Wyomissing PA 19610

Genie: RDANGELO3

Internet rdangelo3@genie.geis.com

The Association of North America Radio Clubs ("ANARC") has announced the results of its Executive Board elections for two-year terms commencing on January 1st. **Harold Cones** and **Mark Meece** have been re-elected while **Uncle Skip Arey** has been elected for the first time. I am happy to report that all three are members of our club. They join **Dave Marshall**, **John McColman**, **John Vodenik**, and myself to make up the seven member board. The 1996 board is currently electing a Chairman from among its ranks. When that is complete I will pass along that information.

Through ANARC's quarterly publication *UPDATE*, we learn about the decision of **Michael Murray** not to seek another term as Secretary General of the EDXC. Michael has served in that capacity since 1979 following the resignation of Rudolf Heim. In the last few years the amount of time he has had available for council activities has dwindled. As many of you know, Michael

ANARC SWL Ham Net

Tune in Sunday mornings at 10 A. M. Eastern Time on 7240 LSB for the latest in shortwave listening, DX tips, and up to the minute hobby news. Contributors share their DX tips via their own amateur radio stations or by telephoning a "gateway" station who then broadcasts the relayed tips. Net Controls Bob Brown KW3F, Hausie WB4JSP, and Tom Sundstrom W2XQ, host an always lively gang of DX monitors. (Best heard in the eastern half of NA.)

has been a regular at the Winter SWL Festival in Kulpville in recent years. At the FEST we have come to know Michael as a friend. Although I am sure he will attend DX gatherings as before, it will not be as the Secretary General of the EDXC. Personally, I will miss him. He has been good for the hobby; good for EDXC; and good for ANARC. We wish him well in his future endeavors.

Welcome to the following new NASWA members -

Sudhir Bagga, Redondo Beach, CA
Michael N. Beu, Austin, TX
Donald A. Boyer, York, PA
Robert C. Campbell, Hillsboro, OR
Giovanni D'Amico, Hindelbank, Switzerland
Larry Davis, Arlington Hts., IL
Tony Dibenedetto, Fairfax, VA
Robert Dixon, Davis, CA
Klaus Floer, White Plains, NY
Mike Floyd, Mesa, AZ
Thomas J. Golero, Flushing, NY
Jim Harman, Clovis, CA
Bob Hill, Natick, MA

Maryanne Kehoe, Atlanta, GA
David Maciejewski, Toledo, OH
SSGT Chris Passmore, Fairchild AFB, WA
Joe Perge WB8HWF, Newark, OH
Dr. Phanor L. Perot Jr., Charleston, SC
Charles Perry, Newfoundland, NJ
Wilder A. Pickard II, Evanston, IL
Lloyd W. Roupe, Littleton, WV
Simon Sarkissian, Rosemont, PA
Trevor Stanley, Flagstaff, AZ
Michael Swensek, South Elgin, IL
Dr. Maurice J. Tepper, Chappaqua, NY
David Zagurny, Batavia, OH

Our Motto is - "Unity and Friendship"

Calendar Of Events

- Nov 17 Meeting.** Philadelphia Area NASWA Chapter. Kulpsville Holiday Inn, Kulpsville, PA at 7:30 PM. For more information contact Dan Cashin at 215-446-7831.
- Nov 17 Meeting.** Boston Area NASWA Chapter. The Lexington Club, Rts. 4 & 225, Lexington, MA at 7:30 PM. The location is 1/4 mile west of Rt. 128, Exit 31. For more information contact Paul Graveline at 508-470-1971 or Internet: 74007.3434@compuserve.com
- Nov 18 Meeting.** The Miami Valley DX Club (all band orientation) meets at 1:00 PM. For more information plus this months meeting location contact Dave Hammer at 614-471-9973 or write to MVDXC, Box 292132, Columbus, OH 43229-8132.
- Nov'95 Contest.** 1995 Annual DX Contest associated with Adventist World Radio's DX program, "AWR Wavescan." See October's NASWA Notes for details.
- Dec 03 Meeting.** The Tidewater SWL's meet at 6:30 PM. For more information plus meeting location contact Joe Buch at 804-721-2782.
- Mar '96 Contest.** 1996 North American DX Championships. Further information will be published in the Journal or you can send a self-addressed stamped envelop to 1996 NADXC, c/o Dr. Harold Cones, 2 Whits Court, Newport News, VA 23606. Information will be sent after the contest plans have been firmed up.
- Mar '96 Convention.** The 9th Annual Winter SWL Festival will be held at the Kulpsville Holiday Inn (Exit 31 on the Northeast Extension of the Pennsylvania Turnpike) on 22-24 March 1996. Organized by the "gang of three" this all wave gathering attracts over 200 hobbyists each year. Further information and the registration form will be printed in the Journal as we get closer to the event. We look forward to seeing many of our club members at the FEST once again.
- Apr '96 Convention.** The 30th EDXC Conference will be held in Florence, Italy on 27-30 April 1996. The Associazione Italiana Radioascolto ("AIR") is the organizing group. Detailed information is available from AIR, P.O. Box 30, I-50141 Firenze 30, Italy.
- May '96 Convention.** The 1996 ODXA Convention will be held at the Holiday Inn in Kingston, Ontario on 3-5 May 1996. More details to come.

Members are invited to submit items to be included in this calendar to Rich D'Angelo (Internet: r.dangelo3.genie.geis.com) or Ralph Brandi (Internet: ralph@mtunp.att.com).

FRENDX: Twenty Five Years Ago....

A temporary/emergency bulletin was published by the Board of Directors due to Executive Editor/Publisher Bill Eddings suffering a serious heart attack in October. As a result, only the most interesting DX and QSL information was published in a 10-page bulletin. The Board planned to return to regular sized bulletins in December. Ed Shaw of Virginia volunteered to be the interim publisher for the next few months. Although limited in space allocation, QSL Report editor Gregg Calkin reports members receiving verifications from the Austrian Army Radio Station, Radio Nordsee International, Springbok Radio and Clandestines: Radio España Independiente and Radio Liberation. In the ANARC Report, Gerry Dexter notes that member Wendel Craighead was the new Executive Secretary of the association replacing Gray Scrimgeour (who became one of the three NASWA representatives). A photo page featured Australian member Robert Sheperd, Chris Lobdell, Don Jensen and Andy Rugg.

Incidentally, ANARC's quarterly publication, UPDATE, is available through the associations' publisher, **Bill Kurrasch** (5607 Lincoln Road, Ontario, NY 14519), for US\$7.00 in North America or US\$10.00 worldwide. Its a good way of keeping up with news of its member clubs, committees, and sister organizations. A sample can be had for just US\$1.00 or two International Reply Coupons.

Oops Department: Eagle-eyed **Tom Sundstrom** noticed the wrong dates listed in the Calendar of Events for the Winter SWL Festival. **Kris Field** provides the following, "The dates for the 9th Winter SWL Fest are March 14-16, 1996." Thanks Tom for the sharp eyes and to Kris for the correct dates. I hope many club members can attend the 1996 FEST.

Don Jensen checks in this month with another report from our Country List Committee. As we head into the DX season, you may want to make sure your records are up-to-date.

Also, don't forget to keep our Awards Chairman busy during the winter months.

From our good friend **Harry Weatherly** comes word that our friends at DX Australia (P. O. Box 285, Mt. Waverly, Victoria 3149, Australia) have incorporated. The official name is now DX'ers Calling Incorporated although the club will continue to be known as DX Australia. They publish an excellent monthly bulletin, DX'ers Calling, covering primarily shortwave and medium wave from a Pacific point of view.

Finally, a brief reminder that our Distributing Editor, **Fred Kohlbrenner** (2641 South Shields Street, Philadelphia, PA 19142) awaits your loggings each month. He will forward them to the appropriate log report editor. He can be reached at through the Internet at: fkohl@ix.netcom.com.

That's it for this month. Enjoy this month's *JOURNAL*; it's another good one. 

For the second year now, detailed information is available about transmitters used by shortwave radio stations around the world.

TDP SW-95 -- the "Transmitter Documentation Project" -- has just come off the press in its second edition. TDP is the result of more than 10 years of research by Belgian DXer Ludo Maes, with the cooperation of international organizations, publications, DX clubs and programmes, transmitter manufacturers and in some cases the radio stations themselves. For this second edition, a number of well-known DX-ers joined to contribute with updates and additional information.

TDP has grown to a 60-page booklet listing shortwave broadcast transmitters worldwide, arranged by country. Each listing indicates the name of the station, transmitter site and geographical coordinates. It also shows the number of transmitters at the site, their power, manufacturer, type number and year of installation. This year, a lot of detailed information about the installations of the Commonwealth of Independent States has been added thanks to a number of dedicated and specialised contributors.

This informative new publication also contains a list of shortwave transmitter manufacturers and their headquarters, plus statistical breakdowns of the number of shortwave transmitters in use around the world, grouped by power level, country and manufacturer. An article about the history of a transmitter manufacturer concludes the booklet.

TDP SW-95 is now available for only 5 GB £, 6 IRC's, 7 US \$, 10 AUS \$, 10 CAN \$, 10 DM, 35 FF, 200 BEF or 625 YEN ¥, including worldwide airmail delivery (no cheques or credit cards please). Send for your copy today, to:

As 1996 Approaches...

In 1995 I introduced the concept of Target Topics in each monthly column; are there other areas you'd like to see explored as a new year approaches? As always, the column stays freshest with your input. As always, you're welcome to use E-mail or snail mail routes; another option is telefax, which you're welcome to send to +1 410-560-2857. Please make sure my name is on the cover page so my office mates can get the fax to me.

Voice Of Russia: New Programs?

My travel schedule this past week precluded a personal look at these, but it's newsworthy enough—several new programs have appeared on the Voice of Russia fall schedule:

This Is Russia is a cultural program, looking at culture, arts, and religion. Russian personalities are also profiled. Sundays 0030, Tue/Thu/Sats 0130, Mon/Wed/Fri/Sun 0630 are among the air times.

Our Treasure Chest looks at Russian history, from ancient to recent times, from princes to premiers. Aairs daily 0430 and 2030.

Moscow Yesterday and Today recalls events in the life of Moscow, which will be 850 years old in 1997. Weekdays 0130 and 0630, alternating with **This Is Russia** as noted above.

Timelines is an insight into Moscow life through foreign eyes, in a light entertainment format, hosted by Estelle Winters. Mondays 0330, Saturdays 2330.

You're invited to send in some comments on these programs for upcoming columns.

Target Topic: Inventions and Innovations

In picking this topic, I chose to distinguish this category from the category of science and research. Instead, I will be looking at programs that celebrate new applications of science, oftentimes mixed with a healthy dose of entrepreneurship and economic development.

The BBC's main contribution to the genre is **New Ideas**, a ??-minute weekly series. The program takes a look at new products, normally including some aspect of high technology.

Another other notable entry is **Innovation Canada**, also looking at new technologies and products from the Canadian perspective, in order to show that new product originations aren't limited to south of the 49th North latitude.

Peter Bowen sent in the following review on the third entry, this from Radio Australia. *Innovations* is a weekly twenty-six minute magazine program.

Topics covered are wide-ranging, and are separated by short musical breaks to allow the listener to take brief mental rest periods, and also to provide some contrast and variety. In a program of this type, explanation of the new innovation, as well as a description of the scientific background, is essential. This is well achieved on Innovations, making the content clear and easy to understand.

Items broadcast include correspondents' reports and interviews conducted by the host/presenter. The former includes sound actuality of several different types (for example, voices of interviewees, music, and "scientific sounds"). Animation and life are characteristics of the contributions by both

host and reporters; they also speak with confidence and competence. Those interviewed speak with excitement, energy, and competence, befitting those who have new ideas and discoveries to share.

Although **Innovations** is an excellent program, its focus totally on Australian innovations and discoveries is too narrow and confining. Given Radio Australia's role as probably East Asia's most important English language international broadcaster, as well as Australia's desire to be considered part of Asia, it would be more appropriate to include some items from other parts of Asia. On the other hand, shortwave programs on

new discoveries tend to primarily be a vehicle for increasing the export sales of those new ideas by firms in the broadcaster's home country.

In spite of this criticism, **Innovations** is an excellent middle-of-the-road science show. Its material is more advanced than that found on the very basic **Research File on Radio Netherlands**, but not quite as advanced as what is broadcast on **Discovery on the BBC**.

Here are other programs featuring innovations and technology, versus pure science, as shown in John Figliozzi's **Shortwave RadioGuide**.

Time	Days	Station	Title
0130	Wednesday	HCJB	El Mundo Futuro
0430	Sunday	Swiss R. Int'l	Technorama
1315	Tuesday	HCJB	Towards Tomorrow

Many thanks to Peter's contribution reviewing **Innovations**...where's your contribution?

Radio Netherlands Highlights

Through November 16th, **Documentary** features an ongoing encore presentation of Dheera Sujan's presentation of *The Silver Screen, a Golden Past*. On November 23rd and 30th, Martha Hawley hosts a two-part series celebrating the 20th anniversary of Surinam's independence from the Netherlands in *The Surinam Experience*. December 7th starts the first of a two-part program called *Friendship With Germany*, looking at a new era of the Netherlands-Germany relationship. **Documentary** airs Thursdays to North America at 0053 and 0453.

Through the winter months, Radio Netherlands has a 26-part series of programs on Africa in the program **African Season**. November 13th features a look at France's role in French-speaking Africa. The November 27th program originates in Uganda, one of the countries hardest hit by AIDS, on the eve of International AIDS Day on December 1st. **African Season** airs Tuesdays to North America at 2330.

BBC World Service Highlights

Music and the Arts

The marquee program for the Beeb December is **Around The Beatles**, a two-part 30-minute program of Beatles anecdotes from everyday people who found themselves rubbing elbows with the group during the group's peak. Disappointingly, there are no airings on the Americas feed when shortwave frequencies are used. It appears the best bet will be Tuesdays, November 14th and 21st, 0630 on some European frequencies.

Thursdays, 1505: the **UK Album Chart** is a weekly 10-minute quick look at the top 10 UK albums. Tim Smith spins the week's highest entries and fastest climbers.

Mondays, 0030: **Good Books**, a weekly 15-minute look at literary classics, focuses on children's books in November. *Black Beauty*, *The Hobbit*, and *Pinnocchio* are among the books reviewed in November. Repeated Wednesdays 1445.

Sundays, beginning November 12th, 0130: **The Multitrack Sessions** is a new eight-part 15-minute series highlighting acoustic popular music of the genre you might find on MTV's "Unplugged" series. Repeated Tuesdays 1445.

Sundays, beginning November 12th, 0450: **Portrait of the Artist** is a new six-part 10-minute series looking at some of the most famous self-portraits in existence. One painter is profiled in each program. Also airs Sundays 1405.

Sundays, beginning November 5th, 0330: **Purcell's London** takes a look of England's greatest classical music composer in the context of London musical life during Purcell's life. If you're curious, the 300th anniversary of Purcell's death is November 21st. This five part 30-minute series also airs Thursdays 1215.

Sunday, November 21st, 2105: the **Purcell Anniversary Concert** features the Choir of Westminster Abbey and the New London Consort with some of Purcell's best known music, including *Suite From Abdelazer*. The European release airs at 1901.

Saturdays, 2230: **November Play of the Week** highlights include the winners of the 1995 BBC World Service Drama Competition.

The overall winner, **Puzzles**, written by Katy Parisi of Virginia, airs November 4th. The play is set in the Ohio snowbelt and looks at a youngster's relationship with his grandfather and the grandfather's insight into adult life.

The European winner, **Last Supper**, airs November 11th. It's a largely autobiographical story of a young Jewish family's flight from Germany on the eve of World War II.

The South Asian winner, **My Enemy, My Friend**, airs November 18th. is a look at the 1993 Hindu-Muslim riots in India through the eyes of one family's struggle for survival through a night of rioting.

News and Feature Programs

Thursdays, 0230: **Assignment** returns following a hiatus with a new series of weekly 30-minute programs. The program analyzes a single issue in each week's program. The

European release Thursdays at 1830 should also be easy to catch, at least in Eastern North America.

Tuesdays-Saturdays, 0130: **Outlook**, one of the most popular BBC World Service programs, with a mix of interviews and analyses, can be reached by its own unique E-mail address: outlook@bbc.co.uk. Also airs weekdays at 1405 to North America.

Tuesdays, 1505: **Trees** is an ongoing 10-minute series reflecting on the cultural and economic influence of wood and woodlands. Treehouses, reforestation, and the paper industry are among the November topics.

Thursdays, beginning November 9th, 2330: **Heritage** returns for a new six-part 30-minute series looking at archaeological sites, museums, and historic buildings in Europe, Asia, and the Middle East as links to the roots of culture. Malcolm Billings hosts. Repeated Fridays 0330.

Monday, November 13th, 1515: **The Fallen** is a single 45-minute program commemorating the ordinary soldiers of World War I. Drawing on eyewitness archives, letters, poems, and songs of the time, the program looks at how servicemen lived and how they died. This will be an interesting program after a year's worth of commemorations from World War II.

Thursdays, beginning November 16th, 0345: **Animals of Power** is a five-part 15-minute look at the role animals have played in the human quest of seeking meaning in life. Animals have been viewed as contributors of 'success in hunting, battle, health, fortune, weather, and fertility. Also airs Wednesdays 1515.

Mondays, beginning November 20th, 1505: **Hallowed Ground** looks at poetry that reflects particular places or settings. For example, the November 27th edition looks at the poetry associated with places of annihilation, including Buchenwald and Hiroshima.

Tuesdays, beginning November 28th: **What's News** returns for a 14-part series of 15-minute programs on news and current affairs for a young audience, again hosted by Sarah Ward. Listener input on story suggestions or interview questions is again solicited. While there isn't a specific E-mail address provided, the usual BBC World Service address of worldservice.letters@bbc.co.uk should get your question forwarded to the right folks.

Science and Technology

Fridays, beginning November 3rd, 2315: Even though I highlighted the new computer and digital communications program **Soundbyte**, the BBC has apparently changed the air times. Other airings include Wednesdays 1145 and Fridays 1430.

Monday, November 26th, 1515: **Them And Us** is a single 45-minute program looking at language and thought in the animal kingdom, challenging the 300 year-old notions of animals as mere flesh-and-blood machines.

Mondays, beginning November 6th, 1215: **You And Your Bones** is a new six-part 30-minute series exploring the structure and function of our skeletal system. This program is especially suited to those who have just started listening to the BBC in English, as an example of what can be learned from the BBC World Service. Also airs Mondays 0630.

Monday, November 20th, 1515: **Lighten Our Darkness** is a look at ancient and modern perspectives of the sun, whether it's in worship, economics, or farming. The insight of writers, poets, religious thinkers, and scientists is considered.

Light Entertainment

Mondays, beginning November 13th, 1130: **Quote...Unquote** returns for another 12-part 30-minute series of quiz programs on slogans, sayings, and catchphrases. Favorite family put-downs, and examples of "hoof-in-mouth disease" are also fodder for discussion.

Upcoming Target Topics

As always, your input is solicited for my monthly look at a particular program type. So you can plan ahead, here are some of the Target Topics for upcoming months:

December: Domestic Life programs

January: Light Entertainment and Mailbag programs

February: Religion

That's All, Folks

Until next month,

73 DE Richard

HARDWARE BITS by Alan Johnson

GROVE TUN-5 MINITUNER—Grove Enterprises has recently introduced their new TUN-5 Minituner. It is a compact tunable active antenna when used with the attachable whip antenna or can be used as an amplified preselector when an outdoor antenna is connected. It uses a dual-gate FET amplifier and covers 250 kHz to 30 MHz in five switch-selected bands. An AC adapter is included or the unit can be powered by a nine volt battery. The price is \$99.95. The TUN-5 can be obtained from Grove Enterprises, P.O. Box 98, Brasstown, NC 28902-0098; (800)-438-8155.

NEW BRITISH RECEIVER?—NASWA's Rich Dailey of Pittsburgh, PA wrote to tell me that John Wilson and John Thorpe, previously of Lowe Electronics, have established a new SW receiver manufacturing firm and will shortly introduce their "Type N" receiver. Let's hope this is true—details as available.

(At press time comes news that the company is a British arm of AOR, who introduced their AOR-3030 last year. Details of the new radio, the AOR-7030, are available on British dealer Javiation's site on the World Wide Web, <http://www.demon.co.uk/javiation/>. —Layout Drone)

OTHER NEW RECEIVERS—Remember that the new Radio Shack tabletop receiver, the DX-394, should be coming out this month and I have seen some messages on GENIE that Drake will soon be putting out a \$300 tabletop receiver.

The Ultimate Challenge: DXing Medium Wave Harmonics

By Don Moore

If you've been reading NASWA very long, you've noticed by now that shortwave broadcasters aren't the only broadcast stations using the shortwave bands. On occasion loggings of mediumwave (AM) "harmonics" creep in. But, although some mediumwave stations broadcast on shortwave at times, usually when they do they don't even know it! And that's just part of what makes DXing mediumwave harmonics such a challenge.

What Are Harmonics?

All radio transmitters naturally put out harmonics, which are multiples of the fundamental frequency. For example, a station on 1400 kHz will transmit harmonics on 2800, 4200, 5600, etc. Twice the fundamental frequency, e.g. 2800 khz, is called the second harmonic; three times it, e.g. 4200 khz, is called the third harmonic, etc. The first harmonic, or one times the fundamental frequency, is the fundamental itself. Harmonics should not be confused with images, which are generated internally in a receiver, and are usually received plus or minus 910 kHz or 1000 kHz of a frequency, depending on the receiver, or receiver mixing products that cause exceptionally strong stations to appear where they don't belong. Harmonics are produced at the transmitter, not the receiver.

Harmonics may seem like a free way for a small AM station to become an international broadcaster, but AM stations don't want to intentionally transmit harmonics, as any power that goes into a harmonic frequency is not being used for their fundamental frequency, which means a less powerful signal for their main audience. In

addition, harmonic transmissions are prohibited by law as these unintentional broadcasts on higher frequencies may interfere with other stations which are licensed to use those frequencies. To prevent these problems, station engineers suppress harmonics below a maximum level allowed by the FCC or their nation's equivalent agency, although enforcement may vary (especially in Third World countries). But, not all stations have competent technical help watching over the equipment, or even if they do, mistakes can happen. Sometimes something gets maladjusted or whatever and suddenly there is maybe fifty or a hundred watts going into a harmonic instead of half a watt or a watt. Usually the problem is so small that it won't be noticed until the engineer does a regular check-up on the transmitter, or someone hears the harmonic and tells the station about it. In the meantime, it's happy harmonic hunting for DXers!

A Receiver Problem?

The question as to whether or not harmonic receptions are a technical problem in the receiver is logical considering how many receivers have image and overloading problems. But remember, to have an image or overloading problem putting the station where it doesn't belong, the signal first has to be coming in very strong on the frequency where it belongs. That is, your receiver can't screw up and put a signal someplace other than where it belongs if the receiver isn't receiving the signal in the first place!

As to whether receiving a harmonic is a receiver problem, there is a very easy way to check for that. If you have a harmonic of a 1400 kHz

station on 2800 kHz, just tune down to 1400 kHz and see if you hear the same signal. If you don't, there's no way the harmonic is being generated by your receiver—it must be coming from the transmitter. Usually that's the case as the harmonic is likely coming from several hundred miles away and there are probably other AM stations on the fundamental that are closer to you, and those are the ones you're going to hear on the fundamental frequency. Even if you do hear the same station on 1400 kHz, that still doesn't mean the harmonic is a receiver problem. If on 2800 you hear the station with a fair and interference-free signal, but on 1400 it is weak and mixing with three other stations, you again have a transmitter-generated harmonic. Receivers can't take a weak signal and produce a stronger image out of it, nor can they filter out co-channel interference in the process (although sometimes we might wish they could!).

Receiver-generated harmonics are always a possibility, however, and you should cross check possible fundamental frequencies for the same programming before spending any time trying to ID a harmonic. In reality though, only very-strong local AM stations are going to cause receiver-generated harmonics, unless you have a cheap single-conversion receiver. Even then, if you hear the second harmonic of a 5 kW or less AM station a couple of hundred miles away you can be sure it is not the fault of your receiver. The signal from such a station just won't be powerful enough to overload any receiver.

Why Dx Harmonics?

First of all, it is possible to hear many stations that you simply can't hear otherwise. That's true of almost all the 130+ plus AM harmonics I've heard over the past 20 years. After all, what's your chance of hearing a 1 kW Guatemalan AM station in the central US? Secondly, DXing MW harmonics is one of the most challenging types of DXing and can be a lot more exciting than hearing a station on its fundamental. Most harmonics are second harmonics and fall at the bottom of the SW spectrum—the 2 MHz area, which is the most difficult part of the SW bands to hear any kind of distant stations on. Increasing the challenge, harmonic signals are extremely weak. As the signals are unintentional, powers are on the order of a hundred watts or less—real DX.

Another challenge is that because the signals are weak, it is hard to understand enough to narrow down who the station is, and there are so many more choices. For example, if you have a US harmonic on 2800 kHz, just take a look at how many stations are on that frequency. Was that static-covered identification WBDA or WEBH or ...? Or, maybe a harmonic has lots of news of Colombia, but there are six Colombians on the probable fundamental. Finally, the signals are very intermittent. You can tune through the 2000–3200 range every evening and morning for a month and not here a peep of a harmonic. Then in a week's time, there might be three or four. Some last a day or two, few more than a couple of weeks. Whether or not something is there is a combination of chance and good propagation.

Equipment Needed

DXing harmonics requires just three things. The first is a sensitive receiver as the weak signals don't propagate well over long distances. The more sensitive the receiver, the more audio will be recovered from the weak noise-covered signals. Of course your receiver also must cover the 2MHz band; many of the smaller shortwave portables do not.

The next important piece of equipment is a good antenna. The best 2MHz antenna is the probably a lengthy beverage or mini-beverage antenna, but there is good news for DXers who don't have that much real estate—the second best antenna will even fit inside an apartment. Loop antennas, which are commonly used on medium wave (AM), will also work very well on 2MHz. Building loop antennas is beyond the scope of this article, but the National Radio Club's two antenna reference manuals have lots of plans and information. Send \$1 to National Radio Club Publications Center, PO Box 164, Mannsville, NY 13661 for an NRC catalog. To make a box or other wire loop work usable on 2 MHz, it may be necessary to use a little less wire than is needed for MW. Build the loop according to their plans, try it out, then gradually shorten it, if necessary. Alternately, Kiwa is reportedly soon to come out with a commercially-built shortwave loop for the tropical frequencies. If it's anything like their medium wave loop, it should be a great harmonic-snatcher!

The budget conscious DXer with some backyard space might try a Dipole, Inverted V, or a Delta Loop cut to 2.5MHz. However, at 120 meters, even these common antennas take up space! Some DXers have reported good 2 MHz reception by winding 120 meters of wire around a 10 foot section of pvc pipe. Finally, if none of these specialized antennas is suitable, there's the good old random wire with an antenna tuner. I now use a Drake R-8 and two 400 foot minibeverages (which, in length, are roughly resonant at one wavelength on 2 MHz). But years ago I had success DXing harmonics with a Barlow-Wadley XCR-30 portable with a 3 foot whip antenna and after that with a FRG-7 and a 30 foot wire on the roof. Many of the harmonics I hear today with the R-5000 and minibeverages are also audible, if not as strong, on my Sony ICF-2010 with the whip antenna.

The third necessity for DXing harmonics can't be bought from any radio supplies vendor. It's called patience. Because signals here are weak and very susceptible to the vagaries of propagation, it's common to go one or two weeks without hearing a thing. The DXer has to consistently tune through the 2-3.2 MHz band at least two or three times during each nighttime or morning DX session. Weeks may pass without a thing being heard and when something is heard, it may be too weak to identify. Many DXers soon give up and say it's impossible to hear anything down there. But through the patience of daily or near daily checks, some great catches can be made. The best way to look for harmonics is to tune from the bottom of the band to the top in USB mode, stopping and checking out any suspicious carriers, especially those on frequencies ending in zero.

Actually, two more things are needed to DX harmonics. You need to have a good list of AM stations, such as the WRTH for foreign medium wave and the National Radio Club's "Domestic Log" for domestic stations. And, unless you have a good head for mathematics, a calculator will be very useful. When you hear a probable harmonic, you need to be able to divide the frequency you're hearing and find possible fundamental frequencies to look up in the AM station guide to help identify it. For example, 2920 divided by 2 is 1460, by 3 is 973, and by 4 is 730. Therefore you are probably hearing a

second or fourth harmonic. A third is only possible if the station's fundamental frequency has drifted off center.

What Can Be Heard

Mediumwave harmonics can be divided into two categories, domestic stations (US & Canadian) and international harmonics. Let's look at the easier, domestic, ones first. Domestic harmonics are easy to spot because they sound just like everyday AM stations, which is exactly what they are. The first harmonics you hear will probably be your local AM stations, although be careful—if the signal is loud and clear, it is probably a product of overloading in your receiver. But, even if your local stations' harmonics have been properly suppressed within the legal limits, it still may be possible to receive the second and maybe third harmonic a few miles away with a good antenna and a sensitive receiver.

Of course hearing harmonics from your local stations isn't much of a challenge. The challenge is to pick up harmonics from stations several hundred miles away. Because harmonic DXing is essentially DXing someone's mistake before he catches it, it's truly a matter of "here today, gone tomorrow". A harmonic strongly received today may not be there at all the next week, or even the next day. Usually, however, domestic harmonics will be around for a few days before the problem is caught and fixed. If you hear a harmonic and can't identify it, check the next day about the same time. A good time to go hunting for domestic harmonics is around your local sunset and sunrise (especially sunrise), when "grayline" near-darkness conditions exist. Because the grayline runs roughly north-to-south, harmonics from a southerly direction are much more common than those from the east or west.

Most harmonics you hear will be second harmonics; third and higher are very uncommon. Some harmonics actually fall inside the AM band, such as those of stations on 800 kHz and lower (e.g. $2 \times 800 = 1600$ kHz). These will probably be covered-up by stronger signals from stations legally on the frequency, unless you live very close to the offending transmitter. While some harmonics can be heard in the "no-man's

land" of 1605–2000 kHz, between where AM ends and SW begins, and in the lower part of the 2 MHz band, the best frequencies for domestic harmonics seem to be between 2460–3200 kHz. These frequencies are the second harmonics of 1230–1600 kHz, which is where most of the smallest AM stations are—the ones more likely not to be technically up to standards.

International Harmonics

Domestic harmonics are tough, but international ones are even tougher. But, eventually you'll come across a Spanish station on a frequency where there isn't supposed to be one. Engineering requirements are less enforced in Latin America than in the US and Canada, and low-powered harmonics are common among the less well-run rural AM stations. Rarely, though, are these harmonics strong enough to be heard more than a few hundred miles away. But, under really good reception conditions, some of these may be heard in North America for a night or two. On occasion, a station will put off transmitter maintenance long enough, that the harmonic will become strong enough to be heard in North America on a semi-regular basis, albeit weakly. For example, Radiotelevision Dominicana put out a harmonic on 2540v (2x1270) for over two years and in January, 1993, Ecuador's Radio Runacunapac Yachana put out a harmonic on 2968 (2x1484) strong enough to rival signals in the sixty meter band.

Because they are so weak, long-distance Latin harmonics are best received when static levels are lowest—in the winter and as late at night as possible. The best reception is usually in the early morning before dawn, right after the stations have just signed on for the day. As with domestic harmonics, just divide the frequency you are hearing by 2, 3, and 4 (and maybe 5, 6, and 7), and check the WRTH lists for any "even" channels (frequencies ending in zero) that you get. Occasionally a Latin American harmonic will be heard on a non-even channel, such as Colombian Una Voz en la Frontera, heard on 3041, or the second harmonic of the off-frequency fundamental of 1560.5 kHz.

Latin American harmonics come from the south, so what about harmonics from the east and west. From either direction harmonics have a huge ocean to cross, which is difficult for such weak

signals. I know of only two cases of trans-oceanic reception of mediumwave harmonics. For several weeks in 1979, Radio Tirana, Albania put out a second harmonic of its 1458 kHz broadcast on 2912 kHz, which was heard by several DXers in Eastern North America. The second case was in July, 1989 when DXers John Bryant and Dave Clarke, DXing on vacation in the Juan Fernandez islands off the Washington coast, picked up an unidentified Indonesian on 3144 kHz. John later played the tape to some of his Indonesian students and with their help was able to identify it as the second harmonic of Radio Veronica Sonata on Sulawesi Island. This must surely be the best harmonic reception of all time—and John even later received a verification for it!

QSLing Harmonics

In the case of domestic harmonics, if you want a QSL, it probably isn't worth the effort to report your harmonic reception to the station. Verifications are all but unheard of because it's highly unusual for a chief engineer or station manager to be willing to admit on paper that his station violated FCC regulations and the harmonic was heard several hundred miles away! Besides the high probability of not getting a reply, another drawback of sending a reception report on a harmonic is the possibility that the harmonic may disappear before other interested DXers get a chance to hear it. The best remedy for this is to report the reception to a rapid DX news source, such as the DX Party Line, before sending your report, so that other DXers will have at least a few days to look for it before the report arrives. There is, however, a way to verify a harmonic reception in a round-about fashion. Send a report to the station, but neglect to even mention the frequency heard in the report. The station then naturally assumes that you heard the fundamental and sometimes sends a QSL. It's a bit devious, and I don't know if it really counts as a QSL. But, if you really want a reply from a domestic harmonic reception, it works.

But, regardless of whether one is interested in a QSL or not, should we inform the station of the problem? Some DXers feel we should do a good deed and call or write them about it. Others point out that it is the station's job to adequately maintain their equipment, so let the harmonic on the air so that other DXers can hear it.

One common argument for telling stations that they are producing harmonics is that the harmonics may be interfering with vital communications. In reality, that's rarely true. Tune through the area between 1600–3200 kHz a few times and see what you hear. There's not much there. A few frequencies are used for maritime communications, but the US Coast Guard & similar agencies elsewhere monitor those frequencies constantly, so no AM station is going to get away with a harmonic on a vital frequency very long. If you are familiar with medium wave DXing, think of how quickly that Turks & Caicos AM station on 530 got moved when it began interfering with aeronautical beacons a few months back. Or, for another example, when WRMI first began testing in April, their transmitter was putting out a twelfth harmonic which was interfering with the VHF airband and were told about it in just a few days. In short, the organizations that are using those vital frequencies keep a close eye on them. Usually, harmonics are very low-powered by-products, and anything legitimately on a frequency is bound to be much more powerful and would blow the harmonic signal away. The only reason harmonics can be heard at distances is because they have clear channels with no other station using the frequency.

Getting back to QSLing, Latin American station engineers and managers, on the other hand, don't seem to be as reluctant to admit their mistake in the form of a QSL. I have received several QSLs for Latin American harmonics, and have seen several more in DX bulletins over the years. QSLing Latin harmonics doesn't seem to be any more difficult than QSLing Latin American stations in general. Curiously, few of the Latin American harmonics that I have reported to, whether or not an answer was forthcoming, fixed the harmonic very quickly after the probably arrival of my report. In fact, three were still heard over a year later!

Stations Heard

In over 20 years of off-and-on harmonic DXing, I've heard around 130 medium-wave harmonics about equally divided between US and for-

eign stations in more than 20 different states and over 15 countries (all from Latin America except for Albania). Most were second harmonics, with a couple of third and one fourth thrown in. The exception to that are the Cuban stations, especially those on 590, 600, and 720 kHz, which have been heard on harmonics as high as the twelfth. Harmonics are, of course, unpredictable. A harmonic heard last year, or even last week, is probably not going to be there today. But, to give you an idea of what can be heard via harmonics, here's a list of some that have been reported over the last year or so. Just don't expect to hear these same stations—they've probably fixed the transmitters by now! The fundamental frequency is given in ().

AM harmonic DXing is an interesting, if obscure, branch of the the listening hobby, but I hope this little article helps convince a few others out there to try it. If so, be sure to report your results here so the rest of us can go after the stations, too!

SW

The JPS Communications ANC-4 Antenna Noise Canceller

After reading the glowing reports of others, I was finally able to get my hands on an ANC-4 of my own to review thanks to Tom Jacks of JPS Communications. I've had the chance to use the ANC-4 for several weeks, both with my usual 200' inverted "L" antenna, as well as with a Dressler ARA-40 active antenna.

The ANC-4 is designed to provide cancellation of locally generated radio frequency noise that is picked up by the primary station antenna, before it enters the radio itself. Examples of the types of noise that the ANC-4 is effective against include power-line noise, computer noise, TV/VCR noise, etc. This is accomplished by phase shifting by 180 degrees the noise signal picked up by a short auxiliary antenna. The shifted noise signal is then combined with the noise received by the main antenna, resulting in the electrical cancellation of the noise with minimal alteration of the desired signal. The advantage of this approach to noise reduction (as opposed to such devices as DSP audio filters) is that it occurs before the noise can enter the radio and affect the receiver's automatic gain control (AGC), causing a decrease in the sensitivity of the receiver.

The Unit

The ANC-4 is housed in a black, heavy metal cabinet measuring 1.7x6x4.3 inches (HxWxD) and weighs two pounds. It requires an external power source (not supplied) of 11 to 16 volts DC and the current drain is rated at 150 milliamps. The ANC-4 inserts in the antenna line between the primary station antenna and the receiver using SO-239 coaxial connectors. The noise antenna can

either be a short piece of wire that connects to an RCA jack on the back of the unit or a supplied 32 inch collapsible whip antenna that screws into the circuit board through a hole in the top of the case. Front panel controls consist of pushbuttons for power, phase range and frequency range and rotary knobs for noise phase and gain adjustments. The frequency range specified for the ANC-4 is from 500 kHz to 80 MHz, but the manual states that it is usable down to 100 kHz. Insertion loss is specified at 6 dB and noise cancellation is specified at 40 dB or greater. The ANC-4 can be used with a transceiver with power levels up to 150 watts, since it has a RF detector and relay to bypass the unit when transmitting. The quality of construction is excellent, just as with all of the JPS products I have used. The instruction manual is outstanding, covering all aspects of operation and optimization in clear detail. The suggested retail price is \$175 with street prices slightly lower.

Operation

Once all the connections to the ANC-4 have been made, basic operation is straight forward. I won't repeat the detailed instructions given in the manual, but, in a nutshell, operation consists of adjusting the front panel controls until the noise is nulled. The depth of the null obtained depends on various factors, such as noise strength, character, frequency and antenna orientation. Sometimes the noise can be completely eliminated and at other times it can only be attenuated, although usually significantly. I found adjustment to be easiest when the receiver was tuned to a frequency on which only the noise signal was present and using the receiver's "S" meter as a guide for setting

the ANC-4's controls for maximum noise null. This process usually resulted in a definite nulling without ambiguity. The adjustment tends to hold for several hundred kilohertz, although I did find that I would occasionally need to re-adjust the ANC-4 within a given meter band. I found it very difficult to try to adjust the unit for minimum noise when the receiver was tuned to a station, but this might become easier with practice.

I did find that there could be major differences in the amount of noise reduction obtained on the different antennas, depending on the frequency. I'm certain that this was due to differences in antenna polarization relative to the orientation of the noise antenna as well as differences in the amount of noise picked up by the antennas. This aspect of operation is clearly outlined in the instruction manual and procedures for determining whether the noise antenna is picking up enough noise signal are described.

The ANC-4 has some secondary uses besides noise cancellation. It can be used as an active antenna when the main antenna is disconnected. It works fairly well for this application, although at my location I had some problems with images from local broadcasters appearing in the low HF region, indicating possible overloading of the RF amplifier. The ANC-4 can also be used to combine two full-size antennas to allow for space diversity reception.

The Bottom Line

The ANC-4 can produce almost miraculous results, most of the time. There were several cases where I was unable to copy a signal due to noise. When I switched in the ANC-4, the station became listenable. In other instances, I was able to reduce, but not eliminate, the interfering noise. Every listening environment is unique in the type and number of noise sources that are present. The ANC-4 will give the best results when there is a single source of noise that predominates at the listener's location. The best cure for noise interference is to locate the source and eliminate it, or at least filter it. In cases where that is impossible or impractical, the ANC-4 is an alternative well worth considering. I would advise the prospective ANC-4 owner that it is not a "set and forget" device. In order to obtain maximum noise reduction, the user should be prepared to spend some time learning to use the controls and experimenting to find the optimum length, type and orientation of the noise pick-up antenna. However, these efforts will potentially be rewarded with blissful RF silence. I would also advise those contemplating the purchase of an ANC-4 to be sure that the dealer will allow the return of the unit for a refund if it proves unsatisfactory for the listener's particular noise situation. For more information, JPS Communications can be reached at P.O. Box 97757, Raleigh, NC 27624-7757; telephone (919) 790-1048/FAX (919) 790-1456.

The Dressler ara-40 Active Antenna

The ara-40 is the latest addition to the prestigious line of active antennas from the German firm of Dressler. Its design has been optimized for use with portable receivers, which tend to have more amplification since they are designed to be used with their short, built-in whip antennas. Using a full-sized outdoor passive antenna or a high-gain active antenna can result in overloading of the receiver with distortion of the signal and spurious responses. The ara-40 is designed to provide a lower gain figure (approximately 3 dB vs. the 10 dB gain of its big brother, the ara-60) to prevent receiver overload.

The advantages of using an external antenna with a portable receiver are that it can provide higher signal levels for a better signal to noise ratio (as long as signal levels are not so great to cause overloading) and that the antenna can be located outside the residence, overcoming the effects of shielding of radio signals by the walls and decreasing the interference effects of such things as computers, VCR's, etc. that may be located near the radio. Because of these factors, it usually is wise to put up some type of external antenna when a portable radio is used as the main receiver in a home situation.

What Is An Active Antenna?

Since most radio hobbyists don't have yards which are large enough for a couple of rhombic or Beverage antennas and apartment dwellers may be lucky to have a balcony, active antennas are a very attractive option, since they are compact and visually unobtrusive. Basically, an active antenna consists of a short antenna element connected to an amplifier to boost the available signal level. This amplifier stage is usually a broad-banded device, allowing the antenna to receive a wide frequency range, unlike most wire antennas which have peaks and troughs in their frequency response. There is usually an impedance transformation stage as well to match the high impedance of the short antenna to the common 50 - 75 ohm input impedance of modern receivers. The "active" portion of the name derives from the presence of the amplifier stage - this stage requires a power source, unlike a simple piece of wire. The amplifier stage has been the reason that active antennas have acquired somewhat of a poor reputation in the past. The amplifier must have a wide dynamic range, i.e. it must be able to amplify weak signals while not being swamped by strong ones. Poor dynamic range manifests itself as spurious responses, i.e. strong signals appearing on the wrong frequencies or being mixed in with weak signals. Active antennas with good dynamic range can be built, but they require careful design and component selection. The Dressler ara-40 is such an antenna.

The ara-40 consists of two modules: the antenna unit and the interface box. The antenna base is a 5 1/2 inch long aluminum cylinder that is 1 1/2 inches in diameter. The antenna element is an approximately 36 inch long fiberglass rod protruding from one end of the cylinder. The fiberglass is green in color, which may not have been the best choice to keep the antenna from being noticed. Running from the other end of the base cylinder is approximately 30 feet of coaxial cable, ending in a BNC connector. The instructions state that this lead-in can be extended up to 90 feet if necessary. The base unit is anodized aluminum and is well weather-proofed. There are two bolts protruding from the base cylinder which are

used to attach the base to a mounting clamp to fasten the antenna to a pipe or mast. The end of the antenna lead-in attaches to the interface box. A supplied BNC to PL-259 cable is used to attach the interface box to the station receiver. A source of 12 volt DC power (not supplied) is also plugged into the interface box via a "barrel" type power connector. The interface box contains a screwdriver adjustable potentiometer to provide up to 20 dB of attenuation of the antenna's signal. The interface box also contains circuitry to power the antenna via its lead-in cable and isolate the receiver from the DC voltage. The specified frequency range of the ara-40 is 40 kHz to 40 MHz, with reduced gain from 40 to 108 MHz. The price is \$199.95.

Operation

One nice feature of active antennas is that they are easy to install and, unlike passive wire antennas, they don't have to be placed at high elevations. In fact, mounting an active antenna too high can result in it receiving too much signal, thereby degrading its dynamic range performance. The important part of placement of an active antenna is to get it as far away as possible from sources of interference. Dressler recommends placement just above the roof or even three feet above the ground outside the house. The instruction sheet states that a ground connection will not improve reception with the antenna. The ara-40 is designed to be mounted in a vertical position to allow for omnidirectional signal pick-up. I mounted the review unit about 15 feet away from the side of the house and about five feet above the ground.

Comparisons

I first compared the ara-40 to my 200' random wire antenna with both connected to a Drake R8 through an antenna switch box. Overall, signal levels were about 10-15 dB lower with the ara-40, although there were very few signals that could be copied only with the wire antenna. The antenna gain was consistent across the HF spectrum and I noticed no spurious responses from local MW stations that weren't also present on the wire (maybe

I should check my gutter joints!). The background noise level seemed slightly higher with the ara-40, but this is probably due to the fact that it is closer to the house than the wire is. I noticed little effect from adjusting the attenuator control, certainly not 20 dB of signal reduction.

I will be the first to admit that the above is not a fair comparison, since the ara-40 is not designed to be used with table-top communications receivers, which are made to be used with full-sized passive wire antennas. The true test was with a Sony ICF-SW7600G, comparing the ara-40 against the radio's built-in whip. It was essentially no contest, with the ara-40 the hands-down winner. This was in part due to the test location in the basement, but this points out a potential application for the ara-40, i.e.

The Sony ICF-SW7600G Portable Receiver

The Sony '7600 series of portable shortwave radios has to be the longest running model line that is still in current production. The line began with the ICF-7600 in 1977. This was a single-conversion, analog tuning unit which covered five international broadcasting band segments. The line went digital in 1983 with the ICF-7600D (labeled in the United States as the ICF-2002), which put the ground-breaking design of the ICF-2001 in a miniature package. The line has undergone facelifts and refinements, which has culminated in the ICF-SW7600G, whose most prominent feature is a synchronous detector with selectable sideband.

A Truly Portable Radio

The '7600G is just slightly larger than a paperback book (actual dimensions 7 5/8 x 4 3/4 x 1 5/16 inches WxHxD) and weighs one pound and six ounces including four AA batteries. This makes for an ideal travel radio. Battery life is specified at 20 hours in AM mode when using alkaline batteries with a daily listening time of four hours. The radio covers 150 - 29,999 kHz continuously with AM/USB/LSB/CW reception. The radio also provides for FM reception with a frequency

getting a radio signal into a listening location where there is shielding, such as that encountered in steel-reinforced concrete construction. I encountered no problems with over-loading, although I sometimes found it useful to switch on the radio's attenuator to reduce the background noise level.

The Dressler ara-40 is worthy of consideration for those hobbyists who are using a portable for their primary home station receiver, especially if they are faced with insufficient signal strength or interference sources inside the home. The ara-40 is easy to install, unobtrusive and works well. The antenna is available from Gilfer Shortwave, 52 Park Avenue, Park Ridge, NJ 07656; 1-800-GILFER-1. Thanks to Gilfer Shortwave for providing the review unit.

coverage of 76.0 to 108.0 MHz, with FM stereo reception possible if headphones are used. Tuning steps on shortwave are either 5 or 1 kHz, on MW 10/1 kHz or 9/1 kHz, on LW 9/1 kHz and on FM 50 kHz. The MW steps are changed by a switch inside the battery compartment. There is a fine-tuning thumbwheel on the right side of the case for resolving SSB/CW signals. The current street price for the '7600G is around \$200, with one mail-order source offering the unit for \$180. Sony has become somewhat stingy with supplied accessories - all that is supplied with the '7600G is a soft carrying case and reel-type external antenna. There are no earphones or AC adapter. The Sony AC-E60M AC power adapter is approximately \$20 additional.

Revamped Controls

The most noticeable difference between the '7600G and its predecessor, the ICF-SW7600, are the four manual tuning buttons in the lower right-hand corner of the radio. The inner buttons tune in the smallest steps for the selected frequency band (one kHz on shortwave) and the outer buttons tune in the coarse frequency steps (five kHz on SW).

The keys are very conveniently positioned for tuning with the right thumb while holding the radio. When other front panel buttons are held down, the tuning keys are also used to set the clock, set the two standby timers or jump to a desired meter band. When in tuning mode, holding one of the inner buttons down will continuously tune the radio, while depressing one of the outer buttons for longer than two seconds will put the radio into scanning mode within the selected meter band. While scanning, the '7600G will stop at a signal for two seconds and then resume scanning, unless the "scan stop" button is pushed. The scan function works well, stopping on the carrier frequency of most signals. I did find it somewhat disconcerting to try to rapidly tune across a band using the coarser step tuning controls, only to find that the radio had gone into scan mode, which requires pressing a separate button to stop rather than just letting up on the tuning key. Fortunately the tuning rate of the fine step keys is relatively fast, allowing for more conventional band-scanning. Since the '7600G can tune in one kHz steps for reception of AM signals, the fine tuning control only works when the radio is in SSB mode, unlike its predecessor, the 'SW7600.

Other improvements of the '7600G include the addition of a second standby timer. These timers allow the radio to come on at predetermined times on selected frequencies and automatically shut-off sixty minutes later. There is also a sleep timer which will shut the radio off after sixty minutes. The output level of the tape out jack has been increased so that the output can be used with the line level input of a tape recorder or hi-fi amp, rather than a microphone level input. However, the '7600G does not have a timer output for tape recorder activation. Some things have not changed from earlier versions of the radio: there are still only ten memory channels for AM stations, whether they are LW, MW or SW and ten channels for FM stations and the clock only displays one time zone. Tuning by direct keypad frequency entry requires pressing the "Direct" button, entering the frequency on the keypad and then pressing the "Exe" key to tune the radio. There are no capabilities for alphanumeric labelling of memory channels and no "page" organization of memory channels as are available with newer Sony designs. The '7600G maintains the Sony idiosyncrasy that the clock can only be displayed when the radio is turned off.

Performance

The '7600G is a dual-conversion design and has only a single IF filter bandwidth, although it represents a good compromise between interference rejection without sacrificing audio quality. There is a tone switch which reduces high frequency response, which can help in some cases of interference. The outstanding performance feature of the '7600G is the addition of the synchronous detector. It performs very well - it locks quickly and holds lock during deep fades, without any "warbling" of the signal. Although the effect is subtle, use of the sync detector does seem to improve audio quality and reduce distortion. The best feature of the sync detector is the ability to select either the upper or lower sideband of an AM signal in order to escape adjacent channel interference. This can be very handy in recovering a listenable signal when there is a noise or strong signal on either the high or low side of the desired station.

Sensitivity with just the built-in whip is quite good, although here in the West, the supplied external wire antenna comes in quite handy. The circuit noise is low, which enhances the perceived sensitivity. I like the sound quality of the '7600G and there is plenty of output power for using the radio outdoors. The built-in speaker sounds a bit shrill on local FM stations, which is remedied by decreasing the treble response by switching the tone switch to the "News" position. However, I usually leave the tone switch in the "Music" position on shortwave for increased presence. SSB reception is very stable and since the radio tunes in one kHz steps, the fine tuning control is not as "twitchy" to use as in the earlier 'SW7600. The overall fit and finish of the radio is excellent and the pushbutton controls have a solid, positive feel in operation.

I am very pleased with the Sony ICF-SW7600G and prefer it to the ICF-SW100 that I recently reviewed. The '7600G's serious competitor is the Grundig Yacht Boy 400 which sells for about the same price. The Yacht Boy 400 offers richer sound and dual bandwidths, but the Sony has the advantages of the sync detector and easier SSB reception. The improvements that I would like to see in the '7600G would be the addition of a second, narrower IF bandwidth and the ability to display the clock when the radio is in use.

 CMA

Country List Committee Report

Don Jensen
5204 70th Street
Kenosha, WI 53142

NASWA's Country List is like a yardstick. It is intended as a measuring device. A DXer, if he or she chooses, may count the number of different countries heard or QSLed. That, of course, is an optional activity, unimportant and ignored by some, but greatly interesting and challenging to others.

In order that there be some consistency between what various NASWA members are counting, a standardized country list long ago was established.

While there are changes, and always will be, in shortwave broadcasting, the Country List Committee, this year, has not found any which, at this time, seem to warrant adding new radio countries. The committee continues, however, to monitor these changes in world events and shortwave broadcasting, and will act if and when it seems warranted. We do welcome your suggestions, questions and input regarding the list.

Because it may help others better understand how our club's Country List is administered by the committee, I'd like to excerpt portions of a letter received from one of our NASWA members.

He proposed "the elimination of Alaska and Hawaii, two U.S. States, from the... list and a redefinition of a radio country... to eliminate the 150 mile rule" for determining what shall be counted as a country.

What is a "150 mile rule?" Though NASWA has no such rule, some medium wave (BCB) clubs grant separate country status to a separate territory if it is more than 150 miles from its parent country, and thus justify counting Alaska and Hawaii separately from the rest of the 48 contiguous United States.

NASWA likewise gives separate radio country status to those two states, but not for that reason. To repeat, NASWA has no so-called "150 mile rule" which our member asks to be eliminated.

Instead, in determining what shall or shall not be considered a radio country, the NASWA Country List Committee considers three factors: Geographical (which can, in fact, include consideration of geographical separation, though nothing so precise as 150 miles); Political Status; and Hobby Traditions.

The committee makes its decisions based on one or a combination of these factors. In the cases of Alaska and Hawaii, geographical separation played a part, but, more significantly was a longstanding hobby tradition, predating their 1959 statehood, which informally accorded them separate consideration.

But further, NASWA also has a specific and important policy to NOT remove an existing radio country from its list because of political change. So members are not faced with having to remove any logged radio countries from their own personal heard/verified tallies.

We think this is a significant and fair policy. Consider what confusion would result if one tried to use a standard such as a yardstick which was, periodically, shortened by another inch or two.

A final reminder. There is a distinction between the meaning of the common English word, country, and a radio country as used in the NASWA list. The latter is, specifically, a unit to measure one's advancement as a shortwave DXer, and may or may not include elements of sovereignty or politics.

Thus, Alaska and Hawaii can be considered radio countries for purposes of NASWA's list, even though their political status is no different from Idaho or South Carolina.

—Don Jensen, Chairman

NASWA Country List Committee

(English at 2200-2300, German 2100 & 0000). (5940 kHz is used by **R Almaty-KAZ** 1600 until 1900 UTC, 5940 & 7205 rent by **R. Belarus** Minsk for 1900-2000 UTC time span). 0000-0100 German. From 0100 4820 kHz replaced by 4860. (AMID-German AGDX Monitoring and Information Service/Bueschel-Germany)

Radio Tashkent, Uzbekistan, in German at 2000-2030 on new powerhouse 6230 kHz, 5060, 9540, and 11905 kHz. **Uzbek Radio** Tashkent second domestic progr, approx. 0430-1500 UTC replaced 15200 kHz by usual winter QRG of 15330 kHz //much stronger 15165. (Bueschel/BCDX/Jihad #52) **R. Tashkent** has an English broadcast at 1330-1400, announcing 9715 6025 5975 and 5060 kHz. Of these I hear only 9715, while 15295 which was used in the summer has

disappeared. Does anyone receive the other (or any other) frequencies? (Koutamanis-Netherlands)

CLANDESTINE-ASIA 4115 **Voice of Independent Kashmir** 1530-1700 reactivated. (Goonetilleke/RNMM/Johnson/Jihad #52)

CLANDESTINE-MIDEAST According to a UPI news item dated 27/8 the **Voice of Iraqi Kurdistan** is based in the resort town of Salahuddin in Northern Iraq. (Kropf/Jihad #52)

BBCM heard the last broadcast from **Voice of Human Rights and Freedom for Iran** on Saturday (30th September). They said they were closing "with the greatest regret", but gave no explanation. Reason "US government will no longer fund the rental of SW txs at Abis, Egypt. (BBCM)

CLANDESTINE-UNID 9594.9 -1315- Presumed "clanny" Station here due to the very audible "warble" jammer present, M & W Ancis w/talk fading in & out but never long enough to get a handle on the language, not **RFE/RL** per latest sked. My best guess would be **Republic of Iraq Radio/Vo the Iraqi People** operating at this time. (23-Sep/Trummel-MO/Jihad #52)

COLOMBIA 3579.93 kHz **R.Catolica Nacional** (pirate), near Tuquerres per Henrik Klemetz; 0257 with Ecuadorian pasillos. TC and ID at 0305 and a very rough recording of the official R.Catolica "Ode to Joy" IS on guitar. (26-Sep/McVicar/Jihad #52)

6015.21 kHz **R.Mira**, Tumaco; 1919 with salsas, ads for local services in Tumaco, one "**R.Mira**" mention during prgm intro. (03-Oct/McVicar/Jihad DX #54)

COSTA RICA RFPJ current sked:

(McVicar-HCJB)

Updating earlier reports, **HCJB's** Rich McVicar advises that the matter was reconsidered and that the 1.5 kW SSB transmitter on 21455 will in fact continue in operation 24 hours daily during the W95 season. The use of 15540 USB is, however, discontinued. (McVicar/October "World Radio Report"/DX Ontario/Clark)

HCJB is repeating last year's BCB test (on 690 kHz) on a monthly basis through 1996. All correct reports will be answered with a special QSL. Here's the schedule, which I'll print just this once:

October 7, 1995	0600-0615
November 5, 1995	0600-0615
December 3, 1995	0600-0615
January 7, 1996	0800-0815
February 4, 1996	0600-0615
March 3, 1996	0600-0615
April 7, 1996	0515-0530
May 5, 1996	0545-0600
June 2, 1996	0600-0615
July 7, 1996	0800-0815
August 4, 1996	0600-0615
September 1, 1996	0515-0530

(McVicar-HCJB)

EQUATORIAL GUINEA Mystery station heard on 15185v throughout European daylight hours is **Radio Africa**. (BBCM)

ETHIOPIA *Radio Fana*, 6210, weak but clear with mx box IS, clear ID by man, frequencies, then into probable news. (Berg 9-19, NU #1339)

Radio Ethiopia, 5990, noted at 0330 sign on with flute, into Amharic // 7110. (27-Sep/Hill/Berg/NU #1341/Jihad DX)

 3295.3 **RRI Samarinda** (t) 1235-1300, Weak signal of M & W tk in Indo lang. Lagu Melayu at 1252 to 1300. (07-Oct/Atkins DXpedition)
 3223 **RRI Mataram** tentatively noted from 2147 (08-Oct/Hill-MA)
 3295.3 **RRI Samarinda** 1235-1300 Weak, into Jak news 1300. (07-Oct/Atkins/Bueschel-Germany)
 3325 **RRI Plangkaraya** 1428-1434 ID mention Palangkaraya at 1430. (09-Oct/Atkins-WA)
 3345 **RRI Ternate** 1135-1145 Tremendous signal (07-Oct/Atkins/Bueschel-Germany)
 3384.9 **RRI Kupang** 1439-1444 Fair, no sign of weaker RTM Miri on 3385. (09-Oct/Atkins)
 3987.2 **RRI Manokwari** 1156 w/bits of music, SCI at 1159:30 to Jakarta ID and news at 1200. (26-Sep/McVicar/Jihad #52)
 4003.2 **RRI Padang** 2359 with SCI, poor (27-Sep/McVicar/Jihad DX #54)
 4606.38 **RRI Serui** 1156 w/mx, ID at 1158:30, SCI at 1159 and RRI ID and nx at 1200. poor (04-Oct/McVicar/Jihad DX #54)

4753.21 **RRI Ujung Pandang** strong, signing off at 1610. (Mika Makelainen/Jihad #52)
 4874.6 **RRI Sorong** 1155 w/pop mx show, SCI at 1159. fair (04-Oct/McVicar/Jihad DX #54)
 4910.3 **RRI Bukittingi** 1703 Indonesian news. (Veldhuis) 6069.84 kHz RRI Jayapura; 1158 with SCI, nx. pr on Sept.28 (McVicar/Jihad DX #54)
 6070 **RRI Jayapura**; 1159 with SCI to M w/nx at 1200. vy poor (22-Sep/McVicar/Jihad #52)
 6156.64 **RRI Tual** (pres.), On 9/7, 1305, Could barely confirm that they were running Jak. nx relay by M // others. No chance for ID due to weak strength and QRM. Quite distorted also. Into Indo Lagu mx at 1309. QRM from strong 6160 Vancouver also. (Valko/Jihad DX)
 7231.03 **RRI Fak Fak**; 1155 w/music prgm hosted by W, SCI at 1158, TPs, Jakarta news (10-Oct/McVicar/Jihad DX #54)
 9680 **RRI Jakarta** now using new Marconi 250 kW tx here, putting superb signal into Europe around 1200-1600, especially Mo-Fr, when Renascenca is off. (Bueschel-Germany)

According to a reply, **RRI Yogyakarta** broadcasts at 2200-0200 on 42 and 25 meters, and at 1000-1700 at 59 and 43meters. Transmitters; 7190-Philips model made in 1971, 5047-Gates model made in 1954, 7100 RCA model made in 1954, 2350-TCA model made in 1961. List compiled in April 1994, doesn't mention 5059 sender. Local news is now heard at 2230 and 1230 entitled "Berita Bahasa Jawa" (Javanese language news), 2330 and 1000 entitled "Berita Daerah" (Local news), 0030 entitled "Berita Bahasa Inggris" (English language news), 0630 entitled "Berita Olahraga" (Sports news), 0830 entitled "Berita Kota" (City news), 1330 entitled "Berita NusantaraII" (NusantaraII network news). V/s Drs.H.Hamdan Sjahbeni, Kepala Stasiun. Mailing address is; Jln Amat Jazuli No.4, Yogyakarta 55224, Indonesia. (Yamada-Japan)

[From Kevin Trummel: "In the October Listeners Notebook, **RPDT2 Buol** was reported on 2 similar but different frequencies, one I'm sure is a typo: 3232.5 or 3632.2, which is the correct one?" I believe the former, but I wouldn't bet \$\$\$ on it.—AQ]

IRAN IRIB Tehran in Arabic to NoAM 0230-0330 on new 6150 kHz (last winter 7100), and 9022 kHz. (AMID-German AGDX Monitoring and Info Service/Bueschel-Germany)

IRAQ 4615 Reactivated **Rep. of Iraq R.** @ 0236 Px of Middle Eastern MX w/ M and W annrs. Plagued by bubble jammer. (13-Sep/Rippel/Jihad DX)

R. Baghdad Intl, 7147, noted since Sept. 30th as early as 1753 until 2100* The signal and audio vary. Sometimes there's a good signal, others there's noth-

ing, and the audio can be good to telephone quality. The Turkish segment from 1800-2000 provides the best reception; ARO QRM. (Bob Hill)

ITALY Winter 1995 frequency schedule for **IRRS-**

Shortwave:

0600-0830 3985
0830-1530 7125
1530-2100 3985
2100-2300 3950 Fr-Su

All transmissions USB -6 dB reduced carrier AM compatible (Boschetti-IRRS)

European Christian Radio 6230 rather than listed 6220, from 1925 with many IS's and English IDs giving the Brunn, Austria mailing address. S/on at 1930 in Italian. Weak with military SSB QRM. (15-Oct/Hill)

7300L **R. Europe**, Pioltello, currently operates at 0730-1430 on Saturdays and Sundays only. The programming includes a Spanish-language DX-program titled "Con Frecuencia" made in Argentina. Information provided in a letter dated Sept. 5th by Dario Monferini, who is in charge of foreign relations at the station. (Makelainen/Jihad DX)

JAPAN NHK Shobukuki Relay Station (t) 3607.5U @0945 Noted but vy weak(04-Oct/Trummel-MO). NHK Mihara Relay Station (t) 3373.5U @1018 audible about 10 Minutes, tough in 3375 stop (05-Oct/Trummel-MO). NHK Kasuga Relay Station (t) 3259.0U @0912 Weak with pops from time to time (07-Oct/Trummel-MO)

JORDAN Arabic program observed on 7130 kHz around 2100 til close @2329*. No ID monitored. Assumed **Jordan Radio** Amman (tet.). Unclean signal, 120 kHz wide. (Bueschel-Germany)

KOREA (SOUTH) Radio Korea Int'l changes via **BBC** Skelton-GB relay:

0700-0800 Korean 7105 (ex-9510)
1700-1800 Russian 7120 (ex-9715, ex-1900-2000)
2000-2030 English 3970 (ex-5965, new time)
2030-2130 French 6090 (ex-5965)
2130-2230 German 3970 (ex-5965)

For 1600-1700 English direct from Seoul, 6480 replaced by new 7550 kHz. (R. Korea SW Feedback/Bueschel-Germany)

LAOS Lao National Radio, Luang Prabang (t) 7162.1 @1215 W in Lang, nice carrier but modulation was weak, bad ham QRM, seemed to be playing western pop after 1230, a move from 7154/6970?, peaked @1240 & then into the noise, Poor (09-Oct/Trummel-MO)

LIBYA An Arabic-language station calling itself "Sabha Local Radio" (Arabic: *Idha'at Sabha al-*

Mahalliyah) was intercepted in progress at 0905 on 23rd September, broadcasting on 11815 kHz shortwave. Sabha is a desert town in the interior of Libya, about 400 miles south-southeast of Tripoli. It was the birthplace of the 1969 revolution that brought Col Qadhafi to power. On 28th and 30th September it was confirmed as signing on at around 0745 (BBCM)

MADAGASCAR Radio Madagasikara, 3287.82 @ 0259 usual IS, then Malagasy W, fair but 3290 splattered. (08-Oct/Crawford/Jihad DX #54)

MALAYSIA Radio Malaysia SibU (t) 6050 at 1010, presumed Iban language, good signal for listed 10 kW (22-Sep/Trummel-MO). Radio Malaysia Kuching 7160 at 1020, level about the same or slightly better than 6050 kHz, Also 10 kW (22-Sep/Trummel-MO).

MALI RTV Malienne appears to be bouncing back and forth between 4772.4 and 4783v, // 4835. (Hill-MA + others)

(BBCM)

PORTUGAL *The Voice of East Timor* via *Radio Portugal International* 17595 1000-1200, Radio Portugal International broadcasts daily to the former colony of East Timor, in Indonesia. The program that airs from Portugal is actually from the Fretilin Resistance movement, a group composed of Timorese citizens who opposed Indonesia's rule. The show features news in both Portuguese and Tetum, which is the lingua franca in Timor. (Portuguese is vehemently forbidden by the Indonesian authorities). (Paulo Texixeira-DC/Jihad DX #53/08-Oct/Padula/ARDXC "NewsPlus")

RDP Lisbon to NAM 2200-0300 replaced 6175 with 6095 kHz, English Mo-Fr 0230-0300. Clashes with Vatican Radio here. Lisbon producing strong spur on 12160 kHz (2 x 6130 kHz), Mo-Fr 0500-1300, Sa/Su 0700-2000. (Bueschel-Germany)

QATAR QBS-Doha, 7210.1, heard here on this new unlisted frequency from 0245 sign on and in the afternoons until 2125 s/off. In Arabic with fairly good signals, but there is QRM from the BBC-NHK relay from 2000-2100. (Hill-MA) On 26th September QBS was observed to be using two shortwave frequencies simultaneously: at 1235-1305 on 9570 and 15265.2 kHz, and from 1305 on 9570 and 15265 kHz. Qatar has not used two shortwave transmitters simultaneously since the mid-1980s. (BBCM)

ROMANIA Following up last month's mystery, which is still being heard: It now seems likely that it is a non-broadcast operation, which nevertheless carries material broadcast by *Radio Romania*. The station is now using two frequencies, although not simultaneously. The new channel is 14814U was heard signing off at 1358 with the announcement "Aici Morgana receptie" ("This is Morgana receiving"). 14201.5U noted around 0600-0700. Amongst the material carried by the station has been what

appears to be a recording of the "Army Hour" (Romanian: "Ora Armatei") program broadcast by the Romania-Actualitati service (the first domestic network of state-run Radio Romania). However, most of the time only continuous Romanian folk music is played, interrupted occasionally by a tone. (BBCM)

SAINT HELENA Did you miss something last month? In case you'd forgotten, *Radio Saint Helena* did not conduct their "annual" transmission this year. Look for them on October 25, 1996. (DSWCI/OZDX/08-Oct/Padula/ARDXC "NewsPlus")

SLOVAKIA *Radio Slovakia International* winter frequency schedule, until March 31, 1996:

0100-0230	EE/Slovak/FF	5930 7300 9440
0800-0830	German	6055 7300
0830-0930	Ee/Slovak	11990 17485 21705
1400-1430	Russian	9440 11990 13715
1630-1700	Slovak	7210
1700-1730	French	5915 6055 7345
1730-1830	Slovak	5915 6055 7345
1830-1900	Russian	5915 7150 9485
1900-2100	GG/EE/Slovak/FF	5915 6055 7345

(Schaay/Bueschel-Germany)

AWR DX Program in English observed on Sats(!) at 1725 on 9475 kHz via 250 kW st Rimavska Sobota. AWR ID, Hong Kong addr, AWR IS, 1757*. (07-Oct/George/Jihad DX/Bueschel-Germany)

SOUTH AFRICA Former ANC clandestine *Radio Freedom* was granted a special-event licence by South Africa's Independent Broadcasting Authority. It broadcast 24 hours a day for the two weeks from 21 September through 5 October. (BBCM) Probably on FM. Brings back memories of them nightly on 5015 khz—AQ

SPAIN REE Madrid winter schedule changes:

0900-2000		9620 Su
1200-1600		9620 Mo-Fr
1600-1700		15210 (new)
1700-2100		9620 Sa
1900-2000	French	6130 (ex-9875)
1900-2400		11880 (ex-15110)
2000-2200	Arabic	6130 (ex-9875)
2200-2300	English	11775 kHz (ex-9675)
2200-2300	Spanish	6130 (ex-9875)

(REE Madrid/Schaay/Volk-Germany)

SUDAN R. *Omdurman*, noted on new 9024v at 1800 with 6 pips, ID for EE service of *Sudan National Radio*-Khartoum, announcing freqs. of 9200 and 576 MW. On 8 October it had shifted to 9025, not a good choice with Teheran on 9022 kHz. (Hill-MA)

SURINAM R. Apintie 4990.95 @ 0245-0400* continuous US light pops, s/off anmts by M w/mentions of their FM stereo outlet. Anthem followed by "beat of the Apintie drum" IS as noted in WRTH. (Rippel-VA) Likely a new transmitter.—AQ

SWITZERLAND SRJ Berne on out-of-band frequencies 5850 and 7510, both at 1700-1845. (Bueschel-Germany)

TANZANIA Presumed *Radio Tanzania* noted on 7165 between 0330-0430. (02-Oct/Durkin-NC)

For Tanzania's election period, SENTECH South Africa (site of *Channel Africa*) is relaying *Radio Tanzania's* Swahili programming on shortwave. Sked:

0300-0455	7290
0900-1100	15435
1300-1525	15435
1530-1655	7280
1800-2115	7280

Relay will last through early December. (4-Oct/BBCM) This is being widely reported; hear it now while you can.—AQ

THAILAND R. Thailand, Bangkok has replaced 7255 with 7285 at 1100-1130, in Vietnamese and Cambodian. In English at 1900-2000 to Europe on new 7295 kHz (ex-7200). (Cushen/RNMB/Bueschel-Germany)

TURKEY TRT-Voice of Turkey has brought five new 500kW transmitters online from a site in Emirler. Here's the revised sked (toss out last month's...) good thru 31 March:

0000-2400	Turkish	11955 9460

(Klink-DG1EA/Buschel-Germany)

UGANDA Uganda's minister of state for information has warned villagers living near the now-defunct HF site at Soroti to stop stealing the station's remaining cables and angle bars. The minister inspected the station and found that some people are continuing to remove property from the station, which was destroyed during the insurgency. He said that the station is a government asset which should not be destroyed, adding that it could be used for FM transmissions in and around Soroti. The site was last heard on the air in 1984. (BBCM)

The *Voice of America* announced on 9/22 that they are discontinuing Shortwave broadcasts to Europe. They said that due to budget cuts and most Europeans can hear the VOA via MW anyway were the reasons for the haul in broadcasts. (Fleming/INTERNET/Jihad #52) SW pxs in Bulgarian, Latvian, Polish and Czech were also to be terminated. Radio Liberty/Radio Free Europe was also to cancel some SW services. The cuts were due to budget constraints. Savings were being made by reducing SW txions rather than cutting personnel. Pxs will continue on MW and/or affiliates. Station advised that research indicated that there are insufficient listeners to VOA on SW in Europe. SW services remain on air for the ME and North Africa. SW services continue in Albanian, Croatian, Hungarian, Romanian, Russian, Serbian and Slovak. (VOA Communications World/BBCM/08-Oct/Padula/ARDXC "NewsPlus")

...and despite drastic budget cuts, this continues:

Radio Marti shortwave sked:
 0000-0100 9815 7365 6010
 0100-0200 7365 6010
 0200-0300 7365 6030

(BBCM)

ZAIRE 9829.0-0805- Was calibrating my dial to measure Kiribati on 9825 when I stumbled on this, very weak most of the time and it isn't coming from my computer/monitor, I thought it might be 2x 4914.5 but there wasn't anything there, a verry long shot is 3x 3276 Bukavu, Zaire operating at this time but way past their sunrise to verify the fundamental, the 2nd Harmonic of this frequency was reported back in Jihad#15, gone by 0823 when I got done messing about in the tropical bands. (29-Sep/Trummel-MO) BBCM sez *Voix du Zaire* in Kinshasa has again disappeared from shortwave. It was recently spotted on 15244, but not heard there since 13 September. (BBCM)

UNIDENTIFIED 5264.59 kHz "Radio Hit", possibly from Peru or Mexico; 0031 UTC with pop mx, ads. One was for "Cervesa San Juan." Henrik Klemetz lists this beer as Peruvian in *Latin America by Radio*. "Via satellite" mentioned. A couple of mentions of Mexico, where there are a number of "Radio Hits" listed in the WRTH, but none on nominals of 5265, if this is a harmonic. North American pop hits as well as LAm pops. Suddenly off at 0120 UTC. (28-Sep/McVicar-EQA)

7170.1 Since 10-8 noted African at 1930 when Tirana vacates channel. Programming consists of guitar mx, exotic wailing with weird drums. Talks by M

in French until s/off at 2000. Thought I heard him say "television". Nothing listed in WRTVH and Passport. Possibilities are Senegal, Madagascar or possibly the (wishful thinking) The Comoros? (Bob Hill-MA)

IF A TEST FALLS IN THE FOREST, DOES ANYONE HEAR IT? Per E-mail contact with them, *Radio Caroline Dublin* says they haven't yet heard from anyone who heard their test last month, disappointing because they set up a second xmtr for south county Dublin, 300 watts on 6250 Khz. But so far no reports on either frequency. Bobby Gibson logged 11 hours live on the air for this test and lost his entire Sunday, "but thats why I love radio." (Berg)

MISCELLANEOUS From *USPS Intl Postal Rates & Fees*, July 1995 (Publ. 51): "Small packets is a class of mail for gifts, merchandise, commercial samples, or documents that do not have the character of current and personal correspondence. This class is also used for sending audio and video tapes of any kind, ADP cards, magnetic tapes, and QSL cards." Interesting—I wonder how many USPS personnel could tell you what a QSL-card is. Presumably they mean ham QSL's sent in bulk? Also of importance: Special Handling must be used when mailing honeybees to Canada. (16-Oct/Berg)

CORRECTION Regular (and some irregular) readers to this column know that ye olde editor takes extraordinary pains to credit all items to their sources. Now and then, though, items arrive after bouncing around cyberspace, and the origin gets lost in the process. This is what appears to have happened to an item in last month's column (4750.1 *Radio San Francisco Solano*), credited to HCJB's Rich McVicar. Rich emails, "Henrik Klemetz in Bogota was the fellow who positively ID'd this station and dug the address out. I gave him full credit in the original log sent to Anker [Petersen, DSWCI]. I'd be grateful if you could make a correction next month." So, belated thanks to Henrik Klemetz for the item! —AQ

Pirate Radio Report

Chris Lobdell
P.O. Box 146
Stoneham, MA 02180-0146
CompuServe 75720.253
internet: piradio@usa1.com

Hello and welcome to another PIRATE RADIO REPORT. My deadline is too early to give you any Halloween logs, but we'll cover them in depth next month. Also please note my new internet address: piradio@usa1.com.

Don't You Believe Dept

That KDED is dead. Reliable sources have told me that this Grateful Dead station is still in business and will be making more transmissions in the future. That's good news. That the VOICE OF SCOTLAND actually transmitted from Europe! Despite some information in other publications I can safely state that these transmissions originated from North America. So don't believe otherwise!

Station Profile—Caribbean Sound System

This month we are pleased to bring you the following, submitted by CSS head honcho, Count Whip:

"A pirate station broadcasting from a ship at sea? Hardly an original idea, right? OK then, how about a pirate station broadcasting from a luxury cruise ship? That's what CARIBBEAN SOUND SYSTEM'S Count Whip claims to be doing. Count Whip was a semi-famous DJ in Jamaica in the 60's and 70's before landing this gig as a cruise director on an unnamed passenger liner. CSS features a variety of Ska music artists from the present all the way back thru the 60's. The first two shows were relayed by the NAPRS. The second show featured some NASWA big wigs on board, including Don Jensen sing the NASWA countries list! CSS now has it's own transmitter so keep checking those pirate

bands and one night soon you just might hear the "Whole Lotta Love Boat Theme". If you do, you know you've got the CARIBBEAN SOUND SYSTEM! Write to us at Box 146, Stoneham, MA 02180 and be sure to include 3 units of first class postage for a QSL. We QSL each show with a different design."

Thanks to Count Whip for that excellent profile. Next month we hope to bring you one on PIRATE RADIO BOSTON.

Pirate Bandscan

The pirate bands have seen only a moderate amount of activity this month. We do have some logs to report. Jill Dybka of TN reports in with a log of BULLFROG RADIO heard on October 1st at 0200 UTC with a good signal on 6955 kHz. FRIDAY RADIO is a new station heard by both Mary Jo Ondrechen and John Fisher in MA. They were heard on October 14th around 0000 UTC with Led Zeppelin music announcing the Providence, RI mail drop. Mary Jo also heard the oldies station KTLA on October 1st at 2130 UTC on 6955 kHz.

Most of the activity continues to be heard on 6955 kHz. Start checking 7415 kHz after 1400 Sunday because WEWN has vacated 7425 kHz at that time, leaving the area splatter free.

Free Radio Weekly

That's the name of my weekly pirate email only newsletter. You must contribute to it to receive it. The deadline for each week is Friday at 0000 UTC. Send your contributions to: piradio@usa1.com.

Until next month, happy Pirate Hunting!

LOGGINGS CONTRIBUTORS-NEXT DEADLINE IS DECEMBER 10TH

The following members contributed loggings:

Brian ALEXANDER, Mechanicsburg, PA	NRD-535D
Gabriel Ivan BERRERA, Buenos Aires, ARG	
Jerry BERG, Lexington, MA	R8 R390A HQ180A 150' LW
Don BREWER, Oakland Park, KS	ICF-SW77 SW7600 2-ICF-2010's
Richard A. D'ANGELO, Wyomissing, PA	R8 HF-150 A-D Sloper 100' LW
Marlin FIELD, Hillsdale, MO	NRD-535D Eavesdropper
Bill FLYNN, Cave Junction, OR	R8 83' dipole 500' loop
Bob FRASER, Cohasset, MA	Sony ICF-2003 SW-100 Active Antenna
Nick GRACE, Washington, DC	IC-765 TS-440S 75m dipole
Richard HANKISON, Praire Village, KS	R5000 Eavesdropper
Harold LEVISON, Philadelphia, PA	R8 R70 YB400
William McGUIRE, Cheverly, MD	DX380
Bob MONTGOMERY, Levittown, PA	NRD-525 R390A FL-2 ARA60
Ed NEWBURY, Kimball, NE	R8 R5000 70' windom
Mary Jo ONDRECHEN, Canton, MA	R8 300' longwire
Benton OWSLEY, Ventura, CA	NRD-525 folded dipole
Dennis PASQUALE, New Brighton, PA	DX-440 10m longwire
Sheryl PASZKIEWICZ, Manitowoc, WI	R8 NRD-525 Eavesdropper
Ed RAUSCH, Cedar Grove, NJ	R5000 Sony 2010 MJF-959 300' dipole
Chuck RIPPEL, Cornland, VA	R8A NRD-515 R390A
Betsy ROBINSON, Clinton, TN	Sony 2010 Indoor antenna
John ROGERS, Belmont, MA	R8
Mike RYAN, Bangkok, THAILAND	R8
Giovanni SERRA, Rome, ITALY	NRD-525 A-D Sloper
Trevor STANLEY, Flagstaff, AZ	Drake SW8 Datong AD-370
Kirk TRUMMEL, Springfield, MO	Collins R391 Drake R-4B 80m sloper 150'LW

Thanks again to the above members for sending in and sharing their logs. Envelopes from two members arrived too late to be sent on to the editors and are being held until next month. Please remember to mail your logs so that they reach me by the tenth of the month deadline. If your equipment as listed above is out of date or incorrect let me know and I'll correct them in next months column.

Best wishes and good DX!

Tropical Band Loggings

Thank you to all who contributed. It was a good column and we had lots
 of contributors. Reports from 12 states & 2 countries. Next deadline
November 17. HAPPY THANKSGIVING

If your receiver has memory, plug in a lot of tropical stations that
 are on your target list. This helps one to remember to check the out
 of band frequencies for the Latins. You may want to concentrate on
 stations others have recently heard. Once you have logged that station,
 you may want to plug in another target or just a fun station to listen
 to like Voice of Turkey or BBC.

Another technique I recently used was to put the AGC or Automatic Gain
 Control in the off position to enhance reception on a very weak station.
 This is best used on single sideband and on a narrow filter. Many times
 it only succeeds in increasing the static crashes but sometimes can
 bring signal peaks up to a listenable level.

FOR SALE: Customized Beam Headings (from/to) and Distances
 (MI/KM) to more than 480 WRTH transmitter sites including
 new Russian republics. ITU Country Codes included. Send your
 location or coordinates, \$7.15. NASWA Journals 1991, 1993,
 and 1994, \$11.00 a year or \$30.00 for all three. WRTH '91,
 \$7.00; '93, \$8.00; '94, \$10.00 or \$20.00 for all three.
 Passport to World Band Radio '94, \$9.00; '95, \$10.00. All
 items include shipping (overseas shipping extra). Cashiers
 check or money order, please. Al Drehmann, Route 2, Box 3-B,
 Tryon, NC 28782. Phone (704) 894-3398 (not collect).

The following item is out of sequence since I initially assumed it was a Europirate station but, on closer examination, it seems to belong in the regular SW section:

- 69154 IRELAND Dublin Community R in EG 0045, pop mx, good carrier level but UTE & SSB QRM (Trummel MO) in EG 2150, pop mx, few ancmts, too weak to ID, only 300 watts (Berg MA 9/23)

NOTES AND GENERAL INFORMATION

1. Please note that my new mailing address (for those sending loggings directly to me) is Shoreline, WA rather than Seattle, WA as in the past. Zip code and everything else is unchanged.
2. Does anyone know if Breich is in French Morocco or Tangier? Also Trummel wants to know the address of R San Ignacio, Peru (6747.2) if anyone knows it.
3. Giovanni Serra in Rome advises us that the 30th Annual Meeting of the European DX Council 1996 will be in Florence, Italy from April 26-29, 1996 (for those of you who have lots of Lira and a yen for a delightful overseas vacation). Details regarding reservations and accommodations can be obtained by writing to the following address:

AIR-Associazione Italiana Radioascolto
P.O. Box 30
I-50141 FIRENZE Succ.50
FAX ++39-40-421441

We had a reasonably good number of excellent DX reports this month. For a while, though, I wondered if Europe had fallen off the map. Openings have been mighty rare here on the WCNA.

English Schedules

Tom Sundstrom

PO Box 2275

Vincentown, NJ 08088-2275

Fax 609-859-3226

Internet: T.SUNDSTROM@pics.com

Prepared 10/26/95.

Thanks to Chris Hambly (Australia), Dave Kenny (BBC WBI), Adam Lock (WWCR), Jonathan Marks (R Netherlands), Rich McVicar (HCJB), Dr. Adrian Peterson (AWR), Andy Sennitt (WRTH) and Giovanni Serra (Italy).

1996 European DX Council Meeting

The EDXC is the European counterpart to the Association of North American Radio Clubs. You may have heard the EDXC reports aired on HCJB's DX Partyline on the third Saturday of each month. Those of you who attend the Winter SWL Festival have met its chairman Michael Murray.

The **30th annual EDXC meeting** will be held **April 26 to 29, 1996**, in Florence, Italy. It's a lot of fun, and highly recommended. For more information fax +39 40 421441 or write:

AIR-Associazione Italiana Radioascolto
PO Box 30
I-50141 Firenze Succ.30, Italy

This information is from Giovanni Serra, and I'm sure he will be there to greet you if you opt to attend.

And don't forget to mark on your calendars March 14-16, 1996, for the **Winter SWL Festival** in Kulpsville, PA (just north of Philadelphia).

Denmark: R Denmark will, after many years, once again air an English language broadcast — for 15 minutes on the first Sunday of the month starting January 7.

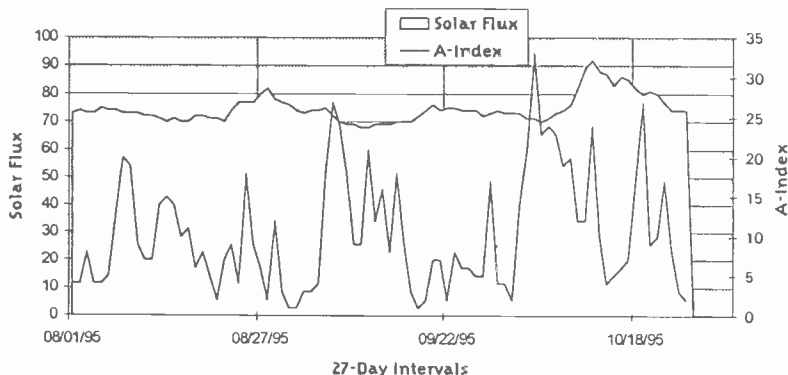

USA: WWCR began testing on 3315 September 18. By the following weekend all

went well and full-time operation started. But on deadline Adam Lock tells me that on the 25th the FCC ordered WWCR off 3315 because of complaints from USAF MARS stations. WWCR is back on 7435 until the situation can be worked out.

Drake R8A: We're putting the receiver through its paces. First impressions are that Drake did its homework with some nice additional features vs the R8...

New from Gilfer Shortwave

Active Receiving Antennas for HF and VHF/UHF

Dressler ara 40 HF Active Antenna

Dressler's newest HF antenna, designed as a low-cost match for portable receivers (Grundig Satellit 700 & YB400, Sony ICF-2010 & ICF-7600G, etc.) as well as low-end table-top models (Lowe HF-150, Yaesu FRG-100, etc.). Similar design to the ara 60 antenna but with reduced gain (approx. 3 dB) to avoid overloading of sensitive portable receivers. Constructed from anodized aluminum, with a fiberglass whip antenna element. Includes adjustable attenuator (0-20 dB). Install indoors or outdoors. Requires 12VDC power supply (optional)

Gilfer Price: \$199.95 (+\$10 s&h) Order #D04240

Dressler ara 60 HF Active Antenna

Better than ever, the newly redesigned ara 60 offers more gain and better performance than the ara-40, making it the perfect partner for high-end receivers such as the Drake R8A, JRC NRD-535, Watkins-Johnson HF-1000, etc. Featuring superior strong-signal handling capability, +50dBm third-order intercept point. The 95 cm (approx. 3 ft.) fiberglass whip element feeds a low-noise FET transistor followed by a wideband impedance transformer in order to pick up weak signals without excessive loss. An ultralinear final amplifier then amplifies the signal further for a maximum overall gain of 10 dB (± 0.2 dB). An adjustable attenuator (0-20 dB) allows reduction of gain in event of overloading. Requires 12VDC power supply (optional)

Gilfer Price: \$269.95 (+\$10 s&h) Order #D04260

Dressler ara 2000 VHF/UHF Active Antenna

The successor to the popular ara 1500 model which was the number one wideband VHF/UHF active antenna, the new ara 2000 utilizes a GaAs-FET amplifier for maximum gain (11-13 dB up to 1.5 GHz) and minimum noise figure (1-2.5 dB), while delivering excellent third-order intercept point performance (+40 dBm below 500 MHz, +43 dBm above 500 MHz). Coverage from 50-2000 MHz, circular polarization, N-type coax connectors. Housed in a UV-resistant cylinder less than 18 inches tall and about 3.5 inches in diameter, the ara-2000 is easily hidden from landlords and neighbors! Includes mounting hardware and 15 meters of RG-58 coax cable. Requires 12VDC power supply (optional). We highly recommend this antenna for use with the Icom IC-R7000/R7100, AOR and Realistic Scanners, and any other wideband receivers.

Gilfer Price: \$269.95 (+\$10 s&h) Order #D04220
