NEW!**DYNA ROTOR™**

The new Jerrold Dyna-Rotor is a revolutionary breakthrough in antenna rotator design, featuring a totally solid-state control circuit and a unique Dynamic Spline drive mechanism. The Dyna-Rotor is completely automatic—just set the control knob to the desired direction, and the antenna turns to the exact selected position—quickly, precisely. Antenna is synchronized with the control at all times; no re-synchronizing ever required. Positive mechanical lock prevents antenna from drifting off selected position, even in high winds. Fastest rotator available, the Dyna-Rotor turns the largest antennas a full 360° in less than 40 seconds. Control unit is attractively styled and completely silent in operation. Dial light indicates antenna is turning. In-line rotor cannot be jammed by ice loading; operates reliably at —20°F.

Model 2L — 2 Lights, 2 Switches per Room
Two lights, green for room available and red for checkout on consoles for front desk and housekeeper. Switches are on front desk board only, and not on housekeeper's board.

When guest checks in, desk moves switch putting out green light. No lights indicate occupied or rented room. When guest checks out, the room clerk throws other switch, putting on red light on his console and red light on housekeeper's board and a small light appears on the guest room panel.

When the maid enters the room, the light on the guest room panel indicates a checkout to her. She pushes in her signal plug to indicate she is working that room. This causes red light on front desk and housekeeper's consoles to blink. When maid is through with room she pushes her plug all the way in and removes it. This puts out all lights and turns on the green lights to indicate room is ready for sale.

Note: Once the maid enters the room and pushes in her plug, either or both the front desk and the housekeeper can give her verbal instructions in regard to the room. Two-way communication is available but not recommended.

NEW, MAID AND INSPECTRESS ROOM STATUS SYSTEM, Model 2LMI

This is a new light system that is equivalent to American's standard 4 light system. It not only shows when a room is ready for sale, occupied or a check out, but also the status of a

room when it is being cleaned or inspected. Front desk has one green light and switch per room, cashier has one red light and switch per room. These two boards can be combined for front desk operation. A combination information board with red and green lights for each room, but no switches is at the housekeeper's station, and for the inspectress, there are boards for each floor with a red and green light for every room on the floor.

OPERATION

When a guest checks out, cashier throws switch for the room, lighting red light on her board, also on housekeeper's board, and on floor board as information for inspectress and maid, and a small light on status plate in check out room. When maid sees this light on entering the room she immediately knows it is a check out. She pushes her plug into the maid jack on the room plate. This causes red lights to dim, for the room involved. At this time, the cashier, or housekeeper can give verbal instructions to the maid (one way communication). When maid is through, she removes her plug and all the lights for the room begin to blink, indicating that room has been cleaned.

Inspectress enters and checks the room. If it is acceptable, she pushes her plug into the maid's jack and removes it, causing the small light on the room panel and the red lights on the other boards to stop blinking and to burn steady. Upon seeing the small light on the room panel burn steady, the inspectress knows the room is a checkout. She pushes her plug into her jack on the room panel, causing the room plate light and the red lights on the other boards to go out, while at the same time lighting the green light on the front desk. Front desk now knows he has a room for rental.

Single Light Maid Status System

Maid Call System "MC" is the use of the white light or maid's control light of Status Control System 4L as an independent, separate system. This system may be installed alone, and functions to notify the Front Office or Housekeeper when the room has been completed.

Operation:

- (1) On Check Out, Room Clerk turns on light on Guest Room Panel.
- (2) Light indicates to Maid that room is Check Out.
- (3) Light blinks at Front Office and/or Housekeeper's board when Maid inserts plug in room jack.
- (4) Light goes off when Maid removes plug.
- (5) Room Clerk now knows room is ready for Sale.

As with other systems, Front Office and Housekeeper are in direct communication (one way) with Maid in room.

AMERICAN'S New TV-set THEFT ALARMS Pending Patents.

A-TA-B/50 TV-set Theft Alarm for Hotels.

AMERICAN'S TV-set Theft Alarm is now available in designs that meet the needs of occupancies of any size; in addition to the **Model B**, for hotels of 50 rooms or more, there is the new **Model C**, for motels of under 50 room units.

Both models operate to signal the front desk of any attempt to steal the television set it protects.

Installation may be made by any technician, following detailed instructions supplied with each System (Console, and Room Units). **Requires only one control wire per guest room.**

Operation: Equipment under protection (TV-set, appliance, etc.) is electronically protected. Any attempt to remove connection from wall outlet, or cut power cord, starts alarm signal. This signal is indicated at the Front Office as a flashing light, and loud buzz.

There is no alarm in the guest room to alert the thief, but the Front Office signal, once triggered, cannot be stopped until Front Office attendant has operated a Reset switch (which cancels buzz); a room indicator lamp remains lit, however, until house personnel has checked the guest room and restored the circuit to its normal alert condition.

Apartment House owners can now offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry.

SPECIFICATIONS

No. A-TA-B/- TV-set Theft Alarm, including Front

Office Control Console, complete w/room lights, loud-sounding buzzer, alarm light, flasher, alarm reset and power on-off switches, solid state devices, and power supply; and, Room Kit (Conversion Cord, Conversion Outlet, one each per room). Control Console (A-TA-B/50) measures approx. 15" x 7 $\frac{3}{4}$ " x 9" deep; wt., approx. 30 lbs.; finish, gray crackle enameled steel. Operates on 115 V., 60 cy. A-C. **Net Price, A-TA-B/-, \$12.00/room.** Price is for a maximum of 50 rooms. Cable not included.

TV-3, SELF-CONTAINED TV THEFT ALARM. The TV-3 Theft Alarm mounts on the back of each TV set. Should anyone attempt to cut the power line, pull out the power plug or remove the Theft Alarm, an extremely shrill piercing alarm is set off. The alarm, which is audible throughout the entire building, will run for about an hour. Two options are available to the owner. Option 1 requires the management's presence to shut the alarm off. Option 2 — If the plug is re-inserted in the receptacle, the alarm will shut off by itself. This option allows for a test of the alarm.

The TV-3 is held in place by screws. No internal connections have to be made to the set. All that's required is to plug the TV set's power cord into the TV-3 and then plug the TV-3 into any power receptacle.

NOTE: If Power goes off, Alarm will not be set off.

INSTANTANEOUS OR SIMULTANEOUS INTERPRETATION & TRANSLATION SYSTEMS

These systems are used wherever foreign groups assemble for meetings, conventions or governmental business. The system is similar to that used at the United Nations and other international conference halls.

There are usually five languages spoken for the purpose of interpretation.

The system comprises:

1. The initial pickup of the person addressing the audience.
2. Simultaneous transmission to the interpreters through headsets.
3. Each of the five interpreters, in his own language, translates what the speaker has said simultaneously to each separate seat in the auditorium.
4. At each seat there is a special switching device and air conduction head sets for the occupant, allowing him to hear either original address or any of the five interpretations.
5. The switching unit is installed in the seat arm or in the case of a temporary installation, tied to the lower arm.
6. Whenever portable equipment is used, the wires from the switching device are plugged into a specially designed floor molding, that is placed directly under and through the seats.

The system consists of the following equipment:

BOOSTER AMPLIFIERS

BOGEN SOUND SYSTEMS

Bogen's booster amplifiers embody the most advanced developments in design and techniques of construction. These units deliver maximum power from a small package. They are ideal for sound systems in industrial plants, airports, stadia, schools... wherever undistorted power is required. Note their exceptionally wide-range response characteristics. Built-in provision permits paralleling any number of power amplifiers to multiply power output. The models described on the preceding page are ideal preamplifiers for these boosters. The MO200A, MO100A, and MT100 units are unsurpassed for both PA and industrial uses. Their 115-volt output makes them adaptable to

unique applications. With a variable frequency audio generator input, they represent relatively inexpensive power sources — any frequency or voltage — capable of driving servos, motors, vibration (shake) tables, ultrasonic equipment. The unique all-silicon transistor model MT100 may be operated from a 12-16 VDC source as well as from 117 VAC. Highly flexible in combination, inputs of identical amplifiers can be paralleled; outputs can be wired in series or parallel to provide any reasonable voltage or power (except MBT60 outputs).

No cage is furnished with MO200A.

MOD SERIES
Models MOD-90 and MOD-200

TRUE MODULAR AMPLIFIERS

FEATURES:

- 1 to 8 modular input preamps.
- Thousands of possible combinations.
- Hundreds of modular arrangements.
- Dozens of basic applications.

GENERAL:

The new Bell P/A MOD Series modular amplifiers incorporate the TPA Series in a unique package concept that makes possible a virtually unlimited number of applications. The new line provides unprecedented flexibility in modules. The new MOD amps are full fidelity, heavy duty construction, conservatively designed to meet the most extreme performance requirements within each power range. As in the TPA Series, Bell P/A's high standards of quality prevail throughout the new modular line.

INPUT MODULES:

Bell P/A MOD Series units are each equipped with one hi Z mic preamp (Model No. MMH-1) and one hi Z, high level, aux program preamp (Model No. PMH-1). Six other preamp modules* may be added, for a total of 8, to satisfy input requirements of nearly any installation. Modules are simple to install in field, requiring no special tools or wiring.

The "stacking" principle utilized in Bell P/A MOD Series permits unusual design flexi-

bility. Channel 1 (to extreme right, facing front of unit) is base channel, and all input modules are stacked to left. Special control modules, such as "priority paging" or "limiter" module, may be placed in any channel so as to mute or limit the gain of all inputs to the left of its position. In this way, it is possible to control from one to all seven other inputs.

When designing a system, it is recommended that MOD xx Basic be special-ordered with required input configuration. Completed unit will be shipped from factory, ready to operate.

* Input modules can be supplied with any standard audio input connector, on special order. For complete information on input modules and specifications, see individual module spec sheets.

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than 1/2%. D.C. on all filaments. **Frequency response:** ± 1 db 20-20,000 cycles. **Bass tone control range:** -18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, -12 db at 20 cycles. **Treble tone control range:** -18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, -12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb-hum-free plug-in transformer. **Input volts required for 1 volt output from cathode followers:** Mikes, .0028 volts, gain 54° db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

PHONO TOP

The Newcomb P-4 is a 4-speed record player that is designed to fit on top of the E-20, E-40 or E-75 Pathfinder amplifier.

It includes an automatic idler release on the power switch to prevent flat spots, a plug-in turnover-type dual-sapphire-styli ceramic cartridge, pickup hold-down screw and drop pad. Dimensions: $8\frac{5}{8}'' \times 14'' \times 5''$ high over all. Weight: 6 lbs. LIST: \$39.95.

All Newcomb Pathfinder power amplifiers and the E-5P preamplifier have slanted operating panels for convenient control in either a sitting or standing position. This feature is important, too, with rack mounted installations where units may be mounted near the floor as well as at eye level. All control knobs have white, rotatable reference markers for quick return to a pre-determined setting. All have a 25,000 hour pilot light. All are UL approved. Newcomb

public address amplifiers Models E-20, E-40, and E-75 all have the following features: Each has two microphone channels with mixer controls and one high level channel with mixer for ceramic phono pickup, radio or tape. Mike channels are wired for Newcomb plug-in transformers for instant conversion to use with low impedance microphones. High level control is compensated; as volume is reduced, bass is proportionately sustained. Mike not affected by this control. There are separate bass and treble master tone controls. Output taps on terminal strip and two sockets are for 25 volt balanced or unbalanced line plus 70 ohms unbalanced, and 16, 8, and 4 ohms. There is an output jack for recorder or booster and an a.c. output receptacle. Pathfinder equipment has a distinctive two-tone finish in soft tints of olive-gray and spruce.

Provides selective communication. Each Master is equipped with a 6 or 12-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 6 separate conversations may be held simultaneously, with 12 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this

purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 12 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 12 stations are used, channels must be shared; stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

THE ALL-TRANSISTOR TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" INTERCOMMUNICATION SYSTEMS

"Has Everything . . . Does Everything"

One Model Meets Every Requirement

Setting a high standard in quality, design and performance, the TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets the intercom needs of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

ONLY THE TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" GIVE YOU ALL THESE FEATURES

• **DISTINCTIVELY STYLED**—Less than 3-inches high. In cabinets that combine the look and feel of fine-grained leather with the strength and rigidity of steel. Attractively finished in charcoal gray and brushed chrome.

• **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS**—Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non-private" to others.

• **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, voice follows.

• **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.

• **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.

• **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.

• **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.

• **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.

• **EXTERNAL RELAY CONTROL**—A standard feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. Use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth. Operates simultaneously with chime within Master.

• **RECIPROCAL POWER SUPPLY**—Each Master operates on 120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the "Chief" Masters in the system can operate without being plugged-in.

• **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.

• **HI-POWER STAFF STATIONS AND HORNS**—For use with any TALK-A-PHONE Master where high volume at Staff locations is needed. Ideal for paging speakers. K-HP-3 provides more than twice the volume of universal Staff; K-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.

• **WALL SWITCH**—Combine with TALK-A-PHONE Horn or Hi-Power Staff to add origination-of-call feature.

• **"LD" LONG DISTANCE**—(optional accessory on Masters). For use over cable lines of 2,000 ft., 5,000 ft., 10,000 ft. or more without loss of volume. Functions only between Masters with LD . . . not between an LD Master and Staff. Built-in at factory at additional cost.

• **CRADLE PHONE**—(optional accessory on Masters or Staffs). Has live microphone. Provides listening privacy and greater speaking convenience. Diminishes background noises in noisy areas. Eliminates use of controls in conversation between Masters. Cuts off incoming voice from loudspeaker when in use.

• **WALL MOUNTED CRADLE PHONE**—(optional accessory). For noisy areas and listening privacy. Use with K-HP-3, K-C-20 and K-S-101 or K-S-102. Speaker disconnects when in use.

• **RIGHT-OF-WAY RELAY**—(optional accessory). Use with "CHIEF REDI-POWER" Masters to page any group of stations with a single button. Paged stations can also be used for intercommunication. K-RW-10 capacity, 10 stations, K-RW-20 capacity, 20 stations. Connects to one Master, other Masters also utilize facilities.

• **POWER PAGING BOOSTER**—(optional accessory). Use with "CHIEF" Masters to page a group of speakers with a single button. 50 watts output. Requires its own paging speakers (K-C-20, K-HP-3). Provides paging facility only . . . paged stations cannot reply or originate calls through paging speakers. Connects to one Master, other Masters can also utilize facilities.

All "CHIEF" and "CHIEF REDI-POWER" Master Stations come complete with junction box and built-in power supply attached by 6' flexible cable. Master size: 14" w, 3 1/2" h, 8 3/4" d. For 120 volts, AC only. U.L. Listed.

How to Determine Cable Requirements. To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For K-C-4920 and K-CRP-5920, use two lengths of 6226 Cable; and for K-C-4930 and K-CRP-5930 use three lengths of 6226 Cable, etc. To connect K-C-41, K-C-42 or K-HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect the K-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each K-C-41 or K-C-42, follow same procedure). Connect K-S-111 at any convenient point between remote speaker and Master Station.

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS

These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 30 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add K-RW-10 or K-RW-20 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 120 volts, AC only. And, lower rated power amplifiers may be used with a substantial savings in cost.

D INTER-COM SPEAKERS

Oxford high efficiency Inter-com speakers are designed to give round, full and clear reproduction in the voice frequency range and at the same time suppress unwanted background noises. Even whispers will be reproduced with great clarity in areas with high background noise levels . . . shouts are reproduced without distortion.

E ALL WEATHER SPEAKERS

Oxford offers a complete line of All Weather speakers specifically designed for maximum operating performance regardless of weather conditions. They feature exclusive Oxford HYDRO-PRUF cones for full environmental protection. Special moisture protected voice coils prevent humidity damage. Extra heavy cadmium plating, inside and out, resists corrosion.

F CERAMIC SPEAKERS

Featuring shallow construction, these speakers are ideal for in-wall, stereo wing, picture frame, and other installations where space is at a premium. In addition to the standard models, Oxford also offers ceramic units with exclusive Oxford Hidden Magnet design. The magnet is mounted between the basket and the cone, permitting use of the dual cone for extended range while retaining the thin silhouette.

G EXACT REPLACEMENT AUTOMOTIVE RADIO SPEAKERS

A complete line is available, including exact replacement speakers, universal speakers, special units for custom automobiles, and speakers specifically designed for transistorized automobile radios.

H REPLACEMENT SPEAKERS

They are all designed to reproduce the entire audio spectrum with true high fidelity so necessary for fine stereo reproduction. For the price conscious hi-fi equipment buyer, Oxford offers the most outstanding value.

J PROFESSIONAL MUSICAL INSTRUMENT SPEAKERS

As a "full line" loudspeaker manufacturer, Oxford also produces speakers for many "special purposes." The most popular of these is a series designed for use with electric musical instruments, such as guitars and electronic organs. It is only with a speaker designed for this particular application that the full quality of the instrument and performance can be appreciated.

RCA**MICROPHONES
AND ACCESSORIES****POLYDIRECTIONAL RIBBON — 77DX**

The quality microphone standard of the broadcast industry, the RCA 77DX, is available in two models: one with a low-gloss finish for TV, the other a satin chrome finish for AM and FM. The 77DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency-response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be utilized. The 30- to 20,000-Hz frequency response of the 77DX makes it suitable for every high-fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30- or 150-ohm output impedance. This 77DX mounts on a standard 1/2-inch pipe thread, and comes with 30 feet of three-conductor shielded cable, less plug.

NONDIRECTIONAL DYNAMIC — BK-1A

Ideal for outdoor use or wherever constant handling is required, the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. It provides uniform response from 50 to 15,000 Hz. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional; the horizontal position is semidirectional. The output impedance is 250 ohms, but 30- and 150-ohm connections are included. The BK-1A may be mounted on any type stand having 1/2-inch pipe thread and is perfect for use with the MA-06 desk stand. Thirty feet of three-conductor cable is supplied, less connector.

BK-1A\$86.00*

UNIAXIAL RIBBON — BK-5B

The BK-5B is a high quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardioid pattern. Frequency response from 30 to 20,000 Hz permits using the BK-5B for all types of high fidelity voice and music pickups. The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. It is supplied with thirty feet of three-conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has 1/8-inch pipe thread.

BK-5B\$158.00*

LAVALIER — BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3-ounce unit is only 2 1/16 inches. Wide-range frequency response (60-15,000 Hz) permits using the microphone for all speech applications. The 250-ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections. The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of two-conductor shielded cable is supplied, less connector.

BK16B with lanyard and fastener\$86.00*

BIDIRECTIONAL RIBBON — BK-11A

In the studio or at indoor remotes, whether a simple interview program or full orchestra pickup, the bidirectional characteristics and excellent frequency response (20 to 20,000 Hz) make the BK-11A an extremely useful production tool. The output can be connected for 30-, 150-, and 250-ohm operation. A three-position switch permits selection of desired frequency ranges for voice and music. The BK-11A has been designed for use with the inexpensive MA-06 desk stand, and it can also be used with any standard 1/2-inch pipe thread desk or floor stand. Thirty feet of three-conductor cable is supplied without a connector.

BK-11A\$107.00*

SUBMINIATURE LAVALIER — BK-12A

The RCA BK-12A is a high-quality subminiature microphone weighing just 20 grams and measuring only 3/4" x 1 1/2". It has a wide-frequency response of 60 to 18,000 Hz, which has been tailored for proper speech balance. A line impedance voice coil permits use with 30- to 250-ohm unloaded inputs. The BK-12A is essentially nondirectional to 6,000 Hz, and as a result, ordinary errors in orientation have negligible effect upon response. It is supplied with lanyard, tie-clip holder, cable clip and 30 feet of two-conductor cable (less connector).

BK-12A\$95.00*

**HIGH-OUTPUT UNIDIRECTIONAL
RIBBON — KU-3A**

The KU-3A is a high-quality microphone for TV, motion picture and recording studio line pickup or wherever boom operation is used. It provides uniform response from 30 to 15,000 Hz. Output impedance is factory connected for 250 ohms; however, it may be easily connected for a 30- or 150-ohm output impedance. It is supplied with voice/music switch, resilient mounting and 12 feet of pigtail cable, less connector.

KU-3A\$675.00*

GENERAL PURPOSE DYNAMIC — SK-30/SK-31

Here is an excellent nondirectional, general-purpose microphone available as a low-impedance (SK-30) or high-impedance (SK-31) unit. It is rugged and lightweight with good response to voice and music (50-14,000 Hz). In addition to being hand held, it may be swivel mounted on a desk or floor stand or it may be mounted on a goose-neck stand. A 3/8-inch-27 thread swivel adaptor is available for floor or desk stand mounting. The microphone comes complete with 20 feet of shielded cable (less connector).

SK-30\$30.00*
SK-31\$31.00*

**NONDIRECTIONAL DYNAMIC —
SK-39B/40B (Low Z — High Z)**

Cue and talk-back applications are perfect for this inexpensive dynamic microphone. The SK-39B/40B is rugged and relatively insensitive to mechanical shock and wind. Frequency response is 60 to 10,000 Hz. It may be mounted on any 3/8-inch-27 fixture thread, and is supplied with 7 feet of three-conductor cable (less connector).

SK-39B/40B\$33.00*

NONDIRECTIONAL DYNAMIC — SK-45B

Ideal for talk-back, cue, and public address use, the rugged lightweight SK-45B microphone offers good voice reproduction. It may be connected for a 150- to 200-ohm balanced output or a 15,000-ohm output. Response is from 70 to 12,000 Hz. Mounting with any 3/8-inch-27 fixture thread permits the use of low cost stands. The SK-45B is supplied with 25 feet of two-conductor cable less connector.

SK-45B\$37.00*

BIDIRECTIONAL RIBBON — SK-46

The SK-46 is designed for high quality indoor use. It has excellent frequency response (40-15,000 Hz) and bidirectional pickup characteristics. Output impedance is 200 ohms, but it may be reconnected to produce a 15,000-ohm output. Dependable performance as well as attractive styling make the SK-46 an ideal choice for high fidelity applications. The SK-46 has a 3/8-inch-27 mounting thread and is supplied with 25 feet of two-conductor shielded cable (less connector).

UNISPHERE A Microphones **MODELS 585SA • 585SB • 585SAV • 585SBV**

The Unisphere A Series of Microphones are economical unidirectional dynamic microphones featuring special filters that provide protection from wind and "pop" (explosive breath sounds). They also eliminate annoying loudspeaker "squeal" caused by feedback. These models are particularly suitable for use in locations where omnidirectional microphones may not operate properly because of poor acoustics or where wind creates a problem. The Model 585 Series comes complete with shock-mounted cartridge, On-Off switch, detachable cable, and a Model A25B swivel adapter.

The Model 585SAV and 585SBV are two of the most ingenious microphones ever designed because the volume control on the microphone case enables the user to change the loudness of the P.A. system at the microphone location. Ideal for applications where the amplifier controls are inaccessible or where the speaker or singer wants to control his own volume for dramatic effects.

Model 585SA Unisphere A: High impedance. **List Price: \$65.00**

Model 585SB Unisphere A: Low impedance. **List Price: \$58.00**

MICROPHONE MIXERS

SHURE M68 AND M68FC MICROPHONE MIXER (TRANSISTORIZED—PORTABLE)

PRACTICAL—The Shure M68 Mixer is a practical, efficient and economical way of increasing the efficiency, usefulness and flexibility of public-address and paging systems, or tape recorders, by making it possible to use more than one microphone or other sound source. You can strategically place microphones so that everybody who should be heard will have a microphone close at hand. It is particularly useful where additional microphones are needed for panels or for audience Question-and-Answer sessions.

UNIQUE—This new mixer is unique in that it satisfies the needs of most public-address systems and serious tape recording enthusiasts, while being light enough to be portable, simple to operate and modest in cost. It is the **only** mixer which strikes a happy medium between the expensive heavy and complex permanent-installation type mixer and the extremely low-cost units of limited usefulness.

With the M68, each microphone (or other sound source) can be cut in or out of the system (and independently balanced for volume) with no loss in microphone output level. In addition to independent volume controls, a master volume control simultaneously controls the gain of all inputs. The M68 can, therefore, be used as a conveniently "at-hand" P.A. system volume control in situations where the regular amplifier is located some distance away.

VERSATILE—You can use high or low impedance microphones, in any mix, with any type amplifier without need for expensive line transformers.

You can tape record from multiple sound sources or record sound-on-sound with two recorders.

Frequency response is 30-20,000 Hz (cps). Underwriters Laboratory listed for use in commercial applications. Easily portable... 2 $\frac{5}{8}$ " x 11 $\frac{3}{8}$ " x 5 $\frac{3}{8}$ ", weighs only 4 lbs. 105-125 V. A.C. 50/60 cps.

Series "60" Cabinet Racks

Scientifically designed to meet all requirements for human needs as well as component physical specifications; the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system. Very economical to the user, units are shipped fully assembled and ready for immediate use.

Basic frame welded in a solid unit composed of 14-gauge cold-rolled steel channels. Sides have "U" braces with perforated channels for fastening vertical adjustable mounting rails. Rails also support other types of equipment such as brackets, shelves, slides, etc. Eliminates need of drilling holes in the rack. Sides and rear door made of 16 gauge steel. Door may be mounted to open left or right. Vertical channel, 6" wide, welded to door to prevent vibration or whip. Two pairs of panel mounting rails are supplied; fully adjustable. Panels may be mounted in front and rear at the same time. Front rails drilled and tapped 10-32 W.E. spacing. Rear rails are drilled according to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in the Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door are easily installed.

Standard finishes are smooth baked enamel over a primer. For two-tone gray, specify by adding suffix **SG**. For two-tone blue, add suffix **SB** to order number. Standard Bud relay rack panels are available for the Series Sixty racks in light gray and light blue; when ordering, add suffix **SG** for gray; **SB** for blue.

PRESTIGE BALL CORNERED VERSA-CABINETS

A standard Prestige Versa-Cabinet consists of the framework, two ball cornered sides, perforated metal back, solid bottom plate and two supporting channels.

The front, back, top, and bottom may be quickly removed for access to interior for easy servicing.

Standard 19" panels may be attached to the top, bottom, front or back of cabinet to provide complete closure. Perforated top panel may also be used.

An opening is provided across bottom of back for cable leads, controls or knobs. Size of opening is 1 3/4" x 19". Bud Steel Panel PS 1250 or Aluminum Panel PA-1101 may be used to close opening if desired. Perforated back may be removed and a standard steel or aluminum panel may be used to close back opening entirely.

Sides are attached by means of holding flanges on the bottom of the frame and nut at top. Handles may be fastened to sides.

Cabinets may be fastened side-to-side in batteries of two or more or may be stacked one on another. Four rubber feet are regularly supplied.

Top may be closed by using PS-1256HG or PA-1107HG solid panels or by using PS-616HG or PS-815HG door panels or by PC-1710 perforated steel top panel.

Clear inside width—22 1/4". Overall width—23 3/16".

Clear inside depth—15". Overall depth—15 25/32".

Weight 28 to 35 lbs.

Finished in gray hammertone.

HEAVY DUTY RACK MODEL DR-HD

Complimenting units to our Dupli Rack (DR) Series where component weight requires extra structural rigidity. No bolts or screws are visible from the outside.

The basic unit is of heli-arc weld construction and made from heavy 11 gauge (.119) steel to support weight of 1000# or more. Each unit can be bolted to an adjoining unit by removing the detachable side panels, bolting through holes provided, and then replacing the side panels on each end unit.

Supplied as part of the basic unit are a pair of 11 gauge drilled and tapped (10-32) panel angles (HD) plus two pair of support angles (SA-HD) drilled and tapped on same Western Elec.* spacing as panel angles and a 16 gauge CRS reinforced louvered rear door. Support angles are mounted to rear of panel angles to support

heavy equipment and/or shelves (CS-HD 1922) made specifically for these cabinets. Shelves are accessory equipment. Detachable side panels (DSP-HD) fit between front and rear corner posts and are mounted with machine screws.

Front doors are box type reinforced with an internal channel and without louvers. Doors swing open on hidden hinges within an attractive anodized aluminum extrusion around entire cabinet front to give a distinct shadow effect.

Finish is MWI Standard Baked On Enamel Colors. Other colors available on special order.

THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

SIZES ARE GIVEN IN INCHES.

A typical Dimensional Drawing of Constructional Elements of a Par-Metal Modular Cabinet Rack Cat. No. PR-8427-B.

RACK FRAMES are #12 Gauge Steel (.104") and are fully welded, and have modern, functional design.

PANEL MOUNTING ANGLES of 3/16" structural steel are included. Hole spacing will match either **WE** or **EIA** specifications. Holes are tapped for 12/24 screws. 10/32 tapped holes are optional at no extra cost. Contempo-Panel Mounting Angles are tapped 10-32 only. Angles are secured to rails with 3/8" diameter steel bolts to provide maximum forward and back adjustment, for optional front to rear positioning.

DOORS: Except for Contempo Front Door (Series **FC**, see #4 above), all doors are "Dutch Formed" (one piece out of #16 gauge steel (.059")). On Racks with front doors, a solid door is standard. Louvered Rear Door is standard on all racks. However other door modifications are optional at no charge (see Part-Metal Page 23). To save aisle space, racks 30"

wide or more have double doors with three-point latches.

HINGES for ALL doors are of the slip-joint type for simple removal.

DOOR HANDLES are die cast, chrome plated and are non-locking. Lock handles are on both doors on Racks with "F" prefix.

REMOVABLE TOP PANELS are standard. For ventilating modifications see Par-Metal Page 23.

RECESSED RACK BASES are listed on Par-Metal Pages 6-8, 11. Do not use rack base with roller trucks.

HARDWARE is provided as needed at no charge. This includes bolts, washers, nuts, panel mounting screws and a grounding duplex electric outlet (below rear door).

ROLLER TRUCKS

A Single Unit Contempo Roller Truck, Model No. CR-192-1.

A Double Professional Roller Truck, Model No. HD-426-2.

2 PL-6718-B Racks with 1 RX-219 Exterior Table and a double EB-502 Extended Base Roller Truck with 2 EBL-501 Floor Locks.

GENERAL DESCRIPTION

ROLLER TRUCKS are engineered to fit and complement all PAR-METAL cabinet racks. All Roller Trucks designated for PL/FL, PR/FR, PX/FX, ER/FD and DL racks are **Dish Shaped**. The inside dimensions are slightly larger than cabinet sizes, as a safety factor, and to provide better weight distribution. These models have rounded front corners and chrome plated moulding.

CONTEMPO-ROLLER TRUCKS (Models CR, CRB and CEB) are **Pan Shaped** — flat across the top with aprons which partially cover the casters. They are sized to match the rack they support. Mating holes allow rapid bolting to the rack. Roller Trucks are available for one, two, or three racks. Single rack trucks have four casters... double rack trucks, six casters... and triple rack trucks have eight casters.

Unless specified, **ALL** Roller Trucks except CONTEMPO, are finished in blue-gray wrinkle enamel. For PC/FC Racks, (Models CR, CRB and CEB) the **standard** finish is Dawn Gray Vinyl. When included in the order, Roller Trucks are matched to the Rack. For full finishing color guide, turn to PAR-METAL Page 4.

HEAVY DUTY TRUCKS: Construction: $\frac{1}{8}$ " welded steel plus $\frac{1}{4}$ " steel reinforcing braces. Casters: 3" diameter, swivel type, ball bearing, Rockite Composition. Non-marking wheels. Load Capacity 225 lbs. per wheel. Single Units have four casters, Double Units have six casters and Triple Units have eight.

BRAKE CASTERS: Toe-Touch Brake casters are optional; they replace the 2 Front corner casters of any Heavy Duty Roller Truck.

EXTENDED BASE ROLLER TRUCKS: Extended Base Roller Trucks offer extra depth in front and are strongly recommended when racks are equipped with slide, tables or drawers which may bear extra weight or pressure when extended. The added depth in front of the rack provides stability and safety. For easier movement of the racks 4" diameter wheel casters are supplied. Provision is made for adding Heavy Duty Floor Locks (optional). Construction: .104" welded steel — plus $\frac{1}{4}$ " steel reinforcing braces. Casters: 4" diameter, swivel type, ball bearing, hard Rockite non-marking wheel with grease fittings. Load Capacity 450 lbs. per wheel.

STANDARD TRUCKS Construction: $\frac{1}{8}$ " welded steel. Casters: 2" diameter, swivel-type, ball bearing, Rockite Composition wheels. Load capacity — 125 lbs. per wheel.

SLIDE ASSEMBLIES

SIMPLICITY: Just a cradle and a shelf, table or drawer are all that is required. No time consuming assembly of slides and no alignment problem.

EASE OF INSTALLATION: Cradle is mounted to panel angles of the rack with screws and drawer, table or shelf drops into place. This manner of installing the sliding unit permits fast removal for service of equipment.

MOUNTING METHODS: Brackets are attached to Panel Angles and may be attached to Vertical Side Supports for additional stability. Either method will provide rigid support. Both may be used simultaneously.

FULL EXTENSION of the equipment from the rack is engineered in. Thus, accessibility to top, sides, and back of most adjustments may be made without removal.

RUGGED CONSTRUCTION: Parts welded or fastened with stainless steel rivets and machine screws... supporting parts made from 12 gauge (.104") Prime Steel.

MINIMAL DEFLECTION is produced when the listed load capacities are measured with the slides fully extended.

HANDLES: A "V" Shaped Chrome Plated Pull Handle Model V-24 with necessary hardware is standard equipment on all Slide Assemblies. On **CONTEMPO** line **ONLY**, to substitute modern handle H-505 (at same cost) Suffix "H" **MUST** be added to model number on your original order.

BASIC SLIDE ASSEMBLIES: Consist of a readily removable shelf, a pair of slides, and a mounting cradle. Each part is ready for installation. All movable parts are mounted on ball bearing wheels. Mounting or removal of slide is extremely simple and does not require tools.

Installation may be made to rack (or console) panel mounting angles or to standard vertical side supports through holes pre-drilled in the side brackets. Four Sizes are listed for using either 19" or 24" wide panels. ALL parts are zinc plated.

* All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended. All parts are zinc plated.

Par-Metal**KNOCKDOWN CABINET RELAY RACKS****DELUXE CABINETS — FOR 19" WIDE PANELS**

**"ER" SERIES
WITH REAR DOOR ONLY**

CABINET is 1/16" sheet steel. Sides are ventilated with "venetian" louvres. Vertical corner trims and formed mouldings are at top and bottom. Racks are shipped "knocked down" for easy assembly.

CORNER TRIMS: Front vertical corner and joining trims are engineered to permit rapid installation of sliding shelves, drawers, tables, etc.

PANEL MOUNTING: Angle irons are 7/64" thick steel, holes are drilled and tapped 10-32 on EIA hole spacing.

HARDWARE: Doors are the same as our modular racks. "Series ER" racks are equipped with automobile non-locking handles while "Series FD" racks have handles with key locks. Hinges are "slipjoint" type so doors may be easily removed.

FINISH: Blue grey wrinkle finish is standard. Black wrinkle enamel or grey hammertone enamel are available without extra charge.

ROLLER TRUCK: Use either No. RT-412 or HD-412 for all racks listed on this page.

PANELS: Panels 19" wide to fit these racks are listed on Par-Metal Pages 21 and 22.

SHELVES: For Series ER Racks use shelf No. ER-2212 listed on Par-Metal Page 36.

SERIES "FD" RACKS have bolt retainer rails to adjust the front to back position of their panel mounting angles. Optional Vertical Side Supports with Brackets and shelves (listed on Par-Metal Page 14) fit in these racks.

MULTI-RACK CABINET ASSEMBLIES

MULTI-RACK ASSEMBLIES: Both "ER" and "FD" racks may be set up in rows. The use of venetian louvers provides a flat surface on the sides; separate side plates with welded screw studs inserted at top and bottom simplify the assembly — no tools are needed. Vertical joining trims overlap the joint between racks (supplied at no cost if noted on original order).

CONTEMPO-RAMA OF DESK PANEL CABINETS

For 19" Wide Panels

10 NEW CONTEMPO MODELS • NEW FEATURES • NEW USES

The SAME FULLY WELDED Sturdy Construction!

PAR-METAL's CONTEMPO Top Cabinets are made in single units with detachable End Panel, thus permitting the addition and/or removal of a unit at any time. Mating hardware is supplied. End Panels fit into brackets and lock in place with a 1/4 turn cowl fastener, and are set-in 3/8" off the edges.

To meet the exacting demands of modern electronics, our engineers have designed many new models. Your choice of layout configuration is further extended by PAR-METAL's new and exclusive line of **ANGULAR WEDGES** for both CONTEMPO-PEDS and DESK TOP CABINETS. (Details are on PAR-METAL Page 32). They satisfy a long overdue need in the industry.

Desk Top Cabinet #PT-19 is shown without End Panels or Formed Panels. It is typical of ALL Models.

All models except LS-24 fit exactly and use no table tops on the 24 1/4" deep CONTEMPO-PEDS. For Model LS-24 and to use any model on a 34 3/4" deep pedestal, Formica Table Tops are listed on PAR-METAL Page 30. All CONTEMPO-PEDS may use exterior tables (see PAR-METAL Page 29). To decorate the CONTEMPO-LINE, we add a New Look! For the entire CONTEMPO-RAMA, standard finish is a combination of Dawn Gray and Charcoal Gray Textured Vinyl. Your choice of other available finishes are shown on PAR-METAL Page 24.

Construction: CONTEMPO Desk Top Cabinets are 21 1/8" wide. A full complement of 19" wide blank formed panels are supplied. They are listed with each cabinet's description. A flat 1/8" steel or aluminum panel may be substituted for these formed panels without extra charge, if so ordered. A formed **Rear Drop Door** with full length continuous hinge (Model DRD) may be substituted for the rear panel at an extra cost of 5% of the top cabinet. Ventilating formed **Rear Drop Door** (Model VRD) may be substituted at an extra cost of 7 1/2% of the top cabinet.

ELECTROLYTICS

**TYPE AFH (85°C) TWIST PRONG
ELECTROLYTIC CAPACITOR**
SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong mounting electrolytic capacitors with all the latest refinements — 85°C operation — high purity aluminum foil construction through out — improved moisture resistant seal. Types AFHS-PWHS are specially constructed for high ripple current circuits. PWH and PWHS are constructed for printed wiring board applications.

These units operate over a wide temperature range with a minimum change in capacitance.

While designed for filter audio bypass applications in Radio-TV and Amplifier equipment as exact replacements, many values are rapidly gaining acceptance in industrial applications.

They are manufactured to meet all requirements of EIA specification number RS-154. Capacity tolerances of this specification are listed below.

ELECTROLYTIC CAPACITY TOLERANCES

0-50 Volts	—	—10	+250%
51-350 Volts	—	—10	+100%
351 Volts & Up	—	—10	+50%

Aerovox Corporation is currently working on a size reduction program. Many sizes shown in the following listing reflect latest design figures. However Aerovox reserves the right to furnish previous catalog sizes until present stocks are depleted.

The AFH capacitors listed here include only those ratings which might find usage in industrial applications. A complete line of ratings may be found in the latest Aerovox Industrial Catalog, IDC 567, or Servicemen's Catalog, SE-567, and may be requested from Aerovox Corporation, Distributor Sales, or through your nearest authorized Aerovox Industrial Distributor.

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium. Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers.

Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.

Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/8" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.

Tolerance and surge voltage are in accordance with EIA Specification RS-154.

The factory is currently in the process of reducing sizes of this type. AEROVOX reserves the right to ship sizes listed below until present stock is depleted and smaller sizes as they become available.

CAPACITORS

ELECTROLYTICS — (Continued)

TYPE PTT TUBULAR PLASTIC-CASED ELECTROLYTICS

Small in size big in performance, designed especially for wide applications in transistorized circuitry and cramped electronic assemblies, here is a truly MINIATURE electrolytic tubular that will handle full sized loads. AeroVox Type PTT units feature "Polycap" cases that are the next best thing to metal cans for maximum protection against humidity. Advanced construction techniques assure long capacitor life. Units are rated for operation at temperatures from -30°C to +65°C.

For full technical information request Bulletin NPJ-111 Rev.

TYPE B C D UPRIGHT MOUNTING BAKELITE CASED ELECTROLYTICS

"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage. Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case. For full technical information request Bulletin NPJ-108.

CAPACITORS

Type K323Z Metallized Polycarbonate Capacitors

If plastic sleeve is desired add suffix "P" to type number and specify when ordering. Add 1/16" to the diameter and length and add .02 to cost of unit.

Here is the first stock line of hermetically sealed metallized polycarbonate capacitors. Polycarbonate film offers many advantages over paper or other film dielectrics including high capacitance stability, low dissipation factor, low dielectric absorption and high insulation resistance. Metallized polycarbonate offers the additional feature of self-healing in the rare case of dielectric breakdown. Size and weight savings over paper capacitors are most obvious in lower voltage ratings but the added stability is an important plus at the higher voltages. Operating temperature is -65°C to +125°C at full rating. Standard tolerance is ±20%. Other tolerances available on special order. For full technical information request bulletin NPJ-136.

TYPES P323S AND P323SX

Tubular, metal-cased units with hermetically sealed construction and glass terminal end seals. Engineered to meet high-temperature, minimum space requirements, Types P323S and P323SX are designed for long life at elevated temperatures.

Impregnated with HYVOL "S", a special high temperature liquid impregnant. These units are capable of withstanding twice rated voltage between terminals or between terminal and case for a 1-minute period. Ambient temperature shall be +25°C, -10°C for this test. Power factor is less than 1% when measured or referred to a frequency of 1,000 cps at 25°C.

Type P323S and P323SX are rigidly processed to assure operation between -65°C and +100°C. Type P323S uses an inserted-tab construction to obtain minimum size, while type P323SX has extended-foil construction for applications at very-low AC voltages.

For equivalent types rated -65°C to +100°C in the same case size as shown, order as P123S, SX etc., and request prices.

Styles available from stock include units bearing suffixes S-SX which are as listed; G types, with one end grounded which are $\frac{1}{16}$ " shorter; GP types, grounded, with plastic insulating sleeve and $\frac{1}{16}$ " larger diameter and P types, with both ends insulated and a plastic sleeve, which are $\frac{1}{16}$ " larger in both length and diameter.

Grounded units to be discontinued when present stocks are depleted.

STYLE VARIATIONS

Suffix	Description	Can size change
S-SX	As listed	As listed

GP	Grounded with plastic insulating sleeve	Add $\frac{1}{16}$ " to diameter
P	Both ends insulated with plastic sleeve	Add $\frac{1}{16}$ " to diameter and length
GT	One end grounded with threaded neck mounting	Deduct $\frac{1}{16}$ " from length

**TYPES P123ZN,
P123ZNG
and
TYPES P323ZN,
P323ZNG
Metal-Cased
Capacitors**

Metallized paper tubulars hermetically sealed in metal tubes with glass end seals soldered for positive moisture seal. P123ZN operating temperature range -55°C to +100°C. at full voltage rating and +125°C. with voltage derating to 75%.

Type P323ZN is in a similar construction but made to operate WITHOUT VOLTAGE DERATING over a temperature range of -55°C. to +125°C.

Standard tolerance - P123ZN -.01 mfd. and lower ±25% .012 mfd. and up ±20%. Type P323ZN - all values ±20%.

Sizes shown are for uninsulated styles, for insulated case add the suffix "P" to designation and 1/16" to diameter and length.

CAPACITORS

RECEIVING MICA CAPACITORS — (Continued)

DIPPED SILVERED MICA CAPACITORS - TYPES ADM-10, ADM-15, ADM-19, ADM-20 AND ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

- High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 megohms at 125°C.

Capacitors will be marked with capacity and tolerance.

DIMENSIONAL DATA

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within $\frac{1}{16}$ to $\frac{1}{32}$ from one of the capacitor surfaces. (Exclude SCDM).

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

	DM-10	DM-15	DM-16	DM-19	DM-20	DM-30	DM-42	DM-43

LEAD WIRE GAGE	#26	#22	#22	#20	#20	#18	#18	#18

Dur-Mica leads may be either tinned brass or tinned copper-clad steel, 30% minimum conductivity, except the following which are copper-clad steel only:

DM-10, DM-42, and DM-43.

DM-19 and DM-20 — 3000 mmf. and above.

DM-30 — 10,000 mmf. and above.

Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.

Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM-15 and DM-16. Crimped lead gage of DM-15 and DM-16 is #20. The DM-10 case size is not available with crimped leads.

SPACE-SAVER

TYPE SCDM THIN COAT DIPPED MICA CAPACITORS

(ELMENCO TYPE 1CR)

In applications requiring the high performance characteristics of dipped mica capacitors where space is at a premium, the Type SCDM reduced coat ELMENCO capacitors may often be used to advantage. A single protective resin coat is applied instead of the full series of dips incorporated in the standard unit. The amount of coat material is thereby reduced to a minimum consistent with good design, and a significant reduction of all dimensions is achieved.

All electrical and environmental requirements of MIL-C-5 are retained with the exception of case insulation (3.5.3) and moisture resistance (3.14). A maximum voltage stress of 100VDC through the case insulation is recommended for SCDM units. Although some lots of this type capacitor will not meet stringent MIL moisture resistance specifications, all will meet the humidity requirements of Paragraph 2.3.6 of EIA Standard RS-153. Therefore, the SCDM capacitors will operate with satisfaction where they will not be exposed to extensive periods of high humidity. It is recommended that if these capacitors are destined for operation under extreme environmental conditions, they should be given additional moisture protection such as encapsulation or hermetic sealing of the assembly.

TYPES SCDM10, SCDM15, and SCDM19 capacitors are stocked in depth at ARCO regional facilities in all values. They may be obtained within 24 hours from your local ARCO distributor. See standard DM tabulations on preceding pages for values and pricing.

Representative dimensions of the SCDM style capacitors. The dimensions of intermediate values may be closely approximated by interpolation.

Capacities from 100 to 2400 mmf. can be supplied in CM-19 cases. In values above 1000 mmf. the list prices for CM-19 are 10% higher than those listed above.

As can be seen in the line drawing above, the only difference between CM19 and CM20 is length dimension. For competitive reasons it has been necessary to retain both mold sizes. However both CM19 and CM20 fully conform to all specifications for MIL-C-5 case size CM20, and they are interchangeable for military requirements.

ELMENCO

CAPACITORS

Epoxy-dipped Flat Mylar

The new ELMENCO Type MDF capacitor is a mylar dielectric unit dipped in a newly formulated epoxy material and shaped in the flat configuration particularly suited to saving space on printed circuit boards. Before being brought to market, the design has been carefully evaluated for more than two years to be sure that the performance of the MDF will be of a level expected of ELMENCO capacitors. This release covers the 100VDCW rated series only. Dipped mylar capacitors with other voltage ratings will be announced shortly.

The specifications for the ELMENCO Type MDF are as follows:

Voltage Rating: 100VDCW, 250VDCT.

Insulation Resistance: 20,000 megohm-microfarads or 100,000 ohms, whichever is less, at 25°C.

At 85°C., the figures are 300 megohm-microfarads or 1500 megohms minimum; at 125°C., 20 and 100 respectively.

Maximum power factor at 1 kc.: 0.6%

Maximum cap. change from room temperature:

-7% at -55°C.

-3.5% at -30°C.

+4% at 85°C.

+17% at 125°C.

Capacitance drift: ±1% maximum.

These preliminary dimensions are established maximums for the four basic configurations of Type MDF. When dimensional surveys are completed on production representative of all values, individual dimensional information for each capacitance value will be published as for other dipped ELMENCO capacitors. Dimensions, particularly thickness, will vary with capacitance value.

TEMPERATURE STABLE

This new ARCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to -55°C . to $+125^{\circ}\text{C}$, without derating of the 1000VDCW specification. Standard tolerance is $\pm 10\%$. The combined small size, low cost, and high stability represents another significant advance in the quality line of ARCO capacitors. All units are marked "TS" for identification.

TEMPERATURE COMPENSATING**TYPE CCTO**

Arco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Arco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

* ± 0.5 mmf. tolerance**TYPE CCTN**

Another member of the Arco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of -750 ppm/ $^{\circ}\text{C}$. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

Why do we wind all our tv-replacement capacitors with computer-grade 99.99% pure aluminum foil?

To help cure that pain in your neck.

Impurities in aluminum foil can lead to deterioration, premature failures, lost customer confidence—and call-back time you can't charge for. Big pains in the neck.

So we wind every Arcolytic® electrolytic capacitor with the purest aluminum foil available: 99.99% pure. It meets computer manufacturer standards. And exceeds those of radio-tv manufacturers.

Result: Arcolytic capacitors last longer in your customer's set. In fact, they won't deteriorate even at high operating temperatures of 85° C.

And while we wind them with computer-grade foil, we price them for home-entertainment service. You pay no premium.

You'll find whatever discrete capacitance value you need at your LDP Distributor's. And in your choice of single- and multiple-section tubular, or twist-mount designs. (You'll also find a complete line of equivalent-quality miniature ceramic disc capacitors up to 6000 VDCW.)

Start using Arcolytic capacitors. And the next call from your customer will be because he likes your kind of reliability, and wants more of your service.

Amperex high quality, low cost electrolytic capacitors feature small size, high capacitance and long service life. Low leakage currents are achieved through the use of highly purified materials and carefully controlled manufacturing processes. They are the "dry" type with the liquid electrolyte absorbed into a layer of paper between cathode and anode foils. Winding is sealed in an aluminum can.

They are designed to operate at varied efficiencies over a temperature range of -40°C to $+85^{\circ}\text{C}$. The min. and max. temp. depends on the application; increase of impedance and losses are the limiting factors.

APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with 1/4" diameter shafts to permit adjustment of

the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a 3/8" hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

"SNAP-CAP" CARDBOARD TUBULAR ELECTROLYTICS

"Snap-Cap" capacitors are made to the same specifications as the "W" series and are supplied with an exclusive mounting ring which allows them to be snapped into a standard BP4 or MP4 mounting plate. Lugs hold securely and won't shake or vibrate loose, yet capacitors are easily removed if required. Furnished with color-coded insulated wire leads with stripped and tinned ends; wires 5" long. Used in equipment where temperature does not exceed 65° C. **Tolerance:** -10%, +100%.

Computer Grade Capacitors

Two classes of Computer Grade Capacitors are available: CGS for 65° C operation and CG for 85° C operation. Operating life of both types should exceed 10 years when used within stated parameters. Derating voltage and/or lowering operating temperature will extend life by a large factor. **Temp. Range:** -20° C to +65° (CGS), +85° (CG). **Tolerance:** 0-150 WVDC, -10 +75% (U); 151 WVDC up, -10 +50% (T). For complete specifications, ask for Form 4-64 (CG), 4-80 (CGS). Both classes are supplied with polyester film insulating sleeves and have "High-post" terminals with #10-32 screws. Physical mounting of these capacitors is usually done with VR clamps shown below. The clamps, however, are not included with the capacitors. Order separately.

NYTRONICS, INC.® Capacitors

Film and Paper Dielectric Capacitors

Nytronics' broad experience in film and paper dielectrics is represented in a line of standard units for the aerospace, computer, instrumentation and consumer markets. The extensive Nytronics facilities are also available for production of custom components for use in these markets. A wide range of configurations and types is available to meet the most stringent requirements.

PSF SERIES — POLYSTYRENE AND FOIL Hermetically sealed in metal cases, these units are designed for applications requiring high insulation resistance, low dissipation factor, and minimal dielectric absorption. They are applicable for designs requiring high capacitor stability. Available in standard tolerance of $\pm 1\%$ to $\pm 20\%$. They can be provided to special close tolerance requirements of $\pm 0.1\%$, as well as matching sets for application in digital computers, precision timing circuits, and laboratory standards.

RPM SERIES — METALIZED POLYCARBONATE Available in tubular cases with glass-to-metal — seal terminals, the RPM Series provides high insulation resistance, exceptional stability and a minimal change in capacitance with temperature. Its self-healing properties, in the remote event of a dielectric breakdown, provide an extremely reliable unit. It also offers a low dissipation factor for AC applications.

MAF SERIES — MYLAR AND FOIL Designed for applications requiring a flat capacitance change with temperature from $+15$ to $+65^\circ\text{C}$, the MAF series provides exceptional electrical properties in the temperature range of -55°C to $+125^\circ\text{C}$. The dissipation factor at room temperature is less than 0.6%. The extended foil design provides for positive electrical contact between leads and electrodes irrespective of the operating voltage.

MAM SERIES — METALIZED MYLAR The MAM series offers a reduction in size over the MAF series. Its self-healing property, in the remote event of a dielectric breakdown, makes this hermetic unit suitable for the most stringent applications. Special capacitance tolerance of $\pm 1\%$ can be provided on a special order basis.

AFS SERIES — KRAFT AND FOIL Hermetically sealed with compression type glass-to-metal solder-seal terminals the AFS series is approved to MIL-C-25. Designed for operation from -55°C to $+125^\circ\text{C}$ this series is intended for use in military and industrial electronics.

Various packaging configurations are available for the series shown above:

- wrap and fill
- plastic
- standard glassseals and other custom hermetic enclosures

Other dielectric series are available such as Teflon, Metalized Paper, Combination Films and/or Film Kraft.

OHMITE tan-o-mite® tantalum capacitors • wire • foil • slug

SERIES TS SLUG

The "slug" type of tantalum capacitor utilizes a porous anode of sintered tantalum. Intended for polar applications, these capacitors offer the best characteristics of all the types described in this catalog. They exceed the vibration test of MIL-C-3965, Grade 3.

Available from stock in two physical types — the "hat-shaped" type, 3 sizes (U, F, G) and the "straight-cylindrical" type, 3 sizes (SU, SF, SG) which have the same range of capacitance and voltage as the equivalent hat-shape sizes. Hat-shape and straight-cylindrical types are offered in two operating temperature ranges, —55°C to +85°C and —55°C to +125°C. Tolerances: See footnotes under price and stock tables. Units insulated with plastic sleeve are available at slight extra cost. Stock listings below.

†Complete commercial stock no. as follows: If straight-cylindrical capacitor is desired, insert an "S" in the middle of the number where the underlined space is provided as in "30SUB6_". If a hat-shape capacitor is desired, write this number without the space as in "30UB6_". Add K, or M at end of number to indicate tolerance. Add "A" after tolerance letter if insulating sleeve is desired.

*Complete MIL type designation as follows: For hat-shape, un-insulated type insert

"44" after "CL_" for insulated type insert "45" instead. For straight-cylindrical shape, un-insulated, insert "64" after "CL_"; for insulated type insert "65" instead. Insert K, or M before "P" to indicate tolerance.

‡High capacitance units.

Tolerances: K = ±10%; M = ±20%.

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is Ethern, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification ML-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

For more complete information on other ratings, tolerances and voltages, write for Bulletin 2421.

TANSITOR TANTALUM CAPACITORS

TYPE: TES -55°C to +85°C

Tansitor Type TES tantalum capacitors are unique small foil tantalum capacitors ideally suited for use in printed circuits. They are similar in performance to CL34 and CL24 type capacitors, but offer significant savings in space because both leads emerge from one end of the capacitors. They operate reliably over the temperature range of -55°C to +85°C.

Tansitor ELECTRONICS, INC.

MIL-C-3965C TANSITOR TANTALUM CAPACITORS TYPES: CL64 & CL65 — CHARACTERISTICS "B" & "C" —55°C to +85°C and —55°C to +125°C

Tansitor wet sintered anode capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965C for MIL types CL64 and CL65. Encased in a fine silver can, the sintered porous tantalum anode provides exceptionally high capacitance per unit volume. These units exhibit extremely low leakage currents, low power factor, and little change in capacitance with frequency.

As opposed to "Shoulder Type" construction of other wet types, the CL64 and CL65 offer a straight cylindrical shape, readily lending them to flat circuit applications. CL 64 and CL65 styles are equivalent to Tansitor Type W. Tansitor Type WF equivalent with neutral electrolyte is also available.

CASE DIMENSIONS — CL64, CL65 (Uninsulated)*

CASE SIZE	Dimensions (Nominal) Length x Diameter, Inches
T1	0.453 x 0.188
T2	0.641 x 0.281
T3	0.766 x 0.375

*For dimensions of insulated units add approximately 0.065" to length, 0.015" to diameter. Basic case dimensions for insulated style are same as uninsulated.

SOLDER TYPE TERMINAL

A feed-through terminal for "A" pattern punched board made of half-hard brass, tin plated. Two serrated slots of .032" will accommodate three or more wires per slot, while two .062" holes at bottom allow additional connections. Insertion or extraction is accomplished with part 20022 tool or long-nose pliers. Locking notch (*) insures terminal from falling out of punched board. Its great feature is that wires are held securely before soldering. Request quotation for gold or silver plating.

"WIZARD SPRING" SOLDERLESS CONNECTOR

"Wizard Spring" is a plated solderless connector designed to hold many wires from any direction, and may be mounted either top-side or under-side. It may be secured to "A" pattern boards quickly by the use of a 20021 terminal as the holding device. Before insertion both parts are held with tool No. 20022. Otherwise, they are easily secured with the use of sheet metal screws. Finger loop (illustrated) is a unique feature for quick, easy usage. The "Wizard Spring" costs less than any similar device.

MICRO MITE MOLDED R.F. CHOKES J. W. MILLER COMPANY

Nicknamed the "Micro-Mite", these rugged coils exhibit high Q and very low distributed capacity, all concentrated into an amazingly small package. They are ideal for use where weight, space and high Q considerations are involved. Size reduction ranges up to 80% of equivalent standard molded chokes. The construction of these coils permits miniaturization without the use of ferrite materials, thus maintaining temperature stability. This series of molded coils conforms to MIL-C-15305.

Molded Choke Coils Color Coding

For cylindrical choke coils. Cylindrical choke coils shall be marked with five colored bands. A silver band MIL identifier of double the width of the other four bands, located near one end of the coil, identifies military radiofrequency coils; four other bands of equal width, three indicating the inductance in microhenries and the fourth band indicating the tolerance in percent. Color coding shall be in accordance with the color code of table II. When either the first or second band of the three bands is gold, this band shall represent the decimal point for inductance values less than 10, and the other two bands shall represent significant figures. For inductance values of 10 or more, the first two bands shall represent significant figures, and the third band shall represent the multiplier. For small units, dots may be used instead of bands, when specified. The diameter of the MIL-identifier dot shall be larger than the other dots. The colors used shall be in accordance with MIL-STD-174. Typical color coding for units with inductance values less than 10 and for 10 or greater is shown on figure 1.

MOLDED SHIELDED MINIATURE R.F. CHOKES

This is the first major development in R.F. Choke design for many years.
The electromagnetic shielding is fully effective at the ends of the coil as well as along the body.
Molded construction assures top performance under severe conditions.

Size: 0.157" Diameter, 0.375" Length
Shielding: Less than 2% coupling
Inductance: 0.1 uh thru 10,000 uh (61 values)
Environment: Grade 1, Class B, MIL-C-15305

Power Rating: .20 watts @ 90° ambient and rated current flow
*Current based on (1) Temperature rise not to exceed 35°C at 90°C ambient
(2) Overload not to exceed 1½ times rated current
**Current required to decrease inductance 5%

Sub-Miniature R.F. Chokes

An extremely versatile series of iron core R.F. chokes designed to meet the industries' demand for high reliability, ultra-miniature components. The coils are ideally suited to network and filter design, delay lines, and computer applications. Rated at 50 milliamperes maximum D.C. current they are more than satisfactory for most applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per JAN-T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class B of MIL-C-15305.

R.F. Transformer for HV Power Supply

These R.F. power supply transformers for use with television receivers and cathode ray oscilloscopes make it possible to construct an inexpensive source of high voltage DC. Two types are available, the #4525 for voltage to 5000 DC and the #4526 for voltages to 10,000 DC (or 30,000 DC in a voltage rectifier tripler circuit). Type 1B3-GT tubes are used as rectifiers and the R.F. oscillator circuit uses one or more type 6V6 or 6Y6 tubes connected in parallel. The high frequency AC source permits use of simple and inexpensive resistive capacitive filters with low ripple content in the output.

TV AND RADIO INTERFERENCE FILTERS

TV High-Pass Filters

This TV High-Pass Filter will eliminate or greatly reduce annoying interference which may be picked up by the intermediate-frequency amplifier section of your television receiver. Improves picture clarity by rejecting interference from short wave stations, amateur transmitters, X-Ray and diathermy equipment, industrial r.f. heating units, electric appliances, etc. Clear, steady pictures insured with a minimum of noise streaks, sound bars or herringbone. Filter is designed to attenuate all signals from zero frequency to 40 megacycles. All television channels passed with minimum loss. No tuning required. Installed easily in antenna lead-in receiver. In aluminum shield with convenient "L"-type bracket for mounting.

Dimensions: 1 7/8" by 1 7/8" by 3 1/2" high.

Cash Register Filter

The radio interference produced by most cash registers and business machines, such as comptometers and billing machines, is, in many cases, quite severe and the general purpose type of filter does not always give adequate protection. The Miller Cash Register Filter has been expressly designed to meet the requirements of this type of equipment and will

provide positive elimination of radio interference feed-back into the power supply line. The filter is of the two-section type and consists of four duo-lateral wound chokes and four .5 mfd. condensers.

Dimensions: 3 1/4" x 4" x 7" long.

TV and Appliance Filter

Similar in construction to the Cat. No. 7818, the Cat. No. 7815 is designed for use with larger household appliances and commutator-type motors as well as communications-type receivers and recording equipment. Useful for elimination of

TV interference in radio receivers when inserted in television receiver-line cord. The #7815 filter uses larger capacitors and heavier capacity inductors to handle load requirements up to 550 watts. It is assembled in a gray Hammertone finished case.

Dimensions: 2 1/4" square x 4 1/2" long.

Electric Shaver Filter

This filter contains an inductive-capacitive circuit consisting of two duo-lateral wound chokes and a non-inductive condenser, giving complete freedom from radio interference. No ground connection is needed for the filter and

the danger of accidental shock is avoided through the use of shock-proof, unbreakable moulded rubber construction.

Dimensions: 1 1/8" diameter x 3" long.

TV and FM Wave Traps

These new high-Q series-resonant wave traps may completely eliminate interference and undesirable images in television and FM receivers. When tuned to the frequency of interfering signal, they are very effective in reducing sound bars and herringbone patterns, or streaks and tearing in the television picture. Superimposed pictures from two different stations also may be prevented. For FM receiver use, cross-talk from interfering station is greatly diminished. Use of one of these traps generally will

reduce interference caused by a near-by transmitter to a degree which will permit satisfactory reception from a weaker station.

Dimensions: 1 3/8" by 1 7/8" by 3 1/2" high.

All-Wave Interference Filter

Designed to eliminate radio noises caused by small household appliances such as food mixers, sewing machines, vacuum cleaners, etc. When connected between the radio receiver and the power outlet, the filter will prevent pick-up of interference and unwanted signals through the house wiring system. When used with household appliances the filter prevents the interference energy from getting into the house wiring circuit and disturbing receivers throughout the neighborhood.

Dimensions: 2 1/4" square x 4 1/2" long.

Capacity Type Line Filter

The Miller Capacity Line filter is an all purpose filter for the elimination of radio interference caused by the operation of household appliances such as electric razors, heating pads, hair dryers, food mixers, vacuum cleaners and practically all common household devices and fractional horsepower motors. This filter will provide adequate filtering in less severe cases of interference and in instances where the cost of Miller Inductive-Capacitive type filters is not warranted. A bakelite receptacle at one end and one foot long cord with plug at the other end makes installation simple.

Dimensions: 1 1/8" diameter x 2 5/8" long.

Un-Cased Interference Filters

These filters utilize two duo-lateral wound chokes and a dual .2 mfd. non-inductive wound, oil impregnated condenser. The filters are assembled on 1" diameter bakelite tubes and are provided with solder-type terminals and brass mounting brackets. While designed primarily for use with traffic signals, its usefulness is by no means limited to this application. These filters may be used for built-in application with any type of radio interference producing electronic device whose voltage and current requirements are within the rating limits of the filters.

Resinite Adjustable R.F. Coils

Resinite is a phenolic impregnated tubing which combines the mechanical and dielectric advantages of phenolics with the high dielectric strength, moisture resistance, and non-corrosive properties of cellulose acetate. Resinite can be certified to MIL-P-79B Type PBG. This series features an extremely wide choice of inductance ranges and utilizes only the highest quality commercial materials throughout. They find application where the severe moisture resistant characteristics of the encapsulated units and the mechanical properties of the ceramics are not required.

Shielded Subminiature Adjustable R.F. Coils

These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

Dimension: 1/2" sq. x 5/8" high. *Minimum self resonant frequency measured at maximum inductance.

FM Variable Capacitors

These two- and three-gang variable capacitors feature wide plate spacing (.042 Air Gap) along with a rigid construction to assure the highest stability. The plate contour results in an almost linear frequency versus rotation characteristic. Trimmers are supplied on each section. However, it is recommended that the oscillator trimmer be replaced with an NPO adjustable ceramic. Capacity range 6.6-22.7 pf per section. Trimmer capacity 2-20 pf. Shaft .250 diameter, one inch long.

HI-VOLTAGE INSULATED COUPLINGS

MEETS MIL SPECS: TEMPERATURE - HUMIDITY - SHOCK - VIBRATION - FUNGUS

HI-VOLTAGE INSULATED COUPLINGS

15 KV Breakdown 10 inch pounds torque
Series No. AK-5079 & No. AK-5164

Engineered with stainless steel shaft and precision, screw-driver tip molded integrally with Diallyl Pthalate Material in accordance with Military Specifications. Completely shock, vibration and fungus proof, they operate with ease over an ambient temperature range of -75 to +175° C. Supplied complete with nickel plated mounting hardware.

Stainless steel screw driver tip fits all standard slotted shafts (potentiometer, etc.) without need for further machining. Ideally suited to adjust high voltage controls thus protecting operating personnel against danger. They are also used to reduce ground capacitance on other types of sensitive instrument controls.

For Commercial Instrument Applications... These couplings are available in general Purpose Black Bakelite.

Cat. No. 6164-(X or B)-() For Standard Type
Cat. No. 6079-(X or B)-() with Locking Type Bushing.

JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

HOW TO DESIGNATE SHIELD SIZE AND SHAPE

This "Shield Selector Guide" has been created as an aid to shield designers. Properly used, it will eliminate (or minimize) your design time, and facilitate the ordering of the correct size and shape shield. There is no longer a need to draw your own prints. We probably have made shields the same, or similar to your needs.

Shown are representative configurations of shields that we feel cover most applications. However, other combinations of these shapes can easily be created, to meet your specifications. Just let us know dimensions.

Typical P/N and ordering information is shown to the right.

READOUT INDICATORS

RK Series—precision machined from 1-piece aluminum which also serves as a heat sink for the bulbs. Front and rear tapped holes for mounting on a panel or on RKA-2-8 brackets. The RK-FLV violet filter is available to reduce reflected lighting effects resulting in a better contrast.

Unique in-line design provides clear displays without focusing problems thereby allowing equally clear viewing from any angle. Compact size assures a neat fit in a limited space. Long life bulbs—20,000 to 50,000 hrs. Engraved acrylic plates are of a non-yellowing quality are mounted in a tightly-packed stack and edge-lit.

RKP Series—plug-in readout indicators are designed for ease of use.

RKF Series—has a larger 1-piece aluminum body with 1" high numerals, along with 2 long-life bulbs per numeral for increased brightness, and acts as safety alarm should a bulb be inoperative.

PILOT LIGHT ASSEMBLIES

BNE Series—featuring a 1-piece body construction, this miniature neon pilot is ideally suited to indicate toggle switch positions, or for other display configurations with space limitations. A particular characteristic of this model is the compact lens system protruding slightly above the panel. Operating voltage, 75 VAC without resistor; for 115 VAC operations use external resistors (150K for standard intensity, 33K for high intensity) not supplied. Single $\frac{3}{16}$ -.32 mounting.

BNF Series—similar to the BNE Series except that the lens system extends a greater distance beyond the panel for a bright illumination. This model has a permanent built-in neon and operates on 75 VAC. An external resistor required for 115 VAC. Turret type lugs are used for simplified hookup. Single $\frac{3}{16}$ -.32 mounting.

BND Series—combines an entirely new look in a space-saving pilot assembly. The neon protrudes beyond the panel to provide maximum light intensity. This model is available with or without built-in series resistor for 75V or 115V operation, and is also available as standard or high intensity. Single $\frac{3}{16}$ -.32 mounting.

BRITE-GLO[™] NEON LAMPS

Extremely small size lamp (equivalent to T-1 $\frac{3}{4}$). Smallest neon in the industry. Bullseye appearance gives the largest glow where needed on top. Rounded top places the illuminated area closer to the viewing point. Metal base (Model MNE-4SL) increases light output and protects lamp from damage.

BEAUPUG 3300 SERIES PLUGS & SOCKETS

The 3300 Series BEAUCHAINE ELECTRICAL CONNECTOR line has been developed to fulfill the industry need for a reasonably priced, reliable and versatile connector for chassis, cable and modular use where space is not a prime consideration. The 3300 Series is made in 2, 3, 4, 6, 8, 10, 12, 15, 18, 21, 24, 27, 30 & 33 contact configurations. Male contacts are brass, cadmium plated. Female contacts are phosphor bronze, also cadmium plated and are covered

by U. S. Patents # 3,271,728 & 3,311,867 For greater dielectric strength, protection and economy, we have developed the molded POLYPROPYLENE and the new POLYCARBONATE backshells (or caps) which are described on the following page.

BEAUPUGS meet or exceed UL Std. #498, oil contacts carrying "rated" current simultaneously.

Current (2-12 Contacts) -- 7.5 amperes & 1875 watts
Current (15-33 Contacts) -- 4.5 amperes & 1125 watts

"Jones" Type Plugs, Sockets

300 SERIES CONNECTORS are from the famous line of "Jones" plugs and sockets which have been a standard of the electrical and electronic industry for over a generation. For medium duty applications, they are small in size with good separation between contacts.

Molded bakelite insulator has 2 to 33 cadmium-plated phosphor-bronze contacts, for cap or panel mounting. All plugs and sockets are polarized so that plugs of one size cannot fit into sockets of another size. "Knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. Rated Voltage... 730 Volts rms. Contact Resistance... 0.16 Ohms max. Rated Current... 10A max.

In accordance with UL Standard #498, (all contacts carrying "rated" current simultaneously) as follows: Current (2-12 contacts).....7.5 amperes Wattage (2-12 contacts).....1875 watts
 (15-33 contacts).....4.5 amperes (15-33 contacts).....1125 watts

Barrier Block Fanning Strips

Fanning strips serve as a convenient means for rapidly making and removing connections from barrier terminal blocks. They facilitate cable or harness wiring and minimize the possibility of subsequent wiring errors. Both straight and angle type fanning strips are available. Terminals are made of .032" brass, cadmium-plated. The 3/32" thick, 1/2" wide XP black phenolic mounts are furnished with a hole, in either the right or left side, for securing the cable with lacing twine. For larger sizes, use of a cable clamp is recommended.

Printed Circuit Edge Connectors

BIFURCATED CONTACT EDGE CONNECTORS

Designed for minimum printed circuit card wear, low insertion force and positive contact with printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with .00003" minimum gold plated. Types 250, 251 and 252 utilize bifurcated contacts, permitting two flexing surfaces instead of one for positive contact.

Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Connectors meet requirements of MIL-C-21097A (Ships) where applicable. One plastic polarizing key furnished unassembled. Rating: 830 v. AC rms.

The finest grade laminated phenolic sheets we use in our production fabrication are available to you in a range of standard sizes or special sizes cut to order; and in a variety of types.

NEMA GRADE XXXP-MIL-P-3115C, paper base electrical-color natural. Most commonly used for panels and terminal boards. Excellent electrical grade and dimensional stability. Max. operating temp. continuous 250 deg. F.

NEMA GRADE G-10, MIL-P-18177B-GEE, color green **GLASS CLOTH EPOXY**. Superior chemical resistance, excellent mechanical and electrical properties. Max. operating temp. continuous 300 deg. F.

COPPER CLAD LAMINATES, XXXP MIL-P-13949 TYPE PP and **GLASS EPOXY MIL-P-13949B TYPE FL-GE**, are used mainly for printed circuitry. The copper foil serves as the conductor and the laminate provides the insulating support. 2-ounce copper foil is laminated to one or both sides of the insulator. We catalog both types in XXXP and G-10.

FIBERGLASS REINFORCED POLYESTER NEMA GRADE GPD-1 with a class 155C (300°F) rating. Color is Tan. Excellent mechanical and electrical properties. Fabricates similar to Phenolic and can be punched cold.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028

Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do... on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 7/8" jaw spread. 1 1/2" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

Skin-tight flexible Vinyl insulator (sold separately) covers completely — has slotted "lip action" tip. Clip weighs 1/20th oz., has tiny 1/16" O.D. nose, but ample 3/8" jaw spread 1 1/4" long. Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

Screw connection easily made by slipping insulator forward. 2 1/8" long.

Type No. 905 Solderless Terminal Blocks are specially designed for applications where space and weight conservation are important factors. Because they are molded of flexible polyvinylchloride material they may be bent in any direction to fit contours and sharp angles. Typical applications for these terminal blocks include missile guidance systems, computers, aircraft communications, underwater detecting equipment, etc.

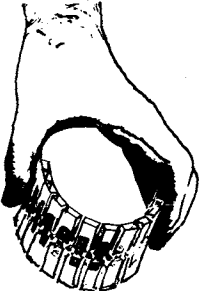

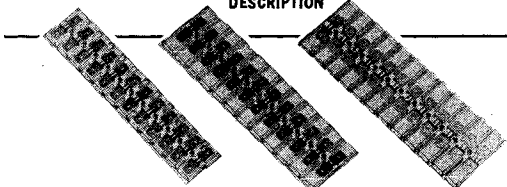

The shortest distance between the live parts of Type No. 905 Terminal Block is 3/8". Its brass terminals will accommodate a #10 wire as a maximum. The polyester material of which the blocks are made is rated at max. of 30 amps, 380 volts, or 440 volts if mounted on insulated surface. Maximum heat capacity: 60° C. Insert conductor in block and tighten the set screw.

Flexible Terminal Block No. 905 measures 3-3/4" long, 5/8" wide, 1/2" high and 11/32" between terminal centers. It may be cut to smaller sizes as required.

PRESS-FIT® TEFLON* CLOVERLEAF® RECEPTACLES

... providing the economies of dip-soldering with the inherent reliability of wired chassis construction

The "Press-Fit" Cloverleaf Receptacle provides economical yet uniformly perfect solder joints by means of dip soldering on a metal chassis. The unique Cloverleaf configuration permits insertion of four or more wire leads, plus an optional center post for mounting additional components after the dip-soldering operation. This design provides an encompassing hold on the leads, while providing for excellent capillary flow of solder. The Cloverleaf receptacle is a Seaelectro "Press-Fit" design. Virgin Teflon

insulation, precisely machined to "Press-Fit" into the chassis provides fast, positive and economical installation.

The reliability of dip solder joints made with the Cloverleaf receptacle, combined with the inherent dependability and repairability of metal chassis construction makes it ideal for use in high density, complex electronic instrumentation packaging, while the low cost of the terminal and its simple installation provides a new and outstanding assembly technique for premium quality radio and television manufacturing.

PRESS-FIT® TEFLON** SPACER/BUSHINGS

The Newest and Best Way to Mount P.C. Boards to Metal Panels and Chassis

Mount and insulate P.C. boards on metal chassis or panels without nuts, bolts, or lock washers. The new Press-Fit Teflon* Spacer/Bushings save assembly time while providing an economical and mechanically secure mounting device.

Machined from pure Teflon*, these new units are designed for various thickness P.C. boards and chassis or panels. Insertion in the chassis is a simple, one-step operation. The grommet end of each Spacer/Bushing is simply snapped in pre-drilled or punched metal chassis holes with entrance edge broken. Once inserted, they're in for good. P.C. boards require only mating holes for the opposite end of the Spacer/Bushing and may be snapped on and off of the mother board at will.

NOTE: Mtg. Hole .152 $\pm .002$ Dia. in .062 $\pm .006$ thick chassis.

SEAELECTRO PROGRAMMING DEVICES

SEAELECTRO PROGRAM SWITCHING

SEAELECTROBOARD™ MODULAR CORDLESS PROGRAM BOARDS*

"Sealectroboard" programming and switching provides complete ease and simplicity of operation with drastic reductions in hardware and space. The units consist of two decks of bussed contacts running at right angles to each other in the X and Y directions, forming an electrical matrix. A single shorting or component holding pin is used to complete the program circuit... move the pin to a new location and a new program function is generated.

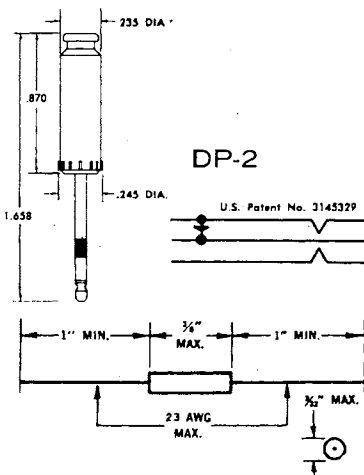

The "Modular Sealectroboard" provides an extremely flexible means of program system expansion with a built-in appearance. The system consists of only four standard component assemblies, designed such that when installed in a standard E.I.A. 19" relay rack, or bench cabinet, they result in a very attractive unit.

The "Modular Sealectroboard" can be expanded from a 10 x 10 hole matrix to a 10 x 60 hole matrix in one standard 5 1/2" x 19" rack panel. Additional panels can be added and interwired to expand program capacity as system requirements dictate.

SHORTING PIN

ARROW, HART & HEGEMAN "SNAP ACTING" MOMENTARY CONTACT SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated

condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

PRETRAVEL Pretravel is the distance or angle through which the actuator moves from the actuator free position to the actuator operating position.

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position to the releasing position.

SWITCHCRAFT® Switches

Switchcraft switches give you unlimited latitude in the selection of switching functions and actuations for customizing your equipment designs. Whether you choose pushbutton, slide or lever actuated switches, OUR specialized sales personnel can aid you in the selection and specification of the proper switch to fill your particular requirements. Call on us. We can supply any lever switch, or any size "Multi-Slide" and/or "Multi-Switch", with virtually unlimited functions, from stock, immediately, at factory prices.

Only Switchcraft offers 3 complete lines of slide, multiple station pushbutton, and lever switches . . . 3 proven solutions to man-machine interface problems.

SLIDE ACTION . . . Series 39000 "Multi-Slide" switches provide design engineers with an entirely new switching method to solve man-machine system problems. "Multi-Slide" switches help eliminate operating confusion inherent in constant manipulation of pushbutton matrices by providing slide-switch variety. **Series 39000 Switches** offer 3 types of actuation: interlock, all-lock, non-lock.

PUSHBUTTON ACTION . . . Whatever your requirements for switching, you will find Switchcraft "Multi-Switch" switches enable you to design a cybernetically correct, error-reducing panel. Both illuminated and non-illuminated types are available with non-lock, all-lock, interlock, push-to-lock, push-to-release functions. Illuminated types offer single or multiple lighting effects. **Series 7000 and 21000** frames are available from 1 to 37 stations in a row. **Little "Multi-Switch" Series 35000, 36000, 37000**, are compact switching units offering 1 to 18 stations in a row.

LEVER ACTION . . . Switchcraft offers the largest selection of illuminated and non-illuminated lever-type switches in the industry. They come in a wide choice of sizes, 2 or 3 position, locking and non-locking types. They range in size and style from miniaturized "Feather Lever", featuring changeable push-on color knobs to "Lever-Lite", a 3-color illuminated type lever switch; to the industry standard "Telever", a telephone type switch featuring field changeable functions.

DW "MULTI-SWITCH"™ SERIES 65000

Rugged, versatile, multiple-station pushbutton switch requires only 1 1/8" depth behind panel. Overall switch height of 2 1/2" allows stacking in tight parallel rows. Three standard functions available: **Interlock**—actuating a button automatically restores to normal the button previously actuated; **Non-Lock**—each button

has momentary action; **All-Lock**—all buttons, except release, lock when depressed. Standard on all interlock switches is a **Lock-Out** feature which prevents operation of more than one button at a time; this is also available on special order for non-lock and all-lock switches*. Single row assemblies are available from 1 to 12 stations with interlock or all-lock functions; up to 18 stations, non-lock. These switches utilize a specially-designed switching module consisting of a switch housing, pushbutton actuator, terminal board assembly and contactors. Features "U"-shaped, double-wipe bifurcated contactors for extra reliability. Silver-plated contactors rated 3 amps, 125 VAC, non-inductive; 0.5 amp, 125 VDC. Pushbutton, on 5/8" centers, is an integral part of

plunger and cannot be lost or pilfered. Assemblies to 18 stations mount with only two #6 screws (not furnished). Frame notched to accept Tinnerman No. 7888-632-1 speed nuts with 6-32 machine screws (not furnished). Switches listed are fully assembled and factory-tested; have black pushbutton actuators and 2-C (DPDT) switch modules at each station. **Only the more commonly used switches are listed here; for complete engineering information, request Switchcraft Bulletin 174.**

"GLO-BUTTONS" FOR "MULTI-SWITCH" SWITCHES SERIES X, Y, Z

Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Buttons" look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with std. .050" x .187" plungers, as Switchcraft Series 7000, 8000, and 35000 "Multi-Switch", and other switches having maintained plunger action with a max. of 1/16" fallback. "Glo-Buttons" have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear (Figs. A). An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the

button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see Figs. B. All "Glo-Buttons" have black button housings and are available with std. legends: "A" thru "Z", "0" thru "50", and "ON", "OFF". Eight basic types of buttons are offered: To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order 1/2" sq. "Glo-Button" with black screen, orange-red illuminator and numeral "7", part number would read X21248-7.

Unique "Adjust-A-Clips" provide snap-in, front of panel, mounting in panels from $\frac{1}{4}$ " to $1\frac{1}{4}$ " thick in .615" sq. holes. Red, black, green, or white pushbuttons. $\frac{1}{4}$ " button stroke. Integral slide contacts of special spring tempered phosphor bronze, silver plated, rated at: 250 ma., 30 watts max., A.C. non-inductive load. Evenly spaced solder lug terminals are clearly identified for ease of wiring.

BASIC SCHEMATIC CIRCUITS

Switch circuitry can be described as combinations of basic schematic circuits as shown below. N.O. means normally open; N.C. means normally closed.

"double-wipe" Slide Switches

New low-cost, precision "double-wipe" slide switches. Switches use special U-shaped, bifurcated sliders to assure continuous wiping action. Contacts rated at 0.5 amp. D.C., 3 amps. A.C., 125 volts non-inductive load. Standard solder lug terminals have a 3/16" dia. center hole and wrap-around notch for wiring ease. Most switches furnished with black 1 1/2" knob and .140" (5/64") dia. mounting holes. Nos. 46206LF, 46256LF and 47227LF flush screwdriver actuated knob. All slide and rocker switches are U.L. approved unless otherwise noted. See next page for slide switch contact arrangement.
