## PATCH CORDS, JACK PANELS AND TELEPHONE PLUGS: Audio, Broadcast, Miniature

TRIMM patch cords feature telephone type plugs on cords built to withstand hard use. Two or more conductors of bronze tinsel are covered with numerous layers of insulation and waterproofing. The cords are color coded, shielded (if desired) then covered with a final braid of nylon to assure long service. The nylon is standard black unless a color is specified. Available at a slight extra charge are: Blue (BL), Brown (BR), Green (GR), Red (RD), Slate Gray (GY) and White (WH).

### "840" PATCH CORDS

Broadcast type "506" twin plugs at both ends. Conductors are wired to tip and the shield (when used) is connected to the grounded shaft. Commonly supplied with shield attached at one end only. Available without shield (W in code number), or with shield attached at both ends (X in code number). PP indicates the cord has a plug at both ends.

## TERMINAL BLOCKS, TURN AND PUSH KEYS, LAMP SOCKETS: Related Panel Equipment

### TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems—wherever very large numbers of circuits need convenient places of termination.

#### "421 SERIES"

Molded of black phenolic plastic material, including base. Provides 20 terminals per row, in two banks of ten, with up to ten rows. Base  $6\frac{1}{4}$ " long x 3" wide. Has steel mounting strip inset in groove in base, with standard mounting dimensions and accommodating #10-32 screws.

Terminals are of 0.040" tintillate brass, and are removable without disassembly of block. Have "butterfly" notched design assuring better retention of wire. Lengths of terminals in three graduated lengths for ease of wiring, and are identified by numbering along top row. Interchangeable with W.E. "L" series, as indicated by ( ) following TRIMM No.

Code No.	No. Rows	No. Term	Base

VECTOR PLUGBORDS

**VECTOR PLUGBORDS** speed plug-in circuit construction because the pre-punched holes accept push-in terminals, eyelets or turned terminals and the contacts are already on the board. Epoxy paper boards meet requirements of MIL-P-22323, Type PEE; Epoxy glass is G-10 grade per MIL-P-18177; copper-clad Epoxy paper meets MIL-P-13949 Type PX, and copper-clad Epoxy glass meets MIL-P-13949.

**838 SERIES** same as above, except with 2 oz. copper etched contacts on .156" centers. 838PWE has 10-5 transistor base pad network one side. "GN" types have nickel plated gold flashed contacts.

**812, #37, 848 SERIES** furnished with attached Elco Varicon contacts have .062" holes on alternate 0.1" centers.

**VECTOR D.I.P. PLUGBORDS** permit quick hookup of integrated circuits. Boards are punched with .041" holes on 0.1" centers and have mounting pad areas for twelve D.I.P.s. Etched lines .070" wide spaced on .1" centers run horizontally on front side and vertically on rear side of board to reduce hand wiring. Listed boards have: (A) 44 etched contacts (total front and back) spaced on 0.156" centers; (B) 35 Elco Varicon contacts on 0.1" centers; (C) 39 Vector Edge-pin contacts on 0.1" centers; (D) 78 etched contacts (total front and back) on 0.1" centers. Patchcords are available.

Receptacles listed are glass filled diallyl phthalate.

TUBE SOCKET TEST ADAPTERS

T-789

T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Kit T789 consists of the three popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval and a P1 probe in a handy clear plastic carrying case.

EXPERIMENTER'S TEST ADAPTERS SOCKET EXTENDERS

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections.

SOCKET EXTENDERS provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender. Sockets have beryllium copper silver plated contacts for long life. An all maled outside shell is used with socket leads soldered to plug pins.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

CURRENT TEST ADAPTERS

T9R-C

WITH P-2 PROBE

Versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or voltage measurements without cutting leads or making computations. All measurements may be made from the tube side of the electronic equipment without disturbing the chassis.

VECTOR CURRENT TEST ADAPTERS have two spring test tab elements for each pin. These test tab elements break the circuit when a dual-sided probe is inserted in test position. Probes are gripped by the test tabs and need not be held in position. Current is read at the meter where the two test leads are connected. The same test adapters and probe also permit voltage and wave form readings on any pin position, merely by connecting the leads jointly to the meter. The adapters have mica-filled shell and keyways, and may be used in a horizontal or vertical position.

# YOUR GUIDE TO THE COMPLETE LINE OF **waldom** "positive action" SOLDERLESS TERMINALS & CONNECTORS

**Insulated and Non-Insulated types for every wiring application**

**Available in Five Construction Styles**

**KRIMP TITE®**  
 KRIMP TITE® terminals and connectors are the most modern labor saving answer to your wiring problems. Functionally designed to make positive connections with a minimum of experience and time needed for application. Uniformly reliable connections can be made in a fraction of the time formerly required by less reliable and more costly methods. Available in a wide range of types and sizes to meet your every wiring need. Minimum barrel lengths 1/4 inch, are available in all terminals listed.

**INSULKRIMP®**  
 INSULKRIMP® terminals and connectors incorporate all the advanced features of KRIMP TITE construction, plus the advantages of the permanently attached rigid vinyl plastic insulating sleeve. Up to No. 10 wire range basic barrel is KrimpTite; size No. 8 and up uses Versakrimp (brazed seam) barrel. Replacing slower methods of individually insulating connection with tubing or tape, INSULKRIMP Terminals and Connectors are rapidly applied in a single application. The tough insulating sleeve is permanently attached and will not slip off, fracture, or unravel. In addition, INSULKRIMP construction affords increased vibration resistance due to its insulat on supporting plastic sleeve. Operating Temperature Range: continuous duty from -40° to 220°F; intermittent duty to 300°F.

**VERSAKRIMP®**  
 VERSAKRIMP® terminals and connectors have all the advantageous features of the KRIMP TITE construction plus the universality and higher tensile strength afforded by BRAZED BARREL construction. The seam is bonded with a special silver brazing alloy, and cannot possibly pull open under any conditions of stress or wire pull. Capable of being crimped by a wide variety of crimp styles, a new freedom of selection is available for your needs. Crimping location is not critical, as the specially brazed seams are guaranteed not to split and may be crimped from any direction. Recommended for both stranded and solid wires.

**VIBRAKRIMP®**  
 VIBRAKRIMP® terminals are particularly suitable where high vibration is a factor and firm insulation support is required. The seamless annealed electro-tin plated brass sleeve adds over-all strength to the terminal construction while the "skirt" portion which extends beyond the barrel is crimped in the same operation as the barrel and the wire is permanently held, preventing creep. Insulation is anchored and any wire flexing takes place beyond the terminal.

**AVIKRIMP®**  
 AVIKRIMP® terminals are truly the ultimate in construction and performance. To all the VIBRAKRIMP features has been added the permanently attached and overlapping NYLON insulating sleeve — no extra insulation necessary. It provides extra barrel strength and insulation grip to resist high vibration plus heat-resistant pre-insulation. Color coded for rapid identification, these terminals are complete in themselves, needing only the proper wire and crimping tool. WALDOM offers many sizes and types with the maximum in reliability for your most critical applications. Operation Temperature Range: continuous duty from -40° to 250°F; intermittent duty to 350°F.

## BASIC TERMINAL CONSTRUCTION DETAILS

Made of pure electrolytic copper for highest conductivity (MIL QQ576). Annealed to flow freely under crimping pressure for best connection. Electroplated with pure tin for greatest corrosion-resistance, in accordance with the highest standards of the electrical industry and MIL-T-10727 (Ord.).

Modern construction from a single piece of metal gives greater strength, lower cost, uniform current flow for maximum conductivity.

All terminals and connectors have wire range clearly stamped on back.

The open-end design allows quick visual inspection of wire location before and after crimping.

Strength gussets reinforce terminal where flat tongue has been formed into round barrel.

Multiple deep V-notches securely grip wire, provide best contact and maximum holding power over wide contact area.

**"STEP" CONSTRUCTION GIVES EXTRA PROTECTION**  
 Cutaway views of an AVIKRIMP barrel show how the "step" design for the brass sleeve acts to socket the wire insulation solidly in both the AVIKRIMP and VIBRAKRIMP styles for the ultimate in anti-vibration protection. In addition, the external "hump" marks the exact location of the barrel end — a quick guide to the target.

**SOLID SILVER-BRAZED BARRELS**

The barrel seam of the parts in Wire Ranges 8 thru 4/0 is coated with a 35% Silver Brazing Alloy to insure a solid one-piece barrel which will not open when crimped or under any stress or wire pull.

**EXTRA WIRE-GRIPPING POWER**

Specially designed indentations in the form of inverted truncated pyramids provide the interior of the barrels of all parts in Wire Ranges 8 thru 4/0 with extra wire-gripping power & greater contact area.

**BENT TONGUES AVAILABLE**

Terminal tongues can be bent to any angle for special applications. Although 90° and 45° angle bends are the most popular, we will form terminal tongues to your particular specifications.

Note: Large size INSULKRIMP\* and NYLAKRIMP\* parts have brazed barrels of VERSAKRIMP style.

**RECTANGULAR TONGUE TERMINALS FOR TERMINAL BLOCKS**

MIL-E-16366D (SHIPS) covers non-insulated brazed barrel rectangular tongue terminals. Insulated versions of these terminals are covered by MS-17143 (SHIPS). Since the Navy and AWG Wire Sizes, Tongue Width, Clearance, and Stud Size are identical for both Specifications, these common basic dimensions are in the center section of the chart below. The left and right sections of the chart list the individual Specification, the Waldom Part Number, Length, and the Maximum Wire Insulation Diameter (for MS-17143).

## HAND RATCHET AND MAINTENANCE TOOLS

### RATCHET TOOL

A precision production tool. Lighter in weight and easier to use than any similar tool. Unique pin-action gives greater mechanical advantage. The tool crimps even the heavier wires and terminals (up through #10 AWG) with a light squeeze. Tamper-proof ratchet mechanism is safe for fingers. The ratchet mechanism will not release until the crimping cycle is complete, but no extra effort is required for release and handles then open automatically. Precision-calibrated and crimp-tested at the factory to give perfect electrical connections every time.

### MAINTENANCE TOOL

An ideal inexpensive multi-purpose maintenance tool. Handles wire sizes #22 through #10 AWG. Cuts and strips wires, crimps insulated and non-insulated terminals and connectors. Proper leverage is provided to assure uniformly reliable results. Edges stay sharp. Quality hardened steel. Insulated handles.

### SELECTAKRIMP®

**A New Tool for Crimping Both Small and Large Wire Range Terminals\* in Maintenance and Production Work**

#### OUTSTANDING FEATURES

- Completely portable—easy to use
- Eliminates need for soldering large wires to terminals
- Replaces costly, permanently mounted crimping equipment
- "In-line" action assures uniform crimping
- Impossible to over- or under-crimp
- Low cost—yet lasts indefinitely

\*Crimps #16 thru 4/0 wire range terminals

Here's the long-awaited answer to the problem of crimping large wire range terminals in maintenance and production work—without costly, permanently mounted equipment. The new Waldom "Selectakrimp" is a completely portable, easy-to-use tool. To operate, all you need is any conventional 2-lb. hammer to produce the closing pressure by striking the ram. An easy-to-read crimping scale prevents under-crimping. Over-crimping is prevented by unique design of the nest and indenter. Terminal being crimped is held securely in the nest by a strong, completely enclosed spring. Uniform, positive connection crimping is assured by the "in-line" ram action.

A single Selectakrimp tool can serve various departments, because its light weight (1-3/4 pounds) makes it easy to bring the tool to the work. Where production requirements call for simultaneous use in several locations, the low cost of Selectakrimp makes it economically feasible to have more than one in plant or shop.

Built to last indefinitely, the ram is made of specially heat-treated tool steel, and the base, of cast malleable iron. Base design prevents rocking of tool under closing pressures.

Stock No. SKT-840 — each \$14.80

### AIR-POWERED CRIMPING TOOL

#### MODEL AT-200 CRIMPING TOOL

WALDOM'S new crimping tool—the 29 ounce light AT-200 is value engineered to give continuous high rate production without operator fatigue. Air-powered and hand-operated, the AT-200 measures an easy-to-handle 10½" long. Designed for a wide variety of applications involving 22 thru 10 wire sizes, solid or stranded. When teamed up with WALDOM'S match-designed terminals and connectors—quick, reliable, low cost connections result. Convert AT-200 into a foot-controlled, bench-mounted tool with WALDOM'S Bench Adapter accessory. Your investment is 40% less than comparable air crimping tools, and only slightly more than manual bench tools. Crimps insulated and uninsulated terminals, splices and closed-end connectors. Accurately positions terminal between die heads for a perfect crimp. Utilizes 14 individual die heads — calibrated at factory to assure perfect crimps. Trigger safety feature safeguards operator and eliminates need to disconnect air supply when changing heads. Connects to any standard shop airline (85-95 PSI).

### PORTABLE HYDRAULIC CRIMPING TOOLS

#### PUTT-PUMP\*

Putt-Pump\* is the unique "peanut-sized" power pack, whose hydraulic-pneumatic system creates giant-sized forces. Its "Putt Putt" sound is caused by the piston building up pressure to crimping force strength. Foot treadle actuated, the pump can be stopped during the crimping cycle in order to lock terminals in crimping dies before inserting wires—useful as a third hand! Designed for greater efficiency in the wiring of products too large to be brought to a stationary bench crimping press, this light weight crimping tool is quickly and easily moved from one production job to the next. Uses standard shop air pressure (80 p.s.i. minimum).

#### RAPID-PUMP\*

Rapid-Pump\* is a versatile caster-mounted portable whose power source is any 110 Volt AC outlet. Faster, more powerful than the PUTT-PUMP\*, it features an On-Off Switch Box and Power Indicator Light.

#### CRIMPING HEADS FOR PUTT-PUMP & RAPID-PUMP

Crimping Heads For Putt-Pump & Rapid-Pump—Two Hydraulic Crimping Heads are available and each can be used on either the PUTT-PUMP\* or RAPID-PUMP\*. The small crimping head, HHS, crimps 8 through 4/0 wire sizes. The larger crimping head, HHL, crimps 1/0 through 4/0 wire sizes. HYDRAULIC HEAD—SMALL, Catalog No. HHS, is used with either pump. Forged from special high strength alloy steels, it is super-tough and extremely light weight. Crimps #8 through 1/0 wire sizes. See Die Chart below. Optional Accessories are Bench Mount Adaptor, Catalog No. HHS-BMA; and Balancer for hanging head from ceiling, Catalog No. HHS-B. HYDRAULIC HEAD—LARGE, Catalog No. HHL, is used with either pump. Sturdy, yet light weight, it crimps sizes 1/0 through 4/0. See Die Chart below. Optional Accessories are Bench Mount Adaptor, Catalog No. HHL-BMA, and Balancer, Catalog No. HHL-B.

### MAIN POWER SUPPLY

Input 115 V/AC, 60 cy. 0.25 amp. Transformed/rectified to 6 V/DC, maximum load 2.0 amp. The Supply is Electrically Supervised, so that a failure immediately sounds trouble alarms, and the System automatically transfers to Emergency Power, thus assuring continuity of fire protection. The Main Supply automatically returns when power is restored. Use #14 approved wire.

### EMERGENCY POWER SUPPLY

6 Volt Battery: Burgess #4F4H; Eveready #706; or equivalent. Maximum load under alarm condition 2.0 amp. Obtain from local electrical or radio wholesale house.

### CABINET

14" x 9" x 4". Gray Hammertone. Surface mount. Cylinder lock, 2 keys.

### DETECTOR CIRCUIT

6 V/DC, 0.15 amp. Safety-Loop Circuit is Electrically Supervised, so that a wire break immediately sounds trouble alarms. Emergency circuits compensate for such fault (See N/E Switch), thus assuring continuity of fire protection. Maximum wire run 5000 ft. #FA-18/2 Approved Fire Detector Cable.

### NORMAL/EMERGENCY SWITCH

Provides Emergency Operation:

- Compensates for wire break in Detector Loop, permitting full response from all detectors until repairs are made.
- Silences Trouble Buzzer, but maintains Red Lamp to show the emergency condition.

### ALARM CIRCUITS

6 V/DC, maximum load 1.5 amp. If only one bell is used, it is Electrically Supervised, so that a failure immediately sounds trouble alarms. If two or more bells and/or #A-604 Annunciator are used, they are alternately connected to the two alarm circuits provided and the last operable alarm device is Electrically Supervised. Use #14 approved wire.

### TEST/RESET/SILENCE SWITCH

Provides Simple Test Procedure:

- Test The System (once monthly)
- Silence all Firegongs.
- Reset to normal operation.

## APPROVED FIRE ALARM SYSTEM

National Fire Codes Pamphlet 72A details the 'Local Automatic Fire Protective Signalling System' and its installation, acceptable to the Board of Fire Underwriters, and to Federal, State and Municipal authorities. This Standard is applicable to all industrial, commercial and military installations. Best practice throughout the country uses it in homes as well. Consult your Fire Chief.

Equipment bearing the UL Label has passed rigid inspection requirements and is of high professional quality.

Proper and correct tally of Automatic Fire Detectors is basic. The Code requires detectors in each room, hall, closet, stairwell, storage area, furnace room, basement, attic, loft, shaft, chute, etc. Do not exceed the space ratings given for each type of detector.

All wiring should be done in conduit as the best insurance for longevity and trouble-free service.

**HARREL**

# PRECISION SOLID STATE TEMPERATURE CONTROLLERS

**GENERAL**

Harrel temperature controllers are intended for the precision temperature control of ovens, test fixtures, and all kinds of industrial machinery. They are arranged for easy mounting on any panel and are designed to require minimum panel space.

Temperature sensing is by means of a wire-type resistance sensor. This gives long-term stability and sensitivity which cannot be equalled by any other method of temperature sensing. The temperature sensor may be located as much as several hundred feet from the controller if desired. No special lead wires or shielding are required between controller and sensor.

**ON-OFF RELAY CONTROLLERS**

Utilize a rugged, solid state amplifier controlling a 10-ampere relay. Relay is easily replaceable in the field.

**TIME PROPORTIONING RELAY TYPES**

Similar to regular on-off controller, but controller operates on a regular cycle of on to off and back again, and it is the proportion of on-to-off time which is varied to control the temperature. Gives a characteristic which approximates true proportional control and in general gives greatly improved performance over regular on-off controllers.

**TRUE PROPORTIONAL TYPES**

Completely solid state. No relays, contacts, or moving parts whatsoever in the power control circuits. Output does not cycle on and off but remains steady at exactly the amount necessary to hold the temperature at precisely the desired value. True stepless control gives closest temperature control of any type of controller. Elimination of contacts and moving parts means life measured in years.

\* For on-off, temperature change at sensor to go from on to off and vice versa. For time proportioning, temperature change for 30% to 75% power output. For true proportional, temperature change from 10% to 80% full power output. Note that temperature performance for proportional types will in general be much better than figure shown; full proportional band is seldom required to compensate for changes in external conditions.

\*\* At 25°C ambient temperature. Derate linearly to zero at 100°C ambient temperature. For indicating types, heater must be arranged so that steady state power output (that is the power other than during warm-up and cool-down) is between 5% and 75% of full power output.

Indicating Controller

**INDICATING FORMS**

The system of display employed on indicating forms of the controller is designed especially for automated systems. The temperature is both set and read out on the large easy-to-read dial. The indicator is separate, and is of the go/no-go type which gives a visual alarm whenever the actual temperature is not at the set point. No skill or knowledge is required of the operator. All he has to do is be sure that the indicator stays out of the two red zones. Indicating forms are mounted on an attractive escutcheon arranged for easy panel mounting or indicator may be located remotely if desired.

**SENSORS**

A number of different forms of sensors are available for the above

- Patch Sensor:** For measuring the temperature of surfaces. Thin and flexible; may be attached by means of an adhesive or with tape (supplied).
- Oval:** Sensors wound on oval hollow ceramic core. Bracket mount for sensing air temperature.
- Tubular:** Cylindrical sensors in aluminum or stainless steel protecting jackets. May be mounted in solids, liquids, or gases.

# MALLORY Industrial Sequence Timers

Mallory Industrial Sequence Timers are heavy duty types designed for industrial process control, laboratory testing, prototype timers, experimental work, etc. Time period is controlled by synchronous motors rated at 117 VAC and available in 16 values ranging from one minute to 24 hours.

Time cycles are easily changed in increments of 2° for the 5T, 10T and 15T and 4° for the 1T and 2T. The actual time change may be accomplished without tools, however, a tool is provided which makes changes more precise. Once set, the time cycle repeats precisely and indefinitely.

The basic cycle mode is a repeating type. It is quite simple however, to wire the timers to allow single cycle operation. In this case, the start of the cycle is controllable either electrically or mechanically by means of the knob.

Time cycles are controlled by precision molded glass-nylon cams which actuate the SPDT switches. The switches are rated at 15 amps at 125 VAC and are both UL and CSA approved. Switches snap into precision holes in the timer frames and are easily replaced although normally rated at more than 1 million cycles.

Drive motors attach to basic frames by means of a locating hole and two screws. The motors may be interchanged in seconds to provide a variety of sequence times.

Five basic frames are available and each is supplied with switches in position and pre-tested for accuracy. Mounting for the 5T, 10T and 15T types may be by the front panel or integral feet. The 1T and 2T are designed for thru-the-panel mounting.

All models are available as complete assemblies or as separate units (basic frames and motors). In either case, a complete set of instructions and timing charts are supplied. The timing charts convert rotational degrees into the time of the drive motor. Thus, a change of 2° in the cam of a timer equipped with a one minute motor is equal to a time change of 1/2 second. In the 24 hour model this 2° change equals a mere eight minutes. A printed dial divided into 2° increments is also supplied. This dial is pressure-sensitive so that it may be to any clean dry surface. A knob with a hairline marker is supplied with the 5T, 10T and 15T. The 1T and 2T are supplied with a 366-1 knob.

Switches on all types are equipped with guarded quick-disconnect terminals. Brass female quick-disconnect terminals are also supplied for ease in wiring.

All timers are furnished with environmental protective plating for maximum life. No lubrication is required between cam and switch. As a result, operating life is exceptionally trouble free.

Drive motors are supplied with 7" insulated wires with wire ends pre-stripped. When motors are ordered as individual units, each is supplied with the appropriate timing chart.

All models shown are equipped with a non-reversing clutch and rotation is restricted to a clock-wise motion when viewed from the front (knob) face. This clutch prevents accidentally reversing the sequence when timers are used in single cycle applications.

### COMPLETE ASSEMBLIES

Timers are available either as complete assemblies or separate units. When ordered as complete assemblies, motors are attached to the frames and units packed in a carton with knob, dial, terminals, instructions,

timing chart, and adjusting tool. Other motors (listed below) may be ordered to change time cycle. Motors are attached to frames by two screws.

**MALLORY****SONALERT® Electronic Signals**

The Sonalert electronic audible signal is a major advance in the signal warning field. The signal produces a penetrating sound of either 2800 Hz or 4500 Hz by purely electronic means. All circuitry is completely "solid-state" for maximum efficiency, lowest current requirement and extreme reliability.

Operating principles are quite simple. A transistorized oscillator drives a piezoelectric transducer to produce the desired tone. The characteristics of the transducer determine the output frequency and this cannot be changed by external means. Output volume is directly proportional to input voltage and ranges from 68 db at 6 VDC up to 80 db at 28 volts DC.

Because the circuitry is all solid-state, there are no points to arc and require maintenance. In addition, the signal produces no RF field. As a result, it may be used in computers where even the slightest amount of RF generation would upset delicate amplifiers.

The outstanding advantage of the Sonalert signal is that it operates on such low currents. In fact, the signal uses less current than a high-intensity neon indicator light. Because of this the signal is widely used to augment visual warning signals in computers and industrial process controls.

In the vast majority of cases no amplifier is needed to operate the Sonalert. Thus, it may be used with only simple probes to indicate water level when operated at 28 VDC. Indeed, it can even be used to give an indication of water hardness on a direct basis. Soft water does not have sufficient conductivity to "fire" the signal. As water becomes hard conductivity increases and the signal sounds.

The listing to the left shows all standard Sonalert signal models. The basic type is the SC628 which produces a 2800 Hz tone and operates on 6-28 VDC. The SC628H produces 4500 Hz. Types for 110 VAC operation are also shown. Several models are available which produce pulsating signals. The pulse rate is dependent on input voltage and varies from 3 cycles per second at 6 VDC up to 5 cycles at 28 volts. A special "warbler" model is also available (SC628W). This model is used in conjunction with a normal SC628H and produces a signal which warbles between the low 2800 Hz tone and the higher 4500 Hz tone.

There are no MIL specifications to cover the Sonalert per se. However, the signals are widely used in military and aerospace applications. A complete list of applicable MIL specs is presented in Bulletin 9-398 which is available from your Mallory distributor. Preferred types for military applications are the SC628S, SC628SH and SC110S. These are equipped with silicon transistors for improved operation under adverse environmental conditions.

A 48 page booklet of Sonalert uses is available upon request. The booklet covers a host of uses ranging from auto through boat and home as well as industrial and laboratory. This booklet is available at your local Mallory Distributor or by writing to Mallory. Ask for Form 9-406.

# THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality INSTANT LETTERING® transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

### PLANETARY DRIVES

Two ball-type planetary drive units are useful whenever a compact device is needed for reduced-speed operation of light mechanisms. These units depend on the action of steel balls that rotate between the knob shaft and a concentric sleeve that is attached to the driven instrument. The units are adjustable so that the pressure on the balls can be varied to match the operating load, this assures maximum smoothness while maintaining adequate torque. Maximum torque is 14 inch ounces; minimum torque is 10 inch ounces. The ratio is approximately 5 to 1, and two units may be used in tandem to produce a 25 to 1 ratio. These are precision devices for both military and commercial applications.

#### TWO-SPEED PLANETARY DRIVE

Permits slow speed operation at approximately 5 to 1; high speed at 1 to 1. The 6665 Dual Concentric Knob below fits this unit. Complete with mounting accessories.

Part No. 599 Net Ea. 10.56 25 to 99, Ea. 9.90 100 or more, Ea. 8.30

#### SINGLE SPEED PLANETARY DRIVE

Same as above unit, except that the sleeve for the high-speed knob has been omitted. In its place is a threaded sleeve with shoulder, so an indicating dial or pointer may be installed. Clamping nut, clamping washers and planetary anchor stud are included.

Part No. 27067 Net Ea. 10.01 25 to 99, Ea. 9.45 100 or more, Ea. 7.70

#### ACCESSORY DUAL CONCENTRIC KNOB

Fits 599 Planetary Drive. Larger knob is aluminum. 1-3/16" diameter drilled 7/16" to fit high-speed sleeve on planetary. Smaller knob is molded black styrene with 1/4" brass insert to fit low-speed planetary shaft. Both with set screws.

Measures transistors, diodes and F.E.T.'s, in-circuit, for reverse leakage down to 500 ohms of loading. Also measures F.E.T.'s for transconductance (Gm) to 10,000 micromhos. Both high and low power transistors may be measured for 1000 cycles Beta ( $h_{fe}$ ) within a range of 1 to 1000. Unit is housed in a splash-proof, high impact plastic case and cover. It is lightweight, portable and battery operated (uses type "C" batteries). Also available is Model 259C which includes automatic Beta calibration circuit.\*

## MODEL 240 IN-CIRCUIT TEST SET

This tester features qualitative checks of virtually every type of transistor both in-circuit and out-of-circuit. It indicates presence of gain, shorts and opens. This is a sequential, logic device featuring automatic lead finding in-circuit transistor checking. Lead orientation or device polarity need not be known; test set automatically applies proper voltage and completes test in less than three (3) seconds. Lights show GO—NO—GO indication and fault finding. Makes every operator an expert in finding catastrophic failures quickly.

Optional accessory . . .  
Model 242 In-Circuit Test Probe

## MODEL 245B SEMICONDUCTOR TESTER

Measures high and low-power transistors, diodes and rectifiers both in- or out-of-circuit in wide range of Beta measurements (1 to 1000). Transistors with a Beta between one and one hundred may be measured in-circuit, with as low as 50 ohms of loading between emitter and base electrodes with  $\pm 10\%$  accuracy. Transistor shorts and opens are immediately detected by inability to measure Beta. Only three controls. Easy to read measurements. No critical nulling adjustments required. Completely safe for all semiconductors.

### AMPHENOL STEREO COMMANDER — MODEL 880

The Model 880 Stereo Commander incorporates seven instruments in one compact package, providing a complete testing laboratory for audio FM and multiplex at a fraction of the cost of the seven individual instruments it replaces. It is a solid-state portable unit that can be used in the home as well as in the service shop.

Four signal sources and three measuring instruments are contained in the package. Signal sources include:

1. An audio generator that supplies either sine or square wave signals used by other sections of the Stereo Commander.
2. A multiplex simulator that generates or controls all signals necessary for complete and accurate alignment of an FM multiplex receiver.
3. An RF/sweep oscillator that may be used as an FM source modulated by the signal present at the composite jack (monaural sine wave or square wave) or as a sweep generator with 60 Hz sweep rate for FM tuner alignment.
4. An oscillator that generates a crystal-controlled 10.7 MHz signal for use as a marker for aligning FM receivers.

#### Has Impedance Bridge

Measuring instruments include:

1. An intermodulation distortion analyzer which measures distortion to 100% using SMPTE standard signal.
2. An impedance bridge capable of measuring largely resistive unknowns from 1 ohm to 20,000 ohms. Since the audio generator provides the signal used to drive the bridge, unknown impedance can be checked at any frequency within generator range. This section may also be used to determine resonant frequencies.
3. A high impedance AC voltmeter with a sensitivity of 100 millivolts full scale. The unit measures from 0.1 volt full scale to 1000 volts full scale... in nine increments. The VTVM is also used as an indicator for the impedance bridge and intermodulation analyzer sections mentioned in 1 and 2, above.

#### Output Specifications Cited

The Model 880 Stereo Commander has a composite output of 5 v peak to peak stereo, with 35db channel separation up to 10 KHz; 2.5 v peak to peak L-R and 3 v peak to peak monaural. Output at 19, 38 and 67 KHz is identical — 5 v peak to peak, sine wave.

The monaural audio output is 3 v peak to peak, sine wave, and 10 v peak to peak, square wave. Both sine and square wave are variable from 35 Hz to 18 KHz in two ranges with less than one percent distortion.

The Stereo Commander is 11½ in. wide, 9¾ in. high and 6 in. deep and weighs slightly over eight lbs.

Suggested list price of the seven-in-one unit is \$329.95.

### AMPHENOL CRT COMMANDER, CRT TESTER AND REJUVENATOR, MODEL 855

The AMPHENOL Millivolt Commander is a quality built, low budget instrument that meets the requirements of electronic technicians, school and college laboratories, industrial testing laboratories or manufacturers test inspection lines.

It's an all-transistor voltmeter designed with the needed low ranges for servicing transistorized equipment!

The Amphenol Millivolt Commander's extremely high sensitivity presents direct and accurate read-out from 100 millivolts to 1,000 volts DC, full scale — and from 10 millivolts to 300 volts RMS AC, full scale, with accuracy of ±2% on DC range and ±3% on AC range. These features have never before been available in popular priced test equipment.

Has the portability of a VOM with the accuracy and input impedance of a VTVM. At its price, the Amphenol Millivolt Commander offers extreme versatility, accuracy and utility. It uses the field effect transistor to maintain the constant high impedance found in a vacuum-tube voltmeter. It is an indispensable tool to technicians requiring accurate reading of low voltages in transistorized equipment.

#### FEATURES

Measures: 1/10 to 1,000 volts DC, full scale, in 9 overlapping ranges within ±2% accuracy. 1/100 to 300 volts RMS AC, full scale, in 10 overlapping ranges within ±3% accuracy.

—40 to +50 db in 10 steps of 10 db each.

Resistance from 10 ohm center scale to 10 megohms center scale within ±3 degrees of arc in 7 overlapping ranges.

Input impedance of 10.6 megohms.

Battery life is equal to shelf life in normal usage. In excess of 1000 hours continuous drain. Requires no warm-up.

Automatic shut off when lid is closed.

Sturdy, single-unit probe with built-in DC/AC-OHMS switch and shielded cable.

Compact and lightweight — only 9¼" x 5¾" x 6¾", weight approx. 5 pounds with batteries.

MODEL 870, MILLIVOLT COMMANDER, \$99.95 net.

### AMPHENOL SIGNAL COMMANDER SOLID-STATE FIELD STRENGTH METER, Model 840

#### Broadcast Quality At Service Equipment Cost

Another unique solid-state instrument. This battery-operated portable offers broadcast-quality performance at service-equipment cost. Besides relative readings, it makes classical measurements in microvolts per meter and microvolts across 300 or 75 ohm lines — a feature found in expensive lab-type models. Direct, accurate readings to 100,000 microvolts. Plug-in adapters for TV, FM, CB, UHF and other bands, make it obsolescence-proof. Invaluable in antenna work — selecting sites or antenna types, and for orientation. Indispensable in MATV and CATV system work and in RF laboratories. Amplified audio output provides audible signal for positive check. Optional dipole antenna is available for optimum impedance match. Model 840, \$149.95 without modules; Model 840-13, VHF and FM frequency range \$69.95; Model 840-83, UHF \$54.95, Model 840-300, Balun for 300 ohm line \$8.95; Model 840-1000, Dipole Antenna \$12.95.

**RESISTANCE DECADES Model DR Series**

High-Precision and Stability • Low Zero-Resistance • Long-Life Switches

DR units provide convenient selection of precise resistance values. Typical applications are found in the areas of circuit design in simulation of various factors, and as standards in bridge-type measurements.

Standard units are available with 3, 5, or 7-dials. Each decade inserts a precise ohmic resistance in series with the terminals. The basic ohmic value of any decade may be multiplied by factors of 0, 1, 2, 3, thru 10, by setting its dial at the appropriate step.

Switches are 12 position, 360-degree type. Actual resistance is the sum of zero-resistance and indicated resistance. Model DR units provide zero-resistance of less than 0.003 ohm per decade.

**CAPACITANCE DECADES Model DK Series**

Model DK units provide convenient selection of precise capacitance values with direct reading on the dials. Typical applications are found in bridge measurements and in experimental work such as circuit design. Standard units are 3-dial types. Paralleling switches provide steps of 0 to 10 by combining four capacity values. All capacitance is connected across the terminals.

Capacitors are adjusted to the accuracies listed so that increments are correctly indicated on the dials. Zero-capacitance is less than 35 pf. Silver-mica and mylar dielectrics are used to obtain low-loss, high-stability characteristics.

## KILOVOLTMETERS

MEASURE 100,000 VOLTS AC OR DC

MODEL DV-100KV DIVIDER

KILOVOLTMETER

Large rugged 6 inch precision mirror scale meter, ideal for use in lab or field testing. Completely transistorized with stabilized anti-drift circuitry resulting in sensitivity in the order of a few microamperes. Battery operated unit using long life, self-contained mercury batteries. Panel mounted trimmers provide for recalibration when required. Uses fast spike bypass circuitry and a novel automatic voltage coefficient compensator for the multipliers. Special high voltage probes supplied with instrument. The low voltage probe is used on the 5 and 10 KV range, with the larger high voltage probe used in the higher ranges. The accuracy of the basic instrument is  $\pm 1\%$  of full scale on DC,  $\pm 2\%$  of full scale on 60 cycles. The probe accuracy is  $\pm 2\%$  on the 5 and 10 KV range and  $\pm 4\%$  on the 50 and 100 KV range.

Where greater than the usual accuracy is required a Model DV-100KV Standard Divider is available as an accessory for use with the Model 50 and 60 KV meter. The Model DV-100KV Divider is used in place of the probe normally supplied with the instrument. This unit consists of a series of wire-wound standard resistors arranged in a spiral with a special corona guard ring. Accuracy  $\pm 0.05\%$ .

RANGES: 0 to 5,000/10,000/50,000/100,000 volts DC or 60 cycles AC.

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

**CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER** because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

**SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS.** An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

**INSURE CONNECTOR RELIABILITY**

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer® Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

## INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance

and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

# PANEL METERS

**BIG LOOK**†

Handsome, easy-to-read meters in two styles for all panel and control applications. All DC meters have self-shielded movement with pivot and jewel or taut-band suspension. Taut-band designs give great resistance to shock and increased sensitivity. Zener-diode, expanded-scale voltmeters available for improved narrow-range accuracy on 3½" and 4½" sizes. Snap-on, snap-off covers on meters. All types meet ASA Specification C-39.1.

**Accuracy:** ±2% FS, all DC and AC iron vane; ±3% FS, AC rectifier type (with 60-cycle sine wave at 25° C); ±0.5% of midspan, expanded-scale types. **Overload:** 20% momentary and sustained, voltmeters; 10 times rated current for 10 consecutive intervals of ½-sec. with 1-min. interval between successive applications, momentary; 20% for 8 hours, sustained, ammeters. **Scale:** Pivot and jewel, 90° rotation; taut-band, 100°.

**Insulation:** 2600 V rms hi-pot for all but 1½" models (1600 V rms). **Response Time:** Meet or exceed ASA requirements: 3 sec. max. for microammeters; 2 sec. max. all other DC ratings; 2.5 sec. max. AC ratings. **Damping:** 40% max. overshoot; 2.5 min. damping factor. **Burden:** 5 amps, 0.5 VA, 0.5 power factor for AC ammeter; unity power factor, AC voltmeter.

## BIG LOOK PANEL METERS

Accurate, quick reading with wide, border-to-border scales; free from shadows. Most popular meter design with low-profile, easy-to-read sense. Aluminum frame holds reflections to a minimum. Big, bold numerals over cleanly marked divisions for fast reading. Tapered pointers assure high accuracy. Taut-band suspension provided on all models except 1½" size. Standard 2½" and 3½" models come with sealed cases to protect against hair, dust, chemicals or other foreign particles. Shelf-shielded DC mechanisms; snap-on, snap-off covers.

# METER RELAYS

## TYPE 195 AND 196 METER RELAYS

TYPE 195

New General Electric Meter Relays feature a solid-state, light-sensitive switch for optimum control simplicity and reliability. This switch controls the load relay directly; no amplifiers, no pointer contacts...no mechanical interference with meter movement. Pointer travel is unrestricted across the entire scale...you get continuous indication above and below the setpoints! Control action is dependable and repeatable over entire range!

Unique piggy-back control modules on 3 1/2-inch and 4 1/2-inch models, eliminate mounting and wiring of separate components...speed up and simplify installation. Control mounts directly on rear of indicator; no soldering, no complicated connections...just plug-in and they're mated! Control module may be removed without interrupting measurement circuit.

Other features include ON-OFF (automatic reset) or Alarm (manual reset) Control... 120-volt A-C Operation! No special power supply needed... Long Lamp Life! Conservatively estimated at 5 years... Fail-safe Operation.

# HIPOTRONICS AC/DC HIPOT TESTERS & MEGOHMMETERS

MODEL 306B

300 SERIES

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC Hipot, DC Hipot and DC megohm tests. The "A" units perform IR tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

- The sensitive thyratron operated overload relay adjustable from 20 microamperes to 5 milliamperes, will in many applications, permit non-destructive hipot tests to be performed.
- When the overload is set to 20 ua, the high voltage will generally trip on the build-up of leakage current before actual arc-over occurs.
- The "B" series has a quadruple range current meter which permits leakage currents as low as 0.01 ua to be read.
- The "A" series permits the reading of currents down to 1.0 ua.
- The KV meter has two ranges and is connected directly at the output for maximum accuracy.
- Other features include an AC input switch, fuse and pilot light, front panel output jacks, continuously adjustable output control, guard circuit on "B" series, and a failure light with reset button.
- Housed in a totally enclosed dust-proof cabinet.

Weight: 20 pounds

- Voltage to 6 KV, megohms to 100,000
- Overload adjustable from 20 microamperes to 5 ma.

# HIPOTRONICS MEGOHMMETERS

Hipotronics megohmmeters are precision instruments for use in production or laboratory testing of cables, capacitors, printed circuits, transformers, electronic assemblies, etc.

- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the seven range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 7 models, all with 115 Volt, 60 cps input and AC input switch, fuse and pilot light.

# HIPOTRONICS NON-DESTRUCTIVE HIPOT & INSULATION TESTERS

## NON-DESTRUCTIVE HIPOT TESTERS

Non destructive hipot tests may be made on many materials, components, test specimens etc. if a sensitive overload, coupled with a high speed HV cut-off is incorporated into an insulation tester. Hippotronics 100 series of hipot testers have a thyatron operated overload relay which cuts-out the HV in 5 milliseconds or less with leakage currents as low as 20 microamperes. The overload, when set on 20  $\mu$ a, will generally trip the HV on corona and leakage currents which precede an actual breakdown, puncture or flash-over. The overload is continuously adjustable from 20  $\mu$ a to 5 ma which enables the user to draw 5 milliamperes for capacitor charging, cable testing, power supply etc.

## HIGH VOLTAGE POWER PACKS

The Hipotronics wide range of compact miniaturized power packs with output voltages from 2 to 100 KV and current ratings of 2, 5 or 10 milliamperes are designed for long life and trouble free operation. Advanced high voltage techniques developed by Hipotronics permit greater size and weight reduction than previously possible.

All units are housed in a hermetic sealed MIL-T-27A can and filled with mineral type transformer oil under high vacuum. The insulating oil insures corona-free operation and provides a cooling medium for running the supply at 3 or 4 times normal current rating for long periods of time. The corona free operation precludes component failure caused by long term corona degradation of insulation and guarantees a pure DC output free of any interfering high frequency signals which might possibly influence or affect the system which it is powering.

Every component in the supply is operated at well below its design rating and pre-assembly hipoted at one and one half times its operating voltage.

The output connections are high voltage ceramic type on models 20 KV and below and through plug in re-entrant receptacles for coaxial cables on greater than 20 KV units. Three foot cable assemblies are supplied with each re-entrant bushing type and longer ones are easily assembled if required.

# VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

29th Year

**MODEL 34-FX Ser A,**  
a popular 9 reed meter,  
shown half actual size.

• **USES, Commercial and Military** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, television, and radar service, on engine-generator sets and standby equipment, in laboratories, in many types of aviation and electronic equipment, on panel and control boards, in inspection setups, and in high-cycle power sources — wherever constant or known frequency is important to accurate and efficient operation of equipment.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to the frequency shown on the dial. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — Breadth of actuation differs with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 400 cycle or a 1000 cycle reed.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter. Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

Superior performance for commercial and military applications is assured by more than 26 years of continuous experience and know-how covering the design and complete manufacturing of hundreds of thousands of these instruments in our Connecticut plant. Current production incorporates several innovations covered by recent J-B-T patents.

• **ADVANTAGES** — At reference temperature of 77°F most models have guaranteed accuracy of 0.3% or better of the frequency being measured, but the tables that follow indicate that certain models may be ordered with accuracy of ±0.1%. Accuracy on interrupted DC may be somewhat less. High fatigue strength provides a safety factor for continuous operation. Temperature compensations are not required as frequency change per °F is only .0075%, negative. For example, a 50°F temperature rise causes a 60 cps reed to read only 0.2 cps lower than at reference temperature.

## VIBRATING REED FREQUENCY METERS

J-B-T

29th Year

J-B-T INSTRUMENTS, INC.

## SEALED FREQUENCY METERS

**FHXX TYPE** Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing and electrical requirements including 3000 volt breakdown. Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Sampling procedure includes a test in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. Available in 3½", 2½" and 1½" cases. For dimensions, see Table, Line 8, and Print SK-153 Rev. A. Standard voltage is 100-130.

**MODEL 15-FHAC, 1½";** widely used as frequency standard for cathode follower circuit.

**MODEL 21-FHXX, 2½";** 5 reeds, cased to match other 2½" panel meters.

**MODEL 34-FHXX-Z-11,** shown half size, Accuracy, ±0.2%

## REVISED DIAL APPEARANCE

Shipments during the life of this catalog may include meters with dials somewhat different from those pictured here. Dials are being rapidly modified to use the revised trademark as adopted during J-B-T's Silver Anniversary Year. Most ¾" frequency meters also will soon carry the designation Series A after the model number (as in the 34-FX Ser. A at the left above). Such instruments have additional ruggedness and sensitivity, and unusually uniform amplitude over the entire span of the meter. However Series A are otherwise interchangeable as to mounting dimensions and circuit characteristics with other meters bearing the same model number.

RUGGEDIZED AND ILLUMINATED METERS

Model with "RUG"—Sealed vibrating reed frequency meters and illuminated elapsed time meters are available, when so ordered, to the extent of MIL-M-10304B, covering ruggedization of other kinds of meters, and usually are specified only for extra-severe shock and vibration.

**Construction**—Requirements for lighted meter dials have led to eliminating the 3 $\frac{1}{2}$ " FHXX Series of sealed meters. Light from a source behind the panel is admitted through a sealed window built into the meter case. Inquiries are invited.

400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

Among the variations which J-B-T produces on special order, are 21-reed, 390-410 cycles in 3 $\frac{1}{2}$ " case; and 11-reed; 780-820 cycles with cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

RESONANT—REED RELAYS (Decoders) AND OSCILLATOR CONTROLS (Encoders)

Typical Frequency Sensitive Relays RR-A11A-136.5

Typical Sealed Oscillator Control RO-B103-188.0

For technical description of J-B-T frequency-sensitive electromechanical control devices, see Bulletins 162R and D664A; for representative models and prices, see Section 5100 of this book.

New

FG SERIES for Modern Design; Picture Window Frame Optional

**FG FREQUENCY METERS.** Thoroughly modern in appearance, the sparkling clear-plastic front and the bright textured metal insert below the dial add zest to any panel. FG meters not only match the 3 $\frac{1}{2}$ " wide x 3" high front of the New EG elapsed time meters on the next page, but are interchangeable as to mounting with other kinds of panel meters. Standard voltage is 100-130 volts; accuracy and electrical characteristics are the same as corresponding FX meters in the table on preceding page. For example, Model 30-FG differs from Model 30-FX only in the case. FG mounting details appear in line 9 of the Table of Dimensions below and in Print SK-160, available on request. Further design flexibility is provided by use of the half-bezel adapter sketched below, in which a black plastic picture window frame outlines a panel area 3.83" wide x 2.27" high. Three typical FG models are catalogued, but others are available on special order.

## ELAPSED TIME METERS AND REED RELAYS

J-B-T

29th Year

J-B-T INSTRUMENTS, INC.

### • USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

### New EG SERIES for High Visibility; Modern Picture Window Optional

MODEL 31-EGW-5 for standard flush type mounting.

Same model with 13A-239 metal half-bezel.

**EG ELAPSED TIME METERS.** These are designed to give a bright, jewel-like look to panels when used alone, in multiples, or in conjunction with other instruments such as the matching new FG series of frequency meters. A gleaming textured metal shroud below the dial and a clear-plastic case front 3 1/2" wide x 3" high give high visibility to the numerical read out. Dimensions are same as line 9 for FG meters on opposite page. For optional picture window frame effect, on panel area 3.83" wide x 2.27" high, add 13A-234 or 13A-239 half-bezel adapter. (See panel cutout and mounting detail drawing on preceding page.) The quiet, sturdy motors and extensively field-tested mechanisms of other J-B-T elapsed time meters are used in the EG series. Two models are catalogued. Other voltages, frequencies and numerals will be quoted.

31-EGW-5, (illus.) 5 wide digits, 0-9,999.9 hours, 60 cps, 110-125 volts ..... \$21.50

31-EGW 6 wide digits, 0-99,999.9 hours, 60 cps, 110-125 volts ..... 22.00

### SQUARE-CASED ELAPSED TIME METERS

**MODEL 31-ES.** A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Like 30-FG, Line 10 in Table on opposite page, except depth behind panel (B) is 2 1/4" and terminals are located on horizontal center line, each spaced 1/2" from the center (C). Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles. Now supplied with tenths in red on white and units in white on black.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. .... \$17.50

### CLEAR PLASTIC ELAPSED TIME METERS

**EPL TYPE.** Clear-plastic front attaches to sturdy metal case with solder terminals behind panel. 21-EPL, (illus.) is 2 1/2" wide x 2 3/4" high with 2 1/2" meter barrel; 31 EPL is 3 1/2" x 3 3/4" with 2 1/2" barrel. Both 60 cy., 110-115 volts. See also EG Series, above. 21-EPL, 0-9,999.9 hours ..... \$30.00  
31-EPL, 0-9,999.9 hours ..... 34.00

### ELAPSED TIME — FREQUENCY METERS

**31-FE SERIES.** To conserve panel space and centralize information, this instrument combines elapsed time or running time meter with frequency reads. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reeds, at 100-130 volts; self starting. Tenths shown in red on white, all other numerals in white on black. \*Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see print SK-45. Rev. D.

31-FE, 3/4" metal case 4-19/32" deep ..... \$33.00

31-FEX-1, (per print SK-44 Rev. F—not regularly stocked) like Model 31-FE, except with 3 1/2" metal flange permanently attached for MIL-M-6B front mounting per line 7, Table of Dimensions ..... 34.10

### BASIC 3 1/2" ELAPSED TIME METERS

### New 5-DIGIT WIDE NUMERAL ELAPSED TIME METERS

**MODEL 31-EXW-5.** Newest in the J-B-T line of elapsed time meters is Model 31-EXW-5 with 5 wide, easy to read numerals. This model is particularly recommended for new equipment because, with superior visibility, rugged construction and attractive price, it is expected to supplant the 31-EX. The meter registers to 9,999.9 hours and automatically resets. Tenths are shown in red on white, units in white on black. Model 31-EXW-5 is interchangeable electrically and mechanically with both 31-EX (below) and 31-EXW shown at the left. Mounting, which is the same as type MR-34 or MR-35 to MIL-M-6B, also JAN-I-6, and terminal location are per print SK-125 Rev. C.

31-EXW-5, 5 digits, 0-9,999.9 hours, 60 cy., 110-125 volts.....\$16.50

**Model 31-EX.** This instrument has been the most widely used of any J-B-T elapsed time meters and continues to be available where parts lists or production runs call for style of numeral and dial appearance, as illustrated. The black molded case, which mounts according to Print SK-80 Rev. E, is interchangeable with the new wide-numeral meters. 5-digit 31-EXW-5 and 6-digit 31-EXW.

31-EX, 5 digits, 0-9,999.9 hours, 60 cy., 110-125 volts ..... \$16.75

31-EX-200, same except 230 volts. (Not regularly stocked) ..... 18.75

### ELAPSED TIME METERS — Tenths of Minutes

**MODEL 31-EXM,** 60 cycles, 110-125 volts, reading 0-9,999.9 minutes; for short-run applications or readings at closer intervals than 31-EX. Tenths of minutes in red on white, minutes in white on black numerals, otherwise identical with 31-EX ..... \$20.00

### 6-DIGIT WIDE-NUMERAL ELAPSED TIME METERS

**MODEL 31-EXW.** One of the most easily-read and most versatile of J-B-T elapsed time meters is Model 31-EXW, illustrated. Easy-to-read, wide numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in red on white and units in white on black. This model is interchangeable, electrically and mechanically with Models 31-EXW-5 and 31-EX. The black molded case is also interchangeable with all 3 1/2" FX types of frequency meter. Print SK-125 Rev. C gives mounting information.

31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts ..... \$16.95

### 3 1/2" SEALED ELAPSED TIME METERS — 60 Cycles

**MODEL 31-EHXX.** Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearances match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts ..... \$19.75

### 3 1/2" SEALED ELAPSED TIME METERS — 400 Cycles

**MODEL 33-EHXX.** This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. ## OVEN OR HEAT CHAMBER TESTERS

**MODEL 23-JP-1.** This popular portable unit using pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. 0-650°F. dial with 2 3/8" scale arc is covered by clear-plastic front (may be shipped as rectangular instead of round as illustrated). Sturdy, pliable, scuff-resistant black case is 4 1/2" x 2 7/8" x 4 1/4". Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error, as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5 1/2" calibrated thermocouple, clip, and convection shield **\$28.00**

**MODEL 32-JP-3.** This time-tested model has an instrument-type carrying case of natural finished mahogany 6" x 3 7/8" x 4 1/2" over hardware. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2 1/2° on a 2 3/8" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5 1/2" thermocouple, clip for affixing to grill and convection shield included **\$29.50**

**MODEL 32-JP-7.** This model is recommended as the most versatile and easiest to read of this J-B-T series. The 0-650°F. scale is more than 4" long. Automatic compensation for ambient temperature is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5 1/2" thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., use appropriate accessory thermocouples. Tester price includes stitched Ever-ready case, 5" wide x 5 1/2" high x 2 3/4" deep, of sturdy scuff resistant black vinyl. **\$32.00**

# Fast, accurate point <sup>to</sup> point circuit testing

PARAGON PRO-GLO Circuit Testers are simple, inexpensive, easy-to-use instruments for checking non-energized circuits. This little pen-size unit accurately checks for polarity, shorts and opens and continuity in circuits with resistance up to 10 ohms.

The PARAGON PRO-GLO tester consists simply of a plastic case containing two AA penlight batteries and a #222 lamp, a pointed probe and a three-ft. lead wire with alligator. The lead wire holds a new probe protector.

Servicemen and home repairmen appreciate the ease of use of this simple tester. Signal light at point of contact eliminates necessity for shifting eyes to read meter. Speed and accuracy of testing is increased. Low cost of device makes it practical for mass distribution in large service centers. Long operating life is assured — probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic and wire is heavy-duty, flexible test lead.

- Eliminates or reduces distortion of sweep curve by the marker.
- Permits trap alignment without marker "suckout."
- Hi-Q markers — high in amplitude, narrow in width.
- Four marker choices — positive peak, negative peak, positive and negative peaks (wide band), positive and negative peaks (narrow band).
- Voltage stabilized for rock-steady trace display.

## WV-84C ULTRA-SENSITIVE DC MICROAMMETER

Application: a battery-operated vacuum tube microammeter designed for measuring minute direct currents, for making current and voltage measurements in electrolysis and corrosion investigations, and for checking currents in light meters, ultra-violet and infrared detectors, and spectrophotometric devices. Self-contained batteries permit use almost anywhere. Low-drain tubes extend battery life and protect the delicate meter against burnout due to accidental overloads. When used as a voltmeter, it is especially suited to measurements in circuits where loading is a critical factor. Can also be used as an ohmmeter to measure extremely high resistances, such as leakage and insulation resistance.

NEW PROTECTED 260-5P AC/DC VOLT-OHM-MILLIAMMETER

This instrument has built-in Meter and Tester protection approaching 100% which virtually makes this VOM "GOOF PROOF." The 260-5P will be of particular value where the instrument may be used by inexperienced people; students, apprentices, and new employees. Technicians, too, will find the instrument ideal for exploring unfamiliar equipment, especially when lack of a schematic diagram poses the hazard of encountering unexpected high voltages.

Combined protection not found in any other VOM.

1. Reset button pops out to indicate overload.
2. Circuits cannot be reset while overload is present.
3. Massive overloads which can cause hidden damage are not required to activate the protective circuit.
4. All ranges are protected except those not feasible in a portable instrument 1000 and 5000 volts DC and AC; 10 Amps DC.

The 260-5P has the same ranges and takes the same accessories as the Simpson 260-5 VOM. Complete with test leads 7500 and operator's manual.

HIGH ACCURACY 261 AND 270-3 AC/DC VOLT-OHM-MILLIAMMETERS

For applications requiring higher accuracies, Simpson has combined the latest in VOM design with strict manufacturing controls to produce the 261 and 270 Series 3. Features include:

1. A new self-shielded annular meter movement.
2. Special calibration circuit that increases accuracy.
3. Diode overload protection. (Prevents movement burnout even on 200,000% overload.
4. Mirror scale with knife edge pointer.
5. Input protected with an internal 1 amp fuse.
6. TAUT BAND movement. (270 only).

### DUAL SENSITIVITY MODEL 263

Dual sensitivity Volt-Ohm-Milliammeter with accuracies of  $\pm 1\frac{1}{2}\%$  DC and  $\pm 3\%$  AC F.S. Overlapping ranges offers greater accuracy expressed as a percentage of reading. Diode overload protection. Uses  $1\frac{1}{2}$  volt alkaline battery to insure greater stability on low ohms scale.

Complete with test leads No. 0115 and operator's manual \$88.00

### 100,000 $\Omega/V$ . MODEL 269-2

Model 269-2 incorporates Simpson's self-shielded meter movement with spring backed jewels. Improved Model 269-2 includes two new ranges, 400 V. AC and 800 V. DC. The ampere range coverage has been changed from a 16 ampere range to an 8 ampere range, and the Ohm Center Scale is changed to a 12 ohm center for better coverage.

Complete with test leads No. 0115, 4000V. DC probe extension and operator's manual \$90.00

### MODELS 267 AND 268

Companions to the World Famous 260, these instruments are ideal for TV and Radio Service work, General laboratory work, and production line testing where accurate repetitive readings are required. One major switch in the instrument selects range position and function at the same time which saves time in operation and also acts as a protection to the tester circuit. Input protected with an internal 1 amp fuse.

Complete with test leads No. 7500 and operator's manual. Model 267 \$65.00 Model 268 \$65.00

### 33-RANGE MODEL 262-3

Model 262-3 Volt-Ohm-Milliammeter is very compact with 33 ranges on a large, easy to read 7" scale that makes accurate repetitive readings easy to attain. Self-shielded meter movement incorporates spring backed jewels which eliminates damage to the meter pivots that could result from shock and vibration — dependability and longer life are ensured.

Complete with test leads No. 0115 and operator's manual. Model 262-3 \$75.00

### MODEL 604 MULTICORDER®

#### FEATURES:

- 22 Built-in Ranges — AC & DC.
- 3 Built-in Speeds — 1/3/12 in./hr. Plus external drive accommodate.
- A permanent record of both range and measured value.
- Inkless recording via fast sequential impressions on pressure sensitive strip chart paper (no pen and ink maintenance problems).
- A high torque meter movement, with a shock-proof taut band suspension moving coil system.

SIMPSON MULTICORDER Model 604 contains a unique range marking system that indicates the range being used as the value is being recorded. Compact, rugged design, easy-to-operate and accurate, the Multicorder is an indicating instrument with a wide band of ranges and functions for measurements that eliminates the need for a separate recorder for each of the functions and ranges. You get visual readout in addition to the recording action that offers three chart speeds: 1"/3"/12" per hour. This Simpson Multicorder is the only multifunction recorder available for less than \$200.00.

World's First IN-CIRCUIT Capacitor Leakage Tester

"ONE PACKAGE FLEXIBILITY"

- Measures the leakage resistance of defective paper, mica, or ceramic capacitors
- Indicates directly the capacitance of good paper, mica or ceramic capacitors over a range of 10.0 mmf to 10.0 mf

A pulse technique detects many marginal capacitors. All measurements are made under load conditions. No adjusting of a bridge circuit and balancing controls. Borderline capacitors which cause costly "call backs" are detected immediately with the pulse test.

†Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service. Impedance is 390Ω @ "0" VU deflection.

†Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service. Impedance is 3900 Ω at "0" V.U. deflection.

## AVERAGE SENSING, TRUE RMS & DC SEGMENTAL INSTRUMENTS

Segmental voltmeters and frequency meters make it possible to measure very small changes in input conditions. The significant portion of the overall voltage or frequency range is expanded to occupy the full scale length. Thus, only that segment of the range that is important appears. In addition to the standard expansions and accuracies shown, special segmental voltmeters can be built on order. Write the factory for a quotation.

The A.C. segmental voltmeters are available in either average sensing or true R.M.S. sensing units. When working with sine wave currents or when other measurements will be made with average sensing equipment, the average sensing meters are preferred. When working with distorted waveforms, as would be encountered in constant voltage transformers, S.C.R. circuits, D.C. to A.C. solid state inverters or similar equipment, the true R.M.S. sensing meter would probably be preferred.

**SPECIFICATIONS**

**GENERAL:** Model 29XA Relays are of the D'Arsonval Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

**CALIBRATION:** Accuracies  $\pm 2\%$  of full scale.

**CONTACTS:** Gold Alloy. For use @ 15 volts DC, 10 milliamperes maximum, on resistive or diode protected inductive loads.

**CONTACT ADJUSTMENT:** Contacts are externally adjustable over 95° of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

**CONTACT DIFFERENTIAL:** Normally, contacts will close within 2% of full scale value and break within 10% of full scale value.

**INSULATION:** Breakdown 300 volts AC from Relay contacts to meter circuit. 3 KV AC from Relay terminals to mounting panel. (All Tests at 60 cycles.)

4 1/2" Model 29XA

**RUGGED SEAL CONTACTLESS METER RELAYS**

*Maximum reliability design*

Intended for control, alarm, and limit applications — with utmost dependability. Photoconductor sensing eliminates all interference with the indicating meter. High gain transistor switch circuit provides solid state reliability, accurate switching, and extremely small dead band. Control points are adjusted from the front panel thru a gear drive. The solid-state switching circuit triggers internal 10-ampere DPDT relays (one for each control point). Ideal for unattended operation, they can be obtained from stock in a wide selection of ranges, with either dual or single control points, and in three sizes.

**SPECIFICATIONS (Stock Models)**

**CALIBRATION ACCURACY:** DC models,  $\pm 2\%$  of Full Scale. AC models,  $\pm 3\%$  of Full Scale.

**CONTROL POINT ADJUSTMENT:** The single control is adjustable over the complete 100% arc. The double control limit is variable from 0-95% while the high limit can be located from 5% to 100%. The control points on a double control can be adjusted within 5° of each other. Control point indication is within 2% of control switching.

**CONTROL POINT DIFFERENTIAL:** Difference between "on" and "off" is within .5% of Full Scale.

**POWER REQUIREMENTS:** 115 Volts A.C. 50-500 CPS D.C. power required for sensing and switching is provided by the external power module furnished with dual control models. Single control models have self-contained power supply.

**OUTPUT:** D.P.D.T. relay contacts for each control point. Contacts rated @ 10 amperes, 115 A.C. resistive.

**METER INDICATION:** Continuous, unaffected by control point setting.

**CONTROL CIRCUITRY:** Fail safe. Both slave relays "open" in event of power failure.

**MOVEMENT:** Self-shielding pivot and jewel or Taut Band.

**EXTERNAL POWER SUPPLY** — Used with all two-control models (supplied with unit).

## TO-6 TEL-OHMIKE® CAPACITOR ANALYZER

The TO-6 TEL-OHMIKE capacitor analyzer is a must for checking all capacitors. It is a moderately priced instrument with laboratory quality and accuracy—the highest accuracy of any instrument of its type available to the service trade!

- **CAPACITANCE BRIDGE** measures up to 2000  $\mu$ F. Five overlapping ranges include exclusive 1 pF to 100 pF range. Special shielded transformer for bridge voltage. Extremely low AC voltage; 1.35 volts for electrolytic capacitors, 2.85 for all others, permits safe testing of all low voltage capacitors.
- **INSULATION RESISTANCE** of papers, ceramics and micas directly read on large meter. No guessing with neon lamps. Dual range—to 10KM $\Omega$  30V for low voltage units . . . to 50KM $\Omega$  150V for higher voltage components. Fast charge feature speeds testing of high capacitance units.

- **LEAKAGE CURRENT** of electrolytics measured directly on meter. Four ranges; .06, .6, 6, and 60mA. Three ranges of DC voltage (continuously variable within each range) permit testing capacitors at exact rated voltage up to 600 volts.
- **POWER FACTOR** of electrolytics, up to 50% measured by Wien Bridge.
- **METER PROTECTOR** of solid-state design allows severe accidental over-loads without burn-outs.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance and power factor measurements. High gain amplifier provides greatly improved sensitivity.
- **PUSH-BUTTONS** color-keyed for instant range selection.
- **MODERN CASE:** Silver-grey hammertone finish, panel is charcoal grey with highly contrasting white designations. Measures 8  $\frac{7}{8}$ " high, 14  $\frac{5}{8}$ " wide, 6  $\frac{1}{8}$ " deep. Weight only 13 pounds.

## TCA-1 TRANSFARAD®

The Transfarad is specifically designed to safely test all low-voltage, low-leakage aluminum, tantalum, film, paper, and ceramic capacitors used in transistorized circuits. A must for modern industrial laboratories and electronic service shops.

### SAFELY TESTS TRANSISTOR CIRCUIT CAPACITORS INCLUDING TANTALUM TYPES

- The only analyzer which gives the complete story on tantalum and other low leakage current capacitors.
- **CAPACITANCE BRIDGE** measures 1  $\mu$ F to 2000  $\mu$ F in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming any low voltage capacitor during measurements.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurement at exact rated voltage.
- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6  $\mu$ A to 600  $\mu$ A in seven ranges.
- **POWER FACTOR** measured by Wien bridge from 0 to 50 per cent.
- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.
- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.
- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.
- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.
- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

## TRIPLETT ELECTRICAL INSTRUMENT COMPANY

# WESTON INSTRUMENTS, INC.

## MODEL 1900 PANEL INSTRUMENT SERIES

**GENERAL** — The 1900 Series is an integrated line of a-c and d-c panel instruments, providing a carefully selected choice of sizes, case styles, accuracies, pointers, scales and ranges. Particular attention has been paid to designing instruments that will present an overall appearance of harmony, even when random sizes are mounted side by side. Mounting bezels provide three types of mounting — recess, flush and conventional.

One of the many features of this new Weston series is the method of construction which provides quick interchangeability of fronts and easy access for adjustment or service, if ever required. From their spring-backed jewels to their unique fastening clips, the 1900 Series incorporate the fine workmanship and quality that has always been associated with Weston.

## THIN LINE PANEL METER MODEL 111

Completely Flat — Can Be Stacked Side-by-Side

New Self-Shielded Mechanism

Saves Panel Space

Designed to Meet ASA C39.1 Specifications

The Model 111 utilizes a completely new mechanism design. This is the only edgewise instrument incorporating a flat cormag mechanism design for shielding purposes. The magnet is inside the moving coil as in all Weston CORMAG® designs and the resulting inherent shielding allows mounting on magnetic or non-magnetic panels without need for adjustment, as well as the ability to "stack" meters side-by-side without any interaction. The mechanism also has a shock absorption jewel arrangement to assure long life.

ALL DIMENSIONS ARE APPROXIMATE

### SPECIFICATIONS

## THIN LINE PANEL METERS

### MODEL 121 EDGEWISE

- Completely Flat—Can Be Stacked Side-by-Side
- Parallax Eliminated—In-Line Pointer and Scale
- New Self-Shielded Mechanism
- Saves Panel Space
- Illumination Available (Self-Contained)
- Designed to Meet ASA C39.1 Specifications
- Front Mounted Zero Corrector

The Model 121 is basically a 2½ inch flat edgewise meter offering many benefits not generally offered in this type of meter. To eliminate parallax normally associated with edgewise meters an "in-line" scale is standard; a red pointer increases readability. For those requiring lighting, self-contained illumination is available as an optional feature. The bulbs are removable while the meters are mounted in the panel—even when "stacked" side-by-side. • The Model 121 utilizes a completely new mechanism design. This is the only edgewise instrument incorporating a true flat CORMAG® mechanism design for shielding purposes. The magnet is inside the moving coil as in all Weston Cormag designs and the resulting inherent shielding allows mounting on magnetic or non-magnetic panels without need for adjustment, as well as the ability to "stack" meters side-by-side without any interaction. The mechanism also has a shock absorption jewel arrangement to assure long life.

### SPECIFICATIONS

self-contained                      self-contained

Mounting: Meter can be mounted either horizontally or vertically. Order proper meter from price list for the required type mounting. Mounting clips fasten to meter behind panel—no screws show on front of panel. For "stacking" thru holes are provided so stack can be bolted together.

Illumination: Two G.E. 328 lamps are used. Recommended operating voltage—5 volts (less than 200 ma per bulb). Expected life greater than 5,000 hours.

Dielectric: 2000 volts RMS

The basic mechanism is of the standard Weston CORMAG design which offers inherent self-shielding. This means that these units will be unaffected by panel material, normal magnetic fields created by current carrying conductors and can be mounted side-by-side with no loss of accuracy.

**SPECIAL FEATURE:** Filters may be placed behind the scale so that the pointer will change color at a fixed point. Up to two colors (plus a white pointer area) can be provided. Standard colors are red, green or amber.

No mounting screws are visible from front of the panel—two clips behind the panel securely lock the meter in place.

## SPECIFICATIONS

## MODEL 1209 SERIES (Projected Moving Scale Meter)

### ...8" OF SCALE IN A 2½" FRONT

- RETAINS ALL THE ADVANTAGES OF AN 8-INCH METER
- ELIMINATES PARALLAX
- 1% ACCURACY (½% OPTIONAL)
- SELF-ILLUMINATED SCALE
- REQUIRES ONLY 7 SQUARE INCHES PANEL SPACE
- SELF-SHIELDED MECHANISM
- SELF-CONTAINED

Standard meters use black background scales with white figures. White background scales available.

### APPLICATIONS

For the first time, designers can standardize on one meter which fills the complete range of requirements: small size • long scale length • accuracy • self illumination • versatility in styling (proprietary bezels available at a normal cost). With Weston's new PMS instruments, equipment dimensions can now be based on optimum space requirements rather than on meter size.

## BIRNBACH FEEDTHRU INSULATORS

Made of highly vitrified, low absorption porcelain smoothly glazed to prevent accumulation of dust or dirt. Maximum strength is achieved by the proper proportions and flat mounting surfaces. Long insulating sleeves on the lower part of the insulator contribute much to their performance on high voltages. Brass nickel-plated hardware.

## CORRUGATED FEEDTHRU INSULATORS

The six new corrugated type feedthru insulators have more than twice the leakage path of the straight type because of increased surface of the corrugations and recommends itself where a straight side insulator of equal height is not satisfactory because of its shorter leakage path. Brass nickel-plated hardware and cork mounting washers supplied.

## HIGH VOLTAGE FEEDTHRU INSULATOR

This insulator has been designed to meet the demand for an insulator having high dielectric and mechanical strength. The extra long leakage path is made possible by the corrugations on the top insulator. The bottom sleeve tapers from a base dia. of 1 1/4" where the electric stress is greatest.

# JB<sup>®</sup> Polystyrene

## ROD TUBING SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

# PRESSURE-SENSITIVE VINYL PLASTIC ELECTRICAL TAPES

Offer a combination of superior electrical and physical properties

## ALL-WEATHER ELECTRICAL TAPE

General Electric AW-1 ALL WEATHER vinyl plastic electrical tape is the only heavy-duty, all weather electrical tape at standard tape prices.

That means you save — buy one tape instead of two for all conditions — and get a bonus of 20% more tape with superior flexibility, handleability and insulation protection.

It is perfect for any type of electrical repair work during any season of the year — from sub-freezing winter temperatures to the most severe, humid summer conditions. What's more, it resists acids, alkalis, abrasion, sunlight, salt water, many insulating oils and other organic solvents. And it won't flag or creep from its backing.

Available at your local distributor in cases, ten-paks, and individually canned  $\frac{3}{4}$ " x 66' rolls.

**A-C OPERATION** — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 cycles. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types SS150 and SS152 use Class A insulation; all others have Class B.

**D-C STEPPING** — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200 steps per revolution. Accuracy of the steps is ±.09° non-

cumulative. Three-lead types require a center-tapped d-c supply and single-pole, double-throw switching; four-lead types require a single-ended power supply and single pole, double-throw switching. Bifilar motors can also be used with transistorized switching circuits. With a suitable control potentiometer instead of switches, a SLO-SYN motor can be made to rotate steplessly, permitting extremely accurate positioning. All motors have lubricated-for-life bearings.

### PRECISION STEPPING

For phase-switched d-c stepping, types HS25, HS50 and HS50L make 200 steps per shaft revolution. Each 1.8° step is accurate within ±3% (.06°) noncumulative. May be operated at speeds greater than 500 steps per second if accelerating and decelerating circuits are used. With proper circuitry, the motors may be operated at speeds of 1000 steps per second or higher without missing any steps.

### 200 RPM

Types TS50 and TS52 are similar to standard models but operate at synchronous speeds of 200 rpm and take 36 or 72 steps per revolution when used for d-c stepping.

**SLO-SYN**® *Preset Indexers*

Used to control indexing of SLO-SYN bifilar motors. The index angle, or position, can be preset by dial setting on the control panel the number of 1.8° steps to be driven. Have provision for actuating any external equipment needed to perform related operations. Index, jog and free run can be initiated manually from the control panel or from an external switch. Can be made to cycle automatically with proper external switching. Single- and two-axis models are available with counting ranges to 99,999 steps. Two-axis models provide independent control of two SLO-SYN motors. Speed adjustable from 4 steps/second up to maximum possible with motor used. Optional backlash take-up circuit.

**SLO-SYN**®  
*Translator*

TYPE ST1800B

Pulse-to-step converter designed for use with appropriate bifilar SLO-SYN motors converted for incremental stepping. Convert low level signal pulses or square waves into the correct switching sequence needed to step a SLO-SYN motor at 200 steps/revolution (1.8° per step). Input is 105-125 volts a-c, 1 ampere. Signal input impedance is 500 ohms. Used for programmed positioning, indexing and indicating operations.

**SLO-SYN**®  
*Adjustable Speed Drive*

TYPE ST1800BV

Essentially, SLO-SYN Adjustable Speed Drive type ST1800BV is a translator which includes a built-in oscillator to supply the triggering signals. Oscillator frequency can be adjusted to vary the speed from 4 steps/second up to the maximum permissible with the motor used. Direction of rotation can be controlled either from the front panel or from a remotely located switch.

**SLO-SYN**®  
*Translator Module*

TYPE STM1800V

Plug-in circuit boards with logic capabilities for stepping a SLO-SYN motor in 1.8° increments. Type STM1800 is a basic translator which will provide bi-directional motor operation. Type STM1800V is similar but includes a built-in oscillator which can be adjusted to drive the motor at speeds from 4 steps/second up to maximum at which the motor will drive the load.

**POWERSTAT** *DC Motor Speed Controllers*

Provide continuously adjustable speed control of d-c shunt-wound motors from a-c power lines. Full rated torque available at any speed. Feature instantaneous start, stop and reverse, tubeless transient-protected circuitry. Instantly resettable, fast-opening overload protection is provided in the armature circuit in addition to fuse protection.

Rated for 120 volt, 60 hertz single phase input. Type MSC16 for motors to 1/6 hp, type MSC33 to 1/3 hp and type MSC75 to 3/4 hp. NEMA frame 1725 rpm, dc motors in 1/6, 1/3 and 3/4 hp also available.

EXPM9C Sensing Head has cad cell housed with 3/8" diameter lens in brass tube mounted in aluminum bracket. Height, 4 3/4"; width, 1 1/2".

### E1AP/E1A Remote Heads

Series E1A heads have 3/8" diameter lenses mounted in flexible silicon rubber. Gasket sealed aluminum cases are tapped for 1/2" conduit. May be adjusted with rigidly positioned on 1/2" pipe or conduit with lock nut. Case easily opened for inspection of lamp or cell with mounting undisturbed. Depth of case in direction of light beam, 1 3/8"; width, 1-7/16"; height 3 3/8".

### EPA/E2A-E4B Remote Heads

EPA10C, E2A88E, and E4BE each has 1 1/2" diameter lens mounted in a gasket-sealed cast aluminum case with adjustable mounting bracket tapped for 1/2" conduit. Width 4"; height 5 1/4".

## Miniature Photo Reflective Heads and 800B Transistorized Control

### E8LP12G Scanner Head

Dotted line represents path of reflection—not the light beam

reflective surface

E8LP12G Scanner Head for specular reflective control. Responds to ordinary reflective surface and light beam must be directed perpendicular to the reflective surface for light to bounce back and strike the light sensing cell.

### E8S12G Scanner Head

Dotted line represents path of reflection—not the light beam

retro-reflective surface

E8S12G Coaxial Scanner responds to retro-reflective surface (tape, chalk, ink, paint, etc.). Light beam need not be perpendicular to the surface; with an angle of incidence up to 45° and more light bounces straight back to the source.

### E8LP12G Miniature Scanner Head

For high speed scanning service in minimum space. E8LP12G Scanner Head combines the fast acting cadmium selenide cell and the light source lamp in a single miniature housing (approximately 3/8 inch in all three dimensions plus 3/8" male pipe thread connection. See dimensional diagram below.)

The light sensing element is a fast response, cadmium selenide cell. The lamp has a built-in lens. An infrared filter helps protect against ambient light. The lamp rating is 2.5 volts at .5 amperes—life expectancy up to 75,000 hours depending on operating voltage.

### Unique Design—Rugged Construction

- Housing (1) is precision machined from bar aluminum for ruggedness and stability. In production quantities can be furnished in specified colors.
  - Removing a ring nut (2) releases capsule (3) containing cadmium selenide cell and light source lamp.
  - Removing two screws from capsule (not visible in photo) permits replacement of cell and lamp.
  - Polarized design assures correct position on four spring loaded contacts (4) when capsule is inserted in the head.
  - 6-foot cable is factory-connected to terminals in housing.
- F. Cable, terminal connections and contact base are encapsulated in the housing with epoxy resin.

E8LP12G Scanner Head including mounting bracket, also 6-foot factory-connected cable with cable grip and seal for connecting to 800 control. \$28.75

### E8S12G Coaxial Scanner Head

For use with retro-reflective tape or other retro-reflective material. May be used with a retro-reflective mirror when it acts as a sort of limit switch or for detecting or identifying objects with retro-reflective markings, code marks, labels, etc.

The light beam does not need to be perpendicular to the retro-reflective surface; beams at angles up to 15° and more (depending on conditions) bounce straight back to the cell.

## Current Surge Overload Protection

### Unique Protection for tools, equipment, personnel

The Surj-Switch uses electronic amplification for instant reaction to variations from normal load current. Easily adjusted on the job to operate at the desired value.

The 10-amp. SPDT Control Relay may operate a warning signal, a lubricating circuit, feeding rate control, etc. without interrupting operation or may be used to stop operation.

Used on surface grinders to warn when excessive pressures are applied; on machine tools to warn when tools become dull; on automated installations; whenever load change indicates trouble.

Model K1 Surj-Pick-up. Required for operation of Surj-Switch Controls—for 50-60 cycle, 0 to 80 amperes, one or 3-phase, any voltage...\$35.00

Model J Surj-Switch. For overloads.....\$55.00

Model JA Surj-Switch. For under loads...\$65.00

## Impak-Switch Die Protection

In the above diagram each piece properly ejected from the die strikes the impact sensing plate which actuates the Impak Control and the Control re-cycles the press control for another stroke.

The impact of falling parts against the sensing plate of the Impak-Pick-up activates the Impak-Switch. Objects may be of practically any reasonably uniform size, ranging from ball bearings to heavy stampings, etc.

In other die protection applications the Impak Control has time delay set to barely exceed the complete stroke cycle of the press. Each properly ejected piece re-cycles the Impak Control before the timing period expires.

Model V Impak-Pick-up—with 6-ft. shielded plastic-covered cable.....Net \$30.00

Model Z Impak-Switch—for use where impact is not less than one ounce falling 2 inches and each object strikes only once.....Net \$60.00

Model C3 Impak-Switch—for use where impact force is limited, where high speed is required or where objects may strike more than once. Net \$145.00

## A2BX Solar ON/OFF Control

Automatically turns lights "ON" at preset light value—and turns lights "OFF" when light exceeds preset value.

DPDT Control Relay energizes when light exceeds intensity for which control is set; de-energizes when light falls below the preset level.

In case of tube failure the relay de-energizes; providing same control action as when light falls below preset level.

Dual Time Delays prevent operation by either momentary light flashes or shadows. Modern, simple circuitry uses one rugged, premium type power tube. Light intensity adjustment from outside of housing. Gasket-sealed cast aluminum housing, tapped for 1/2" conduit. For 115/230 v, 50-60 c. Power consumption, 20 watts

Available with three adjustment ranges:  
No. A2BX-2; 1 to 5 fc for street lighting, parking lots  
No. A2BX-5; 15 to 50 fc for signs, parking lots  
No. A2BX-1; 20 to 150 fc for obstruction or tower lights

### Mount in 3/8" Clearance Hole

Neon Datalite Indicator Lights consist of: (1) **Datalamp Cartridges**—a plug-in, replaceable light source, with either stovepipe or long cylindrical lens shape—**with or without** built-in current limiting resistor (see recommended resistance values and appropriate code nos. below). (2) accommodated by **Datalamp Holders** of shorter length when cartridge **without** built-in resistor is used; by Datalamp Holders of longer length when cartridges **with** built-in resistor are used. See charts at right for available selections.

**Standard Finish:** Black anodize. To obtain optional clear anodize finish, change the first digit in the catalog number suffix from -5 to -6.

Example: 508-8745-604.

**LENS COLOR:** The digit before the last dash in the catalog number indicates that the color of the Datalamp Cartridge is RED. When color other than red is desired, change this digit to a figure from the listing below.

Note: Blue or green lens colors are not available for use with Neon light sources.

Red—1; Yellow (Amber)—3; White Translucent—5; Clear (Colorless)—7.

Example: 507-4538-1533-610 (yellow amber)

## PERMANENT LAMP INDICATOR LIGHTS with Non-Replaceable NEON LAMPS Mount in 3/8" Clearance Hole

This series utilizes T-2 type neon lamps (NE-2H for high brightness and NE-2E for standard brightness operation) on 110-125V AC or 105-125V DC respectively. See resistance values and life ratings in chart.

Assemblies listed contain built-in current-limiting resistor. Units may be had without resistor, but it must be added externally. The 250 Series (with "outer" Data Cap) permits rotation of this cap for alignment of legend after installation.

### Two Terminals — Fully Insulated

Meet or exceed environmental and operational requirements of MIL-L-6723 and MIL-L-3661.

### RUGGED CONSTRUCTION

Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached. The use of phenolic material for military specification grade assures permanent isolation from ground. These assemblies are solidly made to withstand usual vibration and corrosion resistance tests.

## Sub-Miniature Indicator Lights for T-1<sup>3</sup>/<sub>4</sub> Bulbs with midget flanged base

WITH FIXED PANEL**

185-9730-1871-602

188-9730-5071-602

This series of indicator lights offers a choice of 2 mounting provisions: (With fixed flange) — **Front** mounting in 15/32" clearance hole; (With movable knurled flange nut) — **Front and Rear** mounting in 1/2" clearance hole.

The lens cap is effectively lighted by T-1<sup>3</sup>/<sub>4</sub> bulb with midget flanged base, which extends completely into the luminous portion. Fine solid color effects are obtained. The two-part construction permits opaque sides with lighted colored faces.

Lens caps may be rotated, permitting legends or cap edges to be easily brought into alignment after installation of the assembly; or they may be keyed, thus permitting them to be pushed into place only in a **pre-determined** position.

Unique anti-rotation (locked) construction provides for secure keyed mounting of mounting bushing on panels.

**LENS FACE COLOR:** The digit before the last dash in the catalog number indicates that the lens face is **RED**. When a color other than red is desired, change this digit to a figure from the listing below.

Red — 1; Green — 2; Yellow (Amber) — 3; Blue — 4; White Translucent — 5; Light Yellow — 6; Ivory — 8. Example: 183-9730-1474-602.

NE-2J (C9A)—High brightness

TWO TERMINALS — FULLY INSULATED . . . Meet or exceed environmental and operational requirements of MIL-L-6723 and MIL-L-3661.

**FEATURES: Omnidirectional Stovepipe Lens:** Molded of high heat plastic, gives 180° light spread. Heavy wall of lens is reinforced by a threaded brass insert. This fitting receives the lamp and screws into the internal thread of the bushing. The bulb enters well into the plastic lens for best effectiveness. The shank of the lens holder is crimped in 3 evenly spaced places to secure the lamp.

**STOVEPIPE or  
ROTATABLE  
CYLINDRICAL LENS**

This omnidirectional stovepipe lens is molded of high heat plastic to a special design. About two-thirds of the lens is "fluted," and the remaining portion is smooth. This produces clear light framed by a sparkling "halo" when viewed from the front. Softer light is afforded along the "fluted" sides. The NE-2D or NE-2J Neon Lamp enters high into the lens for best effectiveness.

Whether used on the front insertion or the back insertion assembly, the stovepipe or cylindrical lens cap is readily removable from the front of the panel, thus making the lamp accessible for easy replacement.

## ASSEMBLIES for T-3¼ BULB with MIN. BAYONET BASE INCANDESCENT or NEON

For Mounting in 11/16” Clearance Hole

In these Oil-Tight Indicator Lights, a high degree of resistance to shock and vibration is achieved by the use of the rugged Neon lamps on 120 and 240 V; and by choosing low voltage Incandescent lamps with short filaments, such as No. 44 or No. 1866 for circuits powered by transformers stepping down to 6.3 V.

**Exclusive Features:** Assemblies for use with NE-51 Neon Glow Lamps have “bull-in” resistors—an exclusive Dialco feature (U.S. Pat. No. 2,421,321). Options include: binding screw, soldering or quick connect terminals. 7 lens colors are available; see bottom of page 972 for method of specifying color.

## R - LITES

R-Lites are Eldema's product family of relampable holders and lens caps for the midget flange based T-1  $\frac{3}{4}$  incandescent and T-2 neon bulbs. The lamps and lens caps are replaceable from the front of the panel. There are five R-Lite groups — each with its own features — the holder and lens cap part numbers in each group start with the same two letters to insure mating parts.

## RM AND RN SERIES

The RM-RN groups meet MIL-I-3661. The RM is for incandescent lamps — the RN Series with a built in resistor is for neon lamps. Standard types RMA and RNA — waterproof types RMW and RNW — two tin plated lug terminals — black anodized aluminum cases — high impact plastic lenses. Mount from the front in  $15/32$ " holes. Equivalent Military numbers are listed.

## TEST ACCESSORIES

## SAFE-T-KLIP

Many models are available to offer a practical solution to the problem of protecting valuable test equipment against accidental shorts or contact with power leads. Thoroughly insulated with tough nylon, they provide safe operation in excess of 600 volts—yet retain their design ability to reach hard-to-get-to recesses common to all electronic chassis.

Safe-t-clip supplied packaged in pairs. Pair is one red, one black.

- Absolute protection from shocks or shorts
- Meets military requirements
- Clips are cadmium plated steel
- U.S. Patent No. 2,754,490

## MODEL B1410A—for lead wires

- Provision for mechanical or solder joint with test wires
- Strain relief built-in

## MODEL B1410B—for test prod

- Use in conjunction with standard .080" test prods
- Threaded entrance hole assures positive connection—will not slide off prod

## MODEL B1410C—for standard banana plugs

- Provision for positive electrical connection with standard banana plugs.

## B1410M—MINIATURIZED For Test Leads

- For leads up to 22 AWG, solder joint
- Built-in strain relief

## SAFE-T-KORD

MODEL 1480—  
for fused power protection

- Eliminate shorts and shocks—dangerous bare leads
- Protect equipment from burn out
- Apply line voltage to components not having line cords
- Thread-on clear Lexan housing for visual inspection and quick replacement of fuse
- Supplied complete with two 5 amp. fuses.

## VOLTAGE TESTERS

Rugged, long-lasting. Completely eliminates conventional (and delicate) meter movements—test lamps ruggedized for toolbox use.

## MINI-VOLT VOLTMETER Model # B400B

(U.S. Pat. 2,644,134)

"Abuseproof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, unit has wide application for all equipment whose proper operation requires correct voltage. Used by electricians, radio and TV repairmen, refrigeration and air conditioning servicemen, experimenters, lab technicians, handymen.

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model #400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity, measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately 1/2 megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Provides lifetime of service—glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-inch flexible test leads and test prods.

## LINE-VOLT TEST LITE Model # 1310

LINE-VOLT Model No. 1310 is a rugged, compact test light covering the wide range of 55-550 VAC or 90-600 VDC.

LINE-VOLT tells immediately whether there is power in the line, checks fuses, can identify AC or DC lines, grounded components, continuity of line circuits.

Leads are 12" long overall and are heavy-duty flexible wire terminating in 3 1/2" insulated prods with really sharp points—able to pierce insulation, paint, or oxidation. Bright lamp provides immediate positive indication.

## LO-VOLT TEST LITE Model # 1300

LO-VOLT Test Lite No. 1300 is a compact test light for ready use in many applications.

Operating over a wide range of 3-28 volts AC or DC, LO-VOLT supplies the instant answer to whether there is an available power supply for thermostatic controls, model train equipment, other stepped-down AC voltages as well as battery supplies such as automotive.

A continuity tester when used in conjunction with a power supply to detect the presence of an open.

Completely enclosed so that lamp is not exposed, LO-VOLT is supplied with flexible leads terminating spring clips for ready tie-in to test circuit.

## HIGH VOLTAGE POWER SUPPLIES

## PORTABLE HIGH VOLTAGE DC POWER SUPPLIES

One of the most popular power supplies on the market. Completely redesigned for greater ruggedness and convenience of operation. Widely used for powering electronic equipment and for routine breakdown and insulation testing. Output voltage is well filtered D.C. which is adjustable with convenient front panel control. Input is 115 Volt, 60 cycle A.C. Larger 6" precision 1% mirror scale movement available on order. Regulated models offer closely stabilized output voltage regardless of line or load changes.

NOTE: Regulated power supplies are of the radio frequency type (RF) and adjust from approximately 20% to full rated voltage. Regulation is in the order of  $\pm 1\%$  over most of the range. These supplies are rated at 100 microamps. Transformer operated unregulated supplies are available in 5 milliampere types and have a range of zero to full voltage output. These are recommended for industrial service applications. When ordering add the proper prefix to the basic model number, for example, RF, or 5 MA, depending on your requirements.

Model	Max. Voltage	RF	5 MA
6000-1	1 KV	—	\$200.00
6000	2.5 KV	\$175.00	225.00

6025	25 KV	275.00	350.00

OPTIONS: Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. (Illustrated) \$50.00. Additional Built-In Current Meter (both meters are 3 inch size), including automatic meter protector circuit \$50.00.

## PACKAGED POWER SUPPLIES AND ZENER REGULATIONS

PACKAGED POWER SUPPLY

These new low-cost units make D.C. voltage problems easy. Just wire input and output connections, and the unit is ready to operate. Building block construction provides a basic transformer, a rectifier unit, and where necessary a regulating device. These three elements bolt together quickly and maintenance is simplified should any of the components fail. Each of the three basic building blocks are mechanically constructed in a molded Diallyl Phthalate shell and encapsulated with epoxy resin.

The output is completely isolated and either post may be grounded or the unit operated as a floating supply. The D.C. voltage is filtered and provides 5% or less ripple. Output may be varied from full rating down to zero by simply inserting a small adjustable transformer in the input. Most units are rated for 5 MA current. Power supplies 7.5 KV and higher have modified mechanical construction from that described above. Input 115 V, 60 cycle.

Use with High Voltage Zener Regulators to obtain 1% line and load regulation.

\* If necessary, insert a series resistor to limit zener current to under 5 MA.

Simply connect in parallel\* with any high voltage power supply and automatically obtain line and load voltage regulation as well as ripple reduction. Nominal current rating is 0.5 to 1 MA for better than 1% stabilizer. Regulation over range of 0 to 5 MA is 3%. Can be wired in series for high voltage service (five 4,000 volt types to regulate a 20,000 volt power supply). Twenty built-in taps included, each provides a regulated voltage to an accuracy of 20%. Ideal for photomultiplier tubes. Use as a high voltage reference in conjunction with regulator amplifier circuitry.

# AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment

General Electric a-c voltage stabilizers are static-magnetic transformer-type products which provide voltage maintained within  $\pm 1\%$  variation while input line voltage fluctuates  $\pm 15\%$ . They are offered in the following variations:

**Unfiltered output:** output voltage waveform is relatively flat-topped, with harmonic content from 15 to 20%.

**Harmonic filtered output:** output voltage is filtered to near sinusoidal waveshape, with a maximum of 3% harmonic content.

**Enclosed construction:** completely metal enclosed for safe external mounting.

**Open construction:** for installation within electronic or electric equipment.

**SINGLE PHASE**—Magnetic-capacitor circuitry is frequency sensitive. Stabilizers designed for one frequency are not suitable for use on another.

**THREE PHASE**—Standard single-phase a-c voltage stabilizers can be connected for 3-phase, 4-wire loads with input connected delta. However, single-phase models cannot be connected for 3-phase, 3-wire loads: select from 3-phase delta-delta models.

GENERAL ELECTRIC

# STABILTRON\* AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment Requiring **PRECISE** Voltage Control

General Electric Stabiltron a-c voltage stabilizers can be used in a wide variety of electronic equipment applications where precise control of voltage is required. The Stabiltron consists entirely of static components — there are no tubes to burn out or moving parts to replace or maintain.

The Stabiltron senses deviations from a predetermined output voltage level by an error detector. The error signal, through the silicon-controlled rectifier circuit, augments the voltage stabilizer action and provides almost instantaneous correction of output voltage.

Typical applications include computers, radar and communications equipment, industrial process control, and X-ray equipment.

**Input Voltage** — The most common power source voltages can be handled by the standard models listed. Stabiltron units can be provided for special voltage levels on request.

**Output Voltage** — Stabiltron voltage stabilizers maintain extremely precise voltage output in spite of wide fluctuations of line voltage, frequency, load, load power factor, and ambient temperatures.

The table below illustrates the effect on the output of the maximum steady state excursions, within rated limits of some of these variables.

**TABLE 1 — TYPICAL OUTPUT VOLTAGE CHARACTERISTICS**

Variable	Excursion	Output Voltage Bandwidth†
Line voltage‡	95 to 130	0.02 to 0.2%
Frequency	57 to 63 cycles	0.15 to 0.4%
Load	0 to 100% rated load	0.02 to 0.1%
Load power factor	0.4 lagging to unity	0.01 to 0.1%
Ambient temperature	-25C to 40C	0.01%/degree C

† A range is indicated because exact amounts are dependent on the static level of other variables.

‡ When the Stabiltron unit is operated at less than rated load, the line voltage can be reduced considerably below 95 volts without serious deterioration of the output voltage.

**Response** — Under transient line or load conditions, elapsed time for correction of output voltage and transient excursion from the normal bandwidth are key considerations to equipment operation.

The Stabiltron provides fast response and small transient excursion through its unique combination of solid state and magnetic circuitry.

**TABLE 2 — TYPICAL TRANSIENT RESPONSE CHARACTERISTICS**

Transient Change	Percent Peak Output Voltage Excursion	Response Time	Total Recovery Time
0 to 115V input	14%	4 cycles	13 cycles
95 to 130V input	14%	3 cycles	8 cycles
130 to 95V input	9%	5 cycles	9 cycles

20% to 100% rated load	21%	1 cycle	2 cycles
100% to 20% rated load	34%	1 cycle	10 cycles

‡ The time required for the output to recover 63.3% from its maximum excursion.

§ The time required for the output to recover to normal bandwidth limits.

**Harmonic Content** — Under all rated ranges of line variation and most load conditions, the total harmonic content of the output wave form will not exceed three percent for a sine wave power source. Even under adverse conditions, when the power source is not a sine wave, the Stabiltron voltage stabilizer will correct the wave form to the load to approximately three percent harmonic content.

**Rectifier-filter Loading** — Since the output wave form is low in harmonic content, the Stabiltron voltage stabilizer can be connected successfully to a rectifier (capacitor input) filter load to the input of a d-c power supply having capacitor input filters.

# REGULATED DC POWER SUPPLIES

## Improve Performance of Computers and Other Electronic Equipment

These component power supplies can be used in a wide variety of applications where relatively constant d-c voltage is required despite fluctuating line voltages. Computers, process control equipment, and electronic measuring devices are typical applications where demands for accuracy require constant regulation of voltage.

Performance-proved G-E d-c power supplies can be designed to suit your needs for either 50- or 60-cycle power sources.

### EFFECT OF INPUT VOLTAGE VARIATION

D-c power supplies can be designed for various input voltages and ranges. With all other variables constant, the output voltage will not vary more than ±1 percent for a change in input voltage over the rated range of 97 to 130 volts input.

### EFFECT OF TEMPERATURE CHANGE

For every 40C change in the ambient temperature, the output voltage level will change approximately one percent.

### EFFECT OF FREQUENCY

A change of one percent in frequency will change output voltage level approximately one and one-half percent.

### ISOLATION

All d-c power supplies provide electrical isolation between the a-c power source and the d-c load.

### POLARITY

G-E d-c power supplies can be designed with the polarity you require. All standard units listed can be installed with either plus or minus grounded.

### RIPPLE

Ripple levels of one percent RMS meet most requirements. However, other levels of ripple content can be designed into G-E power supplies.

### EFFICIENCY

Efficiency ranges from 70 to 85 percent for normal output voltage levels. For unusually low output voltages or low power ratings, some decrease in efficiency may occur.

### REGULATION

Load regulation characteristics depend on the rated output voltage and rated power level of the power supply.

## VOLTAGE REGULATORS

- New solid-state control
- Precise output voltage control
- Fast voltage-correction rate
- Cabinet or rack-mounted models
- Magnetic circuit-breaker protection

General Electric's new automatic voltage regulator line provides closely regulated output voltages from varying input voltages. They normally include a motor-operated Volt-Pac variable transformer, associated buck-boost transformers which handle a wide range of input-voltage variation, and a new solid-state SCR control.

These automatic regulators maintain a preselected output voltage level within 1 percent bandwidth, and are temperature compensated from -20 to +40C. They can be bench or floor mounted, or in smaller sizes, mounted in standard relay racks.

\* 208-volt nominal output voltage operation requires no change in power connection, but does require selecting correct control transformer ratio. When operated at a nominal 208 volts output, the regulator will correct for an input range of 181 to 236 volts, with the output voltage adjustable from 199 to 217 volts.  
 † The specified input voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage range will change proportionately with the change in output voltage level selected.  
 ‡ Load kva based on nominal output voltage.

**No Waveform Distortion**

No harmonic waveform distortion is introduced at any load or with any input voltage. The output voltage waveform is a precise reproduction of applied input waveform.

**Adjustable Output Voltage**

Output voltage for units nominally rated 115 volts is adjustable from 110 to 120 volts. Output voltage also is adjustable from 220 to 240 volts for units rated 230 volts; from 440 to 480 volts for nominally rated units of 460 volts. Please note that the specified input-voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage range shifts in proportion with the selected output voltage.

**Accurate Static-sensing Control**

Solid-state control combined with the new Sylvan-Kettler static-sensing device achieve the optimum in automatic accuracy. The voltage regulator is governed automatically by a dead-band-type voltage-sensitive control utilizing either lamp or zener bridges. The circuit includes magnetic input circuit breakers and an output voltmeter.

## ALKALINE DURACELL BATTERIES

Alkaline Duracell batteries are designed for high drain applications such as photo-flash and portable lighting. Life is up to 10 times longer than ordinary zinc-carbon batteries and storage life exceeds two years. The discharge curve on Alkaline Duracell batteries closely parallels that of mercury types. Voltage stability, while not as good as mercury, is vastly superior to zinc-carbon types. All types shown are available in blister-pack display cards, add suffix **B** (e.g., MN1300B) to order.

## RECHARGEABLE ALKALINE BATTERIES

Rechargeable alkaline batteries are offered in three sizes: AA, C and D. These cells are used in equipment such as portable TV, record players, etc. They offer a low cost means of providing rechargeable power. They are not intended, however, to be used as substitutes for other rechargeable batteries. Special charging and low-voltage protection circuits are required. For complete details on these circuits, ask for Bulletin 6-136.

# HIGH VOLTAGE POWER PACKS

## COMPACT "M" SERIES 2 TO 75 KVDC

The "M" series Power Packs are a completely new design. Long life and a small package directed the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Standard input voltage is 118 at frequencies from 50 to 500 cycles per second inclusive. Available also are input voltages of 220, 230 and 240 volts from 50 to 500 cycles per second inclusive. For 220 volts suffix the desired part number with "X", 230 volts "Y" and 240 Volts "Z". All units may be modified for other input voltages.

The output is filtered DC and standard potentials and current ratings are listed below. All units can be modified for any required potential and current below the values specified in the listing. The output potential can be varied from zero to the rated voltage and load by means of a variable auto transformer at the primary.

Ripple is 1% RMS or 2.75% peak to peak at rated current and voltage.

Design life is 40,000 hours at 35°C and 5,000 hours at 85°C.

Case finish is light blue gray lacquer per MIL-L-7178.

All units except the 75 KV, have two output terminals isolated from the container, permitting either terminal to be operated at ground or an intermediate point between them can be tied to ground. The 75 KV unit has a single high voltage terminal for the output. The Power Pack is normally furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be shipped as such from the factory upon request. The polarity can be easily reversed as required by opening the top access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left ungrounded so that the lead current be monitored if required.

# SCHAUER POWER SUPPLIES

New in design and applied engineering technology are Schauer standard and custom-engineered power supplies for communication, industrial and laboratory use. Among a wide range of types are fully transistorized series regulated and magnetic amplifier regulated, output regulated and non-regulated units. Illustrated here are but a few of the types and designs that are available.

Special features that can be incorporated include alarm cir-

cuits, current limiting circuit, bus switching, etc. All units are built of quality components, conservatively rated and completely wired for maximum reliability under continuous duty conditions.

Your power supply problems can be readily solved by consulting with Schauer — manufacturers of quality products since 1907. Ask your distributor for Schauer Catalog No. 640.

**SCHAUER Type SRA  
Power Supply**

Magnetic amplifier regulated input and output with alarm circuit and provisions for switching to either positive or negative bus of a 3-wire D.C. system. Regulation is maintained within 1% total band for load variations from no load to 125% of full load and for input voltage variations of  $\pm 10\%$ . Available in capacities from 10 through 250 amperes in 48, 60 and 125 volt models for 3 phase, 60 cycle input lines at standard commercial voltages.

## SCHAUER Type TRPS Power Supply

Transistorized regulated power supply for relay rack mounting, providing exceptionally close output regulation. Can be supplied in capacities up to 25 amperes maximum at voltage ratings up to 125 volts D.C. and in a variety of packaging and mounting arrangements.

## SCHAUER Type SA48006 Power Supply

For operating and testing AM and FM 2-way and marine radios. Provides maximum 48 amperes at 6 volts D.C. or 24 amperes at 12 volts D.C. by switching. Output adjustable by multiple tap switch. The ventilated steel case for bench or wall mounting is 10" wide x 9½" deep x 15" high.

## SCHAUER Type SK Power Supply

General purpose power supplies for applications where close output regulation and a highly filtered D.C. supply are not required. Bench, wall and floor mountings and many variations in output and characteristics are possible.

**LIFE CELL**

- **GUARANTEED FOR LIFE**
- **RENEWABLE FOR LIFE WITH BUILT-IN CHARGER**

**Everyday Applications**—LIFE-CELL is the perfect power source for flashlights, portable radios and communications equipment, phonographs and tape recorders, toys, portable tools or wherever "D" size batteries are used. Ends forever the problems and annoyance of weak or dead batteries.

**Industrial applications**—LIFE-CELL is ideal for dependability and convenience in portable communications equipment, portable power tools, security alarm systems, audio/visual equipment, and hundreds of other applications in industry,

hospitals, police departments, watch services, maintenance departments, schools, banks and other institutions.

**Basic information**—Power: 1.5 volts. Standard "D" cell size. Completely encapsulated, leak-proof, shock-resistant, operates under higher and lower temperature conditions. Lower internal impedance for higher efficiency—delivers more power for a longer period of time. Retains its charge longer when not in use. Ends replacement battery buying forever... **Costs Less Per Hour Of Use.**

**MECHANICAL.** Weight: 3.95 Ounces - 112 Grams • Dimensions: 2.406 Inches High - 1.32 Inches Diameter. Interchangeable with Standard D Cell.

**Cell Type**—Sealed secondary lead-acid cell has a gelled electrolyte which permits operation, charging, and storage in any position.

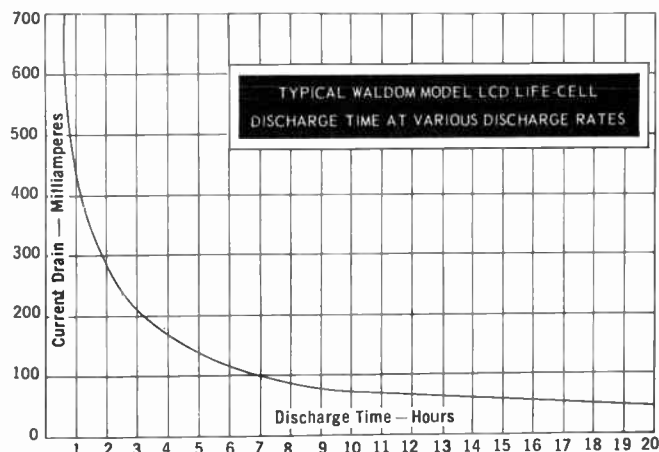

**Cycle-Life**—The number of charge-discharge cycles obtainable depends, as with any other rechargeable battery, upon how it is used, depth of discharge, temperature, and many other factors. An average of 150-200 cycles is normal. There are cells now on test with over 250 cycles.

**Recharge Time**—The time necessary to recharge the cell depends upon the amount of current that has been drawn from it. Normally from twenty to seventy hours is required.

**Overcharge Protection**—A special circuit by-passes the charging current when the cell exceeds full charge. This prevents any excessive buildup of internal pressure.

**Shelf-Life**—All electro-chemical systems deteriorate with time. The lead-acid cell exhibits less self-discharge than nickel-cadmium and other commonly available cells, and, therefore, provides superior shelf-life.

**Capacity**—The chart below shows typical lengths of time the Waldom Life-Cell will operate at various current drains.

**THERMOSTATIC** AMPERITE **DELAY RELAYS**

GLASS ENCLOSED • HERMETICALLY SEALED • A.C., D.C., OR PULSATING CURRENT

# AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are manufactured on automatic high production equipment — resulting in a low price — and top quality. Quality is not sacrificed at any point. For example, although contacts are rated at 3 amps, 10 amp contacts are actually used. Similarly with all other parts—only the best available are used.

Amperite Thermostatic Delay Relays are actuated by a heater . . . and therefore can be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

**CIRCUITS SPST:** Available only — normally open or normally closed.

**HEATER VOLTAGES AVAILABLE:** 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.

For 220V use a 6500 ohm-5 watt resistor in series, with 115V heater.

**HEATER WATTAGE:** Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

STANDARD

MINIATURE

### VARIATION OF DELAY WITH HEATER VOLTAGE

FIG. 1—Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

**CONTACT DROP:** — 0.1V — Prox. at 1A.

**DELAYS AVAILABLE:**—From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay up to 120 seconds can be increased up to 25% by using a resistor in series with the heater. Delays above 120 seconds cannot be increased. Relays with short delays such as 2 to 5 seconds can be increased 50%.

**LIFE** of any individual relay will depend on the service the contacts are subjected to. With a 115V — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. **SHELF LIFE** of Amperite Delay Relays is over 10 years.

**INDUCTIVE A.C. LOADS:** When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd across contacts. In some cases, putting a 20,000 ohm, 5w. resistor across the contacts reduces the arcing considerably.

**Relay Contacts should not be used on voltages above 220V.**

### FOR INSTANTANEOUS RECYCLE AND ELIMINATION OF CHATTER

For instantaneous recycle and elimination of chatter. Cannot be used with Sensitive Relays.

Magnetic Relay requires extra N.O. contact as shown at "E".

Fig. 1

For instantaneous recycle and elimination of chatter when Sensitive Relay is used.

Magnetic Relay requires an extra SPDT contact as shown at "F".

Fig. 2

**INSTANTANEOUS RECYCLE:** This can be obtained by using a normally open Amperite Delay Relay in conjunction with a Magnetic Relay as shown above. If normally closed is required — use a normally open Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

**LONG CYCLE RELAYS:** are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 7 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

Flashers operate approximately 1/3 on, 2/3 off. The percentage time on can be increased by reducing voltage of heater.

**115V Flashers ONLY** made in quantities of 12 or less. Cannot be supplied in production quantities.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

**FLASHERS** have contact rating of 1/2a 115V AC, non-inductive.

\*All characteristics are nominal and subject to normal manufacturing tolerances, other voltages available on special order.  
 \*\*115 VAC units are made with a full wave bridge rectifier and use the same coils as listed under 110 VDC units.  
 \*\*\*Four wafer relays with all "A" form contacts use three-wafer relay coils.  
 NOTE 1: ONE WAFER RELAYS USE A SHORTER ACTUATOR ASSY. — INSTEAD OF 2-1/32 AS SHOWN, THE ACTUATOR IS 1-15/32 HIGH.

GENERAL FEATURES:

The series 801 T-Bar Relays are solenoid actuated multi-pole relays with a unique design permitting stack-up of enclosed contact "wafers." Each wafer has a maximum of 12 pole double throw contacts thereby allowing ECI to supply the 801 relay with any combination from 4 to 60 poles.

T-BAR Connectors save time and reduce installation costs using individual snap-in crimp terminals crimped to pre-stripped wire and then snapped into a contact block, which forms the connector. The connector is pushed onto the wafer terminals, eliminating soldering. Because we offer a connector, rather than a receptacle, harness work can be completed outside the chassis and therefore no fancy chassis work is required to accept a receptacle. It not only makes the metal work simpler, but it also saves layout engineering and drafting time. Since T-Bar Switch/Relays are so easily mounted, they are often found on the back of meter panels or on their own brackets.

# GLOBE RELAYS

## MIDGET SERIES

### TYPE "W" MIDGET GENERAL PURPOSE

This relay offers high reliability at a minimum cost. The silver cadmium-oxide contacts are mounted on beryllium copper blades.\*\* There is good contact wiping action. This unit operates well in ambient temperatures up to 125° C.

\*\* Fine silver contacts for 5 amp applications.

**CONTACTS:** 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

**COIL:** D-C applications up thru 120 VDC, A-C applications up thru 230 VAC.

**MOUNTING:** One 6-32 screw and keying boss to prevent turning.

### TYPE "WP" MIDGET PRINTED CIRCUIT

Relay is identical to the "W" type using the same integrally maulded parts. The terminals are designed for direct mounting into printed circuit boards. They will fit into .050 inch diameter holes and project 1/2 inch beyond an 1/8 inch thick circuit board. Base plate area on the board is only 1.070 x .920 inches. Dimensional artwork for hole configuration is available.

**CONTACTS:** 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

**COIL:** D-C applications up thru 120 VDC, A-C applications up thru 120 VAC.

**MOUNTING:** Soldered into printed circuit boards.

### TYPE "WC" MIDGET GENERAL PURPOSE WITH DUSTITE ENCLOSURE

Relay is identical to type "W." However, the unit provides a clear dust-proof polystyrene case on Octal type plug-in base. Operating temperatures up to 85° C ambient. Variation of base or a hermetically sealed can, can be provided on request. This unit comes in standard Globe wiring. For special wiring to meet existing installations specify "WZ" wiring.

**CONTACTS:** 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC. Arrangement 1, 2 or 3 PDT.

**COIL:** D-C applications up thru 120 VDC, A-C applications up thru 230 VAC.

**MOUNTING:** Octal plug-in.

### TYPE "WL" MIDGET LATCHING

This latching relay may be had with either coil to operate at any specified voltage. It is designed that either coil may be used to operate the contacts into a latched position. The other coil will latch or unlatch the contacts into the opposite position.

**CONTACTS:** 5 amps @ 24 VDC or 115 VAC, 10 amps @ 24 VDC or 115 VAC.

**COIL:** D-C applications up thru 120 VDC, A-C applications up thru 230 VAC on either coil.

**MOUNTING:** 2 holes for #6 screws in center of frame.

Solenoids available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85°C. above 24°C. ambient, without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85°C. above the 24°C. ambient temperature when operated at rated load. Plunger has slotted end with 1/8" diameter hole for coupling.

When Ordering give the following information: (1) Solenoid Number; (2) Operating voltages and AC or DC current; (3) Continuous or intermittent duty (if intermittent, give the cycle of operation, length of time current will be passed through the coil, and any other pertinent information); (4) Maximum stroke and maximum pull required.

Pull Data listed in this bulletin obtained during "cold" operation.

**STEPPING CONTROLS**—For accurate sequence selecting, pulse multiplying, pulse dividing, circuit selecting, automatic homing, remote homing, counting and latching. Guardian steppers are specified for automatic control of electrically operated business machines, accumulators (coin and other), animated displays, electrical scoreboards, automatic overhead garage doors, assembly line controls, automatic packaging (loading) controls, sump pump controls, commercial slide projectors, among others. All Guardian steppers are intermittent duty direct-drive units with switching operations completed upon energization.

**CONTINUOUS ROTATION**

The circuit selection wiper on Continuous Rotation Steppers moves in one direction only, upon energization of the step coil. This type of stepper is available in standard 24 point (MC) or 40 point (PC). The Guardian MC Midget Continuous Rotation Stepper is particularly adaptable to repetitive sequence functions. The 24 bridging contact deck is evenly divisible by eight possible sequences. The PC stepper features self-stepping speeds up to 30 steps per second and mechanical life expectancy of over 4,000,000 steps.

All stepper contact points are rated 1½ amps resistive, at 115 V., 60 cps. Coil\* Voltages are 115V., AC, 24 DC 60 cps.

**ELECTRICAL RESET**

The circuit selecting wiper on Electrical Reset Steppers can be reset to zero or home from any desired position, by energization of the reset magnet. They are frequently employed to record counts by various numerical groups, then resetting automatically.

**Type M.E.R.** A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

**Type P.E.R.** Operation same as M.E.R. but with up to 36 active contacts.

**ADD AND SUBTRACT**

Add and subtract steppers are basically continuous rotation types with the added feature of being able to reserve the movement of the selecting wiper when required.

**Type IR-MAS** A midget add and subtract stepper incorporating a cam actuated switch which operates at zero position. Used primarily to indicate a zero balance between pulses supplied to the "add" coil as compared to pulses received by the "subtract" coil.

## GENERAL PURPOSE RELAYS

### MINIATURE PLUG-IN LOW PROFILE LOW COST (SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections. ### NEW MINIATURE SENSITIVE RELAYS (SERIES SK) 60 MILLIWATTS PER POLE

This entire series of SK type relays is identical in construction to our MK series miniature relays, with one essential difference—the special alloy used in pole and frame increases the magnetic

flux many times thus making the relays very sensitive to very low power levels—only 60 milliwatts per pole.

## MECHANICAL LATCH RELAYS

### OPEN TYPE (SERIES RL)

Open type for use where a sustained relay closure is required, and current drain of a relay coil is to be eliminated. Incorporates two coils, one to close load con-

tacts, the other to reset them. Requires only momentary electrical contact to operate or release. Provides positive mechanical latch, eliminating chatter during sustained relay closure.

## TIME DELAY RELAYS

### PLUG-IN TYPE (SERIES TRP)

The series TRP Time Delay Relay provides a pre-set delay between the closing of one set of contacts and the subsequent operation of a set of SPDT load contacts.

The series TRP initiates from a sustained switch closure to L1 and L2. The unit resets instantaneously when this circuit is opened; ready for another timing operation.

The series TRP is available in two operational options:

**Type "A"**—If sustained closure is interrupted during time cycle, unit will not reset. When closure is again made, timing will continue to give originally selected time delay.

**Type "B"**—If sustained closure is interrupted during time cycle, unit will instantaneously reset.

## REED RELAYS — 3 STANDARD TYPES

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 3 standard types for immediate delivery in prototype quantities.

### The General Purpose Relay with Telephone Type Reliability

The MAGNECRAFT 88 Relay is an abrupt departure in clapper type relay design. Dimensionally interchangeable with relays made by others the 88 has been developed to provide Telephone Type Relay reliability at general purpose relay prices.

Unique in relays of this type MAGNECRAFT 88 Relays have rugged, precision-built hinge-pin armature bearings with over-size bearing surfaces—the same construction used in the finest telephone type relays for lowest friction and maximum contact effectiveness with stabilized adjustment over long life.

Glass insulation provides great di-electric strength unaffected by humidity and temperature changes.

Molded Nylon bobbins with ruggedized coil terminal inserts eliminate possibility of shorts.

Built-in contact wipe with riveted contacts further advance reliability through long life.

The many refinements, plus MAGNECRAFT Quality Control and Inspection Standards, give you hidden values beyond price—unseen values that keep making friends through years of dependable service.

When you inspect and compare you will soon see that many MAGNECRAFT 88 extra values are not hidden.

## Micro-Miniature Rotary Relays

**MAGNECRAFT Class 44 Rotary Relays** have been developed to provide increased reliability in the crystal can size. Here are a few of many areas in which improvement has been made:

1. Frame and header assembly of rugged bridge-type construction—assures greatly increased resistance to distortion from shock, vibration and temperature—to military specifications.
2. Balanced armature—minimizes the effect of gravity, shock and vibration on operating reliability.
3. Hinge design—oversize, instrument type bearings at BOTH ends.
  - a. Minimizes friction for increased sensitivity and greater contact pressure.
  - b. Increases operating reliability and life.
4. The finest development in high temperature insulation.
5. Hermetically sealed in inert gas for maximum protection against severe ambient conditions.

Contact combination: Double Pole, Double Throw  
Contact rating: 2 amperes at 28 VDC or 115 VAC, non-inductive.  
Operate Time: 5 milliseconds maximum with nominal voltage.  
Release Time: 5 milliseconds maximum.

with Snap-On  
Dust Cover

Class 77 Telephone Type Relay features miniature size 4PDT contact combination, switches up to 5-amperes, has greater contact pressure without increasing coil operating power. The special design eliminates internal wiring, solder connections and pig-tails. The precision built hinge-pin armature bearings with oversize bearing surfaces guarantee longer life. Molded nylon bobbin with rugged coil terminal inserts eliminates possibility of shorts. Insulation of contact terminals provides higher dielectric strength unaffected by humidity and temperature changes. Comes in a molded insulated snap-on dust cover.

**NEW AND IMPROVED Molded Modular Axial Lead Reed Relays Give You Many Advantages Over The Regular Open Style Reed Relays! Manufacturing Cost Is Reduced While Our High Quality and Reliability Is Actually Improved!**

### MOLDED OPEN STYLE CROSS SECTION

1. Reed Capsule contacts are hermetically sealed with inert gas in glass capsule to completely protect them from dust, contamination, moisture or tampering.
2. Reed Leads are gold plated or tinned for ease in soldering connecting lead wires.
3. Reed Lead Mounting Assembly provides fastening reed lead to bobbin for stress relief to minimize forces begin exerted to glass capsule during soldering.
4. Coil is accurately wound on specially designed one-piece molded bobbin insulated for excellent dielectric characteristics.
5. Coil Terminals are molded into bobbin to give maximum strength and avoid shorts and open connections. Terminals are tinned for ease of soldering.

## Ultra-Reliable Encapsulated Printed Circuit Reed Relays

1. Reed contact leads are soldered stress-free to rugged terminal posts.
2. Terminal posts extend through the terminal board as printed circuit pins.
3. The complete assembly is encapsulated, which provides:

- a. Mechanical protection for the glass capsule, contact leads and coil.
- b. Full protection against tampering and contaminating atmosphere.
- c. Rigid positioning of terminal supports and printed circuit pins; stresses on circuit pins cannot transmit to the reed contact leads and affect relay adjustment.

The package illustrated is a Class 102PC, DPST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature encapsulated printed circuit reed relays (pages 5 and 6) is similar to the standard size.

### MPC—The Low Profile Printed Circuit Reed Relay Package that combines High Reliability and Low Cost

1. Reed Relay contacts are hermetically sealed with inert gas in glass capsule; completely protected from contamination and tampering.
2. Contact leads are soldered (or welded) stress-free to rigidly positioned terminal supports.
3. The combination circuit board pins and terminal supports are securely fastened to

- terminal board; stresses on circuit board pins cannot transmit to contact leads and affect relay adjustment.
4. Integrally molded Nylon bobbin and mounting base combine electrical insulation and mechanical protection for the glass capsule.
5. Snap-on steel cover adds mechanical protection and magnetic shielding.

The package illustrated is a Class 102MPC 6PST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed. Construction of miniature MPC packages (pages 5 and 6) and sub-miniature MPC packages (page 9) is similar in principle to the standard size MPC package illustrated.

### Class 128 Coaxial Relays for High Power RF Switching

#### Flat Mounting Compact Coaxial Relays

Small compact relay combining a heavy duty coaxial cavity and the MAGNECRAFT 88 Relay structure described on page one.

The precision-built, hinge-pin type armature bearings of the Class 88 assure consistent pull-in power with maximum reliability over long life.

The coaxial contact structure is enclosed in a heavy duty precision machined brass cavity with removable plug for convenient inspection of contacts.

SPDT RF switching contacts are silver cadmium oxide, gold flashed, conservatively rated 100 watts of RF power; impedance matched to 50 ohm cable using standard type UHF connectors. VSWR 1.25: 1 maximum from 0 to 500 megacycles.

Operate time, 25 ms maximum

Release time, 25 ms maximum

Overall dimensions.  $2\frac{5}{8} \times 2\frac{7}{8} \times 1\frac{1}{8}$ .

## MODEL GPR GENERAL PURPOSE RELAYS

Includes Indicator, Plate, Thyatron and Latching Versions in Unenclosed and Enclosed Types

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate, thyatron and latching versions. Wide commercial and industrial use where economy and versatility are important.

**Basic (Unenclosed) Relay:** All connections terminate on barrier-type terminal panel on combination solder—quick-connect

(push-on) lugs which accept AMP 110 female connectors. The terminal panel is conveniently incorporated into printed circuit boards. Fixed contacts are integral inlay on terminal itself. Normally furnished with a 6-32 x 1/2" mounting stud and non-turn boss (or lug for 4-pole relays). A 6-32 threaded hole is optional. Unenclosed relays can also be mounted by plugging their panels into Ohmite SOGPR sockets. See "Socket" following.

**Contact Ratings:** Two ratings—fine silver contacts, 5 amps at 115 VAC or 32 VDC; silver-cadmium contacts, 10 amps.

**Insulation:** Tested at 1500 VAC.

**Coil Wattage:** 1.4 watts DC operation; 160 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

**ENCLOSED RELAYS (GPRTA-, GPRTT-, GPRTS-, GPRTP-).** Four types of clear plastic enclosures as follows:

**Chassis Mounting Types:** "GPRTA"—("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT"—("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout; "GPRTS" type (Terminals for Socket Use) is similar to GPRTT but has no mounting flanges. It is intended strictly for plug-in mounting in Ohmite socket "SOGPR" (see "Socket" below).

**Plug Base Type:** "GPRTP"—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity—is designed with recessed pins which meet UL spacing requirements (150V).

\*Column heads carry symbols to indicate UL or CSA (Canadian Standards Assn.) approval. The grey tint indicates that relay is recognized under UL "components program" (File No. E33069, Guide No. 380W1.14C, Assignment No. 62C3559A). CSA File No. is 21309. See explanation in "UL and CSA Approval."

†4-Pole GPRTS relays are not covered by CSA.

‡GPRTA and GPRTT types as listed by UL, differ slightly from the stock versions above and consequently, are made to order. These UL versions have a "U" added to the catalog number, such as in "GPRTAU." They also have CSA approval.

## MODEL GPR GENERAL PURPOSE RELAYS

**Socket (SOGPR):** Unique socket fits the terminal panels of all GPR relays and provides over-the-surface spacing to meet UL requirements for 150 volts. Requires chassis cut-out to mount. Hold down springs (see illustration) for unenclosed and enclosed relays, are provided with each socket but are not required except under conditions of vibration or shock. Socket solder terminals will also accept AMP 110 quick-connectors. See socket listings.

**Indicator Relay:** Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described in preceding. Neon bulb furnished with coil ratings 70 volts and above; incandescent bulbs for coil ratings below 70 volts.

**Plate Relays:** Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit controls, i.e., in the plate circuits of standard vacuum tubes.

**Thyratron Plate Relay:** Designed specifically for plate circuit of thyratron tubes 2050 and 2D21 with 115 VAC supply (see diagram). Also suitable for operation in series with silicon controlled rectifiers from a 115 VAC supply. Ready to work, no capacitors or adjustments required, no chatter. Available unenclosed and in most GPR enclosures.

Plug wiring schemes for plug base (GPRTP) relays

**Latching Relay:** Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Unenclosed type "GPRLE". Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SB fitting S-324-AB socket.

**UL & CSA Approval:** Column heads in the stock tables carry the UL (Underwriters' Laboratories) or CSA symbol (Canadian Standards Association) where applicable. The grey tint in the column indicates the relays are recognized under the "UL components program". The acceptability of such relays by UL depends upon their combination with other equipment such as sockets etc.

### MODEL DO LATCHING RELAY (DOLEX-)

DOLEX-3T, 3PDT  
DOLEX-5T, 4PDT

Consists of Model DO relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relays and reset coils) are 115VAC. Available with 3 or 4-pole relays. Weights: 3-pole—16.5 oz.; 4-pole—17 oz.

### MODEL DOSY RELAY FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, resistive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance. Dimensions are same as for Model DOS next column.

**TYPE 33B** Designed and constructed with a variety of features which contribute to the sensitivity and longevity of this relay. Contacts and terminals are mounted on molded phenolic blocks with integral barriers. Moveable contact blades are made of spring temper phosphor bronze for high conductivity and long life. Adjusting screws on each blade permit close adjustment in the factory for contact gap, over-travel, and pressure. Armature pivots on machined phosphor bronze bearing pins and pivot holes are precision reamed. Adjustment of the armature and yoke assembly allows proper alignment between the armature and pole face. Four 6-32 N. C. tapped mounting holes in the base allow easy mounting on chassis or bracket.

**Dimensions:** H. 2 3/4", W. 2 1/8" (5 Pole), L. 2".

**Mounting Data:** 4 Tapped Holes 6-32NC-2, 1/2" x 1 1/4" centers.

**TYPES 38, 39, 40, 41, 42, 51** Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A. C. solenoid. Special production techniques and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.

## ORDERING INSTRUCTIONS — File-O-Matic Sec. 23

All relay contacts are rated at 120V, 60 Hz, non inductive load. When ordering specify relay type and coil voltage or resistance.

Example: PR5AY, 120 Volts AC, 60 Hz or LBS, 2500 ohms resistance.

To operate 110V DC relays on 220V DC use a 5 watt wire-wound resistor of a

value approximately the relay coil resistance in series with the relay coil.

GENERAL PURPOSE RELAYS

**KR3-H SERIES** Ruggedly constructed but of small size, KR3-H is a heavy duty relay especially designed for applications where limited space is a factor. Its heavy duty copper alloy movable contact carrier has twin 1" dia. silver-cadmium-oxide contacts rated 20 amps @ 120V AC 60 Hz resistive, or 28V DC; 1 HP 120/240V 60 Hz. Contact arrangement is 1 Form X (SPST-NO-DB) only. Terminals: suitable for 1" quick connect, also solder; for contacts: solder only for coil. Size: 1.6" x 1.671" x 1.52". Seated height: 1.21". Mounting: One 6-32 stud and locating tab on .437" center. Weight: 2 ozs.

**KRP3-H SERIES** All electrical specifications listed above for the KR3-II series relays apply to the KRP3-H. However, the KRP3-H is enclosed in a clear, high impact plastic dust cover and features an octal plug-in base. Weight: Approximately 3 ozs.

**KRP SERIES** Versatile, multi-contact arrangement. Enclosed in a clear high impact plastic dust cover. Standard 8-pin octal-type plug for KRP5 and KRP11, 11-pin for KRP-14. Weight: Approx. 3 ozs. Contacts: 5 amp, 1" dia. gold-flashed silver, 10 amp 3/8" dia. silver cadmium-oxide. See KCP-KRP hold down spring for special mounting applications. See KRP-N indicator lamp relay for current monitoring applications.

**KRP-N INDICATOR LAMP RELAY** A general purpose relay incorporating a lamp to indicate current or voltage availability in power circuit. Contacts: 5" dia. silver cadmium-oxide. Enclosure: Clear, high impact plastic dust cover. Mounting: Standard octal plug. Weight: Approx. 3 ozs. Hold down spring (Please see page 2).

**"P" — CASE** A clear high impact plastic case for mounting rectifiers, capacitors, resistors or a combination of these. Available with octal-type plug with 8 or 11-pins. Comes complete with four screws. Weight: .5 ozs. each. See KCP-KRP Hold Down Spring for special mounting applications.  
35D070 Case (8-pin plug) NET \$ .60  
35D072 Case (11-pin plug) NET \$ .75

**KUP SERIES** This reliable 10-ampere relay for industrial control is available with a socket that is also rated 10 amperes. The .187" terminals of the relay are of the quick-connect/solder type. Sockets are priced separately and their terminals are of the pierced solder type. The KUP is enclosed in a clear, high impact plastic dust cover. Silver-cadmium-oxide contacts assure long contact life. Operation: Continuous.

Hold down spring (Please see page 2)

**KUP SERIES** with slotted flange case for direct-to-chassis mounting. Identical in both electrical and mechanical specifications as the KUP described above, except that they are not suitable for socket mounting. The .187" terminals are of the quick-connect/solder type. Slot width: .156". Weight: 3 ozs.

All models carry U/L Component Recognition.

**9KU1** pierced solder terminals sockets for KUP plain case relays. Rated 10 amperes; molded nylon. Mounting hole .165 dia.

Box of 5 NET \$3.75

**9KU2** printed circuit pin terminal sockets for KUP relays. Will accept .187" terminals of KUP in plain case. Molded nylon. Mounting hole .165 dia.

Box of 5. NET \$4.50

**9KU4** screw terminal socket for KUP plain case relays. The nylon socket (accepts .187" terminals) is riveted to the bakelite frame that provides screw terminals.

AP SERIES RATCHET, IMPULSE

A reliable compact unit for applications requiring on-off or reversing action on alternate operations. Positive ratchet operation at all speeds on impulses as short as 60 ms. Intermittent operation only. Mounting: Three 3/8" dia. holes on 3 1/2" x 1 1/4" triangular centers. Contacts: 3/8" dia. silver. Weight: 7 ozs. Coils for intermittent duty only.

BU BUZZER AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a host of other applications where a small light weight, dependable buzzer is required. Weight: 1 1/2 ozs. Mounting: No. 6-32 tapped core.

GM SERIES Unusually versatile switching makes this impulse/sequencing relay especially suitable for single coil latching. The 2 Form C contact arrangement is switched alternately by cam action during drop-out of the armature. It can also be furnished with additional 2 Form C auxiliary contacts (designated by "L"). AC version operates on a 50% coil duty cycle (5 Min. max.). Mounting: 8-32 tapped core with locating boss. Weights: With aux. contacts 4 1/2 ozs. Without aux. contacts 4 ozs.

The GM1N10 and GM1N12 AC or DC use the basic GM structure with uni-directional printed circuit boards with 10 or 12-steps, respectively. The board is attached to an extension of the ratchet shaft. The movable contact arm advances one position each time the armature drops out. Contact rating: .25 amps. Contact arrangement: SP-10 pos. and SP-12 pos. Size: 2.312" x 1.875" x 2".

GR SERIES A unique bi-directional stepping relay employing two solenoids for contact operation. Audio control, speed, temperature or other factors may be increased or decreased remotely. Adding and subtracting functions are typical applications. Solenoid coils are epoxy potted. Mounting: Two 6-32 bosses on .875" centers. Pierced solder lug terminals. Coil duty cycle: Intermittent, 5 minutes max. on, 5 minutes min. off.

KB SERIES LATCHING RELAY Both release and trip coils must be for the same voltage. One coil operates relay to set latch and other coil releases it. Ideal for memory work and overload applications. Operates on momentary impulse to either coil. Mounting: Two 3/8" dia. holes on 1 1/2" centers. Weight: 6 ozs. Contacts: 1/2" dia. silver rated 5 amps; "G" suffix indicates silver-cadmium-oxide contacts on movables rated 10 amps. AC relays with 5 amp. Contacts carry U/L component recognition (File No. 29244) and are CSA\* listed. AC coil for intermittent duty only.

KBP SERIES LATCHING RELAY Enclosed in a translucent polypropylene dust cover, the KBP is furnished with 20-pin octal type plugs for socket mounting. Contact arrangements of 4PDT and 5PDT are available. Otherwise all specifications are identical to the KB series described above. U/L component recognition does not apply to the KBP series. Weight: 8 ozs.

# DRY REED RELAYS

## TYPE JR STANDARD

## TYPE JRM MINIATURE

Fast response, reliable performance, high sensitivity, and long life make JR standard and JRM miniature series relays especially suited for data processing applications, computer equipment, logic circuitry and various other sophisticated control circuits.

### TWO TYPES OF BASIC CAPSULES

Both JR and JRM relays employ dry reed glass capsules with two basic types of contact arrangements, Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a Form B (SPST-NC). This arrangement

requires that coil polarity be observed. It uses a two-cavity bobbin. Combining one Form A with one Form B results in a single Form C (SPDT) break-before-make; this uses a three-cavity bobbin. A "true" Form C (SPDT) uses a reed switch with two stationary and one movable contact. The movable contact is normally closed until the coil is energized, causing a "true" Form C (SPDT) break-before-make; it uses a single-cavity bobbin.

### TYPICAL WIRING DIAGRAMS

# JM SERIES MERCURY-WETTED CONTACT RELAYS

Rare long life, high speed, and unvarying dependability — all are the result of the basic component of these relays: a hermetically sealed glass capsule. It contains the contact arrangement and a small reservoir of mercury sealed in a high pressure hydrogen atmosphere. A film of mercury is renewed for every operation—that's why you can think in terms of billions of operations without contact bounce, pits or welds.

## TWO TYPES OF CAPSULES

The capsule used in JMF modules and JML relays has a SPDT, break-before-make (Form C), non-bridging contact arrangement. Each capsule used in JMP, and JM1 to JM4 relays has a SPDT, make-before-break (Form D), bridging contact arrangement. JMF, JML and JMP series achieve a high rate of sensitivity by factory-adjusted magnet biasing.

## CONTACT RATINGS

JMF and JML: 500V max., and 2 amps max., 100VA max.  
JMP and JM1 to JM4: 500V max., and 5 amps max., 250 VA max.

\*With contact protection unless in a low level circuit. Details of a simple protection circuit consisting of resistor and capacitor in series are packed with each relay.

## SOLID STATE

## TIME DELAY RELAYS

AS LOW AS \$12.50

- ON DELAY
- OFF DELAY
- KNOB ADJUSTABLE
- RESISTOR ADJUSTABLE
- FIXED TIME DELAY

A wide selection of three separate series of solid state time delay controls are represented by Potter & Brumfield time delay relays, the CD series, the CH series, and the CU series. The differences between the three types consist in their degree of accuracy, the variety available in each series, and their cost.

## BASIC TIMING CIRCUIT

The basic timing circuit of all three series consists of a resistor in series with a capacitor. When the input voltage is applied to the resistor-capacitor circuit, the voltage across the capacitor slowly increases. When the firing level is reached a solid state trigger circuit acts to turn on a solid state output switch that energizes a switching relay or external electrical load. The solid state design eliminates cams, clutches and motors. Using no moving parts, the timing circuit can have no mechanical wear, an advantage that is especially desirable when accurate recycling is required.

## CD SERIES

Remarkably dependable, accurate and flexible, the CD series offers an unusually wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability. It is available in two types: Knob-adjustable in two versions, one with the relay in the same enclosure as the solid state unit, the other with an auxiliary relay. A second type is adjustable with an exter-

nal resistor. The CD series is available for time delay on operate or on release.

## CH SERIES

The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types: Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on operate and on release.

## CU SERIES

An outstanding value in a solid state time delay relay at low cost, the CU series is designed for delay on operate applications in machine tool controls, copiers, office equipment, coin-operated machines, process controls and many others. It is available in two types: Fixed time delay that is set at the factory and cannot be modified. Second, adjustable with an external resistor. For minimum time two terminals, 2 and 5, must be shorted; for maximum time the listed external resistor between terminals 2 and 5 must be added. For intermediate times select a lesser value resistor, or a potentiometer. Either model can be furnished in two types of enclosures with the relay in the same enclosure as the solid state unit. The CU series is offered with delay on operate only.

Please use the KUP type designations (9KU1, 9KU2 and 9KU4) and prices (page 3) for these accessories when ordering.

# TM SERIES TIME DELAY RELAYS AND AUTOMATIC RESET TIMERS

## THREE TYPES:

- ON DELAY
- INTERVAL
- OFF DELAY

**Built-in  
accuracy  
and  
dependability**

Potter & Brumfield TM series timers are available in a wide variety of timing and adjustability ranges. Three types of timing sequences, on delay, interval, and off delay are offered by Type TM-01, Type TM-11, and TM-21, respectively. They assure accurate timing control for motors, pumps, heating, air conditioning, vending machines, machine tools and many other types of equipment. They are easy to install as all internal timer components are connected to external terminals. The self-lubricated 3 watt synchronous motor runs continuously and requires no shut-off switch. The durable, molded phenolic enclosure and base provides protection against dust and moisture.

### SPECIFICATIONS

Voltage: 120V or 240V, 50/60 Hz.

Switch Load Capacity: 690VA pilot duty — 120V — 600V AC.

Motor: 3 watts, 240V AC maximum.

Accuracy: Plus or minus 1%, total dial range.

Minimum Setting: Two dial graduations, or two seconds out of 60 second range, or at zero position.

NOTE: Switches are independent of motor. Switches can be wired independently up to 600 volts. Zero set on each timer. If application requires by-passing of timer, the timer is set at zero and locked.

\* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.  
 \*\* Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.  
 † Load tests — making inrush ratings (0.4 to 0.5 P.F.) — breaking 125% continuous rating (0.65 to 0.8 P.F.).  
 • Cross-bar contacts.

\* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.  
\*\* Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.  
• Cross-bar contacts.

**CONVERSION INSTRUCTIONS**

All 10 and 15 ampere contact assemblies on RBM standard type C contactors are normally open. To convert to normally closed, use screwdriver. No special parts needed.

1. Remove movable contact assembly and lock washer by backing off terminal nut "A".
2. Loosen screws "B" and remove stationary contact assemblies.
3. Invert movable contact assembly, and replace on contactor with flat "I" spring resting on contact block. Contacts facing out.
4. Remove screws "B" from, and reinsert into opposite end of, stationary contact assembly. Re-install stationary contact assemblies; holding contacts in alignment with movable contacts while tightening screws.
