RADIO REVENUE SUMMARY

Radio revenue for the 178 markets covered by this report <u>decreased</u> in 1991 by 3.8/5. These markets account for about 65% of all radio revenue in the nation.

```
    1991 Market Revenue
    $5,001,300,000
    (-3.76%)

    1990 Market Revenue
    $5,196,600,000
    (+3.72%)

    1988 Market Revenue
    $5,026,100,000
    (+6.34%)

    1987 Market Revenue
    $4,701,500,000
    (+7.99%)

    $4,353,400,000
```

These figures are for spot revenue only. They do not include network revenue, although they do include network compensation for most markets which amounts to less than 1% of the total.

I estimate that total spot radio for the entire nation was down 3.91% to \$8,047,000,000. This is the first annual decline in radio revenue since at least the early 1970's and probably since the mid 1960's.

```
1991 Total Spot Revenue $8,047,000,000 (-3.91%)
1990 Total Spot Revenue $8,375,000,000
```

Some regions of the nation fared slightly better than others. Below is a regional breakout:

| | <u>1991 Change</u> | 1990 Change | | |
|---------------|--------------------|-------------|--|--|
| Pacific | -4.2% | +6.6% | (CA, HI, AK, OR, WA, NV, AZ) | |
| Mountain | -3.2% | +2.3% | (NM, UT, CO, ID, WY, MT) | |
| Great Plains | -3.5% | +3.5% | (ND, SD, MN, IA, KS, NE, MO) | |
| Midwest | -1.9% | +2.7% | (WI, MI, IL, IN, OH) | |
| South Central | -1.7% | +3.5% | (TX, OK, AR, LA) | |
| Southeast | -4.5% | +1.0% | (FL, GA, AL, MS, SC, NC, TN, KY, WV, VA) | |
| Mid Atlantic | -4.1% | +5.4% | (MD, DC, DE, PA, NJ, NY) | |
| New England | -7.9% | -0.1% | (CT, RI, MA, VT, NH, ME) | |

Revenue in the ten largest markets declined 2.7% during 1991. Chicago had the best year with a 2.6% revenue increase. Revenue declines were the greatest on the coasts (East and West) and more moderate in the central part of the country.

The markets with the highest and lowest 1991 growth rates are as follows:

| | Highest Growth Ra | <u>te</u> | | Largest Revenue Declines | | |
|-----|-------------------|-----------|-----|--------------------------|--------|--|
| 1. | Jackson, MS | +6.1% | 1. | New Haven | -14.5% | |
| 2. | Columbia, SC | +5.7% | 2. | Santa Barbara | -13.0% | |
| 3. | Charleston, SC | +5.1% | 3. | Utica-Rome | -12.5% | |
| 4. | Baton Rouge | +4.9% | 4. | Lansing | -12.3% | |
| | Appleton-Oshkosh | +4.9% | 5. | Albany-Schenctdy | -12.0% | |
| 6. | Boise | +4.8% | 6. | Providence | -11.8% | |
| | Lincoln | +4.8% | 7. | Portsmouth, NH | -11.4% | |
| 8. | Chicago | +4.5% | 8. | San Jose | -10.6% | |
| | Omaha | +4.5% | 9. | Augusta, GA | -10.4% | |
| | Shreveport | +4.5% | 10. | Bridgeport/Fairfield | -10.3% | |
| 11. | Anchorage | +4.2% | | 3 1 , | | |

OUTLOOK FOR 1992 . . . AND BEYOND

I must sadly report that my estimates for 1991 were more accurate than thos of any other forcasters. I estimated that the industry would be basically flat (0.5%). The radio group CEO's predicted a 4.6% increase. The RAB and others predicted gains. 5%-plus gaines. As discussed earlier the actual 1991 change was -3.91%

I am very confident that 1992 is going to be a positive year. My instincts (an my heart) say radio revenues will be up in the 6% range. I am afraid, however, that I have not the courage to call for that much of an increase. My intellect says +4% is the number. So I will go on record predicting a 4% revenue increase in 1992.

The Group CEO's are more pessimistic. Their mean increase is 2.2% Their range of opinions are -3.5% to +7%

A summary of predictions for 1992 radio revenue growth:

GROUP CEO'S: +2.2%
DUNCAN: +4.0%
DUNCAN'S PRAYER: +6.0%

I see no gain in station values in the coming year. I do believe we are at the bottom of this cycle and there are some positive elements:

- 1. Low interest rates
- 2. An improving economy
- 3. Slightly reduced competition through LMA's
- 4. A slight easing in HLT regulations.

However, the <u>negatives</u> balance out the positives:

- 1. Supply of stations far outstrips demand
- 2. Financing stations is still very difficult
- 3. Most markets remain over-radioed: too much competition
- 4. Possibility of structural changes in advertising
- 5. Lenders/receivers dumping properties

I am hearing about radio deals in which the sale price is less than 1.3 times gross. To me this is a bottom. These deals are always made by receivers/lenders dumping properties. Before we see any improvement in station values these types of "fire sales" have to be worked out of the system. This will take a year or two.

RADIO GROUP REVENUE

The 50 highest billing radio groups billed \$2,828,700,000 in 1991. This represents 35.1% of total spot radio revenue.

| | Revenue for 50 largest groups | % of total radio spot revenue |
|------|----------------------------------|----------------------------------|
| 1989 | \$2,828,700,000 | 35.1% |
| 1990 | \$2,975,800,000 | 35.5% |
| 1991 | \$2,818,600,000 | 34.8% |

CBS has replaced Capital Cities/ABC as the highest billing group. This is the first time Cap Cities/ABC has not been the highest biller. CBS's revenue is estimated at \$205,100,000 and CC/ABC at \$199,000,000. CBS's lead may increase in 1992 because of their acquisition of WCCO/WLTE in Minneapolis.

Other groups billing in excess of \$100,000,000 are Westinghouse, Infinity and Cox. Some of the other groups making impressive gains include:

| Westinghouse | (#3 to #2) |
|--------------|---------------|
| Viacom | (#9 to #7) |
| Evergreen | (#25 to #18T) |
| Ragan Henry | (#41 to #32) |
| Saga | (#47 to #33) |
| Entercom | (#43 to #37) |
| Rusk | (#48 to #40) |

For the first time there were no new groups added to the list of stations billing over \$20,000,000. Five groups fell below the threshold.

DUNCAN'S MARKET GRADES

You will notice that I have changed the designations which I use for the market grades. No longer do I assign a letter grade. Instead, I now have three levels: Below Average, Average, and Above Average.

In the last two years, I have become uncomfortable with the letter grades. The differences between radio markets have flattened out in the last few years. Now it seems that almost all radio markets are overly competitive. It used to be that many markets had a fair and balanced number of stations. This is no longer true, so a major source of differentiating markets has diminished. Secondly, at least for the short term, there seems to be a contraction of economic differences between regions of the nation and individual markets. It is difficult to judge differences in the radio economics of individual markets when 90% of all markets had declining revenues in 1991.

This does not mean that we are nearing radio's version of the NFL's "parity". The NFL still has superior teams such as Washington Detroit and Buffalo. It also has inferior teams such as Indianapolis. Radio still has superior markets and inferior markets. I just believe it is pretentious of me to assign one market a "B-" grade and another a "C+". The differences between markets just isn't that well defined anymore.

BASE VALUES . . . AGAIN AND AGAIN AND AGAIN

Every year I agonize about whether to continue offering base values. To tell you the truth it is a real hassle. During the 1980 go-go days I was constantly criticized for setting the values too low. For the last two years I have been criticized for setting them too high.

Am I defensive and/or insecure? Not me. I think my base values were quite accurate in the 80's because they were below what many people were paying for "stick" properties. Now I feel they are a more accurate portrayal of station values than is being reflected by some of the panic selling and station dumping that we currently see. So I am going to include them again.

ODDS AND ENDS

WGN is again the highest billing station. WGN billed over 42,000,000 and this is the first time a radio station has ever enjoyed revenue over 40,000,000. The top 10 statons are:

| 1. | WGN | \$42,500,000 | 6. WFAN | \$26,600,000 |
|----|--------|--------------|------------|--------------|
| | KABC | 35,000,000 | 7. WLTW-F | 26,000,000 |
| | KOST-F | 33,000,000 | 8. KIIS AF | 25,000,000 |
| | WINS | 30,000,000 | 9. WCBS~F | 24,700,000 |
| | KLOS-F | 29,500,000 | 10. KGO | 23,000,000 |

Capital Cities/ABC and Cox led the two surveys concerning the most-admired radio groups. Cap Cities/ABC led the poll of station managers (followed by NewCity, Cox Westinghouse, Shamrock and Infinity). Cox led the poll of Group CEO's - followed by Infinity, NewCity and Shamrock.

WGN remains the most admired radio station. KMOX followed closely.

AMERICAS HIGHEST BILLING RADIO GROUPS

This fascinating table estimates the revenue for the leading radio groups in the United States. The listing includes all groups which I estimate have billings in excess of 10,000,000. The only groups excluded would be a few groups featuring the Religion/Gospel format. These companies do not primarily depend on spot dollars.

My primary source of data for this table was the group CEO's themselves. I mailed questionnaires to over 100 group CEO's. Over 80% responded--a response rate I am very proud of. Among the major groups, only Gannett, Cox and Greater Media would not cooper but I was able to research these and other non-responders in other ways.

The revenue figures are in gross dollars and they do not include trade/barter dollars.

Are the figures accurate? Yes, I believe so, and I get closer every year. I rarely have a group CEO or anyone else call to question the figures. Generally, I feel I am within 2% to 3% of actual.

^{*} In some cases, two stations from the same market are counted as just one entity for the "stations" column. This was usually the case when the AM was simulcasted or programmed the same or similar format, but had very low ratings.

THE FOLLOWING GROUPS BILLED BETWEEN \$10,000,000 AND \$20,000,000 DURING 1991:

NOTE: Figures are gross dollars. Estimates are based on input from managers and owners in each market and from group CEO's. In some cases, I used formulas I have developed.

RADIO MARKET RANKING FORMULA

A MATHEMATICAL MARKET INDEX

The following pages primarily focus on a market rating formula which I developed in 1985. Markets are graded according to a formula which examines 10 important factors which affect the viability of a radio market. These factors are weighted according to the relative importance of each factor.

| 1. | 1991 Revenue per viable radio station | (WETGUETNO: | 1 4 \ |
|-----|---|-------------|-------|
| | | (WEIGHTING: | 1.4) |
| 2. | Radio revenue growth between 1990 and 1991 | (WEIGHTING: | 1.3) |
| 3. | Estimated radio revenue in 1996 | (WEIGHTING: | 1.1) |
| 4. | Growth of population between 1990 and 1995 | (WEIGHTING: | 1.1) |
| 5. | Growth of retail sales between 1990 and 1995 | (WEIGHTING: | 1.0) |
| 6. | Manager's market rating: 1991 and future (1996) | (WEIGHTING: | 1.0) |
| 7. | Jim Duncan's opinions of each market | (WEIGHTING: | 1.0) |
| 8. | 1991 revenue per available share point | (WEIGHTING: | 0.8) |
| 9. | Amount of radio competition in market - | | |
| | people per station | (WEIGHTING: | 0.7) |
| 10. | Amount of lost listening - below the line | | , |
| | and listening to non-listed stations | (WEIGHTING: | 0.6) |

It is very important for you to remember that the resulting numbers are valid for and within the same market-size group. The actual numbers for major markets are not comparable to the medium market group or to any other group.

Markets were ranked by comparing their rating against the performance of other markets in their group. The markets were ranked in order according to their performance. The major markets are ranked 1 through 40. The numbers are then reversed and points assigned. The market that ranks first of 40 markets would receive 40 points. Number two would receive 39 points and so on. The market ranked number 40 would receive one point.

Once again, please remember that you cannot compare the ratings of one sized market with those in another group.

You will also find a listing of "Duncan's Market Opinion". This rather subjective rating is explained in detail in the Explanations and Comments section.

CLASS I - MAJOR MARKETS

RANKED BY TOTAL POINTS - MATHEMATICAL INDEX

| (1988 <u>RANK</u>) | (1989 <u>RANK</u>) | (1990 <u>RANK</u>) | (1991 <u>RANK</u>) | 1992 <u>RANK</u> | | Total <u>Points</u> | Duncan's <u>Market Opinion</u> |

EXPLANATIONS AND COMMENTS

IMPORTANT: Please read this section carefully and refer to it often as you use this book. This section will help you get the most of every table. ALL REVENUE FIGURES ARE IN GROSS DOLLARS.

The best way to explain the market report is to take a single report and go through it table by table. For this purpose, we will use a mythical market.

1991 ARB Rank: 1991 Revenue: \$40,000,000 Managers Market Rating (current): 4.2 1991 MSA Rank: Rev. Per Share Point: \$437,093 Managers Market Rating (future): 4.4 Population per Station: 58,018 (17) 1991 ADI Rank: 24 Duncan's Market Grade: I above average \$8,000,000 FM Base Value: 1991 Revenue Change: 6.1% Mathematical Market Grade: 1 above average Base Value %: 22.2 Station Turnover: 31.1%

The 1991 Arbitron market rank for this city is number 36. The universe for this ranking is the 280 markets for which Arbitron issues a ratings report. The MSA or Metropolitan Statistical Area is the official U.S. government market designation. The ADI is Arbitron's TV market designation. Many markets are in "hyphenated" ADI's or they are not named in the ADI designation. When this occurred I did not list the rank number, but instead referred the reader to the lead of major city in the ADI.

The FM Base Value is an adjustment of the stick value/entrance fee. The stick value estimate supposed that a new full-signaled (B or C) FM were dropped into the market. An estimate was made as to the value of that raw license. The more I thought about this the more I came to dislike the premise. It is not very likely that a new FM will be dropped into most of the markets I cover.

The Base Value is a better estimate in my opinion. It estimates a "worse case" value for a Class B/Class C FM licensed to the market. I estimate what the station would be worth if the current owner had not achieved a great deal with the station. In fact, he had run it into the ground with no ratings, no clear position in the market, and a negative cash

I did not use any fancy formulas to calculate this figure. Instead, I looked at past sales, revenue growth in the market, my opinions about the market, and other factors.

The Base Value % is the market's FM Base Value expressed as a percentage of the market's total radio revenue. Use it to make comparisons with similarly-sized markets.

Remember that the base value applies only to FM's with signals comparable to other B/C FM's in the market. The station must be licensed to the central city or a close-in suburb. The value is as of 1 January 1992. It is valid for 1992 only.

The 1991 Revenue comes from the REVENUE HISTORY AND PROJECTIONS section which is explained below.

The Estimated Revenue per Share Pint is derived from a series of calculations which can be found o the left-hand side of the page and about halfway down the page. The methodology used for calculating this figure is discussed below.

The Population Per Station shows the number of persons in the market per metro station (those stations above the line) which is rated in the market. This market had 17 stations which were listed in the metro in the latest Arbitron. That figure was divided into the 12+ population for this market's metro. This is a good figure to use when judging if a market is "over-radioed".

Station Turnover shows the percentage of each market's viable stations which have been sold during the last two years (1990 and 1991).

The Manager's Market Rating (current) for this market is 4.2 This is the result of a questionnaire which was sent to stations' general managers and sales managers. One of the questions was "On a scale below how would you rate your market as it stands today".

Awful Radio Market Average Radio Market Super Radio Market 1 2 3 4 5

The managers were asked to circle the number on the scale which approximated their opinion of the market. The responses were then averaged and the result listed. A rating of 2.5 to 3.5 is basically a neutral response. In this market response is very positive. It is my opinion that in general the managers tended to overrate their own market slightly.

The future column asked the managers to rate how their market would perform five years into the future - 1996.

As of 1992, I have changed the "Duncan's Market Grade". Prior to 1992 the grades were A,B,D or D. As of 1992 there are three levels: above average, average and below average. These grades show Jim Duncan's opinion (objective and subjective) about each market. Basically, when I have completed most of the work for this book I lock myself in my office and turn off the phones for a day. I then rank the markets in this book -- each and every one. The more desirable markets are given an "above average" grade. The less desirable markets are designed as "below average".

The Mathematical Ranking can next be found. It is explained in its own section in the from of the book. It can and should be compared with Duncan's Market Grade.

This section contains the most important data for each market. It is the guts of the report. It shows the revenue history, the current revenue picture, and a view of the future revenue. What is unique about this presentation is that all revenue figures are calculated in three ways: 1) revenue estimates for 1986, 1987, 1988, 1989, 1990, and 1991 combined and projected out to 1996: 2) revenue per capita figures from 1986 to 1991 projected to 1996; 3) revenue as a percentage of retail sales projected through 1996.

We will explain this table by table. ALL REVENUE FIGURES ARE IN GROSS DOLLARS.

Duncan Media Revenue Estimate: As we all know, the FCC got out of the revenue reporting business after 1980. Thus, the revenue figures for 1986, 87, 88, 89, 90, and 91 are estimates made by Duncan Media. These estimates were gathered in three ways. The first and best way is to access reports from accounting services in those markets where revenue data is gathered and reported -- for about 90 markets I was successful in my efforts to get that data. The second method was to ask broadcasters in each market to give me their best estimate of their market's revenue. In perhaps 60 markets I was able to gather estimates which I felt confident about. However, I am always surprised to learn how many broadcasters have no idea how many dollars are available in their own market. The third method was, when all else failed, to make my own estimate using my knowledge of the market, along with past performance figures.

Yearly Growth Rate (1986-1990): The next step was to calculate a percentage which shows the yearly growth rate in revenue between 1986 and 1991. In many markets this was simply a matter of calculating a compound growth rate. In some markets I adjusted the percentage according to my own feelings and intuitions. Such a change would severely affect future projections so I took the liberty of "flattening" the percentages a bit. In some other cases, I did not use each of the five years to calculate the percentage. They are so marked. The reasons are similar to those stated above.

Projected Revenue Estimate: For the years 1992 through 1996 I used the yearly growth rate to project the market's revenue.

Revenue Per Capita: This represents the radio revenue dollars per person in the market's metro. It is calculated by dividing the total population into revenue figures. The resulting figures are in dollars.

Resulting Revenue Estimate: The revenue per capita figure is multiplied by the population to derive a total revenue estimate for each of the years 1992 through 1996. The population estimates are obviously very important to the accuracy. I used estimates supplied by "Sales and Marketing Management - Survey of Buying Power". Their population estimates are listed in "POPULATION AND DEMOGRAPHIC ESTIMATES" section. The yearly per capita estimate is multiplied by the yearly population estimate.

Revenue as % of Retail Sales: Some radio observers believe this is the most accurate way to project radio revenue. The percentage is calculated by dividing total radio revenue by total retail sales. The results are based on the radio revenue for each year (FCC and estimate) and the retail sales for each year as reported in Sales and Market Management.

Mean % 1986-1991: This figure was calculated by finding an average of the "Revenue as a percentage of retail sales for the years 1986 through 1991. The result is an estimate of radio revenue for those years. The retail sales figures are listed in the "POPULATION AND DEMOGRAPHIC ESTIMATES" section and they were also supplied by "Sales and Marketing Management - Survey of Buying Power". S&MM is probably the most reliable "future" date provider available and I am fortunate to be able to use their data.

MEAN REVENUE ESTIMATES: These are probably the most important and useful figures in this section. It simply calculates an average for the three revenue estimates which, as we have discussed, were calculated in three different ways. This tends to flatten out the figures a bit.

I believe this section provides the most complete and comprehensive revenue estimates available to the radio industry. The figures must be used with caution, however. They are largely based on past performance and as every mutual fund prospectus says - past performance does not necessarily guarantee future performance.

So how valuable and reliable are the projections? I feel they are most useful when they are used as a beginning point for further analysis. I suggest you take these figures and factor in your own knowledge of the individual markets and any other variables you have knowledge of.

I have the most confidence in the revenue projections when all three methods of calculation results in similar figures. However, in some markets, the estimates vary rather drastically.

CONFIDENCE LEVELS

1991 Revenue Estimates: Normal

1992-1996 Revenue Projections: Normal

Confidence levels show you how confident I am about the revenue estimates and projections. There are only two main levels: Normal or Below Normal. In some cases, I qualified the "Below Normal" with a "Slightly" or "Much."

Below-The-Line Listening Shares: 0.4% Unlisted Station Listening: 6.4% Total Lost Listening: 6.8% Available Share Points: 92.2 Number of Viable Stations: 12 Mean Share Points per Station 7.68 Median Share Points per Station: 7.6 Revenue per Avail. Share Point: \$437,093 Estimated Revenue for Mean Station: \$3,356,877

This table contains several calculations which are used in analyzing a radio market:

Below-the-Line Listening Shares: This shows the percentage of listening which goes to stations which are located outside the market's metro. The Spring 91 edition of American Radio describes how this figures was calculated.

<u>Unlisted Station Listening:</u> This figure shows the percent of all radio listening which goes to stations not listed in the rating books. These stations are primarily college and other non-commercial stations or commercial stations with too little listening to be included in the rating books.

<u>That Lost Listening:</u> This shows the listening shares in the market which are usually not available to the primary commercial stations in the market.

<u>Available Share Points:</u> These are the listening shares which are available to the primary commercial stations in each market. This figures varies greatly from market to market. It is the crucial figure when calculating how much revenue is available per share point. Many broadcasters just divide total revenue figures by 100 and say that is close enough. The figures shown here are much more accurate.

Number of Viable Stations: This is the number of stations which, in my judgment, are active and viable competitors for advertising dollars in the market. The other stations are generally those with less than a 1.0 share or stations from small towns far from the metro's principal city. We have been a bit more selective when it comes to selecting viable stations. In most markets this figure dropped significantly from previous years. This, in turn, has an influence on the revenue for mean station. This figure is usually much higher than previous years.

Mean Share Points Per Station: The median share for a viable station is provided as a comparison to the mean.

Revenue Per Available Share Point: This is calculated by dividing the "Available Share Points" into the 1991 total revenue.

Estimated Revenue for Mean Station: This is derived by multiplying the "Revenue per Available Share Point" by the "Mean Share Points per Station".

These figures provide a good starting point for projecting an individual station's revenue and for estimating what an average station in the market bills. It tends to underestimate revenue for the top rated stations in the market which will have an impact on these estimates.

POPULATION AND DEMOGRAPHIC ESTIMATES

| | 86 | <u>87</u> | 88 | <u>89</u> | <u>90</u> | <u>91</u> | <u>92</u> | <u>93</u> | <u>94</u> | <u>95</u> | <u>96</u> | |
|-----------------------------|------|-----------|------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|--|
| Total Population (millions) | 1.18 | | 1.18 | | | | | | | | | |

This table shows total population and retail sales for each year from 1986 through 1996. We now use only "Sales and Marketing Management" figures. The figures for 1989 and 1994 are actual figures (or projections) as provided by "Sales and Marketing Management". The figures for the other years are projections made by Duncan Media.

| Ethnic Breakdow | ns (%) | Income Breakdov | wns (%) | Age Breakdo | wns (%) | Education Levels (%) | |
|-------------------------------------|----------------------------|---------------------------------------|------------------------------|-----------------------|----------------------|---|----------------------|
| White Black Hispanic Other | 76.5 22.0 1.1 0.4 | -15 15-30 30-50 50-75 75+ | 23.8 28.0 26.4 15.8 | 12-34 25-54 55+ | 25.7 55.3 19.0 | Non High School Grad: 33.5 High School Grad: College 1-3 years: College 4+ years: | 29.6 16.9 20.0 |

The above statistics were provided by Market Statistics.

Household Income: As of 1991 and provided by "Sales and Marketing Management".

Median Age: As of 1991 and provided by S&MM

Median Education: Based on 1990 census updated to 1991

Median Home Value: There is an important change in this category. Previously we used a figure based on the median price of homes sold in the market in the previous year. This new figure is based on the estimated average price of all homes in the market. Generally, this figure is lower than last year.

Population change 90-95: Gross change in total population based on S&MM projections.

Retail Sales Change 90-95: Gross change in retail sales based on S&MM projections.

Number of B or C FM Stations: Self explanatory except stations must be viable and have competitive signals over the market.

Revenue per AQH: 1991 revenue divided by Average Quarter Hour totals for all listed stations in Spring 91 Arbitron.

COMMERCE AND INDUSTRY

These listings show which companies are headquartered in the market being studied. The Forbes 500 and Fortune 500 companies show the major corporations. The INC 500 is a listing of the fastest growing small, privately-owned companies.

The rank of each Fortune 500 company is shown in parenthesis. Most companies in the Fortune 500 would also be listed in the Forbes 500, although I did not list them twice.

Employment Breakdown

By Industry (SIC):

By Occupation:

| Business Services Eating and Drinking Places Wholesale Trade-Durable Goods (The Top 10 SIC's are listed) | - | (7.6%) (7.4%) (6.8%) | Manag/Prof. Tech/Sales/Admin Service Farm/Forest/Fish | 251,632 356,166 116,903 9,021 | (24.6%) (34.9%) (11.4%) (0.9%) |
|---|----------------------|----------------------------|--|--|---|
| Total Metro Employees: 938 | ,701 5,815 (45.5% | () | Precision Prod Oper/Fabri/Labor | 120,851 167,162 | (11.8%) (16.4%) |

This data is also provided by Market Statistics. The column on the left shows employment by industry/SIC. The top 10 SIC's are listed. The column on the right shows employment by job description or occupation. Below are the six occupational classifications and their sub-classifications:

Managerial and Professional Specialty Occupations

Executive, administrator, and managerial Officials and administrators, public admin. Management related occupations
Professional specialty occupations
Engineers and natural scientists
Health diagnosing occupations
Health assessment and treating occupations
Teachers, librarians and counselors

Technical, Sales, and Administration Support Occupations

Health technologies and technicians
Technologists and technicians, except health
Supervisors and proprietors, sales occupations
Sales representatives, commodities and finance
Other sales occupations
Administrative support occupations, including clerical
Computer equipment operations
Secretaries, stenographers, and typists
Financial records processing occupations
Mail and message distribution occupations

Service Occupations

Private Household occupations Protective service occupations Service occupations, except protective and household

Farming, Forestry and Fishing Occupations

Farm operators and managers
Farm workers and related occupations

Precision Production, Craft, and Repair Occupations

Mechanics and repairs Construction trades Precision production occupations

Operators, fabricators, and Laborers

Machinery operators and tenders, except precision Fabricators, assemblers, inspectors, and samplers Transportation occupations Material moving equipment operators Handlers, equipment cleaners, helpers and laborers

PAGE TWO (THE RIGHT-HAND PAGE OF EACH MARKET)

Largest Local Banks: Lists the largest banks in each market along with their assets as of 1991.

Colleges and Universities: The major colleges and universities in each market are listed along with the number of students enrolled as of 1991. The source for this information was the Education Directory, Colleges and Universities.

Military Bases: If any significant military installations are present in the market, they are listed on this table. The number of personnel stationed at the base is also listed. This figure does not include dependents.

Unemployment: This figure was researched through several government sources. For some markets, there is not any data available.

RADIO BUSINESS INFORMATION

<u>Heavy Agency Radio Users:</u> We surveyed local broadcasters and asked them which local advertising agencies are the heaviest users of local radio. Those agencies listed were chosen by a consensus of the broadcasters.

Largest Local Radio Accounts: We asked broadcasters what were the largest, local accounts in their markets.

Sources of Regional Dollars: Broadcasters were asked which markets were important sources for regional dollars.

<u>Highest Billing Stations:</u> This feature is certain to be a fascinating, albeit controversial listing. It shows what Duncan Media believes to be the highest billing stations in each market and their 1991 revenue. Sources in some markets helped me to a degree -- primarily in ranking the stations -- but I accept full responsibility, credit, and blame for what is printed.

I used several formulas for estimating the revenue -- all of them I consider proprietary. I will tell you that the formulas include revenue per share point potential, the station's format, and other variables. My goal is to be within 5% of actual. Let me know how I did.

COMPETITIVE MEDIA

Over The Air Television: No explanation needed

Daily Newspapers: The circulation for these papers are as of 1991. AD means All Day.

| | Revenue | * | % of Retail Sales |
|------------|----------------|------|-------------------|
| Television | \$ 94,000,000 | 39.3 | .0129 |
| Radio | 32,500,000 | 13.6 | .0044 |
| Newspaper | 106,000,000 | 44.3 | .0145 |
| Outdoor | 6,900,000 | 2.9 | .0009 |
| | \$ 239,400,000 | | .0327 |

Media Revenue Estimates: this table shows the estimated revenue for each of four major advertising vehicles. The figures are in gross dollars. My confidence levels for radio revenue are high, medium for television, and low for newspaper and outdoor. Newspaper estimates include retail space, inserts and what I call "Retail Classified". Retail Classified would be auto advertising and real estate. I would not include personals, yard and garage sales, and other lineage which would be placed by an individual rather than a business. Newspaper sales do not include the revenue derived from the sale of the paper to subscribers and newsstand sales.

Television estimates are primarily projections based on old FCC data and the NAB's work in compiling TV revenue.

As I said, I have a low confidence level with the newspaper and outdoor advertising estimates. In general, I took a national percentage of retail sales for each medium and applied it to each individual market. Local radio managers and owners were asked for their estimates. Some of them were helpful, but most broadcasters really don't have any idea what the newspaper bills. My hope is that people will read these pages and make suggestions about how I can improve the estimates.

The "%" figures is a particular medium's share of the total estimated dollars for all four media. As a broad and general billing ratio I would offer the following:

TV outbills radio 2 or 2 1/2 to 1 Newspaper outbills TV by 30% t 40%

The "% of Retail Sales" shows a medium's revenue as expressed as a percentage of total 1991 retail sales. Radio's sales are the equivalent of \$4.40 per \$1,000 of retail sales. TV and newspaper are \$12.90 and \$14.50 per thousand, respectively. total advertising on the four media is over \$30.00 per thousand dollars of retail sales. These percentages are higher than normal (except for radio and outdoor which are close to normal). TV usually averages around \$0.90 per thousand and newspaper around \$1.10 per thousand. The total % of Retail Sales averages anywhere from .0200 to .0290.

Recent Radio Transactions: This shows radio sales since 1987. In some cases, the sales may never have been closed for various reasons. They are listed anyway because they still give an indication of station pricing in the market.

Miscellaneous Comments: This section contains various odds and ends including footnotes, quotes about the markets and weather data.

| 1990 | WFDF/WDZZ-F | | 7,000,000 |
| 1991 | WFLT | | 225,000 |
| NOTE: | Some of these | sales may not have be | en consummated. |

Miscellaneous Comments

* Split TV ADI with Saginaw/Bay City. TV revenue is estimate of Flint's share. Total TV revenue for ADI is estimated at $$38,600,\!000$

Manager's Comment

"The Flint market has held up very well during these difficult economic times -- much better than many of the "glamorous" markets. 'Roger and Me' is dead." [Top of the theorem] Top of the theorem

"Kansas City is a vastly improved market since the mid-80's. Operators today are more innovative and aggressive. The market economics are diverse and stable. Look for growth in Kansas City through the 1990's."

MANAGERS' COMMENTS

"Abilene now has 17 radio stations... the FCC will not

be happy until everyone in Abilene has their own radio

Some Recent Station Sales

KORQ A/F 1987 Sold to Bakcor \$2,100,000 (E) KWZD-F 1,300,000 1988 1989 KFQX A/F (Merkel) Sold to Motta 950,000 1989 KWZD-F 1,300,000 KORQ A/F From Bakcor to Adams, Jr. 1,300,000 (E) 1990

NOTE: Some of these sales may not have been consummated.

Miscellaneous Comments

*This market is part of Boston ADI. TV revenue is estimate of Cape Cod's share. Total TV revenue for ADI is estimated at \$374,000,000.

MANAGERS COMMENTS

"Cape Cod has 180,000 year-round residents and 14 radio stations. The market has been dropping by \$1,000,000 per year since 87, yet the FCC keeps allowing new drops. Three are in Chapter 11. During Hurricane Bob only 3 stations (WCOD,WQRC, WCIB) were able to stay on air because they had equipment to be able to."

"If we all convert to satellite music/talk, who will be around to train new talent. I can get kids to run a hoard with no problem, but true talent is not getting training on the air in small/medium markets."

1992 PUBLICATIONS FROM JIM DUNCAN

AMERICAN RADIO

Now, a quarterly (plus the "Small Market" edition) AMERICAN RADIO remains the radio industry's most complete and timely source book of radio ratings and programming information. There are over 30 tables for each market, plus—in the Spring and Fall editions—over 60 pages of national ratings. AMERICAN RADIO is considered to be the "bible" of the radio industry and is required reading for everyone involved with radio.

| ISSUE | RELEASE DATE | NUMBER OF MARKETS | PRICE |
|----------------------|--------------|-------------------|---------|
| Winter Supplement | May | 97 | \$49.00 |
| Spring Edition | August | 170 | \$84.00 |
| Small Market Edition | September | 90 | \$49.00 |
| Summer Supplement | November | 97 | \$49.00 |
| Fall Edition | February | 168 | \$84.00 |

DUNCAN'S RADIO MARKET GUIDE

Designed to be a companion volume to <u>AMERICAN RADIO</u>, this book examines the economic conditions of 190 markets. Included are: radio revenue histories and projections on a yearly basis between (1986 and 1996); revenue estimates for over 1,500 important stations; revenue estimates for competitive media (TV, newspaper, outdoor); Duncan's opinions about each market; population and retail sales histories and projections; group revenue estimates; radio's most admired groups and stations; local radio account information; revenue per share point estimates; station sales since 1985 and much, much more (over 30 other tables).

PUBLISHED EVERY JANUARY

RADIO IN THE UNITED STATES: 1976 to 1991

This new issue offers a statistical history covering the last 16 years. For each market (180 or so) there is a complete year-by-year analysis of station shares and cume ratings, format shares, financial information, highest billing stations, station sales (back to 1970 for most markets), major call letter and format changes and much, much more. This book is literally a history radio for the last 16 years.

PURLISHED IN MARCH 1992

Price: \$110.00

Price: \$265.00

THE RELATIONSHIP BETWEEN RADIO AUDIENCE SHARE AND REVENUE SHARE

This new report examines the relationship between a station's audience share and its revenue share. Over 800 stations are included. The revenue and audience shares for each individual station is covered. Additional information is provided for each format and every market size. This report covers an area we have all speculated about, but never had access to any reliable data. This report fills the gap. You will use it for programming decisions, budgeting and goal-setting. You will also find it makes for fascinating reading. Effective in 1992, this book is doubled in size because we will be adding audience breakdowns for over 1000 stations. For each station the following is provided: Time-Spent-Listening, Turnover ratios, % Exclusive Cume, % 12-24, 25-54 and 55+, % Male, % Female, % At-Home-Listening, and the station with the highest level of shared audience.

PUBLISHED EVERY APRIL

Price: \$85.00

DUNCAN'S RADIO GROUP DIRECTORY

This is a brand new publication which first published in May, 1989 and will now be issued annually. This book is a complete and comprehensive directory of group radio owners in the U.S. All groups with three or more stations in rated markets and revenues in excess of \$3,000,000 will be included. Over 160 radio groups will be covered. The directory will include (for each group), ratings performance; station purchase prices (and date of purchase); station revenue estimates; senior management; addresses and phone numbers; group financial data; major shareholders; board of directors; key suppliers; a history of the company and much more.
