# TOWERS

**SELF-SUPPORTING UP TO 60 FEET HIGH**  
**HOT DIP GALVANIZED HEAVY DUTY MODELS**  
**ZINC ELECTROPLATED ECONOMY MODELS**  
**NO LOST TOWER FOOTAGE**  
**FAST, EASY SECTIONAL ERECTING**

With these two Jontz Tower models you can fill any tower needs... from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Model No. 500 is self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from 1½"x18

ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1¼" x 16 ga. tubular uprights and is hot dip galvanized.

New, extra-wide corrugated cross-braces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking ⅜" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.

**HOW TO ORDER:** 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers.

**SHIPPING:** For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

**JERROLD**®**TV-FM RECEPTION PRODUCTS****POWERMATE AMPLIFIERS**

Powermate solid-state antenna amplifiers each comprise a universal-mounting (Mast, boom or flat surface) amplifier and a remote power supply (usually mounted on back of TV set). High gain and low noise assure finest color and black and white reception.

**Model SPC-107A.** This is an improved version of the famous Jerrold Super-Powermate coaxial Model SPC-103 amplifier, which brings in far-distant TV stations clear as a bell but doesn't overload with strong local signals. The Model SPC-107 has built-in match both at the antenna and at the receiver end of the cable, making the use of separate matching transformers unnecessary. Remote power supply, installed on or near receiver, gives you the choice of 75-ohm coax or 300-ohm twinlead output to associated equipment, depending on this equipment's impedance. . . . . **Net \$31.97**

**Model SPC-132A.** Most powerful of all Powermate antenna amplifiers, the "De-Snow" is recommended for deepest fringe-area reception and for master antenna installations in apartment houses, motels, and hotels. In addition to complete coaxial-cable operation, the Model SPC-132A offers twin-transistorized preamplification at the antenna plus a three-transistor post-amplifier integral to the remote power supply. . . . . **Net \$65.50**

**Model UPC-105.** This hi-gain UHF Powermate amplifier Model UPC provides a choice of 75- or 300-ohm antenna inputs and has a 75-ohm COLORAXIAL output. Model 105 has a 75-ohm input and output. Used for individual homes in extreme fringe areas. Model UPC-105 may also be used in master antenna systems. . . . . **Net \$43.95**

Jerrold home TV distribution system amplifiers and amplified couplers improve reception of weak, fringe-area signals. Models are available for connecting 2 to 4 sets, 75 or 300 ohms, VHF, FM, UHF, or All-channel (VHF/FM/UHF).

**New Model TAC-4.** A TAC-4 Colorcaster Home TV System Amplifier brings in all 82 channels—VHF and UHF—as well as the full FM bands. Because it is solid-state and uses coaxial cable it is reliable and trouble-free. Handles 4 sets at once—anywhere in the house—from the same antenna. Provides a full 3 dB gain for each 75-ohm outlet and excellent overload stability in the presence of strong signals. . . . . **Net \$48.50**

**Model TA-24.** Powermate Indoor 4-set coupler uses special transistor to provide sufficient gain (2.2 dB average at low band, 3.6 dB average at high band) to supply 4 TV sets from one antenna. Uses 300-ohm twinlead. Gain is higher with fewer sets. Handles both VHF-TV and FM channels. . . . . **Net \$16.75**

**Model TA-66.** Super Powermate Indoor 4-set coupler is solid-state, twin transistor unit that provides 7.5 dB gain at low band and 6.3 dB gain at high band. Uses 300-ohm twinlead. Supplies 4 TV sets. Gain is higher with fewer sets. . . . . **Net \$22.95**

**Model TAU-12.** Powermate Special—2-set coupler provides sufficient gain (2.7 dB average) to adequately supply 2 UHF tuners. For areas where VHF signal is received off-the-air and only UHF requires amplification. Solid state. . . . . **Net \$19.95**

**SYSTEM AMPLIFIERS**

Jerrold TV/FM distribution system amplifiers are the result of unmatched experience in solid-state technology. The "Gibraltar" series is the result. Now you can have a complete solid-state, all-channel system from antennas to TV and FM receiver outlets, with assurance of guaranteed performance through Jerrold's policy of using only minimum specifications.

Provisions for both 300-ohm and 75-ohm input terminals. Provides 22 dB minimum gain and better than +42 dBmV minimum output, TV and FM bands. Output impedance is 75 ohms for coaxial distribution. . . . . **Net \$53.70**

**Model 3550.** New solid-state, high-gain, broadband "Gibraltar" VHF amplifier for medium size distribution systems. Similar to Model 3440. Provides 33 dB minimum gain and better than +45.5 dBmV output, TV and FM bands. Input and output impedance 75 ohms. . . . . **Net \$68.95**

**Model 3660.** Solid-state, high-gain, broadband "Gibraltar" amplifier for large TV distribution systems such as those in hotels, apartment houses, and schools. Provides 40 dB of gain and better than +50 dBmV output, TV and FM bands. Easily handles more than 100 sets. Capable of 12-channel operation. Flat response across all bands. Separate gain controls for high and low bands. Wall or 19-inch rack mounting. . . . . **Net \$130.00**

**Model 2880.** Broadband, vacuum tube amplifier famous for its high output capability (+60 dBmV). One volt per channel for each 7 channels. Provides 41 dB of low band and 44 dB of high band gain. . . . . **Net \$222.75**

**JERROLD****TV-FM RECEPTION PRODUCTS****UHF CONVERTERS**

Jerrold UV-Series Single Channel UHF to VHF Converters are designed for Master Antenna Systems, for metropolitan to deep-fringe installations.

**Model U3V\***. For outdoor use, Model U3V converts any single UHF channel (14 through 83) to any single VHF channel (2 through 12) with a loss of only 12 dB maximum. Used in metropolitan or strong signal areas. It uses a mast-mounted, weatherized Converter Unit, Model 454, at the UHF antenna for optimum signal-to-noise ratio. Both DC power and oscillator input are from a remote Oscillator/Power Supply, Model 463. Impedance is 75- or 300-ohm input (specify), 75-ohm output. **Net \$150.00**

**Model U4V\***. For outdoor use, Model U4V permits a conversion similar to the U3V but with an overall conversion gain that makes it excellent for fringe area reception of UHF signals. Weatherproof-housed, mast-mounted, solid-state, cavity-tuned Converter-Amplifier Unit, Model 454T assures optimum signal-to-noise ratio. The indoor remote Oscillator Power Supply, Model 463 is used to supply oscillator and DC power to the mixer head. Conversion gain of 7 dB (low band) and 5 dB (high band). Impedance is 75- or 300-ohm input (specify when 75-ohm is desired), 75-ohm output. Noise figure is 14 dB maximum, 10 dB typical. Bandwidth is 8 MHz. **Net \$135.00**

## TRAPS

**High "Q" Traps.** Each trap consists of two tunable L-C circuits in a modified bridged-tee network. Tuning of units is by means of Teflon-dielectric trimmers with screwdriver adjustment. When both circuits are tuned to an interfering signal, rejection is a minimum of 40 dB. Insertion loss at 1.5 MHz off the interfering frequency is only 3 dB. Impedance 75 ohms. Indoor mounts. Shipped with two F-59A connectors for use with RG-59/U coaxial cable.

- Model TLB-1.**  
For low-band channels 2-6 (59.75-83.75 MHz) ..... **Net \$39.55**
- Model TFM-1.**  
For FM band (88-108 MHz) ..... **Net \$38.55**
- Model THB-1.**  
For high-band channels 7-13 (179.75-211.25 MHz) ..... **Net \$38.55**

**Series 1435\*.** Multi-section, wideband traps provide a minimum of 20 dB (average 23.0 dB) rejection of any specified VHF-TV channel, or the full FM band. Provide sharp cut-off and prevent strong TV or FM channels from causing overloading of the TV set and resulting in sound distortion, cross modulation, or herringbone pattern on the TV screen. VSWR is 1.5:1. Weather-proof housing. Mountable directly to antenna crossing. Can be used with either amplified or non-amplified antennas. **Net \$ 4.77**

\*Specify channel number of FM band.

## TAPS AND OUTLETS

The Jerrold Variable Tap is a new concept in flush-mounted tap-offs. Model VT-75 is for 75-ohm use and Model VT-300 is for 300-ohm use. The same model is used at every outlet location. A printed circuit incorporates all three isolation values. These values are color-coded red, yellow, and green. The particular isolation value required is selected by merely positioning the isolation screw according to color-code. Separate cover plate included. Taps, like electrical outlets, are installed without the cover plates and the system checked out—before the walls are painted. Ivory colored. Attached with single screw.

- Model VT-75** ..... **Net \$ 2.35**
- Model VT-300** ..... **Net \$ 2.15**

**Model FT-75.** New unit for small distribution systems carrying VHF, FM, and UHF television channels with flat 12 dB isolation. Can be flush-mounted in a regular electrical outlet box. Accepts CAC, RG-59/U or RG-6/U coaxial cable. Solderless feeder line connections are made through a twin cable clamp and a single binder screen. Plug, ferrule and ivory-colored plate are provided. Impedance is 75 ohms. **Net \$ 2.12**

## ULTRA-TAPS

These TV signal tap-offs are the finest on the market for master antenna systems in hotels, motels, schools, apartment houses, or other commercial and industrial buildings. Each tap is matched which insures the absence of discontinuities which might create standing-waves and degrade the overall system performance. Equipped with "Gamma" receptacles, units accept Jerrold 75- and 300-ohm push-on plugs. Simple crimp-on bushings and positive gripping clutch permit fast solderless connections to the feeder. Units can be flush mounted in standard 2" x 4" (or combination) wall boxes and used with Jerrold or other cover plates.

**Models UT-82-59, UT-82-CAC.** All-channel (20-890 MHz) tap-off units that provide a choice of 3 isolation and feed-thru values, each color-coded. Two models for either RG-59 (UT-82-59) or Jerrold "CAC" Cable (UT-82-CAC). Simple crimp-on bushings and positive-gripping clutch permit fast, solderless connections to the feeder. The tap terminal accepts G-59, PG-59, and G-56 push-on connectors. Specifications are shown on table.

- Model UT-82-59 (Specify W, R, Y)** ..... **Net \$ 3.60**
- Model UT-82-CAC (Specify W, R, Y)** ..... **Net \$ 3.60**

**Model UT-22.** For VHF-TV or FM. Provides choice of three isolation and feed-thru values (color-coded). Taps signals from RF-59-type feeder cables. Provide single "Gamma" receptacle for connecting a TV or FM receiver. Accepts G-59, PG-59, and G-56 75-ohm, and G-300 75-300-ohm adapter, push-on connectors. Specifications are on the table.

- Model UT-22 (Specify W, R, Y)** ..... **Net \$ 2.70**

**Model UT-18\*.** All-channel TV feed-thru unit (dc-890 MHz) provides flush-mounted terminal outlet for splitter or tap-off units only. Male connections not supplied but may be purchased for cable used. The output terminal accepts G-59, PG-59, and G-56 push-on connectors. **Net \$ 2.10**

**Model UT-33.** Combination tap-off unit for VHF-TV and FM, unit is available in some isolation and feed-thru values as Model UT-22. Additional isolation to separate TV and FM signals for simultaneous connection of both TV and FM receiver. TV output, 75-ohm "Gamma" fitting. FM—300-ohm screw terminal. Specify W, R, Y ..... **Net \$ 3.30**

**Model UT-13\*.** Similar in function to Model UT-18 except provides an additional FM outlet attenuated 10 dB below the TV signal level. **Net \$ 2.86**  
\*Not to be used as a line termination. No isolation or feed through.

- Model UT-PL.** Single outlet cover plate of molded ivory plastic. **Net \$ .21**

**Model 2L — 2 Lights, 2 Switches per Room**  
Status Control System Between Front Office,  
Housekeeper & Guest Rooms:

- (1) Green Light — Room for Sale — Available
- (2) No Light — Room Occupied
- (3) Red Light — Room on Change (Check Out)

On condition (3) Check Out, a small light appears on guest room plate indicating to Maid that room is Check Out. Maid inserts her plug into plate jack causing lights at Front Desk and Housekeeper to blink. This informs them that Maid is making up room. When Maid completes room, she removes her plug. This turns off blinking red light and turns on the steady green light. This alerts Front Desk that room is ready again and available for sale.

A microphone jack on both Front Office and Housekeeper's panels allow for direct communication (one way only) to Maid in guest room. Maids location, and presence, is indicated by blinking light, so both Front Desk and Housekeeper instantly know where Maid is working.

- (1) Green Light — Room for Sale — Available
- (2) Amber Light — Room Occupied
- (3) Red Light — Room on Change — Check Out
- (4) White Light — Maid's Light, independent of status

Operation of Maid in room is similar to Model 2L except that white light is separate circuit which indicates to both Front Office and Housekeeper when room is completed, by steady white light. Status is changed to green by either Housekeeper or Front Office. This is a dual system, which may be operated from either Front Office or Housekeeper's boards, therefore does not depend on Housekeeper being present to operate system. This system allows for direct communication (one way) between Front Office, Housekeeper and Maid in Guest Room.

**Single Light Maid Status System**

Maid Call System "MC" is the use of the white light or maid's control light of Status Control System 4L as an independent, separate system. This system may be installed alone, and functions to notify the Front Office or Housekeeper when the room has been completed.

**Operation:**

- (1) On Check Out, Room Clerk turns on light on Guest Room Panel.
- (2) Light indicates to Maid that room is Check Out.
- (3) Light blinks at Front Office and/or Housekeeper's board when Maid inserts plug in room jack.
- (4) Light goes off when Maid removes plug.

## SIGNAL MAIL RACK & MESSAGE-AT-DESK

REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM

AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The Mail (and Message) Rack Signal System is comprised of numbered pockets, one for each room with a push button light switch, or light and switch for each pocket. Each pocket is wired to a guest-room. When clerk files mail (or message) in pocket, he lights corresponding lamp; simultaneously, a duplicate lamp in the guest room lights, and advises guest he has a message at main desk.

Long-life bayonet lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front.

A new 2-Way model, No. A-MR2, with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

The Message-at-Desk Unit is identical with the Mail Rack System, except that there are no pockets — only push button light switches or lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described. Model A-MD1/85 (illus.), for example, is a desk-top model for 85 guest rooms.

No. A-P20-3-A Signal Plate, in guest room, mounts on standard 1-gang outlet box.

The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with key slots.

If guest room is not wired for radio, a separate wall plate, A-P20-3-A, is provided for the signal lamp; otherwise, it can be included on the radio control panel or the TV Remote Control Unit.

They may be made for Flush-wall (recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to wiring. Power Supply unit (included) is controlled by a switch.

Above, No. A-MR3/100 Mail & Message Rack, Key Slot (not shown) is available.

No. A-MD1/85 Message-at-Desk unit, Desk-top type.

## AMERICAN'S New TV-set THEFT ALARMS\*

A-TA-B/50 TV-set Theft Alarm for Hotels.

TV-3, SELF-CONTAINED TV THEFT ALARM.

AMERICAN'S TV-set Theft Alarm is now available in designs that meet the needs of occupancies of any size; in addition to the Model B, for hotels of 50 rooms or more, there is the new Model C, for motels of under 50 room units.

Both models operate to signal the front desk of any attempt to steal the television set it protects.

Installation may be made by any technician, following detailed instructions supplied with each System (Console, and Room Units). Requires only one control wire per guest room.

**Operation:** Equipment under protection (TV-set, appliance, etc.) is electronically protected. Any attempt to remove connection from wall outlet, or cut power cord, starts alarm signal. This signal is indicated at the Front Office as a flashing light, and loud buzz.

There is no alarm in the guest room to alert the thief, but the Front Office signal, once triggered, cannot be stopped until Front Office attendant has operated a Reset switch (which cancels buzz); a room indicator lamp remains lit, however, until house

personnel has checked the guest room and restored the circuit to its normal alert condition.

Apartment House owners can now offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry.

extremely shrill piercing alarm is set off. The alarm, which is audible throughout the entire building, will run for about an hour. Two options are available to the owner. Option 1 requires the management's presence to shut the alarm off. Option 2 — If the plug is re-inserted in the receptacle, the alarm will shut off by itself. This option allows for a test of the alarm.

The TV-3 is held in place by screws. No internal connections have to be made to the set. All that's required is to plug the TV set's power cord into the TV-3 and then plug the TV-3 into any power receptacle.

**NOTE:** If Power goes off, Alarm will not be set off.

**Net: TV-3, \$14.00.** Quantity discounts.

Safe continuous operations from  $-20^{\circ}\text{C}$ . ( $-4^{\circ}\text{F}$ .) to  $+65^{\circ}\text{C}$ . ( $149^{\circ}\text{F}$ .)

Unique features: optional panel-mounted preamp. provides 2 additional mic. inputs • hi or lo imp. mic. inputs (no transformer required) • all solid-state (CHS100, CHS50 are all-silicon) • automatic wave-soldered printed circuit boards • AC/DC operation (12 v. battery) with CHS35, CHS20 • provision for mic. precedence and remote vol. control.

# BOOSTER AMPLIFIERS

Bogen's booster amplifiers embody the most advanced developments in design and techniques of construction. These units deliver maximum power from a small package. They are ideal for sound systems in industrial plants, airports, stadia, schools . . . wherever undistorted power is required. Note their exceptionally wide-range response characteristics. Built-in provision permits paralleling any number of power amplifiers to multiply power output. The models described on the preceding page are ideal preamplifiers for these boosters. The MO200A, MO100A, and MT100 units are unsurpassed for both PA and industrial uses. Their 115-volt output makes them adaptable to

unique applications. With a variable frequency audio generator input, they represent relatively inexpensive power sources — any frequency or voltage — capable of driving servos, motors, vibration (shake) tables, ultrasonic equipment. The unique all-silicon transistor model MT100 may be operated from a 12-16 VDC source as well as from 117 VAC. Highly flexible in combination, inputs of identical amplifiers can be paralleled; outputs can be wired in series or parallel to provide any reasonable voltage or power (except MBT60 outputs).

No cage is furnished with MO200A.

Sherwood presented the industry's first ALL-SILICON solid-state amplifiers. SILICON transistors possess a heat reserve three times greater than lower-cost germanium transistors. They are used exclusively in all Sherwood amplifier circuits.

These amplifiers feature extremely low distortion (0.1%), at normal listening levels (under 10 watts), high phono input overload capabilities, and audio power to drive a mono 3rd (center) channel or remote single-channel accessory speaker systems. Speaker power-output protection circuits are provided in all units. The S-9900a and S-9500a each also feature front-panel rocker action switches which permit independent or simultaneous listening to two pairs of stereo speakers.

**GENERAL SPECIFICATIONS:** Power Bandwidth (@ 0.5% harmonic distortion): 12-25,000 cps. Harmonic Distortion: 0.25% @ rated output, 0.05% @ 10 watts or below. Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address

amplifiers weren't made this way to begin with. All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hand craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels; supply unusually high useful power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability, extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, finished in soft, light shades of green. The control panel is slanted for convenient operation either seated or standing, and it is well illuminated. Custom K Series models abound with such refinements as movable reference markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. When you're out to prove what you can do, when you're putting in a model job, a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

## 70 COMBINATIONS FROM 14 UNITS

The modular concept makes it possible for you to get exactly the features you need without delay. Four chassis and four power units combine to form 15 basic assemblies. The VU meter may be added to 12 assemblies. 8 models (K4R assemblies with and without VU meter) become remote-control units with the addition of the RB4 accessory. All 35 may be rack panel mounted or covered for free-standing use. (UL requires that they be purchased with one or the other.)

## SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. Outputs: 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. Distortion: less than 1/2%. D.C. on all filaments. Frequency response: ±1 db 20-20,000 cycles. Bass tone control range: -18 db to +18 db. Low frequency roll off: 3 db at 100 cycles, -12 db at 20 cycles. Treble tone control range: -18 db to +18 db. High frequency roll off: 3 db at 5,000 cycles, -12 db at 20,000 cycles. Microphone impedance: 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. Input volts required for 1 volt output from cathode followers: Mikes, .0028 volts, gain 54° db, 2 megohms. Magnetic, .0022 volts, 100,000 ohms. Equalized to full RIAA curve. Ceramic pickup, .086 volts. Equalized to RIAA curve. Tuner or Tape input (Aux.), .34 volts, 1/2 meg., gain 6.4° db. Gain stated is with 1 meg. output load. With 600 ohm output using TR-100 add 13 db. Hum below 10 volts output (inputs shorted): Mikes, -80 db. Magnetic pickup, 70 db. Aux. input, 80 db. All controls off, -100 db. Socket supplies power for VU-2T volume indicating meter. Note: K4R provides for remote control of all inputs. Dimensions, all models: 17" x 13 3/8" x 7 3/8" (height dimension includes KC cover). Weight, all models: 7 pounds. All microphone inputs require Cannon XL3-11C type connectors.

## SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: Input impedance: 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. Output impedances: 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. Hum and noise: 80 db below steady state power rating.

## NEW TX-10 SERIES

CYBERNETICALLY ENGINEERED FOR INTUITIVE OPERATION ■ SOUND ON SOUND RECORDING ■ THREE HEADS ■ HYSTERESIS MOTOR ■ MONITOR BEFORE OR AFTER RECORDING ■ ANY SIZE REELS—3" TO 10½" ■ MIXING CONTROLS ■ POINTER-TO-POINTER METERS ■ DIFFERENTIAL BRAKING

Essentially a machine for the perfectionist, the Newcomb TX-10 incorporates virtually all of the features professional users have said they would like to see in a portable recorder. The TX-10 is thoroughly dependable, a high precision instrument, with a transport mechanism that is probably the most foolproof, the gentlest on tape of any machine in the world. Tape movement is controlled with a telescoping joy stick. Operation is intuitive. The natural thing to do is the right thing to do. You can record sound ad infinitum. For example, you first record on track one. Twist the selector and you record on track two while the signal from track one is being transferred to track two. Twist the switch again and you are adding new material to track one while the previously combined signal from track two is being re-recorded on track one. There is no limit to the number of times this can be done. Tape loads in a straight line. No pressure pads on heads. All tape guides are stainless steel. Shuts off automatically at reel's end. Head covers remove for easy cleaning and editing. A pause-

edit position of the joystick permits inching tape to exact location desired. The TX-10 is a two-speed machine—7½ ips and 3¾ ips—selected by push button with automatic speed-frequency correction. (15/7½ ips machines available on special order.) A relatively powerful, cool-running hysteresis synchronous motor and dynamically-balanced flywheel drive keep flutter and wow below .2% at 7½, .25% at 3¾, or .1% at 15 ips. The TX-10 has three heads—record, playback, and erase. 100KC bias and erase oscillators with indicators. Response is ±2 db 30-18,000 cps at 7½ ips, or ±3 db 30-13,000 cps at 3¾ ips. The TX-10 may be operated either vertically or horizontally. The dual volume indicating meters are illuminated, arranged pointer-to-pointer, show playback as well as recording levels. To prevent accidental erasure, you must push a separate interlock button to record. The four-digit counter permits close measurements even with a 10½" reel fully loaded with thin-base tape. There are separate "mike" and "line" input mixing controls for each channel, a balance control, a ganged volume control, a pilot light. A roomy opening on the left-hand side of the case provides for all inputs and power cord stowage. There are sockets for Cannon XLR-3-12C male connectors, easily accessible sockets for Newcomb plug-in input transformers to permit use of low impedance microphones. Outputs are on the right side of the case.

Dimensions: 12¾" x 16¾" x 9½". Weight: 36½ lbs. Power requirements: 95 watts, 117 volts, 60 cycles a.c.

One Model Meets Every Requirement

Setting a new standard in quality, design and performance, the new TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets every intercom need of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

## ONLY THE TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" GIVE YOU ALL THESE FEATURES

- **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS** Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non-private" to others, and retain full communication facilities.
- **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, you reply.
- **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.
- **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.
- **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.
- **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.
- **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.
- **EXTERNAL RELAY CONTROL**—A standard built-in feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. For use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth.
- **RECIPROCAL POWER SUPPLY**—Each Master operates on 110-120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the Masters in the system can operate without being plugged-in.
- **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.
- **HI-POWER STAFF STATIONS AND HORNS**—For use with any TALK-A-PHONE Master where exceptionally high volume at Staff locations is needed. Ideal for paging speakers. T-HP-3 provides more than twice the volume of universal Staff; T-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.
- **WALL SWITCH**—Combine with TALK-A-PHONE Horn or Hi-Power Staff to add origination-of-call feature.

# ATLAS SOUND

## ATLAS PAGING AND TALK BACK SPEAKERS

The HU and CJ models listed below are all equipped with the well-known "Versalock" mounting bracket. This rigid, rugged and dependable bracket is completely adjustable on both a horizontal and vertical plane, affording "pin-point" directivity and simple secure mounting. The HU and TP horns are constructed of aluminum, while the CJ horns are molded of indestructible Fiberglass. Rugged diecastings and tough steel parts add strength wherever necessary. All models are 100% weatherproof under all climatic conditions.

**HU-12N** Small in size and low in cost. Excellent for low power paging and talk-back systems where limited coverage is required.

**HU-15N** The famous ATLAS SOUND "work horse," HU-15N is the most popular all-purpose, trouble-free speaker of its type and size.

**HU-24N** Similar to HU-15N. The larger horn improves low frequency response and increases over-all efficiency. For paging and talk-back systems that are also required to reproduce music.

**CJ-14N** A wide angle speaker with a rectangular horn opening which gives broad sound dispersion in the horizontal plane while maintaining good vertical coverage.

**EC-10** The lowest priced American-made speaker designed specially for low power systems requiring limited coverage. Made possible by a breakthrough in design, materials and performance, EC-10 gives improved results and high efficiency for intercom and other applications formerly using cone speakers.

Horn sections are molded of a new, tough, all-weather, acrylic plastic and the handsome beige-brown color combination blends with any decor. The tough steel bracket is adjustable and makes mounting simple and secure. Model EC-10 is unmatched where size, weight, appearance and high efficiency combined with low cost are factors.

**CJ-30N** Similar to CJ-14N, except the power handling capacity is increased and the larger, wide angle horn improves low frequency response.

**TP-15N** One high efficiency driver unit does the work of two for low cost bi-directional coverage in long corridors and outdoors. The universal bracket mounts the dual horns at a 10° angle down or out from wall surface or pole.

## ATLAS MICROPHONE STANDS AND ACCESSORIES

ATLAS SOUND microphone stands and accessories are noted for variety, quality and reliable performance. The famous, extra-long clutch for secure, full hand grip is standard on all manual models. Clutch operation is velvet-smooth, wear proof parts are jam free and positive locking; the adjustable tube cannot slip and drop unexpectedly.

New, low profile bases with modern, slim silhouettes are less conspicuous and more functional. Improved designs concentrate base weight at the outer edge for maximum stability. Additional anti-tip bumpers are located between self-leveling, shock-absorbing pads which protect desk, table and floor.

Superchrome plated finishes are lifetime wear and rust resistant. Stand parts and accessories are precision threaded for easy assembly and versatile interchangeability. All models have standard 5/8"-27 threads for microphone attachment.

**MS-10C** Popular, budget-priced floor stand for low cost applications. Sturdy, wrinkle gray base with stability for average weight microphones.

**MS-4** Three tubes with two clutches adjust from standard height for adults to special low of 25" for children and seated performers. Ideal for instrumentalists requiring low microphone placement. New, low silhouette base with dark gray wrinkle finish.

**MS-11C** General purpose, all chrome design with new, low profile base contour and more weight for greater stability. Slim, inconspicuous silhouette is both elegant and modern, suits any decor where styling and appearance are important.

**MS-14G** Identical to MS-11C, but all gold finished for special decor requirements. Complements both black and gold model microphones.

**MS-11S** Self-locking version of MS-11C with unique, automatic clutch for effortless, instantaneous changes in height. The stand is adjusted by simply grasping the decorative black control sleeve and raising or lowering the microphone. Removing the hand automatically locks the position. All chrome with new, low profile base.

**MS-12C** Same general purpose, stable design as new MS-11C, with base finished in dark gray wrinkle.

**MS-12S** Special, automatic clutch action for easy, quick height adjustments. Identical in size, unique operation and applications to MS-11S, except with wrinkle gray base.

**MS-20** Rugged, heavy duty combination for safer support of any microphone. Larger 12", low contour base has more anti-tip weight at the outer edge for maximum stability. Oversize 1 1/4"-7/8" tube assembly includes adaptor for 5/8"-27 threads.

**MS-25** Professional floor stand. Integral air suspension system counterbalances microphone weight to prevent out of control crashdown, take effort out of height changes. Air cushioning action is adjustable, floats microphone tube gently down without severe mechanical shock if clutch is accidentally not tightened or released. Heavy duty, gray and chrome base contacts floor on large, 17" circle. Triangular shape and concave sides permit standing close for easy handling without stepping on base. Oversize 1 1/4"-7/8" tube combination includes 5/8"-27 thread adaptor. MS-25 gives maximum stability and safety for all microphones, including the finest and most expensive — at home, on stage and in the studio.

**CS-1** Tripod base infinitely adjustable from 10" diameter standing, to 42" circle flat on floor. Reverse-collapses to compact 23" for storage. Useful in restricted space, on uneven surfaces, for clustering microphones and indoor/outdoor portability.

**CS-52** Handsome, three-legged floor stand. Combines the slim, less conspicuous appearance of modern, low profile design with large, 15" base stability. Packaged in one, reshippable carton.

**CS-42** Similar to CS-52 in design, except that base is readily collapsible for portable use or convenient storage. Packaged in one, reshippable carton.

## PUBLIC ADDRESS HORNS AND DRIVERS

### Compound Diffraction Projector

**MODEL 848A**—Combines FC100 Compound Diffraction Horn plus 1828C Compound Driver for finest wide-angle sound, lowest distortion, highest quality of any projector. Specifications: Frequency response, 150-10,000 Hz; impedance, 8 ohms; dispersion, 90° x 120°; power handling capacity, 30 watts; sound pressure level, 120 db; dimensions, 10½" x 20½" x 20". Net Weight, 13½ lbs. complete. **Net — \$53.40**

### Projector Horns

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

**EXCLUSIVE COMPOUND HORNS** permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

**MODEL FC100**—Similar to the famous CDP®, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn. Large horn is fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn — cut-off, 100 Hz; taper, 100 Hz; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 Hz. Mouth size 10½" x 20½", depth (less driver), 20". Net Wt. (less driver), 10¾ lbs. **Net — \$32.10**

**MODEL AC100**—Concentrating version of CDP®. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 Hz; taper, 100 Hz; air column length, 56"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 Hz. Diameter, 21"; depth (less driver), 21"; Net Wt. (less driver), 11½ lbs. **Net — \$53.40**

**REENTRANT HORNS** provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high-frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die-cast mounting plate plus precision die-cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1¾"-18 threads.

**MODEL FR150**—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1¾"-18 thread. Specifications: Low-frequency cut-off, 150 Hz; taper, 150 Hz; air column length, 45"; sound distribution, 70° x 100°; mouth size, 10½" x 20½"; depth (less driver), 21"; Net Wt. (less driver), 9½ lbs. Shpg. Wt., 12 lbs. **Net — \$27.60**

**MODEL AR150**—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber edge-damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1¾"-18 thread. Specifications: Low-frequency horn—cut-off, 150 Hz; taper, 150 Hz; air column length, 41"; sound distribution, 85°; diameter, 21"; depth (less driver), 17". Net Weight (less driver), 6½ lbs. **Net — \$31.20**

**MODEL HC400**—Features wide-angle dispersion in a round reentrant horn. Same horn, less driver, as used in 844A. May be combined with any E-V driver listed on next page. High articulation for difficult paging jobs. Ruggedly constructed die-cast body. Completely weatherproofed and trop-calized. Nom. dispersion: 90°. Low frequency cutoff: 250 Hz. Taper: 250 Hz. Air column length: 16". Finished in Mesa Tan baked enamel. 10" dia., 5¼" deep. Net weight: 4½ lbs. **Net — \$9.00**

### Versatile Convertible Drivers

Designed for smooth peak-free response with maximum efficiency, Electro-Voice public address drivers offer the greatest possible long term economy with a consistently high level of performance.

The Reentrant Driver Model 1828R (30 watts) will produce maximum intelligibility when used with such Electro-Voice horns as the AR150 & FR150, and HC400, yet its freedom from severe response peaks assures improved results even when installed on other Reentrant Horns.

The versatile Convertible Drivers listed below are easily adapted for use with all Reentrant-type Horns (E-V and others), but are especially effective when used with the exclusive Electro-Voice Compound Diffraction Projectors (CDP®), FC100, and AC100.

For use in constant voltage systems, order 1828T or 1829T.

All drivers have 1¾"-18 threads for attaching horn.

E-V Diaphragm replacement kits (easily field replaceable) are available for all Electro-Voice public address drivers.

### MODEL RT-20 RECTANGULAR HORN

These versatile horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 5' 9 1/2", giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°

Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

#### SPECIFICATIONS—RT-20

### BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves out-

ward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3". Fits all Jensen driver units and horns.

Net Weight, 1/2 lb. Shipping Weight, 3/4 lb.

**BV-1**—Net Each. . . . . **\$9.90**

BK-11A

## POLYDIRECTIONAL RIBBON MICROPHONE—77DX

The quality microphone standard of the broadcast industry, the RCA 77-DX, is available in two models; one with a low gloss finish for TV, the other a satin chrome finish for AM and FM. The 77-DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be utilized. The 30-20,000 cycle frequency response of the 77-DX makes it suitable for every high fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30 to 150 ohm output impedance.

This 77-DX mounts on a standard 1/2-inch pipe thread, and comes with 30 feet of three conductor shielded cable, less plug.

77-DX Satin Chrome Finish .....\$290.00\*  
77-DX-G Low Luster Gray Finish .....\$275.00\*

## BI-DIRECTIONAL RIBBON MICROPHONE—BK-11A

In the studio or at indoor remotes, whether a simple interview program or full orchestra pickup, the bi-directional characteristics and excellent frequency response (20 to 20,000 Hz) make the BK-11A an extremely useful production tool. The output can be connected for 30, 150, and 250 ohm operation. A three position switch permits selection of desired frequency ranges for voice and music.

The BK-11A has been designed for use with the inexpensive MA-06 desk stand, and it can also be used with any standard 1/2-inch pipe thread desk or floor stand. Thirty feet of three conductor cable is supplied without a connector.

BK-11A .....\$107.00\*

## UNIAXIAL RIBBON MICROPHONE—BK-5B

The BK-5B is a high quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardioid pattern. Frequency response from 30 to 20,000 Hz permits using the BK-5B for all types of high fidelity voice and music pickups. The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. The low-luster amber gray finish makes it ideal for TV.

It is supplied with thirty feet of three conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has 1/8-inch pipe thread.

BK-5B .....\$158.00\*

## LAVALIER MICROPHONE—BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3 ounce unit is only 2 9/16 by 1 1/16 inches. Wide range frequency response (60-15,000 Hz) permits using the microphone for all speech applications. The 250 ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections.

The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of three conductor cable is supplied, less connector.

BK-6B with lanyard and fastener .....\$86.00\*

## SUBMINIATURE LAVALIER MICROPHONE—BK-12A

The RCA BK-12A is a high-quality subminiature microphone weighing just 20 grams and measuring only 3/8" x 1 1/2". It has a wide-frequency response of 60 to 18,000 Hz, which has been tailored for proper speech balance. The BK-12A is essentially non-directional to 6,000 cycles, and as a result, ordinary errors in orientation have negligible effect upon response. The microphone comes complete with lanyard, tie clip holder, cable clip and 30-feet of 2-conductor cable (less connector).

BK-12A .....\$95.00\*

## BI-DIRECTIONAL RIBBON MICROPHONE—SK-46

The SK-46 is designed for high quality indoor use. It has excellent frequency response 40-15,000 Hz and bidirectional pickup characteristics. Output impedance is 200 ohms, but it may be reconnected to produce a 15,000 ohm output. Dependable performance as well as attractive styling make the SK-46 an ideal choice for high fidelity applications. The SK-46 has a 5/8-inch-27 mounting thread and is supplied with 25 feet of two conductor cable (less connector).

SK-46 .....\$54.95\*

## NON-DIRECTIONAL DYNAMIC MICROPHONE—BK-1A

Ideal for outdoor use or wherever constant handling is required the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. It provides uniform response from 50 to 15,000 Hz. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional; the horizontal position is semidirectional. The output impedance is 250 ohms, but 30 and 150 ohm connections are included.

The BK-1A may be mounted on any type stand having 1/2-inch pipe thread and is perfect for use with the MA-06 desk stand. Thirty feet of three conductor cable is supplied, less connector.

BK-1A .....\$86.00\*

## GENERAL PURPOSE DYNAMIC MICROPHONE—SK-30/SK-31

Here is an excellent non-directional general purpose microphone available as a low-impedance (SK-30) or high-impedance (SK-31) unit. It is rugged and lightweight with good response to voice and music (50-14,000 Hz). In addition to being hand held, it may be swivel mounted on a desk or floor stand or it may be mounted on a goose-neck stand. A 5/8-inch-27 thread swivel adaptor is available for floor or desk stand mounting. The microphone comes complete with 20-feet of shielded cable (less connector).

SK-30 .....\$30.00\*  
SK-31 .....\$31.00\*

## NON-DIRECTIONAL DYNAMIC MICROPHONE—SK-45B

Ideal for talk-back, cue, and public address use, the rugged lightweight SK-45B microphone offers good voice reproduction. It may be connected for a 150 to 200 ohm balanced output, for a 15,000 ohm output. Response is from 70 to 12,000 Hz. Mounting with any 5/8-inch-27 fixture thread permits the use of low cost stands. ## OUTDOOR SPEAKERS

Voice coil impedance 3.2 ohms ±10%

These long-life speakers have the improved Humi-Gard Cone which utilizes a Mylar plastic film to provide maximum resistance to moisture and dirt and sand abrasion, yet does not interfere with response characteristics. Air gap surfaces cadmium plated and enameled. Quantity quotations on request.

All Quam speakers are available weather-proofed for an additional 70¢ list. When ordering weather-proofed speakers use part numbers appearing in this catalog and add suffix "OT" to part number. (Humi-Gard Cone available only on 3½", 4" 5", and 6½" speakers.)

## UNISPHERE A Microphones

### **MODELS 585SA • 585SB • 585SAV**

The Unisphere A Series of Microphones are economical unidirectional dynamic microphones featuring special filters that provide protection from wind and "pop" (explosive breath sounds). They also eliminate annoying loudspeaker "squeal" caused by feedback. These models are particularly suitable for use in locations where omnidirectional microphones may not operate properly because of poor acoustics or where wind creates a problem. The Model 585 Series comes complete with shock-mounted cartridge, On-Off switch, detachable cable, and a Model A25B swivel adapter.

The Model 585SAV is one of the most ingenious microphones ever designed because the volume control on the microphone case enables the user to change the loudness of the P.A. system at the microphone location. Ideal for applications where the amplifier controls are inaccessible or where the speaker or singer wants to control his own volume for dramatic effects.

**Model 585SA Unisphere A:** High impedance. **List Price: \$65.00**

**Model 585SB Unisphere A:** Low impedance. **List Price: \$58.00**

# MICROPHONE MIXERS

## SHURE M68 MICROPHONE MIXER (TRANSISTORIZED—PORTABLE)

**PRACTICAL**—The Shure M68 Mixer is a practical, efficient and economical way of increasing the efficiency, usefulness and flexibility of public-address and paging systems, or tape recorders, by making it possible to use more than one microphone or other sound source. You can strategically place microphones so that everybody who should be heard will have a microphone close at hand. It is particularly useful where additional microphones are needed for panels or for audience Question-and-Answer sessions.

**UNIQUE**—This new mixer is unique in that it satisfies the needs of most public-address systems and serious tape recording enthusiasts, while being light enough to be portable, simple to operate and modest in cost. It is the only mixer which strikes a happy medium between the expensive heavy and complex permanent-installation type mixer and the extremely low-cost units of limited usefulness.

With the M68, each microphone (or other sound source) can be cut in or out of the system (and independently balanced for volume) with no loss in microphone output level. In addition to independent volume controls, a master volume control simultaneously controls the gain of all inputs. The M68 can, therefore, be used as a conveniently "at-hand" P.A. system volume control in situations where the regular amplifier is located some distance away.

**VERSATILE**—You can use high or low impedance microphones, in any mix, with any type amplifier without need for expensive line transformers.

You can tape record from multiple sound sources or record sound-on-sound with two recorders, or conveniently record important meetings with full assurance that every voice will be intelligible.

Frequency response is 30-20,000 Hz (cps)

# MAGNETIC TAPE HEADS AND QUIK-KITS

Designed and manufactured to highest standards of excellence, Nortronics tape heads are used as "original" equipment by more than 75% of the nation's tape recorder manufacturers. Nortronics now offers a complete line of heads, available in a wide selection of track styles, functions and sizes in PROFESSIONAL, PREMIUM or STANDARD versions.

**ABOUT THIS LISTING**—The magnetic heads, hardware and accessories listed on these four pages is only a partial listing of the complete Nortronics line. For information on more than 1500 replacements and more than 1500 possible conversions, see your Nortronics Distributor. His comprehensive listings contain cross-reference data by: 1.) Manufacturer's Name and Model 2.) Recorder Manufacturer's Head Part Number and 3.) Head Manufacturer's Part Number.

**REAR MOUNT HEADS**—All heads listed below are No-Mount styles. Rear-Mount styles are also available, except on "Combos," and may be ordered by simply adding 50 to last two digits of No-Mount model number. (i.e.: 1203 No-Mount becomes 1253 to indicate same head with Rear-Mount.) For Rear-Mount prices, see footnote under charts.

# ROBINS® RECORDING TAPE

## ROBINS® BRAND BALANCED SOUND RECORDING TAPE WITH ACTION PAIRED REELS

Best quality recording tape with "Action-Paired Reels". The matching reels provide smoother tape transport. Prevents tape stretching. Offers cartridge convenience without special equipment. No need to repeatedly thread tape or search to find a treasured passage. Tape is always ready for playing or recording. Just lift partially played reels of recorder together and place them in the convenient "Dual Compartment Library Box". To load recorder, reverse procedure.

**BONUS . . .** Empty matching Reel, Tape Log Disc, Tape Clips, and Self-Stick Title Labels included in every package . . . **PLUS** - Color-Coded Leader Tape prespliced to beginning and end of every 5", 5 3/4", and 7" reel of tape. Green leader indicates beginning of reel, Red leader, end.

**BALANCED SOUND RECORDING TAPE WITH ACTION PAIRED LOW TORQUE REELS . . .** Until now only pre-recorded tapes produced by major recording companies had low-torque reels because the larger hub reduces the force (torque) required to wind tape steadily and evenly, thus reducing wow and flutter. Now Professional Quality Recording Tape is available with "Action Paired" Low Torque Reels.

# Series "60" Cabinet Racks

**A** Upright Rack

Scientifically designed to meet all requirements for human needs as well as component physical specifications; the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system. Very economical to the user, units are shipped fully assembled and ready for immediate use.

Basic frame welded in a solid unit composed of 14-gauge cold-rolled steel channels. Sides have "U" braces with perforated channels for fastening vertical adjustable mounting rails. Rails also support other types of equipment such as brackets, shelves, slides, etc. Eliminates need of drilling holes in the rack. Sides and rear door made of 16 gauge steel. Door may be mounted to open left or right. Vertical channel, 6" wide, welded to door to prevent vibration or whip. Two pairs of panel mounting rails are supplied; fully adjustable. Panels may be mounted in front and rear at the same time. Front rails drilled and tapped 10-32 W.E. spacing. Rear rails are drilled according to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in the Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door are easily installed.

Standard finishes are smooth baked enamel over a primer. For two-tone gray, specify by adding suffix **SG**. For two-tone blue, add suffix **SB** to order number. Standard Bud relay rack panels are available for the Series Sixty racks in light gray and light blue; when ordering, add suffix **SG** for gray; **SB** for blue.

## UPRIGHT CABINET RACKS (FIG. A)

For greater ventilation, order units with louvered sides and/or rear door; both, with solid top. Width, 24 1/4", all units. Inside depth 20 1/2" clear on units with 22" outside depth; 23 3/4", all others. Top opening 18 1/2" w. x 17" d. on units with 22" outside depth; 18 1/2" w. x 20 1/2" d., all others. ## NEW ZEPHYR 8 CABINET RACKS

Combine striking appearance with increased utility, extra ventilation, and unusually sturdy construction. Units are completely assembled with all-welded 14 gauge steel frames. Sides and reinforced rear door are of 16 gauge steel. Sides of frame are reinforced by channel braces to which panel mounting rails are attached; front and rear mounting rails are adjustable. Sides may be removed from outside of rack for easy access to interior. The octagonal shape and louvers placed in the four narrow sides permit exceptional ventilating capability. If corner placement is desired or combinations of racks are placed together, this shape allows for a "center ventilated system." Also, the outer shape surrounding the inner structural frame provides extra space for longitudinal or vertical placement of plenums, cable-track, buss ducts, etc. Casters may be attached to the base or removable sub-base. Front doors, available as optional accessories, are equipped with a flush-type latch. Available in two-tone gray finish only.

## PRESTIGE BALL CORNERED VERSA-CABINETS

A standard Prestige Versa-Cabinet consists of the framework, two ball cornered sides, perforated metal back, solid bottom plate and two supporting channels.

The front, back, top, and bottom may be quickly removed for access to interior for easy servicing.

Standard 19" panels may be attached to the top, bottom, front or back of cabinet to provide complete closure. Perforated top panel may also be used.

An opening is provided across bottom of back for cable leads, controls or knobs. Size of opening is 1 1/4" x 19". Bud Steel Panel PS-1250 or Aluminum Panel PA-1101 may be used to close opening if desired. Perforated back may be removed and a standard steel or aluminum panel may be used to close back opening entirely.

## SHADOW CABINETS

An extremely versatile housing since both front and rear panels as well as the bottom may be removed for installation or servicing purposes. Unusually attractive appearance is created by recessing the front panel one inch as well as by beveling the front edges of the body.

The recessed front panel prevents accidental movement of controls, knobs, and switches attached to it.

The two piece body of the shadow cabinet is made of 18 gauge steel and the panels of 16 gauge steel. Finish is light gray hammertone.

Four rubber feet attached to the bottom of the cabinet eliminate marring of the surface on which it may be placed.

# Slimline 901 Imlok®

Bud Slimline 901 Imlok is based upon the same, proven principles as the Standard Imlok system. The basic difference is lighter weight and narrower appearance of the extrusions; corner connectors are smaller in size and are not visible in the completed housing. Connectors are 380 aluminum die castings; extrusions are 6063 aluminum. A really attractive small rectangular case, large elegant console or multiangular structure can be made with Slimline 901 Imlok. Whether for a production run or a single prototype, we can supply the material or make a complete enclosure.

# Modified Standard Products

Often a modification of a standard BUD product will create a "made to order" housing with a resulting savings in time and cost. This is when a special is not a special. Illustrated below are

enclosures which are adaptations from standard BUD products. Tell us your requirements we will suggest the most economical enclosure for you — modified standard or a special fabrication.

# Specially Fabricated Products

Consult your local Authorized Bud Distributor about your special enclosure problems. In reality, he is an extension of the factory's engineering department and can recommend the proper design and size for your equipment. His advice will save you time and money.

These are the services we perform:

1. Modification of our standard products.
2. Specially punched panels, chassis and boxes.
3. Standard construction employing steel or aluminum.
4. Special construction employing the Imlok system of aluminum extrusions, castings and sheets.
5. Original designs based upon your circuitry requirements.

Bud can supply you with a pilot model or a production run. Our more than 35 years of experience in the electronic industry assures you that we can readily understand your problems and solve them economically. 112,000 sq. ft. of completely integrated plant facilities — from engineering, tooling and fabrication to painting, assembly and packaging insure quick delivery. Almost every type of industry, branches of the armed forces, the Space Agency and the Nuclear Energy Commission use Bud products.

Whenever a special sheet metal enclosure is required, call in your local Authorized Bud Distributor. He is anxious to cooperate with you.

## THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

LMB®  
PRESENTS SOMETHING NEW  
IN CHASSIS —

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

METAL WORKS new design in Student Booths brings you "tomorrow's booth" today! Featured below is the 500 Series. These booths are designed to minimize noise entering the booth and prevent the students' response from adding to the general noise level. Designed to meet today's needs in an ever expanding educational program,

they can be added to as funds permit, or as the language program expands, by simply bolting on additional units, consisting of only 1 leg and deck. They are adaptable to flush mount any tape recorder. No part of the booths protrude into the aisle leaving all aisle space clear for passage.

1. Tape recorder position hole cut to any size and positioned to customer requirements. Amplifier position hole furnished, if required, when tape recorders are not used.
2. Square steel tubing, modernistically designed, giving a better appearance, stronger, and a lifetime of use.
3. Acoustical treatment of slope top tilted forward (see back view) gives student maximum isolation.
4. Flush mounted lock in slope top offers protection for electronic equipment when not in use (see closed view).
5. & 11. Front and back view of deck. Rear view illustrates modesty panel conformation.

6. Leg levelers included with all legs or sides. Excellent feature for that uneven floor. Hold down tabs also furnished.
7. Cross brace welded to each leg assures maximum strength and rigidity.
8. Modesty panel (Part No. M-102) used on row ends only. This panel also serves to close the wire pan at the end of each row of booths.
9. Perforated metal covering for acoustical material. Perforated metal is used exclusively on these all new booths.
10. Formica covering on slope top (Part No. F-103). This is finished off with aluminum trim at front.
12. This view shows an add-on booth equipped with a formica covered slope top in the closed position. Note the slight slope (3°) to the front.

## CONSTRUCTION DETAILS OF ASSEMBLED RACKS

**CABINET FRAMES** are completely welded. The complete assembly includes ALL necessary vertical corner trims, horizontal top and bottom mouldings and optional side panels.

Brackets, shelves, mounting angles, panels, and bases are attached when requested. For modular assemblies, joining trims are included at no additional cost. The basic frame is similar for ALL racks. PX or FX Racks have the same distinctive styling as PR or FR Racks. But while PR or FR Racks have removable side panels (optional), PX or FX Racks have solid side walls welded on.

- **Removable Top Panel or One Piece Solid Tops (Your Choice).** (Solid, louvered or perforated) See Par-Metal Page 13.

### REMOVABLE TOP PANEL

### DETACHABLE SIDE PANELS

### FRONT MOLDINGS

- **BOLT RETAINER RAILS** are rigidly welded. 3/8" steel bolts with lock washers and hex nuts hold the **PANEL ANGLES** and/or **VERTICAL SIDE SUPPORTS** in any position you select along the bolt retainer rails.

- **PANEL MOUNTING ANGLES** are included. They are made from 1-1/2" x 1-1/2" x 3/16" structural steel and are punched to provide 5/8" - 5/8" - 1/2" alternate spacings (meets both WE and EIA requirements) for standard rack panels and are tapped 12/24, 10/32 tap optional.

- **VERTICAL SIDE SUPPORTS** are optional. They are made from .104" structural steel and are drilled to meet WE and EIA spacings (5/8" - 5/8" - 1/2"). Holes are tapped 10/32.

When attached to Bolt Retainer Rails with 3/8" steel bolts, they provide maximum adjustment for mounting brackets, shelves, slides, extension tables and custom-made equipment.

- **SIDE MOUNTING BRACKETS** may be used separately or with shelves as shown. Slots in the brackets provide maximum vertical adjustments.

- **DOORS** are stamped from one piece of 1/16" structural steel and "dutch formed" on all sides to provide smooth double thick edges. Adequate ventilation is obtained from venetian (internal) louvers.

Locking handles are supplied on racks with front and rear doors. Racks with rear doors only have non-locking handles but locking handles are available.

- **SUB-BASES** are available for all modular type racks as an optional accessory.

- **FOUR FLOOR LEVELERS** are supplied with all cabinet racks.

- **OUTLETS:** "Knockout holes" are provided for connecting cables; a duplex outlet and junction box are mounted on cabinet under rear door.

## GENERAL DESCRIPTION

### SINGLE UNIT ASSEMBLY

Single unit assembly with extension desk. See next page for several styles.

### DOUBLE UNIT ASSEMBLY

Double unit assembly. Additional arrangements pictured on following pages.

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been used in the electronics industry many years.

As no particular fixed design can serve every requirement, we have devised a group of standard units, the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. Models have been functionally designed and smartly styled to keep pace with current trends. Units may be grouped or expanded to meet your specific needs.

Versatile pedestal racks are the keystone to the entire assembly. Constructed for heavy duty use, having all essential features of our PL, FL Cabinet Racks on Par-Metal Page 6 includes panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets, shelves and drawers. They offer efficient utilization of space, complete accessibility for servicing, and are solidly built to withstand heavy strains in a laboratory or a moving vehicle.

Pedestal Frames may be used with or without an extension desk table. There are four models of Desk Panel Cabinets suitable for mounting on pedestal frame tops to make a complete console. Consoles may be combined with Series PL Racks on Par-Metal Page 6.

Unit assemblies are not limited. They may be extended to any length. If you have a specific problem, do not hesitate to consult us.

Side panels are readily detachable from outside. No drilling or fitting is necessary for assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting angles are tapped 10-32. No metal screws or clips are used in construction.

# PAR-METAL RACK TYPE SLIDE ASSEMBLIES

## GENERAL DESCRIPTION

Slide assemblies will save considerable layout and assembly time by eliminating alignment and mounting.

All models have two units: a heavy cradle made from 7/64" steel and a sliding unit. Cradle is first mounted to rack; the sliding unit drops into place. **It may be removed readily.**

Holes are provided for mounting to Vertical Side Supports. Either method will provide a rigid support; both may be used together.

Basic slide assemblies for use in 19" wide racks accommodate chassis up to 17" wide. Usable space may be fully extended from front of racks; load capacities are based on shelf in extended position. Constructed to withstand constant usage. All parts are welded or fastened with stainless steel rivets.

## BASIC SLIDE ASSEMBLIES

are sold as a complete unit, ready for installation in all racks. Panels may be attached to chassis by using standard brackets. Panel and chassis assembly is then bolted directly to the slide pan.

Formed panels with a minimum height of 7" are recommended. Four models are listed to fit racks using panels 19" or 24" wide. BS-1940 and BS-2419 are identical in size, but have different load capacities. All bracket heights are 6-1/2"; all shelf heights are 1-3/4".

\* All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended. All parts are zinc plated.

## CAPACITORS

## ELECTROLYTICS

**TYPE AFH (85 C) TWIST PRONG  
ELECTROLYTIC CAPACITOR**
**SINGLES • DUALS • TRIPLES • QUADS**

The outstanding line of twist-prong mounting electrolytic capacitors with all the latest refinements — 85°C operation — high purity aluminum foil construction through out — improved moisture resistant seal. Types AFHS-PWHS are specially constructed for high ripple current circuits. PWH and PWHS are constructed for printed wiring board applications.

These units operate over a wide temperature range with a minimum change in capacitance.

While designed for filter audio bypass applications in Radio-TV and Amplifier equipment as exact replacements, many values are rapidly gaining acceptance in industrial applications.

They are manufactured to meet all requirements of EIA specification number RS-154. Capacity tolerances of this specification are listed below.

**ELECTROLYTIC CAPACITY TOLERANCES**

0-50 Volts	—	—10	+250%
51-350 Volts	—	—10	+100%
351 Volts & Up	—	—10	+50%

Aerovox Corporation is currently working on a size reduction program. Many sizes shown in the following listing reflect latest design figures. However Aerovox reserves the right to furnish previous catalog sizes until present stocks are depleted.

The AFH capacitors listed here include only those ratings which might find usage in industrial applications. A complete line of ratings may be found in the latest Aerovox Industrial Catalog, IDC 567, or Servicemen's Catalog, SE-567, and may be requested from Aerovox Corporation, Distributor Sales, or through your nearest authorized Aerovox Industrial Distributor.

## ELECTROLYTICS — (Continued) TYPE PRS "DANDEE" (85°C)

SINGLES • DUALS • TRIPLES • MULTIPLES

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.

Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers.

Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.

Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/8" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.

Tolerance and surge voltage are in accordance with EIA Specification RS-154.

The factory is currently in the process of reducing sizes of this type. AEROVOX reserves the right to ship sizes listed below until present stock is depleted and smaller sizes as they become available.

### TYPE B C D UPRIGHT MOUNTING BAKELITE CASED ELECTROLYTICS

"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte. High purity foil insures long life and low leakage. Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case. For full technical information request Bulletin NPJ-108

## ELECTROLYTICS — (Continued)

### TYPE QE 61

Type QE capacitors are aluminum electrolytics designed for applications requiring high reliability and long life. Typical applications are in computer equipment, power supplies, telephone networks, industrial electronic equipment and high grade commercial and laboratory test instruments.

These units are manufactured with special high purity materials and processed under controlled conditions of cleanliness with the most modern equipment available. The aluminum container is hermetically sealed and furnished with low screw inserts with a pressure type safety vent provided in the cover.

Operating temperatures for QE61 is —20°C to +65°C. Standard capacity tolerance 2.5 Volts to 150 Volts is —10% +100%. For 151 Volts to 450 Volts —10% +50%. QE61 will be furnished with heat shrinkable mylar tubing which adds only .010 to the diameter and .020 to the length of the can size as shown.

For complete engineering details including ripple currents, dissipation factor, etc., request our latest bulletin NPJ-125.

### TYPES HCB and NPB High Capacity Low Voltage Bakelite Cased Electrolytics

Type HCB units are polarized electrolytic capacitors designed for use in industrial applications such as battery eliminators, power supplies, electric fence controls and sound movie projectors. For non-polarized applications in welding and control equipment Type NPB units are available.

Both types feature heavy-duty, moisture resistant bakelite cases which eliminate the need for outer cardboard insulating tubes. Operating temperature range from —40°C to +85°C. Capacitance tolerance up to 150 VDCW —10% +100%, over 150 VDCW —10% +50%. High capacity etched plate construction assures long trouble-free operation. Units supplied with wrap around—footed brackets for vertical mtg.—horizontal mtg. available on Special Order.

### TYPE B161Y — High Voltage Capacitor

Now a dual purpose high voltage capacitor for use on standard DC applications or low frequency AC use. These units incorporate a dual dielectric of film and Kraft paper with a special impregnant which allows these units to be used as replacements for the higher priced glass tube capacitors. Standard tolerance is ±20%. Operating temperature is -45°C to +100°C. All units are furnished with #18 AWG wire leads. Also available on special order are units with studs for mounting in place of the glass capacitors.

Higher voltages and capacities available on request. For full technical information request bulletin NPJ-135.

### TYPE V161

### AEROFILM® (MYLAR\*) CAPACITORS

V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85 C. Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar\* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%.

## Type K323Z Metallized Polycarbonate Capacitors

If plastic sleeve is desired add suffix "P" to type number and specify when ordering. Add 1/16" to the diameter and length and add .02 to cost of unit.

Here is the first stock line of hermetically sealed metallized polycarbonate capacitors. Polycarbonate film offers many advantages over paper or other film dielectrics including high capacitance stability, low dissipation factor, low dielectric absorption and high insulation resistance. Metallized polycarbonate offers the additional feature of self-healing in the rare case of dielectric breakdown. Size and weight savings over paper capacitors are most obvious in lower voltage ratings but the added stability is an important plus at the higher voltages. Operating temperature is -65°C to +125°C at full rating. Standard tolerance is ±20%. Other tolerances available on special order. For full technical information request bulletin NPJ-136.

## TYPES P323S AND P323SX

Tubular, metal-cased units with hermetically sealed construction and glass terminal end seals. Engineered to meet high-temperature, minimum space requirements, Types P323S and P323SX are designed for long life at elevated temperatures.

Impregnated with HYVOL "S", a special high temperature liquid impregnant. These units are capable of withstanding twice rated voltage between terminals or between terminal and case for a 1-minute period. Ambient temperature shall be +25°C, -10°C for this test. Power factor is less than 1% when measured or referred to a frequency of 1,000 cps at 25°C.

Type P323S and P323SX are rigidly processed to assure operation between -65°C and +100°C. Type P323S uses an inserted-tab construction to obtain minimum size, while type P323SX has extended-foil construction for applications at very-low AC voltages.

For equivalent types rated -65°C to +100°C in the same case size as shown, order as P123S, SX etc., and request prices.

Styles available from stock include units bearing suffixes S-SX which are as listed; G types, with one end grounded which are 1/16" shorter; GP types, grounded, with plastic insulating sleeve and 1/16" larger diameter and P types, with both ends insulated and a plastic sleeve, which are 1/16" larger in both length and diameter.

Grounded units to be discontinued when present stocks are depleted.

### TYPE P95ZN

Micro-Miniature  
Dipped Metallized  
Paper Capacitors

AeroVox Type P95ZN capacitors employ an entirely new internal construction concept and utilize a dipped resinous housing to produce remarkably small sizes. The dielectric is a distinct departure from conventional foil paper and previous metallized paper construction. This new and improved metallized dielectric provides both the dielectric and the electrodes. Since capacitance is pre-determined mechanically in the initial processing, the human element is eliminated for capacitance control. In addition, the P95ZN offers unusually strong lead connections as the result of an exclusive AeroVox manufacturing process. Leads are hot tin-coated phosphor bronze.

These AeroVox micro-miniature capacitors are especially suited for applications where low capacity units are now being used.

## INDUSTRIAL SECTION — MIL TYPES MIL-C-25C

### TYPES CP53, CP54, CP55

Hyvol J or H oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is  $\pm 10\%$  (K), on multiple section units  $+20 -10\%$  (V).

### CHIP CAPACITOR ENGINEERING KIT AKC-800

To facilitate prototype development of hybrid circuits Aerovox offers a Chip Capacitor Engineering Kit containing 125 chip capacitors in capacitance values from 1 pf to 100,000 pf. Assortment covers the three basic temperature characteristics.

Chips are silver terminated and a supply of leads is provided for attaching either by soldering or welding methods.

### TYPE ULA MICROMINIATURE CERAMIC®

#### CHIP CAPACITORS FOR HYBRID CIRCUITS

Replacement units for items in Chip Kit AKC-800. High ratio of capacity to volume inherent in Ceramic monolithic capacitors allows unusually small sizes especially suited to hybrid circuitry. Units supplied unencapsulated, ready-to-solder into circuit.

Complete range of popular capacitance and voltage value in three temperature coefficient ratings for widest possible applications.

All units rated at 50 VDC and standard tolerance is ±20% except for 1.0 pf with tolerance of ±.5 mmf.

\*Improvements in the state of the art allow us to furnish replacement capacitors at 50 VDCW. All other characteristics are the same as the chips furnished in the Kit AKC-800—the only difference is in nomenclature. (ULA105 = 50 VDCW; ULA102 = 25 VDCW etc.)

Chips are packaged in sealed packages of 25 each.

### SPARK GAP CAPACITOR

The spark gap capacitor is a protective device which limits excessive transient voltage surges to a non-destructive level. Two styles are offered at present, Type 5039 featuring a capacitive element across the gap and type 3411 minimum capacitance type used between grid lead and chassis ground providing a low impedance path to ground. The latter unit is popular in color TV application.

### HIGH CAPACITY, HIGH RELIABILITY, ROLLED CERAMIC CAPACITORS

Cerol® capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating temperature range at rated voltage -55°C to 85°C and at 50% rated voltage -55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015C.

Units are stamped with the rated voltage for identification of type.

## INDUSTRIAL CERAMIC CAPACITORS (cont.)

### Eyelet Feed-Thru Capacitors

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitor, make the eyelet type ideal for high frequency bypass.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes. All units are flash tested at 1250 volts D.C. The power factor is under 3% and the insulation resistance is above 7500 megohms.

## RECEIVING MICA CAPACITORS — (Continued)

### DIPPED SILVERED MICA CAPACITORS - TYPES ADM-10, ADM-15, ADM-19, ADM-20 AND ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-58 Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

- High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test at 125°C.

Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 megohms at 100°C.

Capacitors will be marked with capacity and tolerance.

## AEROVOX DECADE BOXES

RESISTANCE CAPACITANCE INDUCTANCE

FIGURE B

Aerovox now makes available to the electronic industry laboratory quality standards in capacitance, resistance and inductance decades. From one of the outstanding manufacturers of precision resistors, capacitors and inductors, Aerovox is making available decade boxes of the highest quality in the ranges most needed for electronic and electrical laboratories at a price far below that of equivalent quality standards. Aerovox decade boxes are available in 11 units: 4 resistance decades, 3 capacitance decades and 4 inductance decades.

Ten of the decades are housed in seamless, drawn steel cases coated with gray enamel. They are capable of taking the beating of bench use without impairment of accuracy. The 11th decade box, a new resistance model ARD-41, is housed in a special high impact plastic case which will also withstand rugged handling.

This new decade box has a range of 0 to 1.1 megohms in 1 ohm steps, combining all the three other resistance decades into one compact box. Outline drawings of both sizes are shown. All panels are black with the marking engraved in white. For full technical information request bulletin NPJ-109 Rev. 2.

## FILTERS

### SCREEN ROOM FILTERS

Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for 3/4" and 1" conduit.

1 1/4" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

## Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within  $\frac{1}{16}$  to  $\frac{1}{32}$  from one of the capacitor surfaces. (Exclude SCDM).

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

Dur-Mica leads may be either tinned brass or tinned copper-clad steel, 30% minimum conductivity, except the following which are copper-clad steel only:

DM-10, DM-42, and DM-43.

DM-19 and DM-20 — 3000 mmf. and above.

DM-30 — 10,000 mmf. and above.

## Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.

Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM-15 and DM-16. Crimped lead gage of DM-15 and DM-16 is #20. The DM-10 case size is not available with crimped leads.

## DM5 Miniature Dur-Mica

The new ELMENCO DM5 dipped silvered mica capacitor has been designed to keep pace with the ever-shrinking world of electronic circuitry. Significant volumetric savings are achieved in the lower values of capacitance through two principle changes in design. First, the area of each mica film has been reduced to get a better balance of area vs. thickness of capacitive section. This automatically resulted in further saving through redesign of other structural members to get more capacitance per cubic inch. Second, a newly developed dip-coat material is employed which imparts improved environmental protection with a far thinner coat than found on the larger mica capacitors of the ELMENCO line. The result is a much smaller capacitor in the 1 through 198 pf. range with the same reliability and high quality performance the industry has come to expect from ELMENCO mica capacitors.

DM5 capacitors have a standard voltage rating of 300 VDCW except for the highest values which are 100V and 50V ratings as indicated in the tabulation below. Electrical and environmental specifications are basically the same as for the other ELMENCO dipped mica capacitor styles. The capacitors are stamped with capacitance value in pf. followed by a letter signifying capacitance tolerance. For example, 27K would be 27 pf.  $\pm 10\%$ ; 150G would be 150 pf.  $\pm 2\%$ . In the lower values, standard minimum tolerance is  $\pm 1$  pf., but for an added charge we can produce  $\pm 0.5$  pf. or even  $\pm 0.25$  pf. capacitors.

### 300VDCW

The preliminary dimensions indicated above represent the expected maximum limits for the largest DM5 capacitors. At this printing the analysis of dimensions vs. capacitance for all values and voltages had not yet been completed. Due to the variation in size of capacitive section with value, dimensions will vary 30 to 40 mils between 1 and 180 pf. Final tabulation of case size dimensions in mils will be published in the next ARCO catalog similar to tabulations now shown for established case sizes. The lead spacing and specifications will not change.

## NOTES ON DUR-MICA CAPACITORS

Case sizes DM-16 and DM-43 (see page 10 for dimensions and capacitance ranges) are available to special order. Price and delivery information upon request.

All capacitances marked \* are 300VDCW.

All capacitances marked \*\* are 100VDCW.

§ Minimum tolerance ±1 pf. For ±0.5 pf. add 50% to listed price.

† Minimum tolerance ±0.5 pf.

‡ Tolerance letter designation in part number.

All values available in ±½% tolerance if needed. Prices upon request.

All ELMENCO mica capacitors are manufactured to meet applicable MIL-C-5 specifications. The corresponding MIL designation is indicated next to each case size heading. The DM-19 (CM06), DM-30 (CM07), and DM-42 (CM08) capacitors are universally marked so that material shipped will automatically meet MIL-C-5 marking provisions. On DM-10 (CM04) and DM-15 (CM05) case sizes, the capacitors supplied are identical whether the ELMENCO or MIL part number is specified with the exception of marking. When the MIL part number is specified, MIL Type Designation must appear on the capacitor.

For capacitance values within the ranges specified for each case size but not listed, there is a \$1.50 set-up charge per item. For the base price, use the next higher standard listed capacitance value.

For the "P" or 150°C. operating temperature requirement, add \$0.10 to the indicated net price, then add an additional 20%.

## SPACE-SAVER

# TYPE SCDM THIN COAT DIPPED MICA CAPACITORS

### (ELMENCO TYPE 1CR)

In applications requiring the high performance characteristics of dipped mica capacitors where space is at a premium, the Type SCDM reduced coat ELMENCO capacitors may often be used to advantage. A single protective resin coat is applied instead of the full series of dips incorporated in the standard unit. The amount of coat material is thereby reduced to a minimum consistent with good design, and a significant reduction of all dimensions is achieved.

All electrical and environmental requirements of MIL-C-5 are retained with the exception of case insulation (3.5.3) and moisture resistance (3.14). A maximum voltage stress of 100VDC through the case insulation is recommended for SCDM units. Although some lots of this type capacitor will not meet stringent MIL moisture resistance specifications, all will meet the humidity requirements of Paragraph 3.6 of EIA Standard RS-153. Therefore, the SCDM capacitors will operate with satisfaction where they will not be exposed to extensive periods of high humidity. It is recommended that if these capacitors are destined for operation under extreme environmental conditions they should be given additional moisture protection such as encapsulation or hermetic sealing of the assembly.

Types SCDM10, SCDM15, and SCDM19 capacitors are stocked in depth at ARCO regional facilities in all values. They may be obtained within 24 hours from your local ARCO distributor. See standard DM tabulations on preceding pages for values and pricing.

# High Voltage Dur-Mica

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.

The Dur-Mica design provides advantage of higher temperature operation (125°C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a

result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.

All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

The physical configuration of these capacitors is the same as for the standard DM units. This information is found on page 8. The only difference is that for a given capacitance value case dimensions will be larger for higher voltage ratings because the mica is thicker. The maximum case dimensions for each of the case sizes indicated below is the same as the maximums indicated in the tabulation.

- NOTES: 1. All capacitors operated at 50% Voltage at 85°C. have a failure rate of .0001% 1000 hours, 90% confidence level.  
 2. Failure rates for intermediate capacitance values can be approximated by interpolation.  
 3. Although it is obvious from the tabulation that failure rates lower than .0001% can be derived, that figure is considered a practical low limit.

## High Reliability Dur-Mica

### Type HRDM

Missile, Computer, and other applications wherein entire system performance depends on reliable operation of thousands of components has prompted development of a High Reliability line of ELMENCO Dur-Mica dipped silver mica capacitors. Selected DM units are subjected to a special "debugging" process to eliminate potential early failures. This process is particularly effective when the capacitors are to be subjected to operation near their maximum rated temperatures. The HRDM capacitors are exposed to double rated voltage for 48 hours at 125°C. The graphs below indicate the reliability levels of these capacitors. The curves have been derived from the results of tens of thousands of hours of testing of tens of thousands of capacitors of all values and case sizes. Further information on the performance characteristics of HRDM capacitors is available upon request.

### RELIABILITY OF ELMENCO HRDM CAPACITORS

Failure Rate in % per 1000 Hours (90% Confidence Level) vs. Capacitance Value □ 500VDCW Operation at 85°C.

To conserve catalog space, part numbers for each HRDM capacitor are not listed as they are for the standard units. Capacitance values are shown for each case size with corresponding list prices indicated for each standard tolerance. Voltage ratings are the same as for the standard DM capacitors.

To specify part number, merely prefix the regular DM part number by the letters "HR". For example, a high reliability DM15-101J would be called out by the part number HRDM15-101J.

Capacities from 100 to 2400 mmf. can be supplied in CM-19 cases. In values above 1000 mmf. the list prices for CM-19 are 10% higher than those listed above.

As can be seen in the line drawing above, the only difference between CM19 and CM20 is length dimension. For competitive reasons it has been necessary to retain both mold sizes. However both CM19 and CM20 fully conform to all specifications for MIL-C-5 case size CM20, and they are interchangeable for military requirements.

## High Temperature Molded Silvered Mica

The standard Elmenco molded mica capacitor is designed for use at a maximum of 85°C., the former industry and military standard prior to issuance of MIL-C-5. Now, in some applications, these components are expected to operate without derating and with the same order of reliability at 150°C. The latter requirement is particularly difficult to cope with and obviously requires vast improvement over the standard design.

A specially designed Elmenco molded mica capacitor, designated type HTCM, has been developed which will afford complete satisfaction at the higher levels of temperature stress. The resulting units have been carefully evaluated in millions of unit-hours of life and environmental testing to verify their performance excellence.

In order to retain proper characteristics at 150°C., the following steps are taken:

1. Every mica film is screened for high temperature characteristics. This is done 100%, not on a sampling basis.
2. A special high temperature molding resin is employed to preserve the strength and electrical characteristic of the mica at 150°C. This molding material was also selected for the lower molding pressure required. This reduced stress greatly enhances the reliability of the mica films.
3. A solid high temperature impregnant is used instead of wax for greater stability and retention of the moisture resistance characteristic. Wax will have a tendency

to melt out at high temperature, causing possible change in capacitance value, loss of moisture seal, and possible fouling of adjacent circuitry. The HTCM capacitors will remain physically and electrically stable at 150°C.

With these design innovations, vast improvement is obtained in operating reliability at elevated temperature. The expected failure rate is reduced to a small fraction of what might otherwise be expected of standard design capacitors.

### HTCM CAPACITORS MEET ALL ELECTRICAL AND ENVIRONMENTAL SPECIFICATIONS FOR MIL-C-5 TEMPERATURE RANGE "P".

The Elmenco high temperature molded mica capacitor is designated simply by adding prefix letters "HT" to the standard part number. For example, a 100 mmf.  $\pm 5\%$  CM-15, standard part number CM-15-E-101J, would be called an HTCM-15-E-101J, for high temperature operation.

To conserve catalog space, part numbers for each individual HTCM capacitor are not listed as they are for the standard units. Capacitance values are shown for each case size with corresponding prices indicated for each tolerance. Voltage ratings are the same as for standard CM capacitors.

## Epoxy-dipped Flat Mylar

The new ELMENCO Type MDF capacitor is a mylar dielectric unit dipped in a newly formulated epoxy material and shaped in the flat configuration particularly suited to saving space on printed circuit boards. Before being brought to market, the design has been carefully evaluated for more than two years to be sure that the performance of the MDF will be of a level expected of ELMENCO capacitors. This release covers the 100VDCW rated series only. Dipped mylar capacitors with other voltage ratings will be announced shortly.

The specifications for the ELMENCO Type MDF are as follows:

Voltage Rating: 100VDCW, 250VDCT.

Insulation Resistance: 20,000 megohm-microfarads or 100,000 ohms, whichever is less, at 25°C.

At 85°C., the figures are 300 megohm-microfarads or 1500 megohm minimum; at 125°C., 20 and 100 respectively.

Maximum power factor at 1 kc.: 0.6%

Maximum cap. change from room temperature:

- 7% at -55°C.
- 3.5% at -30°C.
- +4% at 85°C.
- +17% at 125°C.

Capacitance drift: ±1% maximum.

PRELIMINARY DIMENSIONS

These preliminary dimensions are established maximums for the four basic configurations of Type MDF. When dimensional surveys are completed on production representative of all values, individual dimensional information for each capacitance value will be published as for other dipped ELMENCO capacitors. Dimensions, particularly thickness, will vary with capacitance value.

# DIPPED TUBULARS

MYLAR\* and MYLAR-PAPER

\* Reg. DuPont Trademark

Elmenco dipped mylar and mylar-paper capacitors represent a double break-through in capacitor design. They combine missile and computer quality with commercial radio-TV cost. A recent development is the addition of precision dipped tubular capacitors in tolerances as low as  $\pm 1\%$  in addition to the popular  $\pm 10\%$  general purpose unit. The only difference between the general purpose "dp" series and the industrial precision capacitors lies in the extra stabilizing processes applied to close tolerance capacitors to insure retention of accuracy in the field under operating extremes.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar\* dielectric capacitors.

## RELIABILITY

Exhaustive evaluation of ELMENCO Dipped Mylar\*-Paper Capacitors has been conducted during the past four years and the product refined to its present high level of quality. The graph to the right is a plot of typical life expectancy for a theoretical 1 MFD. unit expressed in unit-hours operation to first failure as a function of voltage and temperature. It will be noted that these capacitors can be operated at 125°C. in most applications with excellent reliability.

The number of unit-hours to first failure is inversely proportional to the capacitance value in mfd.

As an example, a 0.1 mfd. capacitor operated at full rated voltage and at 105°C. will have a life expectancy of 10 x 500,000 or 5,000,000 unit-hours to first failure. This quality level is continually verified by continuing accelerated life testing on all production.

## MINIMUM LIFE EXPECTANCY FOR 1 MFD MYLAR\*-PAPER DIPPED CAPACITORS AS A FUNCTION OF VOLTAGE AND TEMPERATURE

## MINIMUM INSULATION RESISTANCE VS. TEMPERATURE

These curves represent characteristics as they change with temperature. They have been charted only after thorough long-term testing of thousands of capacitors to assure validity.

## MAXIMUM CAPACITANCE CHANGE VS. TEMPERATURE

## Variable Compression Mica

### TRIMMERS

Elmenco Trimming Condensers are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

Voltage 350 VDCT — 175 VDCW.

#### TYPE PC — PRINTED CIRCUIT TRIMMERS

The Elmenco Trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until soldered. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trimmers and mounting layout are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style.

For list price add \$0.05, for net price add \$0.03, to the respective prices of the standard trimmer.

For List Price add \$0.55, For Net Price add \$0.33 to the respective prices of trimmer alone.

A complete Type 46 trimmer assembly with mounting bracket and adjusting shaft for ease of tuning. Can be supplied as pictured from stock or with construction variations to order.

To specify precede trimmer part number with the letter "S".

For example:

Type 460 trimmer will be ordered as S-460.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within  $\pm 2\%$ .

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.

**TYPE L30**

For List Price add \$0.10, For Net Price add \$0.06 to the respective prices of padder alone.

The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain padder with the special screw, precede the regular padder part number with the letter "L". For example, 302 padder with the special screw would be specified as "L-302".

NOTE: Knobs may also be obtained if desired at a cost of 30¢ each list, 18¢ each net.

Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

## GENERAL INFORMATION

Arco ceramic disc capacitors exhibit a level of performance and reliability consistent with conservative design technique inherent in all Arco components. Higher voltage ratings improve reliability manyfold and provide extra reserve for resistance to surges and temporary overloads. Rugged phenolic coating and high temperature wax impregnation give superior moisture resistance and physical strength. Arco ceramic discs have been designed to minimum size obtainable with complete retention of original specifications while operating in the field. For original equipment or for replacement, Arco ceramic disc capacitors may be used with confidence.

## MINIATURE GENERAL PURPOSE

Arco Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, Arco CCD units fill the bill with dependability and economy. The "space-saving" size of Arco discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000-VDCW (Type 3CCD) and 6000VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

## TEMPERATURE STABLE

This new ARCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to -55°C. to +125°C. without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line of ARCO capacitors. All units are marked "TS" for identification.

**ARCO** CAPACITORS**CERAMIC DISC****TEMPERATURE COMPENSATING****TYPE CCTO**

Arco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Arco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

**TYPE CCTN**

Another member of the Arco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of  $-750$  ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

## Miniature Aluminum Electrolytics Type ME

Type ME Miniature Aluminum-cased Electrolytics are the latest addition to the Arcolytic capacitor line. They use the same high purity (99.99%) etched aluminum foil as the standard size Arcolytics. The design of the Type ME is particularly adapted to the latest transistorized circuitry which features low voltages and compactness of structure.

Type ME capacitors have an all-welded construction which provides increased ruggedness and resistance to environmental extremes. Corrosion and electrolyte leakage are eliminated. Electrically, they exhibit extremely low leakage current and maintain extended shelf life without deterioration. All units are insulated with a transparent plastic sleeve permanently bonded to the aluminum body.

**SPECIFICATIONS:**

**CAPACITANCE AND TOLERANCE:**

Capacitance measurements are made at 120 cycles per second and 25°C. Capacitance tolerance is -10%, +100%.

**OPERATING TEMPERATURE RANGE:** -30 to 85°C.

**D.C. LEAKAGE CURRENT:** Maximum leakage current is 5 microamperes or .03VC, whichever is greater, where V is D.C. voltage applied and C is capacitance in microfarads.

**LEADS:** Axial, 1/2" length minimum, #20 tinned copper.

**NOMENCLATURE:** The part numbers for each Type ME incorporate case size, voltage, and capacitance value:

The example specifies a 100 mfd. 12V capacitor, case size 3/8" x 3/4".

**VOLTAGE RATINGS:** The following table indicates letter designations assigned to the various voltages in which Type ME capacitors are supplied:

Letter Designation	A	B	D	E	G	J	M	N	R	T
VDCW	3	6	12	15	25	50	100	150	250	350

**CASE SIZE:** Type ME capacitors are made in 8 different case sizes:

CASE SIZE	DIMENSION	CASE SIZE	DIMENSION
1	3/16" D x 3/8" L	5	3/8" D x 7/8" L
2	1/4" D x 5/8" L	6	3/8" D x 1" L
3	3/8" D x 5/8" L	7	3/8" D x 1 1/8" L
4	3/8" D x 3/4" L	8	3/8" D x 1 3/8" L

The insulating plastic sleeve adds 1/32" x 1/16" to case dimensions.

**STANDARD PACKAGING** is in units of 5 in a custom-designed box which protects straight leads and allows visual observation of quantity through a clear plastic window.

**NEW — TYPE CME**

The new all-welded drawn aluminum can construction has been extended into higher values in case sizes larger than the Type ME miniature dimensions. However, the dimensions of the Type CME represent substantial size reduction over the old style construction. At the same time ruggedness and reliability are greatly improved. Electrical characteristics are identical to those specified for Type ME.

The part numbering nomenclature consists of type designation CME followed by a voltage designating letter and capacitance value. The letter designations for voltage correspond to the code indicated for Type ME on the opposite page. For example, the first listed item, CME-B1000, is identifiable as a 6VDCW (B) capacitor, 1000 mfd.

ADD  $\frac{1}{32}$  TO DIAMETER AND  $\frac{1}{16}$  TO LENGTH FOR FULL OVERALL DIMENSIONS WHICH INCLUDE THE INSULATING PLASTIC SLEEVE BONDED TO THE ALUMINUM ENCLOSURE.

## Tubular Electrolytic Capacitors

### ARCOLYTIC TUBULARS

- Made with 99.99% high purity aluminum foil.
- Maximum operating temperature: 85°C. (Type CTW: 75°C.)
- Extended shelf and operating life at both normal and elevated temperatures.
- Built and tested to meet EIA specification RS-154.

**Type CTA** Single and multiple section tubular electrolytics in drawn aluminum cans with cardboard sleeves. Single section units have bare wire leads with negative grounded to can. Multiple units have a common negative grounded to can, and all leads have vari-colored insulated wire for ease of identification.

DIMENSIONS INDICATED FOR CTA ARE ALUMINUM CAN SIZE. ADD  $\frac{1}{16}$  TO DIAMETER AND  $\frac{3}{16}$  TO LENGTH FOR CARDBOARD INSULATING SLEEVE.

**Type CTW** Same as type CTA except that these are multiple section electrolytics in wax-filled cardboard tubes.

# CORNING® FIXED GLASS CAPACITORS

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING Capacitors provide ultra-stable electrical performance. This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well-known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into the standard CYFM and TYO units. The properties of these capacitors are entirely those of the closely con-

trolled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm.

Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

## TYPE D6 HI-VOLTAGE TUBULAR CAPACITORS

F-C-1 Type D6 high voltage capacitors are designed to assure reliable operation where space is at a premium. These capacitors utilize a combination of polyester film and high quality capacitor tissue. The impregnation in a highly purified mineral oil provides for extremely high insulation resistance and low power factor. The hermetic steatite housing allows for operation under extreme humidity.

All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors.

## TYPE ME HERMETICALLY SEALED METALLIZED POLYCARBONATE\* CAPACITORS. Designed for miniaturization and high reliability.

Type "ME" metallized polycarbonate capacitors by F-C-1, are characterized by their electrical properties approaching that of polystyrene and far exceeding those of mylar. These totally unique properties, coupled with a wide operating temperature range of -55°C to +125°C, open up complete new areas of application that previously were restricted to either a much lesser performing mylar capacitor or a very large and expensive teflon capacitor.

In addition to Type "ME" capacitors having a low temperature coefficient and superior low loss characteristics, they are further enhanced with a self-healing dielectric that totally recovers to its original operational state, after having been subjected to overloading conditions.

## HOW TO SELECT THE RIGHT REPLACEMENT

It is easy to select the right GE replacement for any aluminum electrolytic capacitor used in the past ten years.

**IF YOU KNOW RATING ONLY:** Refer to correct type of capacitor and locate the GE capacitor with desired characteristics. For example if you need single-section tubular with capacitance of 55 mfd at 450 V, refer to QT TUBULAR ELECTROLYTICS, Single-Section. Look for the capacitance range in which 55 mfd falls (QT1-17: 40-60 mfd; QT1-18: 50-60 mfd; QT1-19: 50-60 mfd). The rating in bold-face type (60 mfd in the above rating) is the absolute or maximum rating. Check voltage required. Since QT1-19 is the only one rated for 450V, it is the correct replacement.

If rating needed were 55 mfd at 250 volts you could correctly use either QT1-18 (up to 350V) or QT1-19 (up to 450V), since GE capacitors will work properly at any voltage up to their maximum rating. You would then choose between QT1-18

and QT1-19 on the basis of the size (1/4" difference in length) or price and probably choose QT1-18.

**TO SELECT MULTI-SECTION UNITS** (either tubular or can-type,) follow this same process for each section. Here's a quick way to do it:

1. List values of original capacitor sections in ascending order of value.
2. Match values with their voltage ratings.
3. Find GE units that most closely match capacitance values starting from the lowest value. Use next higher value if first unit value does not match exactly.
4. Be sure that GE voltage ratings equal or exceed original voltage ratings. Proper replacement will usually fall within two or three catalog numbers of the first unit checked.

APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with 1/4" diameter shafts to permit adjustment of

the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a 3/16" hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

**FEATURES**—The MAPC series is similar to the APC series of capacitors in that identical materials and assembly methods are employed. The silicone treated steatite bases and all brass nickel plated metal parts with exception of the phosphor bronze rotor wiper assure the same type of reliable performance that the APC series provides.

# Air variable capacitors

## Sub-miniature PC types to large, heavy duty units

Whatever the choice . . . sub-miniature capacitors for printed circuit use—or large heavy duty types . . . design and development engineers specify Johnson Air Variables!

More than eleven basic capacitor series available in a wide selection of single section, dual section, butterfly and differential types. Stock capacitors in a wide range of plate spacings, capacity per section, breakdown ratings, and finishes meet many military and commercial applications . . . specials available in production quantities.

**TYPE "U", "UA" and "UB"**—less than 0.23 sq. inch mounting area required. Rotors and stators machined from one piece of solid brass. Outstanding reliability with exceptionally uniform delta C and voltage characteristics. Highly resistant to shock and vibration—provide freedom from moisture entrapment. Voltage breakdown to 1100 VDC. Silver-plated metal parts—ceramic is steatite Grade L-423 or better. Single Section types available in: Printed Circuit, Two-Hole, and Bushing Mount styles—Differential and Butterfly types for Printed Circuit mounting.

**"U-LC" TUNER**—Precision machined "U" capacitor; air-wound silver-plated inductor. Low cost, compact, tuneable "L-C" circuit—excellent "Q" and temperature stability.

**TYPE "V"**—High capacity in minimum space. Printed circuit and panel mount types mount in less than 0.3 sq. in. area. Rotors and stators precision machined from one piece of solid brass for high reliability and outstanding mechanical stability! High "Q" (greater than 1500 at 1 MC.) . . . low temperature coefficient (plus 50 + 20 PPM/°C) . . . exceptionally uniform delta C and voltage characteristics. Metal parts, silver-plated—ceramic is steatite grade L-423, or better. Voltage breakdown rating 650 VDC. Freedom from moisture entrapment. Slotted rotor or shaft extension for convenient adjustment.

**TYPE "W"**—Advantages of machined plate construction in a larger plate area capacitor offering maximum capacity values of up to approximately 70 pf. Rotors and stators precision machined from one piece of solid brass for outstanding electrical and mechanical stability! High Q (greater than 1500 at 1 Mc) . . . low TC. Requires less than 0.62 sq. inch mounting area . . . printed circuit type mounts by terminals in two .200 by .030 width slots on .800 centers . . . chassis mounting versions mount by means of #3 machine screws or 3/32" rivets located on .470 centers. Metal parts silver plated . . . ceramic end frame steatite grade

# MALLORY Tubular Electrolytic Capacitors

**METAL TUBULAR ELECTROLYTICS**  
Metal tubulars with insulating sleeve. Use etched cathode construction for maximum reliability. **TC**, **TCN** are single section with 3" tinned leads except (\*) 2" leads; **TCD**, **TCT** have 7" insulated leads; **TCS** has solder lugs. Sizes .89" dia. and up have mtg. straps. **Temp. Range:** -20° C to +85° C except (\*) rated at +65° C. **Tolerance:** -10%, +100% up to 350 WVDC; -10%, +50% 450 WVDC and up.

# Computer Grade Capacitors

Two classes of Computer Grade Capacitors are available: CGS for 65° C operation and CG for 85° C operation. Operating life of both types should exceed 10 years when used within stated parameters. Derating voltage and/or lowering operating temperature will extend life by a large factor. **Temp. Range:** -20° C to +65° (CGS), +85° (CG). **Tolerance:** 0-150 WVDC, -10 +75% (U); 151 WVDC up, -10 +50% (T). For complete specifications, ask for Form 4-64 (CG), 4-80 (CGS). Both classes are supplied with polyester film insulating sleeves and have "High-post" terminals with #10-32 screws. Physical mounting of these capacitors is usually done with VR clamps shown below. The clamps, however, are not included with the capacitors. Order separately.

## DISCAP<sup>®</sup> DISC CERAMIC CAPACITOR DATA

DISCAP capacitors are manufactured by Radio Materials Company, a division of P.R. Mallory & Co. Inc. RMC is the world's largest maker of these capacitors, a position gained by producing the widest line to the highest quality standards. The listing on page 19 contains only those types normally carries in distributor's stocks. Many other types and ratings are available on special order.

Since the dielectric material in the disc ceramic capacitor is a blend, its characteristics can be altered to produce a wide variety of results. This is best illustrated by the 1C types (C80 and C71). Note the marked negative change in the C71 as temperature increases while the C80 stays virtually constant. Also shown are P100 and N1500 types which are special order items.

## TAM SOLID ELECTROLYTE

TAM

Mallory TAM tantalum capacitors are made to the same exacting standards as the TAS types. The TAM is designed for printed circuit board applications and has parallel leads  $1\frac{1}{2}$ " long spaced .200" apart. Case is premolded plastic with polarity markings on the top. Temperature range is  $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Standard tolerance:  $\pm 20\%$ . Stability and life characteristics are ideal for low voltage, low impedance transistorized circuits. Complete technical specifications and typical life test data is given in Technical Bulletin 4-47.

# Tantalum Foil Capacitors

Mallory tantalum foil capacitors are available in either etched or plain foil, polarized or non-polarized, and in two temperature grades (+85° C or +125° C). Standard ratings shown below and on the next page are listed with un-insulated cases. For insulating sleeve, add "one" to type shown (CL20 becomes CL21, etc.) and

add 10c to prices shown. Case sizes, tolerances and industrial net prices are shown in the table at the bottom of this page. These capacitors are also available to Mallory commercial numbers (TAF, TAG, TBF, TBG, etc.). For details on these numbers ask for Technical Bulletin 4-65.

# MALLORY Wet-slug Tantalum Capacitors

## MIL-C-3965 CL64/65 MINIATURE METAL CASE WET-SLUG TANTALUM CAPACITORS (TLS)

Mallory CL64/65 (TSL) sintered anode tantalums have flangeless case, ideal for high density packaging. Completely replaces the older CL44/45 MIL type. Type CL64 exhibits very high performance and very low DCL. Supplied in two temperature grades: -55° C to +85° C and -55° C to +125° C. Tolerances: ±10% (K), ±20% (M), -15% +30% (S) and -15% +50% (T). Types listed are in plain, uninsulated case; for insulating sleeve, specify CL65 and add 5c to prices shown. Complete specs in Bulletin 9-351.

## MTP/MTPH ULTRA-MINIATURE TANTALUM CAPACITORS

Mallory MTP/MTPH capacitors provide the greatest capacity-voltage product of any tantalum type. Sintered anodes are housed in special silver cases with elastomer end seal, and are completely insulated. MTPH types are manufactured to rigid "Minuteman II" standards with zero failures in 3.7 million unit-hours of testing. Type MTP is the commercial equivalent. Operating Temp.: -50° C to +85° C. Tolerance: ±20%. DCL is extremely low. See bulletin 4-70 for details.

# LOW VOLTAGE CAPACITORS

## TYPE AZ EPOXY DIP

**TYPE AZ** Capacitors are finished with a dip finish assuring operation in severe environmental conditions. **TYPE AZ** Capacitors are also available in flat oval shape.

## TYPE AM METALLIZED MYLAR\*

**TYPE AM** Capacitors are hermetically sealed in brass containers with compression glass seals for a "floating" case add 1/16" to dimension L (See drawing in **TYPE AZ** column).

## TYPE AB METALLIZED MYLAR\*

**TYPE AB** Capacitors are housed in standard bathtub containers using compression type solder-seal glass insulators. **TYPE AB** provides large values of capacitance with the fine characteristics of Metallized Mylar.\*

## 85°C GLASS CAP — PLASTIC FILM DC FILTER

**TYPE OF** Capacitors are housed in glass tubes with metal-to-glass soldered ferrules. Capacitor element is an improved plastic dielectric type, impregnated with a highly purified and inhibited mineral oil.

All glass containers with 'D' dimensions of 19/32 have 2-1/2 inch long 18 tinned copper pigtail leads.

# Plastic Capacitors, Inc.

# HIGH VOLTAGE CAPACITORS TYPE LK

## MYLAR\* PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed steatite bushings are used, and in the voltage ranges of 2000 and greater, steatite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

Ultra High Stability — Less than  $\pm 40$  ppm/ $^{\circ}$ C  
200 Volt D.C. rating  
Compatible with:  
Integrated Circuitry; Thick and Thin Film Circuitry; Printed Circuitry

The NYT-CHIP provides in slug form all of the high stability and low loss features of the epoxy molded NYT-CAP. This configuration yields the greatest possible packaging density and has the highest degree of mounting flexibility for use with all presently used packaging techniques. NYT-CHIPS are supplied with "wrap-around" tinned terminals permitting connection to either face or to the ends of the chip.

## Type 500 Computer Electrolytic

### FOR HIGH RIPPLE AND HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost. For more complete information write for Bulletin 2236.

**Types 271-272-273-291-292-293-294** MICA CAPACITORS

Sangamo transmitting cast mica capacitors are supplied in seven basic case sizes. They are encapsulated in a high quality thermo-setting compound which eliminates moisture intrusion and makes them highly shock resistant. These capacitors are designed for frequencies ranging from 100 kilocycles per second to 3 megacycles per second and are ideally suited for high current and high voltage circuits.

In capacitance and current ratings, Sangamo cast mica units are equivalent to MIL-C-5 Types CM65 through CM90 in molded and ceramic cases, but in environmental capability, operating temperature range, physical size, mounting configuration and reliability, they are far superior. **FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2324.**

# Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-ta-metal solder seal terminals. The impregnant used in these units is Ethern, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.
