Micro-Vectorbord has been specially designed for the denser packaging required by cordwood construction and mounting micro-miniature components. All boards listed are G-10 Epoxy Glass type GEE (MIL-P-18177), or G-10 Epoxy Glass type FL-GE (MIL-P-13949) except "EP" types which are epoxy paper type PEE grade EXXXP per MIL-P-22324.

PUSH-IN TERMINALS

SOLDERLESS SPRINGCLIP TERMINALS—Reliable truly solderless terminals for fast setup of experimental circuitry. May be used over and over—permits reusing expensive components by eliminating heat damage. Extremely low contact resistance, e.g. less than .002 ohms for T30-2. Suggested board thickness: 3/32" for best support of T30 and T32 series.

SOLDERABLE TYPES T9.4, T9.6, T28, T28-1 are brite tin or silver plated for easy soldering.

Vector TUBE SOCKET TEST ADAPTERS

T-789

T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Kit T789 consists of the three popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval and a P1 probe in a handy clear plastic carrying case.

EXPERIMENTER'S TEST ADAPTERS SOCKET EXTENDERS

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections.

SOCKET EXTENDERS provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to plug pins.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

CURRENT TEST ADAPTERS

T9R-C
WITH P-2 PROBE

Versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or voltage measurements without cutting leads or making computations. All measurements may be made from the tube side of the electronic equipment without disturbing the chassis.

VECTOR CURRENT TEST ADAPTERS have two spring test tab elements for each pin. These test tab elements break the circuit when a dual-sided probe is inserted in test position. Probes are gripped by the test tabs and need not be held in position. Current is read at the meter where the two test leads are connected. The same test adapters and probe also permit voltage and wave form readings on any pin position, merely by connecting the leads jointly to the meter. The adapters have mica-filled shell and keyways, and may be used in a horizontal or vertical position.

SOLID SILVER-BRAZED BARRELS

The barrel seam of the parts in Wire Ranges 8 thru 4/0 is closed with a 35% Silver Brazing Alloy to insure a solid one-piece barrel which will not open when crimped or under any stress or wire pull.

EXTRA WIRE-GRIPPING POWER

Specially designed indentations in the form of inverted truncated pyramids provide the interior of the barrels of all parts in Wire Ranges 8 thru 4/0 with extra wire-grIPPING power & greater contact area.

BENT TONGUES AVAILABLE

Terminal tongues can be bent to any angle for special applications. Although 90° and 45° angle bends are the most popular, we will form terminal tongues to your particular specifications.

Note: Large size INSULKRIMP* and NYLAKRIMP* parts have brazed barrels of VERSAKRIMP* style.

FOLD-OVER SOLDERLESS TERMINALS

Designed to give a trim appearance to otherwise unsightly wire connections. They fold neatly over the stranding and confine it directly under binding screw or nut and automatically insure greatest possible contact. The cushion-like con-

struction when closed permits binding nut or screw to sink into the soft copper and so serve the purpose of a lock nut and is therefore vibration proof. Each is adaptable to a wide range of wire sizes. For standard, extra flexible or solid wire.

AUTOMATIC FIRE DETECTION & ALARM SYSTEMS

#SC-600R CONTROL UNIT

UNDERWRITERS' LABORATORIES APPROVED
MEETS & EXCEEDS NATIONAL FIRE CODES

FOR: Homes, Schools, Churches, Recreation Centers, Public Buildings, Nursing Homes, Restaurants, Stores, Motels, Clubs, Factories, Warehouses, Military, etc.

#SC-600R CONTROL UNIT\$192.00

MAIN POWER SUPPLY

Input 115 V/AC, 60 cy. 0.25 amp. Transformed/rectified to 6 V/DC, maximum load 2.0 amp. The Supply is **Electrically Supervised**, so that a failure immediately sounds trouble alarms, and the System automatically transfers to Emergency Power, thus assuring continuity of fire protection. The Main Supply automatically returns when power is restored. Use #14 approved wire.

EMERGENCY POWER SUPPLY

6 Volt Battery: Burgess #4F4H; Eveready #706; or equivalent. Maximum load under alarm condition 2.0 amp. Obtain from local electrical or radio wholesale house.

CABINET

14" x 9" x 4". Gray Hammertone. Surface mount. Cylinder lock, 2 keys.

DETECTOR CIRCUIT

6 V/DC, 0.15 amp. Safety-Loop Circuit is **Electrically Supervised**, so that a wire break immediately sounds trouble alarms. Emergency circuits compensate for such fault (See N/E Switch), thus assuring continuity of fire protection. Maximum wire run 5000 ft. #FA-18/2 Approved Fire Detector Cable.

NORMAL/EMERGENCY SWITCH

Provides Emergency Operation:

- Compensates for wire break in Detector Loop, permitting full response from all detectors until repairs are made.
- Silences Trouble Buzzer, but maintains Red Lamp to show the emergency condition.

ALARM CIRCUITS

6 V/DC, maximum load 1.5 amp. If only one bell is used, it is **Electrically Supervised**, so that a failure immediately sounds trouble alarms. If two or more bells and/or #A-604 Annunciator are used, they are alternately connected to the two alarm circuits provided and the last operable alarm device is **Electrically Supervised**. Use #14 approved wire.

TEST/RESET/SILENCE SWITCH

Provides Simple Test Procedure:

- Test The System (once monthly)
- Silence all Firegongs.
- Reset to normal operation.

APPROVED FIRE ALARM SYSTEM

National Fire Codes Pamphlet 72A details the 'Local Automatic Fire Protective Signalling System' and its installation, acceptable to the Board of Fire Underwriters, and to Federal, State and Municipal authorities. This Standard is applicable to all industrial, commercial and military installations. Best practice throughout the country uses it in homes as well. Consult your Fire Chief.

Equipment bearing the UL Label has passed rigid inspection requirements and is of high professional quality.

Proper and correct tally of Automatic Fire Detectors is basic. The Code requires detectors in each room, hall, closet, stairwell, storage area, furnace room, basement, attic, loft, shaft, chute, etc. Do not exceed the space ratings given for each type of detector.

All wiring should be done in conduit as the best insurance for longevity and trouble-free service.

time delay timers

Three basic methods are employed to generate a Time Delay: synchronous motor, Thermal Bi-Metal, and electronic. The Series GTD, MTD, TD/CTD, H/CH, SF/CSF, TDAB, and Series RB generate the Delay function from a synchronous motor. This Delay is created by applying power to the timer motor/clutch circuit with a sustained switch closure (sustained is interpreted as simply being longer in length than the desired delay). When the timer receives power it begins a delay period, at the end of which occurs a switch operation. The load switch remains in the operated condition until power is removed from the timer, at which time the timer auto-

SERIES GTD

The Series GTD is an appearance engineered timer designed to compliment today's modern machinery. This unit provides a switch closure at the completion of a timed delay in an extremely wide selection of time cycles from 3 seconds to 60 hours or more. A clutching mechanism between the heavy duty synchronous motor and the load switch assures instant start, and immediate reset. Mounting is simple. A 3 inch hole in your panel is all that is required. A single screw under the flange of the timer face tightens a bracket against the edge of the panel hole.

As an optional feature the GTD can be supplied with a reverse clutching mechanism. This feature permits the unit to remain in the operate position if the control circuit is de-energized due to a power failure.

Load contacts are snap action SPDT, isolated. Contacts are rated at 10 amps. non-inductive. The GTD is available for 115/60, 115/50, 220/60 or 230/50. Other voltages available, contact factory.

matically resets.

In Models TD, H, MTD, SF, and RB in time cycles under 5 minutes a clutch/motor is used and the operating circuit is illustrated as "Circuit A".

In Models GTD, CTD, CH, CSF, TDAF and TDAB an external clutch is used to couple the motor to the timing mechanism during the time cycle. Model MTD above 30 seconds also is equipped with the external clutch, and this and the forementioned timers operate with the "Circuit B".

SERIES MTD

The Series MTD Time Delay Timer represents a new appearance concept for timing controls. This new timer is designed to match modern panel instruments, so commonly found on the finest automatic machines. The MTD features a rugged plastic face which protects the setting and progress indicators from dust and damage. When used alone or in conjunction with other instruments, the Series MTD will contribute to equipment appearance as well as performing its control function.

The control function of the Series MTD is one of providing a pre-determined timed delay between the closing of one load circuit and the subsequent operation of the timer isolated load switch. The load contacts are 10 amp. SPDT snap action and are brought out to snap on terminals located at the rear of the timer. Mounting is through a 3" round hole in a panel and secured by means of a bracket screwed to the rear of the timer.

The timer is secured to the panel with a bracket which mounts to the rear of the timer and clamps the unit to the panel. The TD offers 10 amp. SPDT snap action load contacts, isolated from the timing movement. Two models within the TD category are available, dependent upon time cycle. The models under 1 minute use a clutch/motor, whereas 1 minute up to 5 minutes use an external clutch that provides rapid reset. Voltages of 115/60, 115/50, 220/60, or 220/50 are available.

programming cam timers

motors

Heavy duty synchronous motors, U/L and CSA approved. These motors are available in any of thirteen standard speeds. In cases where short time cycles are required of a higher torque motor is used. On the MC-O and RC-O Multi Cam Timers a High Torque motor is standard. These motors are built and guaranteed for long trouble-free performance.

switches

Single pole double throw snap action, U/L and CSA approved, totally enclosed. The switches are mounted on individual brackets, permitting removal of each switch without disassembling the entire switch bank. The switch contacts are rated at 10 amps non-inductive AC.

electrical characteristics

The Cam Timer Series can be supplied for 115 volt or 220 volt AC operation on 25, 50, 60 or 400 cycle frequencies. (As well as 6, 12, 24, & 30 volts DC)

gear rack assemblies

50 standard ratio gear and rack assemblies are stocked for changing overall time cycles on the Cam Timer Series. These assemblies may be changed by removing a 5/40 screw, setting the rack into the recess, and retightening the screw. Refer to chart for particular time cycle and gear rack assembly.

individual cam adjustment (series CM, MC, RC only)

Standard cam construction is such that the ON or OFF periods may be adjusted from 2% to 98% of the total time cycle. Cam adjustment consists of loosening the nut on the face of the plate, rotating the movable cam segment to the percentage of ON or OFF period desired, and then tightening the nut. The cams are made of corrosion resistant aluminum.

timing sequence (MC, RC only)

Each cam is individually mounted on the shaft by means of a heavy duty friction disc which allows easy finger adjustment of timing sequences. Individual positioning of the cam is also made possible without the use of set screws and wrenches, and permits rapid adjustment. On the Series MC and RC Multi Cam models a drum calibrated from 0% to 100% is mounted on each cam, this drum in conjunction with a mounted pointer acts as a guide when setting related programmed sequences; thus providing a reference point for use during the cycle.

ordering information

When ordering a Cam Timer please specify the following information:

1. Voltage and frequency of motor current.
2. Number of switches desired.
3. Time cycle selected from chart. (refer to motor number plus gear rack number. Example: MC4 Timer with C-12. Gear Rack.)

■ single cycle multi-cam timer

SERIES RC

The Series RC Timer is designed to provide a single timed electrical cycle upon momentary actuation from a remote position. The cam is a circular plate notched at one point in its circumference. Coincident with this notch is a small plate or a pawl. This plate is contoured to the periphery of the cam, and pressed against the cam face by a spring and a stud. Upon actuation, the relay mechanically disengages a lever from the cam notch, simultaneously starting the motor. During the revolution of the cam, the relay lever rides on the circumference of the cam. At the end of the revolution, the pawl guides the lever into the notch, stopping the motor after completing one revolution. The single switch handles the timer motor and the external load circuits, limited only by switch rating. The RC Multi Cam Timer operates from 1 to 20 additional circuits. This design enables the user to have all the advantages of the Series MC, plus single cycle homing control.

■ recycling timer

SERIES CM

The Series CM Timer repeats a continuous, adjustable ON and OFF electrical cycle. This timer consists of a heavy duty synchronous motor, adjustable cam, and single pole, double throw snap action switch, assembled on a base mount chassis. The cam is coupled to the motor by means of a simple gear and rack assembly, which can be changed by the user. Standard cam construction is such that the ON-OFF cycle may be adjusted from 2% to 98% of the total time cycle. The cam is calibrated in percentage for quick accurate adjustment. 50 stocked gear and rack assemblies are available for time cycles from 40 cycles (2/3 of a second) to 1 rev. in 72 hours.

220/60 — **\$21.50**

■ multi-cam recycling timer

SERIES MC

The MC Multi Cam Timer is identical in operation to the CM timer but controls from 2 to 20 circuits. The cams are mounted on a single driving shaft, coupled to the motor by a gear and rack assembly. Each cam is independently adjustable for 2% to 98% of the total time cycle. Individual cam adjustability enables the timer to be used as a programming device. The cams can be adjusted in any combination of timed sequences rapidly and easily. Total revolution time is determined by motor speed and the interchangeable gear and rack assembly.

interval timer

An interval timer closes its load circuit immediately upon the start of the time period. This circuit is closed (or opened) during the time that the timer is running for the pre-selected period. When this is completed, the load circuit opens and the timer automatically resets. Interval timers are designed to start from a momentary

pulse. However, a sustained start circuit can be used. If the start circuit is still closed at the end of the time cycle, the load circuit will return to its normal position, but the timer will not reset until the start circuit is broken. At this time, the reset will occur and the timer is again ready for another cycle.

SERIES PAB (PAF)

The Series PAB Timer is an extremely accurate timing mechanism built to stand up under the hard usage and demanding standards that modern manufacturing processes require.

Due to the simplicity and reliability of a special clutching mechanism, it is possible to offer the Series PAB with a range of timing from the PAB 1S with a 1 second overall range in 1/60 second increments, to the PAB 3H timer with a range of 3 minutes to 3 hours, calibrated in 3 minute steps.

The series PAF is similar in construction but is panel mounted.

HARREL

PRECISION SOLID STATE TEMPERATURE CONTROLLERS

GENERAL

Harrel temperature controllers are intended for the precision temperature control of ovens, test fixtures, and all kinds of industrial machinery. They are arranged for easy mounting on any panel and are designed to require minimum panel space.

Temperature sensing is by means of a wire-type resistance sensor. This gives long-term stability and sensitivity which cannot be equalled by any other method of temperature sensing. The temperature sensor may be located as much as several hundred feet from the controller if desired. No special lead wires or shielding are required between controller and sensor.

ON-OFF RELAY CONTROLLERS

Utilize a rugged, solid state amplifier controlling a 10-ampere relay. Relay is easily replaceable in the field.

TIME PROPORTIONING RELAY TYPES

Similar to regular on-off controller, but controller operates on a regular cycle of on to off and back again, and it is the proportion of on-to-off time which is varied to control the temperature. Gives a characteristic which approximates true proportional control and in general gives greatly improved performance over regular on-off controllers.

TRUE PROPORTIONAL TYPES

Completely solid state. No relays, contacts, or moving parts whatsoever in the power control circuits. Output does not cycle on and off but remains steady at exactly the amount necessary to hold the temperature at precisely the desired value. True stepless control gives closest temperature control of any type of controller. Elimination of contacts and moving parts means life measured in years.

* For on-off, temperature change at sensor to go from on to off and vice versa. For time proportioning, temperature change for 30% to 75% power output. For true proportional, temperature change from 10% to 80% full power output. Note that temperature performance for proportional types will in general be much better than figure shown; full proportional band is seldom required to compensate for changes in external conditions.

** At 25°C ambient temperature. Derate linearly to zero at 100°C ambient temperature. For indicating types, heater must be arranged so that steady state power output (that is the power other than during warm-up and cool-down) is between 5% and 75% of full power output.

Indicating Controller

INDICATING FORMS

The system of display employed on indicating forms of the controller is designed especially for automated systems. The temperature is both set and read out on the large easy-to-read dial. The indicator is separate, and is of the go/no-go type which gives a visual alarm whenever the actual temperature is not at the set point. No skill or knowledge is required of the operator. All he has to do is be sure that the indicator stays out of the two red zones. Indicating forms are mounted on an attractive escutcheon arranged for easy panel mounting or indicator may be located remotely if desired.

SENSORS

A number of different forms of sensors are available for the above

- Patch Sensor:** For measuring the temperature of surfaces. Thin and flexible; may be attached by means of an adhesive or with tape (supplied).
- Oval:** Sensors wound on oval hollow ceramic core. Bracket mount for sensing air temperature.

**BRISTOL MOTORS**DIVISION OF
VOCALINE**SYNCHRONOUS MOTORS AND TIMERS**

Versatility is the characteristic which design engineers need — and find — in Bristol Synchronous Motors and Timing Devices. Bristol's unusually broad experience and range of design and manufacturing skills are particularly valuable where special requirements must be met.

The devices shown are among the most widely used. All can be mounted in any position, and take a minimum of space. Materials are selected on the basis of their suitability to provide long service, and perform well under a variety of conditions. Bristol engineering service is available for applications that require custom design and manufacture.

SERIES 31 REPEAT CYCLE TIMER. Low-cost multi-contact timer with high repeat accuracy. For vending machines, home appliances, industrial program controls. Speed Ranges: 1 Revolution Per Second to 1 Revolution Per Month. Motors standard, or high torque reversible. Switch Rating: 20 amp. at 115-230 V AC (also in 1/2 hp. at 125 V AC). Switches: enclosed snap action SPDT type. Cams: dual cams with set screws for field adjustment. Cut cams available on special order. Bulletin B-22. **One Switch Model \$8.25 approx.** **Four Switch Model \$16.75 approx.**

SERIES 6100 TIME DELAY RELAY. Universal Time Delay Relay provides self-holding solenoid starting with adjustable timed contact operation. Type 6110 provides three types of load contacts which give seven types of load circuit operation in a single unit. This model may be wired up to one of four basic types of operation: momentary start, automatic reset; momentary start, manual reset; sustained switching; and tandem or cascaded operation. Size 3" in diameter by 5 1/4" long. Timer case bezel 1 1/2 thick x 3 5/8 inches square. Universal mounting allows standard 3-stud or 4-stud panel mounting. For further information request Bulletin No. B-11. **\$44.00 approx.**

SERIES 21 TIME DELAY RELAY. General timer for instantaneous reset-type action, such as timers for photography, electronic safety, alarms, signals, etc. (Life expectancy over 1 million cycles.) Compact. Quick reset time (well under 1/5 second). Repeat accuracy better than 1% full scale. Time setting: 15 seconds to 3 months full scale. Rating: 10 amp (non-inductive load), Voltage: 115 V AC, 60 cycles standard. Optional adjustment feature available. Bulletin B-21. **One Switch Model \$19.00 approx.** **Two Switch Model \$22.50 approx.**

For further information on the three models above request Bulletin B-23. **Non-reset \$14.00 approx.** **Reset \$20.00 approx.**

MODEL 42 DUAL SPEED UNIT. Consists of two motors assembled to a common output shaft through a differential. Output speed is the sum of the two motor input speeds. Therefore, two different speed unidirectional motors provide a choice of 3 output speeds (either motor speed or the sum of the two motor speeds). Available with reversible motors for further variations in output speed. Standard units also available incorporating 3 and 4 motors providing up to 40 output speeds by electrical switching. Dimensions depend on the design of the unit in question. For further information request Bulletin B-24. **Basic Unit \$18.75 approx.**

SERIES 47 REPLACEABLE SWITCH REPEAT CYCLE TIMER is a multi-contact program timer which permits easy switch replacement without the necessity of disassembling. In addition one turn of the calibrated adjusting screw provides a 2% variation of cam time sequence. Switches are rated at 6 amps-115 volts. Available in a wide range of switches and speed combinations. Request Bulletin B-20. **Two Switch Model \$14.00 approx.** **Six Switch Model \$24.00 approx.**

THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality INSTANT LETTERING® transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

Fast, accurate point to point circuit testing

PARAGON PRO-GLO Circuit Testers are simple, inexpensive, easy-to-use instruments for checking non-energized circuits. This little pen-size unit accurately checks for polarity, shorts and opens and continuity in circuits with resistance up to 10 ohms.

The PARAGON PRO-GLO tester consists simply of a plastic case containing two AA penlight batteries and a #222 lamp, a pointed probe and a three-ft. lead wire with alligator. The lead wire holds a new probe protector.

Servicemen and home repairmen appreciate the ease of use of this simple tester. Signal light at point of contact eliminates necessity for shifting eyes to read meter. Speed and accuracy of testing is increased.

Low cost of device makes it practical for mass distribution in large service centers. Long operating life is assured—probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic and wire is heavy-duty, flexible test lead.

RESISTANCE DECADES Model DR Series

High Precision and Stability — Low Zero Resistance — Long Life Switches

DR units provide convenient selection of precise resistance values. Typical applications are found in the areas of circuit design in simulation of various factors and as standard in bridge-type measurements.

Standard units are available with 3, 5, or 7 dials. Each decade inserts a precise ohmic resistance in series with the terminals. The basic

ohmic value of any decade may be multiplied by factors of 0, 1, 2, 3, thru 10 by setting its dial at the appropriate step. Switches are 12 position, 360-degree type. Actual resistance is the sum of zero-resistance and indicated resistance. Model DR units provide zero-resistance of less than 0.003 ohm per decade.

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

DESCO TEST PROBE ADAPTERS

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer® Tester interchangeably.

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance

and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

PANEL METERS

BIG LOOK

Handsome, easy-to-read meters in two styles for all panel and control applications. All DC meters have self-shielded movement with pivot and jewel or taut-band suspension. Taut-band designs give great resistance to shock and increased sensitivity. Zener-diode, expanded-scale voltmeters available for improved narrow-range accuracy on 3 1/2" and 4 1/2" sizes. Snap-on, snap-off covers on meters. All types meet ASA Specification C-39.1.

Accuracy: ±2% FS, all DC and AC iron vane; ±3% FS, AC rectifier type (with 60-cycle sine wave at 25° C); ±0.5% of midspan, expanded-scale types. **Overload:** 20% momentary and sustained, voltmeters; 10 times rated current for 10 consecutive intervals of 1/2-sec. with 1-min. interval between successive applications, momentary; 20% for 8 hours, sustained, ammeters. **Scale:** Pivot and jewel, 90° rotation; taut-band, 100°.

Insulation: 2600 V rms hi-pot for all but 1 1/2" models (1600 V rms). **Response Time:** Meet or exceed ASA requirements: 3 sec. max. for microammeters; 2 sec. max. all other DC ratings; 2.5 sec. max. AC ratings. **Damping:** 40% max. overshoot; 2.5 min. damping factor. **Burden:** 5 amps, 0.5 VA, 0.5 power factor for AC ammeter; unity power factor, AC voltmeter.

HORIZON LINE

BIG LOOK PANEL METERS

Accurate, quick reading with wide, border-to-border scales; free from shadows. Most popular meter design with low-profile, easy-to-read sense. Aluminum frame holds reflections to a minimum. Big, bold numerals over cleanly marked divisions for fast reading. Tapered pointers assure high accuracy. Taut-band suspension provided on all models except 1 1/2" size. Standard 2 1/2" and 3 1/2" models come with sealed cases to protect against hair, dust, chemicals or other foreign particles. Shelf-shielded DC mechanisms; snap-on, snap-off covers.

HORIZON LINE PANEL METERS

Distinctive, low profile design for sophisticated styling. Best readability with swept-back windows to deflect light from line of sight. Both 3 1/2" and 4 1/2" meters may be mounted semi-flush or back-of-panel, recessed with face silhouetted by half-bezel frame to conserve space and improve readability. DC types have core-magnet d'Arsonval movement with pivot and jewel, or taut-band suspensions; self-shielded for use on any panel. Zener-diode, expanded-scale voltmeters available. Snap-on, snap-off covers supplied on 4 1/2" size.

HIPOTRONICS AC/DC HIPOT TESTERS & MEGOHMMETERS

MODEL 306B

300 SERIES

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC Hipot, DC Hipot and DC megohm tests. The "A" units perform IR tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

- The sensitive thyatron operated overload relay adjustable from 20 microamperes to 5 milliamperes, will in many applications, permit non-destructive hipot tests to be performed.
- When the overload is set to 20 ua, the high voltage will generally trip on the build-up of leakage current before actual arc-over occurs.
- The "B" series has a quadruple range current meter which permits leakage currents as low as 0.01 ua to be read.
- The "A" series permits the reading of currents down to 1.0 ua.
- The KV meter has two ranges and is connected directly at the output for maximum accuracy.
- Other features include an AC input switch, fuse and pilot light, front panel output jacks, continuously adjustable output control, guard circuit on "B" series, and a failure light with reset button.
- Housed in a totally enclosed dust-proof cabinet.

Size: 17" W x 9½" H x 11" D

Input: 115 volts, 60 cps, 1 ampere — all models

Weight: 20 pounds

- Voltage to 6 KV, megohms to 100,000

for production or laboratory testing of cables,
capacitors, printed circuits, transformers,
electronic assemblies, etc.

- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the quadruple range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 7 models, all with 115 Volt, 60 cps input and AC input switch, fuse and pilot light.

VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

30th Year

MODEL 34-FX-ser. A.
a popular 9 reed meter,
shown half actual size.

• **USES, Commercial and Military** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, television, and radar service, on engine-generator sets and standby equipment, in laboratories, in many types of aviation and electronic equipment, on panel and control boards, in inspection setups, and in high-cycle power sources — wherever constant or known frequency is important to accurate and efficient operation of equipment.

Superior performance for commercial and military applications is assured by more than 27 years of continuous experience and know-how covering the design and complete manufacturing of hundreds of thousands of these instruments in our Connecticut plant. Current production incorporates several innovations covered by recent J-B-T patents.

• **ADVANTAGES** — At reference temperature of 77°F most models have guaranteed accuracy of 0.3% or better of the frequency being measured, but the tables that follow indicate that certain models may be ordered with accuracy of ±0.1%. Accuracy on interrupted DC may be somewhat less. High fatigue strength provides a safety factor for continuous operation. Temperature compensations are not required as frequency change per °F is only .0075%, negative. For example, a 50°F temperature rise causes a 60 cps reed to read only 0.2 cps lower than at reference temperature.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to the frequency shown on the dial. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — Breadth of actuation differs with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 25 cycle reed normally will have substantially greater amplitude than a 400 cycle or a 1000 cycle reed.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter. Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

RUGGEDIZED AND ILLUMINATED METERS

Model with "RUG"—Sealed vibrating reed frequency meters and sealed elapsed time meters are available, when so ordered, to the intent of MIL-M-10304B, covering ruggedization of other kinds of meters, and usually are specified only for extra-severe shock and vibration.

LL Construction—Requirements for lighted meter dials have led to illuminating the 3 $\frac{1}{2}$ " FHXX Series of sealed meters. Light from a source behind the panel is admitted through a sealed window built into the meter case. Inquiries are invited.

400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

Among the variations which J-B-T produces on special order, are 21-reed, 390-410 cycles in 3 $\frac{1}{2}$ " case; and 11-reed; 780-820 cycles with 4-cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two reeds and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

RESONANT—REED RELAYS (Decoders) AND OSCILLATOR CONTROLS (Encoders)

Typical Sealed Oscillator Control RO-B10B-186.0

For technical description of J-B-T frequency-sensitive electromechanical control devices, see Bulletins 162R and D664A; for representative models and prices, see Section 5100 of this book.

FG SERIES for Modern Design; Picture Window Frame Optional

FG FREQUENCY METERS. Thoroughly modern in appearance, the sparkling clear-plastic front and the bright textured metal insert below the dial add zest to any panel. FG meters not only match the 3 $\frac{1}{2}$ " wide x 3" high front of the New EG elapsed time meters on the next page, but are interchangeable as to mounting with other kinds of panel meters. Standard voltage is 100-130 volts; accuracy and electrical characteristics are the same as corresponding FX frequency meters in the table on preceding page. For example, Model 30-FG differs from Model 30-FX only in the case. FG mounting details appear in line 9 of the Table of Dimensions below and in Prints SK-160 and SK-164, available on request. Further design flexibility is provided by use of the half-bezel adapter sketched below, in which a black plastic picture window frame outlines a panel area 3.83" wide x 2.27" high. . . . Three typical FG models are catalogued, but others are available on special order.

FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS

OVEN OR HEAT CHAMBER TESTERS

MODEL 23-JP-1. This popular portable indicating pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. 0-650°F. dial with 23/8" scale arc is covered by clear-plastic front (may be shipped as rectangular instead of round as illustrated). Sturdy, pliable, scuff-resistant black case is 4 1/2" x 2 7/8" x 4 1/4". Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error, as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5 1/2" calibrated thermocouple, clip, and convection shield **\$30.00**

MODEL 32-JP-3. This time-tested model has an instrument-type carrying case of natural finished mahogany 6 1/8" x 3 7/8" x 4 1/2" over hardware. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2 1/2° on a 23/8" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5 1/2" thermocouple, clip for affixing to grill and convection shield included **\$32.50**

MULTI-PURPOSE TESTER

MODEL 61-JRT. A 9-in-1 tester to speed accurate temperature adjustment and electrical analysis of ranges, refrigerators, test apparatus, etc. Rapidly reads four cold zones —100°F, +80°F, up to 14" distant; two heat zones 0-600°F, up to 5 1/2" distant; one voltage range 0-300 AC; and, with transformer, two current ranges, 0.30 and 0.60 amps, AC. Sturdy, polished walnut case, 15 1/2" x 10-3/16" x 4 9/16". Two color etched metal panel. Separate switches protect bulb and ammeter circuits. Requires one standard flashlight cell, replaceable in the field. Temperature accuracy ±2% of full scale; rectified AC readings ±5%. Accessories as listed may be added for testing appliances. Includes two SA-162 resistance bulbs, two SA-116 thermocouples, electrical leads, and AS-TR-2 built-in transformer. **\$135.00**

MODEL 61-JRT (LESS TRANSFORMER). Same unit, same scales except no reading in amperes; AS-TR-2 transformer omitted. **\$120.00**

AS-TR-2 Transformers for use with Model 61-JRT to provide readings of two current ranges: 0.30 and 0.60 amp. AC **\$19.00**

HEAT INDICATORS

MODEL 32-J PYROMETER IN SN-7 STAND. Mounted in sloping front black metal stand, 4 1/4" high x 4 3/8" deep x 4 1/8" wide. Compensated for ambient temperature. Medium resistance system, damped for quick reading on 23/8" scale, assures ruggedness and pointer stability. For ±2% accuracy, use only the type and resistance of thermocouple and lead provided; if extra length—coil it—to maintain calibration. A protection tube usually is not required. For convenience keep an extra thermocouple and lead on hand.

MODEL 32-J IN SN-7 STAND (Supersedes SN-3 Stand)
 0° — 650°F-350°C, includes SA-91 thermocouple, SA-84 lead, and CB-1 connector block **\$37.00**
 0°-1200°F-650°C, includes SA-87, SA-82, and CB-1 **\$37.00**
 0°-2000°F-1100°C, includes SA-87, SA-82, and CB-1 **\$37.00**
MODEL 32-J IN SN-8 STAND (not illustrated). With 3 binding posts to accommodate flexible extra lead and thermocouple for hard-to-reach locations. 0°-650°F including SA-91 thermocouple, SA-84 lead, CB-1 connector block, and SA-86 flexible leads and thermocouple. **\$41.00**

MODEL 32-JP-7. This model is recommended as the most versatile and easiest to read of this J-B-T series. The 0-650°F. scale is more than 4" long. Automatic compensation for ambient temperature is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5 1/2" thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., use appropriate accessory thermocouples. Tester price includes stitched Ever ready case, 5" wide x 5 1/2" high x 2 3/4" deep, of sturdy, scuff resistant black vinyl. **\$35.00**

TEST EQUIPMENT ACCESSORIES

WG-411A SLIP-ON HIGH-VOLTAGE PROBE

The WG-411A high-voltage slip-on probe was designed for use with either the WG-401A or WG-299D ac/dc ohms probes. It extends the dc voltage range of VoltOhmysts to 50,000 volts when used with WG-206 multiple-resistor. The extremely high impedance of the WG-411A is especially desirable when it is necessary to measure voltages found in geiger-counter tubes, television, and other high-impedance circuits which would not function properly if loaded down with a low-impedance voltmeter.

\$13.50*

WG-289, WG-297 HIGH-VOLTAGE PROBES

The WG-289 extends the d-c voltage range of the WV-77A, WV-77B, WV-77C, WV-87A, WV-87B, WV-97A, WV-98A, WV-98B and WV-98C VoltOhmysts to 50,000 volts. The WG-297 extends the range of the WV-77E VoltOhmyst and WV-38A Volt-Ohms-Milliammeter to 50,000 volts dc. The WG-289 is provided with a microphone-type connector, and the WG-297 is provided with banana-plugs for use with appropriate Volt-Ohmysts and other VTVM's, VOM's.

A choice of three multiplier resistors is available, enabling these probes to be used with many popular electronic and non-electronic volt-ohm-meters.

- WG-206 — 1090-megohm multiplier resistor for VTVM's having 11-megohm input (multiplying factor 100). Use WG-206 for the WV-77, WV-87, and WV-98 series VoltOhmysts@.
- WG-210 — 900-megohm resistor multiplies 5000-volt dc range of 20,000-ohms-per-volt VOM's by a factor of 10.
- WG-211 — 495-megohm resistor multiplies 250-volt dc range of 20,000-ohms-per-volt VOM's by a factor of 100.
- WG-289 or WG-297, Probe only, less resistor **\$13.50***
- WG-206 or WG-210, Multiplier Resistor (each) **\$ 3.75***
- WG-211 — Multiplier Resistor **\$ 3.50***

WG-304B RF MODULATOR

An accessory used to check the over-all frequency response of TV receivers from antenna to picture tube grid. The unit permits modulation of an rf marker signal from a marker generator (such as WR-89A or WR-99A) by a signal from a video sweep generator (such as WR-59C or WR-69A)..... **\$18.00***

WG-349A DIRECT/LOW-CAPACITANCE PROBE

A 48-inch, small diameter, extremely flexible shielded cable designed for use with the WO-33A Oscilloscope. The probe consists of three short leads with alligator clips for ground, direct, and low-capacitance connections. For convenient use, the WG-349A eliminates the need for switching. It connects to the oscilloscope by means of a miniature-type microphone connector. Increases input characteristics to 10 megohms, 12 pF capacitance, when used with the WO-33A and WO-33A(K). **\$6.75***

WG-301A CRYSTAL-DIODE PROBE

"Slip-on" type for use with the WG-299A, B, C, or DC/AC Ohms Probe and Cable extending the frequency range of Volt-Ohmysts® to 250 MHz ...**\$8.25***

WG-302A RF/IF/VF SIGNAL TRACING PROBE

"Slip-on" type high-frequency probe designed for use with the WG-300A and B probe and cable to permit visual signal tracing for rapid isolation of trouble in radio receivers and in television if and video stages **\$9.00***

WG-299D DC/AC OHMS PROBE AND CABLE

The WG-299D is a single-unit probe for use with VoltOhmysts® except WV-77E. Switch provides instant selection of dc or ac/ohms operation. The WG-299D replaces the WG-299A, WG-299B and WG-299C **\$9.00***

Manufactured in SHURITE'S new Connecticut plant, Shurite meters are attractive, rugged, dependable instruments with accuracy well within $\pm 5\%$, and the ability to duplicate readings. DC meters are polarized-vane solenoid type (moving-magnet or bridge-type construction where indicated); AC meters are double-vane repulsion type with jeweled bearing. The jewel construction costs more to build, but it pays off in continuing accuracy during a longer useful life. Models 550 and 950 fit 2-5/32" hole; Model 850 fits 2-5/32" to 2-1/32" hole. All are guaranteed.

Simpson elapsed time indicators

SECTION 2900

Widely used by research labs, manufacturing plants, and broadcast stations . . . to keep life and performance records based on operating time. Models 55ET and 57ET match standard 3½" Simpson meters. New model 105 has modern appearance, with clear lucite cover. New DC model 106 gives accurate (±2%) time readouts where synchronous AC power is not available. Model 106 withstands ambient temperatures from -40°C to +65°C (-40°F to +149°F). Models 105 and 106 manufactured in West Germany.

AVERAGE SENSING, TRUE RMS & DC SEGMENTAL INSTRUMENTS

Segmental Voltmeters and frequency meters make it possible to measure very small changes in input conditions. The significant portion of the overall voltage or frequency range is expanded to occupy the full scale length. Thus, only that segment of the range that is important appears. In addition to the standard expansions and accuracies shown, special segmental voltmeters can be built on order. Write the factory for a quotation.

The A.C. segmental voltmeters are available in either average sensing or true R.M.S. sensing units. When working with sine wave currents or when other measurements will be made with average sensing equipment, the average sensing meters are preferred. When working with distorted waveforms, as would be encountered in constant voltage transformers, S.C.R. circuits, D.C. to A.C. solid state inverters or similar equipment, the true R.M.S. sensing meter would probably be preferred.

THERMOCOUPLES

Stack thermocouples are iron-constantan, calibrated to 5 or 10 ohms ±1% per table.

Types 21221 and 21224 are iron constantan thermocouple wire in a stainless steel overbraid for rugged service application where flexing or abrasion would cause deterioration of standard thermocouples.

Types 21222 and 21223 are iron-constantan thermocouples with a glass cloth overbraid. These thermocouples are suited for most general purpose use or for permanent mounting in protected sheaths or conduit.

Contactless Meter Relays

Maximum reliability design

Intended for control, alarm, and limit applications — with utmost dependability. Photoconductor sensing eliminates all interference with the indicating meter. High gain transistor switch circuit provides solid state reliability, accurate switching, and extremely small dead band. Control points are adjusted from the front panel thru a gear drive. The solid-state switching circuit triggers internal 10-ampere DPDT relays (one for each control point). Ideal for unattended operation, they can be obtained from stock in a wide selection of ranges, with either dual or single control points, and in three sizes.

SPECIFICATIONS (Stock Models)

CALIBRATION ACCURACY: ±2% of Full Scale.

CONTROL POINT ADJUSTMENT: The single control is adjustable over the complete 100% arc. The double control limit is variable from 0-95% while the high limit can be located from 5% to 100%. The control points on a double control can be adjusted within 4° of each other. Control point indication is within 1% of control switching.

CONTROL POINT DIFFERENTIAL: Difference between "on" and "off" is within .5% of Full Scale.

POWER REQUIREMENTS: 115 Volts A.C. 50-500 CPS D.C. power required for sensing and switching is provided by the external power module furnished with dual control models. Single control models have self-contained power supply.

OUTPUT: D.P.D.T. relay contacts for each control point. Contacts rated @ 10 amperes, 115 A.C. resistive.

METER INDICATION: Continuous, unaffected by control point setting.

CONTROL CIRCUITRY: Fail safe. Both slave relays. "open" in event of power failure.

MOVEMENT: Self-shielding pivot and jewel or Taut Band.

EXTERNAL POWER SUPPLY — Used with all two-control models (supplied with unit).

Contact Type Meter Relays

Model 29XA

for alarm control or limit applications on equipment designed for unattended applications

Contact making types are well suited to most general purpose applications in which cost and reasonable reliability are primary considerations. The contacts are the non-locking type and may be positioned along the scale arc by an external, front adjusted gear drive. Styling and mounting dimensions are designated as the Model 29XA.

SPECIFICATIONS

GENERAL: Model 29XA Relays are of the D'Arsonval Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

CALIBRATION: Accuracies ±2% of full scale.

CONTACTS: Gold Alloy. For use @ 15 volts DC, 10 milliamperes maximum, on resistive or diode protected inductive loads.

CONTACT ADJUSTMENT: Contacts are externally adjustable over 95° of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

CONTACT DIFFERENTIAL: Normally, contacts will close within 2% of full scale value and break within 10% of full scale value.

INSULATION: Breakdown 300 volts AC from Relay contacts to meter circuit, 3 KV AC from Relay terminals to mounting panel. (All Tests at 60 cycles.)

Model 383A CAPACOHMETER® IN-CIRCUIT Capacitor Leakage Tester

"ONE PACKAGE FLEXIBILITY"

- Measures the leakage resistance of defective paper, mica, or ceramic capacitors
- Indicates directly the capacitance of good paper, mica, or ceramic capacitors over a range of 10.0 pf to 10.0 mf

A pulse technique detects many marginal capacitors. All measurements are made under load conditions. No adjusting of a bridge circuit and balancing controls. Borderline capacitors which cause costly "call backs" are detected immediately with the pulse test.

Line Voltage: 105/125v, 60 Hz.

Shipping Weight 12 lbs.

Complete with test leads and operator's manual \$139.00

MODEL 1699

This instrument was designed to measure low values of resistance accurately, rapidly, and at low cost. It compensates for the shortcomings of the conventional ohmmeter in the area of low-resistance measurement, while retaining the ohmmeter's simplicity of operation.

The Model 1699 Milliohmmeter determines the value of an unknown resistance by comparing it with a known standard internal resistance.

In low resistance measurements, the contact resistance of the meter probes and the resistance of the test leads become significant sources of error. These errors are avoided by using test leads terminating in Kelvin Clips coupled with a unique circuit which has separate current and voltage paths. This results in $\pm 1\%$ of full scale accuracy — even on the 0-0.05 ohm range.

1700 SERIES

These standards are designed for long-term accuracy under maximum usage. Spring-loaded sapphire jewels and hardened pivots insure high shock resistance and minimum friction. A high damping factor, added to high torque, provides rapid response to input level variations and minimizes overshoot.

The combination of a self-shielded, deep-core movement and a steel case makes these instruments impervious to most external magnetic fields found in industry.

These standards use a knife-edge pointer and mirror scale to eliminate parallax errors.

A large-diameter, ceramic rotary switch with solid silver contacts provides range-change in Models 1700, 1702, 1703 and 1704 so that only two binding posts are necessary. On the Model 1701 Ammeter a separate set of 3-way binding posts is provided for each range.

All 1700-series standards are temperature-compensated for operation from 15°C. to 35°C.

SLO-SYN[®]

TYPE SS25

TYPES SS400 & SS402

TYPES SS150 & SS152

TYPES HS50 & HS52

TYPES X250 & X252

TYPES X1000 & X1002

A-C OPERATION — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 hertz. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types SS150 and SS152 use Class A insulation; all others have Class B.

D-C STEPPING — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200

steps per revolution. Accuracy of the steps is ±.09° non-cumulative. Three-lead types require a center-tapped d-c supply and single-pole, double-throw switching; four-lead types require a single-ended power supply and single pole, double-throw switching. Bifilar motors can also be used with transistorized switching circuits. With a suitable control potentiometer instead of switches, a SLO-SYN motor can be made to rotate steplessly, permitting extremely accurate positioning. All motors have lubricated-for-life bearings.

PRECISION STEPPING

For phase-switched d-c stepping, types HS25, HS50, HS50D and HS50L make 200 steps per shaft revolution. Each 1.8° step is accurate within ±3% (.06°) noncumulative. May be operated at speeds greater than 500 steps per second if accelerating and decelerating circuits are used. With proper circuitry, the motors may be operated at speeds of 1000 steps per second or higher without missing any steps.

200 RPM

Types TS25, TS50 and TS52 are similar to standard models but operate at synchronous speeds of 200 rpm and take 36 or 72 steps per revolution when used for d-c stepping.

SLO-SYN® Preset IndexersTWO-AXIS
TYPE 2SP1800-4SINGLE-AXIS
TYPE SP1800B-4ABSOLUTE
TYPE SA1800-5

Used to control indexing of SLO-SYN bifilar motors. The index angle, or position, can be preset by dial setting on the control panel the number of 1.8° steps to be driven. Have provision for actuating any external equipment needed to perform related operations. Index, jog and free run can be initiated manually from the control panel or from an external switch. Can be made to cycle automatically with proper external switching. Single- and two-axis models are available with counting ranges to 99,999 steps. Two-axis models provide independent control of two SLO-SYN motors. Speed adjustable from 4 steps/second up to maximum possible with motor used. Optional backlash take-up circuit.

ABSOLUTE PRESET INDEXERS permit either absolute or incremental positioning modes. In the absolute positioning mode, the number set on the controls determines the final position of the motor relative to the starting, or "zero" point. When incremental positioning is used, the motor will move the preselected number of steps each time the INDEX button is pressed. Optional backlash take-up circuit.

SLO-SYN®*Translator*

TYPE ST1800B

Pulse-to-step converter designed for use with appropriate bifilar SLO-SYN motors converted for incremental stepping. Convert low level signal pulses or square waves into the correct switching sequence needed to step a SLO-SYN motor at 200 steps/revolution (1.8° per step). Input is 105-125 volts a-c, 1 ampere. Signal input impedance is 500 ohms. Used for programmed positioning, indexing and indicating operations.

SLO-SYN®*Adjustable Speed Drive*

TYPE ST1800BV

Essentially, SLO-SYN Adjustable Speed Drive type ST1800BV is a translator which includes a built-in oscillator to supply the triggering signals. Oscillator frequency can be adjusted to vary the speed from 4 steps/second up to the maximum permissible with the motor used. Direction of rotation can be controlled either from the front panel or from a remotely located switch.

SLO-SYN®*Translator Module*

TYPE STM1800V

Plug-in circuit boards with logic capabilities for stepping a SLO-SYN motor in 1.8° increments. Type STM1800 is a basic translator which will provide bidirectional motor operation. Type STM1800V is similar but includes a built-in oscillator which can be adjusted to drive the motor at speeds from 4 steps/second up to maximum at which the motor will drive the load.

SLO-SYN® High Speed Drives*Translator*

Drive SLO-SYN Precision Stepping Motors up to 2000 steps per second without losing any steps. Triggering the translator circuits is an internal oscillator which can supply a variable frequency range adjustable from 50 to 2000 steps per second. Triggering pulses can be supplied by tape readers, computers, oscillators, pulse generators and other signal producing equipment.

TYPE HTR400

Preset Indexer

Drive SLO-SYN Precision Stepping Motors in indexing and other positioning operations. Acceleration and deceleration circuits permit driving motors up to 2000 steps per second without missing any steps. Decade counter controls on front panel allow the operator to select any desired positioning increment. Optional backlash take-up circuit.

■The suffix "M" in A725M, A750M, and A750DAM identifies extremely sensitive controls with sensitivity adjustment that operate with very short light change. The "M" type controls have been developed for operation by photo sensors that have the "5A Feature" described on the opposite page. This combination is used for scanning register marks; for sensing fast moving objects and other applications where light change is short. Sensors with the 5A Feature are also used where the sensing head is exposed to high temperature.

**A750DA Extra Fast Timed Output
Pulse Width Control**

Timing Ranges same as A750

The Control Relay of the A750DA energizes instantaneously with adequate light change and de-energizes at expiration of pre-set timing period as follows:

With LIGHT Terminal connection the control relay energizes instantly when the cell receives enough light; remains energized even though the cell goes dark and de-energizes when the Timing Period expires, except: while the relay is energized, if the cell goes DARK and then goes LIGHT before the Timing Period expires the relay remains energized and a NEW Timing Period starts.

With DARK terminal connection, DARK on the cell produces the same relay action as LIGHT does in the above.

Timing and Sensitivity Adjustments are inside cabinet.

Adjustable time delay repeat accuracy 1%. Time Delay adjustment has shaft lock.

Power consumption, 25 VA.

E8LP12G Specular Reflective Scanner Head

For high speed scanning service in minimum space. E8LP12G Scanner Head combines the fast acting cadmium selenide cell and the light source lamp in a single miniature housing (approximately 7/8 inch in all three dimensions plus 1/2" male pipe thread connection. See dimensional diagram below.)

The light sensing element is a fast response, cadmium selenide cell. The lamp has a built-in lens. An infrared filter helps protect against ambient light. The lamp rating is 2.5 volts at .5 amperes—life expectancy up to 75,000 hours depending on operating voltage.

E8LP12G Scanner Head including mounting bracket, also 6-foot factory-connected cable with cable grip and seal for connecting to 800 control. \$28.75

E8S12G Retro-Reflective Scanner Head

For use with retro-reflective tape or other retro-reflective material. May be used with a retro-reflective mirror when it acts as a sort of limit switch or for detecting or identifying objects with retro-reflective markings, code marks, labels, etc.

The light beam does not need to be perpendicular to the retro-reflective surface; beams at angles up to 15° and more (depending on conditions) bounce straight back to the cell.

A2BX Solar ON/OFF Control

Automatically turns lights "ON" at preset light value—and turns lights "OFF" when light exceeds preset value.

DPDT Control Relay energizes when light exceeds intensity for which control is set; de-energizes when light falls below the preset level.

In case of tube failure the relay de-energizes; providing same control action as when light falls below preset level.

Dual Time Delays prevent operation by either momentary light flashes or shadows. Modern, simple circuitry uses one rugged, premium type power tube. Light intensity adjustment from outside of housing. Gasket-sealed cast aluminum housing, tapped for 1/2" conduit. For 115/230 v, 50-60 c. Power consumption, 20 watts

Available with three adjustment ranges:
 No. A2BX-2; 1 to 5 fc for street lighting, parking lots
 No. A2BX-5; 15 to 50 fc for signs, parking lots
 No. A2BX-1; 20 to 150 fc for obstruction or tower lights

Current Surge Overload Protection

Unique Protection for tools, equipment, personnel

The Surj-Switch uses electronic amplification for instant reaction to variations from normal load current. Easily adjusted on the job to operate at the desired value.

The 10-amp, SPDT Control Relay may operate a warning signal, a lubricating circuit, feeding rate control, etc. without interrupting operation or may be used to stop operation.

Used on surface grinders to warn when excessive pressures are applied; on machine tools to warn when tools become dull; on automated installations; whenever load change indicates trouble.

Model JA Surj-Switch. For under loads....\$65.00

Impak-Switch Die Protection

In the above diagram each piece properly ejected from the die strikes the impact sensing plate which actuates the Impak Control and the Control re-cycles the press control for another stroke.

The impact of falling parts against the sensing plate of the Impak-Pick-up activates the Impak-Switch. Objects may be of practically any reasonably uniform size, ranging from ball bearings to heavy stampings, etc.

In other die protection applications the Impak Control has time delay set to barely exceed the complete stroke cycle of the press. Each properly ejected piece re-cycles the Impak Control before the timing period expires.

Model Z Impak-Switch—for use where impact is not less than one ounce falling 2 inches and each object strikes only once.....Net \$60.00

Model C3 Impak-Switch—for use where impact force is limited, where high speed is required or where objects may strike more than once. Net \$145.00

Tubeless Bin Level Control

Tubeless Photoelectric actuation—unaffected by pressure of material in the bin. Only rigid, non-moving Lucite probes project into the bin. Cast aluminum, gasket-sealed housing mounts to bin wall as shown. Removal of cover makes all parts accessible. Dust-covered plug-in DPDT 8-ampere relay provides ON/OFF control for either high or low bin level. All wiring connections brought out of case in 3-foot oil-proof cable. For 115/230V, 50-60 C.

Two Terminals — Fully Insulated

Meet or exceed environmental and operational requirements of MIL-L-6723 and MIL-L-3661.

RUGGED CONSTRUCTION

Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached. The use of phenolic material for military specification grade assures permanent isolation from ground. These assemblies are solidly made to withstand usual vibration and corrosion resistance tests.

Order Complete with Lamp. Specify Lamp Number.

DIMMERS — MECHANICAL or POLAROID

Choice of mechanical or polaroid dimming device. Polaroid produces some reduced intensity at all settings, but gives full diameter opening.

Mechanical varies opening size to complete blackout or has permanent small opening as in "semi-blackout" type.

WATER-TIGHT ASSEMBLIES

Water-tight construction: These Sub-Miniature Lights are completely water-tight on the face of the panel. Water-tightness is achieved by means of retained O-ring seals. One O-ring is retained within the back of the lens cap, the other behind the flange on the mounting bushing.

ELDEMA INDICATOR LITES

R - LITES

R-Lites are Eldema's product family of relampable holders and lens caps for the midget flange based T-1 $\frac{3}{4}$ incandescent and T-2 neon bulbs. The lamps and lens caps are replaceable from the front of the panel. There are five R-Lite groups — each with its own features — the holder and lens cap part numbers in each group start with the same two letters to insure mating parts.

RM AND RN SERIES

The RM-RN groups meet MIL-L-3661. The RM is for incandescent lamps — the RN Series with a built in resistor is for neon lamps. Standard types RMA and RNA — waterproof types RMW and RNW — two tin plated lug terminals — black anodized aluminum cases — high impact plastic lenses. Mount from the front in $\frac{15}{32}$ " holes. Equivalent Military numbers are listed.

E. F. JOHNSON CO.

E. F. Johnson pilot lights have been classified as "PREFERRED TYPES", and are immediately available at parts distributors throughout the country. Specials, including types meeting military specifications, are available in production quantities.

Pilot lights

When ordering -1 indicates clear jewel (i.e. 147-1000-1); -2 transparent red; -3 transparent green; -4 transparent amber; -5 transparent blue; -6 opal. Green and blue not recommended for use with neon lamps. In pilot light sockets with built-in resistors for neon bulbs, higher resistance values give longer life; lower resistance values give greater brilliance.

For detailed specifications covering the entire Johnson pilot light line, write for complete catalog using your company letterhead.

RIB-LOC MINIATURE PRESS-IN INDICATOR LIGHT

New RIB-LOC light simply presses into place in a .312" diameter round hole. Typical push-in force in 1/16" thick aluminum panel is 15 lbs.; push-out force, 20 lbs.; torque to rotate, 32 oz. in. Ribs bite into sharp edges of hole to provide positive retention. Durable polycarbonate lens in six colors. Long-life incandescent bulb. Black polyamide housing. Terminations are 1/16" diameter terminals staked to body.

Polyamide spacers

These convenient polyamide spacer bushings make it possible to snap PC boards to a chassis and provide a choice of stand-off heights from .125" to .750". They provide mechanically secure, insulated mounting, yet PC boards can be quickly removed. Machined from nylon, the design provides permanent, snap-in insertion into pre-drilled or punched holes in any 1/16" chassis or panel. (Also available as specials for other panel and board thicknesses.) The other end of the spacer snaps in or out of the PC board so that the board can be removed for service or modification.

PORTABLE HIGH VOLTAGE DC POWER SUPPLIES

These general purpose supplies are particularly suited for laboratory or production line use to provide a convenient source of high voltage, low current dc power. Widely used for such applications as powering photo-multiplier tubes, image intensifiers, condenser charging, and routine insulation breakdown testing.

Voltage readings are indicated by a 6" precision mirror scale kilovoltmeter of 1% accuracy. Polarity is reversible from the front panel (patent applied for). An ac input protection fuse is included as well as a built-in limiting ballast lamp restricting maximum current output levels. These levels may be adjusted by changing ballast. A single control allows continuous adjustment of output voltage from zero to maximum rated voltage.

The output is unregulated (regulation is 20% for 10 to 100% loading). Current rating is 5 milliamperes. The ripple is 5% (rms) at full voltage and current load.

HIGH VOLTAGE SWITCHES

For high voltage, low current circuits requiring complete isolation; nominal rating 5,000 volts (D.C. or A.C.) Model A or D may be used in lower duty circuits to 10,000 volts D.C. Steady state current rating 500 milliamperes—5Ma when switching. Isolated for 15,000 volts D.C. test to ground ... made of modified Diallyl Phthalate. May be ganged together for 2 gang operations.

PACKAGED POWER SUPPLIED AND ZENER REGULATORS

These new low-cost units make D.C. voltage problems easy. Just wire input and output connections and the unit is ready to operate. Building block construction provides a basic transformer, a rectifier unit, and where necessary a regulating device. These three elements bolt together quickly and maintenance is simplified should any of the components fail. Each of the three basic building blocks are mechanically constructed in a molded Diallyl Phthalate shell and encapsulated with epoxy resin.

ZENER REGULATOR

PACKAGED POWER SUPPLY

The output is completely isolated and either post may be grounded or the unit operated as a floating supply. The D.C. voltage is filtered and provides 5% or less ripple. Output may be varied from full rating down to zero by simply inserting a small adjustable transformer in the input. Most units are rated for 5 MA current. Power supplies 7.5 KV and higher have modified mechanical construction from that described above. Input 115 V. 60 Hz.

Use with High Voltage Zener Regulators to obtain 1% line and load regulation.

Simply connect in parallel* with any high voltage power supply and automatically obtain line and load voltage regulation as well as ripple reduction. Nominal current rating is 0.5 to 1 MA for better than 1% stabilization. Regulation over range of 0 to 5 MA is 3%. Can be wired in series for high voltage service (five 4,000 volt types to regulate a 20,000 volt power supply). Twenty built-in taps included, each provides a regulated voltage to an accuracy of 20%. Ideal for photomultiplier tubes. Use as a high voltage reference in conjunction with regulator amplifier circuitry.

*If necessary, insert a series resistor to limit zener current to under 5 MA.

AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment

General Electric a-c voltage stabilizers are static-magnetic transformer-type products which provide voltage maintained within $\pm 1\%$ variation while input line voltage fluctuates $\pm 15\%$. They are offered in the following variations:

Unfiltered output: output voltage waveform is relatively flat-topped, with harmonic content from 15 to 20%.

Harmonic filtered output: output voltage is filtered to near sinusoidal waveshape, with a maximum of 3% harmonic content.

Enclosed construction: completely metal enclosed for safe external mounting.

Open construction: for installation within electronic or electric equipment.

Cord/Receptacle units: for convenient temporary connections.

SINGLE PHASE — Magnetic-capacitor circuitry is frequency sensitive. Stabilizers designed for one frequency are not suitable for use on another.

THREE PHASE — Standard single-phase a-c voltage stabilizers can be connected for 3-phase, 4-wire loads with input connected delta. However, single-phase models cannot be connected for 3-phase, 3-wire loads: select from 3-phase delta-delta models.

REGULATED DC POWER SUPPLIES

Improve Performance of Computers and Other Electronic Equipment

These component power supplies can be used in a wide variety of applications where relatively constant d-c voltage is required despite fluctuating line voltages. Computers, process control equipment, and electronic measuring devices are typical applications where demands for accuracy require constant regulation of voltage.

Performance-proved GE d-c power supplies can be designed to suit your needs for either 50- or 60-cycle power sources.

† May vary ±1%. All standard units come equipped with a plate for 19-inch rack mounting.

‡ Indicates approximate percent increase in output voltage due to decrease of load current from full load.

§ Rack mounting plate has four mounting slots on each end. Distance between centers of two outer slots is 7 1/2 in., between two inner slots 3 in.

¶ Not available for 19-inch rack mounting.

Mounting holes suitable for 1/4-20 screws. Length of screw may vary with chassis height.

Typical circuit showing voltage stabilizers and filter components.

EFFECT OF INPUT VOLTAGE VARIATION

D-c power supplies can be designed for various input voltages and ranges. With all other variables constant, the output voltage will not vary more than ±1 percent for a change in input voltage over the rated range of 97 to 130 volts input.

EFFECT OF TEMPERATURE CHANGE

For every 40C change in the ambient temperature, the output voltage level will change approximately one percent.

EFFECT OF FREQUENCY

A change of one percent in frequency will change output voltage level approximately one and one-half percent.

ISOLATION

All d-c power supplies provide electrical isolation between the a-c power source and the d-c load.

POLARITY

GE d-c power supplies can be designed with the polarity you require. All standard units listed can be installed with either plus or minus grounded.

RIPPLE

Ripple levels of one percent RMS meet most requirements. However, other levels of ripple content can be designed into G-E power supplies.

EFFICIENCY

Efficiency ranges from 70 to 85 percent for normal output voltage levels. For unusually low output voltages or low power ratings, some decrease in efficiency may occur.

REGULATION

Load regulation characteristics depend on the rated output voltage and rated power level of the power supply.

Prices subject to change without notice.

HIPOTRONICS

HIGH VOLTAGE POWER PACKS

The Hipotronics wide range of compact miniaturized power packs with output voltages from 2 to 100 KV and current ratings of 2, 5 or 10 milliamperes are designed for long life and trouble free operation. Advanced high voltage techniques developed by Hipotronics permit greater size and weight reduction than previously possible.

All units are housed in a hermetically sealed MIL-T-27A can and vacuum filled with mineral type transformer oil or epoxy. The insulating medium insures corona-free operation and allows for running the supply at 3 or 4 times normal current rating for long periods of time. The corona free operation precludes component failure caused by long term corona degradation of insulation and guarantees a pure DC output free of any interfering high frequency signals which might possibly influence or affect the system which it is powering.

Every component in the supply is operated at well below its design rating and pre-assembly hipotted at one and one half times its operating voltage.

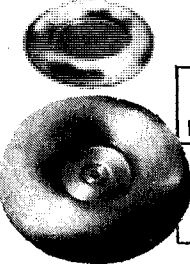

The output connections are high voltage ceramic type on models 30 KV and below and through plug in re-entrant receptacles for coaxial cables on greater than 30 KV units. Three foot cable assemblies are supplied with each re-entrant bushing type and longer ones are easily assembled if required.

HIGH VOLTAGE POWER PACKS

COMPACT "M" SERIES 2 TO 75 KVDC

The "M" series Power Packs are a completely new design. Long life and a small package directed the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Standard input voltage is 118 at frequencies from 50 to 500 cycles per second inclusive. Available also are input voltages of 220, 230 and 240 volts from 50 to 500 cycles per second inclusive. For 220 volts suffix the desired part number with "X", 230 volts "Y" and 240 Volts "Z". All units may be modified for other input voltages.

The output is filtered DC and standard potentials and current ratings are listed below. All units can be modified for any required potential and current below the values specified in the listing. The output potential can be varied from zero to the rated voltage and load by means of a variable auto transformer at the primary.

Ripple is 1% RMS or 2.75% peak to peak at rated current and voltage.

Design life is 40,000 hours at 35°C and 5,000 hours at 85°C.

Case finish is light blue gray lacquer per MIL-L-7178.

All units except the 75 KV, have two output terminals isolated from the container, permitting either terminal to be operated at ground or an intermediate point between them can be tied to ground. The 75 KV unit has a single high voltage terminal for the output. The Power Pack is normally furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be shipped as such from the factory upon request. The polarity can be easily reversed as required by opening the top access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left ungrounded so that the lead current be monitored if required.

SOLA® CVDC power supplies, available off-the-shelf.

Sola offers a wide range of CVDC type power supplies which are available from stock of your local electronic parts distributor or the factory. These standard designs are available in any quantity and are the result of Sola custom engineering efforts.

Inherently highly reliable, the CVDC supplies are ruggedly built and use simple circuitry. Fast and dependable regulation, current limiting, and high efficiency are provided by the heart of the supply: the famous Sola Constant Voltage Transformer.

CHARACTERISTICS

- Fast, dependable line-voltage regulation: within $\pm 1\%$ for fluctuations of $\pm 15\%$; voltage will return to regulation envelope in approximately 50 milliseconds.
- Load regulation: from 1/2% to 8%, one half to full load.
- Automatic current limiting; short circuit protection; withstands load faults; high overloads cannot damage power supply or equipment components.
- High efficiency: upwards of 75%; low input-power requirements.
- Simplified operation: no adjustments or maintenance; continuous duty.
- Convection cooling.
- Ripple: 1% rms maximum.
- Ambient operating temperature: 50° C maximum.

Constant-voltage Sola transformer provides $\pm 1\%$ regulation for line voltage variations as great as $\pm 15\%$, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

STABILINE[®] automatic VOLTAGE REGULATORS

- THE MOST EXTENSIVE LINE OF AUTOMATIC VOLTAGE REGULATORS
- RATED OUTPUTS FROM 0.25 TO 275 KVA

Deliver a constant output voltage regardless of variations in input voltage or changes in load current. Conservatively rated, ruggedly built, precision products. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input voltage range shifts with output voltage setting. All are cabinet types; those with other construction also are indicated.

EMT series

Electro Mechanical Transistorized types in ratings from 2.3 to 118 kva. Control circuit is completely transistorized. POWERKOTE Coils in power section permit higher output ratings. Rated accuracy $\pm 0.75\%$ for all variations of line voltage or load current within stated range of unit.

TYPE EMT4115B

EMS series

Electro Mechanical Transistorized types for single or three phase duty with ratings from 25 to 275 kva. Several types available with individual line control for greater application flexibility. Plug-in transistorized control circuit permits quick replacement in event of malfunction.

TYPE EMS42100

TYPE EMK4105R

EMK series

Electro Mechanical high speed, high accuracy assemblies in ratings of 2.5/5.0 KVA. Accuracy $\pm 1.0\%$ of nominal output voltage.

TYPE IES9101

IES series

Solid-state types with accuracy within 100 millivolts bandwidth, efficiency up to 95%, fast response, low distortion and wide operating frequency range. No vacuum tubes, motors, blowers or relays are used. All units have provision for remote sensing and have removable plug-in solid-state circuit boards.

All-boost Marine

Electro Mechanical Transistorized type EMT10228 is fully enclosed in a weatherproof cabinet. Well suited for marine or industrial applications where equipment must withstand effects of dust and moisture. Has 6 KVA rated output.

TYPE EMT10228

Militarized

Standard Electro Mechanical and Electro Mechanical Transistorized types that meet the requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½"; type EM4108MCR fits standard 19" relay rack. Accuracy $\pm 1.0\%$.

TYPE EM4108MCR

Overvoltage Detector OVK100

TYPE OVK100

Solid-state voltage level detector used with STABILINE Automatic Voltage Regulators. Actuates relay contacts when monitored voltage exceeds preset level. Relay contacts can be used to actuate protective equipment in a latching (relay remains closed) or nonlatching (relay automatically resets) connection. Trip level adjustable from 110 to 150 volts. Adaptable for higher voltage operation.

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are manufactured on automatic high production equipment — resulting in a low price — and top quality. Quality is not sacrificed at any point. For example, although contacts are rated at 3 amps, 10 amp contacts are actually used. Similarly with all other parts—only the best available are used.

Amperite Thermostatic Delay Relays are actuated by a heater . . . and therefore can be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.

For 220V use a 6500 ohm-5 watt resistor in series, with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

Amperite Delay Relays are approved for all voltages up to and including 115V under the component regulations of Underwriters' Laboratories, Inc.

VARIATION OF DELAY WITH HEATER VOLTAGE

FIG. 1—Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

FLASHERS		- 1/2a AC		

CONTACT DROP: — 0.1V — Prox. at 1A.

DELAYS AVAILABLE:—From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay up to 120 seconds can be increased up to 25% by using a resistor in series with the heater. Delays above 120 seconds cannot be increased. Relays with short delays such as 2 to 5 seconds can be increased 50%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115V — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. **SHELF LIFE** of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd across contacts. In some cases, putting a 20,000 ohm, 5w. resistor across the contacts reduces the arcing considerably.

Relay Contacts should not be used on voltages above 220V.

FOR INSTANTANEOUS RECYCLE AND ELIMINATION OF CHATTER

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a Magnetic Relay as shown above. If normally closed is required — use a normally open Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG CYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 7 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

SHORT FRAME

TYPE 4C Relays constructed on the same general design of compact assembly and possess similar specifications. The heelpiece, armature and coil core are made of annealed magnetic iron, with the heelpiece acting as a return path for the magnetic circuit. The armature is pivoted on long-life bearings to insure constant pickup and drop-out adjustment. Standard relays are supplied with solder terminals for contact springs and coils.

Standard Contacts: 18 ga. palladium, rated 3 amps, 150W. resistive. (Gold Flashed)

TIME DELAY

TYPE DT Efficient, low-cost units used in conjunction with various relays for delayed making or breaking of controlled circuits. Applicable wherever a time delay of 5 to 60 seconds is needed. Units are adjustable with a range of 8 to 20 cycles per minute. Operating on the bi-metal thermal principle, these types are housed in unglazed porcelain, and are obtainable with either normally-open or normally-closed contacts.

Dimensions: H. 1 1/4", W. 1 1/4", L. 1 3/4".

Mounting Data: 2 holes .154 dia. for 6-32 NC-2 screws; 1 3/8" centers.

Weight: 1.4 oz.

SENSITIVE

TYPE SV For use in any DC circuit restricted to a few thousandths of a watt power consumption.

Transparent, molded plastic cover guards against dust or dirt reaching the contacts or other working parts.

Adjustments are quickly made with the vernier screws which vary relay sensitivity from the 5-milliwatt factory setting. Both the two stationary contacts and the spring tension can be accurately and permanently set—yet easily changed.

Dimensions: H. 1 1/2", W. 2", L. 2 3/4".

Mounting Data: 2 holes .52 dia.

Weight: 6.5 oz.

Sensitivity: 5 Milliwatts.

STANDARD PLUNGER
STYLES AVAILABLE

TYPES 38, 39, 40, 41, 42, 51 Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A. C. solenoid. Special production techniques and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.

GUARDIAN® ELECTRIC

GUARDIAN AC SOLENOIDS and SOLENOID SWITCHES

Solenoids available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85°C. above 24°C. ambient, without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85°C. above the 24°C. ambient temperature when operated at rated load. Plunger has slotted end with 1/8" diameter hole for coupling.

When Ordering give the following information: (1) Solenoid Number; (2) Operating voltages and AC or DC current; (3) Continuous or intermittent duty (if intermittent, give the cycle of operation, length of time current will be passed through the coil, and any other pertinent information); (4) Maximum stroke and maximum pull required.

Pull Data listed in this bulletin obtained during "cold" operation.

"S" indicates single pole double throw switch, rated at 10 amps 115 vac.

GUARDIAN PROTECTIVE SENSOR DEVICES

Fast-acting voltage, frequency and phase rotation sensors provide accurate repeat cycle characteristic of solid state input sensors, plus dependable 3PDT relay output. For use in visual or audible indicating devices or transfer switches. Sensors are non-latching; electrical latch and unlatch can be obtained by interwiring Guardian 24 VDC or 115 VAC enclosed relays. Versatile mounting; accepts printed-circuit

socket, chassis mount, clip or chassis-mounted socket. 3PDT contacts rated 10 amps resistive at 115 VAC. Temperature range, 0°C to 50°C. Life expectancy, 100,000 operations min. Protected for transient voltages: 600 volts on 3-phase models, 2500 volts on all other types. With plastic dust cover.

3-PHASE, 4-WIRE VOLTAGE SENSING DEVICE

Detects from 3-phase source of 95 VAC when sufficient voltage available and loss of any line or drop-in average to 50 VAC. For use as warning or lockout device to protect 3-phase motors and systems. Designed for pull-in and drop-out; will repeat close values, allowing for unevenly loaded lines which can cause drastic rise and fall in other lines.

GENERAL PURPOSE RELAYS

MINIATURE PLUG-IN LOW PROFILE LOW COST (SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections. NEW MINIATURE SENSITIVE RELAYS (SERIES SK) 60 MILLIWATTS PER POLE

This entire series of SK type relays is identical in construction to our MK series miniature relays, with one essential difference—the special alloy used in pole and frame increases the magnetic

flux many times thus making the relays very sensitive to very low power levels—only 60 milliwatts per pole.

TIME DELAY RELAYS

PLUG-IN TYPE (SERIES TRP)

The series TRP Time Delay Relay provides a pre-set delay between the closing of one set of contacts and the subsequent operation of a set of SPDT load contacts.

The series TRP initiates from a sustained switch closure to L1 and L2. The unit resets instantaneously when this circuit is opened; ready for another timing operation.

The series TRP is available in two operational options:

Type "A"—If sustained closure is interrupted during time cycle, unit will not reset. When closure is again made, timing will continue to give originally selected time delay.

Type "B"—If sustained closure is interrupted during time cycle, unit will instantaneously reset.

REED RELAYS — 3 STANDARD TYPES

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 3 standard types for immediate delivery in prototype quantities.

The General Purpose Relay with Telephone Type Reliability

The MAGNECRAFT 88 Relay is an abrupt departure in clapper type relay design. Dimensionally interchangeable with relays made by others the 88 has been developed to provide Telephone Type Reliability at general purpose relay prices.

Unique in relays of this type MAGNECRAFT 88 Relays have rugged, precision-built hinge-pin armature bearings with over-size bearing surfaces—the same construction used in the finest telephone type relays for lowest friction and maximum contact effectiveness with stabilized adjustment over long life.

Glass insulation provides great di-electric strength unaffected by humidity and temperature changes.

Molded Nylon bobbins with ruggedized coil terminal inserts eliminate possibility of shorts.

Built-in contact wipe with riveted contacts further advance reliability through long life.

The many refinements, plus MAGNECRAFT Quality Control and Inspection Standards, give you hidden values beyond price—unseen values that keep making friends through years of dependable service.

When you inspect and compare you will soon see that many MAGNECRAFT 88 extra values are not hidden.

Ultra-Reliable Encapsulated Printed Circuit Reed Relays

1. Reed contact leads are soldered stress-free to rugged terminal posts.
2. Terminal posts extend through the terminal board as printed circuit pins.
3. The complete assembly is encapsulated, which provides:

- a. Mechanical protection for the glass capsule, contact leads and coil.
- b. Full protection against tampering and contaminating atmosphere.
- c. Rigid positioning of terminal supports and printed circuit pins; stresses on circuit pins cannot transmit to the reed contact leads and affect relay adjustment.

The package illustrated is a Class 102PC, DPST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature encapsulated printed circuit reed relays (pages 5 and 6) is similar to the standard size.

OHMITE general purpose relays

MODEL GPR — INDICATOR, PLATE, THYRATRON AND LATCHING VERSIONS IN UNENCLOSED AND ENCLOSED TYPES

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes

relays in versatile enclosures, some with indicator light, also plate, thyatron and latching versions. Wide commercial and industrial use where economy and versatility are important.

GPR 3-Pole

GPR 4-Pole

UNENCLOSED RELAYS

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder — quick-connect (push-on) lugs which accept AMP 110 female connectors. The terminal panel is conveniently incorporated into printed circuit boards. Fixed contacts are integral inlay on terminal itself. Normally furnished with a 6-32 x 1/2" mounting stud and non-turn boss (or lug for 4-pole relays). A 6-32 threaded hole is optional. Unenclosed relays can also be mounted by

plugging their panels into Ohmite SOGPR sockets. See "Socket" following.

Contact Ratings: Two ratings — fine silver contacts, 5 amps at 115 VAC or 32 VDC resistive; silver-cadmium contacts, 10 amps.

Insulation: Tested at 1500 VAC.

Coil Wattage: 1.4 watts DC operation; 1.6 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

Thru-Chassis Mount GPRTT

SOGPR Sockets

For Octal Plug GPRTP

ENCLOSED RELAYS

(GPRTA, GPRTT, GPRTS, GPRTP)

Four types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA" — ("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT" — ("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout; "GPRTS" type (Terminals for Socket Use) is similar to GPRTT but has no mounting flanges. It is intended strictly for plug-in mounting in Ohmite socket "SOGPR" (see "Socket" below).

Plug Base Type: "GPRTP" — employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity — is designed with recessed pins which meet UL spacing requirements (150V).

Socket (SOGPR): Unique socket fits the terminal panels of all GPR relays and provides over-the-surface spacing to meet UL

requirements for 150 volts. Requires chassis cut-out to mount. Hold down springs (see illustration) for unenclosed and enclosed relays, are provided with each socket but are not required except under conditions of vibration or shock. Socket solder terminals will also accept AMP 11 quick-connectors. See socket listings.

SOCKETS FOR GPR, GPRTS RELAYS

For 4-pole models, 1 3/4" x 2", requires 1 1/2" x 1 1/2" cutout.* 2 holes (for No. 6 screws) on 1 3/8" centers. **Stock No. SOGPR-12 Net 1-24 \$1.25**

*Std. punches and dies from Ward Machinery Co., Chicago. No. 28, Style 22N, 1 3/4 x 1 1/2, for SOGPR-9; No. 28, Style 14R, 1 1/2 x 1 1/2, for SOGPR-12.

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described in preceding. Neon bulb furnished with coil ratings 70 volts and above; incandescent bulbs for coil ratings below 70 volts.

UL & CSA Approval: Column heads in the stock tables carry the

UL (Underwriters' Laboratories) or CSA symbol (Canadian Standards Association) where applicable. The grey tint in the column indicates the relays are recognized under the "UL components program." The acceptability of such relays by UL depends upon their combination with other equipment such as sockets etc.

OHMITE general purpose relays

Thyratron Plate Relay: Designed specifically for plate circuit of thyratron tubes 2050 and 2D21 with 115 VAC supply (see diagram). Also suitable for operation in series with silicon

controlled rectifiers from a 115 VAC supply. Ready to work, no capacitors or adjustments required, no chatter. Available unenclosed and in most GPR enclosures.

OHMITE latching relays

Enclosed Latching Relay (GPRLETP)

6PDT Latching Relay (GPRLE)

Latching Relay: Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Unenclosed type "GPRLE." Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SB fitting S-324-AP socket.

MODEL DO LATCHING RELAY (DOLEX-)

Consists of Model DO relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to

normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relays and reset coils) are 115 VAC. Available with 3 or 4-pole DO relays

KHU/KHP/KHS SERIES Small, rugged, 4PDT, available for AC or DC operation. Only KHU relays carry Underwriters' Laboratories component recognition. KHU has Lexan and KHP has nylon dust cover; KHS is hermetically sealed in metal enclosure. These relays are designed to meet the exacting requirements of data processing, computer and process control applications. Contacts are $\frac{1}{8}$ " gold-flashed silver and are rated 3 amps @ 30V DC or 120V AC resistive for 100,000 operations. "12" suffix indicates silver-cadmium-oxide contacts. Mounting: Solder terminals with a No. 3-48 $\frac{1}{16}$ " long. Adaptable to sockets (below) with printed circuit or solder lug terminals. Weights without sockets; KHU or KHP 1 $\frac{1}{2}$ ozs.; KHS 1 $\frac{1}{2}$ ozs.

KHU/KHP hold down spring (similar to KCP-KRP, above.)

DRY REED RELAYS

TYPE JR STANDARD TYPE JRM MINIATURE

Fast response, reliable performance, high sensitivity, and long life make JR standard and JRM miniature series relays especially suited for data processing applications, computer equipment, logic circuitry and various other sophisticated control circuits.

TWO TYPES OF BASIC CAPSULES

Both JR and JRM relays employ dry reed glass capsules with two basic types of contact arrangements, Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a Form B (SPST-NC). This arrangement

*True Form C

requires that coil polarity be observed. It uses a two-cavity bobbin. Combining one Form A with one Form B results in a single Form C (SPDT) break-before-make; this uses a three-cavity bobbin. A "true" Form C (SPDT) uses a reed switch with two stationary and one movable contact. The movable contact is normally closed until the coil is energized, causing a "true" Form C (SPDT) break-before-make; it uses a single-cavity bobbin.

TIME DELAY RELAYS

- ON DELAY ● OFF DELAY ● KNOB ADJUSTABLE ● RESISTOR ADJUSTABLE ● FIXED TIME DELAY

A wide selection of solid state time delay controls are represented by Potter & Brumfield. The differences are in their degree of accuracy, the variety available in each series, and their cost.

BASIC TIMING CIRCUIT

The basic timing circuit of all three series consists of a resistor in series with a capacitor. When the input voltage is applied to the resistor-capacitor circuit, the voltage across the capacitor slowly increases. When the firing level is reached a solid state trigger circuit acts to turn on a solid state output switch that energizes a switching relay or external electrical load.

CD SERIES

Remarkably dependable, accurate and flexible, the CD series offers an unusually wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability. It is available in two types: Knob-adjustable in two versions, one with the relay in the same enclosure as the solid state unit, the other with an auxiliary relay. A second type is adjustable with an external resistor. The CD series is available for time delay on operate or on release.

CH SERIES

The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types:

Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on operate and on release.

CU SERIES

An outstanding value in a solid state time delay relay at low cost, the CU series is designed for delay on operate applications in machine tool controls, copiers, office equipment, coin-operated machines, process controls and many others. It is available in two types: Fixed time delay that is set at the factory and cannot be modified. Second, adjustable with an external resistor. For minimum time two terminals, 2 and 5, must be shorted; for maximum time the listed external resistor between terminals 2 and 5 must be added. For intermediate times select a lesser value resistor, or a potentiometer. Either model can be furnished in two types of enclosure: with the relay in the same enclosure as the solid state unit. The CU series is offered with delay on operate only.

CJ SERIES

CJ Series time delay dry reed relays combine the basic timing characteristics of time delay relays with the long life and performance of miniature dry reed relays. Two series are available, the CJC fixed time delay on operate and the CJH external resistor adjustable time delay on operate.

SOCKETS FOR CU-41 PLAIN CASE RELAYS

All CU series time delays have an internal DPDT 10 amp relay of the KUP series featured on page 3. The cases for the CU and KUP are dimensionally the same. The plain cases fit the same sockets, and the same hold down spring (9KU3) can be used. Please use the KUP type designations (9KU1, 9KU2 and 9KU4) and prices (page 3) for these accessories when ordering.

CS SERIES SOLID STATE VOLTAGE SENSORS

Adjustable pick-up and drop-out. Two knobs for setting desired values.

Fixed pick-up and adjustable drop-out. One knob for setting drop-out value.

Two types of accurate, low cost solid state voltage sensors are available. First, an adjustable pick-up and drop-out series for 24V DC and 120V AC voltage sources. Second, a series with factory-fixed pick-up and adjustable drop-out, also for 24V DC and 120V AC voltage sources. All are provided with standard octal plugs for socket mounting and are enclosed in a nylon dust cover. Please see the tables for ranges of voltage adjustments.

MDP SERIES SMALL POLARIZED RELAYS

MDP-900-1 and MDP-930-1 Replace Western Electric Type 255

- Sensitive
- High Speed
- Bounce-free

For Bi-Stable or Center-Stable Operation

Small size, ultra-sensitivity and high speed switching together with efficient, bounce-free contact action characterize MDP polarized relays. Their operation depends on both the magnitude and direction of the coil current. Two types of contact arrangements provide the following action when the coils are de-energized: *Bi-stable* — armature remains in its last energized position; *Center-stable* — armature remains in center-off position with contacts open. Contact materials as listed. Temperatures: -60°C to $+85^{\circ}\text{C}$. Measuring only $1\frac{1}{8}$ " sq. by $1\frac{1}{8}$ " high (seated), MDP relays are equipped with a plastic dust cover and 8 or 12-pin plugs. Weight: 4 $\frac{1}{2}$ ozs.

Types MDP-900-1 and MDP-930-1 (with extra long life contacts) will directly replace Western Electric Type 255 relays. 2 $\frac{1}{8}$ " square x 3 $\frac{3}{8}$ " overall height. Weight: 10 ozs.

* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.
** Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.
† Load tests — making inrush ratings (0.4 to 0.5 P.F.) — breaking 125% continuous rating (0.65 to 0.8 P.F.).
• Cross-bar contacts.

Magnetic Latching for miniaturized circuitry. Same physical characteristics as RA. Voltages from 24-220 AC and 12-110 DC. Same electrical characteristics as CRD and CRF on opposite page. Prices range from \$4.50-\$5.30 list.

ROTARY STEPPING SWITCH TYPE RT

The SCHRACK Rotary Stepping Switch is a combination of three reliable components:

1. Standard Relay with 1 Form C heavy-duty contact.
2. Ratchet driven Rotary Switch consisting of four banks of twelve or ten points each with sliding bifurcated wipers.

3. Ratchet driven Stepping Relay with two cams which actuate one Form C contact each.

Schrack Rotary Stepping Switches have a highly efficient magnetic circuit and a driving mechanism designed for maximum operating safety. All components are mounted on a rigid die-cast light metal frame and contacts are permanently molded in a sturdy melamine plastic.

ROTARY SWITCH terminals are arranged in a circular pattern with four groups of twelve points each. A conversion can make it operate with 3 groups of 16 each. An alternate version with 4 x 10 points is available for applications requiring decimal counting. Each group occupies a quadrant of the circle and contains a common bus which is connected to the twelve or ten insulated points in sequence by means of a sliding wiper as the switch is operated.

TYPE RT 304 — 4 x 12 Contact Points \$19.00 ea.

TYPE RT 404 — 4 x 10 Contact Points \$19.00 ea.

LIGHT DEPENDENT

LDRs, made from cadmium sulfide, are semiconductors whose conductivity increases when irradiated by wave lengths within a certain range of the spectrum. Made in specific versions with relevant electrical characteristics for control, counting, measuring, alarm and switching applications.

Type	Description	Diameter (")	Thickness (")
LDR-03	Makrolon case and epoxy resin	0.55 ± 0.196	0.35 ± 0.06

VOLTAGE DEPENDENT

Most important property is the non-linearity between their resistance and the applied voltage. Voltage dependency is due to contact resistance between the silicon carbide crystals. Crystal contacts form a network of series and parallel resistors which determine the electrical characteristics.

Available Types
Disc types available: 0.8W to 3W
Rod types available: 0.7W

Applications
VDRs can be used in spark suppression and contact-protection applications, as well as in series with a resistor for voltage stabilization. Although the stabilizing circuit with a VDR cannot compete with more elaborate circuits, it has vital advantages of simplicity and small space adaptability.

POSITIVE TEMPERATURE COEFFICIENT THERMISTORS

PTC Thermistors increase in resistance as the temperature increases. PTCs are disc shaped with connecting leads and are lacquer coated for protection against atmospheric influences.

Available Types
Standard Discs 1W 40 to 50V series
Standard Discs 0.5W 25V series

Applications
Resistance changes of 10%/°C or better permit the use of PTCs wherever any of the following factors are decisive: ambient temperature; dissipated power; inertia of PTC and positive temperature coefficient.

NEGATIVE TEMPERATURE COEFFICIENT THERMISTORS

NTC thermistors are resistors which exhibit a high negative temperature coefficient of resistivity. They are made of semiconducting oxidic materials. The resistance of the oxides decreases rapidly when the temperature rises.

Available Types
Rod Type
Disc Type
Miniature Bead Type
Special Types for Automobiles
Special Types for Radio and TV

Applications
Resistance changes of 3% to 6% per °C permit the use of NTCs in applications such as: ambient temperature measurement and control; resistance determined by dissipation and time delays.

SPEER FIXED COMPOSITION RESISTORS

Airco Speer resistors are made on modern high speed equipment which molds component material into one integral, dense unit. Heavy pure tin-coated copper lead wires, thermosetting bonding resins, finely divided inorganic fillers, and specially produced and treated high conductivity materials such as carbon blacks are the materials used.

During the molding process, preformed insulating shells of bonded inorganic fillers are filled with carefully adjusted conducting compounds. The binders and fillers of both shell and core are completely compatible and, under high pressure, allow the formation of an inseparable bond between core and shell. The thermal characteristics of shell and core are essentially equal.

After high pressure molding, the "green" resistors are cured in precisely adjusted, indirectly heated continuous tube furnaces. The resin cure is complete and the final resistance of the unit is thereby fixed. A vacuum and pressure impreg-

nation of a special high temperature material develops maximum protection against moisture penetration.

The special impregnant used is completely stable under all operating conditions.

Airco Speer resistors are color coded with special paints developed to provide a high degree of solvent resistance.

All Airco Speer resistors have lead wires of high conductivity copper with a solderable coating of heavy pure tin. The wires are completely precoated before assembly, so that the solderable surface is unbroken over the entire area. The tin coat is controlled to a thickness of .0003"-.0008", several times as heavy as that on ordinary tinned wire. The use of pure tin affords superior storage life and offers the ultimate in low temperature solderability.

The impregnated resistors are measured on high speed automatic resistance sorters and classified into appropriate resistance nominals and tolerances. The color bands are applied after sorting.

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is $\pm 5\%$ for 1 ohm and higher and tolerance below 1 ohm is $\pm 10\%$. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

POWER RESISTOR DECADE BOX

The Resistance Decade Box, Model 240-C for bench use—Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance

value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13" long x 8 1/2" deep x 5 3/4" high, weight 1 1/2 lbs. 250: 19" long x 13 3/4" deep x 7" high (fits in standard 19" relay rack), weight 1 1/2 lbs.

SUGGESTED USES: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

CARBON COMPOSITION RESISTORS

DIVISION OF TRW INC.

TYPE RC CARBON COMPOSITION RESISTORS

PERFORMANCE CHARACTERISTICS

These are in relation to MIL-R-11 and/or MIL-R-39008 specification limits. A performance span or range is given for each important characteristic. You know in advance the typical limits within which IRC carbon composition resistors can be expected to perform. Ask for Catalog "D".

The performance data are based on many thousands of individual tests made on random samples taken from production. The resistors are tested to MIL-R-11 and/or MIL-R-39008 and to other tests of greater severity.

APPEARANCE

IRC carbon composition resistors have a glossy brown, smooth body. The molded jacket has close dimensional tolerances for trouble-free use in high speed lead forming and inserting machines. There is no wax coating to clog equipment.

IDENTIFICATION

Resistance values are clearly indicated by standard EIA/MIL Color Code bands. Solvent-resistant paints are baked on to provide distinct, permanent color bands.

STANDARD RESISTANCE VALUES

Type RC resistors are supplied in all EIA/MIL standard values, subject to the minimum and maximum values for each type. (See table.) Other values are available on special order.

RESISTOR ENGINEERING LABORATORY STOCKS

DIVISION OF TRW INC.

These new Engineering Laboratory Stocks were developed to give your Engineering, Model or Service Shop a complete selection of values in the popular ¼ watt (RC07), ½ watt (RC20), 1 watt (RC32) MIL-R-11, carbon composition resistors and the 2 watt (RC32 size) BWH wirewound resistors.

SNAP PAK

— an IRC exclusive, patented resistor package, that's revolutionizing the resistor market. Snap Pak permits immediate content identification and testing without product removal. Finding the desired resistor is quick and easy. Printed directly on each package is the resistor type, value and tolerance — makes sorting a cinch. No need to read color codes. Take one resistor out and the others stay in the package for fast locating the next time. Snap Pak offers protection for resistors . . . no bent or twisted leads.

¼ and ½ watt, 5% resistors are packaged ten per Snap Pak and the 1 and 2 watt, 5% types are packaged five per Snap Pak. Both are in strips of five individual Snap Paks.

Matching Snap Pak packaging with the attractive free "Inventory Control" cabinet, measuring 54" high x 27" wide x 15" deep pictured left, offers "fingertip inventory" for small resistor quantities saving you both time and money. The inventory cabinet is supplied with a complete set of indexing cards and resistance value labels — ultimate convenience for fast and easy shop use.

All-metal, sturdy "Fingertip Inventory" cabinet finished in red and black baked-on enamel, measures 54" high, 27" wide, and 15" deep.

FIVE PRACTICAL RESISTOR STOCKS FOR DEALERS

IRC ASST. NO. 8 — 20 VALUES OF ½ WATT RESISTORS. Most often used resistor values cover nearly one-half of the usage of resistors. Parallel and series connections will provide coverage of most standard 10% values. Ten each RC20 ½ watt resistors, 10% tolerance, in following values: 10, 22, 47, 100, 220, 470, 1000, 2200, 4700, 10K, 22K, 47K, 100K, 220K, 470K, 1.0M, 2.2M, 4.7M, 10M, 22M. With good-looking stocking cabinet.

IRC ASST. NO. 9 — 20 VALUES OF 1 WATT RESISTORS. Best selling resistor values cover nearly 50% of resistor values used. By parallel or series connections, 80 values of 10% resistors can be covered. Five each RC32 1 watt resistors, 10% tolerance, in these values: 10, 22, 47, 100, 220, 470, 1000, 2200, 4700, 10K, 22K, 47K, 100K, 220K, 470K, 1.0M, 2.2M, 4.7M, 10M, 22M. With sturdy stocking cabinet.

IRC ASST. NO. 10 — 61 VALUES OF ¼ WATT RESISTORS. Stock includes 61 10% values of RC07 ¼ watt resistors from 10 ohms to 1.0 megohms. Because of the small size of these resistors, they are ideal for replacement in transistor radio and similar compact equipment. Suitable for single-ended replacement by bending one lead over resistor body and retaining by spaghetti tubing over lead and resistor body.

IRC ASST. NO. 11 — 84 VALUES OF ½ WATT RESISTORS. All RC20 ½ watt 10% resistors from 2.7 ohms to 22 megohms. Small enough for many transistor radio replacements and large enough for most radio and TV needs. Resistors provide more than usual insulation giving better protection from humidity. Special heat-sink action of leads assures better high temperature operation and stability. Stocking cabinet included.

IRC ASST. NO. 12 — 84 VALUES OF 1 WATT RESISTORS. Stock includes all 10% values of RC32 1 watt resistors, 10% tolerance, from 2.7 ohms to 22 megohms. This is a comprehensive stock of units frequently used by service technicians to replace lower wattage resistors which have failed. Provided increased insulation and heat-sink leads for stable operation in hot, humid conditions. Practical stocking cabinet is included.

- Quicker to find—Handy-Paks can be indexed by power rating and resistance. Resistors are always visible for inventory.

3 TYPES AVAILABLE — 10% tolerance.

... 1/2 watt contains 6 RC20 carbon composition resistors; 1 watt package contains 4 RC32 resistors and the 2 watt Handy-Pak contains 3 RC42 resistors.

TUBULAR POWER WIREWOUND RESISTORS

DIVISION OF TRW INC.

RESISTEG COATED POWER RESISTORS need no derating. They operate at full rated power even at high resistance values. Other features include heat resistant terminals for easy soldering, ceramic cores that withstand shock and are impervious to moisture, heavy windings that handle overloads without burnout, and standard size spring loaded push-in brackets for easy mounting on sizes of 25 watts and over.

IRC Tubular Power Wirewound Resistors are standard tubular construction with lugs and/or leads for use in general applications. They are used in DC and low frequency AC circuits where appreciable power must be dissipated:

- High voltage bleeder resistors in power supplies
- Voltage dropping resistors
- Voltage divider networks
- Bias supply resistor
- RC decoupling resistor
- Filament dropping resistor
- Load resistor
- Shunt resistor

POWER & FUSE RESISTORS

DIVISION OF TRW INC.

FUSE RESISTORS

These special resistors function as a resistor under normal conditions, and as a fuse under overload conditions.

Attractive new SNAP PAK style package. Back of card contains complete replacement information.

Exact Duplicate Original Equipment Part as used in auto Radios. .33Ω and .68Ω in insulated fiberglass sleeve, 47Ω in rectangular ceramic case. Precisely wound element and superior lead solderability.

- FR.33 — .33 ohm
- FR.47 — .47 ohm
- FR.68 — .68 ohm

- FR5.0* — 5 ohms
- FR5.6 — 5.6 ohms
- FR7.5 — 7.5 ohms

* Suitable for 4.7Ω fuse for resistor applications.

Fuse resistors are used extensively as a surge-limiting resistor in voltage doubler circuits of TV receivers. Installation of an IRC Type FR fuse resistor in a TV set will prevent over-loading of more valuable components and possible fire due to a short circuit. The compact, modern design of the IRC fuse resistor measures only 1²⁵/₆₄" x 1¹/₃₂" x 3¹/₈". This unit is completely insulated in a rectangular ceramic case, and equipped with plug-in terminals.

AXIAL LEAD POWER WIRE WOUND RESISTORS

(Available in BULK on Snap Pak)

Attractive new SNAP PAK style package holds 2 each PW5 or PW10, one of PW18.

These popular axial lead power resistors are the industry favorites for 5 and 10 watt applications. The compact shape fits among other components more easily. The axial lead design speeds installation. And, the superior solderability of the terminals assures sound connections every time. A precisely wound element is sealed in a ceramic case — fully protected and insulated. Conservative rating permits

These widely-used fixed wire wound vitreous enameled resistors have solidly anchored welded tabs (lugs) and shock-absorbing mounting brackets to withstand vibration. Multi-layer vitreous enamel coating locks the uniformly-wound resistance wire in position and also seals out moisture. MEMCOR resistors have a high-temperature stability and a com-

patible coefficient of expansion which prevents crazing and cracking.

MEMCOR resistors have a standard tolerance of $\pm 5\%$ on all values above one OHM and a $\pm 10\%$ tolerance on resistance values lower than one OHM (available in closer tolerances).

All MEMCOR resistors listed in this section manufactured to the

rigid requirements of MIL-R-26 Specifications . . . MEMCOR resistors meet and exceed all requirements of this specification.

FR and FRL TYPES

MEMCOR fixed wire wound vitreous enameled types in 5, 10 and 20 watt sizes (FRL) are light enough to be mounted by attached leads and are also available without (FR) tuned leads.

ADJUSTABLE VALUE RESISTORS

MEMCOR adjustable resistors are used in applications where it is necessary to make adjustment in resistance periodically... where intermediate values of resistance are needed... or when multi-tabs are required. The AR types are especially useful in laboratories for experimental work, circuit design, etc.

A section of the winding is exposed on one side to enable the adjustment band to make contact at any desired point. This adjustable band **should not** be moved unless the screw holding it in position is completely loosened to prevent abrading or possible damage to the resistance wire.

Adjustable lugs are formed to the exact contour of the body of the resistor to assure positive contact with the exposed section of winding. Standard adjustable bands are screw-driven style and have an embossed area on the lug.

Special adjustable lugs are available with a silver contact... also, bakelite thumb screw type bands are available.

The AR wattage ratings (and the $\pm 10\%$ tolerance) given in this section are for **the entire** resistor. Never exceed the maximum rating through any portion of the resistor.

OVAL (FLAT CORE) RESISTORS

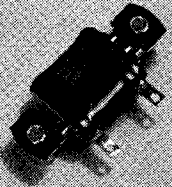

MEMCOR wire wound flat core resistors are applicable for individual and/or stack mounting. Their high watt rating per unit of space and the bracket construction which facilitates stacking (integral mounting brackets are supplied as standard)... make the MOR and OR types space savers par excellence.

The line of ovals (OR) was designed particularly for applications where available space is limited... and the supplementary line of midget ovals (MOR) are

very desirable for applications where the size of the components must be kept to an absolute minimum. The through bracket helps dissipate heat and reduces hot spots. This permits higher wattage dissipation without requiring additional space.

When stack mounted, the OR and MOR resistors should be derated. For an ambient temperature not higher than 40°C, the maximum rise of these resistors will not exceed 300°C. when mounted on a steel panel.

Tapped or adjustable ovals are available.

MOULDED SILICONE RESISTORS

These resistors will operate at 350°C. (660°F.) and will withstand thermal shocks to minus 55°C. Because of the moulded construction the resistors are effectively hermetically sealed and will withstand severe moisture conditions without deterioration.

The construction of the resistors are uniform in all dimensions within a few thousandths of an inch, which facilitates their use in automatic-insertion machinery... for which use they may be obtained specially packaged. They will improve the appearance of any assembly in which they are used.

Temperature co-efficients of plus or minus 20 parts per million per C. degree are standard.

The moulding compound used in these resistors was developed through research and development extending over several years, and represents a marked advance in the "state-of-the-art" for such compounds.

series 99 MOLDED axial lead vitreous enameled resistors

- **FIRST MOLDED WIREWOUND, VITREOUS ENAMEL RESISTOR**
- **INSULATED! Meets 1000 VAC Test**
- **WITHSTANDS 1500°F Temperatures without Distortion**
- **RESISTS Chipping, Breaking**
- **VITRIFIED MARKINGS, Resist Abrasion and Active Solvents**
- **UNIFORM SIZE Permits Clip-Mounting with Significant Heat Sink Benefits**
- **HIGH OVERLOAD CAPABILITY**

vitreous enamel coating by **molding** instead of the conventional "dip" process. The dimensionally consistent and thicker coating that results, guarantees a 1000 VAC insulation rating plus unparalleled capability for withstanding very high temperatures, high humidity and immersion in salt solution.

These resistors are normally mounted by their axial leads. However, their consistent form also permits mounting in clips with heat sink benefits up to 100% (see "Clips" lower left). Resistor markings are also vitreous and will not burn off even under extreme overloads. Resistance tolerance is $\pm 5\%$. Series 99 resistors meet the requirements of MIL-R-26 for "insulated" resistors. See Catalog 101 or Catalog 50 for specific MIL types.

An exclusive technique (U.S. Patent No. 3,229,237) permits application of the

MOUNTING CLIPS

Uniform shape and consistent dimensions of Series 99 and 88 (pages 6-7) resistors, permits them to be conveniently mounted in clips. If the clip is on a metal surface, the wattage capability of the resistor can increase by as much as 100%. Holes in clip base permit fastening to chassis by means of machine screws, eyelets or rivets.

OHMICONE® molded • wirewound • aged for stability
• insulated for 1000 volts • low T.C.

Type 884 Riteohm® Resistors are stocked in power ratings of 3, 5 and 10 watts depending upon resistance. Single layer wound on ceramic cores, Riteohm resistors feature a pressure-molded coating of tough, resilient Ohmicone® silicone-ceramic material which meets the MIL-R-26, 1000 VAC insulation test. Riteohms are aged for long term stability and exhibit negligible inductance at audio frequencies. Temperature coefficient of resistance is $\pm 10 \text{ppm}/^\circ\text{C}$ for most values. Values shown are based on the MIL-Bell system of standard values. For non-standard values, closer tolerances, etc. contact your local Ohmite office.

OHMITE type 270 vitreous enameled fixed resistors

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel—the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is $\pm 5\%$ for values 1 ohm or higher; $\pm 10\%$ below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in

closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

See Catalog 50 for MIL-R-26 styles. Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk packs.

dividohm® type 210 adjustable vitreous enameled resistors

"Dividohm" resistors make ideal voltage dividers for original equipment and replacement in transmitters, rectifiers and other apparatus. Such tapped "bleeders" are made by using one or more adjustable lugs, as required. "Dividohms" are also handy for obtaining odd resistance values, for adjusting circuits, and for use on equipment which must be set to meet various line voltages.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact to any wire in this strip is made by an embossed contact on the adjustable lug (supplied).

WATT RATING: The stated wattage rating applies only when the entire resistance is in the circuit. When the adjustable lug is set at an intermediate point, the wattage rating is reduced in approximately the same portion, i.e., if the lug is set at half the resistance, the wattage is reduced by one-half. A safe rule to follow is to make sure that the maximum rated current is not exceeded. This should be carefully checked particularly if the resistor will be used as a voltage divider with several adjustable lugs. Resistance tolerance is $\pm 10\%$ for the total resistance value. See Catalog 50 for MIL-R-26 styles.

OHMITE *Little Devil*® molded composition resistors on "Tally Tape"™

Color Coder 104*

"Tally Tape," Ohmite's wonderfully convenient packaging presently provides for 1/4, 1/2, 1 and 2-watt resistors. Each perforated segment holds 5 resistors — prevents spilling or tangling — simplifies counting — is printed for quick identification — guarantees original, factory-fresh stock.

Now Includes MIL-R-II Types

Little Devils, Ohmite's famous molded composition resistors, find broad use in commercial and military applications. The 1/8, 1/4, 1/2, 1 and 2-watt sizes, which conform respectively to Styles RC05, RC07, RC20, RC32 and RC42 of MIL-R-11, meet all the stringent requirements of this military specification. The five sizes available satisfy a wide range of design and service needs.

Little Devils have molded insulation for high dielectric strength. Noted advantages of these units are great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Little Devils are available from stock in standard EIA resistance values in the tolerances and resistance ranges shown in the price table. Ratings for maximum continuous RMS voltage drop are high: 150 volts for 1/8 watt units, 250 volts for 1/4 watt, 350 volts for 1/2 watt, 500 volts for 1 watt, and 750 volts for 2 watt units. See "Little Devil" Resistor Assortments, page 14.

RESISTORS AND HANDY CABINET FOR THE PRICE OF THE RESISTORS ALONE

Select the composition resistor you need, right on the job from time-saving Little Devil® Assortments. Ohmite now offers seven industrial assortments in addition to the four service assortments that have been so popular for many years. In this complete line, there is an assortment to fill every industrial and service need. An attractive plastic cabinet or cabinet assembly is furnished at no extra cost with each assortment. Each drawer of a single 5-drawer cabinet has eight compartments, all individually labeled. Dimensions of the single cabinet are 9" long, 4 3/4" high, 5 1/4" deep. Dovetail tops and bottoms facilitate stacking. Cabinet assemblies for industrial assortments are riveted to metal strips which afford rigidity and permit hanging of the unit on the wall.

Of the seven industrial assortments, there are three ±10% tolerance assortments of 1/4, 1/2 or 1 watt sizes each containing 80 values. A two-cabinet assembly is furnished for these assortments. Four 5% tolerance assortments provide 160 values each of resistors in the 1/8, 1/4, 1/2, or 1 watt sizes. A four-cabinet assembly is furnished for each of these assortments.

The four popular service assortments provide ±10% tolerance resistors in a single cabinet in 1/4, 1/2, 1 or 2 watt sizes.

Cabinets are factory packed in accordance with the tables shown below.

High current, low resistance, heavy duty units used in motor starting, dynamic braking, etc. "Corrib" type units employ a corrugated ribbon of resistance alloy. This is space-wound edge-wise around a ceramic tube. Vitreous enamel is fused around the alloy ribbon to lock the turns securely in place. Heavy lug terminals. Resistance tolerance is ±10%.

Available in fixed or "Dividohm" adjustable types. "Dividohm" type is similar to fixed and includes one adjustable lug. Rating of Fixed or Dividohm stock units—300 watts—reduce unit load for stack-mounted resistors; core size (bare) 8½" long x 1¼" diameter. Other sizes made to order.

powr-rib® HIGH CURRENT LOW OHMS resistors

Even higher power handling capability—approximately 700 to 1000 watts—is available in stock, "Powr-Rib" resistors. These are UNCOATED types and are wound either edgewise with ribbon ("Edgewound" type) or with round wire (Round-Wire type).

The core of these units consists of ceramic segments on a metal bar which is slotted on both ends for rapid installation. Standard resistance tolerance is ±10%. Terminals clamp onto the resistor wire and may be moved in from the ends for intermediate resistance values. Extra terminals available for use as taps. See diagrams for terminals. Terminal Stk. No. 2172G (not shown) has screw connections.

PRECISION CARBON FILM RESISTORS

proven quality resistors

Carbon Film Resistors are composed of a basic substrate of strong non-hygroscopic steatite to which is applied a coating of high stability carbon film. Units are processed at high temperature to insure stability and minimize aging and humidity effects. A protective coating of high temperature electrical varnish covers the resistance element. Special applications include resistive coating of custom forms, anti-corona provisions and numerous others. Military items presently include the several styles of Mil-R-14293.

Metohm[®] RESISTORS Metal Film Precision Type

THE STANDARD OF QUALITY FOR MILITARY AND INDUSTRIAL PURPOSES

FEATURES

- High stability and reliability
- Designed to exceed MIL-R-10509F
- Close resistance tolerance
- Wide range of resistance values
- Stock or made-to-order types
- 1/20, 1/10, 1/8, 1/4 and 1/2 watt sizes

In critical space-age electronic circuitry, METOHM metal film precision resistors guarantee high reliability, high stability, close accuracy, low TC and miniature size. Metohms are precision made under "white-room" conditions in the industry's most modern plant.

MIL SPECS. — All Metohm precision resistors are designed to exceed MIL-R-10509F char. C, D and E.

POWER RATING — is based on full rated load in an ambient of 125°C.

WELDABLE LEADS — gold plated Dumet leads and nickel "270" leads are available for weldable applications.

STOCK METOHMS — RN50, 55, 60, 65 and 70 Metohm resistors, char .C, TC Code T2 (±50PPM) are stocked in MIL standard values listed below. Standard tolerance is ±1%.

MADE-TO-ORDER TYPES — see data in accompanying tables for non-stock resistors available in production order quantities.

CONFORMAL COATED TYPES — also available in 1/20, 1/10, 1/8, 1/4 and 1/2 w. sizes. Durable solvent resistant coating allows smaller size. Ideal for micro module circuitry where space is at a premium.

SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ⅜"-32 bushing ⅜" long, and 1½" round shaft. (Knob furnished with each control).

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

NEW! IRC-CTS STRIPTROL CONTROL REPLACEMENT SYSTEM

IRC, DIVISION OF TRW INC.

Here is a brand new replacement system which saves time and money on frequently hard-to-get TV controls.

Striptrol is a unique and modern method of providing exact replacement coverage of many often used side-by-side controls found in the majority of today's black-and-white and color TV receivers. Striptrol features simplicity of assembly and low inventory cost.

This entire replacement system stems from 3 basic

components: elements, housings and adjustors. Striptrol is assembled using a combination of one or more of the three basic parts.

The total Striptrol line consists of a variety of elements with different values and tapers. Also included are eight housings, including both vertical and horizontal mounting styles, with and without power switches, and three adjustors covering both out-the-front, out-the-rear, and switch operating styles.

IRC-CTS SNAPTROL

IRC, DIVISION OF TRW INC.

**PROVIDES VERSATILITY
AND EASE OF ASSEMBLY**

SNAPTROL Newest of three IRC replacement systems designed to provide servicing technicians with satisfactory replacements for comprehensive coverage of single controls, tandem dual controls, stereo controls and concentric dual controls for television, radio, auto sets and high fidelity equipment.

SNAPTROL provides a broad variety of basic, factory assembled control sections, shafts and switches which snap together to provide a wide selection of replacement controls. Literally, it is a "snap" to assemble nearly any standard or special control.

SERIES 45 INDUSTRIAL CONTROLS. With a variety of five basic control components, the Series 45 line permits quick assembly of 12,631,500 different control specifications. These include single, double, triple and quadruple section controls, with or without power switches, in all popular styles and ranges needed for industrial electronic equipment.

Series 45 components are completely compatible and interchangeable with SNAPTROL. Together, these two snap-together systems provide an almost unlimited means to furnish unusual and special controls for industrial applications.

EASY TO USE. Parts assemble into exact duplicate control in 15 to 30 seconds. Sections completely factory assembled. No shaft cutting or modification needed.

GREATER VERSATILITY. SNAPTROL provides new and unique designs which provide for better utility and adaptability of component parts:

1—Interchangeable Control Mountings. $\frac{3}{8}$ ", $\frac{7}{16}$ " and $\frac{1}{2}$ " diameter bushings of varying lengths and bores, quickly thread into front control sections. Accommodates thick panel requirements *without* extra bushing or adjuster. Specially designed tab mounting plates or printed circuit brackets easily attached in place of bushings. This exclusive new design feature reduces the number of front sections needed and extends their use in a greater variety of replacement needs.

2—Printed Circuit Terminals. All carbon control sections are equipped with terminals that will handle both conventional and printed circuit wiring. This original IRC-CTS terminal design doubles the adaptability of control sections.

3—Rotary or Pull-Push Power Switches. Either type of power switch snaps onto either carbon Front or Rear Sections. Another exclusive IRC-CTS design feature which very considerably increases the utility of control components.

4—Uniform Diameter Rear Section Shafts. New design of rear section (inner) shafts provide uniform diameter — permits use of heavy-walled front section (outer) shaft contributing better concentric shaft operation and superior knob retention. Simple compression type adapter fits rear section shaft to knobs normally requiring larger diameter. No drilling or modification of knobs needed. Shafts are flatted or slotted as required — no shaft insert or tine needed! This new design reduces the number of exact length shafts required for broad replacement coverage.

5—Front Sections Serve for Single Controls. Without modification or adapters, all SNAPTROL front sections may be used for single control replacements. Provides practical use of single front section for special bushings, tab mountings, printed circuits, special shaft needs and a variety of power switches. No other section-type control system provides such broad versatility.

FEWER COMPONENT PARTS. Because of the realistic design features provided, SNAPTROL requires far fewer items of components than any other section-type exact duplicate control system which offers so broad a replacement coverage. (Over 2300 exact duplicate concentric dual controls and many thousands of single controls.)

BEST SELLING CONTROLS. SNAPTROL is a special replacement design of the world's most frequently specified and most widely sold CTS Series 45 control. Over 300,000,000 in current use — a strong testimony to the quality and performance of these outstanding controls.

CONTROL MOUNTINGS FOR FRONT SECTIONS

A variety of control mountings permit the use of SNAPTROL Front Sections for many different replacement controls. Bushings of varying diameters and inside bores thread into front sections. Tab mounting plates and printed circuit brackets attach to front section with special male nut supplied with each.

This exclusive design feature of selectable control mountings actually reduces inventory investment for distributors and servicing technicians. For a specific resistance value and taper, only one SNAPTROL Front Section is needed—in contrast to other systems where an additional front section is needed for *each* different control mounting.

CARBON & WIREWOUND REAR SECTIONS

Type CR Carbon Rear Sections and Type WR Wirewound Rear Sections snap onto SNAPTROL Front Sections for use as either concentric dual or tandem dual controls. Rotary or pull-push power switches snap onto CR sections. (WR sections do not accept switches.) Rear or inner concentric shafts snap into either type of rear sections for concentric dual operation. SS7A Intersection Insert provides tandem dual operation. Additional tandem sections may be snapped on by use of SS13 Multisection Couplers.

EXACT DUPLICATE SHAFTS

SNAPTROL Exact Duplicate Shafts are supplied to close tolerances against original control specifications. Easily snap into molded nylon rotors of front or rear sections. Uniform diameter of rear section (inner) shafts permit use of heavier wall on front section (outer) shafts providing better concentric rotation and superior knob fit. Knob Adapter (Stock No. KA1) fits rear (inner) shaft to knobs normally requiring larger diameter shafts. No drilling or modification of knobs is required. No cutting of shafts is needed with SNAPTROL Exact Duplicate Shafts! Easy to install!

Knob Adapter. Fits rear section shaft to knob requirements of over-size shaft. Converts .187" diameter shaft to .202" diameter shaft.

IRC-CTS TYPE 4W CONTROLS AND BASE ELEMENTS

IRC, DIVISION OF TRW INC.

Types WPK and WPS are compact, 1¼" diameter wire wound controls available for replacement use in two popular shaft styles and an extensive variety of resistance values and tapers. Many stock numbers can be supplied as factory-assembled units. All stock numbers may be assembled in field using Base-Element with SK4 or SK5 Kit as desired.

Resistance elements are uniformly wound with highest grade alloy resistance wire on special form that withstands high temperature without shrinking. Pressure molded plastic housing is designed for maximum heat dissipation and accurate location of terminals. Contactor and collector are of long-wearing alloy that makes direct contact.

Resistance tolerance is $\pm 10\%$.

IRC-CTS CONCENTRIKIT® EXACT DUPLICATE SHAFT SPECIFICATIONS

IRC, DIVISION OF TRW INC.

EXACT DUPLICATE SHAFTS

Stock numbers and corresponding lengths are listed on these pages. In general, the last three numbers of the stock number indicates shaft length from control mounting face (not end of bushing) to end of shaft. Of the last three numbers, the first indicates number of inches and the second and third number indicates the number of 32nds. For Stock No. P1-210, length is 2¹⁰/₃₂" or 2⁵/₁₆". For inner shafts employed with K3 CONCENTRIKIT, subtract ³/₃₂" from dimension indicated by stock number.

There is an IRC-CTS Exact Duplicate Shaft available for nearly every concentric dual control. These Outer and Inner Shafts require no modification. Shaft lengths are held within close limits to original shaft lengths. Careful attention is given to end trims for fit to original knobs. The specifications on this page provide dimensions and use.

IRC-CTS INDUSTRIAL 4W CONTROLS

IRC, DIVISION OF TRW INC.

TYPE 4/W INDUSTRIAL CONTROLS

IRC-CTS Type 4W Controls for industry provide 4 watt (linear) rating in conventional 2 watt size. Available in wide assortment of resistance values. Types WP and WPRL may be combined with Type WM Multisections to provide broad selection of tandem dual controls.

Special platings of metal parts provide outstanding appearance. Resistance tolerance of all units is $\pm 10\%$.

TYPE WP

A wirewound industrial control with $\frac{3}{8}$ -32 x $\frac{3}{8}$ " bushing and a full round shaft of $\frac{1}{4}$ " diameter, approximately 3" long from mounting face. For 2, 3 and 4 watt requirements — 10% tolerance; linear taper; in 36 stock values as listed on the preceding page.

TYPE WM MULTISECTIONS

These 4 watt Multisections are rear control sections which add to Types WP and WPRL to supply a wide selection of tandem dual controls. Available in 13 factory-assembled stock numbers. WM Multisections do not operate power switches.

TYPE WPRL

A wirewound industrial control with a short, screwdriver slot shaft of $\frac{1}{4}$ " diameter and approximately $\frac{1}{2}$ " long from mounting face, with $\frac{3}{8}$ " locking type bushing, and locking nut. For 2, 3 and 4 watt requirements — 10% tolerance; linear taper; 36 stock values.

OHMITE vitreous enameled rheostats (potentiometers)

Now, Ohmite offers TWELVE sizes in its line of famous rheostats ranging from 7.5 to 1000 watts. Nothing to shrink or burn, all models are metal and ceramic construction and coated with Ohmite's exclusive vitreous enamel. The revolutionary Model C, 7½ watt miniature unit, the **smallest rheostat of its rating available**, employs this same construction! All Model C stock units and the enclosed Model E unit, are normally supplied in a corrosion-resistant dust-proof case. Model C units are stocked in both standard and locking type bushings.

In all Ohmite rheostats, the resistance wire is wound on a solid ceramic core. The turns are locked in place with tough, protective vitreous enamel. Pivoted, universal action mounting of the brush, assures perfect contact. Copper-graphite brushes (and on heavier current units, silver-graphite) prevent wear of the resistance track. Terminals at each end of the winding permit connection of the unit as a potentiometer.

Models H, J, G, K, L, P, and N, marked "Series A," are listed under the Underwriters' Laboratories Reexamination Service. RHEOSTAT KNOBS are listed on page 20. (Request Catalog 50 for rheostats to meet military specification, MIL-R-22).

RATINGS: Current ratings shown, assume use in free air. If units are enclosed, currents should be reduced to as much as 50% depending upon ventilation. The rated current causes the rheostat to dissipate its rated wattage when its full resistance is in the circuit.

SPECIAL RHEOSTAT FEATURES: Hundreds of features to meet your special rheostat requirements can be furnished. Submit your specifications.

rheostat tandem coupling kits

Tandem rheostat assemblies can be ordered from the factory or assembled by the user with these kits which permit assembly of two units. Each kit consists of a steel "U" frame, a coupling with set screw, mica washer, Allen wrench and instructions.

Rheostat shafts are joined by the coupling which is fastened to the shaft of the rear unit. Projections on the coupling fit a recess on the rear of the hub of the front unit.

Three kits are available as follows:

Cat. No. 6532—Mounts Models H or J, also accommodates Models H, J, G, K or L in rear position.

Cat. No. 6533—Mounts G, K or L units, also accommodates Models H, J, G, K or L in rear position.

Cat. No. 6591—Mounts Model E units only.

heat control rheostats

A convenient control for regulating the temperature of soldering irons, melting pots (such as those used for solder, wax, potting material) or other heater loads. With soldering irons, it permits quick adjustment of operating heat for the type of job and grade of solder.

Consists of vitreous enameled rheostat housed in a perforated metal cage, with knob and dial. Supplied with series plug and six feet of heater type cord. The cord from the heater load is plugged into the series plug which is then plugged into a receptacle. Order in accordance with expected maximum wattage load.

NATURAL CONVECTION UNITS to HIGH-HEAT
DISSIPATING FORCED AIR ASSEMBLIES

has a complete line of standard heat sinks and extrusions available from stock. Custom-engineered units are also supplied to meet virtually any heat dissipation requirements.

PRESS-FIT/CIRCUIT BOARD TYPES

2201

TR 101

2201/TR-101 Series—for optimum natural convection cooling of all standard TO-size transistors used in printed circuit boards, computer cards, etc. Four sizes in TR series provide from 1 to 4 square inches surface area.

2700 (Convection)/2800 Conduction Series—provide greater surface contact plus secure mounting. Eight units provide thermal resistance ranging from 2°C/watt (2801) to 28°C/watt (2701).

2703

2300

2300 Series—free circulation, low-profile units for circuit-board use. Four heat sinks (1/2", 3/4", 1", 1 1/4" x 1.81"² base) of high conductivity aluminum alloy, supplied with black anodize or gold iridite.

FORCED CONVECTION

2401-12B

Modular Design permits custom assembly of compact electronic/heat sink units which may incorporate associated electronics and/or terminals. Model 2601 permits mounting more than 40 units to single fan.

HIGH POWER — CRITICAL COOLING

Model 2450 in four standard sizes (2 x 2", 3 x 3", 4 x 4" and 4 x 6") provides exceptionally low thermal resistance for effective use with "pressure-pack" rectifiers. 4 x 4" unit dissipating 650 watts with 1500 LFM forced air has thermal resistance of 0.105°C/watt with 23 fins and 0.089°C/watt with 33 fins.

2450

2529/2530

Model 2507 handles heavy duty SCR devices on easily accessible, wide shelf.

Models 2529/2530 "Little Giant" heat sinks (5 and 6" lengths) provide .35°C/watt thermal resistance at 100 watts with natural convection for high power rectifier assemblies.

THERMAL/CONDUCTIVE/BONDING COMPOUNDS

THERMAL BOND 312—general purpose conductive adhesive available in 5 oz. kits (12/carton — \$46.60, individual boxes — \$4.65 each), 2 qt. cans, 2 gal. cans.

CONDUCTIVE COMPOUND 829—supplied in ready-to-use 1, 2, 4 and 8 ounce jars (\$1.25, \$2.00, \$2.35 and \$5.75 each — 12 jars/carton). Providing optimum, long-term thermal/electrical contact plus protection against oxidation.

POTTING COMPOUND

166—for potting heat generating devices such as transformers, resistors, etc. Available in mix-and-use packages (jar of compound, vial of hardener). 12 boxes to case \$42.00. Individual boxes \$4.25 each.

Base section LB5A1B or LB5A2B may be used separately for TO-37 transistors such as 2N1172 and 2N1609. Delete letter "B" from part number for Insulube 448 finish. Consult your IERC representative or factory for special orders.

LB SERIES — FOR TO-66 TYPE TRANSISTORS

Efficient staggered-finger design requires only 1.7 sq.in. of mounting area. In natural convection, dissipates 9 watts with case temperature maintained at less than 150°C. At 1,000 RPM, dissipates 15 watts with case temperature maintained at 90°C. Send for Bulletin 146.

Fabricated of aluminum. Letter "B" at end of part number denotes black anodize finish. For Insulube 448 (positive insulation up to 500 watts) delete letter "B". "U" denotes unplated part.

UP SERIES — FOR POWER TYPE TRANSISTORS AND DIODES

Design gives maximum dissipation in medium power applications at lower cost than comparable finned extrusions. Staggered finger configuration allows maximum efficiency in both natural convection and forced

air at less weight and volume. Increased dissipation achieved by mounting dissipators back-to-back on a bracket. Standard finish black anodize. Send for Bulletin 134.

For other hole patterns, see your IERC representative or consult the factory.

HP SERIES — FOR POWER TYPE TRANSISTORS AND DIODES

Heat dissipating performance of IERC's staggered-finger design is comparable to conventional extrusions up to 3 times as heavy and 30% larger. Two sizes: may be used separately or with the smaller unit nested in the larger unit. Standard finish black anodize. Send for Bulletin 139.

JEDEC Silicon Avalanche Rectifiers

All the silicon rectifiers listed below are supplied with avalanche characteristics as standard. They are direct replacements, electrically and physically, for ordinary silicon rectifiers, yet they provide important benefits to you and your products, at no extra cost.

Overtoltage protection is built into the rectifier. Transient voltage induced failures are virtually eliminated because these units avalanche at voltages well below the destruction point. The overvoltage spike is dissipated through the junction at a point below the critical voltage stress across the edge of the junction.

Lower circuit costs are readily achieved. When avalanche rectifiers are

used suppressor and balancing devices, such as resistors, capacitors, R-C networks, etc., are no longer needed. In addition, their elimination improves circuit reliability, due to a reduction in number of components and interconnections.

Dependable performance is assured. Over 20,000,000 of these devices already have been delivered and are in actual use in the field. They are now routinely available from high volume production lines.

All Tarzian Silicon Rectifiers are supplied with avalanche protection at no extra cost. For additional types, not necessarily covered by JEDEC numbers, see the following pages.

RECTIFIERS

are grouped by half wave average current ratings. Ratings shown apply at case temperatures indicated. All surge ratings are peak one-half cycle currents at 60 cps. Surge ratings apply from full load. Voltage ratings

shown are repetitive peak reverse maximum values. Most units have somewhat higher transient ratings. Reverse polarity JEDEC types are designated "R". On non-JEDEC types, the second listing designates reverse polarity where available.

HIGH VOLTAGE SILICON RECTIFIER ASSEMBLIES

Voltage Ratings to 208 KV in a single channel. Three Phase Current Ratings to 510 Amperes. Westinghouse Silicon Rectifier Stacks have proven their outstanding reliability in over 50 million stack hours of failure free operation. Each cell is shunted with a capacitor and resistor which provide the optimum in steady state and transient voltage division. The design of the stack provides for cooling by oil, free or

forced air convection and vapor atmospheres. Where required, assemblies can be supplied with mil-type capacitors and resistors which combined with the high temperature characteristics of the hermetically sealed silicon rectifier cells, allows operation in ambients up to 110°C. Use of these stacks in place of vacuum tubes will increase equipment efficiency by as much as 25%.

Listed are maximum voltage and currents for single assemblies. Stacks can be combined in series or parallel.

Ratings are based on forced air cooling of 1000 fpm at 25°C ambient.

Oil cooling will increase ratings.

Assemblies are designed to meet most standard military environmental conditions.

For very high voltage applications, corona shielding is available. Where voltage will allow, entire rectifier assemblies can be packaged in one channel.

This new Alcoswitch Series fills a need for those who want the best product possible at an optimum price. Similar in appearance and specs to the Alco "E" Series but without the waterproof feature. Has the important features wanted in a good miniature: turret terminals, extra-wide contacts, heavier current capabilities, low-loss, high heat and high impact case construction. "No Tear" shoulder on bushing. Overall dimension allows use in tight quarters. Rated 6 amps @ 125 VAC.

The new "E" Series has the most-wanted features in miniature switches. Waterproof "O" rings are located inside the toggle and on the shoulder. A mechanical shoulder on the bottom of the bushing prevents "tear-offs" when a single mounting nut is employed. High voltage barriers between terminals inside as well as outside. Case has a new, superior plastic material capable of withstanding a higher impact; guards against accidental damage. Low-loss case has extremely high resistance between terminals and case ground, and its high temperature coefficient is ideally suited for prolonged soldering and printed circuits. Turret type terminals are used for simplified wiring or for P.C. Extra-wide, solid silver contacts are bonded, not riveted, on copper-silver plated terminals. Long-life cycle over 100,000 On-Off operations at operating conditions (SPDT). Rated 6 amps @ 125 VAC.

The Mustang Series is for designers who prefer the feel of a larger toggle switch but have space limitations behind today's compact panel. The familiar ultra-miniature Alcoswitch 1/2" case is utilized, however the Mustang mounting requirements are the same as the larger switches with 1/32" bushings. This new Alcoswitch concept is a behind-the-panel space-saver in all Mustang models and it is especially true in the 3 Pole and 4 Pole Series where non-miniature switches are bulky in size. The Mustang switches have the most-wanted features as itemized in the "E" Series story (at left) with the exception of the waterproof "O" rings. The case construction is of low-loss, high impact and high temperature materials with turret terminals and bonded silver contacts. Rated 6 amps @ 125 VAC.

IRC-CTS EXACT DUPLICATE POWER SWITCHES

IRC, DIVISION OF TRW INC.

Exact duplicate replacements for pull-on, push-off power switches used on CTS 45 series controls. The quickest, most reliable switch replacements. Easy to install — eliminates double work of removing switch from cover and reinstalling. Prevent costly call-backs on universal adaptations.

TK-1. Latest development of original CTS TK switch. Uses new molded actuator for greater fatigue strength. Mounted on two-tap switch cover for use on CTS 45 series controls ($1\frac{5}{16}$ " diameter) without element tap or with either one or two element taps. Replaces TK switch only — not used for replacement of original K switches.

AK-1. Up-rated and improved replacement for CTS K switch. Rated at 5 amperes instead of 3 amperes to withstand heavy surges found in some applications. Mounted on two-tap cover for use on CTS 45 series controls ($1\frac{5}{16}$ " diameter) without element tap or with one or two element taps. Replaces K switch only — not used for replacement of original TK switches.

WFR. A reverse-action double pole, single throw switch for bracket-mounting on CTS 45 series controls to provide pull-on, push-off switch action. Switch element only — mounts on original bracket by bending over three lugs.

SELECTOR SWITCH UNIQUE 1-PIECE MOLDED WAFER PROVIDES HIGH RELIABILITY

The new IRC-CTS design goes right to the heart of selector switch reliability . . . the wafer. Automated manufacture provides unprecedented uniformity. One-piece *molded* construction of the wafer virtually eliminates drift. In each production run, all switches are identical, terminal placement is exact and permanent. Machine exactness replaces human error and variation, eliminating wide tolerances and assuring high reliability.

- Compact 1 1/8" size design allows more circuitry per unit of depth behind panel.
- Rivet-free construction permits closer stacking.
- Superior insulation due to repetitive exactness in terminal spacing, and molded glass alkyd material.
- Rotor contacts are double-wiping and self-cleaning.
- Stator contacts are integral with terminals.
- Molded stator will not break or crush during ordinary handling, or if it is dropped.

212 Wafer Assembly

The wafer assembly of the IRC-CTS selector switch can be separated into three basic elements, the rotor insulator, the rotor contacts and the stator. The stator consists of the stator insulator, terminal lugs, contacts, contact ring, which is made as a single unit.

Stator Insulator

The stator insulator is a circular molding which encloses the mid portion of each contact and serves as a container for the rotor. The stator insulator also serves as a natural solder and flux barrier, thus protecting the contact areas.

Contact Resistance

Circuit resistance ranges from .007 to .008 ohms on standard switches when measured from one terminal to an adjacent terminal. When measured terminals are not adjacent, up to 180° apart, the resistance will measure higher due to the extra metal in the stator circuits. It is to be noted

Contact Life:

Standard brass silver plated rotor contacts and brass silver plated stator provide reliable life for a minimum of

Detent Rotational Life:

The standard 212 detent assembly (T79, T80, T81 & T82) has a rated life of 25,000 cycles through 12 positions and return.

The Stator

The Stator is the heart of the IRC-CTS selector switch and determines the circuitry of the switch in conjunction with the location of the selected rotor contacts. The stator is actually a circuit pattern cut out of metal which forms the terminal lugs, center contact ring and the stator contact.

Rotor

The rotor of the IRC-CTS selector switch holds the rotor contacts in place and carries the contacts from one position to another, providing controlled float which prevents open circuiting during severe shock or vibration.

that the circuit resistance check measures all the metal in the circuit. Thus actual resistance at the point of contact is considerably less than the measured resistance. In IRC-CTS assemblies, contact resistance is unusually stable throughout the switch life.

25,000 cycles through 12 positions and return without appreciable increase in contact resistance. (See detent life.)

The star wheel detent mechanism (T180, T181, & T182) has a rated life of 100,000 cycles through 12 positions and return.

TOGGLE SWITCHES - HEAVY DUTY

J-B-T INSTRUMENTS, INC.

30th Year

WHY IT PAYS TO SPECIFY J-B-T TOGGLE SWITCHES

• **J-B-T** concentrates on trouble-free switches. Among the four groups of toggle switches J-B-T produces more than 170 models made to Government Specifications. Market studies indicate that while these switches are a must in military applications, almost half are produced for non-military use where the principal requirement is dependability. J-B-T apparently is specified because:

1. **Materials are good.** For instance, in MIL and AN heavy duty models, J-B-T uses generous proportions of selected silver alloys in integral construction for contact surface areas — to add overload protection, dissipate heat, and keep contact resistance under .005 ohms.
2. **The design is good.** All MS models have silicone rubber bushing seal for sand, dust and 15-foot head of water submersion tests. Medium-duty types MS25098 and MS25100 also feature case-to-terminal sealing and a new design which provides fast break and wider gap to surpass the 125 VDC endurance tests of MIL-S-3950C.
3. **The value is good.** The many features required to meet Government standards, and J-B-T's rigid in-plant testing pay off in long, useful life. Nevertheless, because J-B-T makes **only** quality switches, quantity production permits a surprisingly small price differential over run-of-the-mill brands.
4. **Deliveries are comparatively good.** See your distributor. Production is scheduled to back up his stocks with factory inventory of finished switches and work in process to meet predictable demand.

• **MEDIUM DUTY** describes the current-carrying capacity — nominally 6 amp. at 125 VAC, 3 amp. at 250 VAC — rather than the life characteristics. Self-wiping heavily silver plated double grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

NEW DESIGN FOR MS25098 & MS25100

— Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950C. For example, after 20,000 cycles of operation at 65,000' altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

OUTSTANDING 4-POLE SWITCHES TO MS25068 REQUIREMENTS

There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS25068.

Equally important, J-B-T uses generous proportions of selected silver alloys in integral construction for contact surface areas — to add overload protection, dissipate heat, and keep contact resistance under .005 ohms. The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty J-B-T MS switches. Dimensions same as MS35059 except bodies including terminals: 1-11/32" long, 1-9/16" wide, 1-9/32" deep.

Underwriters' Laboratories, Inc. lists under "Switches, Special Use" (File E26557) models marked with the J-B-T part number shown below. In some instances, there are minor construction differences from ST

switches, but the ratings and external dimensions are the same. UL-marked types are not regularly stocked but only are manufactured in substantial production runs.

DRAWINGS FOR SUB-MINIATURE TOGGLE SWITCHES ON NEXT PAGE

JMT SERIES dimensions and details are shown below. MPC SERIES is identical with JMT series except that solid terminals are provided for direct insertion in a printed circuit board. For details on MPC terminals, see drawing at right. To obtain MPC model number, substitute MPC for JMT; example: JMT-121 becomes MPC-121. Complete dimensions and model numbers are available on drawings SK-166 through SK-169.

PCI SERIES can be provided where it is necessary to mount the switch at right angles to the circuit board. A two-prong bracket and attached terminals necessarily add to the cast.

NOTE A — Dimensions shown apply to standard terminals with holes. MPC series solid-terminals are, slightly larger as shown by configuration drawing at right.

1-, 2-, 3-, and 4-pole DT.* **NEW**Series MPC
For printed circuits
(drawings on preceding page)**Group IV****SERIES JMT, MPC, AND PC1;
A BROAD LINE OF SUB-MINIATURE TOGGLE SWITCHES
MANUFACTURED IN CONNECTICUT BY J-B-T**

MANUFACTURED IN J-B-T's spanking new plant, the sub-miniature types illustrated on this page make up the firm's fourth and newest group of toggle switches. Series JMT combines drastic reduction in size and weight with the trouble-free construction built into standard-size J-B-T switches. Widely used in manually controlled, low-current, solid-state devices and miniaturized circuitry of computers, instruments, space, geophysical, and test apparatus, these tiny switches also have application in aircraft, communications, and electronic equipment, and portable products.

Made with a distinctive GREEN BODY (bright color on some models, forest green on others) single-pole types are 1/4" thin, double-pole types less than 1/2" square, 3-pole and 4-pole types correspondingly small. All use single-hole mounting with 1/4" threaded bushing which will not turn or work loose in the J-B-T surface plate. Stringent in-plant controls assure terminals that are firmly staked and will withstand repeated soldering. Terminal holes on JMT Series accept up to three #22 wires. Terminal configuration for MPC Series (printed circuit type) is shown on opposite page.

SPECIFICATIONS

Mounting hardware supplied consists of one locking ring W-RI-12, two hex nuts, W-NU-11, one internal tooth lockwasher, W-WA-16, Knurled nut, W-NU-12 and tapered panel dress nut, W-NU-14 are also available.

DIRECTION OF MOVEMENT — All JMT switches make continuity to terminal OPPOSITE throw of lever.

MOUNTING INFORMATION — When mounting switch with locking ring, use drill procedure illustrated.

COLOR CAPS — Switches are normally supplied with bat handles. For color coding, tight-grip insulator caps are available for easy attachment before or after switches are mounted. Price, \$10.00 per thousand in bulk; 2c per switch if attached. Specify color and part number:

30th Year

IMPROVED MULTI-POLE MOLDED ROTARY SWITCHES, SERIES 20M.

- Superior Molded Material
- All Models Bonded & Ruggedized
- Panel Seal Available

Front View Showing Panel Locator which is Normally at 3 o'clock Position.

Rear View with Back Cover Cut Away to Show 4-Pole Construction with 4 Live Switching Contacts.

Although the new 20M-Series is 1/4" longer behind the panel than the 20-position molded switches described on the preceding page, the two styles are otherwise interchangeable in dimensions. Providing 19 live positions and off, the 20M-offers these additional features:

1. **Increased Versatility of Circuitry** — up to and including four poles per deck;
2. **Upgraded Insulation Resistance and Dielectric Qualities** — by use of melamine stators and rotors (or other MIL-M-14 molded materials when specially ordered);
3. **Built-in Panel Locator or Non-Turn Device;**
4. **Extended Switch Life** — new contact design with rotor brushes of phosphor bronze heavily silver-plated;
5. **All 20M-Models are Bonded and Ruggedized Construction;**
6. **Radial Alignment of Multi-Pole Contact Surfaces** — by means of newly-designed double-ball detent with diaphragm-type springs.

VARIATIONS OF 20M- Please request SK-142, Revision of March, 1967, or later for full dimensions and circuit diagrams. Besides the condensed listing in the accompanying table, various combinations of shorting and non-shortng contacts for each deck may be made. Fixed stops are built-in but may be altered for single-pole switches when specially ordered. **Over six decks** can be supplied for a reasonable number of poles; extra decks add 5/16" per deck and 5/16" per switch for rear support SU-3. **Ring-contact** (suffix R) may be specially ordered.

PANEL SEAL PS20M-SERIES — Sealed shaft and bushing meet the requirements of MIL-S-3786B for sealing. For details ask for SK-143, Revision of March, 1967, or later. The seal (prefix PS) adds \$1.75 per switch to catalog price.

LEVER ACTION SWITCHES — 6, 5, 4, 3, and 2-Position — LAMINATED, MOLDED, & SUB-MINIATURE

LAMINATED 3- AND 4-POSITION, POSITIVE INDEXING. These lever switches are derived from the J-B-T SS-14 instrument-type rotaries.

Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw (1" slot for 3-position, 1 3/8" for 4-position) — mounting holes for boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. **SINGLE DECK** spacing between centers: recommended, 3/4"; minimum, 9/16". **TWO DECK** spacing: recommended, 15/16"; minimum, 13/16". 3/8" between decks matches TV twinlead wires. **SPRING RETURN TYPE** single deck, 3-position switches may be ordered with spring return. Lever returns to position 11°, giving momentary action at positions 9° and 10°. For dimensions on all SS-14-IL series switches, ask for drawing SK-138.

- SINGLE AND MULTI-DECK • MILITARY OR COMMERCIAL

MS-14-1 Molded

USES — J-B-T Rotary Selector Switches are extensively used in quality test equipment, portable instruments, inspection setups, and other military aerospace and commercial applications where trouble-free, dependable performance is of major importance.

FEATURES — **Extra Contacts** — 14- and 20-position designs provide extra switching capability. **Dependability** — Sturdy rotors and decks with rigid 3-post deck suspension; current-carrying parts heavily silverplated to meet 100 hour salt spray test; sharp detent mechanism to assure positive indexing; insulation resistance above 50,000 megohms. **Low Contact Loss** — Double-grip collector arms, and large area contacts, silver to silver; average contact resistance, .007 ohms or less. **Ample Dielectric** — Conservatively rated at 1 amp., 125 VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp. AC or DC; maximum voltage between contacts, 1500 VAC, R.M.S.; between decks and ground, 2000 VAC, R.M.S.

SS-20-2 Laminated

Enclosed — Molded models have all moving contacts enclosed to minimize dirt and corrosion.

Basic 14-Position: 13 circuits and "off" per deck in 2" circle (SS-14) or 2-3/32" circle (MS-14) with 25° 43' angular indexing. Supplied individually boxed with 1-1/4" Bar Knob, (KN-14), not on bulk orders unless specified. For details, SS-14, 1 to 6 decks, see Print SK-42 Rev. B. MS-14 1 to 6 decks, Print SK-111 Rev. *****BONDED RUGGEDIZED TYPES** As indicated in the table, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types using cured laminations for ruggedization, shockproofing and further enclosure. This additional dependability factor adds only approx. 1/64" and 35c catalog price per deck.

6-POLE DOUBLE-THROW PER DECK —

1 or 2 DECKS (DT Series). Widely used for simultaneous double-throw switching of 6 circuits per deck (18° throw). Fully enclosed — illustration shows protective cover cut-away. CAUTION—MIL-S-3786B, a sophisticated specification, spells out more than one performance level in each of several categories such as Temperature-Life, Vibration, Shock, and Altitude. Each level is designated by its own symbol. J-B-T SR05 models meet an exceptional number of levels.

• USES — For test equipment, airborne and transistorized equipment, geophysical apparatus, and other miniaturized electrical and electronic devices.

TWO BASIC SERIES — Full 12 live switching contacts per deck are available in Series 7000 using a patented water design feature where rotor contacts are on the front, and switching contacts are on the rear of the same deck. 1 to 4 poles per deck 1 to 6 decks, standard.

Up to 8 poles per dual-duty deck are available in Series 5000 which has up to 12 contacts including common on the front, and up to 12 contacts including common on the rear of the same deck. 1 to 4 poles on each side of dual-duty decks; 1 to 4 decks, standard.

THREE ROTARY TYPES — Both Basic Series are made in 3 types: **MILITARY STYLE SR05**, numbered for specific performance levels of MIL-S-3786B; **V TYPE**, of similar construction to SR05, but not ordinarily subjected to full military test procedures; and **X TYPE**, using the same materials as V type switches, but intended as replacements for previous models or as original components for non-military devices where requirements are similarly exacting.

LEVER SERIES (L Types) — Outstanding design known as VL-7000 or VL-5000 Series, 1 to 4 decks. Illustrated on a preceding page.

KNOBS — Supplied with individually boxed switches on V and X types; not supplied on SR05 because separate military specification applies.

REMARKABLE NEW 12 POSITION ROTARY SWITCHES

30th Year

J-B-T INSTRUMENTS, INC.

V/M SERIES 12-POSITION ROTARY SWITCHES
ULTRA-HIGH QUALITY WITH ADJUSTABLE TORQUE DETENT

This unusually fine family of fully enclosed rotary switches is being produced in J-B-T's thoroughly modern new plant. Used in precise laboratory test apparatus, test set-ups, telemetering, meter switching, calibration operations and similar applications where circuit stability is essential to accuracy and repeatability. The V/M Series virtually eliminates the influence of extraneous factors to the circuitry, and the initial electrical and mechanical characteristics remain substantially unchanged throughout the long useful life of the switch.

SPECIFICATIONS (Apply only to VMCS7 Models with coin silver contacts and rotor blades.): **Initial Contact Resistance**, .002 ohms; **Maximum Inductance**, less than .03 microhenry; **Capacitance between Segments**, less than 2 PFD; **Thermal EMF**, less than -1 microvolt; **Current Carrying Capacity**, 5 amp.; **Dielectric Strength**, 1000 volts, rms, 60 cy. — terminals to ground and terminals to terminals; **Insulation Resistance**, greater than 500,000 megohms; **Life Cycling** (make and break), 100,000 cycles at 1 amp., 120 VAC, res. and ind., and 28 VDC res. and ind.

DIMENSIONS: diameter over terminals 1 3/16"; bushing 3/8-32 x 3/8" long; non-turn device 1/8" diam., 1 7/32" from shaft centerline.

NOTES:

* Model Number shown is for VMCS7, with coin silver contacts and rotor blades. For nickel silver, model number would be VMNS7; for silver plated brass, VMSB7.

** Unlike other J-B-T rotary switches, VM series is normally shorting type; for non-shorting construction add 50c per deck per switch, Net.

† Includes knob and mounting hardware. Quantity prices on request.

MODEL VMCS7-1125NF2
5-Deck Non-Shorting Type
Illustrated. (Shorting Type Has
Common Deck Adjacent to
Front of Switch)

FEATURES:

- (1) Adjustable detent action for variable torque (or factory set for 4 inch lbs. max.)
- (2) Unusually sturdy molded-in terminals .032" thick; accommodate two #18 wires.
- (3) Distinctive color-coded glass alkylid decks — gray for coin silver alloy contacts and rotor blades; blue for nickel silver; and green for silverplated brass.
- (4) Husky 1/4" stainless steel shaft.
- (5) Permanent identification of positions 0 through 11, cast-in detent housing and molded-in rear deck.

Applications: selective-calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding.

For further data, ask for Bulletins 162-R and D664A. Inquiries are invited on newly-developed miniature combination relay-oscillator types.

J-B-T frequency-sensitive electro-mechanical relays (decoders) are highly stable control devices. They intermittently make and break contacts when a signal of the same frequency as the tuned reed is received. Although the reed has a high Q, the bandwidth at which the relay responds will be proportional to the input signal level.

RR-A11- and RR-A10 types are round, 4-pin plug-in relays, used primarily on existing mobile equipment.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sealed construction. These units control the frequency of oscillation in vacuum tube or transistor oscillator circuits. The RO-B type oscillator control is recommended where accurate and stable AC signals are required.

RR-D types are internally shock-mounted resonant reed relays, which are square, sealed units with 7-pin miniature plug. They now are the most widely used J-B-T relays.

RO-D types are single-reed, internally shock mounted oscillator controls for applications where space saving is of importance. Dimensionally they are identical to RR-D relays.

HIGH VOLTAGE FUSES
 Designed for use in aircraft radio equipment, transmitting equipment, X-ray apparatus, high voltage rectifiers, etc., for circuits up to 20 kW DC or 30 kVA AC Fuses are fiber enclosed with cadmium plated end caps. Two principles of arc suppression are employed: (1) Multi-break fuse wire which blows at each half inch of its length; (2) Ceramic baffles break the arc into several parts and quench it. Blow Time: 110%, 4-hour min.; 135%, 0-1 hour; 200% 0-2 minutes.

MALLY Switches

Mally switches are available in three general styles: Rotary, lever-action and pushbutton. Most styles are supplied in both shorting and non-shorting contacts. Shorting switches have contacts with "make" before "breaking" and are widely used in audio circuits. Contacts in non-shorting switches "break" before "making". These switches may be chosen with phenolic, ceramic or glass-epoxy wafer materials. Ceramic is usually selected for high voltage circuits as in switching RF equipment. All switches are supplied with normal mounting hardware. Dial plates are not included (except for Type 13124L).

PHENOLIC WAFER ROTARY SWITCHES

Mally phenolic wafer rotary switches come in several sizes and contact arrangements. Supplied with nut, washer and 366-1 black knob. Phenolic is MIL grade Richardson T725.

STANDARD 1 3/8" DIAMETER (FIG. A)

Rated 1 amp at 300 VDC; 4 amps, 50 VDC; 2 amps, 300 VAC rms; 12 amps, 6 VAC rms. Maximum non-breaking resistive load, 12 amps. Breakdown, 1000 VAC/DC. Contact resistance less than 0.01 ohm. Supplied with adjustment pin and stop plate.

OHMITE power tap switches, high current, non-shorting type

Introducing

MODEL 711
Smallest Switch for Its Rating

Ohmite single pole, rotary, multi-position switches have proven their durability over many years in demanding applications. Such applications are found in switchboards, arc welders, spot welders, battery chargers, motor controls, tapped transformers, X-ray equipment, diathermy equipment, radio transmitters, electrical machine tools and many other products. Six sizes, including the new, miniature Model 711, provide a choice of ratings from 7 amperes at 125 volts to 100 amperes at 300 volts AC. A choice of the number of taps is provided up to the maximums indicated. All switches are enclosed except for the Models 711 and 111. All switches feature the slow-break, quick-make action deemed so desirable for switching of AC current.

The five sizes offering ratings from 15 amperes to 100 amperes (Models 111, 212, 312, 412 and 608) feature all ceramic, arc-proof bodies and solid silver alloy, fixed and movable contacts. The large, thick, silver-alloy fixed contact disks are permanently welded to copper studs. These, in turn, are riveted and soldered to sturdy terminal lugs, assuring a permanent mechanical and electrical joint. The rotor (moving) contact, also of solid silver-alloy, is riveted and soldered to the contact arm. Face of the rotor contact is slightly rounded assuring a perfect seating of the contacts with a slight rubbing, self-cleaning motion on every operation.

ALL CERAMIC OPEN TYPE TAP SWITCHES

Designed to transfer currents of several amperes in circuits requiring high voltage insulation. Ceramic body construction is the same as employed in Models J and K rheostats (see page 19). Monel metal taps; silver-graphite brush.

SHORTING TYPE SWITCH: Moving contact bridges closely spaced taps completing a new circuit before breaking the previous one. Switch arm is not indexed and can be left in any position.

NON-SHORTING SWITCH: Positively indexed, moving contact completely disconnects from one tap before contacting succeeding tap.

Switches up to 8 taps are approximately $3\frac{1}{4}$ " diameter including lugs; 9 to 12 tap switches are approximately $4\frac{1}{4}$ " diameter. Switches can be ordered assembled 2 or 3 in tandem. Single hole mounting by means of $\frac{3}{8}$ " diameter bushing and hexagon nut accommodates panels up to $\frac{1}{4}$ " thick (maximum). The "non-turn" lug requires a $\frac{3}{8}$ " panel hole $\frac{1}{2}$ " below the center of the shaft. Shaft diameter is $\frac{1}{4}$ ". Recommended knob, Stock No. 5150, see page 20.

Maximum current capacity is 7 amperes but only 3 amperes at 120 V.A.C. should be interrupted. Current ratings are less for all direct current circuits above 20 volts, for inductive circuits and high voltages.

TAP SWITCH DIALS

Dials for Ohmite tap switches are made of aluminum, etched and enameled black. Dial markings are bright aluminum. The number of dial calibrations or position markings agree with the actual number of positions on the switch. Note, in the table, that dials for switches Models 212 and 312 are available in two diameters to suit the recommended knob.

SOLDERING AIDS**

The hallmark of quality shows in each detail. Examine the straight or angled tips for the hard-to-reach areas... you'll find they're twist-proof, hard-chrome plated to shed solder. More, both ends are insulated from one another. The practical fork-ends are a "must" for twisting or holding wires. And when you want to scrape joints, connections or ream out lug holes, just flip your Beau-Tech soldering aid to the spade end. Non-slipping, non-rolling "hex" handles. Available in standard, miniature and single ended models.

MODEL 30 CONTROL TRANSFORMER

FOR ALL 6 VOLT SOLDERING IRONS

The R30, transformer model has a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 6.5 volts, thus making it possible to select a temperature range between 240 to 480°C. When not in use, a solder iron may rest on a special nozzle provided on the transformer. This protects against overheating. The R30, permits universal use of all the various 6 volt irons with their different capacities, up to 30 watts.

PLASTIC HANDLES—(TN-22, TN-33, TN-44, TN-55) (M2T, M3T, M4T, M5T) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x 3/8" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scribe for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH—has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation. Order tool number by wire size being used. *"N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

ERSIN

Multicore

5-core solder

Available in 1-lb.
and 7-lb. reels**TECHNICAL ADVANTAGES:**

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water-white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

Conforms with all pertinent federal specifications.

Multicore construction: Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

NOTE: Multicore presents an entirely new concept in solder packaging designed to bring the solder to you in perfect condition at all times. The attractive polystyrene foam container resists damage in shipping and each individual reel is skin packed to keep the solder clean and fresh and to minimize oxidation no matter how long it may be stored.

STANDARD TIN/LEAD ALLOYS AND GAUGES

Available from stock: 63/37; 60/40, 50/50, 40/60; Savbit; Special Alloys — H.M.P. (High melting point, 565°F); L.M.P. (low melting point, 354°F). Other alloys upon request.
Gauges: 14 s.w.g. (.080") through 24 s.w.g. (.009").

NOTE: Soldering iron tips should always be 108°F above melting point of alloy.

**NEEDLE FINE GAUGES**

For microminiaturization, integrated circuits and other similar requirements. Off-the-shelf delivery in alloys 63/37 and 60/40, in even gauges from 22 s.w.g. (.022") through 34 s.w.g. (.009").

**COPPER-LOADED SAVBIT ALLOY**

Copper-loaded SAVBIT stops the wear and erosion of copper soldering iron tips . . . increases tip life by 1,000%.

Characteristics and specifications: Savbit Alloy is available in Ersin Multicore 5-core solder containing non-corrosive extra-fast Ersin Flux in 14, 16, 18, 20, 22 and 24 gauge. Melting point: Virtually the same as standard tin/lead alloys. Excellent conductivity, tensile and shear strength.

Available in new 1-lb. and 7-lb. reels, skin wrapped and foam packaged.

NEW ERSIN LIQUID FLUXES

Meet the same high quality standards as Ersin Multicore Solder. Three new Fluxes: Formula No. 5380 and Formula No. 0360 meet Government MIL specifications for active and non-activated liquid fluxes, respectively. Formula No. 4370 is an activated liquid flux which is the external counterpart of the flux contained in Ersin Multicore 5-Core Solder. Conforms to the latest Federal Specification QQ-S-571d.

NEW MULTICORE HIGH PURITY EXTRUDED SOLID BAR SOLDER

Offers higher purity achieved through greater quality control, only possible with extrusions. Available in skin packaging as well as bulk. Available in two alloys: 60/40 and 63/37.

ORYX

PRECISION SOLDERING INSTRUMENTS

*News for
Production
Engineers*

Oryx industrial soldering instruments offer these important advantages:

MINIATURE SIZE
FEATHER WEIGHT
HIGH EFFICIENCY
SAFETY

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat within the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joints is so very short. The need for large insulating handles is eliminated.

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

REPLACEMENT TIPS for low-voltage soldering irons

Oryx tips are precision machined from a special copper alloy with outstanding heat conduction characteristics. Nickel plating reduces scaling. Iron-plated tips and solid nickel tips give much longer life with slightly reduced heat transfer. Gold tips recommended for microcircuits only.

"IN-CIRCUIT" TRANSISTOR TESTER

Test transistors and diodes without unsoldering!

A new test instrument for the circuit designer or test technician. Makes rapid "go-no go" evaluations of semiconductors while they are still in the circuit. Checks cut-off and conduction on PNP and NPN transistors and diodes without the need for costly unsoldering. To use, the operator sets the selector switch to NPN or PNP. He then presses the tester's sharp spring-loaded pins (arranged in TO-5 configuration) against the transistor's printed circuit connections. Open and shorted transistors are readily identified by noting the condition of the tester's pilot light. Diodes and unmounted transistors are similarly tested using a set of extending leads and clips. An optional 7-position diode adapter may be used to test diodes in the circuit. Furnished complete with extending leads and alkaline battery, ready to operate.

PRINCESS ISOLATED LOW VOLTAGE SOLDERING SYSTEM #6970

For safer assembly of discrete components and IC systems.

Its single heat capsule permits tip temperature range from 450°F to 900°F.

The isolated low voltage transformer prevents current leakage which destroys the thin insulating film of bi-polar or metal oxide silicone ICs.

The isolated heat capsule eliminates current paths that degrade the thin metalization in bi-polar ICs.

A Clean Room unit. Input: 120 volts 60 cycle. Output: 6 volts to 12 volts.

COMPLETE STATION INCLUDES: Low voltage ISOLATED transformer with temperature setting dial, 1.35 amp. 3-amp. bayonet type fuse, pilot light and 3 wire cord with Nema attachment plug; Princess handle, heat capsule and 3 soldering nibs, #s 6971, 6950 and 6952. Shipping weight: 3 lbs. 14 ozs. #6970: 1-3 each \$24.95, 4-11 each \$22.95, 12-up each \$21.00.
