12^{\prime \prime}$ formed of extra heavy sheet steel, is supported by $7^{\prime \prime}$ ball thrust bearing. Main shaft supported by two bearings to prevent side-play. $5 / 8$ " opening through center shaft for lead-in wires. Duraluminum control cable pulleys and $\boldsymbol{6}^{\prime}$ galvanized flexible steel cable. Shipping weight 17 pounds.

## CENTER-LOADED TUBULAR TELESCOPING MARINE ANTENNA

Gives a remarkable gain over the signal produced by a base-loaded type of same overall length. At high-frequency end of its 2000 to 3000 kc range it gives a measured effective signal power of decibels when compared with a basc-loaded antenna of similar length. This is equivalent to that produced by quadrupling the transmitter power output. For example, with this new Antenna, a 10 w transmitter will produce a signal equal to that of a 40 w transmitter using a base-loaded antenna and tuning system.
The base of this Antenna presents such a low impedance that less loss is experienced with leaky base insulators due to icing, wet weather or water spray. The line feeding the base is a low impedance line and is not critical as to length and body-capacity effects as is the case of the base-loaded antenna where the loading coil is housed in the transmitter cabinet.
The Antenna consists of two telescoping, adjustable base sections on which the loading coil is mounted, with a tapered top whip section. Each tubular section and the top whip is approximately $61 / 2^{\prime}$ long, providing a total extended length of about $19^{\prime}$. The base sections collapse to a single unit and the top whip section telescopes through the coil into the lower sections, making a collapsed length of only about $71 / 2^{\prime}$.
Available in monel for salt-water installations or in aluminum for fresh water use.
CLM-519-Monel type
Base O.D. .893" 1.D. .799"
CLA-619-Aluminum type
Base O.D. $1.000^{\prime \prime}$ I.D. . $834^{\prime \prime}$

## Solid Stainless Steel Tapered Antennas

Recommended for use where extreme durability and great corrosion resistance are necessary. One-piece solid hard-drawn stainless steel rod, tapered from $1 / 4^{\prime \prime}$ base to $1 / /^{\prime \prime}$ top. A tough, durable Antenna that will take it. Available in three standard lengths, to fit all standard mountings shown on page S-48.

No. SP-472-Stainless Steel Tapered Antenna, 72" long.
No. SP-484-Stainless Steel Tapered Antenna, 84" long.
No. SP-496-Stainless Steel Tapered Antenna, 96' long.
(For Mountings See Page S.48)

## Solid Steel "Whip Type" Graduated Diameter Antennas

Made of solid steel of extremely high carbon content, heat-treated and oil-tempered to carefully develop physical properties. Rods of varying diameters cold-drawn to rigidly-held tolerances, are joined securely and permanently into a single graduated length Antenna of high flexibility, minimum wind resistance and long life. Available in cadmium-plated with plain $14^{\prime \prime}$ end (Style A) or $\mathrm{i}^{\prime \prime \prime}$ threaded stud end complete with hexagon nuts and lock washers (Style B). Also available in stainless steel.

| CADMIUM-PLATED STEEL |  |  |  | STAINLESS STEEL |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Length | Style A | Style B | Length | Style A | Style B |  |

| $96^{\prime \prime}$ | AC-196 | BC-196 | $96^{\prime \prime}$ | AS-196 | BS-196 |  |

The most improved, easiest to install Roof Antenna made! One man makes the installation without cutting or ripping car upholstery. Single hole $18{ }^{\prime \prime}$ diameter in metal roof is all that is necessary. Mounting grounds coaxial sheathing of lead-in line. Rubber gasket insures against leakage. Transparent plastic insulator makes inspection easy. The antenna is stainless steel wire, $18^{\prime \prime}$ long with ball-tip and threaded fitting. Suitable for all frequencies in the 152 to 162 megacycle band.
No. DSH-118-Complete Assembly, less transmission line.

No. DS-118-Antenna only.
No. DSJ-118-Antenna with one-hole mounting and porcelain insulator. (Not illustrated.)

## Motorcycle Antennas and Mounts

Overcomes weaknesses and defects commonly found in other types! In this Premax, the coaxial line is grounded to same portion of mounting bracket that carries the antenna support itself. Hence no flexing of cable between ground and antenna connection

A spring-tension joint permits entire antenna including insulator support and grounded cable to be deflected $90^{\circ}$ without injury. Spring tension is sufficient to prevent accidental deflection.

Cadmium-plated steel bracket fits $3_{4}^{\prime \prime}$ tubing frame in either vertical or horizontal position as shown at right.
Antenna is high-carbon, heat treated tempered steel $34^{\prime \prime}$ long mounted in high-strength porcelain cone insulator. Antenna may be changed without disturbing insulator assembly.

No. CCY-134-Complete Assembly, Antenna and Mounting, less cable.

No. CC-134-Antenna only with Adaptor.

PREMAX PRODUCTS, DIVISION OF CHISHOLM-RYDER COMPANY, INC., NIAGARA FALLS, N. Y.

TYPE NA Insulated Bumper Mounting．Plates heavily cad－ mium－plated steel；insulation white glazed ceramic cones． Fits Style A or $1 / 4^{\prime \prime}$ antenna

TYPE K Insulated Bumper Mounting．Antenna rod fits into section of heavy brass tubing attached to the insu－ lator and permits $10^{\prime \prime}$ adjust－ ment in height of antenna Nut and compression sleeve lock antenna in place．Fits Style $A$ or $1 / 4^{\prime \prime}$ antenna White glazed ceramic insu－ lator．

TYPE R Insulated Universa Mounting of split－ball type Solid cast bronze，which bolts directly to car panel or other surface thru heavy plastic disc insulation with water proof gasket and steel back plate．Baked black ename finish．Fits Style A or any $1 / 4$＂antenna．

TYPE TA Trunk or Panel Mounting．for Premax Style A or any $1 / 4$＂An－ tenna．Fastens to car body or trunk or to any horizontal surface such as roof．Lower＇pport is solid brass roa joined to $12^{\prime \prime}$ brass tube carrying antenna．Upper support is $24^{\prime \prime}$ brass rod adjustable on antenna tube and also in insulator assemblies to fit contour of car．High－ tension white－glazed cera－ mic cone insulators．Maxi－ mum $10^{\prime \prime}$ antenna adjust－ ment．All metal parts heavily cadmium plated．

TYPE S Insulated Roof Mounting for auto or any flat surface．Special plas－ tic insulation disc carry－ ing heavy tempered steel spring with retaining nut and tapered split bushing to fit Premax Style A or any $1 / 4$＂antenna．Overall height about $5^{\prime \prime}$ ；diameter of base about $3^{\prime \prime}$ ．Fittings are solid brass electro－ plated．

TYPE SA Spring Adaptor Mounting，similar to Type $S$ described above except that a base plug is pro－ vided with an adaptor stud to fit any Premax Mount－ ing shown in this column． Fits Premax Type A or any $1 / 4$＂Antenna．Overall height about $43 / 4{ }^{\prime \prime}$ ；base diameter about $15 / \mathbf{g}^{\prime \prime}$ ．

$\frac{8}{3}$

##  <br> ANTENNAS For FM and Television

- Maximum electrical efficiency for all channel coverage.
- Mechanical design that assures permanent and trouble-free installations.

## MINUTE MAN SERIES

Can be assembled by 1 Man in 1 Minute! A magnificent new series of antennas designed and developed in the Ward antenna laboratory.

## TELEVISION MODELS

- Vinsynite mast for strength, durability and maximum protection against corrosion.
- Rotatable guy ring for orientation of antenna after guying.
- Nylon insulators on high band antennas.

## TV STRAIGHT DIPOLE

A bi-directional antenna ideal for use in metropolitan areas where ghost images are not a problem. Completely assembled.

Contents: $1 / 2^{\prime \prime}$ reinforced aluminum dipole elements - structurally designed molded bakelite insulator 5 ft . $11 / 4^{\prime \prime}$ O.D. Vinsynite mast - universal swivel base - 3 rubber-canvas laminated stand-offs for mast - rotatable guy wire ring-grounding solder lug Technical Data and Instruction Sheets.
Individually packed: six to a master carton.
Approximate individual shipping weight: 4 lbs. 12 oz.
List Price. $\qquad$
$\$ 7.50$

## TV FOLDED DIPOLE

Broad Band for full coverage of the Low TV Band.
Bi-directional antenna matched to 300 -ohm transmission line. For use in metropolitan areas where ghost images are not a problem.
Completely assembled.
Contents: $1 / 2^{\prime \prime}$ reinforced aluminum folded dipole elements - structurally designed molded bakelite insulator - aluminum support casting for center of ite mast-universal swivel base ite mast-universal swive! base $-{ }^{3}$ rubber-canvas laminated guy wire ring - Technical Data and Instruction Sheets.

## TV REFLECTOR KIT

For use with Straight or Folded Dipoles.
Used to give additional forward gain, to eliminate ghosts and to discriminate against interference from the back side of the antenna.
Contents: $1 / 2^{\prime \prime}$ reinforced aluminum elements - aluminum element support casting for center of dipole - $11 / 4^{\prime \prime}$ O.D Vinsynite cross arm - aluminum bracket for attaching cross arm to mast - rubber-canvas laminated stand-offs - Technical Data and Instruction Sheets.

Individually packed: six to a master carton.
Approximate individual shipping weight: 4 lbs. 2 oz.
List Price.
56.95

Model TVRA-92

List Price.
 problems.
Reflector and folded dipole completely assembled to cross arm. Only seconds required to fasten to mast assembly.
Contents: $1 / 2^{\prime \prime}$ reinforced aluminum folded dipole and reflector elements - structurally designed bakelite insulator and aluminum support castings for elements - aluminum brackets for attaching cross arm to mast

- 5 ft . $11 / 4^{\prime \prime}$ O.D. Vinsynite metal mast - universal swivel base - rotatable guy wire ring - rubber-canvas laminated stand-offs - grounding solder Jug Technical Data and Instruction Sheets.
Individually packed: six to a master carton.
Approximate individual shipping weight: 8 lbs. 9 oz.
List Price.

## WARD Magic Wand Television Antennas

MAN
SERIES

## ALL CHANNEL

Combination Low Band stacked folded dipoles and reflectors and High Band stacked folded dipoles and reflectors for co. Specifically designed for areas on the fringe of both high and low band stations.
Half wave bay spacing with Ralf wave bay spacing with termined for maximum gain on entire band.
Ingenious design allows High Ingenious design allows section to be oriented independently of Low Band section.
Sturdy construction insures permanent installation. Correct $1 / 2$ wave spacing proven by extensive tests to achieve greater forward gain than ordinary stacked arravs. Eliminates signals from the rear for maximum ghost rejection. Broad banded for maximum pick up on all channels. Use of folded dipoles in scientifically designed arrangement to provide broad response and maximum energy transfer. Completely Pre-Assembled.
Contents: Two $3 / 8^{\prime \prime}$ reinforced aluminum high band assemblies and two $1 / 2^{11}$ reinforced aluminum low band assemblies - rotatable guy wire rings - rubber-canvas laminated standoffs pads - grounding solder lug - all angle self-supporting mounting base - Technical Data and Instruction Sheets.
individually packed: six to a master carton. Approximate individual shipping weight: 21 lbs. 12 oz.
List Price.
. $\$ 49.50$

## HIGH BAND ADAPTER

Used to convert low band folded dipole to dual band all channel separately
orienting antenna. Isolates high band orienting antenna. Isolates high band section from low band and vice-versa
with scientifically designed transmission with scien
line link. line link.
Contents: $3 / 8^{" 1}$ reinforced aluminum folded dipole and reflector elements sturdy reflector cross arm - 5 ft . $11 / 4^{\prime \prime}$ O.D. Vinsynite mast extension - rotatable guy wire ring - rubber-canvas laminated stand-offs.
Indiv. packed: six to a master carton.
App. ind. shipping weight: 4 lbs. 2 oz . List Price.
...... $\$ 8.95$

## TV STACKED ARRAY

Two Low Band assemblies stacked one above the other to produce the extra forward gain needed for good TV reception in remote installations and poor signal locations.
Half wave bay spacing with phasing link scientifically determined for maximum gain on entire band.
Broad Banded to give full Broad Banded to give full througth 6 .
Sturdy design and extra sturdy design and extra strong construction assures permanently secure mounting in any weather - correct $1 / 2$ wave spacing proven by ex
er forward gain much more than with the $1 /$ er forward gain, much more than with the $1 / 8$, or V. wave spaclig of or them the for maxi limmation of sition kof folded dipoles in mum ghost rejection - use of folded dipoles in cientifically designed arrangement to provid broad response and maximum energy transfer Completely Pre-Assembled.
Contents: Two $1 / 2^{11}$ reinforced corrosion-proof folded dipole and reflector assemblies - 15 ft . $11 / 4^{\prime \prime}$ O.D. Vinsynite mast in three sections all angle self-supporting mounting base - re inforced aluminum telescopic feeder tubes connecting the two bays - rotatable guy wire ring -rubber-canvas laminated stand-offs-ground

Model TVB-28 174-216
me. ing solder lug-Technical Data and Instruction Sheets.
Individually packed: six to a master carton.
Approximate individual shipping weight: 20 ibs. 4 oz.
List Price.
$\$ 42.50$

## TV HIGH BAND STACKED ARRAY

High Band Stacked folded dipole. Can be used as a stacked high band antenna by itself or as adapter to conyert low band stacked array to all channel stacked array. Half waye bay spacing with phasing link scientifically determined for maximum gain on entire band.
Superb antenna for use in fringe areas having high band stations.
Contents: Two 3/81
reinforced aluminum
dipole and reflector assemblies - 5 ff .
dipole and reflector assemblies -5 if.
$11 / 4^{\prime \prime}$ O.D. Vinsynite mast extension universal mounting base - high band phasing link - rotatable guy wire ring Technical Data and Instruction Sheets. Technical Data and instruction Sheets.

## by WARD

## BUILT FOR RIGOROUS SERVICE

UNIVERSAL SWIVEL MOUNTS<br>Antennas built for the hardest mobile use. Separate components may be combined to meet any requirements. These rear-mounting Transmitting Antennas are designed for the 25.45 me. services. Base mounts in such a way as to allow the whip rod to be held vertically regardless of contour of vehicle body.

## 〔SPP-3B

## SINGLE ROD

Special Alloy Whip Rod of maximum resilience and durability, $84^{\prime \prime}$ Single rod for use in the range of 30 to 45 mcs . Non-Corroding, stainless steel tapered for proper stress distribution. Base Adapter threaded $3 / 8-24$ to permit mounting on SPP-3 Base or SPP-3A Spring.
Individually packed. Approx. weight: 2 lbs .
List Price.
$\$ 11.50$

## SPP-12 $\rightarrow$

## ADJUSTABLE 2-SECTION ROD

Adiusłable Rod. Telescopes from $85^{\prime \prime}$ to $103^{\prime \prime}$ " and is equipped with a locking device that permits removal of the whip rod and replacement at the exact previous length. Heavy wall, hard drawn brass tubing threaded $3 / 8-24$ to fit either SPP- 3 Base or SPP-3A Spring. See SPP-38 for Rod description.
Ind. packed. Approx. weight: 2 lbs. 10 or. List Price.
$\$ 22.50$

SPP-3

## SWIVEL BASE

Swivel base for mounting at any desired point. Half balls of cast aluminum tapped $3 / 6-24$ to ac. cept whip rods and shock springs. Insulator of black bakelite - rubber gaskets - steel backup plate. All screws are Allen Head type with wrenches supplied.
Individually packed. Approx. weight: 3 lbs. 4 oz.
 List Price. $\qquad$

SPP-3A
SHOCK MOUNTING SPRING
This sturdy spring is used to lessen damage to the whip rod. A flexible lead through the center of the spring maintains constant electrical impedance through the spring assembly. $3 / 8-24$ impedance through the spring assembly. $18-24$ sfud on one end - ${ }^{\text {posite end }}$ - 24 tapped $6^{\prime \prime}$ in height -
 posite end oil tempered wire.
Individually packed. Approx. weight: 2 lbs .12 oz . List Price.
$\$ 7.90$

Disappearing fype antenna - For Transmitting and Receiving - Designed for rigorous service of Emergency Communications. Non-telescopic construction exactly duplicates standard aułomotive models in appearance - gives perfect disguise for detective or patrol service. Antenna mounts in fender or cowl - removable whip for quick service or installation.

55" permanent whip eliminates contact troubles... Lead take-off accepts standard AN connector. For low or high band services. Used as short $1 / 4$ wave vertical for 25-44 mc. service. . . "J' for 152 -162 mc. service. The universal split ball design insures a perfect fit as well as that neat built-in appearance and easy installation.
lead not included.

## Model SPP-71

Individually packed.
Approximate weight: 1 lb . 12 oz .
List Price.
$\mathbf{\$ 2 2 . 5 0}$

## MOTORCYCLE MOUNTS

These Antennas are designed for use on motorcycles and are built to withstand the rugged service and high vibration of vehicle. Rod is electrically short but can be used on all frequencies. 40" rod of same material as SPP-3B - $1 / 4-20$ mounting stud in insulator for mounting to motorcycle. Flexible base of rubber to allow movement when rod is bent - Model SPP- 6 with safety ring tip Model SPP-6A with stainless steel ball tip - no lead supplied. Individually packed. Approx. weight: 1 lb .

Model SPP-6 Ring Tip (Illustrated) ___ List, $\$ 9.25$
Model SPP-6A Ball Tip (Not Shown) List, $\$ 9.25$

## ROOF TOP MOUNT

Developed for roof top mountings in 30 to 45 Megacycle range. Advantages of this type of antenna is that directional effects caused by car body shielding of antenna are avoided. Base is designed to be used with the SPP-38 rod which is sold separately. This unit consists of all components of Universal Swivel Mounts except that half-balls are replaced by SPP-3A Spring fastened permanently to insulator. No lead supplied.
Individually packed. Approximate weight: 3 lbs.
Model SPP-26 Base.
List. \$16.50

## ROOF TOP ANTENNA

This model is designed for faxicabs, police services, and others using the 140 to 165 Megacyeles frequencies. Installed entirely from the outside of vehicle - 12 ft . length of RG-58/U coaxial cable attached permanently to antenna. Whip rod is replaceable.
Individually packed. Approximate weight: I lb.
Model SPP-18.
List, \$6.60

』 UNIVERSAL DESIGNS TO FIT EVERY CAR.
RUGGED, LASTING CONSTRUCTION with -

- Heavy wall brass tubing
- Weather-resistant triple chrome
$\sqrt{\sqrt{2}}$ GREATEST SIGNAL PICKUP with -
- High " Q " low-loss lead cables
- Positive coaxial connections
- 100\% shielding
/ PATENTED FLUID TYPE ANTI-RATTLE.
ل HEAVY CARTONS READY FOR RESHIPMENT.

## SIDE COWL MOUNTS

Two stanchions for sturdy installation. Smartly designed insulators with chrome caps. Conversion kit for torpedo bodies included.

## LONG RANGER

Four-section, 100 -inch, EZ-on installation. A favorite in low Signal areas where its extra length provides fine reception.

Individually packed: 12 to a master carton
Approximate individual shipping weight: 1 lb .11 oz. Model SC-8. $\qquad$ List Price, $\$ 6.95$

## AIR KING

Three-section, 66-inch, EZ-on installation. Individually packed: 12 to a master carton. Approximate individual shipping weight: | lb. 4 oz. Model SC-6. $\qquad$ List Price, $\$ 4.95$

## SIDE COWL OR FENDER FLEX-ANGLE

Three-section, 68-inch, EZ-on installation.
Individually packed: 12 to a master carton. Approx. individual shipping weight: 1 lb .8 oz

Model CF-6. $\qquad$ List Price, $\$ 5.45$

Tops in popularity because of trim styling and a flexible adjustment so rod can be locked in a vertical position, regardless of body contour. Ideal design for new body styles.

TOP COWL OR FENDER

# WORKSHOP TELEVISION ANTENNAS and ACCESSORY EQUIPMENT 

The Workshop line for ' 49 has been redesigned to produce even better pictures at lower cost. Threc-element arrays, designed for specific channels and combined on a single mast for particular areas, have been pioneered by the Workshop with outstanding success-even to the point of nationwide imitation during 1948.

## SERIES A-BASIC THREE ELEMENT ANTENNA

This is a high-gain ( 5 db .) directional antenna having sufficient broad band response to cover the 6 mc . channel for
which it is engincered. It is the basic unit of all Workshop multi-channel systems. Note the following desirable features-

Basic 3-Element High Gain Antenna with Mounting Clamps for 11/4.' O.D. or 1" Standard Pipe Mast

## WORKSHOP SERIES B-MAST SECTIONS

This series consists of a basic highgain, Scrics A, three-element antenna described on page S-55 plus a $71 / 2$-foot mast ( $\mathrm{B}-1$ and $\mathrm{B}-2$ mast sections). Appropriate mounts can be selected from those described under Series C. Clamps for $11 / 4$-inch O. D. mast or 1 inch standard pipe are also furnished. If and when new TV stations start operation in your area, this combina-
tion nuay be readily converted to a multi-channel system by the simple addition of Series A antennas and Model B-2 mast extensions. Scrics AB antenna with mast should be selected from the list below for the channel on which reception is desired. This series is furnished less transmission line and mounts.

## SERIES C-MOUNTING EQUIPMENT

MODEL C-I, Conventional Chimney Mount
An excellent support for antennas with mast equipment that can be mounted on chimneys, posts, and other irregular objects. Made of heavy gauge steel and heavily plated to resist rust. Separation between clamps is variable. Masts from 1 to 2 inches O. D. can be used. Preassembled parts cut installation time. Shipping weight 5 lbs.

List Price $\$ 6.50$
Extra 10 fect of strapping, Model ST-1.

List Price $\$ 0.75$

Revolutionary New "Minute Mount" for Internal Chimney Mounting
This ingenious "Minute Mount" can be installed a short way inside a chimney. Completely adjustable for all chimney flues-tile lined or brick. Will not interfere with operation of chimney. Made of heavy cast alloy capable of supporting 150 lbs . with a generous safety factor. Mast $3 / 4-11 / 2$ inches O. D. and antennas can be oriented while mount is in position. Built-in strain guide prevents chafing of cable against chimney. Shipping weight 2 lbs.

List Price $\quad \$ 8.95$

These rugged braced steel brackets, heavily plated, will furnish a $121 / 2-$ inch clearance for mast equipment that must be supported adjacent to siding or wall. Will hold masts from 1 to 2 inches in diameter. Furnished with wood screws. Packed 2 to a carton. Shipping weight 3 lbs .

List Price $\quad \$ 5.50$

## WORKSHOP SERIES C - MOUNTING EQUIPMENT (Con.)

## MODEL C-4, Universal Base Mount

For installations requiring a truly sturdy braced mount none can compare with the stability of this universal mount. Made of heavy steel protectively plated to resist rust. This versatile mount has an $11 \times 12$-inch base. The mast is clamped at two places $91 / 2$ inches apart and can range from 1 to $11 / 2$ inch in diameter. Its durable and ingenious mounting features will allow mounting relatively heavy antennas and masts on flat, peaked, or inclined roofs, even walls with a 10 -inch clearance. Complete with hardware and instructions. Individually packaged. Shipping weight $61 / 2$ lbs.

List Price
$\$ 11.00$

## SERIES 2A - SUPER HIGH-GAIN SIX-ELEMENT ARRAY

This six-element array consists of two basic threc-element antennas spaced a $1 / 2$-wave apart and connected by a preassembled cable harness as an efficient "broadside array." The forward gain is 7.8 db . compared to the conventional $1 / 2$-wave dipole and will produce a signal approximately six times as strong in power. The array is essentially single channcl with an adjacent channel gain of 5 db . The high front-to-back ratio of 18 db . significs that the possible response of an interfering co-channel signal arriving from behind the array would be $2 \%$ of that picked up from the front.
The sharp directional pattern combined with the advantages of shielded coaxial transmission line, means that the signal-to-noise ratio is considerably greater, and "snow effect" less, than that of other so-called fringe area antennas. In addition, "ghosting" is discouraged, even in sity areas where multi-path reflections are numerous.
W-8, 52 -ohm coaxial cable should be used as transmission line with this array. If a direct connection between the
cable and receiver is not practicable, impedancewise, a $\mathrm{W}-100$ adaptor together with a T-72 matching transformer and fittings may be necessary.
No mast equipment is supplicd with this antenna yet mounting is extremely simple, since the clamp brackets furnished fit any $11 / 4$-inch O. D. mast or 1 -inch standard pipe. This feature along with "foolproof" assembly of the 2A antennas make installation very simple.

## Preassembled Cable Harness Only

The installer can readily convert his present Series A, three-element antenna to a Series 2A, super high-gain, six-element array by adding another corresponding Series A antenna plus a cable harness. The performance of a high band (Channels 7 through 13) six-element Series 2 A array can be further enhanced by stacking another Series 2A plus one more cable harness to make a very super high-gain twelve-clement array. Details of these arrays are furnished with every Series 2A antenna.

## COAXIAL CABLE TRANSMISSION LINE

## W-59 Standard 72 Ohm Coaxial Cable

Electrical and physical characteristics are the same as RG-59/U. Recommended as the ideal cable for installations not requiring more than 75 feet, directly matches Series A basic threc-
element antennas. Neutral colored (wea-ther-proof) jacket with convenient marks indicating 5 -foot intervals. Supplied in 500 -foot reels, weighing 22 lbs.

List Price $\$ 0.10 / \mathrm{ft}$.

## W-11 Very Low Loss 72 Ohm Coaxial Cable

Recommended for Series A three-element antennas when transmission line in excess of 75 feet is needed. Electrical
and physical characteristics same as RG-11/U. Weatherproof. Supplied in 500 -foot reels. Shipping weight 55 lbs.

List Price $\$ 0.30 / \mathrm{ft}$.

## W-8 Very Low Loss 52 Ohm Coaxial Cable

Electrical and physical characteristics same as RG-8/U. Recommended for transmission line with Series 2A six-
clement arrays. Weatherproof. Supplied in 500 -foot reels. Shipping weight 60 lbs . List Price $\$ 0.33 / \mathrm{ft}$.

Silver Plated Chassis Receptacle (Female)

Model
$W-60$

Mates with W-50 cable connector. For chassis or panel mounting. Threaded stem $5 / 8$ inch long. Soldering terminal protrudes from rear. Individually packaged and plainly marked.

## Silver Plated Cable or Panel Junction (Female)

Mates at either end with W-50 male connector. A complete splice requires one $\mathrm{W}-80$ junction and two W-50 connectors which must be ordered separately. Each W-80 individully packaged and plainly marked.

List Price $\quad \$ 1.00$

## Cable Adaptor

Required when changing from larger size $\mathrm{W}-11$ ( $\mathrm{RG}-11 / \mathrm{U}$ ) or W-8 (RG-8/U) to smaller W-59 (RG-59/U) coaxial cables. No soldering necessary. W-50 cable connector furnished. Individually packaged and plainly marked.

List Price $\quad \mathbf{\$ 0 . 8 0}$
List Price

## ACCESSORIES

## Matching Transformer

Matches 72 ohm coaxial cable such as Workshop W-59 (RG-59/U) to 300 ohm receivers. Voltage step up of $2: 1$, with a flat response over the TV channels from 52-216 mos. A W-50 solderless cable connector is furnished. Size 2 inches long, 1 -inch diameter. Strap provided for grounding and mounting container on receiver chassis. Negligible mismatch when used with W-8 52 -ohm coaxial cable and W-100 adaptor. Individually packaged.

List Price $\$ 4.00$

## New Coaxial Switch (SP4T)

This virtually lossless, constant impedance switch will connect any one of four singlechannel TV antennas to a receiver. By simply using additional switches it can also be used for demonstrating any number of TV receivers in a display room, or for low-level audio applications.
Model R-4A
Receptacle fittings mate with $\mathrm{W}-50$ solderless connectors for $\mathrm{W}-\mathrm{5} 9$ cable and must be ondered separately. Decals are supplied for panel marking of TV channels. Only one $7 / 16$-inch hole need be drilled for panel mounting. Size- $2 \%$ inches front to back; 2 -inch diameter. Individually boxed.

List Price $\$ 12.00$

Exterior Matching Transformer
Completely weatherproof device for converting 72 ohn antennas for use with inexpensive 300 ohm Twin Lead transmisexpensive 300 ohm sion line at reasonable efficiency. Can also sion line at reasonable efficiency. Can also benefits of 72 ohm coaxial cable. Individu-
be used with 300 ohm antennas to realize be used with

List Price $\quad \mathbf{\$ 3 . 5 0}$

Diagram of a typical display system employing the R-4A coaxial switch and T-72 matching transformer.

No "assembly puzzles" with Rodiort's "SIMPLI.FLEX", Desion No degree in engi. neering or truck-lood of tools needed absolutely no loose hardware. One minute assembly, one man instollotionl

High strength, well engineered design of more than ample safety foctor, with simple, sturdy all oluminum castings, elements, ond heot-treoted support mosts for PERMANENT instollotions.

## LIST PRICE SCHEDULE

True to Radiart tradition ... these new Television and FM antennas are the finest available! They are laboratory engineered and designed to deliver peak performance, always! Their top quality construction will produce the finest television picture possible. For just a little more . . . YOU can.deliver the best . . . it pays!

## TELEVISION-FM ANTENNAS - ACCESSORIES

## Latest Design

An entirely new and complete line of Television and FM antemas and accessoriesprecision made by ICA, pionerrs in Television for over twenty years. Precision engineered; precision fabricated.

## THE ''SUPER-WASP'"

NEWI IMPROVEDI SENSATIONAL! The new INDOOR Television Antenna with amazing reception qualities. Instantaneous horizontal-vertical orienting and tuming for maximum reception. All-Channel selection Beautifullly designed golden-tone brass dipoles and hakelite walnut base with non-scrateh cushions. Jiffy installation. Also improves recertion when used to supplement existing outdoor anterinas.
No. 6468-With 300 ohm lead List $\$ 6.95$

## HI-BAND ANTENNA

Adds to the performance of existing television installations. liroadens reception range of low band antennas to include the higher channels ( 7 to 13 ). May be independently rotated for maximum directional response. Matching feature results in more cven reception from chanuel to channel. $\Lambda 11$ metal; weather-resis tant. Includes 300 ohm connecting lead. No. 6440 -Ship. Wt. $v^{1 / 2}$ lhs...... List $\$ 6.45$

REFLECTOR
Adrl to existing folded or simple dipole for stronger piek-up.
Tmproves response; cuts down interference. May be added to ICA No. 6420. No. 6425-Ship. W't. 3 liss............. List $\$ 4.45$

## FM RECEPTION

Improves directional strength of FM reception in low signal areas. Eliminates reflections. May be added to No. 6405.
No. 6410-ship. Wt. $21 / 2$ lbs.........List $\$ 4.45$

## Lar̀est Features

Includes sturdy, rust-proof, all-metal construetion; non-corrosive aluminum dipoles, indeendently rotable elements. Oflers liroad-band reception. Easy-fitting units for "jiffy" installation. Full instructions.

HI-BAND LO-BAND TV ANTENNA
For outstanding reception over the entire tele. vision channel range. Perfect 300 ohm inn pedance matching to transmission line and set making losses a minimum. Offers high gain and broad response with strong horizontal reception pattern. Separate elements are independently rotated to yield maximum clarity and signal strength in each band. Dipoles and refiectors of heavy wall non-corrosive aluminum; sturdy steel mast 5 ft . long. Shipping Weirht $81 / 2$ lus.
No. 6444
List $\$ 14.75$

FOLDED DIPOLE WITH REFLECTOR
For areas of unusual natural interference. The folded dipole element ofiers matching feature for more even reception. Yields uniform response over a wide band of frequencies. For use with $300^{\circ}$ ohm transmission line. Includes rubber stand-off insulators to prevent lead-in "contact" interference or sway.
IIi-Banil Antenna (No. 6440) may be attached for coverage of higher chanmels.
No. 6430 Shipping Weight 7 1/2 Ibs.
FM RECEPTION
For maximum FM reception. Especially adapta! le to high interference areas. Eliminates reflections.
No. 6415 Shipping Weight $41 / 2 \quad \mathrm{ll} / \mathrm{s}$.

## WINDOW ANTENNA

For All-eliannel Television Reception. Precision engineered, featuring ease of installation; maximum adjustable dipole for best all-channel reception; durable aluminum and steel construction; excellent reception. Special adjustable hase spans 30 to 50 inehes to fit any woot of casement window frame. Skillfully designer? support permits horizontal or vertical positioning for maximum directional response. shipping Weight $51 / 2$ lbs

## Now only

## JERROLD TV-FM BOOSTER

Comes Equipped with the Amazing New, Bullifin

## Included At No Increase In Price

The Jerrold TV-FM Booster has been widely acclaimed for bring. ing better television reception to distant areas. Now, Jerrold makes another notable advance.

The Match-A-Tran is a new, variable step-impedence transformer that helps provide a perfect match between booster output and TV receiver-any receiver-on all channels. This assures that all the gain of the booster is delivered into the receiver. It is especially efficient on the high channels.

## There Is A Difference

Yes, there is a difference between Jerrold and other boosters. Only Jerrold has a tuned-grid, tuned-plate circuit with a channel selector switch to select each channel. Only Jerrold gives a gain of 20 to 30 DB for the entire 6 megacycle bandwidth of each channel. Only Jerrold comes in a bcautiful plastic cabinet. Only Jerrold has the Match-A-Tran.

Model TV-FM, \$37.50 List

## JERROLD IN-TENNA

Indoor TV Antenna with Outdoor Antenna Gain

Jerrold In-Tenna combines an efficient indoor TV dipole with a high gain, wide band pre-amplifier. This combination offers a superior indoor antenna that is the perfect answer to TV installation problems in apartments, hotels, and private homes. Use it where an outdoor antenna cannot be installed and where an ordinary indoor antenna will not work satisfactorily. The Jerrold In-Tenna is recommended as an indoor TV antenna, for use in any location up to 25 miles from the television transmitter. Model TV IN, $\$ 42.50$ List

## What is the MATCH-A-TRAN?

No present day receiver has an input impedence that is purely resistive for all channels. Thus, standing waves are present on all antenna lead-ins. These standing waves cause peaks and nulls of signal voltage to be spaced along the line at half wave length intervals for each frequency.

For best reception it is necessary that the receiver be connected at a peak signal point for each channel. In effect, the Match-A-Tran is an "electronic line stretcher" that can easily be adjusted for each channel. Thus, brighter, sharper pictures are obtained for all channels. Match-A-Tran is especially efficient on the high (7 to 13) channels.

## NEW Jelotower with

## EXCLIUSIVE $P_{m p}$ Plat He

s. Jomomes. sfo.

2 Men Do the Job - Minimizes Wind Resistance . . . Reduces Vibrotion - Weighs Less Than 2 Pounds per Foot. Sectional Construction (in 10 foat lengths)-Saves Storage Space.
Penn Pilot Hole - Cuts Assembly Time 1 '3. (Patent Applied For)

Quick erection by the installer means quick profit for the wholesale distributor . . . that's the boiled-down truth about the new Penn TELETOWER.

Why? Because-at last- a manufacturer has taken the trouble to engineer a simple mechanical feature that serves as a foolproof guide to speedier, safer tower erection. One leg of the middle section in Penn's tripodtype tower is made longer than the others. Position this single leg correctly and - zip! - the other two are automatically brought into correct alignment.

As a result of this exclusive feature, Penn offers a tower with tripod stability that's as simply erected as a single pole. Two "green-hands" can put this tower up fast . . . and in safety!

When crected, this Penn Teletower forms a rigidly locked tripod that is unaffected by high winds and will not vibrate out of position. Yet, the entire assembly - built of lightweight steel - weighs less than 20 pounds. Sectional, prefabricated construction permits space-saving-storage. Cross braces on tripod serve as rungs and make the tower a safe, useful ladder when erecting antenna. Mount is so designed that not an ounce of tower weight rests on the motor!
Penn Teletowers are already on the way "up"! . . . on roofs . . . and in sales! It will pay to drop us a line.

A profitable Penn Teletower connection in your territory may still be available Though we anticipate heavy Distributor demand. Write or wire today. No obligation.

# All Channel Television and F-M INDOOR PORTABLE ANTENNAS 

The most beautiful antennas on the market-highly efficient-compact-colorful. SPICO Antennas have been accepted as standard equipment by leading television receiver manufacturers. The TENNA-MASTER is available in 2 colors, and with 3 section dipoles and plated faceplates.

## EXCLUSIVE FEATURES:

- Perma-Tension telescopic construction.* - Lock-Notch vertical orientation, - eliminates knobs and tightening. - Clean job-no soldering or lugs showing, wires completely concealed. - Rigid construction throughout; extra heavy wall, and larger diameter tubing.

## YET IT COSTS NO MORE!

Tenna-Master Model TV 93B Black bakelite housings and base.

Tenna-Master Model TV 93A
Mahogany bakelite housings and base.

## PLUGIN-TENNA

- Contains all quality features of above. Antenna has built-in 4 -prong plug which plugs into 4-prong socket molded into base, providing rigid support and excellent electrical contact. Antenna easily removed from base and stored in drawer when not in use. Engineer-tested, approved, and sold at standard equipment by leading TV set manufacturers.

THE ARISTOCRAT IN ITS FIELD

## MASTERETTE

- Economy-priced indoor antenna, with quality features as above. a Has bell-shaped base, stream-line-designed, with no lugs, knobs, or solder showing. Easily orient

We manufacture a complete line of standard auto radio antennas. Television, F-M antennas and component parts manufactured to specifications. Your inquiry invited.
*Patented, U. S. Pat. Off.

"Quad-Loop" is a registered trade mark of Square Root Mfg. Corp. Patent Pending.

- Bi-directional Hi-gain Conical " $V$ "
- Beam Channels 2 to 13 and FM
- 2 to 1 Front to Back Ratio
- Low Inception Angle
- Extremely High Signal-to-Noise Ratio
- $150-\mathrm{Ohm}$ Non-Varying Impedance
- Uses 72-, 150- or $\mathbf{3 0 0 - O h m}$ Transmission Lines
- Minimizes "Ghosts"

## TECHNICAL NOTES

Teirex Conical Antennas technically and practically assume response characteristics similar to a solid conical cone, giving broad band and high gain response with full audio and video band. pass over the entira television spectra.
The nominal cenfer impedance is designed to be 150 ohms and is non-varying because of the conical shaped re. ceiving dipoles. The receiving dipoles are filted forward to present a " $V$ " to the incoming wave, preventing the receiving lobe changing with increasing frequency, and narrowing the forward receiving lobe. Thus the Telrex receiving dipole is an effective $1 / 2$ wave element on channel 2 increas. ing to $5 / 8$ wavelength on channel 3 and increasing in effective " $V$ ', beam action to channel 13 where it has become a full wevelength on each leg with the maximum receiving lobe wevengen on each leg with the maximum receiving lobe
being in line. The reflectors are effective at all frequencles with a front to back ratio of better than 12 DB on all with a front
frequencies.
Unlike other methods of covering both bands, Telrex Antennas do not introduce phase shift or discriminate in favor of one band versus the other or one station versus another, and need only one transmission line. Closer to the tonons af some locations it may be necessary to use too her antenna because one or more stations are located tould enther side of the receiving lobe. This antenna should have its own transmission line. Results can be obtained by connecting the antennas together, although this should be avoided as it may impair the reception on one or more stations. When the stations are within a 5 to 15 degree sector depending on distance from the transmitter the Telrex antenna used for maximum efficiency at low frequencies becomes a much more efficient antenna on the high frequencies than a separate cut-to-frequency stack antenna.
The 2X-TV model presents a modlfied stacking of $1 / 8$ wave with highest possible signal-to-noise ratio and minimum reflactions. The 4X.TV model is stacked to present a spacing of $1 / 4$ wave on channel 2 increasing to full wave ength spacing on channel 13 lowering the angle of incep lobos directly above eliminating high angle response effected by stacking is a variable the anfenna. The gain -distance to the station, angle of radiation cepending on time of day, sta. but angle of radiation, season of year, and of day, etc. but it accounts for tremendous galn $8 \times$.TY model noise, flutter. fading and reflections. The all band. coverage. all band. coverage.
The 150 -ohm non-varying center impedance makes it possible to use any of the commercially available transmission shlelded variety 150 . coaxial, 90 -ohm twin-ex or the unwave ratio nety 150- and 300 -ohm ribbons with a standing wave ratio never exceeding 1.6 to 1 regardless of channel shift, causing blurred pictures creased sausing blurred pictures, multiple images and de-

Model 2X-TV installed on chimney, using the Telrex CM-2A Chimney Mount with stainless steel band.

## MECHANICAL NOTES

Telrex products are designed to minimize assembly time on the "job" assuring a considerable timesaving and a perfoct mochanical installation.

Telrex conical antennas are captivated within better than $3^{\prime \prime}$ of elamping action, providing better electrical contact over a longer period of time and a mechanical support that is second to none.
Mast or pipe clamps supplied are universal, allowing correct alignment and flexibility of mounting arrangements, from $3 / 4^{\prime \prime}$ up to and including $15 / 8^{\prime \prime}$ tubing.
The hardware in use is at all times the best money can buy overdesigned for the job.

Transmission Line Stand-off. Stainless steel banding and phenolic. Used on any size mast or tacked to the building to koep the transmission line away from the pipe or building. Durable; easily installod.

Gin Pole Accessory for use by the installer when a long mast is to be erected. Used in conjunction with the TR-I (tilt-roof mount) makes erection of long masts a simpler task. Removed after installation for re-use.

Tilt-roof Mount, sturdily built of angle iron-easily mounted to roof-free action of mast for rotation and orientation.

Window Wall Set. A two-piece installation set for use where a roof installation cannot be made or where the roof overhang would inferfere with mast being installed flush to the building.

Made of welded angle iron with a cross brace of steal wire. Paint-dipped, assures-a lasting installation.

the $8 X-T V$

${ }^{\text {The }}$ Ulftimate in TELEVISION ANTENNAS $180^{\circ}$ azimuth arc.

FOR HIGH SIGNAL AREAS Window, wall or attic mounting, with flexible orientation possible. Two-piece arm is provided. Short arm is used for parallel-to-wall orientation. The second arm permits other than parallel orientation.

# VFF D has everything YOUNEEDFOR BETTER TV \& FM INSTALLATIONS 

Whatever you need in the line of TV \& FM antenna equipment may now be obtained from one dependable source. Why gamble with profits and customer good-will when you can be sure of all-around satisfaction with Vee-D-X-the complete single source quality line. Every Vee-D-X product is skillfully engineered for your active range of technical requirements and problems. Fast low cost installation insures full profit margin for you on every sale.

> ALL ANGLE MOUNT. Particularly suited for mounting on side of house near a window for manval rotation of an. tenna. Designed to clear overhang of eaves, also ex. cellent for flat or pitched roof. $-\$ 7.50$ List

NEW. LIGHT-WEIGHT MAST. Extremely light weight (a $20^{\prime}$ section weighs only 11 lbs.) without sacrifice of strength. Can be rotated after guy cables have been installed.

VEE-D.X SECTIONAL TOWER. Made in $10^{\prime}$ and $20^{\prime}$ Sections for mounting antennas up to $140^{\prime}$ high. Sections are shipped assembled and painted. Strictly all welded construction. Antenna can be rotated from base.

CHIMNEY MOUNT. Fits any opening - round, square or rec. tangular from 4" to 22", accommodates $1^{\prime \prime}, 1 / 8^{\prime \prime} 8$ $11 / 4^{\prime \prime}$ masts, takes only 60 seconds to install. \$7.50 List.

LIGHTNING ARRESTOR. In. stalled without cutting transmission line. Does not disturb impedence match. High dielectric, low loss. $\$ 2.50$ List.

## THE COMPLETE SOURCE OF TV AND FM ANTENNAS AND ANTENNA ACCESSORIES

MODEL H-MFDR-5X. Highmaster TV Antenna. The last ward in high frequency four-element array design. Super-sensitive pick.up in lacal ar fringe areas. For channèls $7-13$ and can be independently oriented when used with law frequency array. Model shown contains patented A.A.K. filter divider network which is optional.

MODEL HLB-4. High-Low TV Deluxe Array. Factory assembled far fast installation - no hardware bag. Low array contains adjustable reflectar elements for rejection af ghosts, alsa usable as directars when rotated to reverse pasition. Far alt channels and use in lacalities where there are reflection prablems. This madel has high farward gain and narrow band. Patented A.A.K. filter divider network is optional.

MODEL SSO-3. Steel Stand-Off. This universally efficient insulatar will rigidly clamp any size of TV ar F.M. Iwin-lead ar caaxial cable. Variaus clamping cambinations are avail. able by merely reversing either or both half sections of the grommet. Supplied in $3^{\prime \prime}$ or $7^{\prime \prime}$ lengths. Made of semi-hard, weather resisting rubber compound, which will not deteriorale in heat or cold.

## OAK RIDGE ACCESSORIES

- 4-Way Clamps
- Chimney Wall Mounts
- Flat and Coaxial Cables
- Steel and Rubber Stand-Offs
- Wall Mounts ( $6^{\prime \prime}$ and $12^{\prime \prime}$ sizes)
- Chimney Mount Conversion Units
- Telescopic Masts ( 24 ft . and 36 ft .)

- The Alliance Tenna-Rotor is an antenna rotator designed to rotate the beam antenna in FM, Television and other high frequency radio applications. It consists of the rotator which is mounted on the antenna mast and a control box placed adjacent to the receiver.
The rotator unit, fully enclosed in a split zinc die-cast housing, is an electrically driven rotor-actually a rotating hollow shaft, into which the antenna center post is clamped. A four-conductor cable connects the rotator with a plastic control box which plugs into any 60 -cycle 110 -valt $A C$ house circuit. A three-position selector switch controls the rotator. Throwing the switch to the right or left rotates the Rotor shaft clockwise or counter-clockwise through a complete arc of 365 degrees.

At the position of optimum reception, the switch is thrown to the center OFF position. Thus, Tenna-Rotor provides positive, instant control of rotation, enabling the operator to select the exact pasition for "peaked" reception! An automatic signal light illuminates a screen on the panel and tells when the limit of travel in either direction is reached. Tenna-Rator is factory lubricated for life . . . designed for years of rugged service, works in any weather and the rotor unit resists corrosion. Tenna-Rotor reduces interference, expands the range and improves the performance of TV and $F M$ installations. Amateurs can use it for trans-
mission and reception with a special accessory thrust bearing (List Price $\$ 7.95$ additional) which will handle most three element beams with a thrust load up to 200 lbs.

## SPECIFICATIONS

## Electrical

Input volts- 110 volts 60 cycle AC
Input power- 30 watts
Clockwise or counter-clockwise rotation
Instantly reversible motor
Minimum coast to stop
No receiver interference

## Mechanical

Positive mechanical stop at end of rotation
Rotates through 365 of arc at speed of approx. I r.p.m. Factory lubricated for life
Moisture sealed
Corrosion resistant components throughout-
-cadmium plated parts
Maximum allowable antenna weight-20 lbs.
Maximum O.D. for antenna mast- $13 / \mathrm{s}^{\prime \prime}$
Interconnecting cable-4 conductor No. 20 gauge Rotator Size $-73 / 4^{\prime \prime} \times 51 / 4^{\prime \prime} \times 8^{\prime \prime}$
Control Case Size-5" $\times 5^{\prime \prime} \times 4^{\prime \prime}$
Approx. Shipping Wt., 12 lbs.

THE ONLY FULL LINE . . . a mount for every purpose . . . all constructed of heavy gauge steel - NOT Castings - treated with a new and improved waterproof coating made to Navy specifications for complete protection against weather conditions . . . in a handsome semi-gloss silver finish . . . vise-type clamps accommodating masts of $3 / 4^{\prime \prime}$ to $21 / 2^{\prime \prime} \ldots$ all hardware pre-assembled so that no time is lost in installation.

## CHIMNEY MOUNT

## Model CMA

Designed to allow any spread between mast brackets. Exclusive furnbuckle feature provides rapid and secure take-up. Installed in a matter of minutes with ordinary tools . . . no drilling necessary. Several other chimney type mounts available.

## VENT PIPE MOUNT

## Model VM-6

For speedy installation of mast on $4^{\prime \prime}$ to $6^{\prime \prime}$ vent pipes or poles.

## EAVE BRACKET

Model EM-6
For a simple installation allowing a $6^{\prime \prime}$ stand-off.

## ADJUSTABLE EAVE MOUNT Model EMX

A practical tripod support with simple adjustment permitting an $8^{\prime \prime}, 10^{\prime \prime}$ or $12^{\prime \prime}$ stand-off or as much as $16^{\prime \prime}$ when used in conjunction with Metalace Mast Jainer. Three other non-adiustable models available for $12^{\prime \prime}, 18^{\prime \prime}$ or $24^{\prime \prime}$ stand-offs.

## MAST EXTENDER

## Model EM-8

Permits a $4^{\prime \prime}$ bite on any two masts of equal or unequal diameter. With six guying points.

## MAST JOINER

Model MJ-2
For joining masts of equal or unequal diameter . . to add Hi-Freq. to an existing installation. With

## WALL MOUNT

Model WM-4
For rugged in-close mounting allowing a $4^{\prime \prime}$ stand-off.

## GUYING CLAMPS

Model GC-4
Vise-type clamps to hold guys at any point on a mast.

## STEEL STRAPPING

## Model SM-100

$3 / 4^{\prime \prime}$ galvanized steel with $1 / 4^{\prime \prime}$ holes on $3 / 4^{\prime \prime}$ centers . . . for mounting and securing masts to odd shaped forms. In convenient $100^{\prime}$ rolls.

## Duodecal and Diheptal Tube Sockets

Designed for television viewing tubes, oscilloscopes and other cathode-ray tubes. Provides means of grouping leads within the socket housing and bringing them out radially in a neat, unlt-cable form, reducing the space required to a minimum. Grouping of the wires in the enclosed raceway eliminates flexing at solder terminals, minimizing breakage.
Removable socket cap provides complete enclosure for all connections, eliminating shock hazard, yet the cap is easily removed for wiring or servicing. Opening for the lead wire harness can be positioned in any of 61 ocations. Contacts are seated in individual wells, the walls of which form efficient creepage barriers. Socket cap and body molded from high quality electrical bakelite. Contactsare Amphenol exclusive "clover-leaf" design featuring four full lines of contact on each tube pin.
The socket is designed for easy assembly and disassembly . . . requires no special tools.

Duodecal Socket for a maximum of 12 equally spaced pins on a circle diameter of $1.063^{*}$.

## Replacement Sockets

Regular "S" sockets, assembled with No. 4 retainer ring to steel mounting plate with sloted holes to fit mounting centers from $1-1 / 2^{\prime \prime}$ to $1-7 / 8^{\prime \prime}$.

## Floating Octal Sockets

Live rubber grommets fit into mounting holes to cushion this socket for vibration-free operation. Black bakelite dielectric. Mounts in $1-3 / 16^{\prime \prime}$ round hole above or below chassis. Two $1 / 4^{\prime \prime}$ screw holes on $1-1 / 2^{\prime \prime}$ centers.

## AMERICAN PHENOLIC CORPORATION

## (GWHETD

## AMERICAN PHENOLIC CORPORATION <br> 1830 SOUTH 54TH AVENUE, CHICAGO 50, ILLINOIS

## Series 75 Microphone Connectors-Single Contact

Fit almost every microphone. Standard with leading manufacturers for many years. Compact, rugged, neat. Chassis receptacles are integral parts of microphones using single conductor cable. Widely used in amplifiers, transmitters, phonoelectric devices, home recorders and similar equipment. They are also suitable for connecting various units such as PM speakers, headphones, and for theft alarms or wall type coin operated devices, etc.

In the 75 Series, plugs mate with all cable jacks and receptacles. Circuit closing contacts are the same except that they close the circuit when plug is disengaged, eliminating open circuit grid howls.

Locknut Receptacles mount in $.385^{\prime \prime}$ holes when grounding to chassis and $1 / 2^{\prime \prime}$ holes for ungrounded 2 circuit applications.

## Cap and Chain

Seals open chassis units against dirt and dust. Also used with 80 Series Connectors. 75-CCC1 . List $\$ .55$ Cl. Cr. Closed Circuit.

## Phone Plug Adapter

Screws into coupling ring of $75-\mathrm{MC} 1 \mathrm{~F}$ and 75-MC1F-A plugs, permitting the cable to be plugged into any standard phone jack. No soldering or wiring.

Series 80 Cable Connectors are designed for shielded cables; for single and two conductor coaxial cables, microphone cables; for twisted pairs, concentric lines, photo cell leads, patch cords and similar uses. Suitable for connecting model railroad equipment, pin ball games and other small electrical apparatus. Elements are high dielectric black Bakelite. Receptacles mount in $5 / 8^{\prime \prime}$ chassis holes. Maximum chassis thickness for locknut type receptacles is $11 / 32^{\prime \prime}$.

Mating families of connectors are listed in horizontal lines.

The most popular connectors are shown in bold face type.

Cap and Chain required is $75-\mathrm{CCC} 1$.
M Male. F Female.

## Series 91 Microphone Connectors- 3 and 4 Contacts

Extensively used on all types of portable apparatus, these connectors were designed primarily to use with microphones. Some of the advantages of Amphenol Microphone Connectors

- Accidental disconnections are eliminated by a positive screw-type connection.
- Incorrect insertions are impossible because connectors are polarized.
- Pulling and twisting strain on soldered contacts is eliminated because a squeeze-type clamp grips cable securely after assembly.
Chassis receptacles mount in $27 / 32^{\prime \prime}$ chassis holes. Maximum chassis thickness for chassis receptacle is $1 / 8^{\prime \prime}$.

Mating families of connectors are listed in horizontal lines.

114-001 FM FOLDED DIPOLE ANTENNA, complete with mast Swivel mounting plate, insulators, guy clamp, necessary hardware and

Twin Lead Folded Dipole Amateur Antennas

The finest ready-made amateur transmitting antenna ever developed. Ready-cut to the four most popular bands. liroadband characteristics. Excellent for your regular transmitting antenna, as an auxiliary antenna or for portable or field day use. Flat top portion is Amphenol 14-022 with copper clad steel conductors, 75 foot lead-in is Amphenol 14-056 joined to top with molded "T" junction. Packaged complete with easy installation instructions.

A real DX antenna, cut-loband, in use by thousands
of amaleurs.

95 ohm Twinax Cable with two medium size stranded copper conductors, single tinnedcopper shield and black vinyl jacket.

## Amphenol Coax and Twinax RG Cables

Fully approved and produced in accordance with Army-Navy specifications (JAN-C-17A). These specifications utilize the very fine dielectric properties of polyethylene, proven most efficient as a low-loss, flexible, mechanically stable dielectric. The outer jacket in most of Amphenol's approved types is tough, resistant vinyl ... protective, nonhygroscopic, and impervious to exposure to acids, alkalis, oils and gasoline. Polyethylene is also used as outer jacket for some of the types listed.
Polyethylene is processed in strict accordance with Bureau of Ships Specification RE-9172. It should be emphasized that unusally strict standards are applied to every operation in the processing of Amphenol's RG cables. Rigid laboratory tests and process checks, plus Amphenol's "OK" certification and notarized affidavit on every unit shipment is final assurance of extra quality and dependability.

| Polyethylene Characteristics |  |
| :---: | :---: |
| Specific Gravity | 92 |
| Water Absorption | . $005 \%$ |

Amphenol POLYWELD"912"

Amphenol POLYWELD '912", colorless, transparent and ready-to-use, is pure polystyrene in solution. Matchless for "doping", coating, impregnating or sealing for radio frequency, ultrahigh frequency, very-high frequency or general electronics applications. Used as an adherent, POLYWELD joins two sections of polystyrene. It contains solvents which will actually "weld" the surfaces of polystyrene into a single unit of uniform tensile strength.

# GANNON GONNEGTORS 

## TYPE DP FITIINGS

In design, this series of connectors differs from the majority of Cannon Connectors. Type DP Fittings are rectangular in shape, and polarization is affected by the arrangement of the contacts within the connectors. A wide variety of contact arrangements is available with contacts ranging from $10-\mathrm{amp}$. to $40-\mathrm{amp}$. capacity and with low impedence Coaxial contacts of $10-\mathrm{amp}$. capacity providing for continuous shielding available in some types. Standard shells are aluminum finished in sand blast and clear lac-

contact retainer clips
quer; some types are available in xinc, sand blast and clear lacquer finished. Contacts are brass, silver-plated. Insulation is phenolic, with specially treated low moisture absorbtion ceramic insulation used in coaxal contacts. Leading uses of the Type DP connectors are in rack and panel instrument and radio equipment where weight and space saving are important factors. A BULLETIN ON DP CONNECTORS IS AVAILABLE ON REQUEST.

## TYPE "DPB" RECEPTACLES

(With Socket Insert)
The DPB Recep-
 tacles are similar t.0 the Type DP D differing only in the mounting flange which is reduced to $21 t^{\prime \prime}$ reduced to 2 material, zincor aluminum. Standard coaxials with ceramic insulation. Six insert arrangements available, one having twinax contacts and two having coaxial contacts.

The DPB Plugs are similar to the Type DPD, differing in the same respect as
the DPB Recepthe DPB Receptacle differs from the DPD. They are mounted
with four No. 6 with four No. 6
Oval Head Machine Screws.
Standard finish on all DPB shells is tinplate and clear lacquer. Other finishes by special order.
"DPR" Rack Type-Complete Unit

Four Insert Arrangements
Rack type flttings are used where large numbers of contacts must be repeatedly coupled and uncoupled, the coupling and uncoupling being performed by means of a geared novement operated by a bail type handle. The dimensions
 cluding swing of bail). Has four holes for No. 8 Mounting Screws.

## TYPE DPD-2

Special Instrument Panel Disconnect The DPD2 has a twogang shell holding 2 standard DPD inserts. Screw jack extraction means is avallable in off. The purpose of the
 fitting is the standardization of such equipment so that it may be interchangeable between assemblies of various aircraft.

## "DPB" and "DPD" JUNCTION SHELLS

Type DPB-34 Used with DPB34 P shells, having pin insert assemblies. Same material and finish as above.

Type DPD-34 Used with DPD34P shells, having pin insert assemblies. Same material and flnish as above.

# CANNON CONNECTORS 

CANNON ELECTRIC DEVELOPMENT COMPANY - 3209 HUMBOLDT STREET, LOS ANGELES 3I, CALIFORNIA

## type $X$ fitings

CANNON "TYPE X" PLUGS AND RECEPTACLES—The "Type X" Series of small connectors offers inexpensive fittings of reliable quality for sound service, radio, public address systems and geophysical research. In addition to compactness, many exclusive Cannon features are embodied in this series, such as full floating contacts in all socket inserts. Solder pot cable connections are easily occessible. Cable glands are removable. Contacts ore so positive that no latching device is needed for ordinory uses.

The arrow shows spring clip on fullfloating socket contact which gives a positive pressure fit connection.

TYPE "X-11" CORD PLUG (With Socket Insert)
Sturdily built for dependable service. Light in diecast zinc nickel inish. Will take $\frac{3}{16}$ " to ${ }^{9}{ }^{\prime \prime}$ cable. Used in conjunction with the following: X-14 Wall Receptacle, X-12 lowing: X-14 Wall Receptacle, MicroStraight Cord Plug, and X-42 Mi

Raytheon's 3-channel Remote Amplifier and power unit use two types of Cannon Plugs: " $X$ " and " $P$ ". Three receptacles on amplifier of right are Type P3-13.

## TYPE XL FITTINGS

＂XL－3－14N＂Receptocle and＂XL－3－11＂＇Plug in engoging position．Compore smoll size of plug with hand．
The Cannon Electric Type＂XL＂Con－ nector combines various features found in other Cannon types into a small fitting comparable only in sixe to the Type＂X＂for low level sound trans－ mission circuits．Among the leading features are the following：（I）conve－ nient latchlack device to hold connec－ tor tight．（2）lightweight．（3）polar－ ixing means（4）compression gland with relief spring or integral clamp，if desired．（5）streamlined design，（6） tapped metal for insert retaining screw．（7）provision for special grounding contact and grounding to shell．Contacts are 15 －amp．for No． 14 BGS stranded wire in 3 contact in－ sert； 10 －amp．in 4 contact insert．Shell is zinc or steel，with various finishes available，bright nickle being standard． Satin－chrome finish available on steel shells．Min．flashover valtage， 1500 （ 250 working valtage）

XL－3－11 with compression glond removed， showing rubber reducer bushing．

## ZINC SHELL TYPES

## TYPE＂XL－II＂STRAIGHT CORD PLUG（Sacket Insert）

Type XL－3－11 is equipped with latch lock device and has raised polarizing boss．No． 1 contact engages before Nos． 2 and 3，and may
be used for grounding purposes，if de－ sired．${ }^{9}$ cable accommodation．Overall dimensions：length， 2 ，${ }_{3}$ ，with relief spring， 2 is approx．
Contacts Capacity Wt．Lbs．Cat．No．List Pr． $\begin{array}{lllll}3 & 15 \text {－amp．} & .0992 & \text { XL－3－11 } & 1.25 \\ 4 & 10-\text { omp．} & .0992 & \text { XL－4－11 } & 1.75\end{array}$

TYPE＂＇XL－12＂STRAIGHT CORD PLUG（Pin Insert）

Type XL－12 plug has alignment rib in ad－ dition to polarizing groove．Cable accom－ modation is 9 ．Insert is removable for sold－ ering or inspection． ength 17 with dimensions $25 / 8$ ；max diameter cable relief spring， Contocts Copacity Wt．Lbs．Cot．No．List Pr．
 4 K0－amp．．0792 XL－4－12 1.60

## TYPE＂XL－13＂RECEPTACLE （Socket Insert）

A wall mounting recep tacle similar to XL－14 except that it has socket insert assembly and latch locking device． Overall Dimensions： flange diameter．1否； flange thickness rear of flange to solder pot extension 1 ig ；dia． ng holes drilled 136 Contacts Capocity Wt．Lbs．Cot．No，List Pr $\begin{array}{lllll}3 & 15 \text {－omp．} & .132 & \text { XL－3－13 } & 1.25 \\ 4 & 10 \text {－omp } & .132 & \text { XL－4－13 } & 1.75\end{array}$

## TYPE＂XL－14＂RECEPTACLE

 （Pin Insert）

This wall mounting re－ ceptacle has three mounting holes having mounting holes having .136 diameter Overall dimensions：flange di－ llange，$\frac{5}{32}$ ；length be－ hind flange to solder pot extension， 1 有；barrel diameter， $3 / 4$ ．Material zinc，bright nickel finish．
Contacts Copacity Wt．Lbs．Cot．No．List Pr， 3 15－omp．． 0592 XL－3－14 1.00 $\begin{array}{lllll}3 & 15-0 \mathrm{mp} . & .0592 & \text { XL－3－14 } & 1.00 \\ 4 & 10-\mathrm{mp} . & .0592 & \text { XL－4－14 } & 1.40\end{array}$

## TYPE＂XL－13－N＂RECEPTACLE （Socket Insert）

Similar to XL－14N ex－ cept has socket insert assembly，with latch－ lock device，and polar－ izing boss on insert barrel．No． 1 contact engages before Nos． 2 and 3 and may be used for grounding circuit，if desired．Overall dimen－
 sions：flange and bar－
rel and nut are identical to XL－14N length from face of flange including solder pot extension， 1 kz ．
Contocts Capacity Wt．Lbs．Cot．No．List Pr．

\end{array}
$$

TYPE XL－3－12 PLUG
（engaged with Type XL－3－13N Receptocle）

## TYPE＂XL－14N＇＇RECEPTACLE

（Pin Insert）
 Designed to be mounted in a panel and has lock nut，accommodating up to ${ }^{\text {If }}$ inch panel．Two fittings may be mounted on a single gang plate． Overall Dimensions：
 barrel diameter，${ }^{\text {ITI }}$ ； width flange to barrel．
歌，with ${ }^{\frac{15}{6} \text { max，solder pot extension；}}$ fange thickness，揚．
Contacts Capacity Wt．Lbs．Caf．No．List Pr． 3 15－amp． 2048 XL－3－14N 1.15 $4 \quad 10$－amp． $2048 \quad \mathbf{X L - 4 - 1 4 N} 1.55$

## STEEL SHELL PLUGS INTEGRAL CLAMP TYPES

## TYPE XL－3－11SC PLUG

（Socket Insert）
The steel shell type is built for rugged service and has cable entry of $1 / 4^{\prime \prime}$ min．， $5 / 16^{\prime \prime}$ max． $6 / 32^{\prime \prime}$ min．，shorter overali shell than zinc type． Shell than zinc type． Otherwise same con－
struction，mating with regular XL receptacle．
Bright nickel finish standard．
Contacts Capacity Wt．Lbs．Cot．No．List Pr 3 15－amp．． 1333 XL－3－11SC 2.80

TYPE XL－3－12SC PLUG （Pin Insert）
Corresponds to XL－3－12 except that shell is steel with integral clamp．For with integral clamp．For $5 / 16^{\prime \prime}$ max．entry．Shell is ${ }^{7} / 32^{\prime \prime}$ shorter in over－ all length than corre－ sponding zinc shell．

Contocts Capacity Wt．Lbs．Cat．No．List Pr． $\begin{array}{llll}3 & 15 \text {－amp．} 1250 & \text { XL－3－12SC } 2.75\end{array}$

## CANNOL CONNEGTORS

## TYPE P FITTINGS

## REVISED PRICES

CANNON "TYPE P" FITTINGS. Universally used in sound and allied applications. "Type $\mathrm{P}^{\prime \prime}$ Fittings include a size and type for every requirement, with a high standard af quality. All $90^{\circ}$ Plugs have split-shell canstruction far quick, easy access for wiring ar inspectian. Splash-proof but not weather-proof. Plug and receptacle dust caps are available. Laboratary tests show an average valtage-drop af not mare than 10 millivolts, with current flowing at the rated eapacity. Insulating material is black phenolic which has a $0.7 \%$ absorption in 24 hours of immersion in water and a dielectric strength of 550 valts per mil at 60 cycles. Two to 6 contact inserts accommodate No. 10 BES stranded wire; 8 contact insert No. 14 wire.

New shell designs of the P-CG-11S and P-CG-12S, cord plugs, replace both old type shells of zinc and steel, and such improvements as shorter length, new rubber bushing, improved latch and spríng، integral clamp. Shell material is steel, integral clamp zinc.

NEW TYPES WILL MATE WITH CORRESPONDING FITTINGS, SAME AS OLD DESIGN

TYPE P-CG-11S CORD PLUG COMBINATION STEEL E ZINC

(With
Socket Insert)
This new type plug with steel shell and integral zine clamp is $\begin{aligned} & \text { fa " } \\ & \text { " shorter than }\end{aligned}$ the old type and has an overall length of 2 枵腬" $^{\prime \prime}$. The new rubber bushing allows a ${ }^{5}$ " $D$. cable entry, and on P4, P5, I'6 and P8 $1 / 2^{\prime \prime} D$. max. cable entry. Satin chrome finish.

 PLUG (With Pin Insert)Corresponds with
No. 03-11 "Type $O^{\prime}$
Stralght Cord Plug
(Socket Insert). Has integral cable clamp, for ${ }^{\frac{2}{2} / 2}$ " or smaller cable. Made of die-cast zinc, cadmium plated.
Contacts Capacity Wt. Lbs. Cat. No. List Pr $3 \quad 30$-amp $0.104 \quad 03-12 \quad \$ 4.50$

TYPE "03-13" FLUSH WALL
RECEPTACLE (With Socket Insert)

Flange is $2^{\prime \prime}$ in diameter drilled with four holes to take \#4-40 oval-head mounting screws, $90^{\circ}$ apart on a radius of ${ }^{\prime \prime \prime}$ Made of die-cast zinc cadmium plated. Latch Locking Device is oper ated from panel front.
Contacts Capacity Wt. Lbs. Cat. No. List Pr $3 \begin{array}{lllll} & 30 \text {-amp. } & 0.148 & 03-13\end{array}$

## TYPE "O3-14" FLUSH WALL RECEPTACLE

(With Pin Insert)
The flange is $2^{\prime \prime}$ in diameter, drilled with four holes to take \#4-40 oval-head mounting screws, $90^{\circ}$ apart, on a radius of $13{ }^{\prime \prime}$ Made of die-cast zinc, cadmium plated.
Contacts Capacity Wt. Lbs. Cat. No. List Pr. $3 \quad 30$-amp. $0.107 \quad 03-14 \quad \$ 4.50$

TYPE "O"
REPLACEMENT FITTINGS
(Discounts on replacement fittings apply to these items.)

ONE.FOURTH
03-35

TYPE "O" CONNECTORS ARE USED ON STANDARD RADIO BROADCAST MICROPHONES

## type TQ fittings

CANNON TYPE "TQ'" COAXIAL FITTINGS. Type "TQ" Coaxial Fittings provide continuous shielding with constant impedence. Each fitting contains 1 standard Cannon style silverplated contact, roted at 10 -amp. and accommodating \# 16 stranded or \#14 solid, or smaller BGS stranded wire. Solder pots are tinned for ease in wiring. Insulation is ceramic.

CANNON TYPE "TQ" COAXIAL CORD PLUG (With Socket Insert) For Continuous Shielding

A tapered skirt is provided on this Plug, to which the shielding is easily sol dered. Accommodates $1 / /^{\prime \prime}$ cable ut can be supplied for $5 / 8^{\prime \prime}$ cable if specified with order. Body is brass, sil ver plated.
Contacts Capacity Wt, Lbs, Cot. No. List Pr 1 10-amp. 0.106 TQ-1-12 $\$ 2.00$

## TYPE "TQ13BC" FLUSH RECEPTACLE

 (With Pin Insert)For Mounting
Behind Panel
Same construction as No TQ-1-13C, except that the lange is mounted on back of panel. Body is brass, of panel.

zinc plated. | one.hall |

## TYPE "TQ-13B" RECEPTACLE

## For Continuous

## Shielding

Designed for mounting behind panel. Accommodates $1 / 2^{\prime \prime}$ cable. Body is brass, zine plated.
Contocts Capacity Wt. Lbs Cot actual size 10 -amp. 0.057 TQ-1-13B
102.00

## TYPE "TQ-13" RECEPTACLE

 (With Pin Insert)For Continuous Shielding Provided with a tapered skirt to which the shielding is easily soldered. Also has a removable solder pot shield, which snaps into place. Ceramic insulation is used in all Type TQ Con commodates $1 / 2^{\prime \prime}$ cable, but can be sup plied for $5 / 8^{\prime \prime}$ cable if specified with order Two holes-. 120 in diameter, tif apart. Contacts Capacity Wt. Lbs. Cat. No. List Pr 1 10-amp. 043 TQ-1-13 $\$ 2.00$

## TYPE "TQ-13C" RECEPTACLE

## (With Pin Insert)

Similar to TQ-1-13, except that it is not provided with solder pot shield and is not designed for continuous shielding Uses Ceramic insulation. For mounting on front of panel. Body
 ONE. HALF
ACTUAL SIzE is brass, silver plated. Two holes-. 120 in diameter, $\frac{18}{3}$ apart for mounting.

The Type ' K '" Series was designed especially for use in the aircraft field and is used almost universally for aircraft radio, instrument and electrical circuits. Although light in weight, units are rugged and durable. The "K'" Series is made in 3 basic types: (1) Stralght Type. (2) $90^{\circ}$ Type. (3) Wall Moanting Unit, for which either straight or right angle junction shells are provided. Inserts of laminated and molded phenolic are removable.

The cable entry is regularly threaded for various sizes of aircraft flexible conduit, but there are fittings also available with cable clamp for special applications. The " K " Series is comprised of 8 dlameters, with a great variety of contact arrangements covering a range of from 1 to 82 contacts, depending, of course, upon the diameter. 188 insert arrangements.

A key and groove arrangement makes it possible to connect fittings easily and quickly wilhout the necessity of fumbling to match pins and socket:s. This eliminates any
possibility of forcing together in improper alignment and thus bending or breaking pins. Large contacts may be removed for soldering, thereby ellminating the possibility of damaging the insert with excessive heat
Quick, easy access to solder pots at back of contact is made possible simply by removing either 3 or 4 Shakeproof Sems, depending upon the size of the fitting. Since proof sems, depending upon the size of the fitting. Since be rotated to accommodate 3 or 4 different positions. This is also true of the flanges on wall mounting units, making it assy to rotate these fittings to facilitate cable instanait easy to rotate these fittings to facilit
tion and avoid shard bends in conduit.
on and avoid shard bends in conduit. a quick-acting threaded nut which holds both members firmly together and prevents shaking or accidentally pulling them apart. 10 to $250-\mathrm{amp}$. contacts.
NOTE: Detailed Catalog Bulletin and Wall Chart for K
Connectors available on request.

MORE THAN 200 INSERT ARRANGEMENTS AVAILABLE

CANNON "Type AN" Series of plugs and receptacles was deslgned especially to meet ArmyNavy Specifications for aircraft electrical connectors. While the AN Series retains all the basic features of the Type K Series-features which have established conclusive proof of their effectiveness as applied to alrcraft--numerous changes in design and construction have been made to conform to latest Army-Navy Specifications.
Type AN Plugs are made in three basic shapes or styles. These are: 1. Straight cord connectors. 2. Right angle or $90^{\circ}$ cord connectors. 3. Flanged connectors for wall mounting. An almost unlimited combination of circuits and current capacitles can be handled with AN connectors and their interchangeable inserts
Removable and interRemovable and interit possible to change it possible from a pin any fitting from a pin versa, and also to change the number of circuits
CONTACT CAPACITIES
5 to 200 -amp.

AN3108 Plug
handled through any fitting provided the inserts are of the same diameter. The split shell, a feature pioneered by Cannon, makes it easy to install wiring or to solder contacts.

An important feature of the Type AN Sertes is the means provided for coupling the members together. This conslsts of a coupling nut which serves to draw the parts together and to release them while it also prevents plugs and receptactes from being jarred apart by excessive vibration. No spectal tools are required to lock or unlock plugs and receptacles, to separate split shells or to remove inserts. This feature is invaluable, since it eliminates delay in servicing in the field and also because there are so many combinations possible with Type AN Serles.

ELECTRICAL CONNECTING DEVICES

## " 300 " sprars puugs and socrris General Specifications

2 Contacts to 33 Contacts. All plugs and sockets are polarized. 2 Contact Plugs and Sockets are round, others rectanquiar.
Plugs of one size cannot fit into sockets a enother size. Phosphor bronze "knife-switch" type sockel contacts engage both sides of flat plug contacts-double contact area. Molded Bakelite insulation.
Formed metal caps. Formed fibre linings in caps.
Small size, with good separation between centacts
Plug of sceket for panel mounting.
Plug or socket with cap.
Simple, fool-proof assembly.
Finish on caps-Black Crystal.
Plug prongs- $\frac{3^{\prime \prime}}{12}$ wide by $\frac{3}{6}^{\prime \prime}$ thick.
We suggest using the 300 series in circuits not exceeding 45 Volts and 5 Amps., although circuit characteristics may permit higher ratings.

# "500" <br> SERIES PLUGS AND SOCKETS <br> For Complete Listing of 500 SERIES, Write for No. 500 Catalog 

Designed for 5,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.
Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.
All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.
Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}{ }^{\prime \prime} \times \frac{3}{32}$
IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

(Socket with Deep Bracket)

LOCKS FOR 500 SERIES PLUGS AND SOCKETS

Locks shown above are used in connection with any DEEP BRACKET and cap combination.
The locks securely hold the units together, but they can be released instantly.
The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.
No. 500-L Locks.
Per pair \$0.99

## SERIES 101 PLUGS

The entire No. 101 Series of Plugs are identical with the exception of the cable ferrule which is furnished in four sizes as listed below. All metal paris are of brass. These Plugs fit all of the No. 101 Series Sockets. 'Assembly meets Navy
 Specifications. A low loss Plug and Socket ideal for high frequency connections.

## SERIES 101 SOCKETS

The No. 1.01 Series Sockets are furnished in three types as shown below. Base is of Brass, Nickel Plated with Chrome Flash. Brass contact is Silver Plated. Insulation of low loss natural color XXX Bakelite. Meets Navy Specifications. The S-101-D is similar to the S-101 except that the Bakelite is recessed in the base. S-101-D Mod. is the same as S-101-D except that two sides of the base are milled as shown. Mounting Holes No. 101 -No. 41 drill on $\frac{111^{\prime \prime}}{}$ centers. Mounting holes No. 101-D and $101-\mathrm{D}$ Mod. No. 30 drill on $\frac{133^{\prime \prime}}{18}$ centers.

## 1400 SERIES PLUGS AND SOCKETS

This series of "disconnect" plugs and sockets has the distinct advantage of low cost for a separate unit handling many circuits. Due to exposed metal parts, it is recommended for use when the complete unit is within a housing.
Reduces costs of servicing units. Advantageous in shipping when it is desirable to pack units separately. Polarized-assures
correct coupling. Spring temper brass sockets assure perfect contact. Standard units are listed below from 5 to 16 contacts. However we can supply units having as many as 30 or more contacts
On No. 1420 or larger we recommend the plug be divided into two or more units, as a single long plug is not mechanically strong. The socket will be made in one assembly.

## BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite.

The Terminals and Binder Screws are of brass, nickel plated. Marker Strips may be ordered and imprinted to supply terminal designations. These Marker Strips mount beneath Terminal Sirips and also afford insulation from metal mounting surface.

## CINCH=JONESSALES

Electiricaí CONNECTING DEVICES

## FANNING STRIPS FOR CONNECTING TO BARRIER TERMINAL STRIPS

Jones Fanning Strip Terminals are of .032" Brass, Cadmium Plated. The Bakelite strips are furmished with a hole in either the right or left end for fastening the cable with a cable clamp or lacing twine. Simplifies cable or harness wiring, assuring positive connections. Makes replacement of units an easy matter and assures correct connections after servicing.

THE 160 SERIES
The following Fanning Strips it the 140 Sorigs Barrier Stripe. Terminahe are
mounted on Hi" Sakelite, $1 / 2^{\prime \prime}$ wide and on $3 / /^{\prime \prime}$ centers.

## THE 162 SERIES

The following Fanning Strips fit the 142 Series Barrier, Strips. Terminals are
mounted on takelite, s/a wide and mounted on s.

In many instances where there is not sufficient room for the standard Fanning Strips we can supply those listed formed for right angle mounting permitting use when Barrier mounts flush with the side of the chassis. Specity Series 160A, 161A and 162 A instead of 160,161 and 162 . Prices slightly higher.

## NO. 1 TERMINAL STRIPS

Terminal $1 /{ }^{\prime \prime}$ Round Copper, Flattened at Ends, Tin Plated A convenient and compact strip where solder connections are desired.
Terminals mounted on $1 / 2^{\prime \prime}$ centers. Mounting holes $1 / 2^{\text {" }}$ from center of end terminals.

List Price \$0.55 eq. Cat. No. 43-S. ADMIRAL: Same as No. 43 except that it has a elongated slot in neck.

List Price $\$ 0.65$
Cat. No. 21-R. All-molded Bakelite, non-removable tops. Both mosts completely insulated Center mounting screw $6 / 32^{\prime \prime} \times 1 / 4^{\prime \prime}$ long. Base is $2^{\prime \prime}$ long, $11 / 16^{\prime \prime}$ wide and $3 / 16^{\prime \prime}$ thick. Center distance between posts is $7 / 8^{\prime \prime}$

List Price \$0.70 ea

Cat. No. $21-\mathrm{S}$. All-molded Bakelite, non-remov able tops. One post is completely insulated. One mounting screw $6 / 32^{\prime \prime} \mathrm{x}$ 1/4" long Ground post is second mounting screw. Base is $2^{\prime \prime}$ long, $11 / 16^{\prime \prime}$ wide and $3 / 16^{\prime 4}$ thick. List Price $\$ 0.70$ ea

## TIP JACKS

Cat. No. 49. Top diameter $1 / 2^{\prime}$ x $5 / 32^{\prime \prime}$ thick. Threaded brass body $5 / 16^{\prime \prime}-32 \times 3 / 4^{\prime \prime}$ long. One hexagon nut and two insulating washers furnished. Hole for washers is 19/64". Red or Black Bakelite top.

List Price: Red $\ldots . . . \mathrm{S} 0.19 \mathrm{ea}$,
Black ... 0.17 ea.

Cat. No. 52. Top diameter $1 / 2^{\prime}$ $\times 1 / 8^{\prime \prime}$ thick. Body is $5 / 16^{\prime \prime} \times$ $3 / 4^{\prime \prime}$ long. Special steel assembly washers, cadmium plated, are furnished. Red or black Bakelite

List Price: Red ..... SO 0.10 ea. Black ... 0.09 ea

Cat. No. 76. Top diameter $5 / 8^{\prime \prime} \times 5 / 32^{\prime \prime}$ thick. Body is .495" x 5/8" long. Special steel assembly washers, cadmium plated, are furnished. Red or black Bakelite. List Price: Red ..... $\$ 0.18$ Black... 0.15

Cat. No. 17. This twin jack with molded Bakelite base, is provided with two terminals $13 / 9^{\prime \prime}$ apart and has a $6 / 32^{\prime \prime} \times 1 / 4^{\prime \prime}$ mounting screw at center.

List Price $\$ 0.65$ ea.

Cat. No. 18. Twin jack, is provided with two terminals $7 / 8^{\prime \prime}$ apart and has two . $140^{\prime \prime}$ diameter holes, 1-11/16" centers. Bottom plate is $1 / 16^{\prime \prime}$ thick, top plate $1 / 32^{\prime \prime}$ thick. $5 / 8^{\prime \prime}$ wide $\times 2-1 / 16^{\prime \prime}$ long.

List Price $\$ 0.13$ ea.

Cat. No. 18-T. Triple jack is provided with three terminals $9 / 16^{\prime \prime}$ apart and has two $.140^{\prime \prime}$ diameter mounting holes, $1-15 / 16^{\prime \prime}$ centers. Bottom plate is $1 / 16^{\prime \prime}$ thick, top plate $3 / 64^{\prime \prime}$ thick. $5 / 8^{\prime \prime}$ wide $\times 23 / 8^{\prime \prime}$ long.

List Price $\$ 0.19$ ea.

## ELECTRIC SOLDERING IRONS

These lrons embody features that specialized experiencesince 1894 -has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands in use throughout the world in manufacturing plants, service, maintenance and repair shops, Army and Navy Services, telephone, telegraph and radio stations.
No. 3138-Designed primarily for production and maintenance in radio, telephone, telegraph, ignition switchboard and telephone installation work and similar industrial applications. No. 3158-For the same purposes as the No. 3138 but for work requiring an iron of greater capacity.
No. 3178-For use on still heavier work; for light commutators and service and production work. A very useful iron for general purposes.
No. 3198-For heavy work of all kinds. Supplies a large volume of heat at high temperature. Used by manufacturers in many different lines; for shop, service, production work, etc. Each of the above irons is equipped with a baffle plate, at the shank, to prevent free conduction of heat to the handle.
No. 3128-Designed for lighter work than the No. 3138 in similar applications. Has plug-type $1 / 4$ "-diameter tip with a heating element of chrome nickel but without compression winding as used in the higher-wattage No. 3138-3198 series. Element and casing with handle springs and terminal assembly built as a unit.
No. S-76-Designed for work of the same kind as the No. 3128 but has a screw-type ${ }^{\frac{7}{16} \prime \prime}$ diameter tip which screws on the metal head of the core of the chrome nickel heating element. Element with casing and handle springs and terminal assembly built as a unit.

Made in standard voltages and for 32 volts. No. 3138 also made for $6,12,24$ and 55 volts. Nos. $3138-3198$ can be equipped with three-conductor cord, one wire grounded, at slight additional charge. Separate heatinsulating stand supplied with each iron.

## American Beauty coppertips

These copper tips are made from commercially pure, drawn bar, copper rod. Except for the No. 3734 screw-on type tip for the No. S-76 iron, each tip is designed to fit into, and to the full length of, core of heating unit of the particular iron for which it is intended. Maximum area of contact between the tip and heating unit is thus assured. Tips are of uniform diameted throughout their entire length. Each tip is held in place in core of heating unit by a recessed set-screw. Removal for cleaning or replacement is therefore easy. Standard shaped tips with which the various models are equipped are shown in the illustration; but pyramidal. instead of chisel type, and vice versa, can be supplied when so specified without

## American Beauty

## TEMPERATURE REGULATING STANDS

## For use on (AC) Alternating Current Only

This is a thermostatically controlled device for the regulation of the temperature of an electric soldering iron while at rest. When placed on this stand. soldering iron is maintained at working temperature, ready for instant use or, if desired, at a lower temperature. Through an adjustment on bottom of the stand, thermostat may be set for the maintenance of any desired temperature-from very low, or warm, to full working temperature. Body of stand is of molded plastic. Soldering iron cradle proper is of metal. Stand is equipped with cord and attachment plug-cap for connection to current and with a receptacle for connection of the electric soldering iron. It is designed for use with electric soldering irons up to 660 watts capacity and on circuits up to 240 volts.

No. 98-List $\$ 12.95-11 / 8^{\prime \prime}$ Tip- 550 Watts

## - Thermostatic Temperature Control Stand

The iron can be maintained at any desired temperature while in the stand. This is the only way 10 control the tip temperature of an iron. Control of element temperature is not satisfactory. There is too much of a lag between clement and tip temperature.

Years ago we developed a thermostatically controlled iton, which regulated the element temperature
 (just as presently marketed thermostatically controlled irous io) but we discarded the iron as it would permit the tip to cool.
When the stand is properly adjusted, it is impossible for the iron to overheat or to burn off its 1 in .

# DRAKE (4) 

## DRAKE ''INSTANT HEAT'" SOLDER GUN

A new addition to the famous "Drake" fanily of complete soldering aids. lnstant-heat solder gun for quick soldering requirements. Saves power since gun only operates when trouble-free trigger is squeezed. Equipped with built-in spotlight, properly focused to light soldering spot. Attractive maroon plastic case properly louvered for cool operation. Balance engineered by one of America's most fanous industrial designers. Complete with easily removed tips, one $31 / 2^{\prime \prime}$ tip for ordinary soldering; one $61 / 2^{\prime \prime}$ tip for deep chassis soldering. Operates on $110-120$ volt, 60 -cycles A.C., 135 watts. Shpg. wt., 3 lbs.

## dRAKE HEAT <br> CONTROLS

New thermostatically controlled, automatic, heat controls. Ideal for production applications where iron must be kept at correct soldering temperatures at all times. Complete with oxide removing "Magic Cup." Choice of with or without hood. Operates on 110 to 240 volts and will handle any iron to 660 watts. Shpg. wt., either model: 3 lbs.
No. 305 Less Hood
List Price $\$ 7.50$ No. 305 H With Hood

List Price $\$ 8.50$
Standard Models
These standard economy models have stand-by switch instead of thermostats. Keep switch in low position until iron is almost ready for use. A flip of the switch and the iron is ready for use in a few moments. Variable resisior allows individual adjustment to meet the requirements of each soldering operation. Operates on 110 volts. Shpg. wt., either model: 3 lbs.
No. 300 Less Hood
List Price $\$ 5.50$
No. 300 H With Hood
List Price $\$ 6.00$

No. 9
Drake Solder Pots For Production Line

Model No. 200-300 Watt Unit
An ideal electric solder pot for production use. Used in factory production of tinned wire ends, terminal tinning and countless other volume tinning applications. Holds 2 lbs of bar solder in $21 / 2^{\prime \prime}$ diameter $2^{\prime \prime}$ deep cast iron well. Complete witl detachable Underwriters' Approved cord and plug, and bale type carrying handle. Genuine nichrome element. Shipping weight 6 lbs .
No. 200.
List Price $\$ 6.50$

## Model No. 100-150 Watt Unit

Designed for light tinning. Ideal for occasional jobs. Suited especially for tinning ends of stranded wires to prevent fraying. Can also be used for soldering cord tips to cables. One piece cast iron construction holds heat longer. Size of pot $11 / 2^{\prime \prime}$ diameter $1^{\prime \prime}$ deep. Holds 1 lb . of bar solder. Complete with Underwriters' Approved cord and detachable plug. Shipping weight 3 lbs.
No. 100
List Price $\$ 5.00$

# CALROD SOLDERING IRONS FOR EVERY RADIO REQUIREMENT 

## MANUFACTURING-SERVICE

*Reg. U. S. Pat. Off.

- HIGH-SPEED SOLDERING. You can solder as fast and continuously as the nature of the work will allow.
- UNIFORM PERFORMANCE. Operating characteristics remain constant day after day. No appreciable decrease in efficiency even after months of service.
- LONG LIFE AND LOW MAINTENANCE. Long
life is assured and over-all costs are kept low because sturdy construction eliminates need of frequent repairs.
- EASY, LOW-COST REPAIR. Assembling and disassembling are easy
- THEY NEED NOT BE RETURNED TO THE FACTORY FOR REPAIR. Irons can be repaired on the job without special tools or skill.

*Cat. No. 6A161 and Cat. No. 6.162 can be supplied with either a $3 / 8$ - or $1 / 2$-inch diameter tip at prices given. The long $1 / 2$-inch diameter tip projects $33 / 8$ inches from the sliell. Price of iron with long calorized tip- $\$ 10.10$; with long IRONCLAD tip- $\$ 10.90$.

For light, high-speed soldering, such as assembly of radios, telephones boards, boards, appliances, meters, stallation and repair of wiring and wiring devices wiring and wiring devices, ignition. Rxcellent for service and repair men

## ASK ABOUT IRONCLAD TIPS

## IRONCLAD TIPS MEAN

- No Filing
- Less Maintenance
- Lower Upkeep Cost
- Longer Life

ASK YOUR DISTRIBUTOR FOR A COPY OF BULLETIN GEA.4519.

Effect of solder (250 C for 363.5 hours) on plain couper (left) and Ironclad copper (right) soldering tips.

# MIDGET SOLDERING IRONS 

## FOR MANUFACTURING AND SERVICE OF RADIO AND ELECTRONIC EQUIPMENT

## APPLICATION

This 8-inch, $13 / 4$-ounce featherweight iron for ciosequarter soldering with pin-point precision is used where conventional irons might cause damage . . . be clumsy to handle . . . be more expensive to operate. The Midget literally goes places with greater efficiency and less power . . . with no sacrifice in heat or speed. With its fingertip operation, this iron will help make an expert out of any solderer in a short time.

The Midget has chisel-shaped Ironclad copper tips either $1 / 8$ - or $1 / 4$-inch diameter, as desired.

## THIS MIDGET DOES A BIG JOB IN

- Boosting Production Rates
- Increasing Operator Efficiency
- Cutting Down Employee Fatigue
- Saving on Repair and Maintenance
- Reducing Rejects
- Manufacturing and Repairing:

Radios and other electronic equipment

## Meters

Instruments
Jewelry
Appliances
. . . and many other products requiring precision soldering

## SPECIAL TRANSFORMERS (OPTIONAL)

 FOR G-E MIDGET SOLDERING IRONS

Single-tap, Cat. No. 84G392

Four-tap, Cat. No. 84G370

Specially designed 115 -volt transformers are available as optional equipment in two types:

1. Single-tap $115 / 6$ volts-for use where only one soldering heat is required
2. Four-tap $115 / 6.3 / 6 / 5.7 / 5.4$ volts - gives wide range of heats (from 20 to 30 watts) for close temperature control of tips
Transformers are small, lightweight, but sturdy. Their 6 -foot extension cords can be plugged in any 115 -volt a-c circuit.

| Description | Cat. No. | Price $\dagger$ |
| :---: | :---: | :---: |
| Single-tap | 84G392 | \$5.20 |
| Four-tap | 84G370 | 7.80 |

Publication Reference
GEA-4519

## THE MIDGET OFFERS MAJOR ADVANTAGES

Low-cost soldering-Solders more efficiently, using only approximately one-fourth wattage normally used.

Fingertip operation-Only 8 inches long, weighs but $13 / 4$ ounces. Styled for fingertip grip.

Quick, continuous heat-Famous G-E Calrod* heater built into Ironclad copper tip for rapid heat transfer.

Easy renewal-Ironclad tip and heater can be replaced as a unit merely by unscrewing from handle.

Long life, low maintenance-Low voltage permits use of heavy, long-lasting resistant wire. Reduced servicing with long-lasting Ironclad copper tip.

* Registered U.S. Patent Office.
† Manufacturers' suggested retail price.

Elements in the plug tip irons are replaceable by the user and in the screw tip irons replaceable at
the factory. Tips in all irons are replaceable; nade of hard drawn pure copper. Case is made from solid Hexacon steel (except No 50 and P-30), affording it great mechanical strength, preventing denting. Terminal easily accessible and constructed to relieve cord train. Smoolh, cool, comfortable handle-readily replaceable oltage range: 32 to 250 . Standard voltares $110 / 120,121 / 130$ $220 / 250$. All other voltages $\$ 1.00$ extra list.

## SCREW TIP IRONS

No. 50-For light soldering on radio, telephone and electrical apparatus. 50 Watts. Tip diam., $\frac{7}{16 \prime}$. Ship. wt., 1 lb . Equal to $1 / 2-\mathrm{lb}$. old style copper.
each $\$ 4.50$
No. 60-Medium light soldering on telephone, radio, apparatus and inemen's kits. 60 Watts. Tip diam., 1/2". Ship. wt., $11 / 8$ lb. Equal to 1-lb. old style copper..............................................each $\$ 6.25$

No. 85 - A high speed tool for telephone, radio and home use. 90 Watts. Tip diam., $1 / 2^{\prime \prime}$. Ship, wt., $11 / 4 \mathrm{lb}$. Equal to $11 / 2-1 \mathrm{~b}$. old style copper
each $\$ 7.00$

No. 120-Light tinware, toys, typewriter, light anto, etc. A high speed iron, 120 Watts. Tip diam., 5/8". Ship. wt., $13 / 8 \mathrm{lb}$. Equal to 2-lb. old style copper

No. 130 -Same as No. 120 except has larger tip and 10 more watt capacity. 130 Watts. Tip diam., $7 / \mathrm{s}^{\prime \prime}$. Ship. wt., $15 / 8 \mathrm{lb}$. Equal to 2-lb. old style copper.
each $\$ 8.75$
No. 170-Medium tinware, small cans, auto repairs, pipes, gutters, toys, small motors. 175 Watts. Tip diam., 1 ". Ship. wt., $21 / 4 \mathrm{lb}$ Equal to $21 / 2-1 \mathrm{~b}$. old style copper....................................each $\$ 10.00$

No. 225-Medium tinware, cans, auto repairs, metal batierns, light roufing, small branders. 250 Watts. Tip diam., $11 / 8^{\prime \prime}$. Ship wt., $25 / 8$ lb. Eqital to $3-1 \mathrm{l}$. old style copper
cach $\$ 11.00$

No. 350-Heavy tinware, large cans, autos, roafing, reirigerators, ship and airplane. 350 Watts. Iip diam., $13 / 8$ ". Ship wt., $33 / 8 \mathrm{lb}$. Equal to $4-1 \mathrm{~b}$. old style copper.....
each $\$ 13.00$

Ne. 500 - Auto repairs, sinks, roofs, cans, armatures, large branders, tinsmiths, etc. 500 Watis. Tip diam., $15 /{ }^{\prime \prime}$. Ship. wt., 4 lb. Equal to $5-\mathrm{lb}$. old style copper.......................................................each $\$ 15.00$ No. 700 -For extra heavy soldering and large branders. 700 Watts. Tip diam., $13 / 4$ ". Ship. wt., 5 lbs. Equal to 7-lb. old style copper. each \$27.50

OPERATE ON A.C. OR D.C., ANY CYCLE

No. P-30-For extremely light soldering on finest wire and delicate instruments. 40 Watts. Tip diam., $1 / 4$ ". Ship. wt., $5 / 8 \mathrm{lb}$. Equal to 1/4-lb. old style copper....................................................................... $\$ 4.50$ No. P-70-For light soldering on radio and telephone apparatus and electrical instruments. 80 Watts. Tip diam., $\% /{ }^{\circ}$ ". Ship. wt., $11 / 8 \mathrm{lb}$. Equal to 1 -1h. old style copper.
each $\$ 6.00$

No. P-100-A high speed tool for telephone switchbourds, electrical instruments, etc. 100 Watts. Tip diam., $8 / 8$ ". Ship. wt., $11 / 4 \mathrm{lb}$ Equal to $11 / 2-\mathrm{lb}$. old style copper.........................................each $\$ 7.00$
No. P-125-For light tinware, toys, typewriter type bars, small cans, auto, etc. 130 Watts. Tip diam., $5 /{ }^{\prime \prime}$. Ship. Wt., $11 / 2 \mathrm{lb}$. Equal to $2-1 \mathrm{~b}$. old style copper.. each $\$ 8.50$

No. P-150-Lixtra high speed iron for radios, electrical apparatus and where a light iron with small diameter is required. 150 Watts. and where a light iron with small diameter is required. 150 Watts.
Tip diam., $3 / 8^{\prime \prime}$. Ship. wt., $13 / 4 \mathrm{lb}$. Equal to $2-\mathrm{lb}$. old style copper each \$7.75
No. P-151-Sume as No. P-150, except where a larger tip is desired. 175 Watts. Tip diam, $1 / 2^{\prime \prime}$. Ship. wt., $13 / 4 \mathrm{lb}$. Equal to $21 / 2-\mathrm{lb}$. old style copper
each $\$ 8.25$

No. P-200-For medium tinware, cans, auto repairs, light roofing, sheet metal, etc. 200 W'atts. Tip diam., $5 / 8$. Ship wi., $21 / 8 \mathrm{lt}$. Equal to $23 / 4$-1b. old style copper.............................................. $\$ 9.50$ No. P-250-Same as No. P-200, except where greater speed is required for manutacturing. 250 Watts. Tip diam., 5/8". Ship. wt. $21 / 4 \mathrm{lb}$. Equal to 3-1b. old style copper ............................... $\$ 10.75$

No. P-300-For heavy inware, large citis. auto, routing, refrigerator work, etc. 200 Watts. Tip diam., $7 /{ }^{\prime \prime}$. Ship. wt., $27 / 8 \mathrm{lb}$. Equal to 4-ll. old style copper
each $\$ 12.50$

No. P-550-For auto radiators, copper sinks, roofs, heavy armatures, arse branders, etc. 500 Warts. Tip diam., $11 / 8^{\prime \prime}$. Ship. wh., $4^{1 / 2} \mathrm{lb}$. Equal to $5-1 \mathrm{~b}$. old style copper ........................................... $\$ 15.00$ SPECIFY VOLTAGE WHEN ORDERING

## HEXACON HATCHET TYPE IRON

For aame use as l'lug Tip irons of equal wattage, shown aloove. Replaceable elements and all other features of Plug Tip Jrong.

## HEXACON FEATHERWEIGHT HATCHET IRON

So light its weight is hardly noticeable, but more powerful than most larger irons. Hatchet design makes iron effortless to use. No transtormer or other cumbersome and expensive equipment required.

List Price........ $\$ 5.00$ Weight: $51 / 2$ ozs. (less cord). *Vatts: 40,50 or 60 . Both $1 / 8^{\prime \prime}$ and $1 / 4^{\prime \prime}$ dia. tips furnished with each iron. Shipping weight: 1 lb
*Specify watts when ordering.

## SOLDERMASTER Royal Blue Line ELECTRIC SOLDERING IRONS

GENERAL INFORMATION-Replaceable elements. Best grade of Mudagascar mica for insulation. No. 55 has brass-aheathed cart ridge element. lest grade nickel-chrome resistance wire. Replaceable hard drawn copper tips. All one piece swamed cases

CHROME PLATED. Equipped with 6 ft . Underwriters' Approved heater cord, rubber plug. Continental or English type plug 25c extra list. Stand for resting iron furnished.

VOLTAGES 110/120 220/250 A.C. or D.C., ANY CYCLE SPECIFY VOLTAGE WHEN ORDERING

## SCREW TIP IRONS

No. 558-For light soldering, radio apparatus, etc. 55 Watts. Tip diam., $\mathbf{1}^{76}$. Ship. wt., 13 oz. each $\$ 2.50$

No. 76B-For light work, electrical instruments, etc. 75 Watts. Tip diam., 1/2". Shif!. wt., ls oz.
each $\$ 4.00$

No. 100B—Same as No. 76 B except used where more speed is required and heavier work is done. For home use. 90 Watts. Tip diam., $1 / 2^{\prime \prime}$ Ship. wt., 10 oz..................................................................each $\$ 4.50$

No. 150B-Ideal size for tarage and repair work. For home use. 170 Watts. Tip diam., 7/8". Slip. wt., 24 ox.............................each $\$ 7.00$

No. 300B-For heavy steel metal, auto radiators, etc. 275 Watts. Tip diam., $11 / \mathrm{s}^{\prime \prime}$. Ship, wt., $38 \mathrm{oz} . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . e a c h ~ \$ 10.00 ~$

## PLUG TIP IRONS

No. 718 --For light work, radio repairs, etc. 75 Watts. Tip diam., No.". Slip. wt., 16 oz. ..................................................each $\$ 4.00$

No. 1018 -For same work as No. 71 B , lut where more speed is required br heavier work is done. For home use. 100 Watts. Tip diam., $3 / 8^{\prime \prime}$. Ship. wt., 18 oz .

 Tip diam., $3 / \mathbf{z}^{\prime \prime}$. Ship. wt., $13 / 4$ lbs.

No. 201B-For same work as No 150 B , except where plug tip is desired. 200 Watts. Tip diam., 5/8". Ship. wt., $34 \mathrm{oz} . . . . .$. each $\$ 8.00$

No. 301 B -For same work as No. 300 B, except where plug tip is desired. 300 Watis. Tip diam., 7/8". Ship, wt., $46 \mathrm{oz} . \ldots \ldots$ each $\$ 10.00$

## DISPLAYS

Increase your sales with these silent salesmen. Irons securely mounted, but readily removable for sale. Individually packed in cartons ready for shipment. Catalog number and wattage shown on front of display. Complete catalog information and price list on back.

## KWIKHEAT

## SOLDERING IRONS

## thermostailcally controlleo

 HOT IN 90 SECONDS - 225 WATTS 110/120 V. A.C.

- New Bevelled Tips give 30\% more heat
- Three times faster heating
- Maintains constant temperature
- Tips stay tinned 10 times longer

## $\$ 1700$

- Cannot overheat
- Temperatures are pre-set

## Self-Contained Thermostat Patented Feature

KWIKHEAT Thermostatically Controlled Soldering Iron is the only iron containing a built-in thermostat.

This enables it to heat up ready for use in 90 seconds! Fully guaranteed! KWIKHEAT's patented thermostat maintains perfect temperature for best soldering prevents overheating . . . prolongs life of iron reduces cost of tip maintenance. Cool plastic handle . . . light weight . . . 6 interchangeable tip styles make one KWIKHEAT equivalent to several soldering irons of different voltage.

Manufacturers of

## Ungar Electric Soldering Pencils

# WELIER SOLDERING GUHS FOR ALL YOUR SOLDERING 

Fast 5 second heat comes on the instant trigger is pulled. No wasted time or current. No need to unplug gun between jobs.

## TRIGGER ACTION

Just pull the trigger switch . . . model S-107 has single heat 100 watts; model D-207 offers dual heat with two switch positions 100 and 135 watts.

## FLEXIBLE TIPS

Flexible tips can be easily formed to slip through chassis wiring; handles difficult, deep corner jobs with ease.

## PREFOCUSED SPOTLIGHT

Built-in Solderlite eliminates blind soldering-locates the work quickly and shows you exactly what you are doing.

## TWO TYPE WELLER TIPS

Duratip is standard for models S-107 and D-207-chisel shape provides more soldering area, maximum soldering efficiency. Pkg. of 2 for 25 c .

Long Life Tip-loop tip, highly efficient. at less cost. Package of 4 for 25 c .

Model WD-250 has 200 watts normal heat on first switch position, and 250 watts instant heat on second trigger position. Model WS-200 provides 200 watts single heat.

## 5 SECOND HEAT

Pull the trigger switch, and solder. Fast 5 second heating eliminates waiting. Heat goes off automatically when trigger is released ... no wasted time or current, no need to unplug gun between jobs.

## NEW DESIGN

Streamlined design gives perfect balance and soldering ease. Improved transformer engineering provides light weight, compact unit with increased capacity and efficiency. 'Over and under' terminal positions assure maximum visibility with built-in spotlight.

## LONGER REACH

Greater $51 / 4^{\prime \prime}$ length reaches into remote spots with ease.

## RIGID-TIP

New, improved tip is standard with models WS-200 and WD-250. $\lll$ Chisel-shape tip has more copper and greater surface for faster heat transfer, and design provides bracing action for heavier soldering. Package of 2 for 35 c .

## No. 654 - Utica Long Needle Nose Side Cutting Plier

This is a long, fine, spring-tempered nose side cutting plier, drop forged and with hand-honed cutting knives.
Utica Finish Size............................... 6 inches and 7 inches

## No. 1033 - Utica Long Chain Needle Nose Plier

This is a long needle nose type of plier without $\alpha$ side cutter. It has a spring-tempered needle nose with a fine balance for delicate work.
Utica Finish Size.............................. 6 inches and 7 inches

## No. 622 - Utica Short Chain Nose Mechanic's Plier

This plier is a Short Chain Nose Side Cutting Plier, hand-honed cutting knives. It makes an all around Electrical Mechanic's plier.
Utica Finish Size 5 inches

No. 44S—Special Diagonal Pliers with Spring

A slim nose cutting plier designed especially for radio and electrical work. Extra fine hand honed edges permit nearly flush cuts.
Útica Finish Size ............................. 5 inches and 6 inches

## No. 50 - Utica Standard Side Cutting Plier

An ideal tool for electrical work. Drop forged and skillfully tempered. Its cutting qualities are unsurpassed by any side cutting plier.
Utica Finish Size
$5,6,7,8$ inches

## No. 777 - Utica Long Needle Nose Plier

This plier has a long, hall-round, spring-tempered nose for very fine work in assembling small electrical apparatus.
Utica Finish Size ................................................ 6 inches

## No. 888 - Curved Needle Nose Pliers-

This is a long curved spring-tempered Needle Nose Pleir for use in deep and narrow places. It may be used without turning or twisting the hand in the assembling of small fixtures, electrical apparatus, etc.
Utica Finish Size
6 inches

## No. 22 - Utica Chain Nose Plier

This is a Short Chain Nose Plier forged from a fine quality of steel with fine points particularly adapted for the use of Jewelers, Opticians, Telephone Installers, Electricians and Radio Assemblers.

Utica Finish Size
4, $41 / 2,5,6$ inches

## No. 82 - Utica Chain Nose Wiring Plier

This is a special Radio Repair man's plier, new in design, having a chain nose for those who prefer this type of construction.
Utica Finish Size 8 inches

## No. 46 - Midget Diagonal Plier

A small Diagonal for radio and electrical work. Hand honed edges with a slim nose for use in cramped quarters. Utica Finish Size. .4 inches

## No. 91 - Thin Adjustable $221 / 2^{\circ}$ Angle Wrenches, Alloy Steel

Both the handle and jaw are drop forged from a high grade Alloy Steel, hardened and tempered in oil. Will not break or wear in the gear teeth and allow play in the wrench, permitting the jaw to slip off the nut.
It will give better service and last longer than any other wrench.
Size
$4,6,8,10,12$ inch

No. 895
Utica Radio Plier
This is a General Radio Repair Man's Plier. It has a center cutter and flat scored nose for looping and bending.

Utica Finish Size
6 inches

No. 517 Utica Ignition Plier
This ignition Plier with its unique design will fit all ignition units, spring tempered. A great little tool for the hard to get at adjustments.
No. 517
5 inches

No. 65 - Utica
Jeweler's End Cutting Nipper
This Nipper is forged from a fine grade of steel, carefully tempered. A light, strong End Cutting Nipper, used by Electricians and Machinists. The keen cutting edges and "Perfect Fit" handles make this a very popular tool.
Utica Finish Size...- $41 / 2$ and 5 inches
No. 100BX - Utica-Smith Pocket Armor Cutters
No. 100BX—Utica-Smith Pocket Armor Cutters 7" Alloy Steel

The easiest, quickest tool made for cutting armored cable. Fully illustrated instructions packed with each tool.
Utica Finish Size
7 inches

## SHOCK-PROOF BREAK-PROOF AMBER PLASTIC HANDLE SCREWDRIVERS

TIP is properly ground and gauged to fit screw slot accurately. Ground on a flat belt grinder with grain running lengthwise with
 the blade "B" eliminates the indentations of crosswise grinding, always sources of tip weakness and breakage " $A$ ". XceLite grinding insures uniformity right down to the edge of the tip; insuring perfect fit in the screw slot Note ilhustration "C" showing perfect rectangle of XceLite Tip, insuring grip in screw slot. Illustration "D" shows "dubbed-off" result of ordinary grinding with the tendency to lift out of the screw under

SIZE is clearly marked on the handle. Easier to select the correct size - easier to reorder. Number on handle is catalog number, also it gives size of screwdriver. For example: No. 144 means $1 / 4^{\prime \prime}$ diameter blade; $4^{\prime \prime}$ long. Letters "R" or "S" signify round or square blade.

BLADE is skillfully forged of SAE 6150 Chorme Vanadiunı Flectric Furnace Steel. Polished mades.

FLANGE on the blade of handle resists shock of pounding.

EMBEDDED END of blade, winged design, prevents turning of the blade in the handle.

HANDLE is of genuine XceLite plastic, full size and correctly shaped for grip and balance.

## ALPHA <br>  tri-core solders

## An American Solder fon American Production Methods

## INSURE PERFORMANCE-SPECIFYALPHA TRI-CORE

## TRI-CORE ROSIN-FILLED SOLDER

Craftsmen prefer this faster, easier sequence solder. It provides more uniform fluxing and stronger joints for Radio, Electrical, and Automofive work. Soves time, money and labor for manufacluring or repair service.
WHY TRI-CORE ROSIN-FILLED IS THE IMPROVED SOLDER:

- three independently filled cores assure flux continuity, eliminate risk of empty flux sections.
- thinner solder walls speed melting, cut soldering time by $25 \%$ or more.
- no activating chloride agent to produce acid
conditions and loxis vapors.
- forms a clean, smooth strong joint without carbonizing.
- three cores instead of one at no premium in price.
- all gauges from $1 / 4$ " and heavier down to $0.020^{\prime \prime}$ and finer.

## ALPHA SOLID SOLDER WIRE

Alpha's specialized know-how in lead and tin metallurgy and completely modern production facilities assures you of the finest solder wire available. Alpha's unique extrusion process assures a completely homogenized and uniform solder wire throughout. Supplied in any diameler and composition for your needs.

## HANDY CAN PACKAGING

Alpho tri-core, rasin-filled, handy-cons:
 retoil list $25 c$, packed in eye-appeoiing, soles-compelling, self-selling, sofety flange tins. 12 cans per metal-edged display carton. 12 cartons per shipping contoiner. Weight: 1 gross-2s pounds.

Alpho tri-core, "Leak-Pruf" ocid-filled handy-cans: retail list 25 , packed in multiple color lithographed safety flange tins. 12 cons per metal-edged display corton. 12 cortons per shipping conroinet. Weight: 1 gross- 25 pounds.

TRI-CORE "LEAKPRUF" ACID-FILLED SOLDER Why put up with old-fashioned, leaky acid-cored solders? Mechanics acclaim Tri-Core's cleaner job, long shelf life, and guaranteed leakproof feoture. Now you can protect yourself os well as your reputation for better craftsmanship with this development in the field of acid-cored solders!

WIDELY PREFERRED FOR BETTER SOLDERING:

- The only three cored acid-filled solder.
- No solder waste due to fluxless areas.
- Highly soluble Hux washes off with water.
- Non-toxtc, and emits no offensive odors.
- Virtually non-sputtering, reduces hazards.
- Readily solders staintess steel, monel, n!ckel, etc.
- Leakproof; drip-proof; chalk-like flux will not leak to damage tools. - The only acid core solder that can be formed into rings and other shapes, or cut to lengths without flux loss.

Alpha's preformed solders, in any shape or diameter required, cut many hours from your production time. Whether you use induction heating, flame jigs or heating ovens, we can swiflly supply your requirements in washers, rings, cut shapes, drops, pellets, soldeir foil, or other special shopes.

## STANDARD PACKING

1 LB. Spools packed in individual cartons; 50 cartons per shipping container. 5 LB. SPOOLS packed 10

## SPECIAL ALLOYS

STANDARD ALPHA TRI-CORE SOLDERS ARE $40 / 60$. Also croilable in 25/75-35/65-45/55-50/50-60/40. ALPHA SOLID SOLDER wire in all alloy ratios. Available in all diameters from $1 / 4^{\prime \prime}$ and heovier, down to $0.020^{\prime \prime}$ and finer.

 <br> <br> KNOCKOUT PUNCHESAND CUTTERS}

No. 731

## Nos. 730 and 731 RADIO CHASSIS PUNCHES

No. 730 Round Punch shown at left, quickly cuts accurate, round holes in radio chassis for sockets, plugs, and other receptacles. No reaming or filing -hole is smooth, perfect. Operates simply with an ordinary wrench for drive power. Just insert in a $3 / 8^{\prime \prime}$ or $133^{\prime \prime}$ drilled hole and turn drive nut. 13 sizes from $1 / 2^{\prime \prime}$ to $2 \frac{1}{4^{\prime \prime}}$ as shown in table at right. Individually packed. Odd-size holes for neters can be made with other punches and cutters shown below.

No. 731 Square Punch (left) easily makes full or partial cuts so that any square or oblong shaped hole can be rapidly made. Available in three sizes for making $5 / 8^{\prime \prime}, 3 / 4^{\prime \prime}$, and $1^{\prime \prime}$ square holes. Simple to operate, turn with an ordinary wrench. Drive screw fits into $1 / 2^{\prime \prime}$ hole in the metal. Individually packed.

No. 735 KNOCKOUT PUNCH SET

For fast, easy cutting of holes in metal up to $1 / 8$-inch or 10 -gauge thickness. Insert in small opening and drive with an ordinary wrench. Speeds radio set work, cuts cleanly, no reaming and filing. Set includes four punches for making $7 / 8,1 \frac{3}{32}, 1 \frac{11}{32}, 1 \frac{11}{16}$ inch holes. Packed in leather case.

## No. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of two punches for cutting holes $1 \frac{15}{16}$ and $23 / 8$ inch diameter. Packed in leather case.

## Nos. 738 and 739 KNOCKOUT PUNCHES

For cutting holes $27 / 8^{\prime \prime}$ diameter (No. 738 ) and $31 / 2^{\prime \prime}$ diameter (No. 739) in metal up to $1 / 8^{\prime \prime}$ or 10 gauge thickness. Similar in design and operation to that of smaller GREENLEE Knockout Punches. Packed and sold individually.

## No. 740 KNOCKOUT CUTTER

Excellent tool for making meter openings and other large holes needed in radio work. Quickly cuts holes $1 \frac{15}{16}, 23 / 8,27 / 8,31 / 2$-diameter. Operation is simple . . . driven with ordinary wrench. Special discs can be furnished for cutting odd-size holes from $1 \frac{15}{16}$ to $31 / 2$-inch diameter. Packed in leather case.

Recessed top. Dimensions same as No. 1780.

## ERSW MUETNCOME SOLDES

SEVEN POUND REELS

Our claim is a simple one: We believe that ERSIN MULTICORE is the finest cored solder in the World!

Ersin Multicore is solder in the form of wire containing three cores of non-corrosive Ersin Resin Flus. No extra llux is required. The use of Ersin Multicore guarantees that the correct proportion of flux to solder is used and maximum fluxing action occurs at the correct melting point of the solder. Only by using solder wire with three cores of flux is it possible to be sure the flux is always present-that there will not be lengths of wire without flux which result in "dry" or high. resistance joints.

In addition to this advantage, Ersin Multicore is the only cored solder in the world containing ERSIN, an extraractive non-corrosive flux. It is high grade rosin homogeneously activated by a process whiclt confers on the rosin the vigorous fluxing action characteristic of the more active fluxes.

You enjoy speedy and a consistently high precision standard of soldering and attain just that extra rapidity which guarantees economy of operation. Ersin Flux not only removes surface oxides prior to soldering, but prevents formation during the soldering period. You can satisfactorily solder components which are highly oxi-

ONE POUND CARTONS

dized-ones on which it would be necessary to undertake additional mechanical or chemical cleansing processes when using any other type of llux.
In Ersin Flux, the protective qualities of the original rosin are preserved. Joints made with Ersin Multicore Solder will not corrode even after prolonged exposure 10 any degree of humidity. The flux residue is impervious to moisture. It is hard and not sticky. It avoids accumulation of dirt and impurities on the joint.
Every reel or carton of Ersin Multicore is clearly marked both as to Gauge and Alloy, showing the actual content of Tin and Lead. You know exactly what you are getting when you buy Ersin Multicore Solder! Multicore costs a fraction more initially, but is unquestionably most economical in the long run.

Ersin Multicore Solder is available in all Tin/Lead alloys and in standard wire gauge from 10 to 22 . ( 14,16 and 18 s.w.g. are most popular.)
Ersin Multicore is the only solder which offers you these two fundamental advantages: (1) Multicore construction, providing three cores which assure perfect joints; (2) Ersin Flux, our exclusive fast non-corrosive flux.
Ersin Multicore is the answer for those who seek the finest Cored Solder in the World!

## WIDE SELECTION OF SHAPES AND SIZES

Shown above, are but a few of the many Rogan plastic knobs available to you from our regular stock molds. These are supplied without tool charge, resulting in considerable savings in cost, faster delivery. Choice of a wide selection of sizes, shapes and colors. Moided of phenolic or urea thermosetting materials, which will not soften, warp, or scratch easily. Heat resisting materials can be used so knobs can withstand $350-400^{\circ} \mathrm{F}$. continuous heat. Most knobs supplied with $1 / 4$ " shaft hole and set screws. Special shaft hole sizes and means of fastening can be supplied to specifications at nominal cost.

## KNOBS CAN BE BRANDED, AS REQUIRED

Rogan's famous "deep relief" branding process, applied after molding, provides sharp perfect marking at low cost. Any type marking, graduations or numerals can be branded on blank knobs to fit your requirements. Rogan knobs are available in black, brown or walnut, when molded of phenolic materials; and in all ligh $\dagger$ pastel colors when molded of urea materials. Whatever your knob requirements may be, Rogan is equipped to supply you faster, better, more economically. The complete line of Rogan knobs with specifications is shown in the new Rogan catalog. Write for your copy now.

## 'NEW IMPROVED GUARANTEED MODEL'"

WALSCO STAPLE DRIVER

## Patent No. 2,285,384

Pays for itself on the first job!

- A sensational toal for installing wires and cables, that saves time and money.
- Used by Radio, Public Address and In tercom Technicians.
- Staples into corners and other inacces. sible places.
- Staples on hard surfaces such as plaster. hardwood, etc.
- Can be loaded in 10 seconds.

This tool automatically positions the staple then one or two strokes witi the palm of the hand and the staple is driven home neatly, quickly, and accurately A small trigger regulates the feeding mechanism to enable the operator to strike the handle on hard surfaces as often as necessary before a second staple leaves the magazine. Staples come in strips, are large enough for cables and wires up to $1 / 2 /$ diameter. An adjustable regulator controls the depth to which the staple is driven into surface, thus preventing damage to the insulation of the wite.

## DIAL CABLES AND CORDS—TEST RECORDS WIRE STRIPPER - PROTECTO-TUBE

## WALSCO DIALCABLES AND CORDS

WALSCO Dial Cables and Cords are manufactured to meet the most rigid standards of the Government, Radio Industry and Engineering Laboratories. The finest raw materials are used and production is controlled to supply a uniform product with an absolute minimum stretch factor. All standard Cords are made with NYLON braid, known to have the highest abrasion resistance. These selected materials, plus special chemical treatment after fabrication, make WALSCO Cords the finest on the market. WALSCO Dial Cords are used by leading manufacturers as a standard component.
$\mathbf{2 5 - f t}$. and 100 -ft. spools are packaged in clear plastic, re-usable storage boxes with sliding lids. HEAVY CORD-Diameter .062"-Same as used on many Philico and Majestic sets. Very durable, and treated to prevent slipping. No. 33 ft. 25 List Price $\$ 1.75$ No. 33-1C 100 ft....................... List Price 4.60 BRONZE CABLE-16-Strand Braided-Diameter .039"-Breaking Strength 50 lhs .-A braided cable with good flexibility and abrasion resistance. "Fiber-glass" is used as core material and the braid is constructed of special hard Cadmium bronze. Does not unravel.

PHOSPHOR BRONZE CABLE-42-Strand-Diameter . $032^{\prime \prime}$-Breaking Strength 60 lbs.-A very flexible metal cable constructed of 42 strands of hard Phosphor bronze over a "Fiber-glass" core. Fx. tremely durable. Used for replacement of dial cables and many special applications where a strong, stranded cable is required. No. 30 ........................... 25 ft ......................... ## WALSCOLUB = B

A recently-developed chemical compound in thin paste form. WALSCOLUB - B counteracts oxidation, prevents corrosion of metals and eliminates noise on band switches, push buttons, tuners, volume and other controls, as well as airexposed electrical contacts, attenuators, etc. WALSCOLUB-B will not change electrical properties. It is superior to any graphite compound for this purpose. Ideal on metal surfaces to prevent rust. Servicemen: Its use will save you both time and money. Once you have tried it, you will never be without it! Large, liandy applicator tube.

Available also in 1-lb. $5-\mathrm{lb}$. and $25-\mathrm{lb}$. containers for industrial users.

Cat. No.
$22-13 / 4$ oz. tube
List Price Prices on request.

## WALSCO CONTACTENE

 New Improved "Contact Cleaning Fluid"- Cleans contacts and controls.
- Keeps controls and contacts noise-free.
- Lubricates and reduces friction.

A fast-evaporating combination of special solvents affording greatest cleaning power without affecting insulating materials. Contains "No-Ox," which after evaporation of the solvents, forms a thin film that protects the contacts. Contactene is recommended for treating volume controls, band switches, tuning condensers, springs, etc., to eliminate noisy operation. Bottles come with built-in brushes.

## WALSCO Motor and Gear Lubricant

The latest development in chemicals for lubricating purposes. Much superior to greases because of its higher lubricating and lasting qualities. Its viscosity does not change with temperature. Used on phonograpli motors, record changers, and all appliances that require a grease-type lubricant. In large handy "applicator" tube Cat. No.

List Price 23-1 $3 / 4$ oz. tube

WALSCO "NO-SLIP"
A newly developed chemi cal composition that greatly increases the friction of pulleys, cords or belts. Contracts, "sets" and shrinks the fibres at the same time Stops instantly any slippage of Dial Belts, Dial Cords, etc. Easily applied with brush. Indispensable to any radio man.

List Price
$\$ 0.45$

## Latest Television Servicing Tools

## ICA SAFE-T-TESTER

A new, unique, non-shorting prod that makes contact only when pressure is applied to harrel. Ideal for cramped spaces where probing is necessary. Specially applicalle to television needs,

No. 446. $\qquad$

## TRAN-ALIGNER

Newly designed all-insulated aligning tool for standard IF and RF and "K-Tran" midget transformers. Trim filser; milled at one end, screw driver at other end. $21 / 2^{\prime \prime}$ length blade; $6^{\prime \prime}$ overall.

No. 978 ..
List \$. 75 each

## SLIM-ALIGNER

Alignment tool with extra thin recessed blade and slim metal slaft for cramped probing in television receivers. Fiber handle. Especially suitable for "Admiral" and similar make television sets.
No. 6161
List $\$ 1.00$ each

## Stub Aligner

Ideal when cramperl space demands short insulated tuning tool. Exposed nib for screw driver type controls not carrying high voltages. Tough fibre. Length: $21 / 2^{\prime \prime} \times 1 / 4^{\prime \prime}$ diameter. No. 6155

List $\$ .40$ each

## heavy duty

 TEST LEADSEngineered for TV's high voltage measurements. Insulated to withstand 15,000 volts D.C. Thick-walled bakelite handles with
 finger guards. $48^{\prime \prime}$ heavy duty cable. No. 4317.
$\$ 3$ per pair Dealer Net

## TUNING WAND

Extra thin diameter to fit small coil openings in television sets. Flexible vinylite. Brass insert in one end; molded powdered iron core in other end. Lowers or increases inductance. Suitable for "Zenith," etc., TV sets.
No. 6163
List $\$ 1.00$ each

## DEEP-NIB ALIGNER

Tough fibre. Metal nib entirely insulated and set within harrel end. For tuning IF and RF shielded coils and trimmers. Small enough to fit under television tules without removing. Length: $21 / 2^{\prime \prime} \times 1 / 4^{\prime \prime}$ diameter.
No. 6156 .
List $\$ .50$ each

## TELEVISION "CHANNEL TUNER"

A narrow all-insulated screw driver of machined fiber. Ideal for deep, inaccessible tuming. Overall: $7^{\prime \prime}$ Length. $1 / 8^{\prime \prime}$ blade on $41 / 2^{\prime \prime}$ shaft.
No. 6157.

\section*{RF AND SIGNAL

## TRACER PROBE

## TRACER PROBE

Germanium Crystal Circuit. Assures accurate analysis of circuit defects. May be used with audio amplifier for audible trac-
 ing or with V.T.V.M. for RF and AF measurements. Low input capacitance. The ideal probe for the audio section of television circuits. The sturdy bakelite barrel has sealed tenite ends with solderless phone tip and includes $48^{\prime \prime}$ RG59/U coaxial cable with phone plug and $18^{\prime \prime}$ rubber covered ground lead with alligator clip.
No. 4310 $\qquad$ \$7.50 Dealer Net

## ''BIG STRETCH'' ALIGNER

Extra thin, extra long ( $9^{\prime \prime}$ ), bone fibre aligning tool, $61 / 2^{\prime \prime}$ blade. Specially designed for adjustment of nested iron cores of "Admiral," "Zenitl" and similar make TV sets. Permits use on RCA front ends and normally inaccessible areas.
No. 6162.
List $\$ 1.00$ each

## TUNING WRENCH

Insulated fibre tuning wrench with extra thin recessed blade. Extra thin screw driver blade on other end ( $43 / 4^{\prime \prime}$ L.). Tenite handle. Especially designed for "Zenith" TV sets. etc.
No. 6164.
List $\$ .75$ each

DUAL ALIGNER

Dual purpose narrow shaft, fibre alignment tool for trimmers, IF transformers, etc. Recessed screw nib on one end; metal screw driver on other end.

## HEAVY DUTY

 TRANSMITTING CHOKES

Better mechanical design insures constancy of calibration and uniformity between units. Ball-bearings on both ends of ahaft insure long life without wear or side play. Heavy brass sprinis make direct contact with rotor shaft, in suring a clean wiping contact at all times.

ICA FLEXIBLE SPAGHETTI TUBING 20 Foot Lengths

A flexible tubing, heav ily varnished, in attrac tive colors. Average dielectric strength, 5000 volts. Will accommodate from No. 10 to No. 18 Wires
Furnished in one length -20 feet long on handy spools.
$\stackrel{N}{2}$

| No. | Color |  | List |
| :--- | :--- | :--- | ---: |
| 210 | Red | Per Spool | $\$ 1.25$ |
| 211 | Yellow | Per Spool | 1.25 |
| 212 | Brown | Per Spool | 1.25 |
| 213 | Green | Per Spool | 1.25 |
| 214 | Black | Per Spool | 1.25 |

500 Foot Spools, sparhetti tubing, same grade and colors as above. Specify color per spool No. 197.

List $\$ 28.50$

## ICA SPAGHETTI TUBING

For No. 10 to No. 18 gauge wire. Guaranteed not to crack. Furnished in 30" lengths.

200-RMALL SIZE SPAGHETTI TUBING 201-Yellow 202-Black
........ . 15
Lupplied in $36^{\prime \prime}$ lengths. Diameter $9 / 64^{\prime \prime}$ I.D. ${ }^{\circ} 3 / 16^{\prime \prime}$ O.D.
No. 196 -supplied in black only
List-per length $\$ .50$

## ICA GIANT SLEEVING

Made of high voltage insulation saturated cambric material. Inside diameter 3/8". For Insulating Resistors, Small Condensers, Wire Cables. Leads, etc. $36^{\prime \prime}$ lengths.
No. 198
List $\$ .50$

## OTNGUTINE <br> OTNGUTINE <br> OTNGUTINE

## ICA TERMINAL STRIPS

Made of $3 / 32^{\prime \prime}$ heavy black Bakelite, engraved in white. Terminals are brass cadmium plated.

# M PESULINTA 

EILTERVOLT NOISE FILTER
An efficient filter for disturbances caused by electrical appliances. For use with any all wave or broadcast re. ceiver.
Rated conservatively at 250 watts for 32,110 and 220 volt AC or DC circuits. Can be installed either at the radio or at the source of disturbance.
Contains heavy duty R.F. chokes, large filter capacitor, and has a "PI" Filter circuit arrangement.
No. 338 ..
List $\$ 7.50$

## ICA

## FILTERVOLT

Improves extremely noisy radio reception due to interruptions in power line caused by electrical appliances, lical appliances, No. 394

List $\$ 4.50$

## DUPLEX FILTERYOLT <br> Eliminates Radio Noises Caused By- <br>  <br> - Electric Shavers <br> - Refrigerators <br> - Fans - Elevators <br> - Motors, etc.

Unit is equipped with Dual outlet, both sides being filtered for noise elimination
Packed 25 to a standard carton.
No. 90
LIst $\$ 1.50$

## UNIVERSAL VOLTAGE REGULATOR

Voltage fluctuation often occurs not gradually but
suddenly, thus bringing a tremendous strain on the tubes. This regulator protects tubes through scientific regulation of current
fluctuations. Housing fluctuations. Housing hody and end rings are neatly constructed and of perforated japanned metal. For all Radio Sets, AC, DC.

No. 92
List $\$ 1.50$
ICA 3-IN-1 RADIO TUNER

Functions as either an Antenna Tuner, Wave Trap, or Aerial Eliminator. Operates on any make or model radio set.
As an Antenna Tuner, it will improve the reception of a weak station. As a Wave Trap, it will separate interfering stations and improve selectivity. As an Aerial Eliminator, it makes unnecessary the outdoor aeriul. Easily installed witlin a few minutes.
No. 93-Complete witlı instructions List $\$ 1.00$

## ICA DELUXE SIGNA-TONE

AUDIO OSCILLATOR - CODE PRACTICE SET - KEYING MONITOR
The ICA Signatone is a perfected Audio Oscillator, having 3 different output irequencies and a continuously variable volume control. The Audio notes are similar to those of high quality Audio notes are similar to
commercial CW stations.

1. CODE PIRACTICE SET-A number of phones and keys may be connected for intercommunication or for classroom or radio club instruction in code.

2. KEYING MONITOR-An invaluable aid in improving any ham's "fist". Will follow the "bug" at all speeds. No wellequipped station should be without this keying monitor.
3. MODULATION SIGNAL-The steady note of the Signutone is ideal for adjusting both the Modulator and modulated stages of your transmitter for a maxinum modulation percentage of not over 100
4. SIGNAL TRACER-By feeding the output of the Signatone into each stage of your modulator and listening to the output of that stage, defects and "bugs" can easily be located. Complete with tube and self-contained speaker, for 110 V AC-DC.
No. 4300-*Dealer Net Cost
No. 4301 -Classroom Model (No Speaker)-Dealer Net Cost
No. 4301 -Classroom Model (No Speaker)-Dealer Net Cost

## EAR PHONES

Complete With Head Bands
Made of molded Bakelite and light-weight nick-light-weight nick-
el-plated metal. el-plated
2000 ohms.

No. 23-Double Itead Phone.
List $\$ 4.50$

## EAR CUSHIONS

Made of soft rubber. Ideal for the amateur wireless operator, etc. Used by all leading air lines.

No. 195......................................List \$1.10 pr.

## DOUBLE PHONE CORDS

No.
192—Tips on both ends
193 -Spades on one end, tips on other.

## ICA TENNA-SCOPE LOOP

For Midgets or Portables Eliminates necessity of outdoor or indoor antenna. Replaces the aritenna coil in portable or midget sets. Easily assembled.

## No. 4385

List \$1.25

## ICA TENNA.SCOPE

A new style built in tuned rallio antenna. Easily connected. Eliminates use of outside aerial and ground. Features: Better selectivity - Higher signal to noise ratio - Fasily connected, no soldering.

227 Plh threaded shank 35 c
_-Plug with $10-32$ hole with screw $35 c$

## SPRING BANANA PLUG INSULATED

In this spring banana plug no metal parts are exposed around the insuparts are exposed around the insulated handle. Connection is made by soldering to special type tubular lug which is an integral part of metal body. Non-collapsible four leaf banana spring gives maximum area of contact. Metal parts are nickel plated brass except banana spring which is nickel plated phos phor bronze. The high lustre insulated handle is $/$ " long. Available in red, black, green and yellow.

No. 209
LIST PRICE 18 c

## INSULATED SOLDERLESS SPRING BANANA PLUG <br> (INTERNAL SOLDERLESS FASTENER)

An insulated spring banana plug identical in appearance to our part No. 209 except that connection is made to an internal solderless tastaner. The high lustre insulated handle is available in red, black, green and yellow.

No. 210.
..LIST PRICE 20c

## Insulated Phone Tip Jack

An insulated phone tip jack which makes very positive contact. Contact springs are made of phosphor bronze. Metal parts are nickel plated brass The high lustre insulated head is $3 / 8^{\prime \prime}$ in diameter. Available in red, black, green and yellow.
Fits $1 / 4^{\prime \prime}$ hole in panels up to 4 thick.
Supplied with nut and insulating washer.

No. 101
LIST PRICE 15c

## .. PHONE TIP JACK

A phone tip jack identical to our part No. 101 above except that it has a non-insulated 5/16" hex head. Metal parts are nickel plated brass.
Fits $1 / 4^{\prime \prime}$ hole in panels up to $3 / 8^{\prime \prime}$ thick.

No. 106
LIST PRICE 10c

## Open Circuit Phone Jack

No. 100

Made to fit all standpring mags. Con nick el plated phosphor bronze and body made of nickel plated brass. Highest quality insulating material used. Fits $3 / 8^{10}$ hole in panels up to 3/16" thick. Supplied with one metal washer.

Will accommodate all standard hanana type plugs. Mounts in a $1 / 4$ hole in panels up to $3 / 8$ " thick. Insulated head $3 / 8$ " dia. gyailable in Black, ${ }^{7 / 8}$ Rell, Yellow and Green. Supplied complete with insulated shoulder washer, soldering lug, and nut. Specify color.

No. 205
$\$ 15.00$ per $C$

## INSTRUMENT BANANA JACK

Marle of brass, nickel plated Jack receptacle is countersunk and will accept all standard Banana type plugs for a snug and positive contact. Insulated head is $1 / 2$ diameter and supplied complete with insulating washer, lock washer, heavy duty soldering lug and nut. Avaluble in Black, Red, Jellow and Green. Specify color.

No. 219
. $\$ 19.00$ per C

## INSULATED

 COMBINATION JACK
## This combination jack will accom-

 modate all standard plugs, of the phone tip type or lanana type construction. Mounts in a $1 / 4^{\prime \prime}$ hole in panels up to $1 / 2^{\prime \prime}$ thick. Over-all length $1 \mathrm{~m} / \mathrm{m}^{\prime \prime}$. Supplied complete with insulating shoulder washer and nut. Insulated head available in Black, Red, Yellow and Green. Specify color.No. 206.
$\$ 20.00$ per C

## INSULATED SOLDERLESS

 BANANA PLUGS Spring type construction, and will fit all standard banana jacks. Tapped hole is provided in rear of plug and small screw machine stud is provided so that wire can be wrapped around and tightened without the need of soldering. Insulated handle is 3 " long and available in Black, Red, Yellow and Green. Specify color. No. 211. $\qquad$ $\$ 20.00$ per CThis plug constructed the same as No. 211 described above, but the plug nortion is made of hexagon brass. Plug is also supplied with screw machine stud. Insulated handle $1^{\prime \prime}$ long and available in Black, Red, Yellow and Green colors. Specify color.
No. 212
$\$ 25.00$ per C

## INSULATED SOLDERLESS

 PHONE TIP PLUGSInsulated sleeve $3 / 4$ " long, and avail able in Black, Red, Yellow and Green Will fit all standard phone tip jacks and specially recommencled for use with our No 202 insulated jack The wire fits through the sleeve of plum and is wrapped aroupl the serew and is wrapped arouni he screw por tion, and then the knurled nut provided, making soldering unnecessary. Specify color.

Plug with Type
105 Tip
Per C
$\$ 18.00$

## INSULATED Phone tip plug

Insulated sleeve $3 / 4$ " long, available in Black, Red, Yellow and Green. The phone tip will plug into all standard phone tip jacks, and the insulated sleeve is so designed to accommodate all standard banana type plugs.
No. 215
$\$ 15.00$ per C
Phone tip only - less insulated sleeve.
No. 125
$\$ 8.00$ per $C$

## INSULATED

## PHONO NEEDLE TIP PLUG

Insulated sleeve $3 / 4$ " long, a vailable in Black, Red, Yellow and Green. The body of the plug will accommodate all standard banana type plugs. The sharp needle point phone tip will pierce through corrosion for positive contact.
No. 216
$\$ 20.00$ per $C$
Needle tip only - less insulated sleeve
No. 217.
$\$ 12.00$ per C

## INSULATED SHORT PHONE TIP

Will fit all standard phone tip jacks of the insulated or non-insulated types. Insulated sleeve $3 / 4$ " long, and available in Black, Red, Yellow and Green. Specify colors.

No. 203
$\$ 15.00$ per C

## INSULATED BANANA PLUG

## Spring Type

Will fit all standard banana type jacks. A set screw is provided in the side of the plug to secure the wire to the plug without soldering. Insulated sleeves $7 / 8$ " long avaitable in 13lack, Red, Yellow and Green colors. Over-all length $1 \% /{ }^{\prime \prime}$. Specify color.

No. 204.
$\$ 20.00$ per C

## INSULATED BANANA PLUG

 Split TypeThe banana pluy is of the split type construction. Insulated handle 7/8" long. A set screw is provided in the side of the plug, to secure the wire to the plug without soldering. Available in Black, Red, Yellow and Green colors. Specify colors.

No. 213
$\$ 20.00$ per C

BANANA PLUG AND PHONE TIP JACK COMBINATION
Insulated banana type plug of the spring type construction will fit all standard banana type jacks, and the top of the insulated sleeve of the plug will accommorlate all standard phone tips. Insulated hantle 1" long. Available in IBlack, Red, Yellow and Green. Specify color.
No. 214
$\$ 45.00$ per C

## INSULATED BINDING POSTS

Knurled Insulated IIead threaded
eliminating the necessity for using a brass bushing. Each Binding Post complete with $6.32 \mathrm{x} \quad 3 / 8 "$
serew and lockwasher. Available in Black and Red Colors. Specify Colors.

## SMITH

## HEAVY DUTY BAKELITE BARRIER TERMINAL STRIPS

This latest type of construction of bakelite strip is made of molded bakelite of very high tensile strength. The barriers between each terminal prevent any possibility of short circuits and leakage between terminals. The terminals and screws are brass, nickel plated. These strips are manufactured by the KULFA ELECTRIC MFG. CO. INC., Design Patent No. 136,762 and are exclusively distributed by us to the Radio Parts Distributors.

## COLUMN A

All the Barrier Terminal Strips enumerated in Column $A$ for the 1500,1600 and 1700 series are made with screw type terminals exactly as shown in the illustration at top of page.

## COLUMN B

All the larrier Strips enumerated in Column $B$ for the 1500,1600 and 1700 serics are supplied with the two-solder connection lug illustrated above.

COLUMN C

All the Barrier Strips enumerated in Column C for the 1500, 1600 and 1700 series are supplied with the one-solder connection lug illustrated above.

## COLUMN D

All the Barrier Strips enumerated in Column D for the 1500,1600 and 1700 series are supplied with the bottom type comection lug illustrated above.

| 859 | Ivory | 17.00 |

## ATTACHMENT PLUG CAP

A snug-fitting, sturdy, bakelite hase designed for use with standard attachment plug caps. Has slot finding features on its face und heavy spring contacts for positive and lasting electrical contact. 660 Watts - 250 Volts.

No. 857 \$17.00 per C

## RUBBER ATTACHMENT - PLUG

Rubber handle attachment plug: Cord Hole $3 / 8 "(.375)$. Rated at 15 Amps. 125 Volts. Blades are made of Brass.
No. 850
$\$ 15.00$ per C

## bakElite handle plug Foreign Type

Moulded bakelite handle foreign type plug. Blades are made of hrass, and of the Continental Tyle spacing.
No. 851.
$\$ 25.00$ per C

## AMERICAN-FOREIGN PLUG ADAPTER

Streamlined bakelite plug adapter, which adapts from American to foreign type plugs. The plugs will fit snugly into the adapter. The foreisn type plugs are made of brass, and are of Continental Type spacing.
No. 852.
$\$ 30.00$ per C

## AMERICAN-FOREIGN PLUG ADAPTER British Type

Streamlined loakelite plug adapter, which adapts from American to foreign type American to foreign type plugs. The plugs will tit mnugly into the adapter. Prongs are made of brass and are of the BRITISII TYPE spacing.
No. 856
$\$ 30.00$ per C $\quad$ No. 118

## CLOSED CIRCUIT CHASSIS

 CONNECTORSame as No. 117 Connector except that circuit closes when female microphone connector (our No. 116) is removel Supplied with washers, soldering lug and nut. No. 114
$\$ 0.40$ each
FUSE MOUNTING BASES

Black bakelite, panel mount type. Will accommodate the 3 A $G$ Auto type cartridge fuse.

| No. | Type | Each |
| :--- | ---: | ---: |
| 530 | Single | $\$ 0.20$ |
| 531 | Double | .30 |

## FUSE CLIPS

Clips are made of spring brass, nickel plated. Will accommodate the 3 A G Auto type cartridge fuse. Clips $1 / /^{\prime \prime}$ wide $\times 3 / 8^{\prime \prime}$ high.
No. 532
$\$ 1.75$ per C

## CAP AND CHAIN

Made of hrass, heavily nickel
plated. The cap seals open end units against dust, eliminating noisy connections. Used with any threaded one or two-conductor chassis unit.
. $\$ 0.50$ each

PHONO ADAPTER ATTACHMENT PLUG

Phonograph pick-up and auto radio connection plug.
$\$ 8.00^{-}$per C

## PHONO JACK

Mate for the No. 1201 plug. Jack mounted on bakelite and metal back supplied for use with phonograph attachment.
No. 1203, $\$ 12.00$ per C

## MOTOROLA TYPE PLUG

Attachment plug for all Motor. ola auto-radio receivers and many other types of auto ralios.

No. 1200 ............ $\$ 10.00$ per C

## LEAD-IN ADAPTER

Lead-in adapter converts Motorola plug to Delco type plug.
No. 1204

## RUBBER FEET BUMPER

Rubber Bumper - $5 /{ }^{\prime \prime}$ dia. $x{ }^{9} \mathbf{5}^{\prime \prime}$ thick. Recessell to accommodate a self-tapping screw, machine screw, wood screw or a tack.

No. $2184 \ldots \ldots \ldots . . . \$ 4.00$ per C
Insert Rubber liumper - O.D. of shoulder $1 / 2 "$
 to $1 / 4^{\prime \prime}$.

FELT FEET

PHONO TIP JACK
Brass, nickel plated jacks with positive contact springs mounted on ${ }^{16}{ }^{\prime \prime}{ }^{\prime \prime}$, bakelite. Jacks are $7^{7 \prime \prime}$ center to center. Jacks will accommodate standard
derless or solder types. phone tips of either sol-derless or solder types.

## MINI-SHIELDS

The Perfect Shield For Mini-Tubes
These new Mini-Shields are formed to fit snugly and yet expand to a constant snug fit on larger tubes to automatically compensate for the considerable variation in olysical dimensions of miniature tubes as commercially produced.
Specially shaped serrations spaced to engage the lower mini-shield ribs catch and hold the shield firmly which mini-shielditus catige against vibrations or other forces ending to jiggle the tule loose.
These shields are made so that three rows of dimples pressing against the tube provide a gentle but firm snug fit. The three prong spring rase clip grips the shifid positively, crading the tube within the shield and retaining it firmly in the socket secure against vilration. These Mini-Shields are available in two sizes to accommodate tubes $11 / 2^{\prime \prime}$ long and $2^{\prime \prime}$ long

MINI-SPRING FOR MINI-TUBES For Table Radios • Electronic Equipment Radio Receivers
The Mini-Tube guard gives support to the Mini-Tube in two ways. It maintains a direct axial pressure downwards plus a sideways support that keeps the tube upright and perpendicular to the chassis. The spring action is constant and resilient permanently. If your radio equipment has an inclined chassis or the tube are mourted upside down or horizontally . . . or if it is subject to any vitration... or if your demand is constantly superio trouble-free reception, Mini-Tube guards are the only way to insure that tubes stay in place forever

| No. | Type | Per C |
| :--- | :--- | :---: |
| 560 | Short | $\$ 12.00$ |
| 561 | Medium | 12.00 |
| 562 | Long | 12.00 |
| 563 | $9-$ Prong | 12.00 |

## GRID CAP SHIELD

Shield is slotted on the side, for passage of the grid lead wire. The shield fits snugly over the grid cap of the tube, completely shielding same. Shield is cadmium plated finish.
No. 537.

## BRASS AND INSULATED COUPLINGS

For use on electronic equipment wherever a slaft extension is required. O.D. $\frac{70^{\prime \prime}}{} \times 9 / 4{ }^{\prime \prime}$ long.

## LAG SCREW EXPANSION SHIELD

This expansion shield is extensively used in television antenna installations. Made of a special alloy - $\mathbf{1 0 0 \%}$ rust-prooi. Newly designed threads hold greater load and external corrugations (ribs) give additional strength on masonry. This shield is $1^{\prime \prime}$ long $x 1 / 2^{\prime \prime} 0 . D$. and takes our standard $1 / 4^{\prime \prime} \times 11 / 4^{\prime \prime}$ lag screw. No. 1230.
$\$ 18.00$ per C

## STUD ANCHORS

Stud Anchor consists of Cone-Headed Bolt, Lead Alloy Sleeve-Metal Cone and Square Nut completely assembled as at left. the bolt has two fins on its tapered section to lock into lead sleeve after the bolt from turning when the square nut is tightened Fits into a $1 / 2^{\prime \prime}$ hole and is $2^{\prime \prime}$ long over-all.
Instructions for Installation: Drill hole proper diameter and depth place Star Stud in anchor into hole, head of the bolt first - remove hammer anchor - place setting tool or piece of pipe over bolt and No. 1232
$\$ 18.00$ per C

## EXPANSION SHIELD

This is an expansion shield which uses nails as an expansion on locking pin. Drill $1 / 4$ " hole in the masonry and pass shield through mounting hole of object being attached so that top flange remains above fixtures. The nail, under the hammer blow, forces the lead into all the irregularities of the masonry hole, then passes through and locks anchor flange of bottom under the lead. The length of the shield is $11 / 2^{\prime \prime}$.
No. 1233
$\$ 15.00$ per C

## GUY WIRE

An exceptionally high grade of steel galvanized guy wire for anchoring antenna masts. Available in two sizes, STANDARD-6 strands of No. 20; EXTRA IIEAVY-6 strands of No. 18. 6 STRANDS No. 20

| No. | Each | Length | No. | No. |
| :---: | ---: | :---: | :---: | ---: |
| 1250 | $\$ 0.80$ | 50 foot Coil | 1271 | Each |
| 1251 | 1.50 | 100 -foot Coil | 1272 | $\$ 1.25$ |
| 1252 | 7.00 | 500 -foot Spool | 1273 | 12.30 |
| 1253 | 13.20 | 1000 -foot Spool | 1274 | 24.50 |

This Guy Wire is also available in both sizes in 50-Foot Connected Coils, two dozen coils to the carton.

6 STRANDS No. 20
6 STRANDS No. 18
No. 1278 \$16.50 Each Carton No. 1279 \$22.00 Each Carton

## SCREW EYE STAND OFF INSULATORS With Molded Polyethylene Inserts

This screw eye has a special low-loss polyethylene insert and is specially designed for use in 300 -ohm line television installations.
Twin Lead Insert

|  | Twin Lead Insert |  |
| :---: | :---: | ---: |
| No. | Size | Per C |

|  | Universal Insert |  |
| 1265 | $31 / 2^{\prime \prime}$ |  |
|  | $71 / 2^{\prime \prime}$ | 9.95 |

This is the only Eye Bolt Anchor designed for anchoring antema guy wire in brick or masonry. Made of $1 / 4$ material, over-all lencth $21 / 2^{\prime \prime}$, fits into hole, closing gap ${ }^{3} z^{\prime \prime}$. Rust-proofed. Can only be used with our No. 1229 tamping tool shown on I'age U-76b. No. 1227

## EYE BOLT

Sturdy steel eye bolt for use where guy wire is necessary for T.V. mast installation. Inside diameter ${ }_{32}^{23 \prime \prime}$,

No. 1249.
$\$ 8.00$ per C

## BRIDLE RING

Heavy duty steel bridle ring $5 / 8$ " long. Another essential item where guy wire is used in T.V. mast installation.

No. 1238
$\$ 10.00$ per $\mathbf{C}$

## ANCHOR BOLT

Rust-proofed anchor designed for lasting and permanent anchorage for fastening wall mounts and pipe straps to masonry. Free tamping tool with each 100 Bolts.

| No. | Bolt Length | Per C |
| :---: | :---: | :---: |
| 1246 | $2^{\prime \prime}$ | $\$ 15.00$ |
| 1247 | $3^{\prime \prime}$ | 18.00 |
| 1248 | $4^{\prime \prime}$ | 22.00 |

## TOGGLE BOLT

A spring wing togerle bolt useful for mounting objects against hollow concrete. Clamp is galvanized steel and screw is $1 / 4^{\prime \prime} 0 . D$. $\times 3^{\prime \prime}$ long. No. 1223.
$\$ 22.00$ per C

## WOOD SCREW ANCHOR

Especially designed to give permanent anchorage in any kind of masonry for 300 -ohm and coaxial stand-offs. Tupped for wood serew. Free tumping tool with each 100 anchors.
No. 1226
$\$ 11.00$ per C

## SMITH Electronic Coupareents HERMAN H. SMITH, INC.

## TELEVISION ANTENNA ACCESSORIES

CARBIDE TIPPED MASONRY DRILLS

These drills are carbide tipped and have a spiral fluted body. It penetrates freely and easily, giving clean, accurate holes. Individually packed complete with operating instructions.

| No. | Size | Each |
| :---: | :---: | :---: |
| 1234 | $1 / 4^{\prime \prime}$ | $\$ 3.75$ |
| 1236 | $3 / 8^{\prime \prime}$ | 4.75 |
| 1235 | $1 / 2^{\prime \prime}$ | 6.00 |

## TAMPING TOOLS

An absolutely essential item for T.V. antenna installation to insure proper setting of all anchor bolts in masonry. Description holts in masonry

## LEAD ANCHORS FOR WOOD SCREWS

This is a new design anchor which gives greater holding power; requiring a smaller installation hole for the corresponding size screws. It takes more sizes of screws grouped in a more convenient series than other designs. It also has a larger range of holding power through various sizes of hole diameters. These anchors are ${ }^{5 \prime \prime}$ O.D., take a 10-12-14 wood screw and are forced into a $3^{2} 6^{\prime \prime \prime}$ or $1 / 4^{1 /}$ hole.

| No. | Length | Per C |
| :---: | :---: | :---: |
| 1231 | $1^{\prime \prime}$ | $\$ 7.00$ |
| 1239 | $11 / 2^{\prime \prime}$ | 10.00 |

## RUBBER STAND.OFF

Made of $1 / 8$ " heavy duty rubber, this stand-of is especially designed for either coaxial cable or standard twinlead cable. Fits on any mast or cross arm with O.D. varying from $1^{\prime \prime}$ to $11 / 4^{\prime \prime}$.

$$
\text { No. } 1263 .
$$

$\$ 10.00$ per $\mathbf{C}$

## PORCELAIN STAND-OFF

Made to accommodate twin 300 -ohm lead-in wire. Mois-ture-Proof Porcelain maintains firm grip on wire. Screw for mounting in either wood or masonry.

## SOLDERLESS

## TERMINAL LUGS

These lugs are easily applied and do not require the use of any special tool. They are desipned to give a trim are de signed to give a trim appear ance to an otherwise unsightly weaty cover the stranding and catly over the stranding and
 contine it directly under bind
ing screw or nut and automatically insure greatest possible contact. The cushion-like construction of these lugs, when closed, permits binding nut or screw to sink into the soft copper and so serves the purpose of a lock nut and is therefore vibration-proof. Packed 100 per box.

# New Enloryed Line of AC-DC RESISTANGE LINE GORDS 

## STANDARD 3 TERMINALS AC-DC RESISTANCE CORDS

FLEXIBLE, STURDY CORDS, 3-TERMINAL TYPE, WITH COLOR-CODED, TINNED LEADS

Attractive individual Cartons

Note: 135, 160, 180, and 200 ohm cords can also be used for single light 20 and 15 watt fluorescent fixtures.

## TAPPED 4 TERMINAL AC-DC RESISTANCE CORDS

Pilot light resistor shunt built into the line cord. Used on Emerson, Zenith, Sparton, R. C. A., General Electric, Wells-Gardner, Sears Roebuck, Fada, Admiral, Air King, Detrola, Crosley, Garod, and others.

No.
2176-160 OHMS—TAPPED AT 24 OHMS
For sets using tubes having a voltage drop of approximately 69 volts as $2-25$ volt tubes and $3-6.3$ volt tubes plus single pilot light or similar combination

2195-165 OHMS—TAPPED AT 30 OHMS
There is a large demand for this tapped line cord

2177-180 OHMS—TAPPED AT 25 OHMS
For sets using tubes having a voltage drop of approximately 63 volts as 2.25 volt tubes and $2 \cdot 6.3$ volt tubes plus a single pilot light or similar combination

2178-200 OHMS—TAPPED AT 25 OHMS
For sets using tubes having a voltage drop of approximately 57 volts as $1-25$ volt tube, $1-12$ volt tube and $3-6.3$ volt tubes and a single pilot light. May also be used for sets using tubes having a voltage drop of 63 volts, ( $2-25$ volt and 2-6.3 wolt tubes) if high line voltage ( 125 volts) is encountered.

2179-200 OHMS-TAPPED AT 40 OHMS

For sets using tules having a voltage drop of approximately 57 volts as 1-25 volt tube, $1-12$ volt tube and $3-6.3$ volt tubes and two pilot lights in series

List, Ea.
No. 2174-280 OHMS—TAPPED AT 40 OHMS
For sets using tubes having a voltage drop of approximately 32 volts as 2.12 volt tubes and 1-6.3 volt tube or 5-6.3 volt tubes or similar combinations using 2 pilot light in series

2164-360 OHMS—TAPPED AT 80 OHMS
Used in Garod Model BP-20. See No. 2196 for specifications

2166-430 OHMS-TAPPED AT 80 OHMS
For Farnsworth Morlel CD59. See No. 2196 for specifications

2156-510 OHMS—TAPPED AT 80 OHMS
For Fada. See No. 2196 for specificastions

2196-560 OHMS-TAPPED AT 80 OHMS
Tapped at 80 ohms for plate of rectifier. Designed with voltage dropping resistor to plate of rectifier. Avoids necessity of using $B+$ resistor. This cord used extensively

2158-960 OHMS-TAPPED AT 80 OHMS
For G. E. Model L622. See No 2196 for specifications

2165-1950 OHMS-TAPPED AT 360 OHMS
Used extensively in sets such as Crosley Model 27BD, Adnirai Model 28 -G-5, and other sets with similar circuits

HIGH RESISTANCE CORDS

No.
List Pric
2197 For 3 -way portable radios, AC-DO battery. New high resistance type cord, has 560 ohms resistance Jany thousands of sets using thi identical cord are now in use. Thi henulur replacement cord shoul be stocked by erery serviceman udividually packaged serviceman ludividually packaged

2157-For AC-DC Sets.
This cord has 960 ohms resistance, and is used wherever 45 Z 3 rectifier tube is employed. (For pocket type radios, such as: Admiral, Fada Sen tinel, Sonora, Moterola, Detrola Farnsworth, etc.) Individually packaged

REPLACEMENT LINE CORD FOR MOTOROLA SETS

No.
2198-8 ft. cord containing 2 resistance elemento- 1100 and 280 ohms. Has 4 terminals. Essentia replacement for all Motorola ables. Nos. $41 \mathrm{D}, 51 \mathrm{D}, 52 \mathrm{D}, 41 \mathrm{H} . \$ 2.06$

## COMBINATION ANTENNA WIRE and STRAIGHT AC CORD <br>  <br> List Pilice

No.
2168-3-wire cord with special female socket to fit sets which have three prong male plug, used in Sentirel, Admiral, Belmont, Sonora, etc. Individually packaged

[^7]:    HOW TO DETERMINE CABLE REQUIREMENTS: To interconnect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., and total. For C. 4920 use two lengths of 8224 Cable; and for C. 4930 use three lengths of 6224 Cable To connect C.41 Staff Station, measure from Staff Station to the one Master to which Staff Station originates calls. To connect C. 42 and C. 46 Staff Stations, measure a separate length of cable from Staff Station to each Master Station to which Staff Station originates calls (for each C.42 or C-46, follow same procedure).
