**Spreading the word**

North American Shortwave Association — America's Shortwave Broadcast Club

# Monitor more with ICOM receivers from Universal!

**ICOM**  
**PCR100**  
 The PCR100 turns your Windwys 95/98 PC into a wideband receiver. **SALE \$189\*\***

**PCR1000** Prices, specs and offers are subject to change.

Hear it all with the PCR1000 Windows 3.1/95 PC receiver covering 10 kHz to 1300 MHz (less cellular) in AM/FM-N/FM-W/SSB/CW. **SALE \$349\*\***  
**FREE from Universal Radio:**  
 \*Guide to Military Monitoring\* (\*19\*\* value)

**R10** The R10 is a wideband communications receiver you can hold in your hand. It covers .5 to 1300 MHz (less cellular) with 1000 alpha memories, bandscope and SSB/CW. It comes with four AA NiCad cells, charger, belt clip, strap and flex antenna. **SALE \$299\*\***

**FREE from Icom (US customers):**  
 CSWHHRX Windows software and computer cable (\*39\*\* value)  
**FREE from Universal Radio:**  
 \*Guide to Military Monitoring\* (\*19\*\* value)

**R2** The R2 is a miracle of miniaturization. At only 2.3"x3.4"x1" it tunes from 500 kHz to 1310 MHz (less cellular) in AM/FM/FM-W. The R2 comes complete with two NiCad AA cells, charging tray, antenna, strap and belt clip. **SALE \$179\*\***

**FREE from Icom (USA customers only):**  
 CSWHHRX Software and cable (\*39\*\* value)

**R75**

The ICOM R75 may be the best value today in a communications receiver. Has dual PBT, 99 AM, coverage to 60 MHz, 1 Hz, notch and sync alpha memories. Optional DSP. **SALE \$569\*\***

**FREE from Universal Radio:**  
 \*Joe Carr's Receive Antenna Handbook\* (\*19\*\* value)

**R8500**

The professional-grade Icom R8500 covers 100 kHz to 1999.99 MHz (less cellular). **Call for price.**

**FREE from Universal Radio:**  
 \*Guide to Military Monitoring\* (\*19\*\* value)

**A FAMILY AFFAIR - THE R.L. DRAKE STORY**  
 By John Loughmiller KB9AT.  
 This is the behind-the-scenes story of the famous R.L. Drake Company, focusing on the glory days, when Drake was king in amateur radio. Every ham and SWL knew R.L. Drake from the outside, but now the inside, story of this incredibly interesting company is told. This book also includes 150 pages of circuits modifications for Drake radios. Over 300 pages! ©2000  
 Order #1487 ..... **\$29.95**

## NEW YAESU VR-5000

The Yaesu VR-5000 provides sophisticated wideband reception. Coverage is from 100 kHz to 2600 MHz (2.6 GHz) less cellular, in AM, FM-N, FM-W, LSB, USB and CW. This radio features a real-time bandscope and you get 2000 memories. You get 2000 alphanumeric memory channels grouped into 100 banks. Optional aids such as a DSP unit, voice synthesizer and digital voice recorder will be available. Jacks on the back panel include: Mute, 13.8 VDC input, External Speaker, 10.7 MHz iF Output, Antenna Input A (SO-239 50 ohm) & B (Hi Z 450 ohm), CAT Interface Jack (4800/9600/57600 bps). The VR-5000 comes with the PA28B 117 VAC adapter and a DC power cord. This radio is only 7.1x2.75x8" 4.2 Lbs (180x70x203 mm 1.9 kg).  
 List Price \$1099.00 Order #0500 **\$889.95**

- ACCESSORIES**
- #3545 DSP-1 DSP Notch, NR and \$99.95
  - #0560 DVS-4 Digital Voice Recorder 44.95
  - #2006 FVS-1A Voice Synthesizer 38.95

**TEN-TEC**  
**RX-340**

The Ten-Tec RX-340 is the ultimate receiver! Advanced D.S.P. technology at under \$4000. Production units started shipping in July. Please see our print catalog or online catalog at [www.universal-radio.com](http://www.universal-radio.com) for full technical details.

## GRUNDIG

The Grundig YB-300PE brings impressive features and performance to the under \$100 price category. Coverage includes: AM, FM stereo plus SW from 2.3-7.3 and 9.5-26.1 MHz. You get 24 memories, keypad entry, DX switch, 24 hour clock and illuminated digital readout. Includes AC adapter, case and earphones. #0300 **\$99.95**

The Grundig YB-400PE has a striking titanium colored case and includes a wind-up antenna, case, SW Guide and AC adapter. You get digital readout, keypad, 40 memories, SSB, two bandwidths, clock and ant. jack! Buy a new (not reconditioned) YB-400PE from Universal and get a **FREE SWL Guide #2904 #0400 \$199.95**

**SAVE!** We have a limited number of reconditioned YB-300PE and YB-400PE models. Same 1 year warranty with box and all normally supplied accessories. The reconditioned YB-300PE is only **\$69.95** and YB-400PE is only **\$139.95**

The Grundig Satellite 800 combines the technical achievement and features of the Drake SW8 with the rich audio fidelity that Grundig is so famous for. This LW, MW, SW, FM and VHF air receiver sounds like no other. Includes AC supply and headphones. An outstanding broadcast receiver. #0800 **\$499.95**  
**SAVE!** We have a few Satellite 800 radios reconditioned by the R.L. Drake Company. Same 1 year warranty with box and all normally supplied accessories. #0668 Only **\$399.95**

Quality Communications  
 Equipment Since 1942

Free with required purchase to 03/31/01. Prices shown are after mtg's coupons. Returns are subject to a 15% restock fee.

**U.S.A. orders under \$100 ship for \$4.95. Under \$500 ship for \$9.95.**  
 Except Alaska, Hawaii and Puerto Rico

# NASA Notes

Richard A. D'Angelo • 2216 Burkey Drive • Wyomissing, PA 19610 • rdangelo3@aol.com

As we hit the peak of the DX season, let's not forget to continue to contribute to all our columns. It's the contributions from members that make the *Journal* the shortwave publication worth receiving month after month. With that in mind, let me suggest a few topics that would make interesting musings from members. Musings do not have to be long-winded pieces of journalism, hi! Short, informative material is the real goal of the musings column. Members love to read about new equipment, antenna experimentation, DXing techniques, DXing adventures and tips, etc. All that and more make fair game for an interesting musing. Please jot down some thoughts and send it along. Thanks!

**Anker Petersen** of the Danish Shortwave Club International has done a comparison on how well the *World Radio TV Handbook*, *Passport to World Band Radio* and the *Klingenfuss Super Frequency List* ("SFQL") compare based on listening to 100 randomly selected stations throughout the shortwave bands. Overall, it appears *Passport* and the SFQL (this is a CD-ROM, not a book) are comparable in the international broadcasting area with *Passport* holding a significant edge in domestic details. The *WRTH* is a distant third in each area. Personally, I rank *Passport* as the number one shortwave broadcast reference in terms of quality and price followed by the *Klingenfuss Shortwave Frequency Guide*. The *WRTH* is a distant third mainly because of accuracy problems. Anker's interesting analysis and comments can be read at [www.dswci.dk](http://www.dswci.dk) and then click on DWSCI and Latest News.

Don't forget to order the special 22nd anniversary edition pennant from our good friends at **Radio Nuevo Mundo** (Takayuki Inoue Nozaki 18-11 Fuzimi-cho, Hachiojishi, Tokyo, 192-0044 JAPAN). The pennant's dimensions are 20 cm wide and 32 cm high with sky-blue and yellow lettering. Its price is US\$5.00 for overseas including shipping cost (cash is the only acceptable form of payment). Anyone interested in seeing the new pennant an image of it can be found at <http://donmoore.tripod.com/latindir/rnm/rnminfo.htm>

The European DX Council has elected **Luigi Cobisi**, Secretary General, and **Paolo Morandotti**, Assistant to the Secretary General, to head the organization for the next two years. Both gentlemen are from Italy. They replace **Risto Vähäkainu** and **Arto Mujunen** who were formerly serving in those roles, respectively. Veteran DXers **Anker Petersen** and **Kaj Bredahl Jørgensen** from Denmark were re-elected as auditors.

Have I mentioned that the *Country List and Awards* booklet is available online for downloading at our website in PDF format? I know, I know but I thought one final mention in this column was necessary to thank **John Herkimer** and webmaster **Ralph Brandi** for getting that done for the membership. Of course, paper fans can still obtain the *Country List and Awards* booklet direct from the Company Store for just US\$3.00 in North America or US\$5.00 overseas.

That's it for this month. Enjoy this month's edition of the *Journal*; it's another good one.

## FRENEX: Twenty Five Years Ago....

Reports of the special transmission from VS18, Turks and Caicos Islands began appearing in the bulletin. Gilfer Associate's Perry Ferrell reports publisher delays in getting the 1976 WRTH off the presses. Consequently, it was not expected to be available in the US until February 20th. In the Shortwave Center, Jerry Lineback writes about geomagnetic predictions, Larry Magne provides some information about Israel Radio, and Richard Wood writes about how Austria uses reception reports from SWLs to determine frequency usage. In Bill Oliver's QSL Report, Sam Barto reports a verification from Libya after ten years of trying and Tom Gavaras reports a QSL from Nepal in a mere 750 days. Gavaras' first effort as Log Report c editor appeared.

---

## Calendar Of Events

**Feb 16 Meeting. Philadelphia Area NASWA Chapter.** Kulpsville Holiday Inn, Kulpsville, PA at 7:30 PM. For more information contact Dan Cashin at 610-446-7831 or Internet: dcscpk@aol.com.

**Feb 16 Meeting. Boston Area NASWA Chapter.** The Lexington Club, Rts. 4 & 225, Lexington, MA at 7:30 PM. The location is 1/4 mile west of Rt. 128, Exit 31. For more information contact Paul Graveline at 978-470-1971 or Internet: 74007.3434@compuserve.com. The URL for the BADX guys is <<http://www.anarc.org/naswa/badx/>>.

**Mar 9 Meeting. The Cincinnati/Dayton Monitoring Exchange (MONIX)** meet at the Lebanon Citizens National Bank on U.S. Route 42 in Mason at 7:00 PM. For more information contact Mark Meece at 513-743-8089 or e-mail at <[mmeece@siscom.net](mailto:mmeece@siscom.net)>. For additional information about MONIX, check out their web site at <<http://www.siscom.net/~mmeece/monix.html>>

**Mar 9-10 Convention. The 14<sup>th</sup> Annual Winter SWL Festival**, sponsored by NASWA, will be held in Kulpsville, Pennsylvania (Exit 31 on the Northeast Extension of the Pennsylvania Turnpike). Richard Cuff and John Figliozzi co-chair the organizational committee. It's never too early to begin planning. See you there!

**Mar '01 Contest. 2001 North American DX Championships.** For further information you can send a self-addressed stamped envelope to 2001 NADXC, c/o Dr. Harold Cones, 2 Whits Court, Newport News, VA 23606. Rules will also be posted eventually at <<http://www.anarc.org/>>, and are published in the Awards column in the Journal.

**Jul'01 Convention. The 2001 WTFDA Convention** will be held in Boise ID at the Owyhee Plaza Hotel from 27-29 July. More details to come. Inquires can be sent to: [N7SOK@aol.com](mailto:N7SOK@aol.com) or by writing to 4096 Marcia Place, Boise ID 83704.

**Aug '01 Conference.** The annual **EDXC Conference** is scheduled to be held from 24-27 August 2001 in Budapest, Hungry. All DXers, shortwave listeners, international broadcasters and other radio enthusiasts are cordially invited to attend. Additional information is available from [risto.vahakainu@helsinki.fi](mailto:risto.vahakainu@helsinki.fi).

Members are invited to submit items to be included in this calendar to Rich D'Angelo (Internet: [rdangelo3@aol.com](mailto:rdangelo3@aol.com)) or Ralph Brandi (Internet: [ralph@brandi.org](mailto:ralph@brandi.org)).

# Musings

*This column provides a forum where members can express comments, ideas, and thoughts about NASWA or the SW radio hobby. Please feel free to comment on anything presented this month (or previous months). Opinions expressed here are solely those of the submitters. Please submit all Musings to Richard A. D'Angelo, 2216 Burkey Dr., Wyomissing, PA 19610 or via email: rdangelo3@aol.com.*

**Scott Gentry <pizzadxer@yahoo.com>**

Hey, I added a notebook computer to my shack recently. So now I got myself online and can torture everyone with my e-mailings now (ha-ha). By the way, thanx for publishing my musings a few months back. I had no idea my info letter would make it into Contact or NASWA Journal, and was quite surprised (we are full of surprises around here—RAD). And because of it, I made some new DX friends such as Doug Sharrard and Jack Linonis. Great couple of DXers they are. Speaking of DX friends, I can't wait till the next SWL Winterfest to see everyone again. That Fest is such a blast! I had such a great time these past couple of years there. Man, what a lot of fun! Are you going again this time? Maybe I'll run into you again there.

Have you checked out *Cyber Shortwave Live* yet on Live365.com? It's on Sunday mornings at 1600 UTC. They also have live chat going on during the show on SWL Chat. I just love it! Maybe I will see you in there sometime.

73s and the best of DX, Scott

**Richard D'Angelo <rdangelo3@aol.com>, 2216 Burkey Drive, Wyomissing, PA 19610**

In recent months I have added a couple of new pieces of equipment to the shack as a result of some columns written by Alan Johnson. I have added a pair of Koss Pro-4AA headphones thanks to a successful bid on eBay. Although one ear wasn't working, my engineering son, Adam, managed to fix it rather easily. A small payback for the thousands of dollars his college education costs but at least it is a payback. Next I purchased a RF Systems Mini-Window antenna from Universal Radio. I have been quite pleased with its performance. Having a second antenna choice has been very helpful in certain DXing situations. It really is a low-noise antenna. I have it installed in my attic away from computer generated noise. Finally, for very mobile DXing situations, i.e. visits to the in-laws, I have picked up a pair of Telex 610 headphones. Although very inexpensive, they do a nice job. My thanks to Alan for some great suggestions that appeared in various *Equipment Review* columns in 2000 that resulted in a mini shopping spree before the holidays.

73—RAD

**Bob Raymond, NE1I, DXtreme Software <bob.raymond@dxtreme.com>, www.dxtreme.com**

Thanks very much for including our DXtreme RL 2000 press release in the December issue of the NASWA Journal. We hope that many DXers will find that our software enhances their DXing experience.

We have introduced a free Quarterly Prize Giveaway on our Web page, as mentioned in NASWebLog. One of the prizes we are offering is a one-year membership in NASWA. It would

## Contribute!

Send your loggings and QSL information off to our Distributing Editor, **Bob Montgomery** (**Address:** P O Box 1458, Levittown, PA 19058). He will forward them to the appropriate editor. Remember, Bob also distributes QSL report information and totals for the **Scoreboard** column. He can also be reached through the Internet at: [RMonty3@worldnet.att.net](mailto:RMonty3@worldnet.att.net).

---

be nice if the Giveaway resulted in additional members for NASWA and more customers for DXtreme. Even if it doesn't, it is fun picking the winner and then writing to him or her with the good news!

Thanks again and please keep up the good work with the NASWA Journal. Every issue is "another good one" in my opinion. I shudder to think what DXing would be like without NASWA. To paraphrase a famous Vulcan, may NASWA "live long and prosper."

73, Bob

**Richard Cuff, 327 Springhouse Road, Apt. 102, Allentown, PA 18104**  
[<rdcuff@sprintmail.com>](mailto:rdcuff@sprintmail.com)

You know what? I'm psyched. The Winter SWL Festival is about 5 weeks away as you read this, and this is shaping up to be a great weekend of radio fun. Most of the preparations are complete, so in some ways I feel like a political candidate on election night, watching the returns (in this case, registrations) arrive. Please—if you are planning to join us for the 'Fest, get your registration in as soon as possible. This helps us immensely in knowing what our raffle prize budget is, and allows us to purchase supplies ahead of time. Another reason not to delay your registration: Hotel space, if you're from out of town, appears to be going fast.

We are still looking for help managing the Hospitality Room. John Figliozzi and I used to handle that task until we accepted the mantle of "Co-Festmeisters", and Tracy Wood, who helped out last year, is focusing on other areas this year. It would be a great help if someone takes over the responsibility for keeping the Hospitality Room stocked with beverages and munchies. We already have a couple helpers lined up, but we'd love for someone to take charge.

If you are planning to join us in Kulpsville, and would be able to help us in this key area, please drop either John or me an E-mail or snail mail, or call me at 610-393-7104.

See you next month!

73—Richard "co-Festmeister" Cuff

---

**NOTICE:** This issue does not contain the "Listeners Notebook" which normally appears monthly. Al Quaglieri had computer problems on the road and was unable to file his column. Look for "Listeners Notebook" next month. We're sorry for any inconvenience.

# Easy Listening

## Don't Count Shortwave Out Just Yet

I saw four indirectly related items over the past few days that show signs that shortwave listening, even here in the high tech USA, still has merit. To wit:

*Item 1: New Dimensions Rents Time on Merlin Shortwave Transmitters*—You've seen me occasionally mention **New Dimensions** as an interview program airing on **Radio Australia** and **Radio for Peace International** on shortwave. Now the New Dimensions folks have bought airtime from Merlin for European and North American target audiences. The schedule:

To Europe, Saturdays, 1500 UT, 6175 kHz  
To North America, Sundays, 0300 UT, 9430 kHz

It is interesting to see an US-based organization, already present via public radio and webcasting, seek to target a US audience via shortwave. I hope to have some additional insight from New Dimensions regarding their shortwave activities in a future column.

*Item 2: Radio Canada International says 85% of responses to an online survey listen to RCI primarily via shortwave radio*—Larry Nebron passed along these results from one of RCI's ongoing nonscientific web polls. What's interesting is that this survey was among Internet visitors to RCI's site. One might have expected that these respondents were likely listening to RCI via webcast, just because this was an Internet-based survey; not so. Another reason one might have expected a lower percentage for shortwave is that most of RCI's output is beamed towards the USA, and Internet penetration is the World's highest.

*Item 3: Merlin Communications' marketing materials speak of a "resurgence in shortwave listening"*—Yes, I know it's just marketing palaver, but this information is consistent with the state of shortwave radio sales as documented by Larry Magne in the 2001 edition of *Passport to World Band Radio*. Why are we seeing this resurgence? What is fueling it? Your intrepid editor is looking for answers, including a dialogue with Merlin; perhaps (WARNING! SHAMELESS PLUG!) we'll have some time to debate the reasons at the Winter SWL Festival.

*Item 4: Sony's North American representative for world band radios asks why shortwave is rebounding in the USA*—This conversation also came up while he & I were discussing the Winter SWL Festival. My contact asked me why I felt this resurgence was occurring—so it's clear Sony is intrigued by these developments as well. If you have ideas as to why this is so—I'd love to hear your insight via the usual feedback mechanisms.

## Radio Netherlands

### Conspiracy theories?

Well, not exactly. Another non-NASWA columnist counted faces in the Fall/Winter issue of *On Target* versus the Spring/Summer issue, and wondered aloud regarding the absence of several staff members, speculating that people were jumping ship left and right. Alas, as usual, the truth isn't as interesting as speculation. Turns out that the Fall/Winter picture was taken at an outing, and some folks couldn't participate due to prior commitments.

Rest assured there are plenty of reasons to continue to listen to **Radio Netherlands**; for example, here's a preview of upcoming documentaries.

February 8<sup>th</sup>/9<sup>th</sup>: **Hip Hop: Global Youth Empowerment**—From New York to Nagasaki, from Amsterdam to Auckland, and don't forget Djakarta to Dar Es Salaam, hiphop music is gaining in popularity. While the media focuses on the aggressive lyrics that glorify violence and wealth and negate women, there's a lot more to hiphop. It's an educational medium. Commercially successful artists such as Lauryn Hill, The Roots, Mos Def and Talib Kweli are bringing new messages and positive role models to millions of hiphop fans around the world. Reza Kartosen looks at the universal subculture of hiphop, its roots and reality.

February 15<sup>th</sup>/16<sup>th</sup>: **The Dutch Canadian Dream**—In the 1950s, tens of thousands of Dutch farmers emigrated to Canada. In recent years, there has been a renewed wave of immigration to the wide open spaces of North America, far from the taxes and fences of the densely populated Netherlands. Martha Hawley travels to Canada to find out whether it is still a Dutchman's dream and the 'land of opportunity'.

February 22<sup>nd</sup>/23<sup>rd</sup>: **Architecture In A Small Land**—Home is where the heart is, but here in the Netherlands, that might be all there's room for! In this country of skinny bridges, teetering canal houses and postage-stamp-sized gardens, the efficient use of space is absolutely essential. Dutch architects have always been ingenious, building dream houses for a practical people. But in recent years, they've also earned a world-class reputation for innovation and daring. Ann-Marie Michel surveys architectural trends in the last hundred years, and takes a peek inside the Dutch House.

March 1<sup>st</sup>/2<sup>nd</sup>: **A Prince in Pernambuco**—In 1630, Prince Maurits of Nassau was appointed governor of New Holland, the Dutch colony in Brazil. He brought with him 46 scholars, scientists, artists and craftsmen. During their 25-year tenure around the north-eastern port of

Recife, they studied and drew the region's plants, animals and peoples. Maurits was a humanitarian leader who even built an astronomical observatory there. But, as David Swatling discovers, a dark chapter in Dutch history was also unfolding—the rise of the slave trade.

## Voice of Russia: The Perils of Politics

John Figliozzi passed along the following E-mail message he received from the Voice of Russia:

Dear <your name goes here>: NATO extensively used armor-piercing ammunition with elements of depleted uranium in the course of its military campaigns against Iraq in 1991, against the Bosnian Serbs in 1994 and 95 and against Federal Yugoslavia in 1999. The material is weakly radioactive and highly toxic into the bargain. This deadly combination damages the natural environment and can cause cancers in humans. We would appreciate getting your opinion on this much-publicized trouble. Please fill in the following questionnaire, by marking the right answers (points 1, 2 and 3) and formulating answers...

Interestingly, the E-mail was signed "The Russian State Radio Company—The Voice of Russia." This was a subtle hint that the government was behind the questionnaire. You may remember that the Voice of Russia had to agree to be a mouthpiece of state policy to continue its funding, but this clearly crossed the line of journalistic integrity, in your editor's opinion.

## Radio Australia Changes

The aforementioned Mr. Figliozzi also passed along some upcoming schedule changes to **Radio Australia**, which took effect in late January:

**Asia Pacific** adds Sunday to Thursday at 2310 UT and Monday to Friday at 0010 UT.

Weekday features at 0110 UT are: Mondays, *AWAYE*; Tuesdays, *The Science Show*; Wednesdays, *The National Interest*; Thursdays, *Background Briefing*; Fridays, *Hindsight*.

Report programs at 0130 UT are: Mondays, *The Health Report*; Tuesdays, *The Law Report*; Wednesdays, *The Religion Report*; Thursdays, *The Media Report*; Fridays, *The Sports Factor*.

The *Margaret Throsby Interview* will disappear from the schedule at this time, and as things stand at the moment will only be heard once a week on Tuesday at 1605 UT, replacing *Music Deli*. Unfortunately, Radio Australia can no longer broadcast *Music Deli* in its extended Radio National version because of copyright problems.

Other general weekday modifications include:

0210—*The World Today*

0310—*Sport*

0320—*Pacific Focus*

0340—Music program, Mondays, *Australian Music Show*; Tuesdays, *Music Deli*; Wednesdays, *Blacktracker*; Thursdays, *Oz Country Style*; Fridays, *Music Deli* (shortened version)

0410—*The World Today*

0510—*Pacific Beat*

0530—*Sport*

0540—*Pacific Beat*

0610—*Sport*

0620—*Pacific Focus*

0640—Music program, same as 0340 schedule shown above.

John cautions that there will likely be a series of rolling changes in Radio Australia's schedule in the weeks and months ahead, as the ABC wrestles with budget difficulties and general upheaval. For example, the arts programming budget has been greatly reduced, and other programs from Radio National—the programming source for most Radio Australia programming—are likely to be axed. If you have Internet access, John publicizes

this information in the *swprograms* programming discussion E-mail group as well as other outlets.

## BBC World Service Highlights

### News and General Features

Mondays 0330, February 5<sup>th</sup> and 12<sup>th</sup>—*Assignment* airs a two-part special from Punjab, India, where separatist movements continue to threaten India's fragile fabric. India's challenges in coping with the competing demands of its varied peoples are addressed.

Fridays 2330, Saturdays 1305, and Sundays 0430—*Global Business* looks at scientific and visionary assessments of where computing technology will be 50 years out. (Given how much we missed in the 20<sup>th</sup> Century, I'd question the accuracy of such long-term prognostications...)

Saturdays, 0120, and Tuesdays, 1530, beginning February 10<sup>th</sup>—*The Essential Guide* program slot features a five-part weekly series entitled *Goodbye Village, Hello City* investigates the global movement from rural living to urban living. Demographers now believe that, for the first time, more people live in urban areas than in rural areas. The social and economic implications of this phenomenon are considered.

Fridays 0230 and Mondays 1530, through February 27<sup>th</sup>—*The People and Places* time slot features a tandem series, *Speaking Lives* and *The Way We Are*. In *Speaking Lives*, people from different countries share a common ambition or experience. *The Way We Are* looks at changes in everyday British life, with an unedited, extemporaneous discussion on the week's British news stories.

Wednesdays, 0045 and Thursdays, 0430—*The E Files* continues to explore what happens when English is used as the international language of health, development, business, and entertain-

ment. Why does communication using English break down and how can future misunderstandings be avoided?

Tuesdays, 0405 and Fridays, 0630, beginning February 6<sup>th</sup>—the *Omnibus* time slot features a four-part series entitled *Global Perspective* in which radio stations from various countries explore environmental and climatic issues from their specific perspectives.

### Sports

Thursdays, 0205 and Fridays, 1505—*Sports International* features an advance look at the Salt Lake City Olympics in the February 15<sup>th</sup>/16<sup>th</sup> program; an interesting look at regional sports preferences entitled *Sporting Passions* airs the following two weeks. Why do Canadians love curling while Americans love baseball? Just might find out in this series.

### Science and Technology

Saturdays 0205 and Tuesdays 1505, beginning February 10<sup>th</sup>—*Discovery* takes a three-part look at dominant technologies and why they've stayed that way. For example, the internal combustion engine still dominates road transport; keyboards dominate computer interfaces. The future alternatives for these dominant technologies are perused and evaluated.

Saturdays, 0045 and Tuesdays, 0430, beginning February 17<sup>th</sup>—The *Body and Mind* timeslot begins a new six-part run of *Health Check*, a weekly look at health news from around the world.

### Religion and Spirituality

Tuesdays 0045 and Wednesdays 0430, beginning February 20<sup>th</sup>—*Food For Thought* is a new four-part series focusing on the strong connections many foods have with the soul or spirit, be they kosher foods in St. Petersburg, Russia; sacred wine in Cyprus; or, canu, the sacred drink of Mozambique.

Thursdays 0045 and Fridays 0430, beginning February 15<sup>th</sup>—*Reclaiming Roots* is a new three-part feature in the *Heart*

and *Soul* program block. This program profiles three people who have searched for their spiritual and cultural roots through an unusual media. In the first program a British poet of Nigerian extraction rediscovers her Yoruba heritage via her writing, reclaiming her past for herself and her daughter.

## Radio Taipei International

Over the past year, **Radio Taipei International** has added to their English language program content—no longer is the 0300 program simply a repeat of the prior day's 0200 program.

Selected programs and their North American evening timings:

*Jade Bells and Bamboo Pipes*, one of my favorite folk music programs, Mondays 0215

*Trends*, Tuesdays 0230 and 0330

*Life Unusual*, Thursdays 0230 and 0330

*East Meets West*, Fridays 0230

In addition, a live webcast from RTI is now available daily at 0700 UT, not exactly a convenient time, at URL <http://www.cbs.org.tw/realaudio/cbs3.ram>. Selected programs are available for download at URL <http://www.cbs.org.tw/special/languages/english.htm>. I am not yet sure if this is a rotating or static list.

## Feedback, please

While we won't be featuring a programming-specific forum at the Winter SWL Festival, I would enjoy meeting up with as many of you as possible to find out how this column can best aid your enjoyment of shortwave radio and international broadcasting. Perhaps the best place to find me is at the registration table or enjoying a beverage in the Hospitality Room. Hope to see many of you in Kulpsville!

Until next month,

73 DE Richard

## DX Target: UN Radio: A Return to the Shortwave Bands

By Richard A. D'Angelo

Shortly before the 6-8 September 2000 Millennium Summit at the United Nations ("UN") Headquarters in New York City, David Smith—who as the former director of Radio MINURCA was last seen setting up and operating the Central African Republic station on 9,900 kHz—contacted a number of folks in the shortwave radio community about upcoming shortwave broadcasts by UN Radio. Mr. Smith was now at United Nations Headquarters in New York City. UN Radio has not been a regular on the shortwave bands since 1985 although there have been occasional shortwave transmissions noted sporadically during the last 15 years. Beginning 4 September 2000, UN Radio launched a live pilot program to Africa via the facilities of Merlin Communications. These broadcasts signaled the return of UN Radio to shortwave.

The purpose of UN Radio has not changed since it was founded in 1946. Its goals are to promote the universal ideals of the United Nations, including peace, respect for human rights, gender equality, tolerance, and the upholding of international laws. What has changed over the years is the medium used to carry the message. In recent years, UN Radio has used the Internet to disseminate high-quality broadcasts around the world. New technology has made it possible to transmit audio files through computers via the Internet. UN Radio is a unique broadcasting organization because it does not own or operate transmitters of its own. However, with its return to the medium of shortwave broadcasting, UN Radio is in many respects returning to its roots.

### The Early Years

Established in 1946, UN Radio began broadcasting news bulletins and feature programs in its five official languages—Chinese, English, French, Russian and Spanish—for 9 to 12 hours a per day. From 1950 to 1959, UN Radio broadcast for more than six hours daily in 33 languages with about another 100 countries and territories rebroadcasting its programs on a regular basis. In 1974, Arabic was added to the line up.

Since it did not own or operate its own broadcast facilities, UN Radio made arrangements with leading broadcast organizations to relay its programs to different regions of the world. In 1946, the International Broadcasting Division of the United States Department of State transmitted the entire proceedings of the Security Council and the Economic and Social Council on shortwave to the rest of the world. The European Service of the British Broadcasting Corporation also relayed these broadcasts.

### The Middle Years

From 1960 through 1979 UN Radio programs consisted of shortwave transmissions of the proceedings of meetings at UN Headquarters for rebroadcast or monitoring by national organizations. News bulletins in the now official six languages were also a prominent feature of these transmissions. Also, the UN Radio provided news bulletins, news summaries, features and documentary programs in 33 languages to 162 countries and territories.

UN Radio utilized transmitters leased from France, Italy, Switzerland, and the United

States. In 1963, facilities were obtained on transmitters with considerably greater power and effectiveness in reaching Africa, Europe, Latin America, the Middle East and parts of South East Asia.

## The Later Years

In the mid-1980's, UN Radio was producing over 2,000 hours of programs a year in 25 languages and serving 167 countries and territories. Its shortwave programs accounted for about 760 hours of airtime annually. At the end of 1985, shortwave broadcasts were suspended due to the sudden rise in transmission charges. Alternative distribution methods were explored and put into place with broadcasters in Asia, Africa, Latin America, and the Caribbean. UN Radio program production and distribution became more dependent on taped programs as opposed to direct shortwave broadcasting. By 1997, total distribution of tapes and cassettes reached over 200,000 a year.

UN radio gained considerable worldwide recognition in peacekeeping operations. The cost-effectiveness and outreach capability of broadcast radio information played a key role in supporting the operation of UN missions in Angola, Cambodia, Bosnia and Herzegovina, Haiti and Namibia. In these operations, UN Radio provided staffing and

program resources, as well as technical support. Field reports, news and feature programs on peacekeeping and humanitarian affairs have also become a staple of UN Radio programs.

## UN Radio Today

Today the output of UN Radio consists of some 1,200 features and documentaries a year that are distributed worldwide to 185 countries and about 2,000 broadcasting facilities in 15 languages—Arabic, Bengali, Chinese, Dutch/Papiamentu, English, French, French-Creole, Hindi, Indonesia, Kiswahili, Portuguese, Russian, Spanish, Turkish, and Urdu. In April 1997, UN Radio organized the first ever-live one-hour international broadcast featuring the UN Secretary-General.

As mentioned previously, by providing staffing and program resources and technical support, UN Radio has gained recognition in peacekeeping operations supporting the operation of UN missions around the globe. Its news and features programs are an important part of its programming efforts.

Building upon its past experience, UN Radio restored shortwave radio service to Africa, Asia and Europe in Arabic, English, and French. Here is the current UN Radio Shortwave Frequencies and Transmitter Schedule:

---

---

## Transmission

Language	Transmitter Site	Frequency	Time (UTC)	Target Area
French	Meyerton	6120	1700-1715	Madagascar
French	Meyerton	21490	1700-1715	Kinshasa
French	Skelton	17580	1700-1715	West Africa
English	Wooferton	15265	1730-1745	East Africa
English	Meyerton	6125	1730-1745	South Africa
English	Ascension	17710	1730-1745	Nigeria
Arabic	Skelton	17565	1830-1845	Morocco/Algeria
Arabic	Wooferton	15265	1830-1845	Cairo

Each 15-minute program includes five minutes of world news, a three-minute in depth report on one of the main items in the news, and two three-minute features targeted to various geographic regions and focusing on issues including gender, environment, health and development. Merlin will also carry these programs, along with UN Radio broadcasts in Chinese, Russian, and Spanish, on satellite for broadcast to partner stations around the world.

Richard D'Angelo

for the report on a United Nations broadcast

on 4 September 1999 1730-1745 UTC

on 1534.5 MHz

via WAFB/FA

the details of which are correct

UN RADIO - NEW YORK, NY 10017 USA

a world map are currently being used to confirm listener reception reports. These reports can be sent to him electronically at or by FAX (+1-212-963-1307) or by postal mail to:

David Smith  
UN Radio  
Secretariat Building  
Room S-850-M  
New York, NY 10017

Good luck with this DX Target. As usual, please remember to send all logs of UN Radio receptions to the Wally Treibel for inclusion in the International Log Report and those classic United Nations Building verifications to Sam Barto for the QSL Report column. Good luck with this DX Target.

Thanks to the efforts of David Smith, UN Radio is an excellent verifier of listener reception reports. Ancient UN Radio QSL verification cards featuring the United Nations Building in New York City over a portion of

international Log Report and those classic United Nations Building verifications to Sam Barto for the QSL Report column. Good luck with this DX Target.

# Summary of the Sixth Annual Meeting of Mexican DXers

by Jeff White, Radio Miami International

via Electronic DX Press

The sixth annual Meeting (or "Encuentro," as they call it in Spanish) of Mexican DXers and Shortwave Listeners, held August 4-6 in the southern city of Oaxaca, was almost a "sacred" experience. It took place in the Santo Domingo Cultural Center, which is part of the ex-Convent of Santo Domingo, located immediately adjacent to the famous Santo Domingo Church, one of the most spectacular colonial churches in Oaxaca and all of Mexico. The Cultural Center now houses a modern art museum, and if you walked through the museum area, around an inner courtyard, through another doorway and down a flight of stairs you would come to the air-conditioned, almost cave-like meeting hall where the shortwave event took place.

It was really a miracle that this meeting took place at all. At last year's Mexican National DX Meeting in August of 1999, the member clubs voted to accept Gerardo Iraizos' bid to hold the 2000 Meeting in Oaxaca. Tragically, less than two weeks after the 1999 meeting ended, Gerardo Iraizos was killed in a traffic accident. But the Iraizos family—some of whom are also shortwave listeners—soon announced that they were determined to organize the Oaxaca DX meeting in 2000 as a memorial to Gerardo. Several family members participated in the organization, including Gerardo's son Amilcar in Oaxaca and his son Martin and daughter-in-law Thalia in Mexico City.

In the end, over 70 persons from throughout Mexico and as far away as New York, Denmark and Ecuador attended the event. The Santo Domingo Cultural Center is located in

the downtown historical district of Oaxaca, not far from the bustling "zocalo," or main plaza, which is surrounded by the Cathedral, hotels, small stores and outdoor restaurants. Especially at night, the zocalo comes alive with marimba and mariachi music, religious celebrations and vendors selling a wide variety of handicrafts from around Oaxaca, such as the famous black ceramic pottery of the region.

---

---

It is the human contact  
which is generally  
the most enjoyable aspect  
of these Mexican national DX  
meetings. Beyond the  
seminars and lectures,  
the personal contact  
creates friendships that  
last for many years. Most of  
those who attend the Mexican  
DX meetings have  
very limited financial resources.  
Some spend several weeks'  
worth of salary to travel to the  
event, showing their  
great dedication to the hobby.

---

---

Most of the meeting participants made their way to Oaxaca on Friday, arriving in time for the late-afternoon opening sessions. Rafael Grajeda, of the Veracruz-based Society of Radio-listening Engineers (SIR), gave a presentation about aeronautical utility station DXing. This was followed by a philosophical lecture about the meaning of radio by Cesar Fernandez, president of the SIR. At night, the action shifted mostly to the zocalo, with some persons attending an impressive show of folkloric music and dance from around the state of Oaxaca at the Monte Alban Hotel.

On Saturday morning, the first speaker was Pepe Gonzalez, a well-known DXer and singer of children's songs, who unveiled his new book about the history of shortwave radio in Mexico. An impressive guide full of history, data and pictures, the book is the only one of its kind and has instantly become an important historical archive. (More information on how to obtain the book—which costs about US\$7—is available from Pepe Gonzalez by e-mail at: iyoco@gorsa.net.mx.) Other presentations on Saturday morning were by the director of Radio Educación (about their experience with separate programming on the AM and shortwave frequencies of the station) and Radio Miami International (a video of our recent visit to international broadcasters throughout Asia). Next was a walking tour to the nearby Philatelic Museum of Oaxaca, the only one of its kind in Mexico. The director, Alejandra Mora, gave DXers a personal tour of the museum, pointing out that DXers use the international mail services so much that they often become stamp collectors as well.

After a break for lunch, Roger Chambers—a U.S. DXer from New York—spoke about the DX Edge and tropical band DXing. Then Allen Graham, host of the popular DX Partyline program on HCJB Radio in Quito, Ecuador, talked about developments at his station. The final presentation of the day was in English (with simultaneous translation into Spanish) by Anker Petersen of the Danish Shortwave Club International, who told the Mexican DXers about the Danish club's experiences with the Internet and its influence on shortwave clubs (see the November 2000 SWC). His message was clear: In Europe, DXers have more and more access to the Internet and they are spending more and more time on it. A wealth of timely DX information is available for free on Internet sites maintained by clubs and stations, and DX clubs have found it necessary to produce electronic DX bulletins in addition to their printed publications. This seems to be the wave of the near future in Europe, but it may be quite some time before regular Internet access by most Mexican DXers becomes commonplace.

Several broadcasters donated souvenir items to a raffle which was held. The local Radio Shack store, which had an exhibit booth at the Encuentro, donated a shortwave receiver to the raffle as the grand prize. The winner was Porfirio Mendez, head of "DX-Istmo," a club based in the Istmo region of southern Oaxaca state. And DX-Istmo became the newest member (#5) of the Mexican DX clubs which organize these annual Encuentros. The day ended with a "DX Night" where participants brought their shortwave receivers and pulled in some exotic stations from Africa among other places.

After a late night of DXing, the meeting participants continued Sunday morning with a talk by Julian Santiago of Mexico City about a new Spanish-language DX program he is hosting on the shortwave frequency of Radio Mil (6010 kHz) and about some audience research he has been doing. More meaty issues were tackled in a presentation about the challenge of getting more women interested in shortwave listening, and representatives of Radio Mexico International talked about the future of shortwave broadcasting and their campaign to promote awareness of shortwave radio among the general public in Mexico. Dramatically, just as the meeting was coming to an end, an e-mail message was received from Jose Ruben Rivera in Guanajuato (some 360 kilometers northwest of Mexico City) accepting the organization of the Seventh Meeting of Mexican DXers and Shortwave Listeners, to be held in his city in August of 2001. Guanajuato, he explained, is another colonial town rich with cultural treasures, museums, churches and much more items of interest to the tourist.

After the official closing of the Meeting, a majority of the attendees stayed on to take a four-hour bus tour to the ancient Zapotec ruins of Monte Alban on the outskirts of Oaxaca. One could marvel at the pyramids, tombs and ball courts composing this city which flourished from around 700 BC to 700 AD. And it was certainly enjoyable to tour this piece of history together with radio

colleagues from throughout Mexico and beyond. In fact, it is the human contact which is generally the most enjoyable aspect of these Mexican national DX meetings. Beyond the seminars and lectures, the personal

contact creates friendships that last for many years. Most of those who attend the Mexican DX meetings have very limited financial resources. Some spend several weeks' worth of salary to travel to the event, showing their great dedication to the hobby. Until now, there has never been a registration fee for the Encuentros; everyone just pays their own transportation, lodging and meals. Local governments have provided the meeting places free of charge or at very low cost, and the organizers have paid most of the expenses out of their own pockets. That will change next year, as the clubs voted to institute a 50-peso-per-person registration fee. (That's about 5 U.S. dollars.)

More details should be available about the Encuentro 2001 in Guanajuato during the next few months. Those who would like to receive complete details when they become available can send an e-mail to: [info@wrmi.net](mailto:info@wrmi.net).

# European Beacon

Via Rich D'Angelo

It was a pleasure to receive your email today reporting reception of the European Beacon in Pennsylvania. I'm happy to confirm your reception at the times and frequency you reported.

The World Beacon is owned and operated by our company, Affiliated Broadcasting Corporation. We are headquartered here in Jacksonville, Florida, with offices in major North American Cities, The West Indies, Great Britain and South Africa. Our sister corporation, Affiliated Media Group, is one of the largest Christian advertising agencies in the world, providing media and public relations services to major ministries, philanthropic organizations and Christian musical acts. In addition to radio, we control large blocks of television time and magazine space around the world, which we provide to our clients to further their mission activities.

The idea for the World Beacon was born five years ago when my partner, Affiliated Founder and CEO Ray Davis, visited Trinidad and Tobago. Our clients had a desire to do mission work across the globe but did not have a single source to help them develop and broadcast radio programs.

We lease transmitter time to facilitate our broadcasts. The broadcast you heard came from the BBC transmitter located in Skelton, England. We also have a 7 MHz facility in Krasnodar, Russia. Times and frequencies for the European Beacon are as follows. All times are UTC:

1600-1800 15455 kHz—Skelton  
1800-2000 15585 kHz—Skelton  
1900-2200 7360 kHz—Krasnodar

The African Beacon broadcasts on 9675 kHz from a transmitter in Rampisham, England. It's a 500 kw unit beamed South toward the African continent. We also have a series of transmitters by Sentec in Meyerton South Africa, broadcasting daily from 1600-1800 UTC on 6145 kHz, 1800-2200 on 3230 kHz and from 1900-2200 on 5925 kHz. These frequencies may be harder to hear from our area.

We have separate, limited edition QSL cards which we mail to listeners of each Beacon service. The European Beacon cards are currently being printed. You should receive yours soon!

We have recently moved to a new facility here in Jacksonville, Florida. We will also be increasing the bandwidth of our link between Jacksonville and ondon in the near future, which should significantly improve the audio quality you receive.

We share the same history as short wave listeners, my first receiver was an International Cadet, which my uncle helped design and build. It was already an antique when I got hold of it 30 years ago! Along the way I've used receivers by Lafayette, Zenith, Drake and Kenwood, always with the same venerable long wire antenna you use. Congratulations on sticking with the hobby for three decades. Your QSL collection must be fantastic. You might enjoy visiting Jerry Berg's website [www.ontheshortwaves.com](http://www.ontheshortwaves.com). He has a great section on QSLs and is chairman of the Committee to Preserve Radio Verifications. I just finished reading his book, *On The Shortwaves*, an outstanding history of the first fifty years of shortwave broadcasting. If you haven't yet found us on the web, we invite you to visit [www.worldbeacon.net](http://www.worldbeacon.net). The site has a full broadcast schedule and information on our DXQSL listener appreciation program (along with an MP3 link so you can hear the most recent broadcast).

I appreciate any additional feedback you may wish to share on reception of other World Beacon frequencies. I've heard from listeners on the east coast and as far west as Kansas. You're the first to report from PA.

Thanks again for your note and best wishes from all of us at the World Beacon.

Scott Westerman  
President  
The World Beacon  
[www.worldbeacon.net](http://www.worldbeacon.net)

## The Pennant Antenna

Last century I presented the theory and some practical examples of how you might build a unidirectional, low-noise loop for DXing the lower HF and MW frequencies. You may remember that the antenna combined elements of a loop and a grounded vertical along with a terminating resistor to provide a cardioid directional pattern. One of the problems encountered by users of this antenna is that it is sensitive to variations in ground conductivity.

The efficiency of the part of the antenna that simulates a grounded vertical depends upon the size and efficiency of the ground connection. In the grounded vertical, the missing half of the dipole is provided in the earth through a ground connection via a radial wire network. We know that ground conductivity can vary with soil moisture content. The part of the antenna that simulates the vertical grounded antenna has a variable efficiency depending on when it last rained or whether there is snow on the ground.

The effectiveness of the cardioid pattern loop is a function of the phase and amplitude balance that is maintained between the two parts of the antenna. The part that acts like a terminated loop must be balanced against the part that simulates a vertical ground plane. If this balance is not maintained, the null depth off the back of the antenna pattern will degrade. Practical antenna designs address this problem by providing a remotely controlled, variable-termination resistor. The resistance is controlled via a variable DC voltage that is adjusted by the receiver operator to maximize the null depth as ground conditions change. The need to make such adjustments complicates the design and raises the cost of such antennas. The pennant antenna is designed to overcome this disadvantage.

Antenna simulation programs are wonderful tools. One of the most popular among technically inclined amateur radio operators is EZNEC. This program allows experimenters to play with the parameters of imaginary antennas and quickly see the results on their computer screens. At least in the theoretical design phase, there is no longer a need for expensive antenna ranges, towers, or big plots of real estate. Using this program, anyone can become an antenna designer. It was just such an experimenter who evolved the next step in the evolution of terminated loop antennas.

Spanish radio amateur, Jose Mata EA3VY first described the pennant, and its sibling the flag antenna. (Contrary to what Dr. DX will tell you, amateur radio operators do have last names. They are known worldwide only by their first name and call sign but are not really required to relinquish their last names in trade for a license.) Jose decided to try to find a design that would be immune to pattern variations with changing ground conductivity.

Jose knew the earlier designs, like the EWE and the K9AY loop, used vertical members that depended upon the ground to complete the missing half of the dipole. Jose thought that a terminated loop with a vertical dipole element instead of a ground plane might provide the basis of a design that would provide the desired immunity to ground conductivity variations. He got to work on his computer using EZNEC to model various configurations. He communicated his results in January 1998 to Earl Cunningham, K6SE. Together they authored an article in the Spanish edition of CQ Magazine entitled "Banderas y Gallardetes" in September 1998.

Earl continued to manipulate the dimensions of the pennant in his computer model

until he found what he considered to be an optimal design. A sketch is shown in Figure 1.

**Figure 1** The optimally dimensioned pennant antenna provides a deep rearward null that is not influenced by ground conductivity or height above ground.

The dimensions shown provide a non-resonant antenna with a feed point impedance of about 900 ohms from 1.8 to 7 MHz while maintaining a rearward null of up to 37 dB. The terminating resistor is a 860 ohms non-inductive type. Varying the ground conductivity, using the simulation software, from very poor to very good showed the null and pattern to be virtually unchanged. Similarly varying the height of the antenna above ground had no effect on the pattern or impedance.

In order to match this antenna to coaxial cable, some kind of a broadband ferrite core transformer is necessary. A transformer consisting of 8 turns of primary wire on a Palomar FT-140-43 core and 34 turns on the secondary will provide a good match to 50 ohm coax. If the better shielding of 75 ohm RG-6 cable is desired, change the secondary to 28 turns. A common mode choke consisting of a ferrite isolator should also be used to keep common mode currents on the feedline from degrading the null depth.

Cunningham recently described the results of his design work in the July 2000 issue of *QST* magazine. He found that he could interchange the feed point and the termination to reverse the direction of the null. Attempts to cluster several pennant antennas were less than successful when the vertical

parts were close together. Mutual coupling between the parallel vertical elements caused a transfer of energy between the antennas and filled in the nulls. Turning the pennants around so they are fed at the points via a double pole, double throw switch, as shown in Figure 2, allows the directional pattern to be remotely reversed.

Little degradation of the nulls occurs because the floating antenna is non-resonant and is physically separated from the active antenna.

I recommend that anyone interested in building such an antenna or one of its variations read the *QST* article. It has lots of pattern plots and design information on other loop shapes you may wish to experiment with.

**Figure 2** Two or more pennant antennas can be switched to provide different directional beams.

You should realize by now that you don't get something for nothing. This antenna is very inefficient as are all small, terminated loops. You should plan on running a low noise amplifier like the Kiwa unit to allow your receiver to hear down to the atmospheric noise level. I would suggest you locate the preamplifier near your receiver in order to avoid possible feedback from the preamp output to the antenna.

If you would like to play with your own variations of the terminated loop, the EZNEC software is available from Roy Lewallen, W7EL, PO Box 6858, Beaverton, OR 97007; e-mail w7el@teleport.com; telephone 503-646-2885.

Until next time, stay tuned (or stay non-resonant if you so prefer).

## The MFJ-616 Speech Intelligibility Enhancer

The MFJ-616 Speech Intelligibility Enhancer is an outboard audio processing device that is designed to permit compensation for the varying audio characteristics of different radios, different listeners and different signals. It was originally designed to allow MFJ's owner, Martin Jue, to compensate for aging-related changes in his hearing that were interfering with his enjoyment of ham radio. Essentially, it is a three watt per channel stereo amplifier with a four band equalizer with turnover points at 300, 600, 1200 and 2400 Hertz, with 20 dB of cut or boost at each center frequency. The design is based on research that determined that for the English language:

- The frequencies important for speech intelligibility are the consonant sounds from 500-4000 Hz. These frequencies contribute 83% of word intelligibility.
- Frequencies from 500 to 1000 Hz contribute 35% of word intelligibility and 35% of sound energy.
- Frequencies from 1000 to 4000 Hz contribute 48% of intelligibility *but* only have 4% of the sound energy.
- In contrast, the frequencies from 125 to 500 Hz contain 55% of the sound energy but contribute only 4% to word intelligibility

To sum up, nearly half of the information that is responsible for speech intelligibility is in the range of 1000 to 4000 Hertz, but this range has only 4% of the speech sound energy. Conversely, the range of 125 to 500 Hertz has most of the sound energy but

contributes almost nothing to the intelligibility of received speech. The MFJ-616 allows the operator to boost the frequencies that matter and cut the ones that are obscuring the speech. The stereo design of the '616 provides, via the front panel balance control, for compensation for asymmetric hearing sensitivity on the part of the operator as well.

### The Unit (and Accessories)

The MFJ-616 is contained in a 10 x 2.5 x 6 inch (WxHxD) black metal enclosure. It requires an external DC power supply of 12 to 15 volts at 1.5 amps, connected through a 2.1 mm barrel jack. It has rear panel RCA jack inputs for two signal sources, which can be selected by a front panel pushbutton switch. These inputs can be connected to a receiver's headphone output or to a radio's speaker output jack, although soldering a 10 ohm resistor across the plug terminals is recommended if the speaker jack is used (this is well detailed in the owner's manual). The MFJ-616 can also be connected to a receiver's line out jack, although this may not work with all radios, since the input impedance of the '616 is 500 ohms and most line outs are in the range of 10,000 ohms. The MFJ-616's speaker outputs are via 1/8 inch jacks—there are two mono jacks for the left and right channels as well as a stereo jack for computer style speakers. On the front panel is a 1/4 inch stereo jack for headphones—disable the speakers when headphones are used. The other front panel controls are the volume knob and a bypass switch, which permits comparison between processed and unprocessed audio. The unit is also bypassed when the power switch is turned off, send-

ing the receiver's audio directly to the speakers. The other listed specs for the unit are an overall frequency response of 100 to 5000 Hertz. The suggested list price for the MFJ-616 is \$169.95.

The MFJ-72 accessory pack contains a MFJ-1316 power supply, a pair of MFJ-281 speakers and the MFJ-392 headphones, all for \$58.80, which is a \$7 savings over ordering the items individually. The MFJ-281 speakers are small units (approximately 3.5 inches square) with a frequency response of 600 to 4000 Hz to enhance speech intelligibility.

## Operation

I connected the review '616 to the headphone jack of an Icom R75 and used the MFJ-281 speakers. The instruction manual suggests initial settings of the 300 and 600 Hz controls at full counterclockwise and of the 1200 and 2400 Hz controls fully clockwise and then adjusting the controls to obtain

cut to reduce low-end boom and rumble and set the 2400 Hz control at near-maximum cut (around the 8 o'clock position) to reduce high-end hiss. I then adjusted the 600 and 1200 Hz controls for best speech intelligibility. With female announcers, I could boost the 2400 Hz control a bit to make their voices more readable. The benefits of the MFJ-616 are distinct and unambiguous, especially with signals that are just a little above the noise, since the '616 can be adjusted to reject most of the noise that is out of the speech passband. The unit doesn't help a great deal with interfering stations, if the voices on the desired signal and the interfering station are within the same audio passband. If the interfering signal has audio content that is higher or lower ("monkey chatter") than that of the desired signal, the MFJ-616 can be of use. Since the MFJ-616 is an analog device, there is none of the "artificial" or "synthesized" character to the filtered speech as there can be with DSP filters.

.....  
**The MFJ-616 Speech  
Intelligibility Enhancer  
was originally designed  
to allow MFJ's owner,  
Martin Jue,  
to compensate for  
aging-related changes  
in his hearing  
that were interfering with  
his enjoyment  
of ham radio.**  
.....

readable audio. This is not a bad place to start, in order to see just what the '616 can do, but don't be afraid to experiment. I most often set the 300 Hz control for maximum

I liked the MFJ-392 headphones (\$19.95) which are part of the MFJ-72 accessory pack—they were lightweight and had well-padded earcushions to help seal out external noise. Each earpiece has a volume and bass-cut control. They had a pleasant, full-range sound. I was less impressed with the MFJ-281 speakers (\$12.95 each) which were rather tinny sounding, which is not surprising, given the fact that they use three-inch drivers. I would recommend larger speakers for fuller sound at the times that the MFJ-616's filtering is not required. Although I used my shack 12 volt supply for the test, I checked the MFJ-1316 power supply (\$19.95) and found it to be hefty and hum-free.

In summary, the MFJ-616 is a reasonably priced product that is well-built and does the job it was designed to do well. You can try it free for 30 days (if purchased from MFJ and minus shipping costs) and it has a one year warranty. MFJ Enterprises, P.O. Box 494, Mississippi State, MS 39762; 800-647-1800; [www.mfjenterprises.com](http://www.mfjenterprises.com). 

# Pirate Radio Report

Chris Lobdell • P.O. Box 146 • Stoneham, MA 02180-0146 • clobdell@mediaone.net

Hi and welcome to the February edition of the **Pirate Radio Report**. Europirate season is nearing an end as the earlier sunrises will see the end of the 48 meter band pirates propagating to North America between 0700-0900 UTC but many DXers were fortunate and logged quite a few over the holidays. There's always next year!

## North American Frequency Usage

Besides the usual 6940-6960 kiloHertz region, try the 6200-6260 area as well 6850 kHz for North American activity.

## Alfa Lima International Continues Testing To North America

This Dutch Europirate continues is successful Sunday morning test transmissions to North America on 21890 kiloHertz. Try them between 1330-1800 UTC. This 300 watt transmitter has been well heard east of the Mississippi. Reception reports can be sent to them at: Box 663, 7900AR Hoogeveen, Holland.

**Friday Radio** was logged at 2353 on 6950.5 kHz on January 12<sup>th</sup>. Return of a veteran pirate with "Thank God It's Friday" slogans and rock music. The Providence maildrop was announced. [Zeller-OH]

**Ground Zero Radio** was heard on 6946.9 kHz on December 26<sup>th</sup> from 0114-0139 sign off. This was the Christmas program with alcoholic drink recipes, etc. [Maroti-NY]

**KIPM** was noted on December 30<sup>th</sup> at 0140 UTC on 6940 kHz. Illuminati stuff, spooky music, "K-I-P-M, Illuminati Prima Materia", ID as KIPM, address in Elkhorn, NE, "End of transmission", silence for a minute, then into a repeat of this hour-long episode ("The Adversary") from the Wacky World of KIPM about trying to kill the anti-Christ in the womb; QSY @ 0300 to 6950 [Brandi-NJ]

**KRMI/Radio Michigan International** was logged on 6949.9 kHz USB mode on December 24<sup>th</sup> signing on at 0302 UTC with a program of Xmas song parodies including

"Christmas On Acid" and others. [Cobb-ME]

**Laser Hot Hits**, 6218.9, the Irish pirate, was logged on December 22<sup>nd</sup> at 2135 UTC with Christmas music, including Slade and Wham. Station IDs and a phone number were annncd. [Brandi-NJ]

**Melvin Malfunction**, a new pirate, was logged on 6950.5 kHz on January 15<sup>th</sup> at 0019 UTC playing rock and pop music from the 1960's. The announcer was a computer generated voice who gave the following email address for reports: melvinmalfunction@yahoo.com [Costello-NJ]

**Radio Bingo** was heard on 6954.5 at 1431 until 1515 sign off on January 7<sup>th</sup>. Program of rock music, then into the Bingo game which John T. Arthur always seems to win. [Zeller-OH]

**Radio Free Speech**, The Station "That Bill O. Rights Built" was heard 6240 kHz at 2201 sign on December 30<sup>th</sup>. This was a replay of the Thanksgiving Show. Note the frequency. Everything in North America is not on the 6955 area! [Maroti-NY]

**Radio Three**, noted in the 48 meter pirate band on 6240 kiloHertz at 0127 UTC on January 1<sup>st</sup>. Frequent IDs and promos "Radio Free Europe...no, it's Radio Three". Good signal and audio. [Comeau-MA]

**Radio Tellus** was heard on December 24<sup>th</sup> from 0515 to 0529 sign off with pop music on 6955 USB, announcing the Providence [Box 28413 ZIP 02908], RI maildrop. [Wilkins-MO]

**UK Radio**, a Europirate, was presumed to be the one here December 30<sup>th</sup> on 6266.7 at 0510 with a tape loop of Radio Mi Amigo IDs and jingles. [Maroti-NY]

**WMFQ**, the station that always asks "Where's My F'ing QSL!" was logged posing the usual question on January 21<sup>st</sup> on 6945 kHz AM mode at 0207 UTC. Played some Kid Rock, Maria Muldaur announcing the Providence, RI maildrop for those @#@\*@@ QSLs! [Comeau-MA] Until next month, Happy Pirate DX!

# Net Notes

Tom Sundstrom • P.O. Box 2275 • Vincentown, NJ 08088-2275 • Fax: 609-859-3226 • trs@trsc.com  
http://www.trsc.com

Welcome to February. Spring is coming, and the Winter SWL Festival is about a month away. If you haven't checked the fest Web pages lately, why not take a look at [www.trsc.com](http://www.trsc.com) and click on the ticket that asks the question "How many days...?" And check out the swap meet pages if you are selling or looking for an item. We'll be there. Will you?

Lightning Explorer is a free Web page "featuring actual lightning information from the National Lightning Detection Network, Lightning Explorer gives you a view of all lightning activity in the continental United States." The image reflects lightning activity from the last 2 hours, available in 15-minute updates. "The National Lightning Detection Network (NLDN) constantly detects lightning discharges to ground. Each lightning event, called a "flash", is recorded at the Network Control Center for the NLDN. The dots on the map reflect these recorded flashes." Now you can see where the nonsense is that's wreaking havoc on the low SWBC bands: [www.lightningstorm.com/lightningstorm/gpg/lex1/mapdisplay\\_free.jsp](http://www.lightningstorm.com/lightningstorm/gpg/lex1/mapdisplay_free.jsp)

And here is a lightning Web page that covers Canada, but the data is not updated as often: [www.weatheroffice.com/LightningNews/default.asp](http://www.weatheroffice.com/LightningNews/default.asp)

Lightning is one source of a remarkable symphony of strange noises coming from our own planet. Scientists call them "tweaks," "whistlers" and "sferics." These signals are radio waves at audio frequencies. NASA now has a test receiver on the Web for the public to use. Unfortunately for us Apple's QuickTime is the media player device and we have been unable to play the audio, despite repeated attempts to make QT work in several different browsers. But if QT works for you, read the story and listen at [science.nasa.gov/headlines/y2001/ast19jan\\_1.htm](http://science.nasa.gov/headlines/y2001/ast19jan_1.htm)

On a different note, Rich McVicar puts DX'ers to the test in an interval signal quiz on his new Web site at [web.a-znet.com/rmcvicar](http://web.a-znet.com/rmcvicar). Dust off the cobwebs and give it a try.

The <http://> is implied in the URLs listed above.

- 11940 **UNITED ARAB EMIRATES(t)** in AR 1850, tlk over prayers, no discernable ID 1900 (Witham 12/20)
- 13625 **CLANDESTINE R Free Asia** relay Tinian in Mandarin 2055, tlk, phone interview, ID in EG & Mand'n slightly overmodulated, f (Witham HI 12/16)
- 15820U **ARGENTINA** Unknown station in SP 0225, fanfare but unable to copy ID (Sgrulletta NY 12/18) ED: Must be the feeder for R Rivadavia/Continente in Buenos Aires only station listed on 15820.

NOTE: Since I plan to be out of town between March 18 to 24, it will be appreciated if logging reports for the April issue can be sent to Robert Montgomery by March 5 if sent by surface mail or March 10 if transmitted by computer—WCT

# 14th Annual Winter SWL Fest

Sponsored by **NASA**

March 9-10, 2001

Best Western—The Inn at Towamencin  
(formerly Holiday Inn),

Summeytown Pike, Kulpsville, Penna.

Plan to attend your favorite forums Friday and Saturday. Enjoy meeting with your friends in the Hospitality Room. Bring radio related items for the swap meet or to donate for the Silent Auction. Check out your friends' receivers, bring one of your own for others to try!

No frills; just shortwave, longwave, mediumwave, pirates, and scanning. Once again you will enjoy the camaraderie of your hobby friends.

The new year brings a few changes to the 'Fest. First is that the name of the hotel has changed. The location and staff are still the same, however, and so, presumably, is the excellent service we get every year. Second, lunch on Saturday has been upgraded to a pizza & salad buffet. Third, there is now an incentive for you to pre-register, as prices are more expensive for those who wait. Registration options are also more flexible, with new one-day and student registrations.

## Early Registration (rec'd by March 2, 2001)

Full registration: **\$43**

Two-day Partial (no meals): **\$17**

One-day Partial (no meals): **\$9**

Full spouse/son/daughter: **\$28**

Banquet only spouse/son/daughter: **\$16**

Student (w/ valid ID, no meals): **\$5**

Many things, like the raffle, remain the same:

**GRAND PRIZE** To be announced

**SPECIAL** Register early to win a SW portable! One free entry for an early-bird registration received by February 12, 2001.

Please bring items for the Silent Auction. Proceeds are donated to charity.

Checks should be made payable to WINTER SWL FEST. Register directly with the hotel for your rooms by calling the Holiday Inn at (215) 368-3800. For 2001, one special rate **\$75** single or double! Tell the hotel staff you're with the WINTER SWL FEST to receive this special room rate. *You must make your reservation directly with the hotel to receive this rate; reservations via the Best Western 800 number or web site are not eligible for this rate.* Up to the minute info. can be found on the Winter SWL Fest Web Page at <http://www.trsc.com/winterfest.html> or from <http://www.anarc.org/naswa/>.

The Best Western—The Inn at Towamencin is located at Exit 31 of the PA Turnpike Northeast Extension-Lansdale Interchange. Improved access from the south with the Blue Route (I-476)—ask for details. Limo service is available from Phila. Intl Airport directly to the hotel.

Please submit the following form with your registration amount or send for more information to:
