## ROTARY STEPPING SWITCH TYPE RT

The SCHRACK Rotary Stepping Switch is a combination of three reliable components:

1. Standard Relay with 1 Form C heavy-duty contact.
2. Ratchet driven Rotary Switch consisting of four banks of twelve or ten points each with sliding bifurcated wipers.

3. Ratchet driven Stepping Relay with two cams which actuate one Form C contact each.

Schrack Rotary Stepping Switches have a highly efficient magnetic circuit and a driving mechanism designed for maximum operating safety. All components are mounted on a rigid die-cast light metal frame and contacts are permanently molded in a sturdy melamine plastic.

ROTARY SWITCH terminals are arranged in a circular pattern with four groups of twelve points each. A conversion can make it operate with 3 groups of 16 each. An alternate version with 4 x 10 points is available for applications requiring decimal counting. Each group occupies a quadrant of the circle and contains a common bus which is connected to the twelve or ten insulated points in sequence by means of a sliding wiper as the switch is operated.

The sliding contacts are bifurcated spring phosphor bronze wipers. The wiper contact assemblies are insulated electrically from each other and the wipers are of the non-bridging type.

The contacts of the rotary switch bank are capable of carrying .5-amps on a steady state basis and of interrupting 1 amps at 110 volts DC with a resistive load or .2 amps at 115 volts AC. Coil Voltages 12, 24, 48 or 110 DC.

TYPE RT 304 — 4 x 12 Contact Points \$19.00 ea.

TYPE RT 404 — 4 x 10 Contact Points \$19.00 ea.

# SCHRACK RELAYS

## SINGLE COIL MAGNETIC LATCHING RELAYS — TYPES CRD & CRF

(CRF shown)  
Sockets Available

This is a bi-stable power relay held in operated position by a strong residual magnetism of the coil core after the coil is de-energized. The coil core is of a special alloy having sufficient remnant magnetic force to hold the armature locked-in for an indefinite period of time after being energized momentarily.

This Schrack relay has only one coil winding. In operation this coil is energized by half-wave rectified AC obtained by means of a diode such as Type IN3255 connected in series with the relay coil and mounted in the circuit outside the relay case. For de-magnetizing, to return the armature to its normal position, the same relay coil is energized by full-wave A.C., however, with reduced amplitude obtained by a series-connected resistor. The effect is to destroy the remnant magnetism in the coil core and ready the relay for another pull-in operation.

Although AC operation is recommended, it is possible to operate the Schrack Magnetic Latching Relay with a D.C. pulse using reduced levels and by reversing polarity as shown in technical data sheets.

In design, these magnetic latching relays are identical, except for the base, with the Schrack Type CAD plug-in relay. Contacts are rated at 5 or 10 amps depending on materials used. DPDT (2 form C) or 3 DPDT (3 form C) versions are available.

As can be readily seen, this relay has distinct advantages over the mechanical type since there are no parts subject to wear and friction. Long, trouble-free service and freedom from maintenance may be expected. Since Type CRD is plug-in, chassis may be pre-wired, and its compact design requires less than half the space of the conventional mechanical design. An indefinite "memory" storage and safe programming of complex circuits open up a wide range of potential uses for this most advanced relay design which is being offered at an unusually low commercial price.

## LATCHING RELAY — TYPE CBT

A dual coil mechanical latching relay. Each relay operates on a momentary impulse on either coil and is held in the set position until released by an impulse on the other coil. Both coils must be for the same voltage and are continuously rated.

Contact rating: 10 amps. (Based on 600 operations per hour at 115 volts AC 60 cy. resistive load).

May be operated continuously at 1000 cycles per hour.

The CBT relays have a transparent dust cover and a sturdy base plate of insulating material. Screw-type terminals are provided for all contact and coil connections. Available in voltages from 6-230 AC and 6-110 DC.

## OPEN RELAY TYPE CA

## LOW COST PROTECTION AGAINST SINGLE PHASING IN A THREE WAY SYSTEM

Operates by the use of bi-metallic strips and dissimilar coefficients of expansion under temperature changes. When temperature increases due to overload, a microswitch is activated in any leg of a three phase circuit. Microswitch is normally placed in series with the solenoid of any switching device in the 3 phase line. Reset button may be manually or automatically operated.

**AXIAL LEAD VITREOUS RESISTORS**

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is  $\pm 5\%$  for 1 ohm and higher and tolerance below 1 ohm is  $\pm 10\%$ . Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

**POWER RESISTOR DECADE BOX**

The Resistance Decade Box, Model 240-C for bench use — Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance

value being used at a glance.

Clarostat GRENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13" long x 8 1/2" deep x 5 1/2" high, weight 1 1/2 lbs. 250: 19" long x 13 3/4" deep x 7" high (fits in standard 19" relay rack), weight 1 1/2 lbs.

**SUGGESTED USES:** Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

## "GREENOHM"\* WIRE-WOUND RESISTORS

**FIXED TYPES** Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without altering resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with EIA standards, overall tolerances are  $\pm 5\%$  for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are  $\pm 10\%$ .

**ADJUSTABLE TYPES** Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with EIA standards, overall tolerances are  $\pm 10\%$ .

## PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non-inductive precision wire wound resistors to meet the requirements of Mil-R-93D. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. All resistors use resistance wire with very low thermal E.M.F. to the copper leads. Where thermal effects can be disregarded, welded construction with nickel alloy leads may be specified.

Standard temperature coefficient is  $\pm 10$  PPM/ $^{\circ}$ C. Lower T.C.'s, and T.C.'s as high as 6000 PPM/ $^{\circ}$ C can be supplied.

Tolerance available (non power styles): 1%, 0.5%, 0.1%, 0.05%, 0.025%, 0.02% and 0.01%. Resistors with tolerances of 0.1% and below are stabilized by artificial aging and temperature cycling.

### NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS

Sub-miniature Axial lead Precision resistors have been designed for applications where space is a prime factor.

Encapsulated printed circuit resistors are designed for printed circuit board application, where space is a factor.

Radial lug type resistors have been designed to meet the requirements of Mil-R-93D.

All resistors are hermetically sealed with epoxy resin to protect the windings against the effects of high humidity and salt water immersion cycling. Resistors can either be inductive or non-inductive wound.

The materials used in the construction of radial lug type resistors are identical to those used in the construction of axial lead types.

These resistors are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

# CARBON COMPOSITION RESISTORS

IRC, Inc.

## TYPE RC CARBON COMPOSITION RESISTORS

### PERFORMANCE CHARACTERISTICS

These are in relation to MIL-R-11 and/or MIL-R-39008 specification limits. A performance span or range is given for each important characteristic. You know in advance the typical limits within which IRC carbon composition resistors can be expected to perform. Ask for Catalog "D".

The performance data are based on many thousands of individual tests made on random samples taken from production. The resistors are tested to MIL-R-11 and/or MIL-R-39008 and to other tests of greater severity.

### APPEARANCE

IRC carbon composition resistors have a glossy brown, smooth body. The molded jacket has close dimensional tolerances for trouble-free use in high speed lead forming and inserting machines. There is no wax coating to clog equipment.

### IDENTIFICATION

Resistance values are clearly indicated by standard EIA/MIL Color Code bands. Solvent-resistant paints are baked on to provide distinct, permanent color bands.

### STANDARD RESISTANCE VALUES

Type RC resistors are supplied in all EIA/MIL standard values, subject to the minimum and maximum values for each type. (See table.) Other values are available on special order.

EIA/MIL COLOR CODE

### PACKAGING

Type RC resistors are packaged on the exclusive GRIP STRIP<sup>®</sup>, in multiples of 50.

Also, see page 1162 for RC resistors in IRC's new SNAP PAK.

### FIXED COMPOSITION RESISTORS

IRC's unique design of 1/4-, 1/2- and 1-watt resistors means better performance and reliability. 50% more molding around the resistance element assures greater moisture protection. The working element is a layer of carbon thermally bonded to an inert glass filament for better resistance and temperature characteristics. Ribbed, shoulder leads are deeply imbedded in the molding to prevent twist or pull-out and act as heat sinks to conduct heat away for cooler operation and longer field life.

# MOLDED WIREWOUND RESISTORS

**IRC, Inc.**

## OUTPERFORMS FIXED COMPOSITION RESISTORS

IRC's BWH molded wirewound resistor can be used in most applications normally filled by the lower values of composition resistors. The BWH exhibits the inherent stability, reliability, and long-term life characteristics of a wirewound unit. It also provides low resistances unattainable in composition resistors.

Exceptionally stable, small and completely insulated the BWH meets or exceeds all MIL-R-11 performance requirements. Because it is the RC-32 size it will fit any 1 watt composition resistor processing equipment.

BWH resistors are packaged on the exclusive IRC GRIP STRIP<sup>®</sup>, in multiples of 10 and 50, and in the new SNAP PAK (see page 1162) in multiples of 25.

The rating of this resistor is:

- ½ watt at 137°C. ambient
- 1 watt at 115°C. ambient
- 2 watts at 70°C. ambient.

**TOLERANCES & RESISTANCE VALUES.** Available in  $\pm 5\%$  and  $\pm 10\%$  tolerances in accordance with standard EIA resistance values. Minimum standard resistance: 0.10 ohm Maximum standard resistance: 1800 ohms.

**COLOR CODING.** Resistance values are indicated by standard EIA Color Code bands, and are distinguished from composition resistors by a wide band for the first significant figure.

**INSULATION.** A plastic housing molded with IRC manufactured thermosetting materials at high pressure and temperature results in a high insulation resistance. This protects the element from effects of extreme climatic conditions. Type BWH resistors are brown in color.

**NOISE.** Negligible.

**SHELF DRIFT.** Negligible.

## PERFORMANCE SPECIFICATIONS

**Temperature Coefficient.** ( $-55^{\circ}\text{C}$  to  $150^{\circ}\text{C}$ )

$\pm 0.065\% / ^{\circ}\text{C}$	$\pm 0.030\% / ^{\circ}\text{C}$
0.10 ohm to 1.0 ohm	1.1 ohms to 1800 ohms

In order to cover a wide range of resistance values, it is necessary to use different wire alloys, which have different temperature coefficients of resistance. The above table gives the maximum temperature coefficient within a particular resistance group.

**Inductance.** From  $0.04\mu\text{h}$  (0.24 ohm resistor) to  $5.0\mu\text{h}$  (1000 ohm resistor).

**Dielectric Withstanding Voltage.** 1000 volts rms minimum at atmospheric pressure. 625 volts rms minimum at barometric pressure of 3.4 inches of mercury.

# ADJUSTABLE & MILITARY POWER RESISTORS

IRC, Inc.

## ADJUSTABLE RESISTANCE TYPES

IRC Adjustable Power Wirewound Resistors are standard resistors with a track of exposed wire to allow for the adjustable feature. The track or slot is made by masking a section of the winding before coating, and then removing the mask after the coating has cured. No wire brushing, which could damage the resistance wire, is used.

The IRC adjustable feature provides the ideal solution to odd resistance values and to handling a variety of line voltages. One or more adjustable lugs may be used for voltage divided applications.

# POWER & FUSE RESISTORS

IRC, Inc.

## FUSE RESISTORS

These special resistors function as a resistor under normal conditions, and as a fuse under overload conditions.

Attractive new SNAP PAK style package. Back of card contains complete replacement information.

**Exact Duplicate Original Equipment Part** as used in Auto Radios. .33Ω and .68Ω in insulated fiberglass sleeve. .47Ω in rectangular ceramic case. Precisely wound element and superior lead solderability.

- FR.33 — .33 ohm
- FR.47 — .47 ohm
- FR.68 — .68 ohm

- FR5.0\* — 5 ohms
- FR5.6 — 5.6 ohms
- FR7.5 — 7.5 ohms

\* Suitable for 4.75 amp fuse for resistor applications.

Fuse resistors are used extensively as a surge-limiting resistor in voltage doubler circuits of TV receivers. Installation of an IRC Type FR fuse resistor in a TV set will prevent over-loading of more valuable components and possible fire due to a short circuit. The compact, modern design of the IRC fuse resistor measures only 1<sup>25</sup>/<sub>64</sub>" x 1<sup>1</sup>/<sub>32</sub>" x 3/<sub>8</sub>". This unit is completely insulated in a rectangular ceramic case, and equipped with plug-in terminals.

# PRECISION DEPOSITED CARBON & HIGH VOLTAGE RESISTORS

**IRC, Inc.**

**DEPOSITED CARBON PRECISIONS** are available in 1/2, 1 and 2 watt sizes. The wide range of values, 1% tolerance, economy, low voltage coefficient, excellent frequency characteristics, predictable temperature, high voltage rating, low noise level, and small size make IRC deposited carbon resistors ideal for application in advanced electronic equipment and critical TV circuits.

**MOLDED DEPOSITED CARBON RESISTORS** are designed for high reliability, stable performance, low voltage coefficient, low capacitive and inductive impedance in high frequency applications. In miniature 1/8, 1/4, and 1/2 watt sizes, plus 1 and 2 watt types.

Standard tolerance is 1%. (2% tolerance on high range units.) The housing gives complete protection, and offers better heat dissipating qualities. This results in improved load life and maximum moisture protection.

### HIGH VOLTAGE RESISTORS FOR COLOR TV

### SPECIFICATIONS

Type MV47 — 6000 Volts, 47 Meg. ± 20%  
Type MV66 — 6000 Volts, 66 Meg. ± 20%

**EXACT DUPLICATE ORIGINAL EQUIPMENT PART** is available in two ranges for complete coverage, 47 and 66 megohms.

Film type axial lead resistors. Resistive coating applied in helical path on ceramic tube, providing long, effective resistance length with exceptional stability. Precise mechanical spacing of helical turns gives a uniform pitch, and allows uniform voltage gradient throughout the length of the resistor. All resistors are pre-cured and the resistance coating is stabilized at high temperature to eliminate appreciable aging. Temperature coefficient of approximately  $-1\%/^{\circ}\text{C}$  over temperature range of  $-55^{\circ}\text{C}$  to  $+105^{\circ}\text{C}$ .

### HIGH VOLTAGE RESISTOR ASSORTMENTS

**ASSORTMENT #100** — 25 MV47 resistors, packaged one to a display card, 5 cards to a strip. Contains 5 strips.

**ASSORTMENT #101** — 25 MV66 resistors, packaged one to a display card, 5 cards to a strip. Contains 5 strips.

Attractive new SNAP PAK style package. Back of card contains complete replacement information.

## TYPE MOL METAL OXIDE FILM RESISTORS

Mallory MOL resistors have a thin layer of metal oxide evaporated onto a high quality ceramic rod. A precision ground spiral provides exactly the correct resistance. The MOL is essentially non-inductive with superb stability characteristics. May be used in place of either composition carbon, deposited carbon or wire-wound types. Full wattage at 70° C ambient.  
**To order:** Use type number followed by resistance value (e.g., 2MOL1000). **Tolerance:** = 10%.

AXIALS

LECTROHM, while manufacturing the standard vitreous line, is also producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

In addition to the many "Special" resistors illustrated above, LECTROHM manufactures the complete line of standard vitreous fixed and adjustable wire-wound resistors from 5 to 200 watts.

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. These all-welded construction units have welded high-strength alloy terminals. For perfect electrical connection, the resistance wire is welded to the terminal. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1 1/2" tinned wire leads. Standard resistance tolerance is ±5%.

## TYPE 884 MOLDED WIREWOUND RESISTORS ± 1% TOLERANCE

These precision power resistors are furnished from stock in power ratings of 3, 5 and 10 watts depending upon resistance. Single layer wound on ceramic core, Type 884 units feature a pressure-molded jacket of tough, resilient, silicone-ceramic material. Negligible inductance at audio frequencies. Temperature coefficient of resistance is  $0 \pm 20 \text{ppm}/^\circ\text{C}$ . Values shown are selected from MIL Standard MS90169, MIL-R-10509 and Bell Tel. Labs.

Resistance values marked \* are derated in wattage because of maximum voltage gradient considerations. Even with these voltage limitations, however, the wattage ratings are still adequate for most precision applications. However, where wattage requirements dictate, the same value shown in a derated area for either the 3 or 5 watt sizes can be supplied in the next higher wattage as the case may be.

## OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while

the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

## NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the scale the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

## LITTLE DEVIL COLOR CODER

Here is a handy little device that makes it easy to determine the resistance and tolerance

values of EIA color coded composition resistors. Just turn the color wheels until the color corresponds to the color band on the resistor and read the resistance value directly in ohms in the windows.

## OHMITE LITTLE DEVIL RESISTORS MOLDED COMPOSITION TYPE

on Tally Tape EXCEPT 1/8W SIZE

Ohmite's famous molded composition resistors, in the 1/8, 1/4, 1/2, 1 and 2-watt sizes, conform respectively to Styles RC05, RC07, RC20, RC32 and RC42 of MIL-R-11E and meet all the requirements of this military specification.

Little Devils have molded insulation and feature great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Available from stock in the standard EIA resistance values in the tolerances and resistance ranges shown in the price table below. Ratings for maximum continuous RMS voltage drop are high: 150 volts for 1/8 watt units, 250 volts for 1/4 watt, 350 volts for 1/2 watt, 500 volts for 1 watt and 750 volts for 2 watt units.

### STANDARD EIA VALUES

Figures in large, bold type are ±10% EIA values. All values listed are ±5% values. Price table lists the various "Little Devil" sizes and indicates the tolerances and resistance ranges in which they are supplied.

MEMCOR Components . . . resistors and rheostats . . . are manufactured by the MEMCOR Components facility of the MEMCOR Division of LTV ElectroSystems, Inc.

MEMOR Components represent the cumulative design skill and production knowledge of two great lines of resistance products — Tru-Ohm and Hardwick, Hindle. This "second generation" product maintains all of the proven features of both original lines plus the manufacturing refinements that can only result from industry experience.

The values of resistance listed in this section are in stock for immediate delivery—special resistance values or terminal diversions are readily available. **When ordering** — identify type and value of resistor by stock number.

These widely-used fixed wire wound vitreous enameled resistors have solidly anchored welded tabs (lugs) and shock-absorbing mounting brackets to withstand vibration. Multi-layer vitreous enamel coating locks the uniformly-wound resistance wire in position and also seals out moisture. MEMCOR resistors have a high-temperature stability and a com-

patible coefficient of expansion which prevents crazing and cracking. MEMCOR resistors have a standard tolerance of ±5% on all values above one OHM and a ±10% tolerance on resistance values lower than one OHM (available in closer tolerances). All MEMCOR resistors listed in this section manufactured to the

rigid requirements of MIL-R-26 Specifications... MEMCOR resistors meet and exceed all requirements of this specification. **FR and FRL TYPES** MEMCOR fixed wire wound vitreous enameled types in 5, 10 and 20 watt sizes (FRL) are light enough to be mounted by attached leads and are also available without (FR) tuned leads.

### ADJUSTABLE VALUE RESISTORS

MEMCOR adjustable resistors are used in applications where it is necessary to make adjustment in resistance periodically... where intermediate values of resistance are needed... or when multi-tabs are required. The AR types are especially useful in laboratories for experimental work, circuit design, etc.

A section of the winding is exposed on one side to enable the adjustment band to make contact at any desired point. This adjustable band **should not** be moved unless the screw holding it in position is completely loosened to prevent abrading or possible damage to the resistance wire.

Adjustable lugs are formed to the exact contour of the body of the resistor to assure positive contact with the exposed section of winding. Standard adjustable bands are screw-driven style and have an embossed area on the lug.

Special adjustable lugs are available with a silver contact... also, bakelite thumb screw type bands are available.

The AR wattage ratings (and the  $\pm 10\%$  tolerance) given in this section are for **the entire** resistor. Never exceed the maximum rating through any portion of the resistor.

**OVAL (FLAT CORE) RESISTORS**

MEMCOR wire wound flat core resistors are applicable for individual and/or stack mounting. Their high watt rating per unit of space and the bracket construction which facilitates stacking (integral mounting brackets are supplied as standard)... make the MOR and OR types space savers par excellence.

The line of ovals (OR) was designed particularly for applications where available space is limited... and the supplementary line of midget ovals (MOR) are

very desirable for applications where the size of the components must be kept to an absolute minimum. The through bracket helps dissipate heat and reduces hot spots. This permits higher wattage dissipation without requiring additional space.

When stack mounted, the OR and MOR resistors should be derated. For an ambient temperature not higher than 40°C. the maximum rise of these resistors will not exceed 300°C. when mounted on a steel panel.

Tapped or adjustable ovals are available.

**MOULDED SILICONE RESISTORS**

These resistors will operate at 350°C. (660°F.) and will withstand thermal shocks to minus 55°C. Because of the moulded construction the resistors are effectively hermetically sealed and will withstand severe moisture conditions without deterioration.

The construction of the resistors are uniform in all dimensions within a few thousandths of an inch, which facilitates their use in automatic-insertion machinery... for which use they may be obtained specially packaged. They will improve the appearance of any assembly in which they are used.

Temperature co-efficients of plus or minus 20 parts per million per C. degree are standard.

The moulding compound used in these resistors was developed through research and development extending over several years, and represents a marked advance in the "state-of-the-art" for such compounds.

# SPEER FIXED COMPOSITION RESISTORS

Speer resistors are made on modern high speed equipment which molds component material into one integral, dense unit. Heavy pure tin-coated copper lead wires, thermosetting bonding resins, finely divided inorganic fillers, and specially produced and treated high conductivity materials such as carbon blacks are the materials used.

During the molding process, preformed insulating shells of bodged inorganic fillers are filled with carefully adjusted conducting compounds. The binders and fillers of both shell and core are completely compatible and, under high pressure, allow the formation of an inseparable bond between core and shell. The thermal transfer characteristics of shell and core are essentially equal.

After high pressure molding, the "green" resistors are cured in precisely adjusted, indirectly heated continuous tube furnaces. The resin cure is complete and the final resistance of the unit is thereby fixed. A vacuum and pressure of special high temperature material develops maximum protection against moisture penetration.

The special impregnant used is completely stable under all operating conditions. This material seals and produces an effective barrier to moisture penetration.

Speer resistors are color coded with special paints developed to provide a high degree of solvent resistance.

All Speer resistors have lead wires of high conductivity copper with a solderable coating of heavy pure tin. The wires are completely precoated before assembly, so that the solderable surface is unbroken over the entire area. The tin coat is controlled to a thickness of .0003"-.0008", several times as heavy as that on ordinary tinned wire. The use of pure tin affords superior storage life and offers the ultimate in low temperature solderability.

The impregnated resistors are measured on high speed automatic resistance sorters and classified into appropriate resistance nominals and tolerances. The color bands and protective outer film are applied after sorting.

# Specifications and Typical Performance Data for Standard JXP Precision Resistors

All JXP resistors meet or exceed the requirements for Characteristic E ( $\pm 25$  ppm/ $^{\circ}$ C) metal film resistors as set forth in MIL-R-10509.

Resistors of any resistance value within the ranges specified in the accompanying table are available for short time delivery. The resistance ranges specified for the commercial listings below are extended beyond

standard military ranges. Performance within these ranges, however, is considered to be equivalent to those within military ranges.

Wattage at 125 $^{\circ}$ C	Military		Commercial		Length A Max.	Diameter B Max.	Axial Lead # Size

TEMPERATURE COEFFICIENT OF RESISTANCE FOR TYPICAL STANDARD PRODUCTION JXP RESISTORS

TYPICAL A.C. RESISTANCE AS MEASURED ON BOONTON Q AND RX METER

Jeffers capability as a leading producer of low temperature coefficient, precision resistors is derived from significant proprietary advances in metal film technology and the establishment of a manufacturing facility and product philosophy that is devoted exclusively to production of only the highest grade of precision resistors. This concentration of effort has eliminated the necessary compromises in equipment and processes and reduced the diversion of skills which would otherwise be necessary for the accommodation of a multi-grade product line.

In other words, Jeffers makes all its parts to a T.C. of 25 P.P.M. or less. It does not "sort" to find production lots which will hopefully contain a large percentage of 25 P.P.M. units.

This product plan has resulted in some important contributions

to quality and economical precision resistor manufacture. For example:

*All operations in the manufacture of JXP precision resistors are carried out under qualified white room conditions, an important factor in statistical reliability.*

*Shortest delivery available for precision resistors is a natural result of the efficiencies of a manufacturing operation that deals with only one grade of product.*

In addition to manufacturing facilities, Jeffers has complete environmental test facilities, instrument calibration and certified measurement ability for precision resistor evaluation.

## Commercial Tab-Terminal KOOLOHM® Wirewound Resistors

- Ceramic Outer Jacket. May be Mounted Anywhere—Even Flat Against Chassis or Grounded Parts.
- Each resistor is Tropicallized by a Glazed Ceramic Outer Coating and Improved End Seals Which Offer Complete Protection Against Moisture or Any Other Climatic Conditions
- Extremely High Insulation Resistance—10,000 Volts From Surface of Ceramic Jacket to Inner Resistance Elements
- Insulated Wire Permits Winding Higher Values in Layers Which Means Much Smaller Physical Sizes for Each Wattage Rating
- Insulated Wire Permits True Non-Inductive Wound Designs
- Standard Resistance Tolerance:  $\pm 5\%$
- These Resistors Are Also Available in 5 and 10 Watt Ratings, Axial-Lead Style. See Latest Issue of Sprague Catalog C-617

# STACKPOLE

## FIXED COMPOSITION RESISTORS

Stackpole Resistors offer superior performance in terms of load life, moisture resistance, shelf life, and other important characteristics. Available in 1/4, 1/2, 1, and 2 watt insulated types in resistance values with 5%, 10% and 20% tolerances as shown below.

### EASIEST SOLDERING

is assured thanks to an exclusive extra solder coating applied after the usual tin dipping. Leads of Stackpole Resistors solder readily by any method—dip or iron—stay tarnish free even after months in storage. And, their baked-on color codes resist solvent scrubbing operations... maintain uniform, attractive appearance.

MIL-R-10509F

In critical space-age electronic circuitry, METOHM metal film precision resistors guarantee high reliability, high stability, close accuracy, low TC and miniature size. Metohms are precision made under "white-room" conditions in the industry's most modern plant.

MIL SPECS. — All Metohm precision resistors are designed to exceed MIL-R-10509F char. C, D and E.

POWER RATING — is based on full rated load in an ambient of 125°C.

WELDABLE LEADS — gold plated Dumet leads and nickel "270" leads are available for weldable applications.

STOCK METOHMS — RN50, 55, 60, 65 and 70 Metohm resistors, char .C, TC Code T2 ( $\pm 50$ PPM) are stocked in MIL standard values listed below. Standard tolerance is  $\pm 1\%$ .

MADE-TO-ORDER TYPES — see data in accompanying tables for non-stock resistors available in production order quantities.

CONFORMAL COATED TYPES — also available in 1/20, 1/10, 1/8, 1/4 and 1/2 w. sizes. Durable solvent resistant coating allows smaller size. Ideal for micro module circuitry where space is at a premium.

### RING RHEOSTATS

TYPE MP10

Ward Leonard Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on 1/4" panel.

Standard Resistance Tolerance ±10%.

## SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre instal-

lations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

### CONSTANT-IMPEDANCE CONTROLS

Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

### CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

### SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ⅜-32 bushing ¾" long, and 1½" round shaft. (Knob furnished with each control).

Net Price \$1.80

## SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

- Attenuation range of 0 to 30 db over 90% of rotation, 60 db in remaining 10% of rotation. Attenuation will increase approximately linearly to 30 db with counter-clockwise rotation.
- Insertion loss less than 0.5 db.
- Input impedance within plus/ minus 20%.
- The CIT43 and CIBT43 (Bridged T Pad) have constant input and output impedances, while the CIL43 has constant impedance in the input only.
- Shafts and bushings are insulated from the circuit elements.
- Pads have ⅜-32 x ⅜" long bushing.
- ¼" dia. round shafts 1½" long beyond bushing.
- All pads supplied with bar knob and dial plates, as shown above.
- Dia. 1½". Depth of body from mounting surface: CIL43 — 1½"; CIT43 — 1¾"; CIBT43 — 1½".

## CLARO-DEC PRECISION RESISTANCE DECADE BOX

The most flexible innovation yet in precision resistance decade boxes, the Claro-Dec serves many applications with all the versatility needed for the job. Claro-Decs (within established parameters of current) are used whenever accurate steps of resistance values between .1 ohms and 900K ohms,  $\pm 1\%$ \* are required. Selection of desired steps of resistance is accomplished by in-

sertion of a banana plug into the proper, marked front panel hole on the unit. Individual or multiple Claro-Dec units are flush panel or breadboard mounted with equal ease. Units may be physically ganged by sliding the molded-in tongue-and-groove together and electrically series connected with a supplied wire jumper or accessory banana plug.

Net Each: \$3.95

## MICROPOT® TRIMMING POTENTIOMETERS

Amphenol produces 13 complete series of trimmers—from subminiature square trimmers to standard sizes. Amphenol trimmers are offered in general purpose, humidity-proof, high temperature, or humidity-and-high-temperature models, in a wide choice of resistance ranges and end terminals. Amphenol trimmers have an adjustment screw for an extremely fine degree of selectivity. Wire-wound resistance elements are up to 50% longer than competitive types.

## MICROPOT® METAL FILM TRIMMERS

Amphenol metal film trimmers provide infinite resolution with ultra-low 50 ppm/°C temperature coefficient and zero noise at terminal position. Resistance values from 5° to 10,000 ohms.

## MICROPOT® PRECISION POTENTIOMETERS

Amphenol offers a complete line of potentiometers for precision applications—military and commercial—ranging from ½-inch to 3-inches. They are available in single-turn or multi-turn models with high resolution and a wide range of resistance values.

## MICRODIAL® CONCENTRIC DIALS

Engineers consider the Amphenol counting dial the most comprehensive in the industry. Concentric scale dials are available in three basic series. Each features epicyclic gearing to eliminate ambiguity, and large numerals for high readability. Each dial is available with or without brake. Most dial models are offered in a choice of color combinations for coding.

## MICRODIAL® DIGITAL READOUT DIALS

Amphenol's digital dial line includes three, four, or five digit models. The 1309 Series has optional 10, 100, 1000 turns. The 10-turn 1330 Microdial has internal illumination, convex lens, and is available with or without brake. Amphenol dials offer 1000:1 indexing accuracy, and are virtually free from accidental setting changes.

## SUB FRACTIONAL H.P. MOTORS

Amphenol's line of sub-fractional h.p. motors includes synchronous, induction, servo, hysteresis synchronous, or low inertia models. Each has modernized epoxy stator insulation, 20 standard gear trains for speeds from 67 to 1800 rpm; dual, bearing shaft support for heavy overhung loads. Perfect for strip chart recorders, electronic scales, servo systems and sound reproduction systems.

## IRC-CTS SNAPTROL

IRC, Inc.

**PROVIDES VERSATILITY  
AND EASE OF ASSEMBLY**

**SNAPTROL.** Newest of three IRC replacement systems designed to provide servicing technicians with satisfactory replacements for comprehensive coverage of single controls, tandem dual controls, stereo controls and concentric dual controls for television, radio, auto sets and high fidelity equipment.

SNAPTROL provides a broad variety of basic, factory assembled control sections, shafts and switches which snap together to provide a wide selection of replacement controls. Literally, it is a "snap" to assemble nearly any standard or special control.

**SERIES 45 INDUSTRIAL CONTROLS.** With a variety of five basic control components, the Series 45 line permits quick assembly of 12,631,500 different control specifications. These include single, double, triple and quadruple section controls, with or without power switches, in all popular styles and ranges needed for industrial electronic equipment.

Series 45 components are completely compatible and interchangeable with SNAPTROL. Together, these two snap-together systems provide an almost unlimited means to furnish unusual and special controls for industrial applications.

**EASY TO USE.** Parts assemble into exact duplicate control in 15 to 30 seconds. Sections completely factory assembled. No shaft cutting or modification needed.

**GREATER VERSATILITY.** SNAPTROL provides new and unique designs which provide for better utility and adaptability of component parts:

**1—Interchangeable Control Mountings.**  $\frac{3}{8}$ ",  $\frac{7}{16}$ " and  $\frac{1}{2}$ " diameter bushings of varying lengths and bores, quickly thread into front control sections. Accommodates thick panel requirements *without* extra bushing or adjuster. Specially designed tab mounting plates or printed circuit brackets easily attached in place of bushings. This exclusive new design feature reduces the number of front sections needed and extends their use in a greater variety of replacement needs.

**2—Printed Circuit Terminals.** All carbon control sections are equipped with terminals that will handle both conventional and printed circuit wiring. This original IRC-CTS terminal design doubles the adaptability of control sections.

**3—Rotary or Pull-Push Power Switches.** Either type of power switch snaps onto either carbon Front or Rear Sections. Another exclusive IRC-CTS design feature which very considerably increases the utility of control components.

**4—Uniform Diameter Rear Section Shafts.** New design of rear section (inner) shafts provide uniform diameter — permits use of heavy-walled front section (outer) shaft contributing better concentric shaft operation and superior knob retention. Simple compression type adapter fits rear section shaft to knobs normally requiring larger diameter. No drilling or modification of knobs needed. Shafts are flatted or slotted as required — no shaft insert or line needed! This new design reduces the number of exact length shafts required for broad replacement coverage.

**5—Front Sections Serve for Single Controls.** Without modification or adapters, all SNAPTROL front sections may be used for single control replacements. Provides practical use of single front section for special bushings, tab mountings, printed circuits, special shaft needs and a variety of power switches. No other section-type control system provides such broad versatility.

**FEWER COMPONENT PARTS.** Because of the realistic design features provided, SNAPTROL requires far fewer items of components than any other section-type exact duplicate control system which offers so broad a replacement coverage. (Over 2300 exact duplicate concentric dual controls and many thousands of single controls.)

**BEST SELLING CONTROLS.** SNAPTROL is a special replacement design of the world's most frequently specified and most widely sold CTS Series 45 control. Over 300,000,000 in current use — a strong testimony to the quality and performance of these outstanding controls.

## CONTROL MOUNTINGS FOR FRONT SECTIONS

A variety of control mountings permit the use of SNAPTRON Front Sections for many different replacement controls. Bushings of varying diameters and inside bores thread into front sections. Tab mounting plates and printed circuit brackets attach to front section with special male nut supplied with each.

This exclusive design feature of selectable control mountings actually reduces inventory investment for distributors and servicing technicians. For a specific resistance value and taper, only one SNAPTRON Front Section is needed—in contrast to other systems where an additional front section is needed for each different control mounting.

## CARBON & WIREWOUND REAR SECTIONS

Type CR Carbon Rear Sections and Type WR Wirewound Rear Sections snap onto SNAPTRON Front Sections for use as either concentric dual or tandem dual controls. Rotary or pull-push power switches snap onto CR sections. (WR sections do not accept switches.) Rear or inner concentric shafts snap into either type of rear sections for concentric dual operation. SS7A Intersection Insert provides tandem dual operation. Additional tandem sections may be snapped on by use of SS13 Multisection Couplers.

SNAPTROL Exact Duplicate Shafts are supplied to close tolerances against original control specifications. Easily snap into molded nylon rotors of front or rear sections. Uniform diameter of rear section (inner) shafts permit use of heavier wall on front section (outer) shafts providing better concentric rotation and superior knob fit. Knob Adapter (Stock No. KA1) fits rear (inner) shaft to knobs normally requiring larger diameter shafts. No drilling or modification of knobs is required. No cutting of shafts is needed with SNAPTROL Exact Duplicate Shafts! Easy to install!

**Knob Adapter.** Fits rear section shaft to knob requirements of over-size shaft. Converts .187" diameter shaft to .202" diameter shaft.

# IRC-CTS TYPE 4W CONTROLS AND BASE ELEMENTS

IRC, Inc.

Types WPK and WPS are compact, 1¼" diameter wire wound controls available for replacement use in two popular shaft styles and an extensive variety of resistance values and tapers. Many stock numbers can be supplied as factory-assembled units. All stock numbers may be assembled in field using Base-Element with SK4 or SK5 Kit as desired.

Resistance elements are uniformly wound with highest grade alloy resistance wire on special form that withstands high temperature without shrinking. Pressure molded plastic housing is designed for maximum heat dissipation and accurate location of terminals. Contactor and collector are of long-wearing alloy that makes direct contact.

Resistance tolerance is  $\pm 10\%$ .

# IRC-CTS CONCENTRIKIT<sup>®</sup> EXACT DUPLICATE SHAFT SPECIFICATIONS

IRC, Inc.

### EXACT DUPLICATE SHAFTS

Stock numbers and corresponding lengths are listed on these pages. In general, the last three numbers of the stock number indicates shaft length from control mounting face (not end of bushing) to end of shaft. Of the last three numbers, the first indicates number of inches and the second and third number indicates the number of 32nds. For Stock No. P1-210, length is 2<sup>10</sup>/<sub>32</sub>" or 2<sup>5</sup>/<sub>16</sub>". For inner shafts employed with K3 CONCENTRIKIT, subtract <sup>1</sup>/<sub>32</sub>" from dimension indicated by stock number.

There is an IRC-CTS Exact Duplicate Shaft available for nearly every concentric dual control. These Outer and Inner Shafts require no modification. Shaft lengths are held within close limits to original shaft lengths. Careful attention is given to end trims for fit to original knobs. The specifications on this page provide dimensions and use.

The same spacious stock cabinet is provided with either the No. 90 or No. 92 stocks. Permits ready conversion of Basic Stock to Expanded Stock. Sturdy two-shelf metal cabinet measures 17 $\frac{3}{8}$ " wide, 11 $\frac{1}{16}$ " deep and 9" high. Provides twelve large "see-thru" drawers with new locking divider feature. Drawers measure 11" deep, 4" wide and 2" high—956 cubic inches of stock space! All needed dividers are included. Both drawer front and bottom labels provide full location and identification data.

## EXTENSIVE VARIATION OF CONTROL TYPES

CONCENTRIKIT Dealer Control Stocks provide an extensive variation of single and concentric dual control types. Included are a wide selection of control mountings, shafts, and power switches with both carbon ( $\frac{1}{2}$  watt) and wire-wound (4 watts) front and rear sections. Control mountings include  $\frac{3}{8}$ ",  $\frac{7}{16}$ " and  $\frac{1}{2}$ " diameter bushings, tab mounting plates and printed circuit brackets. Shaft styles include  $\frac{1}{4}$ " and  $\frac{3}{16}$ " diameter universal shafts, screw-driver slotted and insulated shafts, rear adjustment feature and a large selection of exact duplicate shafts which require no cutting or modification.

Rotary and pull-push power switches attach to either single or concentric dual styles. Concentric dual controls include carbon front and rear sections, wirewound front and rear sections and wirewound front sections with carbon rear sections. Carbon units are equipped with printed circuit terminals for universal use. Broad selection of resistance values and tapers. Replacement data, pricing information and full instructions included.

## CONCENTRIKIT DEALER CONTROL STOCKS

Most widely used control replacement system, the new CONCENTRIKIT stocks employ the unique adaptability of this true control parts system to provide top coverage of needed replacement controls. Parts included have been carefully selected for broadest combinations for TV, radio, auto sets and high-fidelity equipment. The exclusive features of CONCENTRIKIT afford a nearly endless variety of single and concentric dual controls.

Two specially planned dealer stocks are available. No. 90 is a Basic Stock of Concentrikits parts. No. 92 is an Expanded Stock providing over three times the replacement coverage. Both stocks are housed in the same large metal cabinet with twelve "see-thru" drawers. Special labelling supplies quick location and identification of parts. # IRC-CTS SPECIAL PURPOSE CONTROLS

## IRC, Inc.

### USES:

This control is supplied for reliable replacement of TV Height Controls and other controls in B+C CIRCUITS — such as AGC, NOISE GATE, FOCUS, FRINGE LOCK and SYNC controls — which have become unsatisfactory because of element etching due to voltages present in the particular circuitry.

#### TYPE HLC TV HEIGHT CONTROLS

IRC Stock No.	Resistance Value	IRC Stock No.	Resistance Value
HLC-1	2.0 Meg. ±30%	HLC-4	4.0 Meg. ±30%
HLC-2	2.5 Meg. ±30%	HLC-5	5.0 Meg. ±30%
HLC-3	3.0 Meg. ±30%	HLC-6	7.5 Meg. ±30%

### FEATURES:

- Premium quality control (originally designed for rugged service in military gear)
- 1 watt rating, 750 V. max. between outer terminals
- Small size  $1\frac{1}{16}$ " diameter — same as most original controls
- Nylon shaft — slotted and knurled — easily shortened where required.

## VITREOUS ENAMELED RHEOSTATS

Twelve sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers ratings that meet the major portion of design, production and emergency needs. Ratings of 7½, 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

**FEATURES OF CONSTRUCTION:** Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

**RATING:** The current carrying capacities shown in the tables are for use in *free air*; when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

### MODEL "C" — MINIATURE RHEOSTAT

In this era of miniaturization and transistorization, the Model C enlarges the horizons of designers by providing greater design flexibility. In addition to its small size, its versatile solder terminals will also plug into common transistor sockets or circuit boards. It is stocked with both standard and locking type bushings.

## RHEOSTAT TANDEM COUPLING KITS

Inexpensive kits assemble standard Ohmite Model G, H, J, K, L or E (miniature) rheostats. Each kit consists of a steel "U" frame, a coupling with set screw, mica washer, Allen wrench and assembly instructions. Rheostat shafts are joined by the coupling which is fastened to the shaft of the rear unit. Projections on the coupling fit a recess in the rear hub of the front unit. Stock No. 6533 kit, mounts Model G, K or L units but accommodates Models H or J in the rear position. Stock No. 6532 unit mounts Models H or J but accommodates Models G, K or L in the rear position. Stock No. 6591 kit assembles only Model E (miniature) rheostats.

## MOLDED COMPOSITION POTENTIOMETERS, 1/2 and 2 WATTS

Used in commercial and military electronic applications where high quality and dependable performance are important. Type AB, 1 1/2" dia., is rated 2 watts at 70°C ambient and is available with 7/8" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU dual unit) and locking type slotted shaft (CLU). Type AS, a miniature unit 1/2" dia. rated 1/2 watt,

is available with locking type shaft (Style AS) or 7/8" slotted shaft for knob control (Style ASM).

Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low. Single control Type AB units extend 5/8" behind panel; dual con-

trol 1 1/4". Type AS miniature unit extends 1 1/16" behind panel. An SPST switch for single Type AB units is available. Units are dust and splash proof, fungus and corrosion resistant and meet the latest requirements of MIL-R-94. Styles CMU, CLU, Styles AS and ASM conform respectively to MIL-R-94 Styles RV4N, RV4L, RV6L, and RV6N.

These devices are designed as efficient retainers and heat sinks when mounted to P-C boards due to their excellent conductivity and extra mass. They also provide an efficient thermal link between transistor and chassis or heat sink. Beryllium copper spring fingers firmly retain transistors, yet fit wide case diameter variations and make transistor insertion easy. Available with Beryllium Oxide when a reduction in capacity between transistor and ground is needed in high frequency applications. Send for Bulletins 141 and 144.

## UP SERIES—FOR POWER TYPE TRANSISTORS AND DIODES

UP Series design gives maximum dissipation in medium power applications at lower cost than comparable finned extrusions. Staggered-finger configuration—a design exclusive with IERC—allows maximum efficiency in both natural convection and forced air at less weight and volume. Increased dissipation can be achieved by mounting dissipators back-to-back on a bracket. Standard finish is black anodize. Send for Bulletin 134.

# DUAL DIODES

IRC, Inc.

Attractive new SNAP PAK style package. Back of card contains complete replacement information.

**DIODES.** Universal selenium dual diodes for horizontal phase detectors and remote control in TV receivers. Also used in radio control devices for model planes, and other circuits. Available in four basic types.

The small size, economy, ease of installation and reliable construction of the IRC dual selenium diodes make them ideal for many low-voltage, low-frequency applications. To suit them to various circuits, these dual diodes have either common-anode, common-cathode, or series form of internal connection. The cells in each unit are matched to assure electrical balance.

Alloy-plated leads facilitate soldering. No clamp or other mounting device is needed, since the three leads readily support this flyweight unit.

## Designed for Long Life

Construction features include an integral heatsink and a "floating" spring that gives proper pre-load over the full operating temperature range. No paper, laminates or other material that might absorb moisture are used. Moisture-excluding materials cushion the active elements and isolate them from encapsulant.

## Electrically Balanced and Noise Free

IRC processes each selenium cell to give it a smooth, uncontaminated surface and periphery with no fractures. This technique insures uniform current density over the entire cell area and prevents noisy, unreliable operation.

To indicate polarity, one corner of the case has a diagonal cutoff. This assures correct orientation of units in automated assembly, and allows use of both sight and touch to get proper polarity at manual assembly and inspection.

## DUAL DIODE ASSORTMENTS

**D4 ASSORTMENT No. 32A** — 5 SNAP PAK style display strips totaling 25 diodes, packaged one diode to a card, 5 cards to a strip.

**D5 ASSORTMENT No. 33A** — 5 SNAP PAK style display strips totaling 25 diodes, packaged one diode to a card, 5 cards to a strip.

A wide choice of popular characteristics in low power germanium and silicon diodes is available immediately from Ohmite stock. Both the germanium and silicon types are supplied in the subminiature, hermetically sealed glass envelope (see diagram). The silicon envelope is light-shielded.

High stability is achieved through temperature cycling and aging. All units must meet severe environmental, electrical and mechanical requirements with a liberal safety factor.

**GERMANIUM DIODES** — Ohmite supplies the gold-bonded variety. Power rating is 80 mw at 25°C except where otherwise indicated. Operating temperature range is -65°C to +90°C.

**SILICON DIODES** — Employ either the alloy or diffusion method of junction formation. Power rating is 400 milliwatts at 25°C except where otherwise indicated. Operating temperature range is -65°C to +150°C.

### DIODE METERSAVER PROTECTS METERS

Designed to protect sensitive (high internal resistance) meters against burnout due to overload even where potential is reversed. Introduces negligible error. Consists of 2 silicon diodes in compact case with leads and lugs. Connects across meter terminals without regard for polarity. Shunts excess current around meters—for example, can convert 200 times overload to 3 times overload. Allows use of less expensive meter fuses. Can be used with meters of low internal resistance but use of series resistor is then recommended.

# JEDEC Silicon Avalanche Rectifiers

All of the silicon rectifiers listed below are supplied with avalanche characteristics as standard. They are direct replacements, electrically and physically, for ordinary silicon rectifiers, yet they provide important benefits to you and your products, at no extra cost.

**Overvoltage protection** is built into the rectifier. Transient voltage induced failures are virtually eliminated because these units avalanche at voltages well below the destruction point. The overvoltage spike is dissipated through the junction at a point below the critical voltage stress across the edge of the junction.

Lower circuit costs are readily achieved. When avalanche rectifiers are

used suppressor and balancing devices, such as resistors, capacitors, R-C networks, etc., are no longer needed. In addition, their elimination improves circuit reliability, due to a reduction in number of components and interconnections.

**Dependable performance** is assured. Over 20,000,000 of these devices already have been delivered and are in actual use in the field. They are now routinely available from high volume production lines.

All Tarzian Silicon Rectifiers are supplied with avalanche protection at no extra cost. For additional types, not necessarily covered by JEDEC numbers, see the following pages.

**RECTIFIERS**

are grouped by half wave average current ratings. Ratings shown apply at case temperatures indicated. All surge ratings are peak one-half cycle currents at 60 cps. Surge ratings apply from full load. Voltage ratings

shown are repetitive peak reverse maximum values. Most units have somewhat higher transient ratings. Reverse polarity JEDEC types are designated "R". On non-JEDEC types, the second listing designates reverse polarity where available.

# HIGH VOLTAGE SILICON RECTIFIER ASSEMBLIES

Voltage Ratings to 208 KV in a single channel. Three Phase Current Ratings to 510 Amperes. Westinghouse Silicon Rectifier Stacks have proven their outstanding reliability in over 50 million stack hours of failure free operation. Each cell is shunted with a capacitor and resistor which provide the optimum in steady state and transient voltage division. The design of the stack provides for cooling by oil, free or

forced air convection and vapor atmospheres. Where required, assemblies can be supplied with mil-type capacitors and resistors which combined with the high temperature characteristics of the hermetically sealed silicon rectifier cells, allows operation in ambients up to 110°C. Use of these stacks in place of vacuum tubes will increase equipment efficiency by as much as 25%.

Listed are maximum voltage and currents for single assemblies. Stacks can be combined in series or parallel.

Ratings are based on forced air cooling of 1000 fpm at 25°C ambient.  
Oil cooling will increase ratings.  
Assemblies are designed to meet most standard military environmental conditions.  
For very high voltage applications, corona shielding is available. Where voltage will allow, entire rectifier assemblies can be packaged in one channel.

Fibre Tube. Silverplated indicating pin extends from end of fuse when fuse is blown.

This pin can also be used to actuate a signal by using fuses in BUSS HKA Fuseholders or BUSS Signal Fuse Blocks. GLD fuses in sizes larger than 5 amperes have dual tube construction. They can be used in BUSS Signal Fuse Blocks but not in HKA Fuseholders.

125 volt sizes listed by Underwriters' Laboratories Inc.

### GBA FUSES

GBA fuses are the same as BUSS GLD fuses EXCEPT that the indicating pin is RED. This results in a more vivid indication of an open fuse when the fuses are used in BUSS HLD fuseholders.

GBA fuses have same electrical and physical characteristics as BUSS GLD fuses. They are made in the same ampere sizes up to 5 ampere, and are also priced the same.

To specify; give symbol GBA and amperes.

### BUSS GMT Fuses — HLT Fuseholders

#### Signal Indicating Alarm Activating

**For multiple circuit apparatus where space is at a premium**

GMT fuses and HLT fuseholders permit multiple mounting of fuses in limited space, for protection of communication equipment, business machines, computers, control circuits or any equipment operating at 300 volts or less.

Holders take panel mounting space of only ¼ inch horizontal by 1 13/32 inches vertical.

Fuses give visual indication when blown by release of a spring indicator. The spring carries a colored plastic flag, in a different color for each fuse ampere rating.

The indicator spring when released makes contact with an alarm terminal in the fuseholder, which can be connected to activate a signal circuit.

Blown fuses are readily replaced without use of insulated tools. When mounted on minimum centers, removal of fuse is easy by use of a wire hook.

## FUSETRON DUAL-ELEMENT Fuses and Fuse Holders

*for Protection of TV, Radios, Instruments and Electronic Equipment*

### BUSS In-the-Line or Panel Mounted FUSE and HOLDER COMBINATIONS

For voltages up to 300

Safeguards against use of wrong type and size of fuse. Fuse and knob are in one piece — when fuse opens, entire fuse-knob assembly is replaced.

Fuseholder can be mounted in-the-line — or panel mounted for which a snap-in steel clip is available for mounting on any panel  $\frac{1}{32}$  to  $\frac{1}{16}$  inch thick.

Holders come with 6 inch leads of No. 18 solid copper insulated wire, unless specified otherwise.

<b>HLR</b> holder safeguards against use of wrong type of fuse — (takes all ampere sizes of GLR and GMF fuses).....	List Price
<b>HLQ</b> holder is size limiting type and is made in 6 fuse ranges. Takes either GLQ or GMQ fuses up to the largest ampere size marked in holder .....	\$.25

### SPACE SAVER Panel Mounted FUSEHOLDER For $\frac{1}{4}$ x $1\frac{1}{4}$ inch fuses or $\frac{3}{32}$ x $1\frac{1}{4}$ inch fuses

A compact, space saver fuseholder only  $1\frac{1}{8}$  inches long — extends just  $2\frac{9}{32}$  inches behind front of panel.

Takes  $\frac{1}{4}$  x  $1\frac{1}{4}$  inch fuses and can easily be converted to take  $\frac{3}{32}$  x  $1\frac{1}{4}$  inch fuses simply by changing the screw type knob.

Knob is designed for easy gripping even with gloves.

Fuseholder is of molded phenolic and will withstand sever vibration, shock and other environmental conditions.

Neoprene washer and zinc plated, chromate dipped steel fastening nut furnished with each holder.

Normal current carrying capacity; 15 amperes for any voltage up to 250. U/L listed.

### BUSS Add-On Fuse Blocks for $1\frac{3}{32}$ x $1\frac{1}{2}$ inch Fuses

Single-pole fuseblock and separate end barrier assemble into unit of one or more poles. Units lock together. New poles can be added to either end of existing block. Made of molded phenolic. Marking strips to identify each circuit available.

Type	Description	List Price
<b>3742</b>	End-Barrier Only	\$0.18
<b>3743</b>	One-Pole Block Only	1.25
	Marking Strip in 50 inch length	.61

When ordering, specify number of end barriers and one-pole blocks desired. Only one end barrier needed for each assembled fuse block of any number of poles.

### BUSS STANDARD FUSE BLOCKS

Available from 1 to 12 poles. Have laminated black phenolic base. Clips of strong spring, Albaloy plated, highly resistant to corrosion with great gripping strength. Types 3823 and 3828 have solder terminals firmly seated in small base. Type 3833 has screw terminals on full base that provides ample insulation around terminals.

## TRON RECTIFIER FUSES

For Protection of Semi-Conductor Rectifiers and Like Applications

Another Outstanding Development by the Makers of BUSS Fuses

These TRON fuses are especially designed for the protection of semi-conductor rectifiers, SCR's, Thrusters, Solid State Devices or wherever a very fast acting fuse is needed. They provide extremely fast opening on overload and fault currents, with a high degree of restriction of the let-thru current.

If each diode is protected by a TRON fuse, the fuse will open very quickly when the current drawn exceeds the rating of the diode.

Thus when a short-circuit occurs in a diode the fuse opens and takes that diode out of the circuit. This protects other good diodes in the rectifier which might otherwise be damaged.

For time-current characteristic charts ask for BUSS bulletin HLS.

Test specification for all types of TRON rectifier fuses — carry 100% of rating; open at 1000 seconds on overloads between 120% and 180% of rating; open within 1 second at 250% of rating.

Note The values shown for multi-pole switches are amperes per pole except for motor load. See below.  
Note Current ratings are established at 77° F.  
Note All current ratings good to 50,000 ft. altitude. For higher altitude check local C-H office.  
Note AC current values good for frequencies from 50 to 400 cycles (except "▲" in Col 25 is 20 amp at 50-60 cycles).  
▲ = alternate voltage  
④ These figures are maximum current ratings for 10,000 operations. Longer life (more operations) can be expected when operated at less than rating of switch.  
● Motor load values for multi-pole switches are held on all poles of switches being connected in motor circuit and motor stalled current not exceeding 300% of normal running current.

Experience has shown that for voltages not in excess of 250, the current rating of aircraft switches is inversely proportional to the voltage. If the voltage is doubled, the rating is halved. Therefore, if the 125 volt a-c rating of a switch is known, it follows that on 200 volt ac, the current rating is 125/200 of 62.5% of its 125 volt ac rating.

This rule also applies to two or four pole switches used on polyphase systems. Cutler-Hammer aircraft switches carry per pole ratings and if the current and voltage handled by each pole is known, different rating combinations can be worked out. A double switch, with at least twice the rupturing capacity of one of its poles because there are twice the number of breaks in the circuit. Its life is only slightly more than that of one pole because breaks are not simultaneous. The first pole or break handles twice its normal rating resulting in rapid erosion of contact material.

- ▲ Momentary Contact.
- Indicates direction against which "lever lock" switch is locked. (Other locking combinations on request).
- ▲ Part numbers listed in Navy MIL Std. 242E (Navy).
- ④ These switches are listed in NAV SHIPS HANDBOOK of miniature parts for Electronic Equipment. Nav. Ships 0967-031-1000.
- ⑤ Small lever switch with keyway is built to MIL-S-8834 requirements, except "without lever seal".

The switches listed on these pages represent only a small fraction of the total number of small motor and appliance switches manufactured by C-H. Contact your local Sales Office or Distributor for more complete listings.

## SELECTOR SWITCH UNIQUE 1-PIECE MOLDED WAFER PROVIDES HIGH RELIABILITY

The new IRC-CTS design goes right to the heart of selector switch reliability . . . the wafer. Automated manufacture provides unprecedented uniformity. One-piece *molded* construction of the wafer virtually eliminates drift. In each production run, all switches are identical, terminal placement is exact and permanent. Machine exactness replaces human error and variation, eliminating wide tolerances and assuring high reliability.

- Compact 1 $\frac{1}{6}$ " size design allows more circuitry per unit of depth behind panel.
- Rivet-free construction permits closer stacking.
- Superior insulation due to repetitive exactness in terminal spacing, and molded glass alkyd material.
- 1000% more silver than used by most commercial switches—evenly applied at point of contact.
- Rotor contacts are double-wiping and self-cleaning.
- Stator contacts are integral with terminals.
- Molded stator will not break or crush during ordinary handling, or if it is dropped.

See Page 1223 for Engineering Laboratory Stocks of this Product

A balanced lever arm and star wheel detent assembly free from end and side thrust is available for precision military and instrumentation applications. Star wheel detent provides extremely long life and minimum turning torque variation. Double lever arm construction controls torque in both directions of rotation with practically no change in torque during 100,000 cycles of operation through 12 switch positions.

# IRC-CTS ROTARY SELECTOR SWITCHES

**IRC, Inc.**

## 212 Wafer Assembly

The wafer assembly of the IRC-CTS selector switch can be separated into three basic elements, the rotor insulator, the rotor contacts and the stator. The stator consists of the stator insulator, terminal lugs, contacts, contact ring, which is made as a single unit.

## Stator Insulator

The stator insulator is a circular molding which encloses the mid portion of each contact and serves as a container for the rotor. The stator insulator also serves as a natural solder and flux barrier, thus protecting the contact areas.

## Contact Resistance

Circuit resistance ranges from .003 to .004 ohms on standard switches when measured from one terminal to an adjacent terminal. When measured terminals are not adjacent, up to 180° apart, the resistance will measure higher due to the extra metal in the stator circuits. It is to be noted

## Contact Life:

Standard sterling silver laminated rotor contacts and brass silver plated stator provide reliable life for a minimum of

## Detent Rotational Life:

The standard 212 detent assembly (T79, T80, T81 & T82) has a rated life of 25,000 cycles through 12 positions and return.

## LONGER LIFE CONTACTS

- After 1,100,000 index operations, life tests reveal virtually no change in rotor contact resistance.
- 1,000% **more** silver than used by most commercial switches has been **evenly** applied at actual point of contact by exclusive process. (See Sketch.)
- Rotor contacts are double-wiping and self-cleaning.
- Stator contacts are integral with terminals.

## ELECTRICAL RATING

### Voltage and Current Ratings:

- 1 amp at 28 volts DC
- 1½ amps at 115 volts AC

### High Pot Test:

Between adjacent 30° terminals or terminals to ground: 1,750 volts AC RMS for one minute, Between adjacent 15° terminals: 750 volts AC RMS for one minute.

## The Stator

The Stator is the heart of the IRC-CTS selector switch, and determines the circuitry of the switch in conjunction with the location of the selected rotor contacts. The stator is actually a circuit pattern cut out of metal which forms the terminal lugs, center contact ring and the stator contact.

## Rotor

The rotor of the IRC-CTS selector switch holds the rotor contacts in place and carries the contacts from one position to another, providing controlled float which prevents open circuiting during severe shock or vibration.

that the circuit resistance check measures all the metal in the circuit. Thus actual resistance at the point of contact is considerably less than the measured resistance. In IRC-CTS assemblies, contact resistance is unusually stable throughout the switch life.

50,000 cycles through 12 positions and return without appreciable increase in contact resistance. (See detent life.)

The star wheel detent mechanism (T180, T181, & T182) has a rated life of 100,000 cycles through 12 positions and return.

## NEW MULTI-POLE MOLDED ROTARY SWITCHES, SERIES 20M.

- Superior Molded Material
- All Models Bonded & Ruggedized
- Panel Seal Available

Front View Showing Panel Locator which is Normally at 3 o'clock Position.

Rear View with Back Cover Cut Away to Show 4-Pole Construction with 4 Live Switching Contacts.

Although the new 20M-Series is 1/4" longer behind the panel than the 20-position molded switches described on the preceding page, the two styles are otherwise interchangeable in dimensions. Providing 19 live positions and off, the 20M- offers these additional features:

1. **Increased Versatility of Circuitry** — up to and including four poles per deck;
2. **Upgraded Insulation Resistance and Dielectric Qualities** — by use of melamine stators and rotors (or other MIL-M-14 molded materials when specially ordered);
3. **Built-in Panel Locator or Non-Turn Device;**
4. **Extended Switch Life** — new contact design with rotor brushes of phosphor bronze heavily silver-plated;
5. **All 20M- Models are Bonded and Ruggedized Construction;**
6. **Radial Alignment of Multi-Pole Contact Surfaces** — by means of newly-designed double-ball detent with diaphragm-type springs.

**VARIATIONS OF 20M-** Please request SK-142, Revision of March, 1967, or later for full dimensions and circuit diagrams. Besides the condensed listing in the accompanying table, various combinations of **shorting and non-shorting contacts for each deck** may be made. **Fixed stops** are built-in but may be altered for single-pole switches when specially ordered. **Over six decks** can be supplied for a reasonable number of poles; extra decks add 5/16" per deck and 5/16" per switch for rear support SU-3. **Ring-contact (suffix R)** may be specially ordered.

**PANEL SEAL PS20M-SERIES** — Sealed shaft and bushing meet the requirements of MIL-S-3786B for sealing. For details ask for SK-143, Revision of March, 1967, or later. The seal (prefix PS) adds \$1.75 per switch to catalog price.

**SPECIFICATIONS AND TEST DATA** — Available on request.

## LEVER ACTION SWITCHES — 6, 5, 4, 3, and 2-Position — LAMINATED, MOLDED, & SUB-MINIATURE

**LAMINATED 3- AND 4-POSITION, POSITIVE INDEXING.** These lever switches are derived from the J-B-T SS-14 instrument-type rotaries. Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw (1" slot for 3-position, 1 3/8" for 4-position) — mounting holes for boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. **SINGLE DECK** — spacing between centers: recommended, 3/4"; minimum, 9/16". **TWO DECK** — spacing: recommended, 15/16"; minimum, 13/16". 3/8" between decks matches TV twinlead wires. **SPRING RETURN TYPE** — single deck, 3-position switches may be ordered with spring return. Lever returns to position 11°, giving momentary action at positions 9° and 10°. For dimensions on all SS-14-IL series switches, ask for drawing SK-138.

Two-Deck Lever-Action Switch

SS-14-1L4F-2

**USES** — J-B-T Rotary Selector Switches are extensively used in quality test equipment, portable instruments, inspection setups, and other military aerospace and commercial applications where trouble-free, dependable performance is of major importance.

**FEATURES** — **Extra Contacts** — 14- and 20-position designs provide extra switching capability. **Dependability** — Sturdy rotors and decks with rigid 3-post deck suspension; current-carrying parts heavily silverplated to meet 100 hour salt spray test; sharp detent mechanism to assure positive indexing; insulation resistance above 50,000 megohms. **Low Contact Loss** — Double-grip collector arms, and large area contacts, silver to silver; average contact resistance, .007 ohms or less. **Ample Dielectric** — Conservatively rated at 1 amp., 125 VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp. AC or DC; maximum voltage between contacts, 1500 VAC, R.M.S.; between decks and ground, 2000 VAC, R.M.S.

**Enclosed** — Molded models have all moving contacts enclosed to minimize dirt and corrosion.

**Basic 14-Position:** 13 circuits and "off" per deck in 2" circle (SS-14) or 2-3/32" circle (MS-14) with 25° 43' angular indexing. Supplied individually boxed with 1-1/4" Bar Knob, (KN-14), not on bulk orders unless specified. For details, SS-14, 1 to 6 decks, see Print SK-42 Rev. B. MS-14 1 to 6 decks, Print SK-111 Rev. **\*\*\*BONDED RUGGEDIZED TYPES** As indicated in the table, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types using cured laminations for ruggedization, shockproofing and further enclosure. This additional dependability factor adds only approx. 1/64" and 35c catalog price per deck.

**6-POLE DOUBLE-THROW PER DECK —**

**1 or 2 DECKS (DT Series).** Widely used for simultaneous double-throw switching of 6 circuits per deck (18° throw). Fully enclosed — illustration shows protective cover cut-away. Circuit arrangement printed on switch front. If DTS Shorting Type, 1500 VAC R.M.S. between contacts and ground, 1000 VAC R.M.S. between contacts. See MS-20-1-6DT, MS-20-1-6DTS, and MS-20-2-6DT in table.

**CAUTION**— MIL-S-3786B, a sophisticated specification, spells out more than one performance level in each of several categories such as Temperature-Life, Vibration, Shock, and Altitude. Each level is designated by its own symbol. J-B-T SR05 models meet an exceptional number of levels.

• **USES** — For test equipment, airborne and transistorized equipment, geophysical apparatus, and other miniaturized electrical and electronic devices.

**TWO BASIC SERIES** — Full 12 live switching contacts per deck are available in Series 7000 using a patented wafer design feature where rotor contacts are on the front, and switching contacts are on the rear of the same deck. 1 to 4 poles per deck 1 to 6 decks, standard.

Up to 8 poles per dual-duty deck are available in Series 5000 which has up to 12 contacts including common on the front, and up to 12 contacts including common on the rear of the same deck. 1 to 4 poles on each side of dual-duty decks; 1 to 4 decks, standard.

**THREE ROTARY TYPES** — Both Basic Series are made in 3 types: **MILITARY STYLE SR05**, numbered for specific performance levels of MIL-S-3786B; **V TYPE**, of similar construction to SR05, but not ordinarily subjected to full military test procedures; and **X TYPE**, using the same materials as V type switches, but intended as replacements for previous models or as original components for non-military devices where requirements are similarly exacting.

SUB-MINIATURE TOGGLE SWITCHES

29th Year

J-B-T INSTRUMENTS, INC.

**Group IV** NEW SUB-MINIATURE TOGGLE SWITCHES  
SERIES JMT, MADE IN AMERICA BY J-B-T

MANUFACTURED IN CONNECTICUT by J-B-T, the sub-miniature types illustrated on this page make up the firm's fourth and newest group of toggle switches. Series JMT combines drastic reduction in size and weight with the trouble-free construction built into standard-size J-B-T switches. Widely used in manually controlled, low-current, solid-state devices and miniaturized circuitry of computers, instruments, space, geophysical, and test apparatus, these tiny switches also have application in aircraft, communications, and electronic equipment, and portable products.

Made with a distinctive GREEN BODY (bright color on some models, forest green on others) single-pole types are 1/4" thin, double-pole types less than 1/2" square, 3-pole and 4-pole types correspondingly small. All use single-hole mounting with 1/4" threaded bushing which will not turn or work loose in the J-B-T surface plate. Stringent in-plant controls assure terminals that are firmly staked and will withstand repeated soldering. Terminal holes accept up to three #22 wires.

**SPECIFICATIONS**

**Nominal Rating:** 5 Amp. resistive load, 125 VAC and 24 VDC. **Initial Contact Resistance:** 5 Milliohms max. 3 VDC, 100 Milliamps. **Insulation Resistance:** 10,000 Megohms, min. **Dielectric Strength:** 1,000 volts rms at sea level. **Life Under Load:** 100,000 make-and-break cycles minimum for all suffix-23 models; 60,000 for others. **Weight, Including Hardware:** SP, 0.19 oz.; DP, 0.23 oz.; 3-pole, 0.28 oz., 4-pole, 0.32 oz.

**MATERIALS:** Switching contacts and rockers are coin silver; center terminal silver-plated. Bat handle is bright chrome-plated brass. Case and cradle are molded of colored phenolic; models with forest green bodies use glass-filled phenolic selected for extra mechanical strength and arc resistance. Bushing, locking ring, and hex nuts are brass nickel-plated. Clamp and lockwasher are made of steel nickel-plated.

**HARDWARE AND MOUNTING**

Mounting hardware supplied consists of one locking ring W-RI-12, two hex nuts, W-NU-11, one internal tooth lockwasher, W-WA-16, Knurled nut, W-NU-12 also available.

**DIRECTION OF MOVEMENT** — All JMT switches make continuity to terminal OPPOSITE throw of lever.

**MOUNTING INFORMATION** — When mounting switch with locking ring, use drill procedure illustrated.

**COLOR CAPS** — Switches are normally supplied with bat handles. For color coding, tight-grip insulator caps are available for easy attachment before or after switches are mounted. Price, \$10.00 per thousand in bulk; 2c per switch if attached. Specify color and part number:

**J-B-T PUSH-BUTTON SUB-MINIATURE TOGGLES**

In the life of this catalog, it is expected that the JMT Series will be expanded to include models activated by a push-button in place of the standard bat handle. Your inquiries are invited.

**NOTES**

†These DT switches may also be used as ST by wiring only to applicable terminals. Example: JMT-123 can be connected as an "on and off" switch by using center terminals and terminals on one end only.

‡On orders for single switches, add 50c.

**TOGGLE SWITCHES — HEAVY DUTY**

J-B-T INSTRUMENTS, INC.

29th Year

**WHY IT PAYS TO SPECIFY J-B-T TOGGLE SWITCHES**

• **J-B-T** concentrates on trouble-free switches. Among the four groups of toggle switches J-B-T produces more than 170 models made to Government Specifications. Market studies indicate that while these switches are a must in military applications, almost half are produced for non-military use where the principal requirement is dependability. J-B-T apparently is specified because:

1. **Materials are good.** For instance, in MIL and AN heavy duty models, J-B-T uses generous proportions of selected silver alloys in integral construction for contact surface areas — to add overload protection, dissipate heat, and keep contact resistance under .005 ohms.
2. **The design is good.** All MS models have silicone rubber bushing seal for sand, dust and 15-foot head of water submersion tests. Medium-duty types MS25098 and MS25100 also feature case-to-terminal sealing and a new design which provides fast break and wider gap to surpass the 125 VDC endurance tests of MIL-S-3950C.
3. **The value is good.** The many features required to meet Government standards, and J-B-T's rigid in-plant testing pay off in long, useful life. Nevertheless, because J-B-T makes **only** quality switches, quantity production permits a surprisingly small price differential over run-of-the-mill brands.
4. **Deliveries are comparatively good.** See your distributor. Production is scheduled to back up his stocks with factory inventory of finished switches and work in process to meet predictable demand.

• **MIL-S-3950C SERIES** — Single-pole MS35058 with suffix —21 and above, and double-pole MS35059 types with suffix —21 and above are recommended when maximum reliability is required. Temperature, endurance, and altitude requirements exceed earlier MS types (suffix —1 to —19), AN3021 and AN3027 switches to MIL-S-6745, and ST styles to JAN-S-23 and MIL-S-21195A (Ships). All MS switches contain a silicone rubber bushing seal to meet sand and dust and 15-foot head of water submersion tests.

SINGLE & DOUBLE POLE — GOVERNMENT QUALITY

Cut-away view showing self-wiping double-grip contacts

• **MEDIUM DUTY** describes the current-carrying capacity — nominally 6 amp. at 125 VAC, 3 amp, at 250 VAC — rather than the life characteristics. Self-wiping heavily silver plated double grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

**NEW DESIGN FOR MS25098 & MS25100**

— Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950C. For example, after 20,000 cycles of operation at 65,000' altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

† AN3021-6 same as AN3021-5 with jumper.

§ Same dimensions as MS35059-27.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950B have internal toggle seal to meet 15 ft. water submersion test. MIL-S-3950 models are superseded by MIL-S-3950B models.  
NOTE B: For heavy duty switches in the MS25068, MS35058, and MS35059 Series, MIL-S-3950C calls for SCREW TERMINALS ONLY. These terminals have SOLDERABLE FINISH and may be soldered after removal of screw.

### OUTSTANDING 4-POLE SWITCHES TO MS25068 REQUIREMENTS

MS25068-27  
4-pole D7  
Lever Seal

• There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS25068.

Equally important, the internal construction uses rocker arms and contacts made of solid coin silver (not clad or brazed). The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty J-B-T MS switches. Dimensions same as MS35059 above except bodies including terminals: 1-11/32" long, 1-9/16" wide, 1-9/32" deep.

### UL IDENTIFICATION AND RATINGS: SINGLE AND DOUBLE-POLE; HEAVY DUTY AND MEDIUM DUTY

Underwriters' Laboratories, Inc. lists under "Switches, Special Use" (File E26557) models marked with the J-B-T part number shown below. In some instances, there are minor construction differences from ST

switches, but the ratings and external dimensions are the same. UL-marked types are not regularly stocked but only are manufactured in substantial production runs.

**Applications:** selective-calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding.

For further data, ask for Bulletins 162-R and D664A. Inquiries are invited on newly-developed miniature combination relay-oscillator types.

J-B-T frequency-sensitive electro-mechanical relays (decoders) are highly stable control devices. They intermittently make and break contacts when a signal of the same frequency as the tuned reed is received. Although the reed has a high Q, the bandwidth at which the relay responds will be proportional to the input signal level.

RR-A11- and RR-A10 types are round, 4-pin plug-in relays, used primarily on existing mobile equipment.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sealed construction. These units control the frequency of oscillation in vacuum tube or transistor oscillator circuits. The RO-B type oscillator control is recommended where accurate and stable AC signals are required.

RR-D types are internally shock-mounted resonant reed relays, which are square, sealed units with 7-pin miniature plug. They now are the most widely used J-B-T relays.

RO-D types are single-reed, internally shock mounted oscillator controls for applications where space saving is of importance. Dimensionally they are identical to RR-D relays.

### HIGH VOLTAGE FUSES

Designed for use in aircraft radio equipment, transmitting equipment, X-ray apparatus, high voltage rectifiers, etc., for circuits up to 20 KW DC or 30 KVA AC. Fuses are fiber enclosed with cadmium plated end caps. Two principles of arc suppression are employed: (1) Multi-break fuse wire which blows at each half inch of its length; (2) Ceramic baffles break the arc into several parts and quench it. Blow Time: 110%, 4-hour min.; 135%, 0-1 hour; 200% 0-2 minutes.

## CIRCUIT BREAKERS

**CBB Type CBT Type CBB Adapter**

Exact replacement circuit breakers for television and industrial applications. These circuit breakers are manufactured by Mel-Rain Corp. for Mallory to the same specifications as original equipment. "Anti-cheat" reset action is non-cycling. Button must be pressed to reset. Tripping mechanism is temperature compensating for constant protection. Normal tripping time is ten seconds or less. All values above 3.1 amps have special heavy-duty contacts to withstand heavy surge currents. CBT types have twist tab mounting lugs. CBB types have  $\frac{3}{8}$ "-32 x  $\frac{3}{4}$ " bushing and hex nut. CBT types may be converted to bushing mount by using CBB adapter. Ask for free television circuit breaker cross-reference. Lists all popular TV sets.

# MALLORY Switches

Mallory switches are available in three general styles: Rotary, lever-action and pushbutton. Most styles are supplied in both shorting and non-shorting contacts. Shorting switches have contacts with "make" before "breaking" and are widely used in audio circuits. Contacts in non-shorting switches "break" before "making". These switches may be chosen with phenolic, ceramic or glass-epoxy wafer materials. Ceramic is usually selected for high voltage circuits as in switching RF equipment. All switches are supplied with normal mounting hardware. Dial plates are not included (except for Type 13124L).

### PHENOLIC WAFER ROTARY SWITCHES

Mallory phenolic wafer rotary switches come in several sizes and contact arrangements. Supplied with nut, washer and 366-1 black knob. Phenolic is MIL grade Richardson T725.

# NEW! A FULL LINE OF PRECISION SWITCHES BY POTTER & BRUMFIELD

IN STOCK AT LEADING ELECTRICAL AND ELECTRONIC DISTRIBUTORS

## P&B'S EXPERIENCE ASSURES RELIABILITY AND PRECISION

For more than a third of a century, we have been designing and manufacturing reliable relays. This engineering and production knowhow is now being devoted to our new line of precision snap switches. These are quality switches designed to meet or exceed industry standards for electrical ratings and life characteristics. Operating forces, actuating characteristics and mounting dimensions make these switches directly interchangeable with many competitive types. P&B precision snap action switches meet Underwriters' Laboratories and Canadian Standards Association requirements.

## WIDE VARIETY OF STOCK SWITCHES FOR NEW APPLICATIONS AND DIRECT REPLACEMENTS

The snap switches in this catalog cover a variety of the most commonly used types and include three categories: Precision general purpose, precision miniature, and precision subminiature. All three basic types are available with various auxiliary actuators, terminals, and contact arrangements. They can be used for both AC and DC voltages.

Mounting holes, terminals, operating and release forces, pretravel, overtravel, differential travel and pertinent dimensions meet established industry standards.

## BASIC SNAP ACTION SWITCHES

### PRECISION GENERAL PURPOSE

Compact, reliable, with precise mechanical and conservatively rated electrical characteristics, P&B general purpose snap action switches are for use in applications where loads may be heavy and space is not the primary consideration. They are available with a broad variety of actuators, such as pin plungers, overtravel plungers, rigid lever, roller lever, panel mount plunger, and others, as illustrated and listed on the following pages.

### PRECISION MINIATURE

Sturdily constructed but light in weight and small in size, P&B precision miniature snap action switches are highly sensitive and especially suited for compact installations where precision is a primary factor. Their small size and high electrical capacity recommends them for applications of multiple installations in limited space. Basic types are available in various contact and terminal arrangements shown on the following pages.

### PRECISION SUBMINIATURE

Designed for applications requiring exceptionally small size and low operating forces, P&B precision subminiature switches are especially suited for electronic equipment, business machines, military apparatus and other precision electrical equipment. They are used where space and weight are primary considerations. These types are available for either direct operation by pushers, cams, or lever actuators with or without rollers. Solder, turret and quick-connect terminals are available.

## BEAU-TECH<sup>®</sup> SOLDERING AIDS

The hallmark of quality shows in each detail. Examine the straight or angled tips for the hard-to-reach areas... you'll find they're twist-proof, hard-chrome plated to shed solder. More, both ends are insulated from one another. The practical fork-ends are a "must" for twisting or holding wires. And when you want to scrape joints, connections or ream out lug holes, just flip your Beau-Tech soldering aid to the spade end. Non-slipping, non-rolling "hex" handles. Available in standard, miniature and single ended models.

**DESIGN** IN-DUSTRONIC tools are more streamlined, with slender jaws and fine points, to reach into the tight spots and perform the specific work required of the electronics technician.

**TEST AND INSPECTION** Individually tested for hardness, each tool must maintain highest standards for handle strength and cutting ability. To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

**WORKMANSHIP** IN-DUSTRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburation" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness. **Individually Boxed** — Six is minimum quantity.

**PLASTIC HANDLES**—(TN-22, TN-33, TN-44, TN-55) (M2T, M3T, M4T, M5T) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

**METAL HANDLES**—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x 3/8" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

**METAL ENDS**—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

**FORKED END**—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

**SPADE END**—is a reamer to clean lug holes of solder.

**CURVED END**—can be used as a scribe for marking chassis. As a circuit tracer when looking for loose connections. As a diol cord stringer. Hook can be bent to a 90 degree angle if desired.

**KNIFE & SCRAPER**—for cutting and repairing printed circuits.

**WIRE BRUSH**—has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation. Order tool number by wire size being used. \*\*N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

# ERSIN Multicore

## 5-core solder

Available in 1-lb.  
and 7-lb. reels

### TECHNICAL ADVANTAGES:

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water-white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

Conforms with all pertinent federal specifications.

**Multicore construction:** Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

NOTE: Multicore presents an entirely new concept in solder packaging designed to bring the solder to you in perfect condition at all times. The attractive polystyrene foam container resists damage in shipping and each individual reel is skin packed to keep the solder clean and fresh and to minimize oxidation no matter how long it may be stored.

### STANDARD TIN/LEAD ALLOYS AND GAUGES

Available from stock: 63/37; 60/40, 50/50; 45/55; 40/60; Savbit; Special Alloys—H.M.P. (High melting point, 565° F); L.M.P. (low melting point, 354° F). Other alloys upon request.  
Gauges: 14 s.w.g. (.080") through 34 s.w.g. (.009").

NOTE: Soldering iron tips should always be 108° F above melting point of alloy.

### NEEDLE FINE GAUGES

For microminiaturization, integrated circuits and other similar requirements. Off-the-shelf delivery in alloys 63/37 and 60/40, in even gauges from 24 s.w.g. (.022") through 34 s.w.g. (.009").

### COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT stops the wear and erosion of copper soldering iron tips... increases tip life by 1,000%.

**Characteristics and specifications:** Savbit Alloy is available in Ersin Multicore 5-core solder containing non-corrosive extra-fast Ersin Flux in 14, 16, 18, 20 and 22 gauge. Melting point: Virtually the same as standard tin/lead alloys. Excellent conductivity, tensile and shear strength.

Available in new 1-lb. and 7-lb. reels, skin wrapped and foam packaged.

### NEW ERSIN LIQUID FLUXES

Meet the same high quality standards as Ersin Multicore Solder. Three new Fluxes: Formula No. 5380 and Formula No. 0360 meet Government MIL specifications for active and non-activated liquid fluxes, respectively. Formula No. 4370 is an activated liquid flux which is the external counterpart of the flux contained in Ersin Multicore 5-Core Solder. Conforms to the latest Federal Specification QQ-S-571d.

### NEW MULTICORE HIGH PURITY EXTRUDED SOLID BAR SOLDER

Offers higher purity achieved through greater quality control, only possible with extrusions. Available in 2 lb. skin packaging as well as cartons. Available in two alloys: 60/40 and 63/37.

### PC (PRINTED CIRCUIT) PAK 60/40—22 s.w.g. (.028")

### NEW EASY DISPENSER PAK 60/40—18 s.w.g. (.048")

Ideal for servicemen, hobbyists, lab technicians. Paks are flameproof—can be used close to the heat.

ERSIN Multicore's national network of industrial distributors, in 50 states, facilitates prompt off-the-shelf delivery at factory-low prices.

### NEW SOLDERABILITY TEST MACHINE

Designed and built by Multicore Solders Ltd., this precision machine accurately measures the degree of solderability of terminal component wires and affords positive and totally reliable results. Complies with International Specification I.E.C. Publication 68-2 Test T.; developed in association with the International Electrotechnical Commission.

Free Evaluation Test Samples and "Modern Solders" technical booklet available. Address requests, on company letterhead to: Multicore Sales Corp.

Imported from England  
Conforms to all applicable Federal Specifications QQS-571.

## PRECISION SOLDERING INSTRUMENTS

### FIVE REASONS WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

#### 1. MINIATURE SIZE

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

#### 2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as 1/4 ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

#### 3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat within the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.

#### 4. SAFETY

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

#### 5. ECONOMY

A standard ORYX low-voltage industrial iron costs only \$5.35 in production quantities.

### REPLACEMENT TIPS for low-voltage soldering irons

Oryx tips are precision machined from a special copper alloy with outstanding heat conduction characteristics. Nickel plating reduces scaling. Iron-plated tips and solid nickel tips give much longer life with slightly reduced heat transfer. Gold tips recommended for microcircuits only.

## NEW! ANTI-SEIZE SEALING COMPOUND

- FOR TORQUE WRENCHING
- FOR THREADED CONNECTIONS
- FOR SOLDERING IRON TIPS
- FOR SEALING

Meets MIL-A-907

Telvac "No-Stik" is an anti-seize sealing compound that provides a gas- and moisture-tight seal for threaded connections. When applied to screw threads, antenna, or conduit connections, disassembly is made much easier, even after years of use. Seizing and galling are eliminated. "No-Stik" may be used with titanium, stainless steel, iron, ordinary steel, brass, copper, alloys, die castings, plastics, or aluminum. When bolts are to be tightened with a torque wrench, "No-Stik" is first applied to the threads and shoulder of the bolt. This not only eliminates seizing, galling, and chatter, but also insures proper torque by assuring that the wrench does not trip too soon. Even though used in corrosive atmospheres, salt spray, or at extreme temperatures, the bolts can always be disassembled easily. Other important uses include aluminum connections (to prevent binding) and between soldering iron tips and their heating elements (to prevent freezing and improve heat conduction). Telvac "No-Stik" meets MIL-A-907. No on-the-job mixing is required — it is ready to use and may be applied by brush, finger, knife, or by dipping.

Cat. No. NSTK-1 (1-oz. sample tin).....Net \$ .29 ea.

# WALLBRAND SOLDERING PENCILS, IRONS AND GUNS

## SINCE 1864

Here are a few of the reasons why engineers choose WallBrand pencils and irons. They're Thermogram Rated for better efficiency. Cooler Handles. Feather Light. Perfect Balance. Extreme Operator Comfort.

**Production Line Model 18HD**—Thermogram Value: 300—25 watt input. Engineered for continuous precision soldering applications, the Model 18 has a total weight (less cord) of only 1½ ounces. A wide selection of tips available. Specifically engineered for the demanding applications of micro-circuitry, and high density packaging, precision work on solid state devices, printed circuits, etc. Designed with the critical temperature ranges of micro-miniature components in mind.

**Production Line Model 14HD**—Thermogram Value: 900—40 watt input. The Model 14 has the same precision components as the Model 18 and is designed for continuous production line work requiring more heat in a wide variety of tip sizes. Also 50 watt. Now, in addition to the present Wall soldering pencil irons, you can have Wall soldering pencils in a new plug type system. All heating elements for the 614-618 and sub-miniature 6116 are interchangeable with one handle and cord assembly.

**HD Type for continuous, heavy duty soldering requirements:**

- Triple-life resistance wire wound on pure mica.
- Offers constant, even tip temperature.
- Extra fast recovery.
- Excellent balance.
- 120 or 130 volts, ac or dc (other voltages on request).

WALL MANUFACTURING CO.,

Industrial Soldering Pencils are built to exceed federal specification W-S-570a as amended. WallBrand soldering products are UL and CSA listed.

# Weller® DUAL HEAT Soldering Guns

**Dual heat.** All Weller guns offer Dual Heat—an original Weller feature that provides two tip temperatures from the same gun. Two trigger positions permit instant switching to high or low heat, whichever is best suited for the job. The use of low heat prevents damage when soldering near heat-sensitive components and prolongs tip life. High heat is instantly available when needed.

**Instant heat.** Solders in seconds. No waiting for the tip to heat. No wasted current.

**High-efficiency tip.** Made of copper for superior heat transfer and optimum soldering results. Slips easily into difficult places.

**Exclusive tip grip.** Wiping action of tip fastening nuts eliminates contact resistance and oxidation. This assures full, constant heat.

**Spotlight.** Illuminates the work and eliminates shadows.

**Fingertip control.** Heat is instantly "on" when trigger is pulled, instantly "off" when trigger is released. No need to unplug the gun. No danger of damage from an idling hot tool.

**Operating comfort.** Compact design and perfect balance make precision soldering easy and eliminate fatigue.

**Guaranteed one year.** All Weller guns are UL and CSA approved and guaranteed for a full year against defects in material and workmanship.

## "BLUE CHIP" TRANSFORMERS

62 TYPES

5 DIFFERENT SIZES

Tiny, plastic cased, Blue Chip transformers for printed circuit applications, are available for a wide choice of power ratings.

Five different sizes, from .10 to 1.2 cubic inches with a total of 62 new ratings are listed below to indicate the available power levels for both voice frequency range and extended frequency operation. These ratings take into account not only power handling capacities at minimum frequencies, but also total harmonic distortion under stated conditions. Within the limits shown on the rating charts, variations in both power and distortion levels are possible depending upon the minimum operating frequency.

Blue Chip transformers meet Mil-T-27A, Grade 5, Class S requirements. These versatile transformers are available from ADC, or through your distributor.

## POWER TRANSFORMERS FOR MILITARY AND INDUSTRIAL APPLICATIONS

Reliability, minimum size and long life under rugged environmental conditions are prime requisites in today's military electronic equipment. To meet these modern standards, ADC offers a complete line of hermetically sealed power transformers. Designed to meet MIL-T-27A specifications and utilizing MIL cases and mounting dimensions, these units offer our customers a ready source for prototype and produc-

tion applications. All military contractors and commercial electronic engineers with stringent environmental conditions will find these carefully rated units ideally suited. For those applications where hermetic sealing is not necessary, we offer the conservative transformer designs of our hermetically sealed line, in drawn steel cases of MIL size and mounting dimensions with phenolic terminal plates and solder lug terminals.

### POWER TRANSFORMERS—60 Cycle

ADC offers these standard power transformer designs to cover a wide range of requirements for electronic circuit application. They are available in standard MIL case sizes, hermetically sealed to meet all requirements of MIL-T-27A.

Grade 4, Class R, life expectancy X. Maximum operating altitude is 10,000 feet.

The same electrical ratings are also available as commercial grade fully enclosed units for non-military applications in the same MIL case sizes. This version is furnished with a phenolic terminal board and heavy duty solder lug terminals. Mounting screws and tapped inserts provide the same mounting centers as MIL-T-27A versions.

## AUDIO TRANSFORMERS FOR MILITARY AND COMMERCIAL APPLICATIONS

ADC offers the following designs to cover a wide range of standard audio applications, from low power transistors through heavy duty output circuits. They are conservatively rated at  $\pm 1/2$  db from 30 to 15,000 cycles at the maximum rated power. Each is designed for minimum insertion loss, is fully impregnated before potting and rated for dependable continuous duty operation.

These audio transformers are available in standard MIL cases, hermetically sealed to meet all requirements of MIL-T-27A. THE SAME RATINGS ARE ALSO AVAILABLE AS COMMERCIAL GRADE COMPONENTS, featuring the lower cost construction of a phenolic terminal board with solder lug terminals in the same drawn MIL cases.

## TELEPHONE COILS

For many years, ADC has been a dependable source of transformers and filters for the telephone and telegraph industry. Recently, we have designed and tooled for additional items in a series of "coils" which are electrically and physically interchangeable with similar components made by Western Electric. These items are listed below with the equivalent Western Electric number. All items in this series can be supplied in MIL cases if desired.

## ADC REPEATING COILS

**104A**—Cord Circuit. This repeating coil is designed to have good transmission efficiency for voice frequencies. Low frequency ringing currents are attenuated and circuit will not ring through. Case is heavy steel to eliminate all crosstalk. Core will not saturate at maximum normal current.

**104B**—Phantom. The 104B Repeating Coil is a 4-winding coil, for use in phantom circuits. The phantom winding (5-6-7-8) is parallel wound. Heavy Formvar wire is used for maximum surge voltage or lightning protection. This coil has good transmission efficiency at both ringing and voice frequencies.

## INDUCTION COILS

- 103A—Induction Coil is a 2-winding coil for local battery telephones.
- 103B—Anti-Sidetone Induction Coil is similar to 103A, but with an additional winding for anti-sidetone connection.
- 103C—Anti-Sidetone Induction Coil is designed for common battery telephone use.

## PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is  $\pm 1$  DB from 30 to 15,000 cps. All units feature excellent performance characteristics with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "EIA" standards.

Transformers PGA 1 through PGA 10 are supplied in hermetically sealed cases.

## HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

## MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of  $-55^{\circ}\text{C}$  to  $+75^{\circ}\text{C}$ .

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.

# FREED FILTERS

To MIL-T-27A and MIL-F-18327

Freed Standard Filters are Hermetically Sealed Miniature and Sub-Miniature high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

**Low Pass Filters:** The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40db or more at 2 cut-off frequency.

**ILP Interstage Low Pass Filter.** Characteristic Impedance 10,000 ohms, in and out.

**LLP Line Low Pass Filter.** Characteristic Impedance 500 to 600 Ω, in and out.

**High Pass Filters:** The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

**IHP Interstage High Pass Filter.** Characteristic Impedance 10,000 ohms, in and out.

**LHP Line High Pass Filter.** Characteristic Impedance 500 to 600 Ω, in and out.

**Band Pass Filters:** The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

**IBP Interstage Band Pass Filter.** Nominal input impedance—10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

**LBP Line Band Pass Filter.** Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage.)

## SERIES 1950 NULL "T" FILTERS

The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

Prices on request.

## TELEGRAPH TONE CHANNEL FILTERS

### HERMETICALLY SEALED TO MIL-T-27A AND MIL-F-18327 SPECIFICATIONS

Freed Band Pass Filters are extensively used in multiplex frequency shift transmitting and receiving. Stock filters cover all narrow and wide band channels. All units are built with a standard octal socket.

FBT Transmitting Filters are built for a 600 ohm in and out characteristic impedance. Filter configuration allows paralleling of channel outputs. 10db adjacent channel crossover attenuation.

FBR Receiving Filters are designed for a characteristic impedance of 600 ohms in and out. Filter configuration permits paralleling of channel inputs. 20db adjacent channel crossover attenuation.

# volt-pac<sup>®</sup> VARIABLE TRANSFORMERS

Manual uncased unit—exposed terminals

Manual cased unit—exposed terminals

Manual cased unit—enclosed terminals

The Volt-Pac variable transformer is a control device which provides continuously adjustable output voltage from a fixed line input to vary the voltage applied to a particular electrical load. With Volt Pac units, output voltage is changed by flux transformation...in the unsaturated range of the magnetic core. The results...low cost, versatility, reliability, simplicity, and no wave form distortion.

Volt-Pac units, for surface or back-of-panel mounting, are designed for operation in ambients of -20C to +40C at full rated load, and under all load conditions have low electrical losses.

\* When Overvoltage Connection is used, rated current should not be exceeded. Output kva for Overvoltage Connection is maximum output voltage times rated current.

† When using extended tap connections, operation is for 60 cycles per second only.

‡ Output at Overvoltage Connection is 0-132 volts.

§ When operated on lower input-voltage tap, rated current must be reduced when output voltage exceeds 140 percent of input voltage.

¶ For Line-voltage Connection only—No Over-voltage Connection provided.

■ For 240-volt input, 0-240-volt output, application only.

• For 480-volt input, 0-480-volt output, application only.

♢ 60 cycles only.

## BEYER TRANSFORMERS MINIATURE AUDIO

The BEYER line of miniature audio transformers distributed by GOTHAM represents over 30 years of experience in the field on the part of one of Europe's largest quality microphone manufacturers. It is for this reason that we make only one type of transformer in two sizes: A low level audio transformer suitable for microphones, tape playback heads, etc.

A special winding process permits these transformers to be made in this miniature size while maintaining studio quality frequency response, distortion, and level capability. The coil is wound on a continuous laminated core which means the elimination of the split core with its inherent losses. Result is a semi-toroidal construction with its superior resistance to hum induction.

BEYER transformers are used in professional audio equipment by such outstanding manufacturers as Ampex, Bauer, Collins, Precision Instrument, Rust, and many others. All transformers are made to special order to O.E.M. users' specifications. Samples can be supplied within 2 weeks, production usually within 4 weeks.

### FOUR PHYSICAL MOUNTINGS ARE AVAILABLE:

**Threaded Stud:** The Model TR-45 Commercial Quality and TR-145 Studio Quality units are offered in mu-metal housing with threaded stud supplied with two nuts.

**Solder Lug:** The Model TR-45L and TR-145L are same as above but have radial lugs each end of housing to permit terminal board or Vector socket mounting. Also available in sub-miniature TR-710 Model (see fig.). Primary and secondary windings brought out opposite ends of mu-metal can.

**Plug-in:** The Model BV-36 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing with 7-pin miniature plug base. Same mu-metal shielding.

**Printed Circuit:** The Model BV-37 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing only 1.09" high with special 7-pin, 8-pin, or 9-pin printed circuit base.

### ELECTRICAL CHARACTERISTICS:

Transformers are supplied with any turns ratio from 1:1 to 1:150, tapped and split windings, static shielding, high voltage test, vacuum impregnating or other requirements.

## WOW & FLUTTER METERS ME 101/102

The ME-101/102 instruments are intended for the measurement of the wow and flutter content of all types of recording and reproducing devices. They are fully transistorized, simple and convenient to use. The units are particularly suited for production testing and service work in addition to laboratory testing.

An internal signal generator provides the standard frequency of 3150 Hz. For the purpose of static and dynamic recalibration of the measuring unit, the generator can be detuned in a definite manner or can be frequency modulated from the power line.

Tone fluctuations from ±0.02 to ±2.5% for the ME-101 and ±0.01 to ±0.75% for the ME-102 can be read linearly or weighted as quasi-peak values (according to CCIR and DIN). Hence the properties of high quality tape and record playing equipment, as well as those of dictating machines and home equipment come within the ranges of the instruments. The fluctuation meter ballistics conform to the CCIR standard. A second instrument, the "drift" indicator, measures the frequency deviation of the recorded tone from 3150 Hz. Both indicating instruments can be switched to "rapid" or "slow" indication, as desired.

Besides the normal measuring connections on the front of the instruments, the back is provided with a connector for testing home tape recorders and record players. Other connectors are provided for the connection of external filters, oscilloscopes and graphic recorders.

All North Hills wide band transformers described on this sheet have low insertion loss (less than 1 db). Those with balanced windings have a very low unbalanced voltage and a center tap. Power rating for all units is 1 watt. Applications include antenna matching, interstage coupling, impedance matching, computer drive circuits, signal distribution, pulse applications, voltage step-up, dc isolation, phase detectors, balanced modulators.

Custom units designed to your specifications include power wide band transformers, pulse transformers, filters and adjustable inductors.

See Section 4000 for Precision AC and DC Power Sources.

This series supplements the various other series of wideband transformers covering the video, low frequency and high frequency ranges. The windings do not have D.C. isolation. The insertion loss is less than 1 db and the VSWR is less than 1.3 when properly connected by means of appropriate strip-line.

The case is small, being only 0.590" L x 0.590" W x 0.375" H. The core and windings are carefully sealed with a special epoxy resin and cased in a housing designed for both commercial and military applications. The housing is molded diallylphthalate which meets military specification MIL-M-14F. The terminals are gold plated.

**FILAMENT TRANSFORMERS — THE "FOUR" SERIES**

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designed. All have 117 V. 50/60 cycle primary.

## OHMITE Variable Transformers

Seven basic physical types meet most industrial requirements with long, maintenance-free life. Excellent regulation at any point within rated load; free from wave-form distortion. Direct-reading 2-scale (1 per side) dial supplied; CW also available. New space-saving low power types VT1, VT2 and VT3 have adjustable shaft independent of brush assembly, 3-way terminals, instantly replaceable brush contacts and improved heat dissipation. **Mounting:** Easily replace other brands: VT2LN, VT1, VT02 and VT3 have ¼-32 thd. bushing; VT8 and VT20, 4-hole bolt mount; VT4, 3-hole bolt mount convertible to 4-hole with adapter plate. **Enclosed Types:** Gray wrinkle-finish cases. Units with suffix B

have exposed terminal panel and mounting base; E, fixed type for table or panel mounting; F, portable with cord, outlet socket and fuse; G, deluxe portable with handle, circuit breaker and switch for overvoltage selection. Final suffix: V indicates with voltmeter; VA, voltammeter; VW, volt/wattmeter; all come with handle except VT8NF series. **Other Options:** All types except VT2LN offer shafts, extendable from brush or base side; ganged versions have thru-shaft with same flexibility. Final suffix C types come with 3-cond. input and output with one grounded to case. **UL Listing:** Most single and tandem VT4, VT8 and VT20 units for 120 volt operation are U/L Listed. Consult factory.

# FOR USE IN DC POWER SUPPLIES (TYPE DCV) CONSTANT VOLTAGE TRANSFORMERS

Signal DCV transformers are specifically manufactured for use in DC Power Supplies. In order to increase their versatility they are designed with two center-tapped secondaries which may be series or parallel connected. They may be used with either full wave center-tap or full wave bridge rectifiers. Therefore there are four possible outputs available from each type. These output ratings and recommended filter capacitors are listed in the "ELECTRICAL DATA" chart. It is assumed that silicon rectifiers will be used.

DCV transformers are constructed with prime raw materials and feature conservative design. All DCV's are vacuum impregnated with an epoxy varnish to assure void-free impregnation and eliminate acoustic noise.

DCV transformers are operated in ferro-resonance and are used in conjunction with an AC capacitor. These capacitors are supplied with the transformers.

Signal ACV transformers are manufactured for use with AC loads. They are simple and rugged designs and will regulate to within plus or minus 1% for input variations from 95-130V at 60 cps. If regulation of plus or minus ½% or better is desired, special units can be made to your order. ACV transformers will regulate with loads that are not unity power factor.

Full regulation is maintained at any load from about 20% to 100%. Overload current is limited to a maximum of 200% of rated current at short circuit. The 6.4 and 12.8V ratings are ideal for use with tube or lamp loads since the short circuit current rating limits the inrush current to cold filaments. Stabilization of the voltage results in longer filament life.

ACV transformers are "normal" harmonic type with approximately a square wave output.

## ADVANTAGES OF CONSTANT VOLTAGE TRANSFORMERS

**REGULATION** — output regulated to plus or minus 1% for line voltage variations of 95 to 130V at 60 cps.

**SELF-PROTECTION** — against output short circuit. Current limited to a maximum of 2 times rated current.

**MECHANICALLY RUGGED** — as resistant to mechanical shock as conventional power transformers.

**NO MOVING PARTS** — no adjustment or maintenance necessary.

**SQUARE WAVE OUTPUT** — ideal for use in rectifier circuits—little filtering needed.

**HIGH DEGREE OF ISOLATION** — between input and output circuits both physical and electrical isolation, electro-static shields not necessary.

**RESONATING CAPACITOR** — supplied with transformers.

**EPOXY IMPREGNATION** — minimizes acoustic noise.

### METHOD OF DETERMINING SECONDARY CURRENT RATING

Since our transformers may be used in many possible configurations, the current shown is rms secondary winding current. Secondary current ratings are rms ac values, NOT dc values. When selecting the "Secondary Amp" rating, the conversion chart at the right should be used.

# HIGH CURRENT CHOKES

### HIGH CURRENT CHOKES

Signal's line of High Current Chokes is the most extensive available. It is designed to complement the selection of High Current Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full rated DC current. All resistance ratings are maximum values.

Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

### INDUCTANCE VARIATION WITH DC CURRENT

The curve shown applies to the whole line of chokes. It allows the user to determine the value of inductance which will be obtained at intermediate and overload values of DC current. The values on the curve are stated in generalized coordinates of % inductance versus % DC current.

For example, the CH-100 at 50 amperes (50% DC Current) will have an inductance of 0.75 MHY (150% of rating), the CH-25 at 31 amperes (125% DC current) will have an inductance of 3.5 MHY (70% of rating).

It is not recommended that chokes be used at over 100% of rated current since temperature rise will then be excessive. However, if load current is intermittent, and RMS current is less than maximum rated current, it is permissible.

Special "swinging chokes" can be supplied where the slope of this characteristic is emphasized. Specify minimum inductance required at two current values (usually maximum and minimum current) and we will furnish prompt quotations.

At higher power loads (above 2-3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher

conversion efficiency and lighter power line drain of 3 phase systems. Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.

# NEW DESIGN AND CONSTRUCTION SMALLER • LIGHTER • MORE EFFICIENT

### GRAIN-ORIENTED STEEL CORE

These cores permit the use of higher peak flux densities for the same core loss. This results in a lower number of turns required and therefore, a smaller, more compact transformer.

### STRIP-WOUND SECONDARIES

At the heavy current used in this line it becomes practical and desirable to use wide copper strip (as wide as the coil itself) for windings. Besides the obvious advantages of excellent winding space factor, the heat dissipation of the coil is improved. This improvement is due to the fact that the heat generated in the windings has a pure

copper path to the coil ends, where it can be dissipated. In conventional windings of many turns per layer this heat flow is impeded by wire insulation and air spaces between turns. Therefore, the use of copper strip windings yields a dramatic reduction in size and weight.

### CLASS F INSULATION USED THROUGHOUT

Class F insulation is rated for unlimited life at a total temperature of 155°C (ambient plus temperature rise).

Class A insulation has a maximum temperature rating of 105°C. The "nominal" current ratings given to this series are for a temperature rise of 45°C above 55°C ambient (Class A). Since Class F insulation is

used it is permissible to increase these ratings by 40% (700 and 1400 amperes) without reducing the reliability of the transformer. The temperature rise will be 100°C over a 55°C ambient. The only limitation is not the transformer, but the temperature rating of surrounding components which may be affected by the additional heat radiated by the transformer.

HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS

AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "UP" lines are designed for a maximum of 55°C rise above ambient, for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy 1/4 inch phenolic terminal boards are provided with plated brass screws and flat washers. Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings.

## "DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec.

As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as

208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is doubled.

## "UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec.

The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts. This type is quite useful to boost low line

voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

### SIGNALS CUSTOM SERVICE

Many of our customers do not realize that the major portion of our shipments consists of "special" or "custom" items.

Usually, the final application of one of our stock transformers does not require the full number of taps or windings provided. These naturally are part of the cost of the item. If

we are advised as to the specific taps used or as to what intermediate voltage or current is required we can begin production quickly on this variation of our stock item. If we define production quantities as roughly over 50 pieces, the customer will do better price-wise on his custom made item than on the standard.

# SOLATRON® line voltage regulators

The Solatron® LVR is the first regulator to combine in one unit the qualities of fast response, "tight" voltage regulation, no moving parts, adjustable output, compactness, and high kva capacity.

The Solatron® regulator holds voltage constant within ±1% for any combination of line, load, and frequency, in the face of line variations up to +10/-20%, load variation from 0-100%, and frequency variation of ±5% or greater.

The Solatron is a solid-state device with no moving parts, requiring no adjustment, maintenance, or attention. It combines the ruggedness typical of transformers with the light weight of electronic control circuitry, resulting in a regulator of remarkable compactness. It has great versatility in location, floor or wall mounting, and installation.

## SOLA® Multi-tap™ CVR regulated power supply transformer

The SOLA Multi-tap™ CVR is a constant voltage transformer with taps to provide special voltages ready for rectification with stock silicon rectifiers to complete a regulated d.c. power supply. In effect, the Multi-tap CVR is a custom SOLA CV transformer with off-the-shelf availability, at low cost, for small quantity requirements. Six models provide over 100 regulated output voltages. The relatively square

wave-shape makes the Multi-tap CVR especially suited to rectifier applications.

All CVR transformers are designed to operate in Full wave center tap or bridge type circuits with readily available stock silicon rectifiers. The regulating ability and typical characteristics of the CVR are similar to the familiar Sola constant voltage (CVN) transformer.

Designed for 105-125 VAC, 60-cycle input.

### applications for the Multi-tap™ CVR

- Design of a regulated d.c. power supply requiring custom output for short-run production.
- Building block systems requiring voltage adjustability for later additions of components.
- Systems requiring voltage adjustability to compensate for line drop to remote units.
- Immediate requirements when custom Sola CV is being designed and manufactured.
- Short-run production requiring low-cost, and "off-the-shelf" custom Sola CV.
- Prototypes requiring custom Sola CV transformers.
- Immediate requirements for experimentation.

### schematics for CVR series

Connection for Full-wave center tap rectification for maximum output.

Connection for Full-wave Bridge rectification, for maximum output.

Each CVR model has the winding arrangement and terminal numbering shown in the schematics at left. The primary winding is connected to the two terminals marked "line" on the capacitor side of the transformer or terminals marked #11. Write for complete hook-up tables showing output possibilities.

When you specify Staco Variable Autotransformers you get all these important advantages: Variable output voltages with high efficiency, reliability and minimum maintenance; epoxy coated coils (where possible) that increase commutator stability; optimum core and coil design results in higher current ratings and greater overload capabilities; delivery of output voltages of zero to line voltage or zero to 17% above line voltage; terminals permit connection for increasing voltage in either clockwise or counter-clockwise rotation of knob; regulation is independent of load... zero wave form distortion; moderate temperature rise; precious metal plating of commutator surface eliminates oxidation and deterioration; all units designed for 50/60 cycle operation except as noted.

# STANCOR OUTPUT TRANSFORMER CHART

SECTION 5600

A simplified selection of the proper transformer for use as a replacement in radio receivers or in the construction of audio amplifiers. To use this chart, check the first column for the tube being used, then read across for the applicable operating characteristics and correct Stancor transformer. In most cases, two Stancor part numbers are indicated in order to give a choice of Mounting styles.

## ULTRA MINIATURE

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power.

These transformers are designed primarily for transistor audio applications but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations.

COMMERCIAL

power transformers

Stancor's broad line of commercial grade power transformers offers a choice of standard mounting styles. Listings are in ascending order of plate-supply voltage for ease of selection.

All units are designed and built to meet the exacting requirements of EIA for electrical tolerances, dielectric strength, temperature rise and construction. All are insulated with class A materials; (105°C max. operating temperature).

Transformers designed for full-wave C.T. rectification with capacitor input filter may be used with choke input filter allowing an increase in D.C. current of 30%.

Transformers designed for full-wave C.T. rectification with choke input filter may be used with capacitor input filter requiring a decrease in D.C. current of 25%.

\*Quantity Shown is Total Number used in a given circuit. Rectifiers should be equivalent to Sarks Tarzian numbers shown.

\*Surge protection resistors are recommended when capacitor input filters are used. Allow 3.3 ohms per 70 volts R.M.S. applied voltage. Transformer secondary winding D.C. resistance may be used as part or all of the amount required.

**SILICON OR SELENIUM RECTIFIER TRANSFORMERS:**

Primary — 117 Volts 50 60 Cycles.  
Solder Lug Termination

These transformers have been designed to operate in full-wave center tap or bridge rectifier circuits. The D.C. voltages shown are approximate since they depend on the internal drop of the rectifiers used.

Primary taps and an additional buck or boost tapped winding provides a wide range of output voltages. For detailed terminal connections, output voltages, etc. write for bulletin 518-R. For matching high current chokes see page 22.

# POWERSTAT® Variable Transformers now

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight*, only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-pull sets. 1156D-1256D Series types are available in ratings to 244 kva.

NOW WITH POWERKOTE\* COILS

\*PATENT PENDING

## 40-VOLT SERIES

Meet high current, low voltage requirements of low voltage power supplies and a wide range of transistor circuit applications. Manually-operated and motor-driven single, 2- and 3-gang single phase types available.

## LINE CORRECTORS

Used to correct line voltage variations to maintain a constant output voltage or to supply a limited range of output voltage from a stable a-c source. Manually operated and motor-driven types available.

## OIL-COOLED AND EXPLOSION-PROOF

Oil-cooled units substantially increase ratings above equivalent air-cooled types and provide a measure of safety. Explosion-proof models are Underwriters' Laboratories listed for Class 1, Group D service. Both are manually operated only.

## LW136B SERIES

Have three windings. Connections can be made for operation as a source of adjustable low output voltage, a line voltage corrector or a limited range variable transformer. Manually operated and motor-driven, open and enclosed construction types available. Full connections and ratings on request.

TYPE VS116B

TYPE VS3PN126

TYPE VS146T

**GENERAL UTILITY MOUNTING** – Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with knobs incorporating direct-reading voltmeters. Voltmeters remain stationary as the knob rim is turned, have an accuracy of  $\pm 3\%$  of full scale and are insensitive to stray magnetic fields. When ordering, add VS prefix to the type number given in the charts.

**BACK-OF-PANEL MOUNTING** – Standard cataloged POWERSTAT Variable Transformers in the 21-22 through the 146-246 series designed or adaptable for back-of-panel mounting can be combined with Metered Knob Assemblies. Models for 120 volt service require Metered Knob Assembly VS150 having a 0-150 volt scale and units for 240 volt use require Metered Knob Assembly VS300 having a 0-300 volt scale. Existing models can be retrofitted also.

### VOLTBOX® A-C Power Supply

TYPE UC1MB

Compact, versatile instrument containing all the necessary components for many tests involving a-c voltage: POWERSTAT Variable Transformer, direct reading voltmeter, three output receptacles, two 5-WAY® Binding Posts, "on-off" switch, line-load meter switch, renewable fuse and six foot cord-plug. All are enclosed in a cast aluminum case equipped with a carrying handle. Type UC1MB ratings are 120 volt, single phase 50/60 hertz input and 0-140 volt 10 ampere, 1.4 kva output. Other types are available on special order. Ideal for chemical, physical, electrical and other laboratories, the factory inspection department and plant.

### FLEXIFORMER® Packaged Transformer Primaries

TYPE TP150

When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the unit winding is shuted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. For 50/60 hertz duty.

### OHMSTAT® Slidewire Resistors

TYPE SWR5C

Feature unbreakable, high-temperature coated, split aluminum tube with stainless steel spring expansion compensator. Operates at peak rating with no slackening of wire turns. Excellent heat conducting properties of aluminum prevent "hot spots." Slider bar is chrome-plated brass; double sliding contact provides reliable connection with resistance wire. Negligible inductance through 400 cycles. Screened for user protection. Baseplate shields mounting surface.

TODD ELECTRIC high current transformers and chokes are most widely used for high power rectifier and high current A.C. applications. They are built to the highest standards of workmanship. All types are designed for a nominal temperature rise of 45°C at full load and will easily withstand unusual overloads. The regulation is extremely low, varying from 10% on the smallest unit to 1% on the largest.

Four constructional types are available for maximum flexibility for use in either the laboratory, test rigs, OEM equipment, or production.

TODD ELECTRIC HIGH CURRENT CHOKES are the perfect companion to our High Current Transformers when utilizing inductive filtering in designing a power supply.

### INDUCTANCE VARIATION

The inductance realized from any stock High Current Choke will vary from the normal rated values as shown by the graph when subjected to a non-rated current. Due to greater heating loss, steady state current should not be exceeded by more than 30% except for intermittent operation.

Triad J Series offers flexibility enabling your amplifiers to exceed broadcast standards. Although economy in construction has cut costs, these transformers approach and closely approximate performance characteristics found in more costly hermetically sealed parts. Single hole mounting provides for rotation for maximum reduction of hum... alloy shielding gives you 40-60 db hum reduction (60-80 db in Types A-11J & A-12J)... you can obtain wide frequency ranges... flexible leads facilitate ease in mounting... input units are electrostatically and magnetically shielded... light weight and encased in Triad's satin smooth baked gray enamel cases, 1 3/8" diameter, 1 3/4" above chassis... legible circuit diagrams are permanently affixed to every case.

## Sub-miniature Encapsulated TOROIDAL INDUCTORS

Triad sub-miniature toroidal inductors, designed for quick, easy printed-circuit board mounting, are now stocked for immediate delivery in a range of standard ratings from 50 micro-henries to 500 milli-henries. Many uses, especially in airborne telemetering applications incorporating Triad's sub-miniature filters FL-384 through FL-388. Case size of units is  $\frac{3}{16}$  inch diameter by  $\frac{1}{4}$  inch high. Providing an optimum combination of high Q and extremely small-size, this series is ideal for printed board, transistor or vacuum tube application.

Triad sub-miniature inductors are toroidally wound on permalloy powdered cores. Encapsulated in high temperature epoxy resin. Weldable or solderable leads of gold plated nickel alloy. Highly resistant to severe acceleration, shock or vibration. Manufactured to MIL-T-27A, Grade 5 Class S (MIL type TF5SX20ZZ).

NOTE: Ma. DC maximum is for approximately 5% drop in inductance. Those figures marked \* will give less than 5% inductance drop but should not be exceeded under operating conditions. Inductance tolerance of EX-P05A through EX-P50A is  $\pm 5\%$ ; EX-001A through EX-500A is  $\pm 2\%$ .

## CONTINUED HISTORY IN THE ADVANCEMENT OF THE STATE OF THE ART

In the development of iron core inductance devices, UTC has established itself as the leader in advancing the state of the art for over thirty years. R & D is constantly conducted in new materials, structural advancements and modifications, and winding and manufacturing techniques.

It was UTC who, through the development of advanced fine wire winding techniques, introduced the "Ouncer" series of transformers and inductors in the 1940's. These designs heralded the concepts of miniaturization in the field of iron core inductance devices. Again, it was UTC who developed the DO-T family of transformers and inductors, embodying a revolutionary new structural concept. These components are extremely compatible with present day circuitry demands, and have a power handling capacity far exceeding similar size competitive units. The "PIL" series, for instance, is no larger than an aspirin. These units,

as most UTC components, are ruggedized and highly reliable items which have found strong acceptance in the demanding areas of defense, aerospace, and medical electronics, not to mention the industrial and commercial fields. Many other incidents, both large and small, can be mentioned wherein UTC contributed significantly to the advancement of the state of the art.

UTC continues in its efforts to bring you the most advanced iron core inductance devices made. Active R & D programs, backed by top engineering talent, supported by broad production capabilities, and monitored by stringent quality control measures, attest to UTC's dedication to supplying you with the ultimate designs and units available in the present day state of the art.

We have found this makes good sense and business for UTC. By using UTC components, we're sure it will do likewise for you.

### NEW LINE OF SOLID STATE "MAS"\* PUSH-PULL MAGNETIC AMPLIFIERS

For other Magamps see page 7.

The "MAS" magamps operate on an input of 115 V 400 cycles with an output of ±7.5 V DC, 1000 ohm load and have 2 isolated control inputs. These magnetic amplifiers afford a power gain of approximately 30,000. The power input and output are also completely and individually isolated. The "MAS" magamps are 3 inches high with a 1 1/2 inch diameter and weighs approximately 1/2 pound.

The "MAS" magamps have many advantages over other active circuit elements such as tubes, transistors: • Long life and years of maintenance free operation due to magnetic characteristics and solid state elements. • Ruggedness can withstand high shock, vibration, radiation, and moisture. • Reliability — can withstand 10 times overloads and operate into short without damage.

Possible applications include: • Control Amplifier • Photocell • SCR Controls • Strain Gauge Amplifier • Meter Preamps • Thermocouple • Differential Amplifier • Signal mixing, summing, integration • Hydraulic Servo Valve Driver • Servo Motor • Linear Amplifications of Transducer Signals.

### NEW "FE, FI, FO" MINIATURE INDUCTORS

For other High Q Coils see page 9.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 KC. The FO units are adjusted at 1 V, 400 cycles. All units are adjusted to a tolerance of ±1%. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from -55°C to +100°C. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units Mil Type: TF5RX20ZZ.

### NEW "PIL"\* AUDIO TRANSFORMERS

For other PIL'S see page 3.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

These units are the smallest audio transformers available. The DO-T type structure incorporated overcomes inherently poor electrical characteristics usually found in miniature audio transformers. These ultraminiature PIL transformers are engineered to provide top electrical performance. All units are subjected to a 500 volt dielectric strength test, instead of the usual 100 volts, for higher safety margins and reliability.

Units are designed to a field-proven, ruggedized construction with a completely rigid cylindrical bobbin eliminating wire movement and stress. The turns are circular, effecting uniform wire lay and eliminating corner stress. The leads are rigidly anchored to the coil wire terminal board fashion, eliminating the use of tape, and brought out through strain relief. The units are terminated in weldable and solderable, insulated Gold plated Dumet leads. Dim: 3/16" dia. x 3/16" h., 1/20 oz.

All units are metal encased to Grade 4. Units made to Class S are available on special order. U. S. Patent No. 2,949,591.

### MAT\* MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

#### VACUUM TUBE TYPE

The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact... hermetically sealed... mechanically shielded... and meet MIL-T-27B and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative... power gain of the Magnetic Structure is approximately 40... response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load... for 3 phase, 30° phase shift.

### ULTRASHIELDED POWER-LINE ISOLATION TRANSFORMERS

Simulates battery operation for critical circuits requiring extreme isolation from power line.

Designed to give the ultimate in isolation, for line-powered equipment, which formerly could only be obtained from battery power. The effective capacity coupling between primary and secondary windings is less than 0.1 MMFD.

For this purpose MIL-T-27B Ratings in Regular Type shields are individually terminated to allow maximum flexibility. Input and output terminals are brought out on opposite sides of a special housing in order to maintain the excellent isolation between line and load.

### PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are high reliability units, hermetically sealed by vacuum molding and suited for service from -70° C. to +130° C. Wound core structure provides excellent temperature stability (un-

like ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width. H-45 thru H-57 ratio 1:1:1. H-60 thru H-69 ratio 4:4:1. Others ratio 5:3:1.

See PIP pulse units on UTC page 3.

Primaries for 105, 115, 220, 230 volts; 50/60 cycles. For reduced power, secondary can be cut in half, using 220 v. primary on 110 volts; may be used on 25 to 43 cycles in this case. "W" suffix units designed for full wave center tap and full wave bridge application. Center tap may be disconnected from ground.

MINIATURE, OUNCER, SUBOUNCER & SUB-SUBOUNCER UNITS

SUBOUNCER\* & SUB-SUBOUNCER\* AUDIO TRANSFORMERS  
TRANSISTOR & TUBE TYPES HERMETICALLY SEALED

Designed, Manufactured and Successfully Tested to complete MIL - T - 27B Specifications.

UTC SSO-#P and SO-#P units are ideal miniaturized components having high efficiency and wide frequency response. Special nickel iron core materials and winding methods provide exceptional performance and reliability.

These units are vacuum molded to MIL Grade 5. They employ 50 mil deeply anchored pin terminals ideally suited for printed circuit and transistor application. Terminals are strong enough to support these light weight units.

The UTC SML-70 is an ultra miniature transformer providing high shielding, extremely low insertion loss with wide band response, 200 cycles to 20 kc. These units are provided with pin terminals (.025 dia.) strong enough to support the unit and are ideal for printed circuits.

**LINE VOLTAGE ADJUSTERS WITH METER (FIG. G SEE PG. 13)**

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage. These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly. The nine tap switch provides for line voltage of 60 to 140 volts an 115 volt output models and 160 to 240 volts an 230 volt output model. All units are designed for 50/60 cycles service and come complete with 6 foot input cord and plug and outlet receptacle.

**SIGNALLING AND CONTROL TRANSFORMERS (FIG. H SEE PG. 13)**

Primary 110-120 volts, 50/60 cycles—Secondary

4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens horns, gangs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.
