for SPECIALIZED FILTERS

Decades of experience in the design and production of specialized filters have resulted in UTC being a first source for difficult filters. Fifteen years ago UTC was already the largest user of permalloy dust toroids in the world (exclusive of the telephone system). Present designs include a wide variety of core materials, structures, and winding methods to provide maximum performance in electrical requirements and stability. Illustrated below are a few of the thousands of special filter designs in present production.

These low frequency band pass filters are held to 1 DB tolerance at the 3 DB crossover... 600 ohm... 4 filters per 7 1/2" rack panel.

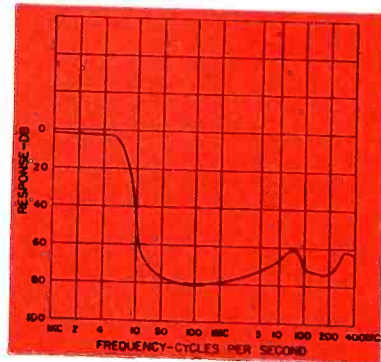

This ultra low frequency filter has a band pass range of one cycle to 10 cycles... 50,000 ohms... 700 cubic inches.

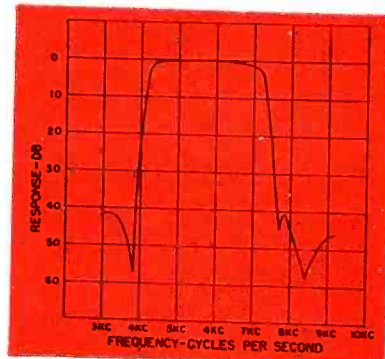

This 600 ohm miniaturized 1 KC band pass filter is housed in a case only 1" x 1 3/4" x 2 1/2".

This 600 ohm miniaturized low pass filter is housed in a case only 1" x 1 3/4" x 2 1/2".

This power line filter provides correct output voltages from sources of 50 to 400 cycles... noise attenuation is from 14 KC to 400 MC... 29 cubic inches.

This band pass filter is designed for sharp cut-off at both ends of the range... 10,000 ohms... case dimensions 1 1/8" x 2 1/2" x 3 1/4".

ELECTRONICS
Member ABC and ABP

Vol. 26, No. 6A

Published monthly with an additional issue in June by McGraw-Hill Publishing Company, Inc., James H. McGraw (1860-1948), Founder. Publication Office, 99-129 North Broadway, Albany 1, N. Y.

Executive, Editorial and Advertising Offices: McGraw-Hill Building, 330 W. 42 St., New York 36, N. Y. Curtis W. McGraw, President; Willard Chevalier, Executive Vice-President; Joseph A. Gerardi, Vice-President and Treasurer; John J. Cooke, Secretary; Paul Montgomery, Senior Vice-President, Publication Division; Ralph B. Smith, Vice-President and Editorial Director; Nelson Bond, Vice-President and Director of Advertising; J. E. Blackburn, Jr., Vice-President and Director of Circulation.

Subscriptions: Address correspondence to Electronics—Subscription Service, 99-129 N. Broadway, Albany 1, N. Y., or 330 W. 42nd St., New York 36, N. Y. Allow one month for change of address. Subscriptions are solicited only from persons engaged in theory, research, design, production, maintenance and use of electronic and industrial control components, parts and end products. Position and company connection must be indicated on subscription orders.

Single copies 75¢ for United States and possessions, and Canada; \$1.50 for Latin America; \$2.00 for all other foreign countries. Buyers' Guide \$2.00. Subscription rates—United States and possessions, \$6.00 a year; \$9.00 for two years. Canada, \$10.00 a year; \$16.00 for two years. Other western hemisphere countries, \$15.00 a year; \$25.00 for two years. All other countries \$20.00 a year; \$30.00 for two years. Entered as second class matter August 29, 1936, at the Post Office at Albany, N. Y., under act of Mar. 3, 1879. Printed in U.S.A. Copyright 1953 by McGraw-Hill Publishing Co., Inc.—All Rights Reserved. BRANCH OFFICES: 520 North Michigan Avenue, Chicago 11, Ill.; 68 Post Street, San Francisco 4; McGraw-Hill House, London, E.C. 4; Washington, D. GENERAL ELECTRIC

ELECTRONIC COMPONENTS, EQUIPMENT AND ALLIED PRODUCTS FOR ALL COMMUNICATION AND INDUSTRIAL APPLICATIONS

General Electric has been building high-quality electronic components and equipments for many years. The components are available not only for communication equipment but also for industrial electronic equipment such as high-frequency heating, radar, controls, etc. The same is true of the equipment.

Each component line manufactured by General Electric is backed up by capable design engineers, finest manufacturing facilities, and our renowned development and research laboratories. Components and equipment listed below are but representative. For further information on the complete line, please get in touch with the nearest General Electric Sales Office.

INDEX

PRODUCT	PAGE NO.	PRODUCT	PAGE NO.

CAPACITORS

STANDARD COMMERCIAL TYPES Fixed Paper-dielectric Capacitors

A-c/d-c dual-rated Pyranol* capacitors for motors, controls, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 mu f, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c. Write for Bulletin GEC-809.

G-E CAPACITORS TO MEET JAN-C-25 SPECS 100 to 12,500 Volts, D-c — 0.01 to 15 Microfarads

These fixed paper-dielectric capacitors are designed to meet the rigid requirements of the joint Army-Navy specifications for use in electronic equipment for the armed forces. Hermetically sealed in metallic containers, these capacitors for d-c applications are available in Characteristics E and F and in case styles CP-53, -54, -61, -63, -67, -69, and -70. In addition to regular applications, these units may also be used at higher temperatures, higher voltages for short-life applications, and with a-c voltages. Write for Bulletin GEC-810.

*Registered trade-mark of General Electric Co.

CAPACITORS

G-E DRAWN-OVAL CAPACITORS (DUAL A-C, D-C RATED) 330 A-c/600 D-c to 660 A-c/1500 D-c Volts

1 to 10 Microfarads

These are dual-rated a-c/d-c capacitors in fluorescent-ballast containers. They are designed to supersede present case types 53 and 70 (shown left with smaller drawn-oval units). Drawn-oval capacitors are smaller, lighter, mechanically stronger, use less critical material, and cost 10 to 20 per cent less than standard fixed paper-dielectric capacitors. Write for Bulletin GEA-5777.

ENERGY STORAGE

These d-c Pyranol capacitors for phototube and similar light-duty energy-storage applications are the result of years of experience in the design and manufacture of capacitors for this type of service. They are relatively lightweight, small, stable capacitors having a life consistent with the application involved. Write for Bulletin GEA-4646.

G-E TANTALYTIC CAPACITORS

The Tantalum capacitor was developed to fit certain direct-current, low-voltage applications where aluminum electrolytics and paper capacitors have not proven entirely satisfactory, and is suggested for applications where superior performance and small size are the major factors.

The Tantalum capacitor is a foil-type, tantalum-electrode, electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but, because of the characteristics of tantalum foil and the electrolyte employed, is smaller in size. The Tantalum capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (-55°C to $+85^{\circ}\text{C}$), without derating, than the conventional aluminum electrolytic capacitor. Tantalum capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

Write for Bulletin GEC-808.

HFP CAPACITORS

These high-frequency, liquid-filled, parallel-plate capacitors are specifically designed for use in the resonant circuit of high-frequency electronic oscillators, such as those used in electronic-heater applications. They may be operated at relatively high voltages and will carry heavy currents continuously at frequencies of 50 kilocycles to several megacycles. Write for Bulletin GEA-4365.

SUBMINIATURE METAL-CLAD TUBULARS

PERMAFIL UNITS

Subminiature metal clad tubular capacitors with silicone end seals and a solid dielectric Permafil, for operation from -55°C to $+125^{\circ}\text{C}$ without derating. With small size, no liquid leakage and high insulation resistance, they will withstand extreme temperature cycling. Because of capacitors silicone end seals with all-welded construction, leads can be soldered next to case without damage to seal. Also, this new silicone end seal permits a polarized voltage to be applied under severe humidity conditions.

Meeting all military requirements, capacitors can be supplied in both tab and exposed foil designs.

Ratings range from .001 to 1.0 muf. in voltage ratings of 100, 200, 400 and 600 volts d-c and cases in standard sizes from .235 in diameter and 11/16 in. length to 1 in. diameter and 2 5/8 in. length. (Write for Bulletin GEA-5934.)

*Registered trade-mark of General Electric Co.

PYRANOL* UNITS

Subminiature metal clad tubular capacitors with a new Pyranol liquid dielectric and silicone end seals for operation from -55°C to $+85^{\circ}\text{C}$ without derating.

Meeting all Char. E requirements for use in military electronics equipments, Pyranol metal-clad tubulars are 20% smaller than comparable oil-filled units, the same size as old style wax units but have superior life characteristics. The silicone end seals, of all-welded construction, provide maximum resistance to thermal and physical shock and permit soldering up to the bushing without danger of seal damage. In addition, in severe humidity conditions, the new silicone end seal permits a polarized voltage to be applied to the capacitor.

They can be supplied in standard case sizes in either tab or exposed foil designs in ratings from .001 to 1.0 muf. in voltage of 100, 200, 400 and 600 volts d-c workings. Write for Bulletin GEA-5934.

CAPACITORS

PERMAFIL CAPACITORS

Permafil high-temperature capacitors are designed to meet the performance requirements of JAN-C-25 Characteristic E (mineral oil) capacitors, and in addition, are suitable for operation in ambient temperatures from -55 to +125 C at full rated voltage.

Permafil, used as the impregnant instead of mineral oil, is a solid resinous material having excellent electrical characteristics over a wide temperature range. Since it is a compound, the processing and manufacture of Permafil capacitors can be controlled to exacting specifications and results in units that are reliable at elevated temperatures. Because the impregnant is solid, it eliminates possibilities of leaks. For information, write Specialty Capacitor Sales, Hudson Falls, N. Y.

Ratings	D-c Voltage	Mu f
Case Style 53	400	.05 to 1
Case Style 61	400	.10 to 1
Case Style 61	400	.05-.05 to .50-.50

PULSE FORMING NETWORKS

These capacitor pulse-forming networks, Type E, are for applications in radar and industrial equipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required. Write for Bulletin GEA-4996.

SPECIALTY TRANSFORMERS FOR ELECTRONIC EQUIPMENT

HERMETICALLY SEALED

A complete line of hermetic transformers in 11 standardized case sizes was specifically designed to meet the performance requirements of the government MIL-T-27 specifications. These units, featuring drawn-steel cases and silicone bushings, are the most dependable, leakproof transformers it is possible to provide and can be used on a wide range of applications.

COMPOUND FILLED

Particularly suitable for applications where moisture or humidity is excessive. For such applications, they are far superior to core-and-coil units. If immersion-proof unit is not required, they are more economical than hermetically sealed transformers. They have wide application in the electronics field, such as in frequency-modulation, carrier-current, and speech-input equipment. An especially useful feature is the universal mounting—the units can be top- or bottom-mounted for open or under-deck wiring.

CORE-AND-COIL

Usually applied where moisture resistance is not an important factor, and where size and weight must be kept to a minimum. Composed of automatically wound coils imposed on finest-grade silicon-steel core laminations, they are of the same uniform high quality as our enclosed transformers. Made to exacting tolerances to provide excellent electrical characteristics. Terminal boards top- or bottom-mounted, or with leads, and with mounting studs or brackets to meet special requirements.

CONTROL AND SIGNAL TRANSFORMERS

Designed in standard sizes from 0.0075 to 0.200 kva to supply low-voltage circuits for most economical operation of numerous industrial, commercial, and household equipments. A complete standard line of normal reactance, high-reactance, and warp-stop transformers is available to meet most applications. However, special units built from standard parts can be designed for special applications. A complete line of transformers is available for specific use with machine tools. Designed so that 23 ratings will meet requirements of most foreign, as well as unusual domestic, applications. All units have front-mounted terminal boards and built-in circuit protectors.

PERMAFIL TYPE

For electronic applications. They utilize a special core-and-coil construction which permits size and weight advantage comparable to and, in many instances, better than conventional core-and-coil unit. Completely protected by a tough coating of Permafil (a synthetic resin developed by G.E.) which makes them highly moisture resistant. Particularly adaptable to aircraft use where size and weight requirements are extremely critical.

AIRCRAFT TRANSFORMERS

General Electric manufactures a complete line of standard 400-cycle aircraft transformers which includes general-purpose transformers, phase-changing transformers, high-temperature silicone transformers, ballasts for fluorescent lamps, ignition transformers for cabin heaters, de-icers, and jet engines. General Electric builds transformers to individual specifications, both military and commercial.

GOOSENECK FILAMENT TRANSFORMERS

Are used as components of radar and transmitter equipment, and allied devices which require high operating voltages above ground. Construction type shown in the photograph permits a substantial reduction in size and weight—critical factors in many installations. A cost saving is also effected over similar ratings of enclosed-type construction.

VOLTAGE REGULATORS

AUTOMATIC VOLTAGE STABILIZERS:

For equipment that requires stable a-c input or for stable output of 115 and/or 230 volts in sizes from 15 to 5000 va, standard G-E stabilizers can be used to cut costs, save space.

With rated load at unity power factor, they maintain output within $\pm 1\%$ for line variations of 95 to 130 or 190 to 260 volts. Quiet, automatic, they provide quick recovery when subject to simultaneous line and load variations, and voltage surges.

If your product is composed of one of the following items, it will pay you to investigate stabilizers: television and radio equipment; telephone apparatus; sound equipment; lighting circuits; photometers; x-ray equipment; rectifiers (full-wave); electrochemical apparatus; test equipment and precision processes; photographic equipment; electronic circuits; calibration devices; color comparators. Write for Bulletin GEA-5754.

INDUCTROLS (Hand or Automatic)

To meet the increasing demand for smooth voltage regulation in smaller electric apparatus, G.E. has extended its line of induction voltage regulators to include the 300- and 600-volt-ampere ratings. With these new Inductrols, smaller laboratory, industrial, and communications applications are now afforded smooth control, high efficiency, and dependability. They can be automatically or hand operated. Write for Bulletins GEA-5833 and GEC-795.

SATURABLE REACTORS

Their features are: 1. provide control in an a-c circuit by means of a direct current. 2. provide a wide range of control with smooth adjustment over entire range. 3. d-c control power required is small, obtainable from any reasonable combination of available current and voltage. 4. very efficient, even at light loads. 5. voltage drop in reactor at full saturation is small, permitting 93% or more of the voltage to be applied to load. 6. compact, sturdy, no moving parts. 7. control power readily obtained from electronic rectifier. 8. conveniently installed in least crowded part of the building for remote control operation. 9. provide a means of insulating the d-c control from the a-c circuit. These units are for use as control devices for numerous automatic and manual control applications. Write for Bulletin GEC-341.

AMPLISTAT Magnetic Amplifier

This amplistat is a complete d-c to d-c magnetic amplifier of the self-saturating type. It is complete with reactors and rectifiers mounted in a metal enclosure on a standard base. The plug feature permits convenience of connection and ease of removal for testing the rest of the circuit. Features include: *High Gain — Isolation* — Input windings galvanically isolated from output. *Reliable* — Rugged construction, little, if any, maintenance. *Static* — No moving parts. *No warm-up time* — Has no tubes. *Compact* — Fits easily on control panels and chassis.

Application: This amplistat is a complete packaged d-c amplifier applicable to a wide range of control and instrumentation purposes. The following are a few of the many possible combinations of SIGNAL SOURCES (Thermocouples, Strain Gages, Thermistors, Photocells, Phototube amplifiers, Bismuth-wire magnetic-field sensitive resistors, Shunts, Resistance-type temperature bulbs, other Amplistats) with CONTROLLED DEVICES (Relays, Solenoids, Small-motor fields, Generators, Amplidyne fields, Power Rectifiers, Lamps, Heating elements, other Amplistats).

ELECTRONIC AMPLIDYNE:

An extremely responsive amplifier combined with a motor amplidyne set, useful in many types of motor control where precise regulation of current, voltage and speed is necessary or desirable.

APPLICATION — Control speed, limit loads, hold tension, speed up acceleration, position precisely, assure quick stopping. Readily adaptable to programming and processing control.

RATED — As a regulated adjustable-voltage power supply for d-c motors up to 1½ hp. As regulated exciter for large adjustable-voltage drives up to 200 hp. The unit has an output of 1½ kw, 250 volts. Can be arranged for use on 220- or 440-volt, 3-phase, 60-cycle power supply.

The G-E electronic amplidyne is applied as a part of a complete control system. Write for Bulletin GEA-4889A.

HIGH VOLTAGE COMPONENTS

HIGH PRECISION RECTIFIERS:

These d-c power-supply units are especially built for precision work. Hermetically sealed, they have a number of highly desirable features which make them suitable for supplying the high potential necessary for cathode-ray tubes, television-camera tubes, radar-indicator scopes, electron microscopes, and other jobs where unusually low regulation, lightweight, and small size are primary considerations. Illustrated is a unit rated 7000 volts, 0.1 ma, d-c. It is manufactured for 215 volts, 2000 to 20,000 cycles, a-c input. An additional pair of terminals, supplying 45 volts a-c when 215 volts are applied to the input terminals, makes the unit especially suitable for use in the tank circuit of an audio oscillator.

PULSE TRANSFORMERS — Oil-filled, Hermetically Sealed:

Oil-insulated hermetically sealed pulse transformers in peak voltage ratings of from 10 to 100 kv or higher and in peak-power ratings up to 30,000 kva or more are now available for use with either hard-tube or line-type modulators.

These compact units, designed for operation on pulse durations ranging from 0.1 to 20 microseconds—with repetition rates up to 4000 PPS.—will be found ideal for such applications as pulse voltage step-up or -down, impedance matching, phase reversing or non-reversing, isolating load from source.

RESONANT REACTORS — Oil-filled, Hermetically Sealed Precision reactors of the type required by resonant charging, line-type, radar modulator circuits. Designed to operate at full d-c load with an a-c current superimposed. Insulated to withstand test voltages of 2 times normal operating voltage. Currently available in peak-operating-voltage ratings of from 10 to 50 kv, and current ratings up to 3.0 amperes, these sturdy units have a wide range of inductance ratings from .25 to 300 henrys, which remains constant within 5% from full to 50% full-load current.

CAST GLASS BUSHINGS

In ratings up to the 15-kv power-transformer impulse level and for currents up to 800 amp, permit the successful design of hermetically sealed electric apparatus. Heat-proof, leakproof, shockproof bushings for use in vital communication and commercial application where severe operating conditions are continually encountered. Available in a wide variety of sizes and shapes in both single- and multi-conductor designs, they

offer the following advantages. 1. Attached directly to apparatus, making gaskets unnecessary and providing a hermetic seal. Designers may utilize all the advantages of present-day insulating materials without fear of reduced dielectric strength caused by the entrance of moisture. 2. Make possible design of more compact, lighter-weight apparatus at lower cost for airborne and other specialized equipment uses. 3. Thermal characteristics of the glass used have been co-ordinated with those of the metal parts which are directly sealed into the bushing to produce strain-free seals which are capable of withstanding thermal shocks far in excess of operating conditions.

INDICATING LAMPS

Type ET-5, offers high visibility, low wattage, and long life. Consists of telephone-type lamp with contacts mounted within an insulated metal tube and with a vitreous-enamel resistor for any voltage up to 660 v. For any panel thickness up to 2 in. Color cap provides excellent vision from any angle. Available in 6 colors. Write for Bulletin GEA-3643.

FILAMENT TRANSFORMERS

Oil-insulated filament transformers for special applications or for use with any of the standard high-voltage rectifier tubes. These compact units can be provided with or without tube socket mounted integral with the high-voltage terminal. Illustrated is a hermetically sealed, low-capacitance filament transformer rated 5 volts, 11 amperes, and insulated to the 18-kv level.

CASCADE-TYPE RECTIFIERS

In laboratory or factory testing and power-supply applications where smooth high d-c voltages are required, cascade connections of from one to four conventional 35-kv, 32-ma rectifiers can be furnished for single-phase operation from 115–230-v, 50- and 60-cycle power supply. Output-voltage ripple peak to peak not to exceed 0.1% per ma. Control panel furnished which provides smooth output-voltage control over complete range from zero to max. Panel also contains overload relays and meters to indicate output voltage and current and filament voltage.

BROADCAST MODULATION TRANSFORMERS

High-fidelity, low-phase-shift, Pyranol or oil modulation transformers and reactors for high-power AM broadcast transmitters are available either as integral or separate units. Highly developed transformer designs in ratings from 3.5 to 500 kw provide wider transmission frequency range and minimize harmonic voltage insertion. Low phase-shift provides more flexibility and range for amplifier feed-back circuits. Overvoltage spark gaps add to the reliability of these units.

For information on these and other high-voltage components, write Specialty Products Sales, Holyoke, Mass., giving full details of application involved.

SWITCHBOARD COMPONENTS

PANEL INSTRUMENTS: 3 1/2-inch Type: General-purpose, small panel instruments for use in radio and communications equipment where compactness (particularly minimum depth behind the panel) is essential. Internal-pivot design construction with pivots solidly mounted to the inside of the shell moving coil. Element assembly is a self-contained unit supported by a high-coercive cast magnet. A strong, compact instrument with fast response and excellent damping. Available in a variety of ratings, in round and square cases: Type DO-71 voltmeters, ammeters, milliammeters, and microammeters for measuring d-c voltage and current; Type AO-72 voltmeters, ammeters, and milliammeters for measuring a-c voltage and current.

2 1/2-inch Types: Same construction and appearance design as the 3 1/2-inch types. Type DW-71 for d-c measurements: ammeters (1 to 30 amp), milliammeters (1 to 500 ma), microammeters (50 to 500 ua), and voltmeters (1 v to 300 v). Write for Bulletin GEC-366.

DIRECT-CURRENT, TYPE DO-71			ALTERNATING CURRENT, TYPE AO-72		
Type	Rating Range	Approx. Resist. Range Ohms	Type	Rating Range	Approx. Resist. Range Ohms
Ammeter	1 to 50 amp	.001 to .05	Ammeter	1 to 100 amp	.00031 to .138
Milliammeter	1 to 500 ma	.10 to 68	Milliammeter	10 to 500 ma	.43 to 1060
Microammeter	20 to 500 ua	70 to 2030	Voltmeter	1 to 500 v	2 to 100,000
Voltmeter	1 to 500 v	1000 to 500,000			
Kilovoltmeter	1 to 5 kv	1,000,000 to 5,000,000			

OPERATING TIME METER—Type KT: Type KT time meters provide an accurate, inexpensive method of measuring the life of electron tubes, record total operating time of the machines or devices to which they are connected. They are available in three forms; for panel or switchboard mounting, portable, and for conduit mounting. They also can be furnished to match the operating characteristics of various machines, and are available to measure operating time in hours, tenths of hours, or minutes. These time meters are designed for applications on electron-tube life tests, punch presses, molding machines, etc. For use on 60-, 50-, or 25-cycle a-c circuits. Voltage rating is from 11 to 460 volts for the three available forms of this meter. Write for Bulletin GEC-472.

GENERAL PURPOSE, AUTOMATIC TIME SWITCH—Type T-27

One of the most versatile of all G-E time switches, the T-27 can control two circuits for as many as 10 ON-OFF operations per day. Can be furnished with omitting device to skip a day or more, and with astronomic dial for dusk-dawn operation. Powered by the famous Telechron* motor, the T-27 is available for 25-, 50-, or 60-cycle operation and from 115 to 460 volts. Contacts are rated 35 amperes at 230 volts. Dimensions are 10 3/4 by 5 3/8 by 4 7/8 inches. Write for Bulletin GEA-535.

*Registered trade-mark of General Electric Co.

SWITCHBOARD INSTRUMENTS
Types AB-18 (a-c) and DB-18 (a-c)
AMMETERS
VOLTMETERS

MILLIAMMETER	1-500 ma	Perm. Magnet, Moving Coil		± 1 per cent
MICROAMMETER	300-750 mu a	Perm. Magnet, Moving Coil		± 1 per cent

Long-scale, compact instruments intended for general switchboard service on large and small equipments. Excellent for control stations, test equipment, and other installation in limited space. 5 instruments can be mounted side-by-side on a 24-in. panel. Drawn-steel, dustproof covers for semiflush mounting. New convex glass cover, with scale mounted flush with case front, reduces shadows to minimum and results in greater readability. Antiparallax scale and pointer, magnetic damping, and external zero adjusters.

General Electric switchboard instruments include voltmeters, ammeters, wattmeters, frequency meters, power-factor meters, varimeters, synchrosopes, temperature meters, and ground detectors. Pertinent data and listings for the more common devices are presented in this publication, although instruments of other ratings and constructions are also available; for example, thermocouple types for the measurement of h-f current or rectifier types for high-sensitivity a-c measurements. Write for Bulletin GEC-218.

WATTMETERS: 25-125 cycle; Accuracy—±1%; Scale Length and Dimensions same as single instruments; Operating Principle—Electrodynamometer; Single-phase and Polyphase types.

VARMETERS: 3-phase, 3-wire; 2-phase, 3-wire; 2-phase, 4-wire; 3-phase, 4-wire; 5 amp; 120-208 v; 25 cycles to all commercial frequencies; Accuracy—±1%; Operating Principle—Electrodynamometer with autotransformer.

FREQUENCY METERS: 120 v; 60 cycles; Accuracy—22.5-27.5 cy—0.08 cy, 45-55 cy—0.15 cy, 55-65 cy—0.15 cy, 40-65 cy—0.25, 20-90 cy—1.00 cy, 350-450 cy—1.50 cy; Operating Principle—Resonant-circuit.

POWER-FACTOR METERS: 3-wire, 3-phase, 25-125 cycles; 4-wire, 3-phase, 25-125 cycles; 5 amp, 120-600 v; Accuracy—±.01 power factor for rated current, voltage and frequency; Operating Principle—Polarized-vane.

SYNCHROSCOPES: 25 cycles with external impeders; 50 and 60 cycles, self-contained; 120 v; 360° rotation; Operating Principle—Polarized-vane.

PORTABLE & RECORDING INSTRUMENTS

PHOTOELECTRIC RECORDER — Type CE: For special temperature measurements, developmental testing, high-speed recording, laboratory investigations, physiological research, and equipment tests. Provides direct ink records, and is ideal for any test where only a small amount of energy is available for the operation of the recorder. Sensitivities obtained as low as 1.0 mu a, full scale. Response periods as fast as $\frac{1}{5}$ second. 4 different motor arrangements provide chart speeds from $\frac{1}{2}$ inch per hour to 72 inches per minute. Write for Bulletin GEC-254.

INSULATION-RESISTANCE METER: An electronic instrument designed to measure insulation resistance over a range of 0 to 20,000 megohms. Measurements indicate poor insulating materials and materials contaminated by dirt or moisture. This instrument also makes possible the study of the effects of temperature and humidity on insulation. Consists of an electronic rectifier, a bridge circuit which contains Thyrite* resistance material, and an electronic-tube voltmeter, all in one enclosure. Meter is available in range of 5 to 20,000 megohms and has four scales. Over the range of 5 to 20,000 megohms, tests are made at a constant 500-volt d-c potential; and from 0 to 5 megohms at 0 to 250 volts. The meter is small, compact, portable — convenient for production and service testing, simple to operate. Write for Bulletin GEC-753.

CURRENT LIMITED HIGH-POTENTIAL TESTER: By limiting the output current to a maximum of 5 milliamperes, the tester effectively minimizes most of the hazards encountered with high-potential testing equipment. Features: output current limited to below the maximum current which an operator can let go; non-destructive testing; line surges virtually eliminated in output; measures crest value of voltage on sample regardless of wave shape, internal voltage drop, or variation in line voltage; faults indicated by glow lamp on panel. Range: 0-3500 volts. Output voltage: 0-3500 volts.

RMS. Output current limited to less than 5 milliamperes when shipped. Maximum load for full output voltage: .005 mfd. Write for Bulletin GEC-700.

GAUSS METERS: Indicates flux density and direction of flux in magnet gaps. Used for measuring: Flux density in gaps of instrument magnets; of blocked d-c relays and breakers; of blocked rotor-generators or motors. Field gradient across air gaps. Direction and density of leakage flux emitted from perimeter of magnets. Flux density in iron portions of magnetic circuits. Strength and direction of stray fields of many permanent and electromagnets. Magnetic properties encountered in laboratory work.

INDICATING FLUXMETER: A convenient means for accurately measuring flux densities, total flux, and microcoulombs. Determines magnetic properties of permanent magnets and d-c electromagnets. Measures flux distribution in a magnet gap, leakage flux along sections of a permanent magnet or electromagnet.

THERMOCOUPLE VACUUM GAGE Measures pressures encountered in laboratory studies and in many manufacturing and chemical processes. Range of 1 to 200 microns and from 1 to 500 microns of mercury. Valuable for checking pressures for vacuum-tube evacuation, vacuum dehydration, and vacuum-heat treatment of metals, metalizing, and vacuum processing of vitamins. The thermocouple vacuum gage is sensitive to both condensable and noncondensable gases, and does not require recalibration when tubes are interchanged. Three different mountings are offered: portable-case style, relay-rack type, and panel type.

PORTABLE INDICATING INSTRUMENTS

DP-12

A new line of instruments, having a functional design to give the greatest convenience and using precision stabilized shunts and resistors to achieve sustained accuracy. These high-accuracy instruments are suitable for laboratory use as well as for field applications and production tests where high precision is essential.

Type DP-11: Designed for general testing where a dependable, easily read instrument with $\frac{1}{2}$ of 1% accuracy is required. Ideal for trouble shooting and maintenance work where accurate readings must be taken under adverse lighting conditions. Size — $7\frac{3}{8}'' \times 7\frac{7}{8}'' \times 3\frac{1}{4}''$. Scale length — 5.5 inches. Pointer — Knife edge with mirror scale. Damping — Magnetic. Zero Adjuster — External. Shielding — excellent shielding from stray magnetic fields.

Type DP-12: Specifications are similar to DP-11 above, except accuracy is to $\frac{1}{4}$ of 1% full scale.

OSCILLOGRAPH — Type PM-18: Records 2, 3, or 4 rapidly or slowly changing currents and voltages simultaneously. Records steady-state phenomena, such as wave shape of alternating currents and voltages, and also transient phenomena of short duration when the quantity to be recorded can be initiated by the closing or opening of a synchronizing switch provided within the oscillograph.

The PM-18 is regularly furnished with a film-pack holder which produces 12 separate oscillograms, $2\frac{1}{4}''$ wide by $3\frac{1}{4}''$ long to record spot speeds up to 12,000 inches per second.

Three film holders available to meet almost every recording requirement. A Polaroid-Land film holder that uses the revolutionary Polaroid-Land film is also available. Makes finished photographic records in about one minute and eliminates need of a darkroom. For those applications which require a longer record, a continuous drive paper holder is available. Write for Bulletin GEC-580A.

CONTROL ACCESSORIES

A-c or D-c SOLENOIDS, CR9503

Simplify complex installations: in direct or remote control requiring short powerful thrusts. Wide selection: 32 different sizes of solenoids of uniform construction are available for push- or pull-type operation and for use on a-c or d-c circuits up to and including 550 volts. To push or pull in a straight line, or to provide mechanical motion at a remote or inaccessible location. They may be operated remotely from a push-button station or automatically by limit switches, pressure switches, float switches, or other pilot circuit devices. Cut-out switches are available for use on d-c circuits. Write for Bulletin GEA-5163.

SOLENOID OPERATED VALVES, CR9507: Sizes 1/4- and 3/8-inch pipe tap-sizes are standard pressure ranges to 150 lb per sq in.; maximum temperature 135 C. 3/32-in. orifice is standard; 1/8-inch orifice can be furnished. This small self-contained solenoid valve is ideally suited for automatic control of water, light oils, steam, and refrigerants.

It is simple in design, having only two moving parts and no stuffing box, thus assuring long life and low maintenance. To permit regulation of flow through the valve, a conveniently located metering pin is provided. The metering pin may be omitted if desired. This valve is supplied with cadmium-plated finish.

SOLENOID VALVE—CR9508-A100B: The CR9508-A100B solenoid valve is a small, inexpensive fluid-control device, particularly adapted to the requirements of the heating and air-conditioning industry as well as to general applications for the control of air, oil, water, and gas. Because it is designed to be incorporated into an assembly that has its own enclosure, no coil cover, conduit plate, or similar accessories have been provided.

Type of Solenoid	Pounds Pull or Push		Wt of Plunger in Lb	Max. Stroke in in.
	At 85 Per Cent Voltage	At 100 Per Cent Voltage		
Pull	0.65	0.9	0.12	3/4
Pull	0.9	1.3	0.15	1
Pull	3.2	4.5	0.31	1
Push	3.2	4.5	0.5	1
Pull	4.0	6.0	0.5	1 1/4
Push	4.0	6.0	0.8	1 1/4
Pull	10.2	14	0.9	1 1/4
Push	10.2	14	1.2	1 1/4
Pull	22.7	30	2.5	1 3/4
Push	22.7	30	3.3	1 3/4
Pull	21.7	30.2	3.3	2

Push	70	97	19	3

ELECTRONIC TIMER, CR7504A 142: For 60- and 50-cycle, 115- or 230-volt, a-c circuits. Three standard models, with selection from 0.06 to 120 seconds in ranges of 20:1. Relay may be connected to be normally energized or normally de-energized during the stand-by period; it is always de-energized during the timed period and energized after timing out. Extremely useful for timing operations of short duration or to provide automatic control for various stages of industrial processes. Repetitive accuracy: ±2% on all settings above 0.5 second.

The unit includes one standard vacuum tube and a magnetic relay with double-pole, double-throw contacts rated 10 amperes a-c at 115 volts. Time setting is adjustable by a potentiometer with dial which reads directly in seconds. Potentiometer and dial-plate assembly may be removed easily for remote mountings, if desired. Write for Bulletin GEA-5255.

SELSYNS, CR9890: Indicating or control selsyns are a reliable, accurate, and rapid means of communication. They are being used successfully in such applications as indicating the positions of valves, governors, bridges, turntables, dampers, etc. Selsyns have been very successful in servo systems where the selsyns operate to guide the action of the power units. Two types of selsyns are available—the high-accuracy type which has an accuracy of ± 1 degree and the general-purpose type which has an accuracy as close as ± 5 degrees. Selection can be made from a variety of sizes suited for each application. A complete line of indicators and transmitters including selsyns is available. Write for Bulletin GEA-2176.

HIGH-SPEED AND HIGH-

SENSITIVITY PHOTOELECTRIC RELAYS: Designed for high-speed operation, with adjustable sensitivity to meet various conditions of phototube illumination. Adjusts to close or open circuit upon suitable light change. Relay operates from an a-c power supply. A rectifier and filter circuit supply d-c voltages to the phototube and amplifier tubes, making the response time independent of the frequency of the power supply. Operates between 1 and 10 foot-candles; a light change of 1/2 ft-c will pick up or drop out the relay. The photoelectric amplifier can be adjusted to respond to a signal as short as 0.001 second where the signal may be a light flash or a light interruption, but the light intensity should be well over 1/2 ft-c and the light interruption should be complete, producing total darkness at the phototube. Write for Bulletin GEC-279.

GENERAL PURPOSE PHOTOELECTRIC RELAY

This general-purpose, photoelectric relay kit, CR7505-K100G3, including a double-pole, double-throw magnetic relay, operates from the interruption of a beam of light, making it simple for items on a production line to be counted easily and quickly. The relay also makes possible automatic weighing with a beam scale and automatic signaling for elevators or doors to save valuable time. Relay operates without a lens in front of the phototube, on a minimum of 40 foot-candles at the aperture, and will reset when light intensity is reduced to 30 foot-candles or less. Write for Bulletin GEA-3533D.

GENERAL-PURPOSE RELAYS, CR2790E: This relay is used to control pilot circuits in response to remote control switch or thermostat, or for direct control of small motors driving pumps, fans, etc. It is also used as a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits and signal systems. This sturdy, general purpose relay comes in open or enclosed forms, in general purpose case. Explosion-proof and watertight case available as kits. Open relays may be front-connected; for conversion to back connected on a metal or insulated base, or with plug-in jacks a kit is available. 3 contact arrangements available; double-pole, double-throw; double-pole, single-throw; single-pole, single-throw. Protection against hazard from restarts after power failures can be provided with the double-pole form when one pole is used as a holding interlock in the coil circuit together with a momentary-contact push-button station. Can be mounted on insulated or non-insulated bases. Enclosed forms have convenient conduit entrances at top and bottom. Write for Bulletin GEC-257.

PUSH-BUTTON STATIONS

For control circuits of magnetic controllers designed for push-button control. Standard- and heavy-duty stations available which may consist of various combinations of momentary-contact buttons, maintaining-contact buttons, selector switches, and indicating lights, for surface or flush mounting. Standard-duty station recommended for use with contactors rated up to and including 150 amp. Write for Bulletins GEA-3469 (Standard Duty) and GEA-5043 (Heavy Duty).

OILTIGHT PUSH-BUTTON UNITS A new push-button unit with building-block construction. It provides flexibility to meet requirements for special units by simple combination of the basic elements, which consist of separable operators, a removable color ring for identification, and a basic contact block. Operators and contact blocks are furnished separately. Single, double, or tandem contact blocks are quickly and easily attached to any type of operator. Write for Bulletin GEA-5779.

RELAYS

CURRENT-SENSITIVE RELAYS, CR2791C: For electronic applications where switching functions must be performed by small amounts of power, a line of current-sensitive, d-c relays is available. Withstand shock and vibration and operate in ambient temperature from -70F to 200F. Cover range from 40 mw to 50 mw; 1.6 ma to 1500 ma; 0.059 ohms to 14,000 ohms coil resistance; and weigh from 0.22 lb. Contact rating 24 v d-c or 115 a-c of 2.0 amp noninductive and 0.5 amp inductive. Installation easy with plug-in base or solder-type terminals. Write for Bulletin GEC-834.

15-AMP. CONTACTOR, CR2810-1265: For small motors; this normally open, single-pole, single-throw contactor is small, self-contained, and inexpensive. The coil is of the layer-wound type, requires only a few watts of power, and is connected directly across the line. The connections are easily made; all terminals are in the top molded part. A form is available which includes a non-insulated interlock, permitting the use of a momentary-contact push button for operating the contactor; the combination provides under-voltage protection.

ELECTRONIC RELAY, CR7511-A111G2

This relay is a simple vacuum-tube amplifier which is sensitive to changes in the resistance of an external circuit. When this resistance falls below a preset value the magnetic relay becomes energized (or deenergized, depending upon the connection) and provides a reliable contact. This relay is used extensively in conjunction with contact-making instruments which are themselves capable of carrying only very small currents. The unit is furnished in a small, weather-resistant enclosing case.

Liquid level probes, CR7511-M100G2, are available for use with this relay in indicating or controlling water level in tanks.

For further information write for Bulletin GEA-4214.

HERMETICALLY SEALED RELAY CR2791G

2, 3 and 4-pole, double throw, 6 pole normally open 28V., D-C, 3 AMPS:

The G-E hermetically sealed relay operates in its own atmosphere, completely independent of conditions outside of its rugged electro-tin plated, drawn-steel housing. During manufacture, the interior has been exhausted, vacuum baked to remove all moisture, filled with dry nitrogen to a pressure of one atmosphere and sealed. Thus, it always operates in the same clean, dry atmosphere, and at a constant pressure. Result, reliability of operation and extended device life. Operating mechanism is sealed and completely tamperproof. Used in the electrical systems and electronic equipment of military and civilian aircraft, in shipboard and portable land-based electronic equipment.

Ambient temp . . . -55°C to 125°C; Vibration . . . Withstands vibration in excess of 5 to 55 cps with max. excursion of 0.060 in.; Shock . . . Operating over -50 g; mechanical damage over 100 g; Terminals . . . Metal-glass (solder hook or plug-in pins). Designed to meet or better all provisions of MIL-R-6106 (Joint Military Service Specifications for Relays) and AN3304, and performance requirements of MIL-R-5757B. Glass reinforced Polyester compound for stack insulation lends greater dielectric strength and arc resistance plus superior impact strength—added life for the relay. Relay will withstand instantaneous voltage surges up to 1500 volts without failure.

Load Type	Normally Open Contacts	Normally Closed Contacts
Resistive (28 v d.c.)	3 amperes	3 amperes
Resistive (115 v, 400 cycle A.C.)	3 amperes	3 amperes
Inductive Motor	1.5 amperes	1.5 amperes
	1.5 amperes	1.5 amperes

THY-MO-TROL* DRIVE

Electronically Operated, Adjustable-speed Drive; Full-range, Stepless Speed Control Standard Ratings from Fractional- to 30-hp Larger Sizes Available

A complete equipment consisting of an anode transformer as required, control and rectifier panel, a control station, and a suitable d-c motor. It operates from an a-c power line. Starting, stopping, reversing, and adjustment of speed are all controlled from the single compact control station. Acceleration is automatic, and motor is protected against overload.

*Registered trade-mark of General Electric Co.

Operating Features

- 1. FULL RANGE**—A single dial—small as a radio volume control, mounted in the push-button control station—gives complete adjustment of motor speed, from low to maximum, without steps. Gives exact speed wanted.
- 2. HOLDS SPEED**—Regardless of ordinary load fluctuations, Thy-mo-trol electronic circuits hold speed constant within extremely narrow limits. Provides both full speed-range and flat speed-load characteristics.
- 3. CURRENT-LIMIT ACCELERATION**—Regardless of the speed-control setting when the START button is pushed, full-wave Thy-mo-trol acceleration is smooth because of electronic current limiting. Starting is extremely fast because of sustained maximum torque during acceleration. No sudden application of excessive torque; therefore, no shock to the machine. No current peaks on the line.

4. FULL TORQUE—Although motor may be scarcely turning over, it can deliver full torque right up to the current-limit point. This means maximum machine output.

5. OTHER THY-MO-TROL ADVANTAGES—Speed can be preset before starting; saves space; no stop for speed change; easy to control automatically; operates direct from a-c line, no d-c supply needed.

Applications

Drill presses, to increase speed range and variety of work handled. Grinders, for precise speed selection and improved finish. Milling machines, to increase work range handled, and to simplify design. Propeller testing, for accurate, smooth speed control. Cable reelers, to maintain constant tension. Conveyors, to match speeds, and many other applications.

THERE'S A G-E ELECTRONIC TUBE FOR EVERY PURPOSE

G-E Electronic Tubes are accurately designed and produced to meet the stringent requirements of electronic circuits—whether for commercial, industrial or military applications. Rigid quality control techniques applied throughout the manufacturing process assure lasting tube performance within established ratings. New applications in communications and industrial equipment constantly demand new tube types. G-E designs tubes to meet every need.

Typical G-E Industrial, Transmitting and Cathode-Ray Tubes, With Special Section on Reliable Receiving Tubes.

Full information, detailed data on these or other G-E tubes sent on request.

GENERAL ELECTRIC ELECTRONIC TUBE MANUALS...

... provide handy reference for complete data—electrical, mechanical, performance characteristics — on every G-E Tube. The easy-to-read graphs and tube outlines help solve your application problems. Order your set of manuals today! Full information, prices for manuals sent on request. Write: Tube Department, General Electric Company, Schenectady 5, New York.

● GENERAL ELECTRIC RECEIVING TUBES ●

General Electric offers a complete line of dependable receiving tubes of all types — miniature, subminiature, glass and metal — for all applications. Further information on G-E receiving tubes is available from your nearest G-E regional sales office listed below.

INSTALL HIGH-RELIABILITY TUBES, FOR BETTER PRODUCT ACCEPTANCE!*

*For example, the United States Navy has recognized the value of high-reliability tubes by authorizing a detailed list of these types to replace standard-tube counterparts. "Tele-Tech", March, 1953.

**Now available in quantity!**

General Electric high-reliability tubes, carrying the famous 5-Star name, now are available in quantity. To get all the advantages that high-reliability types offer you — greatly increased equipment dependability, lower maintenance cost, longer tube life — specify G-E 5-Star Tubes!

A pioneer in designing and developing these premium types, General Electric gives you tube quality that only experience makes possible. As the largest builder of high-reliability tubes, with outstanding manufacturing facilities, G.E. offers you the widest choice of types, plus high-rate production to meet your needs.

Acceptance of the equipment you design and build will increase, once you change over to 5-Star high-reliability tubes. Field performance will be far more dependable, enhancing your reputation. Write now for Booklet ETD-548, which contains full 5-Star Tube application information! General Electric Company, Tube Department, Schenectady 5, N. Y.

Meet your circuit needs from these 30 premium-performance tubes!

- (1) Matched at +1v so that current through higher resistance unit is within 10% of lower resistance unit.
- (2) Consists of 4 balanced diodes. With 15 ma forward current; the voltage drop of each diode is 1.3v min. and 1.7v max., all diodes are within 0.1 volt of each other, and voltage drop of a pair is 0.03 volts of each other.

- (3) Consists of 4 balanced diodes. With 15 ma forward current; the voltage drop of each diode is 1.2v min. and 1.8v max., all diodes are within 0.2v of each other, and voltage drop of a pair is 0.1v of each other.
- (4) Additional test over G11 for negative resistance of base current vs. base voltage characteristic for trigger circuit operation.

GERMANIUM DIODE HANDBOOK, complete specifications on G-E germanium diode products. Contains diode and rectifier characteristics and applications, curves on resistance, voltage, temperature, efficiency, circuit diagrams covering AM, FM and TV receivers, radar, carrier current. \$1.25 post-paid. Send check or money order to: General Electric Company, Section 763-2, Electronics Park, Syracuse, New York.

GERMANIUM DIODE INTERCHANGEABILITY CHART is free upon request.

GERMANIUM DIODE HANDBOOK

GERMANIUM DIODE INTERCHANGEABILITY CHART

OSCILLOSCOPE — Type ST-2B

Better high frequency response than any other scope in its field! Permits a choice of short, medium or long persistence CR tubes. Incorporates identical direct coupled vertical and horizontal amplifiers.

SPECIFICATIONS

Freq. Response—DC to 400 kc at 2db—Identical amplifiers
Sensitivity—AC 10 mv/in. rms—DC 28mv DC/in.
Low Capacity probe—freq. resp. 2 cycles to 400 kc of 2db
Sweep—Triggered or recurrent 2 cycles to 30 kc
Built-in Calibrator—0.1 to 300 volts peak to peak

**OSCILLOSCOPE — Type ST-2A**

Excellent for head-end position work. Unsurpassed for stability and fine trace. Delivers maximum sensitivity without sacrifice of frequency response. Use it to check hum, noise, distortion, modulation. Fits many applications where waveform study is essential.

SPECIFICATIONS

Vertical Freq. Response—20 cycles to 500 kc at 2db
Horizontal Freq. Response—10 cycles to 100 kc
Sensitivity—AC 15 mv/in. rms—DC 2 volts DC/in.
Low Capacity probe available—200mv/in. rms
Sweep—Hard tube sweep 10 cycles to 100 kc
Built-in Calibrator—0.3 to 300 volts peak to peak

**OSCILLOSCOPE — Type ST-2C**

A 5" scope for general purpose work. Particularly useful for maintenance of microwave installations and television stations. Wide frequency response without recourse to peaked amplifier coupling circuits, resulting in excellent transient response.

SPECIFICATIONS

Vertical Freq. Response—20 cycles to 3 mc
Horizontal Freq. Response—10 cycles to 100 kc
Sensitivity—75 mv/in. rms
Low Capacity probe available—Sens. 1 volt/in. rms
Sweep—Recurrent hard tube sweep 10 cycles to 100 kc
Built-in Calibrator—0.3 to 300 volts peak to peak

**GERMANIUM DIODE CHECKER — ST-12A**

For use in laboratories, quality control groups, service shops. Measures the static characteristics of diodes.

SPECIFICATIONS

Forward Ranges—Current—0.3, 1.2, 6 and 12 ma full scale. Voltage—.3 and 1.2 v full scale.
Inverse Ranges—Current—60, 120, 300 and 1200 ua full scale. Voltage—3, 12 and 120 v full scale.
Power requirements—105-125 v, 60/60 cycle, approx. 10 w.

**INDUSTRIAL TUBE ANALYZER — YTW-3**

This portable equipment is designed so that non-technical personnel can quickly and efficiently determine the performance of mercury vapor and gas rectifier tubes by measuring the arc drop voltage under load.

SPECIFICATIONS

Peak Current Range—1 amp. — 100 amp.
Filament Voltage Range—High (4-7V). Low (2-3.5V).
Arc Drop Measurement Accuracy— $\pm 2\%$.
Oper. Temp. Reading Accuracy— $\pm 5\%$ at 38°C.

Tube Complement—2 Type 502A, 1 Type VR-105,
1 Type 5Y3GT and 1NE-17

Amb. Temp.—0°—35° Centigrade. (Tubes would not reach operating temperature in ambient temperature below 15° without heat retaining cover.)

**BINARY SCALER Model 4SN1A3**

Provides scale of 2 in self-contained unit that cuts installation and maintenance to a minimum. Suitable for direct coupling—no intermediate stages necessary. Fits standard octal socket. Speeds up to 200 kc. Resolution time 5 microseconds.

**SWEEP GENERATOR — Type ST-4A**

Variable Permeability Sweep completely electronic, with no moving parts. For TV receiver maintenance, TV production and development laboratories, wide band amplifier study, transmission line impedance measurements.

SPECIFICATIONS

Freq. Range—Continuously variable, 4 to 110 mc; 170 to 220 mc
Sweep Width—Linear from 500 kc to greater than 15 mc
Output Voltage—Greater than 0.1 volts from 4 to 110 mc
Greater than 0.5 volts from 170 to 220 mc
Attenuation—Continuously variable down to 20 microvolts
Leakage—Stray field—less than 10 microvolts induced in 2 in. loop 6 in. from case in any direction
Phase Range Control—Greater than 360 degrees

**MARKER GENERATOR — ST-5A**

Functions as a crystal referenced calibrator from 10 mc. to 300 mc. When used with the General Electric sweep generator, it provides a multiple of crystal controlled markers spaced 1.5 or 4.5 mc. apart . . . and can be used to supply a marker or markers at any frequency from 10 mc. to 900 mc.

TV APPLICATION—12 crystal controlled channel frequency picture markers plus an accurate hand calibrated VFO covering the range of 20 to 50 mc. makes this unit directly applicable to TV alignment problems.

**DUAL REGULATED POWER SUPPLY**

Type ST-9A Has twin outputs and features electronic overload protection. Instruments cannot be harmed by short circuits on the regulated outputs. Built-in modulator permits observation of hum and noise tolerances by duplicating them on the equipment.

SPECIFICATIONS

#1 Regulated—Continuously variable, 0-500 v, max. current 100 ma. #2 Regulated—Same as #1
Parallel #1 and #2—Continuously variable, 0-500 v, max. current 150 ma
Unregulated—Approx. 650 volts no load, max. current 200 ma
—75 Volts—VR tube regulation, 0.2 ma —150 Volts—VR tube regulation, 0.4 ma
Filament Supply—6.3 volts a-c at 10 amps Regulation—Better than $\frac{1}{2}\% \pm \frac{1}{2}\%$ volt
Ripple and Noise—Less than 10 mv p to p on all regulated outputs

**POWER SUPPLY — Type YPD-2**

A high-quality, electronically regulated unit designed for use in laboratories, broadcast stations, and wherever a closely regulated variable DC voltage source at medium current consumption is required.

SPECIFICATIONS

DC Voltage Output—250-450 v, (positive or negative may be grounded to chassis)
DC current Output—0-300 milliamperes
AC Output—6.3 volts 10 amperes unregulated
Regulation—Less than 1% from minimum to maximum current
Ripple—Less than 5 mv peak to peak
Output Impedance—Approximately 2 ohms at 30 cycles, decreases with increasing frequency

FREQUENCY AND MODULATION METER — Type ST-13A

Quality FM Communications meter. Gives hairline accuracy plus provision with oven accessories for future split-channel adjustments. Measures both carrier frequency displacement and modulation. Accessories include External antenna mount and cable.

SPECIFICATIONS

Freq. Ranges—One or two specified frequencies in the following ranges: 25 mc to 50 mc, 72 mc to 76 mc, 148 mc to 174 mc
Reference Oscillator Accuracy—.001% from 32°F to 122°F.
External connection, internal wiring and a socket provided for 6 V oven operation where wider temperature range with greater accuracy is required.
Inputs—18 in. collapsible whip antenna and fifty-ohm BNC connector.
Outputs—Low and high RF outputs for receiver alignment.
Power—Internal batteries.

**NEW COMPLETE CATALOG**

Complete specifications, descriptions, charts, and photographs of G-E electronic test equipment. Write today for your copy: General Electric Co., Section 763-1, Electronics Park, Syracuse, New York.

MAGNET WIRE

Sample of Formex wire (top) compared with enamel wire (bottom) after heat shock test at 150 C

Formex*: Formex magnet wire, because of the physical properties of its insulating film, maintains its dielectric strength throughout normal service longer than oleo-resinous enameled wires. Its abrasion resistance, flexibility, resistance to heat shock and film adhesion are superior features of Formex and enable it to retain its electrical properties under severe usage and service. Formex wire is outstanding in its resistance to moisture absorption and is highly resistant to commonly used solvents. These and many other special features make Formex magnet wire ideally suited for electronic applications.

FEATURES OF FORMEX MAGNET WIRE:

TAKES LESS SPACE: Because of its construction, the winding-space factor of Formex wire is considerably higher than for other types, thereby making appreciable savings by getting the same amount of energy out of a smaller machine.

EASY TO WIND: Its thin film makes Formex wire easy to bend and its smoothness permits the turns of the coil to fall readily into place.

MORE FEET PER POUND: Because there are more feet of wire in a pound of Formex wire than in a fibrous-insulated type, important savings are effected.

FACILITATES MANUFACTURE: With its tough and abrasion-resistant covering, Formex will stand up under the severe treatment of high-speed winding and assembly operations. Thus, it is possible to accelerate production, reduce factory rejects, and realize over-all lower manufacturing costs.

PROPERTIES OF FORMEX MAGNET WIRE

DIELECTRIC STRENGTH: Formex, because of the physical properties of the insulating film, maintains its dielectric strength during winding, assembly, varnish treatment, and life of the apparatus in which the wire is used.

POWER FACTOR: The power loss in a radio-frequency coil depends in part on the dielectric power loss in the insulation. Reliable tests show the improvement which Formex wire represents over conventional enameled wire in this respect.

TOUGHNESS: Film toughness is the property which enables magnet wire to maintain its electrical properties under the severe treatments incidental to its application to electric machines and operation in service. Formex rates high in the following related properties: Abrasion Resistance, Flexibility, Resistance to Heat Shock, and Adhesion of Film.

HEAT AND SHELF AGING: Comparative heat-aging tests produce less effect on Formex than on other types of magnet wire. Formex wires have been subjected to shelf aging for more than four years with no measurable effect on the film.

TEMPERATURE RATING: The film on Formex wire is organic and, as such, falls under AIEE Standards for Class A insulating materials which have a temperature rating of 105 C.

MOISTURE RESISTANCE: In moisture absorption, there is little difference between the performance of Formex wire and that of conventional enameled wire. In continuity, however, the physical make-up and properties of Formex wire assure continuity after the apparatus is wound and ready for service.

SOLVENT RESISTANCE: Formex wire is resistant to deleterious action from practically all commonly used solvents.

Varnish Treatments: Because Formex wire is highly resistant to the action of varnish solvents and heat shock. Formex wire wound assemblies may be subjected successfully to varnish solvents, to baking temperatures, and to baking cycles which must be avoided or used only with extreme caution on assemblies that are wound with conventional types of enameled wire.

Deltabeston*: Deltabeston magnet wire insulated with glass or asbestos is unsurpassed in performance where extreme heat, grease, oil, corrosive vapors, and other severe operating conditions exist. This feature makes Deltabeston extremely valuable in certain communications equipment and gear and in industrial electronic equipment. It has great flexibility, exceptional dielectric strength, heat resistance, abrasion and shock resistance.

FORMEX WIRE TYPES AVAILABLE ROUND FORMEX WIRE

Range of sizes includes all those covered by the NEMA General Standards for Vinyl-acetal-insulated Magnet Wire, comprising 4 Awg (0.204 in.) to .001".

RECTANGULAR AND SQUARE FORMEX WIRE

Rectangular and square Formex also available in a complete range of sizes.

COLORED FORMEX WIRE

To permit a positive, quick identification of circuits, Formex is available with color in the Formex enamel. One solid color (not a tracer) is always provided. Standard colors are green and yellow.

DELTABESTON TYPES AVAILABLE

Asbestos Insulated..... Class B-125C max
Glass Insulated..... Class B-125C max

Both types available for Class H applications by use of silicone adhesives and impregnating compounds.

Magnet Wire Film-insulated with Teflon†

For application involving continuous high temperatures up to 200 C, intermittent high temperatures up to 250 C.

TYPES AVAILABLE

Magnet Wire Single Film-insulated with Teflon

Sizes 20 through 44 Awg. Film thickness is equal to single Formex of equivalent size.

Magnet Wire Heavy Film-insulated with Teflon

Sizes 20 through 40Awg. Film thickness is equal to heavy Formex of equivalent size.

*Registered Trade-mark of General Electric Company
†DuPont trade-mark for tetrafluorethylene resin

Telechron Synchronous Timing Motors

For automatic devices, instruments, control equipment—wherever time is a factor in product performance—Telechron Synchronous Timing Motors are your best assurance of dependability.

Telechron motors are CONTINUOUSLY ACCURATE . . . because they're true synchronous motors with one rotation for every cycle of the alternating current source. Lightweight rotors enable virtually INSTANT SELF-STARTING . . . reach full speed in approximately 3 cycles. All gears and bearings are PERMANENTLY LUBRICATED . . . by a generous

oil reservoir sealed into the dust-free rotor unit.

With Telechron motors, you get the benefit of dependable Application Engineering Service. Engineering specialists in timing problems study your requirements . . . torque, temperature limits, running period, etc. . . . recommend the motor best suited, and at lowest cost.

Write for complete catalog and application data sheet. Telechron Department, General Electric Company, 602 Homer Ave., Ashland, Massachusetts.

IM-9***	1 rev. in any of following periods: Minutes—5, 15, 30, 60 Hours—1, 2, 3, 4, 6, 8, 12, 24 Days—1, 2, 3, 7, 14, 30					3-1/2 x 3-1/2 x 2-11/16	18	2

* Standard direction of rotation facing terminal shaft end—clockwise, except for IM-9 which is counter-clockwise. Reversible rotation available in some models.

** Intermittent maximum peak torque .375 dependent on duty cycle.

*** Type IM-9 provides a totally enclosed circular gear train. Adaptable to most instrumentation and especially for chart drives. Has special backlash eliminators.

INSTRUMENTS— Fig. A is damping magnet once used in GE indicator. B is Carboly magnet now used . . . permitting smaller design, cutting costs, improving calibrations.

CONTROLS— Fan control uses Carboly magnet because (1) It occupies small space and gives higher energy per unit per space. (2) Offers higher stability. (3) Cost is low.

MAGNETOS—To save weight, Scintilla magneto features new rotor made with Carboly permanent magnet (B) to replace old rotor (A). Rotor weight is cut 100 percent.

MINIATURE MOTORS— One tiny Carboly magnet replaces electromagnet and components . . .

makes possible the small design of this battery-operated motor. Magnet gives years of dependable service.

IMPROVE YOUR ELECTRICAL PRODUCTS WITH CARBOLOY PERMANENT MAGNETS

Interested in improving your product? . . . having it weigh less and cost less to build?

Then throw away that electromagnet. *Replace it now with a high-energy Carboly permanent magnet!*

Hundreds of manufacturers in the field of electronic and electrical devices have done just this. More are doing it every day. The illustrated applications on this page show you some typical results.

For more evidence . . . and for expert engineering advice and design assistance, contact the Carboly organization *now*. Skilled Carboly magnet men are at your service. Carboly production lines can supply you with high-quality magnets to meet your most exacting specifications. All sizes, all shapes available; cast or sintered.

Send today for free Carboly Magnet Design Manual PM-101 and for Standard Stock Catalog PM-100.

OUTSTANDING ADVANTAGES OF CARBOLOY PERMANENT MAGNETS

- 1 Cool—generate no heat
- 2 Require no electrical energy
- 3 Cost nothing to operate
- 4 Eliminate coils, windings, wiring, etc.
- 5 Need no maintenance—no coils to burn out, no slip rings to clean or replace, etc.
- 6 Simplify mechanical assemblies—exert strong tractive force for holding, lifting and separating devices that eliminates component parts, makes product design and fabrication simple.
- 7 Save space—great magnetic strength in small sizes
- 8 Powerful—and power is constant
- 9 Combine electrical and mechanical features—transform electrical energy into mechanical motion; mechanical motion into electrical energy
- 10 No power failures ever
- 11 Resist moisture—no coils to collect dampness
- 12 Give uninterrupted operation
- 13 Create savings—often eliminate costly, power-supplying parts
- 14 Simple—no operating parts
- 15 Reduce weight, product size
- 16 Supply a permanent source of energy

HEARING AIDS—New all-transistor, all-magnetic "Radioear" uses Carboly magnets in both receiver and microphone. Magnets eliminate failure once caused by high operating temperatures.

BIG 5

... electronic components
that make a big difference
in electronic design,
manufacture and performance

1 VARIABLE RESISTORS most complete line to cut down size, weight and cost

Model 1 Radiohm®—world's smallest resistor with the longest list of uses

Widely used as standard for hearing aids plus many other commercial and military miniature applications. Its $\frac{5}{8}$ " diameter makes it no larger than a dime. Shielded from dust, lint, etc. Rated at $\frac{1}{10}$ watt. Available in a re-

sistance range of 500 ohms to 10 megohms, with 7 standard tapers. Plain or switch types. New Hi-Torque model has rotational torque of 3.0 ounce-inches. Knob or slotted shaft types.

Ask for Bulletin 42-158.

Model 2 Radiohm®, plain or switch types

Precision controls that are only $\frac{15}{16}$ " in diameter. Rated at $\frac{1}{2}$ watt. Velvet smooth, low noise level operation. Shafts of various types and lengths to your specifications. Ratings from 500 to 15 megohms. Standard or special

tapers. Resistance tolerances to meet your requirements. Plain or switch types, 1-5-8 amps. Phenolic base resists humidity. Many switch combinations provide wide variation at minimum cost. Ask for Bulletin 42-85.

Model 2 Radiohm®, dual and twin types

Size — $\frac{15}{16}$ " diameter. Rated $\frac{1}{2}$ watt. Two- or three-ganged. Single or concentric shafts, of various types and lengths to meet your specifications. Tap or plain tapers. Ratings from 500 to 15 megohms. Resistance tolerances

to meet your requirements. Plain or switch types, 1-5-8 amps. Many switch combinations provide wide variations for design and application. Meet JAN R94 characteristic U requirements.

Ask for Bulletin 42-85.

Quick delivery EXPRESS Radiohms® for immediate production needs

A real time saver! Ideal for the manufacturer needing variable resistors on short notice. Delivery in a few days. Control elements are stocked items. When order is received, desired shafts are staked directly to control elements. Shafts fit standard RTMA

split-knurl and many spring-type push-on knobs. Rated $\frac{1}{2}$ watt. Available in two values $\frac{1}{2}$ and 1 megohm, audio taper (C2) with SPST a-c line switch. Values meet 75% of requirements for switch-type variable resistors.

Ask for Bulletin 42-163.

CENTRALAB'S BIG 5 MAKE A BIG DIFFERENCE IN

2

SWITCHES — a lot more switch in a lot smaller package

MINIATURE SWITCHES — for low-current, high-frequency applications

Series 20

Bolted-Construction type (20a)
Unusually small rotary switches. Only $1\frac{5}{16}$ " dia. Give you quality and flexibility not heretofore available in miniatures. Available in multiple sections with phenolic or steatite insulation. Can be supplied in 2 to 12 positions. 30° positive indexing. Steatite is grade L-5. Meets JAN I-8 specs.

Staked-construction type (20b)

Available in up to two sections with phenolic insulation. Same positions and size as bolted switch. Both types can be supplied with a-c line switch, added as a rear section. Phenolic is grade LTS-E5 or JAN P-13. For complete details—ask for Bulletin 42-156.

Series 30

Last word in conserving panel and chassis space! Dual combinations of $1\frac{5}{16}$ " diameter switches and $1\frac{5}{16}$ " diameter variable resistors. Furnished in three types. Same switching combinations as Series 20.

Series 30a — Rotary switch mounted in front, control mounted in rear.

Series 30b — Control mounted in front, rotary switch mounted in rear.

Series 30c — Two rotary switches independently operated by concentric shafts.

For complete details ask for Bulletin 42-157.

Material specifications on clips, contacts, shafts, etc. and other hardware same as standard switches below.

Standard phenolic

STANDARD SWITCHES

for a wide variety of electronic applications

Available in standard or special switching combinations in single or multiple sections. Cadmium nickel plated parts as well as silver plated brass clips and contacts are standard. Silver alloy clips and contacts available on special order. Salt-spray specifications can be substituted on special order. Switches have double-wiping contacts. 30° - 60° indexing. Various index and clip types for your specific application. Phenolic is grade LTS-E5. Ceramic has extra-heavy current carrying ability. JAN-approved grade L-5 Steatite insulation is non-hygroscopic.

Standard Ceramic

Tone Switches

Widely used in radio-phonograph and allied sound equipment. Available with 3-4-6-8-9 or 10 clips, in SPST, SPDT, DPST and DPDT Models. Shorting and non-shorting contacts. Positive index. Can be supplied with a-c line switch. Specifications same as standard phenolic switches.

Spring Return Switches

PA and intercom switch types. Coil spring design means smoother action, more positive indexing — longer life. Available with one or two spring return positions. 30° index. Index spring is tested for a minimum life of 150,000 cycles.

Ask for Bulletin 995.

Lever Switches

For smoother action, positive indexing on speech input equipment, etc. Spring tested for minimum 150,000 switching cycles. 8 basic indexing combinations. Available in positive, spring return or combination. Shorting and non-shorting types, 2 to 4 poles, 2 and 3 positions. Mounting plates available.

Ask for Bulletin 42-141.

Slide Switches

For improved performance. Flat horizontal design saves space, reduces lead inductance. Wide silver-plated brass contacts. Length variable from 5 to 20 clips per side. Double-wipe clips assure constant pressure. Positive coil spring index — with 2, 3 or 4 positions.

Ask for Bulletin 953.

3 CAPACITORS — closer tolerances, more values to choose from

BC Tubular

Ideal for use in r.f. by-pass, audio coupling applications and general circuit use. Available from 1 mmf to 10,000 mmf. Centralab's own Ceramic-X body withstands temperatures to 2200° F... makes capacitor impervious to moisture and low power factor. Insulated or non-insulated. Ask for Bulletin 42-3R.

BC Discs

Ultra-compact — designed and pioneered by Centralab specifically to solve high-capacity, low-inductance, and small space requirements. Available in single-non-shielded dual and shielded dual types. Tolerances to your requirements. Ask for Bulletin 42-4R.

TC Tubular

Temperature compensating tubulars. Complete range of T.C. characteristics. Comply to preferred values as set up by RTMA. Meet JAN-C-20A specifications. Special values can be furnished, upon order. Temperature coefficient, voltages, capacity and tolerance in accordance with latest RTMA color codes. Ask for Bulletin 42-18.

TC Discs

Extremely thin — only .156" max. Available in sizes 1/4", 3/8", 9/16" and 5/8" diameter. TC Tolerances — ± 30 PPM/°C or ± 15% whichever is greater and in accordance with JAN and RTMA test procedure for values less than 10 mmf. Insulation resistance 10,000 meg-ohms or greater.

HI-VO Kaps®

Safest high-voltage capacitor available. Centralab's TV Hi-Vo Kaps are the standard for the TV industry, including UHF. 10 KV, 20 KV and 30 KV d-c. Will withstand continuous overload up to twice rated working voltage. Small diameter 1" to 1.4" maximum. Ask for Bulletin 42-10R.

Stand-Off and Button-Style

Type S1 Tubular Stand-Off (50 to 2500 mmf) by-passes r.f. to ground in many HF, UHF and VHF circuits. Type S2 (5000 to 10,000 mmf). One end threaded for panel mounting. Ask for Bulletin 42-121R. Button style "Zippers" (T) — a long-life replacement for old-style mica "Buttons." Available in 5 different types. Used for by-passing in low-power, high-frequency applications. Ask for Bulletin 42-122R.

Transmitting and High Voltage, High Accuracy

Ideal for standard or mobile gear requiring close-held oscillator frequencies. Extremely low power factor and stable retrace characteristics. Eleven terminal styles. Capacitance: 3 to 1000 mmf, 5 KV to 40 KV d-c. Ask for Bulletin 42-102R.

Feed-Thru (FT) and Miniature Feed-Thru (MFT)

Designed for single-hole mounting with ground to chassis or shield. Type FT (500 to 2300 mmf) has .050" straight or hooked terminals for easy soldering. Bushing mounted. Type MFT (50 to 1000 mmf) eyelet-mounted. Smallest available in the widest capacitance range. Both types rated 500 v d-c.

Ceramic and Steatite Trimmers

Several types designed for greater stability to shock or vibration. Smaller, lighter, easier to mount in any position. Readily adjustable with screwdriver to full capacity range in 180° rotation. Rated 500 v d-c w. Available in dual or gauged units. Built to JAN-C-81. Examples:

Type 821 Miniature Ceramic Trimmer	Type 823 Ceramic Trimmer	Type 822 Ceramic Trimmer	Type 829 Tubular Ceramic Trimmer
Capacity ranges: 2.5 to 50 mmf maximum.	Medium-heavy steatite base. Eight capacity ranges: 5 to 125 mmf. max.	Medium weight steatite base. Five capacity ranges: 1.5 to 50 mmf maximum.	For TV and VHF. Body only .215" dia. Five capacity ranges: .5 to 10 mmf max. Bulletin 42-59.

Ask for Bulletin 42-101.

(T) Trade Mark.

4

PRINTED ELECTRONIC CIRCUITS — pioneered by Centralab

... more than 25,000,000 in use

Small Plate Components

Smallest standard PEC's made by Centralab — excellent for miniature use. Immediately available. Minimum dimensions $1\frac{1}{32}$ " x $\frac{7}{32}$ " x $\frac{7}{64}$ ". Capacitors 150 v d-c w. Resistors $\frac{1}{8}$ watt. Single capacitors; dual capacitors; single resistors; dual resistors — in combinations; resistor-capacitor in series; resistor-capacitors in parallel. "Filpec," balanced diode load filter — has two capacitors and one resistor. ... offers a new approach to radio and TV manufacturing. Ask for Bulletin 42-132.

Pentode Couplates®

Require only 6 soldered connections. Completely new interstage coupling circuits of 3 capacitors and 3 resistors and a small 6-lead ceramic base. Compared with predecessors they actually reduce soldered connections 50%. Only $1\frac{1}{32}$ " x $\frac{13}{16}$ " x $\frac{11}{64}$ ". Three standard values available. Ask for Bulletin 42-128R.

Triode Couplates®

Require only 4 soldered connections. Replace 5 components normally used in audio circuits. Are complete midget assemblies of 3 capacitors and 2 resistors bonded to a dielectric ceramic plate. Resistors — $\frac{1}{8}$ watt; Capacitors — 400 v d-c w. Ask for Bulletin 42-127.

PENDET *

Another Centralab "first" in Printed Electronic Circuits. Consists of 5 capacitors and 4 resistors in a single plate with only 9 leads. Similar to the popular Audet. Couples the diodetriode and pentode tubes in output stage of a-c, d-c sets. Available in two standard values. Ask for Bulletin 42-149. *Trade Mark

AUDET®

Extremely popular for miniature use. Furnish all values of all components generally found in output stage of a-c, d-c radio receivers. Provide 4 capacitors and 3 resistors — with only 7 leads. Resistors $\frac{1}{8}$ watt; capacitors, 400 v d-c w. Ask for Bulletin 42-129.

Vertical Integrators

Over 7,000,000 in use by major TV manufacturers. Assure big savings in assembly of TV vertical integrator networks. One type consists of 4 resistors and 4 capacitors brought out to 3 leads . . . reduces former 16 soldered connections to 3. Ask for Bulletin 42-126.

Ampec®

Latest outgrowth of Centralab's constant research in PEC development. Excellent for sub-miniature high gain audio use. 3-stage speech amplifier smaller than cover of ordinary book matches. Size: $1\frac{1}{32}$ " x $\frac{15}{16}$ " x $1\frac{1}{32}$ ". Capacitors, 100 v d-c w. Resistors, $\frac{1}{8}$ watt. For data on Model 2 and Model 3 — ask for Bulletins 42-117R — 42-130R.

5

FINE CUSTOM CERAMICS — engineered to give you exact electrical and physical properties

Centralab modern engineered ceramics are a *new* answer to old design problems. They simplify a great number of industrial and electronic applications. A great variety of forms can be extruded, molded or pressed . . . drilled, ground and tapped . . . even metalized. All operations can be done to measured tolerances and very economically. You can choose from many exact formulas — comprising three basic types of materials — Steatite, Centradite, Zirconite. Steatite meets JAN-I-8 and JAN-I-10 requirements for Grade L-5 without exception.

* * *

You can put your confidence in Centralab electronic components. Each is the result of more than 20 years' experience, research development, production and close cooperation between Centralab and leading manufacturers in the field. For complete information — including taper curves, physical dimensions, engineering specifications, write direct, stating bulletins of interest. Or, if you prefer, contact your nearest Centralab representative. He will be glad to help you without obligation.

KEPCO VOLTAGE REGULATED POWER SUPPLIES

KEPCO MANUFACTURES THE MOST COMPLETE LINE OF DC VOLTAGE REGULATED POWER SUPPLIES. THESE UNITS ARE AVAILABLE AS STANDARD MODELS. WORKMANSHIP IS OF A QUALITY WITH THE HIGHEST EXISTING PRODUCTION STANDARDS AND BEST INSTRUMENT ELECTRONIC PRACTICES CONSISTENT WITH THE INTENDED USE OF THE ITEM AS A CONTINUOUS DUTY VOLTAGE REGULATED POWER SUPPLY.

Kepco Voltage Regulated Power Supplies are conservatively rated. The regulation specified for each unit is available under all line and load conditions within the range of the instrument.

Write for complete specifications.

MODEL 131

B SUPPLY: 100-325 volts, 150 ma.
REGULATION: 1/2% for both line, 105-125 volts, and load variations, 0-150 ma.
RIPPLE: 10 millivolts.
C SUPPLY: 0-150 volts, 5 ma.
REGULATION: 10 millivolts for line, 105-125 volts. 1/2% for load at 150 volts.
RIPPLE: 5 millivolts.
FILAMENT SUPPLY: 6.3 volts AC, 10 amp., CT.

MODEL 141

OUTPUT DC: 100-400 volts, 150 ma.
REGULATION: 1/2% for both line, 105-125 volts, and load variations, 0-150 ma.
RIPPLE: 10 millivolts.
OUTPUT AC: 6.3 volts, 10 amp., CT.

MODEL 150

OUTPUT DC: 0-150 volts, 50 ma.
REGULATION: 1/2% for both line, 105-125 volts, and load variations, 0-50 ma.
RIPPLE: 5 millivolts.

MODEL 245

OUTPUT DC: 200-500 volts, 200 ma.
REGULATION: 1/2% for both line, 105-125 volts, and load variations, 0-200 ma.
RIPPLE: 10 millivolts.
OUTPUT AC: 6.3 volts, 6 amp., CT.
 Available with rack mounting.

KEPCO VOLTAGE REGULATED POWER SUPPLIES

MODEL 315

B SUPPLY: 0-300 volts, 150 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-150 ma.

RIPPLE: 5 millivolts.

C SUPPLY: 0-150 volts, 5 ma.

REGULATION: 10 millivolts for line, 105-125 volts. ½% for load at 150 volts.

RIPPLE: 5 millivolts.

FILAMENT SUPPLY: 6.3 volts AC, 5 amp., CT.

Available with rack mounting.

MODEL 700

OUTPUT DC: 0-350 volts, 750 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-750 ma.

RIPPLE: 10 millivolts.

This unit is available delivering:

1.50 amp.—Model 710

2.25 amp.—Model 720

3.00 amp.—Model 730

MODEL 400

B SUPPLY: 0-400 volts, 150 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-150 ma.

RIPPLE: 10 millivolts.

C SUPPLY: 0-150 volts, 5 ma.

REGULATION: 10 millivolts for line, 105-125 volts. ½% for load at 150 volts.

RIPPLE: 5 millivolts.

FILAMENT SUPPLY: 6.3 volts AC, 10 amp., CT.

MODEL 750

OUTPUT DC: 0-600 volts, 750 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-750 ma.

RIPPLE: 10 millivolts.

This unit is available delivering:

1.50 amp.—Model 760

2.25 amp.—Model 770

3.00 amp.—Model 780

MODEL 500-R

OUTPUT DC: 0-600 volts, 300 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-300 ma.

RIPPLE: 10 millivolts.

OUTPUT AC: 6.3 volts, 10 amp., CT.

MODEL 615

Model 615 is Model 500-R with a C Supply.

C SUPPLY: 0-150 volts, 5 ma.

REGULATION: 10 millivolts for line, 105-125 volts. ½% for load at 150 volts.

RIPPLE: 5 millivolts.

MODEL 800

Model 800 features TWO INDEPENDENT REGULATED POWER SUPPLIES.

OUTPUT DC FOR EACH SUPPLY: 0-600 volts, 200 ma. In parallel 400 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations.

RIPPLE: 10 millivolts.

OUTPUT AC FOR EACH SUPPLY: 6.3 volts, 10 amp., CT.

MODEL 510

Model 510 features TWO COMPLETELY INDEPENDENT REGULATED POWER SUPPLIES.

OUTPUT DC FOR EACH SUPPLY: 200-500 volts, 200 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-200 ma.

RIPPLE: 5 millivolts.

OUTPUT AC FOR EACH SUPPLY: 6.3 volts, 6 amp., CT.

The supplies may be connected for series, parallel, or bucking operation.

MODEL 815

B SUPPLY: 0-600 volts, 200 ma.

REGULATION: ½% for both line, 105-125 volts, and load variations, 0-200 ma.

RIPPLE: 5 millivolts.

C SUPPLY: 0-150 volts, 5 ma.

REGULATION: 10 millivolts for line, 105-125 volts. ½% for load at 150 volts.

RIPPLE: 5 millivolts.

FILAMENT SUPPLY: 6.3 volts AC, 10 amp., CT.

MODEL 1020

OUTPUT DC:
0-1000 volts, 50 ma.

REGULATION:
0.1% for both line, 105-125 volts, load variations, 0-50 ma. (range 100-1000 volts). 1/2% for both line, 105-125 volts, and load variations, 0-50 ma. (range 30-100 volts).

RIPPLE: 10 millivolts.
OUTPUT AC: 6.3 volts, 10 amp., CT.

MODEL 2000

OUTPUT DC:
100-400 volts, 150 ma.

REGULATION:
0.01% for both line, 105-125 volts, and load variations, 0-150 ma.

RIPPLE: 1 millivolt.

OUTPUT AC: 6.3 volts, 10 amp., CT.
The Super Regulator is available for many voltage and current ranges.

MODEL 1220

OUTPUT DC:
0-1200 volts, 20 ma.

REGULATION:
0.1% for both line, 105-125 volts, and load variations, 0-20 ma. (range 100-1200 volts). 1/2% for both line, 105-125 volts, and load variations, 0-20 ma. (range 30-100 volts).

RIPPLE: 10 millivolts.
OUTPUT AC: 6.3 volts, 10 amp., CT.

MODEL 3030

OUTPUT DC:
3-30 volts, 30 amp.

REGULATION:
1/2% for both line, 105-125 volts, and load variations, 0-30 amp.

RIPPLE:
Less than 0.1%

MODEL 1250

OUTPUT DC:
200-1000 volts, 500 ma.

REGULATION:
1/2% for line, 105-125 volts.
1/2% for load variations, 0-500 ma.

RIPPLE: 20 millivolts.

MODEL 3100

OUTPUT DC:
0.3-3 volts, 100 ma.

REGULATION:
5 millivolts for both line, 105-125 volts, and load variations, 0-100 ma.

RIPPLE:
1 millivolt.

MODEL 1350

OUTPUT DC:
0-1000 volts, 500 ma.
Regulation and ripple same as 1250.

MODEL 3200

OUTPUT DC:
1-13 volts, 10 amperes.

REGULATION:
1/2% for both line, 105-125 volts, and load variations, 0-10 amperes.

RIPPLE:
10 millivolts.

MODEL 1520

OUTPUT DC:
0-1500 volts, 200 ma.

REGULATION:
1/2% for both line, 105-125 volts, and load variations, 0-200 ma.

RIPPLE:
20 millivolts.

FOR NEW POWER SUPPLY CATALOG — WRITE DEPT. BG

BUSS Fuses

FUSETRON dual-element Fuses and Fuse Holders

for Protection of Radios, Instruments and Electronic Equipment

FAST ACTING FUSES for PROTECTION OF INSTRUMENTS, Etc.

Formerly called 8AG
Dimension $\frac{1}{4} \times 1$ inch, Glass tube.

Provide high speed action necessary to protect instruments. Test specification—carry 100%, open at 200% in 5 seconds.

AGX are listed as approved by Underwriters' Laboratories.

Voltage	Symbol	Amperes
or 250 less	MJB	$\frac{1}{500}$, $\frac{1}{200}$, $\frac{1}{100}$, or $\frac{1}{32}$
"	MJW	$\frac{1}{16}$ or $\frac{1}{8}$
"	AGX	$\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$ or $\frac{1}{2}$
125 or less	AGX	$\frac{3}{4}$, 1, $1\frac{1}{2}$ or 2

The MJW fuses are special low resistance fuses.

BUSS FUSES — SFE STANDARD

Fuses of different amperages are of different lengths — to make it impossible to insert too large a size — thereby preventing over-fusing.

Glass tube — diameter $\frac{1}{4}$ inch. Length as per table below.

Voltage	Symbol & Amperes	Length Inches	Pounds per 100
32 or less	SFE 4	$\frac{5}{8}$.70
"	SFE 6	$\frac{3}{4}$.71
"	SFE 9	$\frac{7}{8}$.72
"	SFE 14	$1\frac{1}{16}$.77
"	SFE 20	$1\frac{1}{4}$.83
"	SFE 30	$1\frac{1}{2}$	1.05

BUSS GLASS TUBE FUSES, $\frac{1}{4} \times 1\frac{1}{4}$ inch

AGC and MTH 4, 5 and 6

MTH 8

Voltage	Symbol	Amperes
250 or less	AGC	$\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 2 or 3
"	MTH	4, 5, 6 or 8
32 or less	AGC	5, 6, $7\frac{1}{2}$, 10, 15, 25 or 30

20 ampere size is an SFE 20 fuse.

BUSS CERAMIC TUBE FUSES, $\frac{1}{4} \times 1\frac{1}{4}$ inch

Voltage Symbol Amperes
250 or less ABC 10, 12, 15 or 20

FUSETRON FUSES, $\frac{1}{4} \times 1\frac{1}{4}$ inch

Glass tube — Dual-Element type

A FUSE WITH A LONG TIME-LAG

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% in 1 hour.

Approximate blowing time:	at 200% load	MDL 25 sec.	MDX 12 sec.
at 300%	"	8 "	3 "
at 500%	"	3 "	$\frac{1}{2}$ "

125 and 250 volt sizes listed as approved by Underwriters' Laboratories.

Shipping weight 0.9 lbs. per 100.

Voltage	Symbol	Amperes
250 or less	MDL	$\frac{1}{100}$, $\frac{1}{32}$, $\frac{1}{16}$, $\frac{1}{10}$, $1\frac{1}{100}$, $\frac{3}{10}$, $\frac{1}{10}$, $\frac{1}{2}$, $\frac{6}{10}$, $\frac{8}{10}$ or 1
125 or less	MDL	$1\frac{1}{4}$, $1\frac{1}{10}$, 2, $2\frac{1}{2}$, or $2\frac{3}{10}$
"	MDX	$3\frac{1}{10}$, 4, 5 or $6\frac{1}{4}$
32 or less	MDL	$3\frac{1}{10}$, 4, 5, $6\frac{1}{4}$, 8, 10, 15, 20, 25 or 30

PIG-TAIL FUSES

Pig tail fuses are available in both ordinary and FUSETRON dual-element fuse types.

Write for full information.

BUSS FUSE CLIPS & CLIP ASSEMBLIES for $\frac{1}{4}$ inch Fuses

(SFE 4, 6, 9, 14, 20 AGX, AGC, ABC, MDL, MJB, MJW, MTH fuses).

Spring bronze clips are made of Herculoy. This metal gives great gripping strength and retains spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means cooler operation of clips and fuse.

4548 Spring bronze clip, nickel plated.

4592 Beryllium copper clip, Silver plated.

Assemblies consist of clip, terminal screw, brass terminal, and mounting screw.

4431 uses No. 4548 clip — described above.

4432 uses No. 4592 clip — described above.

BUSS FUSE BLOCKS

Blocks are made of bakelite with mounting holes. Clips are of spring bronze.

Fuse blocks are made in many sizes and types.

Tell us your requirements.

BUSS PANEL MOUNTED HOLDERS for $\frac{1}{4}$ inch Fuses

Holders are inserted through hole in panel and locked in place by nut on holder. Can be used on panels up to $\frac{5}{16}$ inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Normal current carrying capacity: 15 amperes.

HJM for $\frac{1}{4} \times 1$ inch fuses (AGX, MJB, MJW, SFE 14)

HKP for $\frac{1}{4} \times 1\frac{1}{4}$ " " (ABC, AGC, SFE 20, MDL, MTH)

IN-THE-LINE HOLDERS for $\frac{1}{4}$ inch fuses

These holders are for mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — a pressure spring that is used under contact in base of holder.

Holders can also be mounted in panel up to $\frac{5}{16}$ inch thick by means of a No. 9969 Spring nut (not furnished). Flat spot on holder permits it to be locked against rotation.

Normal current carrying capacity: 15 amperes.

Shipping weight, holders: 4 lbs. per 100.

Symbol
HDI for $\frac{1}{4} \times 1$ inch fuses (AGX, MJB, MJW, SFE 14)
Takes No. 18 or smaller wires.

HDJ-A for $\frac{1}{4} \times 1\frac{1}{4}$ inch fuses (ABC, AGC, MDL, MTH, SFE 20)
Takes No. 18 or smaller wires.

HDJ-B for $\frac{1}{4} \times 1\frac{1}{4}$ inch fuses (as above)
Takes No. 14 or 16 wires.

No. 9969 Spring nut for panel mounting above holders.

Holder-and-Fuse Assemblies

Assembly consists of holder, fuse and 19 inch loop of No. 14 wire already staked and soldered to terminals.

Offer simplest way to install protection. Wire can be cut to give leads of desired length. A spring nut, furnished with holder, can be used to mount holder on panel up to $\frac{3}{32}$ inch thick.

HRJ Complete with SFE 20 fuse

HRI Complete with SFE 14 fuse

HRH Complete with SFE 9 fuse

Division McGraw Electric Company

Oscillators, voltmeters, generators, analyzers, amplifiers—frequency counting, measuring and monitoring instruments, microwave coaxial or waveguide equipment—whatever your measuring needs, there's a precision-built *-hp-* instrument for the job. The *-hp-* line, world's most complete, includes over 200 tested and proved equipments for all types of measurement. Each gives you engineering economies of fast, accurate measurement, broad applicability, dependability, trouble-free service. Each has the traditional *-hp-* "family characteristics" of simple operation, minimum adjustment, independence of line voltage or tube changes, generous overload protection and highest quality design and construction. On these pages you'll find brief details of major *-hp-* instruments. For complete information, see your *-hp-* representative, or write factory direct.

HEWLETT-PACKARD COMPANY
2758 PAGE MILL ROAD • PALO ALTO, CALIFORNIA, U.S.A.

Complete Coverage in Electronic Test Instrumentation

Oscillators—Signal Generators .01 to 10,000,000 cps

-hp- 200 SERIES AUDIO OSCILLATORS

Now four basic *-hp-* oscillators have been redesigned into two compact, lightweight instruments offering wider frequency range, more operating simplicity, highest accuracy and stability. New Models 200AB and 200CD replace Models 200A through 200D, retain the time-tested RC circuits that insure constant output, low distortion; require no zero set. In addition to these general test instruments, *-hp-* continues to offer Model 202D for sub-audio, audio, supersonic and carrier tests; and Model 200I, a spread-scale oscillator for interpolation or where frequency must be known precisely.

-hp- 650A TEST OSCILLATOR

Highly stable, wide band (10 cps to 10 mc) multi-purpose test oscillator for audio, supersonic, video, and rf measurements. Output variable 30 μ v to 3 v. Frequency response flat ± 1 db. Output impedance 600 ohms, or 6 ohms with voltage divider. \$475.00.

Instrument	Primary Uses	Frequency Range	Output	Price
<i>-hp-</i> 200AB	Audio tests	20 cps to 40 kc	1 watt/24.5 v	\$120.00
<i>-hp-</i> 200CD	Audio, ultrasonic tests	5 cps to 600 kc	160 mw/20 v *	150.00
<i>-hp-</i> 200H	Carrier current, telephone tests	50 cps to 600 kc	10 mw/1 v	350.00
<i>-hp-</i> 200I	Interpolation and frequency measurements	6 cps to 6 kc	100 mw/10 v	225.00
<i>-hp-</i> 201B	High quality audio tests	20 cps to 20 kc	3 w/42.5 v	250.00
<i>-hp-</i> 202A	Low frequency measurements	.01 cps to 1 kc	20 mw/10 v	450.00
<i>-hp-</i> 202B	Low frequency measurements	1/2 cps to 50 kc	100 mw/10 v	350.00
<i>-hp-</i> 202D	Low frequency measurements	2 cps to 70 kc	100 mw/10 v	275.00
<i>-hp-</i> 204A	Portable, battery operated	2 cps to 20 kc	2.5 mw/5 v	175.00
<i>-hp-</i> 205A	High power audio tests	20 cps to 20 kc	5 watts	390.00
<i>-hp-</i> 205AG	High power tests, gain measurements	20 cps to 20 kc	5 watts	425.00
<i>-hp-</i> 205AH	High power supersonic tests	1 kc to 100 kc	5 watts	550.00
<i>-hp-</i> 206A	High quality, high accuracy audio tests	20 cps to 20 kc	+15 dbm	550.00
<i>-hp-</i> 230A	Carrier test oscillator	35 cps to 35 kc	+14 dbm/600 ohms	275.00
<i>-hp-</i> 233A	Carrier test oscillator	50 cps to 500 kc	3w/600 ohms	475.00
<i>-hp-</i> 234A	Carrier test oscillator	160 cps to 160 kc	+14 dbm/600 ohms	300.00
<i>-hp-</i> 650A	Wide range video tests	10 cps to 10 mc	15 mw/3 v	475.00

*Open circuit. Internal impedance 600 ohms.

Precision-built -hp- instruments for every

-hp- Vacuum Tube Voltmeters - 2 to 700,000,000 cps

-hp- 410B VACUUM TUBE VOLTMETER

Wide range, flat response ± 1 db, 20 cps to 700 mc. Convenient, simple to use, occupies minimum bench space. Handy compartment for probe and leads. Diode probe places approximately $1.5 \mu\mu\text{fd}$ capacity across circuit under test. This, plus high shunt impedance (10 megohms at low frequencies) means circuits under test are not disturbed, and true voltage readings are assured. Also measures dc voltage to 1,000 volts and resistances to 500 megohms. \$245.00.

Instrument	Primary Uses	Frequency Range	Voltage Range	Input Impedance	Price
-hp- 400A	General purpose ac measurements	10 cps to 1 mc	.005 to 300 v 9 ranges	1 megohm 24 $\mu\mu\text{fd}$ shunt	\$185.00
-hp- 400B	Low frequency ac measurements	2 cps to 100 kc	.005 to 300 v 9 ranges	10 megohms 24 $\mu\mu\text{fd}$ shunt	195.00
-hp- 400C	Wide range ac measurements. High sensitivity	20 cps to 2 mc	.0001 to 300 v 12 ranges	10 megohms 15 $\mu\mu\text{fd}$ shunt	200.00
-hp- 404A	Portable, battery operated	2 cps to 50 kc	.0005 to 300 v 11 ranges	10 megohms 20 $\mu\mu\text{fd}$ shunt	185.00
-hp- 410B	Audio, rf, VHF measurements; dc voltages; resistances	20 cps to 700 mc	.1 to 300 v 7 ranges	10 megohms 1.5 $\mu\mu\text{fd}$ shunt	245.00

-hp- Voltmeter Accessories (not listed) include voltage dividers, connectors, shunts and multipliers to extend the useful range of your equipment.

-hp- Signal Generators - 10 to 10,800 mc

-hp- 612A SIGNAL GENERATOR

450 to 1,200 mc. Master oscillator-power amplifier generator for UHF-TV measurements including gain, selectivity, sensitivity, image rejection. Directly set and read; no charts, no interpolation. Low incidental fm, high-quality broad band video modulation to 5 mc. May be modulated internally or externally, amplitude modulated or pulse modulated. (Good rf pulses 0.2 μsec or longer.) \$1,200.00.

Instrument	Frequency Range	Characteristics	Price
-hp- 608A	10 to 500 mc	Output 0.1 μv to 1 v into 50 ohm load. Pulse or CW modulation. Direct calibration.	\$ 850.00
-hp- 610B	450 to 1,200 mc	Output 0.1 μv to 0.1 v into 50 ohm load. Pulse, CW or Square wave modulation. Direct calibration.	925.00
-hp- 612A	450 to 1,200 mc	Output 0.1 μv to 0.5 v into 50 ohm load. Pulse, CW or amplitude modulation to 5 mc. Direct calibration.	1,200.00
-hp- 614A	800 to 2,100 mc	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calibration.	1,950.00
-hp- 616A	1,800 to 4,000 mc	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calibration.	1,950.00
-hp- 618B	3,800 to 7,600 mc	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW, FM or Square wave modulation. Direct calibration.	2,250.00
-hp- 620A	7,000 to 10,800 mc	Output 0.1 μv to 0.071 v into 50 ohm load. Pulse, CW, FM or Square wave modulation. Direct calibration.	2,250.00
-hp- 623B	5,925 to 7,725 mc	Output 70 μv to 0.223 v into 50 ohm load. FM or Square wave modulation. Separate power meter and wave meter section.	1,750.00
-hp- 624B	8,500 to 10,000 mc	Output 3.0 μv to 0.223 v into 50 ohm load. Pulse, FM or Square wave modulation. Separate power meter and wave meter section.	2,250.00

-hp- Distortion, Wave Form Analyzers - 20 cps to 20 kc

-hp- 330B DISTORTION ANALYZER

Measures distortion as low as 0.1% at any frequency, 20 cps to 20 kc. Measures noise voltages as low as 100 μv . High sensitivity, high stability, broad applicability for broadcast, laboratory or production problems. Wide band 20 db gain input amplifier. Built-in vacuum tube voltmeter usable separately. \$395.00.

FM, AM-FM MODELS

-hp- 330C, for FM broadcasters, includes VU meter meeting F.C.C. requirements. -hp- 330D, for AM-FM broadcasters, includes AM detector to rectify AM carrier, plus VU meter employed in model 330C. Model 330C, \$425.00. Model 330D, \$440.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 300A	Wave form analyzer	30 cps to 16 kc	Variable selectivity; measuring range 1 mv to 500 v	\$625.00
-hp- 320A	Measures total distortion	400 cps and 5 kc	Requires external detector	75.00
-hp- 320B	Measures total distortion	50, 100, 400 cps, 1, 5 and 7.5 kc	Same as above	150.00
-hp- 330B	Measures total audio distortion	20 cps to 20 kc	Includes input amplifier, VTVM	395.00
-hp- 330C	For FM broadcast measurements	20 cps to 20 kc	Special VU meter to meet F.C.C. requirements	425.00
-hp- 330D	For AM-FM broadcast measurements	20 cps to 20 kc	AM detector and VU meter to meet F.C.C. requirements	440.00

SQUARE WAVE GENERATOR

-hp- 210A	Transient and frequency response	20 cps to 10 kc	Output 50 v peak-to-peak 1,000 ohm impedance	150.00
-----------	----------------------------------	-----------------	---	--------

Data subject to change without notice. Prices f.o.b. factory.

Instruments for Complete Coverage

Microwave test instruments for coaxial & waveguide systems

-hp- 430B MICROWAVE POWER METER

No computations! Provides instantaneous, automatic power readings *direct* in db or mw at all frequencies for which there are suitable bolometer mounts. For CW measurements, uses either

1/100 amp. fuse or Sperry 821 barretter. Also measures CW or pulsed power with negative coefficient thermistor. Operates with -hp- 475B or 476A Bolometer Mounts; also 485B Detector Mounts. \$250.00.

-hp- 803A VHF BRIDGE

Gives fast, direct readings of any impedance between 50 and 500 mc. Measures by sampling electric and magnetic fields in transmission line. Usable for comparative measurements 5 to

700 mc. Impedance range 2 to 2,000 ohms. Phase angle -90° to $+90^\circ$, at 52 mc and above. Also measures SWR, % reflected power, VHF system flatness. \$495.00.

-hp- 805A/B COAXIAL SLOTTED SECTION

Range 500 to 4,000 mc. High accuracy, high stability, negligible slope, minimum leakage. Exclusive parallel plane design, VSWR of basic section and connectors, 1.04. -hp- 805A, 50 ohms, Type N coax-connector. -hp- 805B, 46.3 ohms, for $\frac{7}{8}$ " rigid transmission lines. \$475.00.

-hp- 806B Coaxial Slotted Section, 3,000 to 12,000 mc. For use with -hp- 809B carriage. Section and connector VSWR 1.04 to 8,000 mc. 50 ohm impedance, negligible slope. Type N connectors, \$200.00.

-hp- 417A VHF Detector for use with 803A Bridge; or general laboratory use. Super-regenerative receiver, 10 to 500 mc. 5 bands. Approx. $5 \mu\text{v}$ sensitivity over entire band. Direct reading frequency control, thoroughly shielded. \$200.00.

-hp- 415A Standing Wave Indicator for all waveguide or coaxial slotted sections. Gives direct readings in VSWR or db. Single frequency operation; 300 to 2,000 cps. Low noise level, $0.3 \mu\text{v}$ sensitivity, 60 db calib. attenuator. \$200.00.

475B

476A

-hp- 476A Universal Bolometer Mount measures rf power 10 to 1,000 mc. No tuning or adjustment. VSWR less than 1.15, 20 to 500 mc; 1.25, 10 to 1,000 mc. \$125.00. -hp- 475B Tunable Mount, continuous 1,000 to 4,000 mc. \$200.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 360A-D Low Pass Filters	Eliminates harmonic voltages from UHF systems	Cutoff frequencies A-700 mc. B-1,200 mc. C-2,200 mc. D-4,100 mc.	50 db rejection at 1.2 cutoff freq.	\$ 50.00
-hp- 415A Standing Wave Indicator	VSWR indicator or null indicator	300 to 2,000 cps. Normal freq. 1,000 cps	0 to 60 db attn. Max. sensitivity $0.3 \mu\text{v}$	200.00
-hp- 417A VHF Detector	VHF bridge detector (for -hp- 803A)	10 to 500 mc	Approx. $5 \mu\text{v}$ sensitivity	200.00
-hp- 430B Microwave Power Meter	Measurement of rf power	Depends on Bolometer mount	.01 to 10 mw $\pm 5\%$ accuracy	250.00
-hp- 475B Tunable Bolometer Mount	Measurement of rf power (with 430B)	1,000 to 4,000 mc	Matches 50-ohm line to 100 or 200 ohms	200.00
-hp- 476A Universal Bolometer Mount	Measurement of rf power (with 430B)	10 to 1,000 mc	No tuning required VSWR less than 1.25	125.00
-hp- 803A VHF Bridge	Measurement of VHF impedance, VSWR	50 to 500 mc	2 to 2,000 ohms impedance -90° to $+90^\circ$ phase angle	495.00
-hp- 805A Coaxial Slotted Section	Measurement of VSWR	500 to 4,000 mc	For Type N Connectors, flexible cables	475.00
-hp- 805B Coaxial Slotted Section	Same as above	Same as above	For rigid $\frac{7}{8}$ " RG44/U line	475.00
-hp- 806B Coaxial Slotted Section	Same as above (Mounts in 809B)	3,000 to 12,000 mc	For Type N Connectors, flexible cables	200.00
-hp- 809B Universal Probe Carriage	Supports 806B section, also G, J, H, X and P 810 Waveguide sections		Accepts 442B and 444A probes	160.00

-hp- 809B UNIVERSAL PROBE CARRIAGE -hp- 810 WAVEGUIDE SLOTTED SECTIONS

Convenient, all-purpose -hp- 809B carriage operates with six different -hp- slotted sections, waveguide and coaxial. Mounts sections covering frequencies 3,000 to 18,000 mc—sections interchange in 30 seconds! Precision-built carriage calibrated in mm to 0.1 mm; dial gauge may be mounted. Operates with -hp- 442B Broad Band Probe and -hp- 440A Coaxial Detector in combination; or with -hp- 444A Untuned Probe. (See preceding page for probe details.) -hp- 809B, \$160.00.

-hp- 810A/B Slotted Sections. -hp- 810B, for mounting in 809B carriage, is a flanged waveguide section with accurately machined slot tapered at ends to minimize reflection. Available in 5 waveguide bands, 3.95 thru 18.0 kmc. -hp- 810A, complete slotted section assembly including probe carriage. Available for 2.6 to 3.95 kmc band only. (See table on preceding page for data, prices.)

Data subject to change without notice. Prices f.o.b. factory.

ELECTRONIC TEST INSTRUMENTS

-hp- POWER SUPPLIES

-hp- 715A (illustrated) is a versatile source of regulated beam and reflector voltage for operating most test bench klystron tubes. Beam voltage 250 to 400 v; reflector voltage 0 to 900 v; 6.3 v filament. Internal, 1,000 cps square wave modulation, also 60 cps fm modulation, both on reflector voltage. \$300.00.

-hp- 710A—Highly stable regulated dc supply, output variable 180 to 360 v at 75 ma, 6.3 v filament. Either terminal may be grounded. Total hum and noise less than 5 mv. \$85.00.

-hp- 712A. Stabilized, variable power supply providing 0 to 500 v at 200 ma and 1/2% regulation. Also variable bias voltages, 0 to 150 v at 5 ma, and 6.3 v filament at 10 amps. Main supply completely metered. Either terminal may be grounded. Hum less than 8 mv. For laboratory, production or general use. \$250.00.

-hp- 624A X-BAND TEST SET

High level, direct reading, portable test set simplifies lab or field work at frequencies 8,500 to 10,000 mc. Rf output .223 v max. High stability attenuator reduces level by 100 db. May be pulsed or fm modulated. Separate section

measures external rf power or external frequency. Ideal one-piece unit for measuring sensitivity and selectivity, tuning and power level of radar, gunfire and beacon systems. \$2,250.00.

-hp- 623B SHF Test Set, like 624A but operates over frequencies determined by klystron installed. Three klystrons available (each with 600 mc band width) for frequencies between 5,925 and 7,725 mc. Fm modulated. Includes 1,000 cps square wave modulator. \$1,650.00 (with one Klystron).

-hp- AMPLIFIERS

Complete instrumentation for distortion-free fast pulse measurement. **-hp- 460A Wide Band Amplifiers**, in cascade with **-hp- 460B Fast-Pulse Amplifiers**

offer up to 90 db gain, 125 v open circuit output. This permits full deflection of 5XP CRT, or 2-inch deflection of 5CP tubes. Rise time 0.0026 μ sec; can amplify milli-microsecond pulses; gives over 100 mc bandwidth to your standard oscilloscope. 460A, \$185.00; 460B, \$225.00. Connecting cables, plugs, accessories—prices on request.

-hp- 450A Amplifier—general purpose instrument, 20 db or 40 db gain, for use wherever wide frequency range and high stability are needed. 10 cps to 1 mc. Negligible phase shift, no spurious responses. \$140.00.

-hp- 451A Bridging Amplifier. For connecting to high impedance circuits without disturbing circuits or affecting operating conditions. 83 megohms impedance probe readily connects to any point in circuit. Amplifier repeats this voltage accurately without distortion, for operation of VTVM, distortion analyzer, oscilloscope, etc. Frequency 20 cps to 1 mc. \$100.00.

-hp- 212A PULSE GENERATOR

Provides continuously variable, high power "fast pulses" of superior wave form. Combines broad general usefulness with 0.02 μ sec rise and decay time to meet requirements of radar, TV and nuclear work. Pulse length variable 0.07 to 10 μ sec. minimum overshoot; 50 watt peak

power (50 v to 50 ohms load). Low impedance means accurate pulses can be delivered at a distance from the instrument. Repetition rate variable 50 to 5,000 pps; controlled internally or externally. Synchronizing pulses available in advance of, or following, output pulse. \$550.00.

Data subject to change without notice. Prices f.o.b. factory.

offers COMPLETE COVERAGE in convenient "next door" service!

SHALLCROSS

AKRA-OHM PRECISION RESISTORS

Not only are Shallcross Akra-Ohm precision wire-wound resistors made to extremely close tolerances; equally important, they are physically protected to maintain their accuracy under difficult operating conditions. Types, shapes, sizes,

and mounting styles for JAN, MIL, and other exacting needs. Guaranteed tolerances to 0.01% and stabilities as low as 0.003% where required. Matched pairs and sets available. Write for Shallcross Resistor Bulletin R-3C.

MULTI-POSITION SELECTOR SWITCHES

Shallcross regularly manufactures a wide variety of single or multi-deck selector switches having up to 180 positions and designed for dependable performance up to 250 volts 10 amperes, or 2500 volts 1 ampere A.C. Contact resistance ranges

from as low as 0.0005 ohm to a maximum of 0.005 ohm depending upon the size and material of the contacts. Outline your requirements on Specification Sheet No. 6 for recommendation. Write for Data Bulletin L-13.

PRECISION AUDIO ATTENUATORS

Improved materials and production techniques and careful quality control for Shallcross Attenuators have resulted in a line that sets higher standards of attenuation performance for practically every audio and communications use. Included are single and dual potentiometers, variable im-

pedance matching networks, V. U. meter multipliers, cueing attenuators, fixed pads, pre-emphasis and de-emphasis networks, attenuation boxes, ladder and balanced ladder controls, bridged T, straight T, bridged H, and straight H attenuators. Write for Attenuator Bulletin 4-A.

PRECISE MEASURING INSTRUMENTS

As long-time specialists in standard and special electrical measuring instruments, Shallcross welcomes your inquiry for any desired types. Standard instruments include:

Resistance standards • Decade Potentiometers • Decade Resistance Boxes • Wheatstone Bridges • Combined Kelvin-Wheatstone Bridges • Wheatstone-Megohm Bridges • Wheatstone-Limit Bridges • Percent-Limit Bridges • Capacitor Analyzers • Decibel Meters • Tone Generators • Telephone Test Equipment • Low-Resistance Test Sets • High-Voltage Test and Measuring Equipment.

Write for Shallcross Bulletin DC

TUBULAR MULTIPLIER RESISTORS

Shallcross Types MFA and MFB are special resistance elements hermetically sealed in ceramic tubes with ferrule terminals. Designed to JAN-R-29 specifications, they are available with ratings from 1 to 6 watts and for potentials from 1 to 6 KV.

HIGH-RANGE KILOVOLT METER MULTIPLIERS

Whether for direct high-voltage measurements or for use as standards, Shallcross KV meter multipliers combine close accuracy with safety and dependability. Various types are available for voltages up to 200,000 volts or higher if required. Write for Bulletin L-7.

HERMETICALLY-SEALED NETWORKS

Resistance, capacitance, bridge and inductance types available to meet critical electrical specifications and space requirements. Outline details of your requirements for recommendation by Shallcross Engineers.

CUSTOM-BUILT SPECIALTIES AND ENGINEERING SERVICE

Sealed networks, high voltage measuring equipment, special test sets, thermally controlled networks, precise decades and networks for computer devices, high resistance standards, and critical coil assemblies are designed by Shallcross Engineers and built to meet your requirements. Forward your specifications for further information.

SHALLCROSS MANUFACTURING CO., 10 Jackson Ave., Collingdale, Pa.

Representatives in principal U. S. Cities; Toronto and Vancouver, Canada.

COMPLETE CIVILIAN LINE

Exceptionally good delivery cycle on civilian orders due to tremendous mass production facilities.

TYPE C45-70

NEW HIGH QUALITY MINIATURIZED "DIME-SIZE" CIVILIAN CONTROL—Performance Fully Equals Larger Types.

TYPE 70, 3/4" diameter variable composition resistor. Wattage rating: .3 watt for resistances through 10,000 ohms, .2 watt with 350 volts maximum across end terminals for resistances over 10,000 ohms. Also available in concentric shaft tandem construction C45-70 as shown above.

TYPE C2-45

TYPE C2-35

TYPE C2-252

TYPE C2-25

TYPE GC-45, 15/16" diameter variable composition resistor. Wattage rating: 1/2 watt for resistances through 10,000 ohms, 1/3 watt for resistances over 10,000 ohms through 100,000 ohms, 1/4 watt with 500 volts maximum across end terminals for resistances over 100,000 ohms. Available with or without illustrated attached switch and in concentric shaft tandem construction C2-45 as shown above.

TYPE GC-35, 1 1/8" diameter variable composition resistor. Wattage rating: 3/4 watt for resistances through 10,000 ohms, 2/3 watt for resistances over 10,000 ohms through 25,000 ohms, 1/2 watt with 500 volts maximum across end terminals for resistances over 25,000 ohms. Available with or without illustrated attached switch and in concentric shaft tandem construction C2-35 as shown above.

TYPE GC-252, 2 watt, 1 17/64" diameter variable wirewound resistor. Available with or without illustrated attached switch and in concentric shaft tandem construction C2-252 as shown above.

TYPE GC-25, 4 watt, 1 17/32" diameter variable wirewound resistor. Available with or without illustrated attached switch and in concentric shaft tandem construction C2-25 as shown above.

Typical concentric shaft tandem with panel and rear sections operating separately from concentric shafts (TYPE C45-70 ILLUSTRATED). Similar construction available for all military resistors.

COMPLETE MILITARY LINE

Immediate delivery from stock on 189
types including JAN-R-94 and JAN-R-19
types of variable resistors.

NEW 38-PAGE ILLUSTRATED CATALOG—

Describes Electrical and Mechanical characteristics, Special Features and Constructions of a complete line of variable resistors for military and civilian use. Includes dimensional drawings of each resistor. Write today for your copy.

TYPE 45, (JAN-R-94, Type RV2)
1/4 watt, 15/16" diameter variable composition resistor. Also available with other special military features not covered by JAN-R-94 including concentric shaft tandem construction. Attached switch can be supplied.

TYPE 35, (JAN-R-94, Type RV3)
1/2 watt, 1 1/8" diameter variable composition resistor. Also available with other special military features not covered by JAN-R-94 including concentric shaft tandem construction. Attached switch can be supplied.

TYPE 252, (JAN-R-19, Type RA20)
2 watt, 1 17/64" diameter variable wirewound resistor. Also available with other special military features not covered by JAN-R-19 including concentric shaft tandem construction. Attached switch can be supplied.

TYPE 25, (JAN-R-19, Type RA30)
(May also be used as Type RA25)
4 watt, 1 17/32" diameter variable wirewound resistor. Also available with other special military features not covered by JAN-R-19 including concentric shaft tandem construction. Attached switch can be supplied.

TYPE 65, (Miniaturized)
1/2 watt 70°C, 3/4" diameter miniaturized variable composition resistor.

TYPE 90
1 watt 70°C, 15/16" diameter variable composition resistor. Attached switch can be supplied. Also available in concentric shaft tandem construction.

TYPE 95, (JAN-R-94, Type RV4)
2 watt 70°C, 1 1/8" diameter variable composition resistor. Also available with other special military features not covered by JAN-R-94 including concentric shaft tandem construction. Attached switch can be supplied.

UNPRECEDENTED PERFORMANCE CHARACTERISTICS

Specially designed for military communications equipment subject to extreme temperature and humidity ranges. -55°C to +150°C...aridity to saturation.

Precision Mass Production of Variable Resistors

ELKHART - INDIANA

Why it pays to make Rome your source of special electronic cables

10 conductor shielded, Neoprene-jacketed electronic cable

Special 8 conductor, shielded, mobile transmitter cable

2 conductor, polyethylene-insulated, shielded,
Neoprene-jacketed microphone cable

8 conductor, Rome Synthinol®-jacketed, TV camera cable

Special Rome Synthinol 901®
hook-up wire—8 mil wall with nylon sheath

Special 136 conductor, Rome Synthinol-insulated, electronic cable

When you have an electronic wiring problem it pays to go to a specialist, such as Rome Cable. Wires and cables made by Rome, first, are designed by engineers with training and experience in electronic applications. Further, Rome Cable has the manufacturing knowledge and facilities to produce unusual constructions . . . with quality controlled step by step. By standardizing on Rome wires and cables you assure dependable performance for your product and add obvious quality . . . with a component engineered to your requirement.

Rome manufactures a wide range of hook-up wires, intercommunication cables, coaxial cables, electronic computer cables, R. F. transmission line, television camera cables as well as other special constructions.

COMMERCIAL TYPE HOOK-UP WIRES

Rome offers commercial type hook-up wires with three standard insulations.

Rome Hi-temp—a rubber insulation with exceptionally high resistance to heat and moisture. Underwriters' approved for 75° C.

Rome Synthinol—a polyvinyl chloride thermoplastic compound, highly resistant to acids, oils, alkalis, moisture and flame. Underwriters' approved for 80° C.

Rome Synthinol 901—offers all the advantages of Synthinol plus higher resistance to heat deformation, shrinkage and cracking, also improved solderability. Underwriters' approved for 105° C.

MILITARY HOOK-UP WIRES

Rome manufactures military type SRIR, SRHV and WL, complying with Joint Army-Navy Specification JAN-C-76, as well as shipboard types SRI and SRIB conforming to Specification MIL-C-915 A (SHIPS). Insulated with Rome Synthinol, these wires are made in a complete range of specification sizes.

Westinghouse

EQUIPMENT FOR THE ELECTRONICS INDUSTRY

Surge Comparison Testers • FG Audio Amplifiers
High Voltage Rectifiers • Portable Balancers
Portable Vibrograph • Micarta • Transformer Cores
Transformers • Transistors • Magnetic Amplifiers
Instruments • Selenium Rectifiers • Capacitors
Magnetic Metals and Alloys • Pushbuttons • Relays
Indicating Lamps • Switches • Electronic Tubes

SURGE COMPARISON TESTERS

MOBILE

PORTABLE

This Westinghouse surge comparison tester simultaneously tests turn-to-turn, phase-to-phase and coil-to-ground insulation; one equipment for most testing needs. With every test set-up, high frequency and high potential qualitative tests of resistance, impedance, and turn balance are made—results are obtained by a single scope observation. High turn-to-turn voltages are applied without excessive winding-to-ground stress.

Non-destructive testing is assured on even fractional h-p motors; however, destructive fault location is possible in many cases. Surge Potential: 10 kv Peak; Negative to Ground.

Power Input: 115-125 volts, 60 cycle.

7 amperes in Portable Model

16 amperes in Mobile Model

Request Descriptive Bulletin 85-960 for complete information.

FG AUDIO AMPLIFIER

The Type FG 5/10 KW audio amplifier consists of a push-pull power amplifier stage driven by a high fidelity driver amplifier. The power stage contains either two or four triodes (WL-5736) depending upon whether 5- or 10-kilowatts output is desired. Supply for the final stage uses selenium rectifiers. Power supply may be 3 phase, 50 or 60 cycle, 220, 230, 240 or 440, 460, 480 volts. Output 5 or 10 KW into a resistive load over a frequency range of 30-10,000 cps. See D.B. 85-950 for full information.

OPERATIONAL CHARACTERISTICS
Response: Uniform ± 1.5 db, 30-10,000 cps with resistance load.

Distortion: RMS harmonic distortion 5% or less, 50-10,000 cps.

Hum and Noise Level: 45 db or more below full output.

Audio Input Level: 10 milliwatts maximum

Input Impedance: 150 or 600 ohms.

Output Voltages as specified: Arranged for 6 voltages in arithmetical progression.

For example: 120-240-360-480-600-720 volts.

YOU CAN BE SURE... IF IT'S

Westinghouse

P.O. BOX 868, PITTSBURGH 30, PA.

EQUIPMENT FOR ELECTRONICS

PORTABLE BALANCERS

TYPE HQ
PORTABLE BALANCER

Static and dynamic unbalance are usually present in rotating parts after fabrication. Undesirable vibration and noise inherent in mass produced rotors can be eliminated by balancing dynamically with production type balancing machine tools. However, where conditions are such that balancing a rotor in its own bearings is necessary, a portable balancer is indicated.

In the Type HQ portable balancer, relatively simple, accurate and reliable means are provided, by a wattmeter and sine-wave alternator, for determining the amount of unbalance, and the angular location and magnitude of the correction weights.

The balancer consists of an indicating

wattmeter, with necessary interconnection, switching and control devices, assembled in a carrying case; one or more velocity type pickups; and either a sine-wave alternator for hand held models or a keyed type sine-wave generator for mounted models. The alternator or generator, and pickup assemblies are supplied in a separate carrying case. Seismic mountings for pickups are also available. The apparatus may be used normally in a speed range of 600 to 6000 r.p.m. The range may be extended downwardly to 200 r.p.m. by means of an auxiliary low speed seismic mounting. For applications above 600 r.p.m., high speed seismic mountings are available. Request Descriptive Bulletin 85-920 for complete details.

PORTABLE VIBROGRAPH

TYPE LE
PORTABLE VIBROGRAPH

The S#867928-A Type LE Portable Vibrograph is an instrument for making a permanent film record of vibrations in machinery or other rotating bodies. It produces a permanent record of both frequency and amplitude of vibration, on an acetate film. Arranged to be either hand held or for seismic operation. A 40X microscope with a calibrated field is provided for reading the vibration trace on the film. Trace may be projected in enlarged form on screen with Fox Film Micro-Projector. (Not supplied). Low frequency vibration recording of large structures is possible in combination with Barry Seismic Pendulum

obtainable from The Barry Corp., 700 Pleasant St., Watertown, Mass.

Frequency Range: 600- 15,000 RPM (10 to 250 cps)

Amplitude Range: .0001- .050 in. at low frequencies; .0001- .0025 in. at high frequencies

Sensitivity: Amplitudes as low as .0001 in. can be read

Timer Frequency: Approximately 1800 cycles per minute.

Request Descriptive Bulletin 85-911 for complete information.

MICARTA[®]

LAMINATED SHEETS AND SHAPES

MOLDED PIECES

MICARTA 444

MICARTA SHEETS AND SHAPES

Twenty grades of sheets, most of which are available in black or tan. Fillers include paper, cotton, asbestos and glass. The most commonly used by communication engineers is Micarta tan (254) and black (464), both of which are paper base plastic. Either color supplied in 36" x 36" sheets, 1/32" to 2" thick.

MOLDED MICARTA

For large production quantities of simple or complicated shapes. Material placed in the mold may be in one of four forms: (a) wood flour and plastic, (b) impregnated cloth or paper in laminated form, (c) impregnated cloth or paper chopped

MICARTA "444"

This form of Micarta offers a practical and economical means of obtaining molded forms or shapes with low-cost equipment and dies. Examples of the shapes are shown at left. A tan or green product, processed in flat sheets of vari-

Micarta 259 is made of melamine resin in a base of glass cloth. It is white, fire-resistant and very strong. Standard Micarta shapes include angles, channels, zees, rods and tubes. All are produced in six or more grades, in various dimensions.

into small pieces, or (d) a combination thereof. Grades using sheets and chopped pieces make the strongest parts; those containing wood flour are useful for intricate shapes.

ous thicknesses, from cotton cloth impregnated with a phenolic resin binder. Micarta "444" is a practical material for post forming many parts ordinarily made of drawn sheet steel.

For complete details on Micarta, request Booklet B-3184-B.

Hiperthin Cores

HIPERTHIN CORES—Toroidal cores of ultra-thin high permeability magnetic material wound over ceramic spools for computer static storage elements and high frequency pulse applications.

These cores are available in various types of materials such as HIPER-

SIL® (3% silicon iron), HIPER-NIK® (50% iron-nickel), ORTHO-NIK (50% iron-nickel, rectangular hysteresis loop) and 4-79 Permalloy, all in thicknesses of 1 mil, $\frac{1}{2}$ mil, $\frac{1}{4}$ mil and $\frac{1}{8}$ mil. Standard spool sizes are shown and number of turns of magnetic material can be varied to suit application.

EQUIPMENT FOR ELECTRONICS

Fosterite treated transformers utilize Type C Hipersil® cores in a one loop design to achieve a standard design transformer that will fit most applications with minor adaptations. The Fosterite coating applied to these units gives the best protection available for uncased transformers against humidity, immersion and temperature extremes. In addition to standard communications and radar applications, these transformers are being used extensively in other air-borne equipment.

power, low voltage pulse circuits. The four general types are: (1) Blocking Oscillator or regenerative drive, (2) Pulse Trigger or current transformer, (3) Low Power Pulse output transformer, and (4) Coupling Transformers.

Charging Reactors—Charging reactors are used between the D-C power supply and Pulse-forming network in low voltage pulse circuits. Depending on circuit constants and repetition rates, they operate as resonant, hold-off diode, or linear types.

Low Power Pulse Transformers — These pulse transformers are designed for use in low

WESTINGHOUSE ELECTRIC CORPORATION, P. O. BOX 868, PITTSBURGH 30, PA.

MAGNETIC AMPLIFIERS MAGAMP

MAGAMPS, Westinghouse magnetic amplifiers, of either the self-saturating type or simple saturable reactor type, can be designed for a wide range of specific applications. They can be either designed to operate from control input powers as low as milli-microwatts or designed to deliver output powers of several kilowatts. They can be constructed to operated from any a-c supply voltage, either single or poly-phase, ranging from a few volts to several hundred volts, and at frequencies ranging from the lowest power frequency to the megacycle range.

MAGAMPS have been applied in servo systems as complex as aircraft autopilots, in the control of motors from the smallest fractional horsepower size to the largest steel mill drive, in the regulation of gen-

rator voltages from the miniature aircraft unit to the central station generator. They have been used to amplify the minute outputs of thermocouples, photocells, ionization chambers, and strain gauges. Other applications have included arc welding controls, ignitron firing controls, paper mill reel control, automatic battery chargers, and isolation metering of d-c voltages and currents.

MAGAMPS are available in the 3700 series under five general numbers, as shown in the table below. They may also be engineered for specific applications. This service is available through the Materials Division, Westinghouse, East Pittsburgh. For complete descriptive information, request Technical Data 52-600.

OPERATING CHARACTERISTICS OF 3700 SERIES MAGNETIC AMPLIFIERS

Amplifier Type Number	3704	3708	3712	3716	3720
Type of Circuit	Doubler	Doubler	Doubler	Doubler	Doubler
Nominal Power Output (1)	0.04w.	0.3w.	7.0w.	40w.	180w.
D-C Ampere-Turns for control (2)	0.35	0.60	2.0	3.3	5.5
Supply Voltage: Volts	6.3	12.6	30	115	230

Time Delay: (4) Constant k_1	2.6×10^{-3}	3.7×10^{-3}	6.8×10^{-3}	7.5×10^{-3}	8.5×10^{-3}
Inherent Delay Cons. k_2	1.5	1.6	1.9	2.4	3
Output Current: (5) Rated	0.150a.	0.24a.	0.60a.	0.60a.	1.1a.
Max. Power Output	0.016a.	0.603a.	0.50a.	0.96a.	3.3a.
Load Resistance: Rated	20	130	175
Max. Power Output	200	100	28	60	35
Max. Power Gain	200	100	40	175	250
Rectifiers: Self-Sat.	12G11KE1C 2 req'd	21F12KA1A	23F14KA1B	23F18KA1B	24F18KA1A
Recommended Complementary	12G11KE1C 4 req'd	21F41KA1D	23F41KA1D	24F44KA1D	24F112KA1D 2 req'd
Weight of Reactor Assem.	0.13 lbs.	0.20 lbs.	0.85 lbs.	2.5 lbs.	7.0 lbs.
Size of Assem: Dia.	1 1/4"	1 1/2"	2 1/4"	3 1/4"	4
Height	1 1/2"	1 1/2"	2 1/4"	2 3/4"	2 1/2" x 2 units

1. Power output at top of linear region of control curve.
 2. Control ampere-turns from cutoff to top of linear region of control curve.
 3. The figure of merit, M_u , is the ratio of power gain to time delay for 63% response. Power gain is the ratio of the change in output power for a change in input power at the optimum value of load resistance. The time delay is expressed in cycles of supply frequency (60 cycles).
 4. Time delay is given by equation of the form $T = k_1 \frac{N^2}{R} + k_2$ cycles of supply frequency where $\frac{N^2}{R}$ equals $\left(\frac{N^2}{R} \text{ for control circuit A} \right) \text{ plus } \left(\frac{N^2}{R} \text{ for control circuit B} \right) \text{ plus } \left(\frac{N^2}{R} \text{ for control circuit C} \right)$.
 5. RMS value given if output is A-C, average value given if output is D-C.
- For further information, request T.D. 52-600.

INSTRUMENTS

THE MOST COMPLETE LINE IN THE INDUSTRY

Westinghouse instruments are designed, manufactured and approved under the most severe National Standards to meet exacting engineering requirements. The completeness of the lines of Westinghouse instruments gives the builder and the ultimate user the widest choice of matched instruments for any application.

The general points to consider when selecting instruments are: 1. Accuracy desired; 2. Scale range; 3. Single or multiple scale; 4. Size; 5. Appearance.

With literally hundreds of types available—for measuring all electrical quantities, temperature, position and time—Westinghouse brings you the results of over 65 years' experience in designing and manufacturing better instruments for better performance. We built our first instruments in 1888 and have samples to prove it.

Westinghouse representatives and specialized instrument sales engineers are available all over the country to help you make the proper selections.

SWITCHBOARD As the name implies, these instruments are standard equipment on switchboards in power and switching stations, aboard ships, and in the factory. They also are generally applied to control boards and test boards in laboratories and on production lines and to large radio transmitters because they provide maximum accuracy and readability for this type of service. For complete explanation of types of A-C or D-C Switchboard Instruments available, request Catalog Section 43-200.

PANEL Westinghouse Panel Instruments are available for measuring direct current, alternating current, audio frequency, radio fre-

quency, decibels and elapsed time. Available in sizes of 2½, 3½ and 4½ inches, in surface or flush mounting styles and in round or rectangular design. Catalog Section 43-300 is available free on request.

PORTABLE Because of their broad scope of operation, portable instruments are required in a wide variety of ranges, sizes and accuracies. Each type has many different applications . . . but each application can best be served with a particular instrument. The portable instruments shown below represent only a small portion of the varieties available. To aid your selection of the best instrument for your particular application, request Catalog Section 43-100.

RECORDING Westinghouse Recording Instruments are available in switchboard, portable and wall mounting styles in direct current and alternating current types and with round or strip charts. The Recorders are furnished with a broad line of movements to meet all electrical measuring requirements. For complete data ask for Catalog Sections 43-400 and 43-415.

AUXILIARIES These include self-contained units for extending the application of instruments into the measurement of speed and for the measurement of high values of a-c and d-c current and voltage. The general auxiliaries Westinghouse features are Tachometer Generators, Portable Transformers, External Resistors and Shunts in a wide selection of ratings. Request Catalog Section 43-800 for complete details, ratings and descriptive data.

P-5 VOLTMETER

P-4 TRIPLE RANGE VOLTMETER

P-4 DOUBLE RANGE VOLTMETER

TYPE P-5 LINE (Accuracy ½ %)

The Type P-5 series of Westinghouse instruments is designed to withstand severe portable service and still maintain the highest degree of accuracy over long periods of time. A combination of high-grade mirrored dials and knife-edge pointers eliminates parallax and

assures accurate reading. Scale length is 5 inches and divisions are arranged to aid quick reading. Maximum versatility is achieved with multi-range scale, some of which incorporate seven ranges. Pre-aged Moldarta* case does not warp or deteriorate.

FULL SCALE RANGE OF STANDARD RATINGS

P-14 HINGED COVER

P-12
VOLTMETER

K-24
AMMETER

K-25
VOLTMETER

PORTABLE INSTRUMENTS

TYPE P-14 LINE (Accuracy 1%)

The Type P-14 portable instrument includes features of larger portables, including magnetic shielding, plus added advantages of extremely light weight and smaller overall dimensions. Its accuracy, versatility and low cost make it ideal for field and radio testing. Up to 4 voltage or

current ranges available with multi-range scales. Combinations such as 3 current and voltage ranges in the same instrument make this an extremely versatile instrument. Measuring only 5 1/4" x 4 1/4" x 2 1/2"; both hinged cover and open-faced models are pocket size.

FULL SCALE RANGE OF STANDARD RATINGS

TYPE PA-14 FOR ALTERNATING CURRENT

Voltmeters	0-1.5 to 0-750
Ammeters	0-.5 to 0-50
Milliammeters	0-5 to 0-500

TYPE PX-14 FOR DIRECT CURRENT

Voltmeters	0-.75 to 0-800
Millivoltmeters	0-10 to 0-5,000
Ammeters	0-.5 to 0-50
Milliammeters	0-1 to 0-2,000
Microammeters	0-20 to 0-5,000

Also available in rectifier and thermocouple types.

(For Complete Ordering Information, See Catalog Section 43-100)

TYPE P-12 LINE (Accuracy 2%)

The Type P-12 line includes single and multiple range ratings for complete D-C and A-C current and voltage measurements. It meets all requirements, including shielding, insulation, etc. required for 2% portable instruments in A.S.A. C39.1. Provides the same high degree of reliability,

overload capacity and range coverage contained in larger types.

LIGHTWEIGHT: A-C instruments weigh from 1 to 1 1/2 lbs. D-C instruments from 1 1/2 to 2 lbs.

POCKET SIZE: A-C—4 1/4" x 3 1/4" x 2 5/16"; D-C—4 1/4" x 3 1/4" x 1 3/4".

FULL SCALE RANGE OF STANDARD RATINGS

TYPE PA-12 FOR ALTERNATING CURRENT

Self Contained Current—From 5 milliamperes to 50 amperes
Self Contained Voltage—From 1.5 volts to 300 volts. Also available in rectifier types.

TYPE PX-12 FOR DIRECT CURRENT

Self Contained Current—From 20 microamperes to 50 amperes
Self Contained Voltage—From 10 millivolts to 800 volts

(For Complete Ordering Information, See Catalog Section 43-100)

SWITCHBOARD INSTRUMENTS

24-LINE (Accuracy 1%)

4 1/2" Class—Circular Scale, Rectangular Front—Round-body Case for Flush Mounting. Because of its extra-long scale, the 24-Line instrument combines high readability with minimum panel space require-

ments, particularly useful where panel area is at a premium. The pointer travel gives a scale length more than twice as long as other types which require the same panel space.

25-LINE (Accuracy 1%)

6" Class—Rectangular Case—Flush or Projection Mounting—Optional Internal Illumination. Westinghouse 25-Line instruments meet the requirements of many special installations. Simplicity of design,

uniform appearance, interchangeability and availability of movements for any measurements, make this instrument especially suited for modernization as well as for new installations.

FULL SCALE RANGE OF STANDARD RATINGS—24 and 25 LINES

DIRECT CURRENT

Ammeters—0-1 to 0-50 (self-contained)
Ammeters for use with shunts—0-50 or 0-100 millivolts
Voltmeters—0-2 to 0-800 (self-contained)
Milliammeters—0-1 to 0-500
Wattmeters—120 or 240 volts, 0-50 or 0-100 millivolts for external shunts. (25 line only)

ALTERNATING CURRENT

Ammeters—(24 line)—0-1 to 0-20 (self-contained)
(25 line)—0-1 to 0-50 (self-contained)
Ammeters for use with transformers—0-5

Westinghouse

P.O. BOX 868, PITTSBURGH 30, PA.

RECORDING INSTRUMENTS

TYPE G-40 DIRECT ACTING STRIP CHART RECORDER (Accuracy 1%)

Perfection of detail in chart drive, chart reroll, chart threading and inking system, makes Type G-40 Recorders easier to operate and has removed many causes of lost records. Available for switchboard or portable applications.

Chart has double perforations for positive traction or driving drum. Accurate synchronous motor clock, furnishes drive power for chart. Chart speeds of $\frac{3}{4}$ ", $1\frac{1}{2}$ ", 3" or 6" per hour or per minute.

G-40 PORTABLE RECORDER

SWITCHBOARD RECORDER

TYPE A ROUND CHART RECORDER (Accuracy 2%)

A low first-cost, low-maintenance recording instrument for a variety of applications where chart records of 2% accuracy are adequate for their purpose. Extra-sturdy construction makes this a particularly convenient instrument for field service jobs. Portable, switchboard

mounting, wall mounting or detachable socket-mounting cases are available. Scale length is 2 inches, but chart has suppressed zero scale with divisions comparable in size and readability to those of much longer scales.

PANEL INSTRUMENTS

33-LINE (Accuracy 2%) — 2½" Class

Scale Lengths, 1.5" to 1.8". Four different flush mounting types of cases are available: the Military Standard; the round, wide-flange instrument; the round, narrow-flange type;

the rectangular type. Projection mounted instruments also are available in round case. Cases are interchangeable.

35-LINE (Accuracy 2%) — 3½" Class

Scale Lengths, 2.06" to 2.4". Available as a complete line in five types of cases and mounting covering Military, Laboratory, industry and radio applications. The ratings cover the

broadest field consistent with prevailing requirements for instruments of this class. Cases are interchangeable without adapters.

37-LINE (Accuracy 2%) — 4½" Class

Scale Lengths, 2.8" to 3.2". The largest of the miniature panel instruments. The self-contained ratings cover the broadest possible field for this class of instruments. Higher

ratings may be obtained by using external resistors, shunts or transformers. Five types of cases are interchangeable throughout the line.

CURRENT TRANSFORMER

AUXILIARY EQUIPMENT

SECTIONAL TUBULAR RESISTORS FOR D-C INSTRUMENTS:

The sectional construction of these resistors permits a wide range of accurate measurements of high voltages with one milliamper instrument. Resistance values $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$ or 1 meg-

ohm are standard, and combinations of these may be easily and quickly put together to form any complete unit. Designed for panel mounting or portable use.

TYPE G AND GG SHUNTS FOR D-C MEASUREMENT:

Type G and GG shunts provide a complete line for use with indicating or recording instruments for measuring direct currents beyond the range of self-contained instruments.

Portable and switchboard types are available in 50 and 100 millivolt sizes with many different current ratings.

PORTABLE POTENTIAL AND CURRENT TRANSFORMERS:

For measuring electrical quantities greater than the self-contained ranges for which the instruments are rated, these portable poten-

tial and current transformers offer a convenient and accurate means of increasing the usefulness of an instrument.

WESTINGHOUSE ELECTRIC CORPORATION, P. O. BOX 868, PITTSBURGH 30, PA.

EQUIPMENT FOR ELECTRONICS

SELENIUM RECTIFIERS MAGAMP

Westinghouse MAGAMP Selenium Rectifiers have three classifications according to reverse leakage current. The upper limits for Classes A, B and C are 0.3, 0.4 and 0.5 milliamperes per square inch respectively, at 15 volts 400 cycles per second. Table below lists the sizes that are available, giving the active area for each size, the rated half-wave forward current, the maximum limit for forward voltage drop, and the maximum leakage currents at 15 volts, 400 cycles for Classes A, B, and C rectifiers.

Although leakage limits are given here for 400 cycles per second, Westinghouse MAGAMP Selenium Recti-

fiers are equally suitable for 60 cycle applications. The 60 cycle leakage current is approximately one-half the 400 cycle leakage current at any given voltage at room temperature.

Westinghouse Type K cells are tested individually and retested after assembly and sealing or treatment with a protective coating. Unless otherwise specified, the insulation of all rectifier assemblies is given a 60 cycle one minute withstand test, at twice the terminal voltage rating plus 1000 volts, between cell terminals and mounting brackets or case. Request Technical Data 52-650 for complete information.

CURRENT RATINGS AND ELECTRICAL LIMITS

CELL NUMBER		CELL SIZE INCHES	ACTIVE AREA SQUARE INCHES	Rated Forward Current ³ Milliamperes Half-Wave			Forward Voltage Drop ³ Per Cell Half-Wave at Forward Current Shown	Reverse Leakage in Milliamperes Half-Wave at 15 RMS Volts, 400 Cycles ²			
				1-7 CELLS	8-9 CELLS	10-12 CELLS	FORWARD CURRENT MILLIAMPERES	VOLTS	CLASS A	CLASS ¹ B	CLASS ¹ C
11		1/8 Dia.	0.012	7.5	6	5	7.5	1.5007
12		1/4 Dia.	0.05	30	25	20	30	1.5028
				1-8 CELLS	9-20 CELLS	OVER 20 CELLS					
*21		1 x 1	0.5	125	95	80	80	.75	.15	.20	.25
*22		1.2 x 1.2	0.8	155	145	125	125	.75	.24	.32	.40

*25		3 x 3	7.0	1400	1300	1120	1120	.75	2.25	3.0	3.75

1. The manufacturer reserves the right to substitute rectifiers of a higher class when necessary to expedite orders unless "no substitution" is specified. The milliamperere limits shown determine the class designation.

2. Leakage values at 60 cycles are approximately one-half the leakage values at 400 cycles at room temperatures.

3. Applies to both 60 and 400 cycles at ambients up to 75°C.

*Can be supplied in any desired cell combination for full-wave and bridge circuits.

MAGNETIC METALS AND ALLOYS

These metals offer a wide variety of permeability characteristics, low hysteresis losses and high purity. Where their characteristics are particularly suited to the requirements of

Hipernik V® — A 50% iron-nickel grain oriented alloy. Supplied in toroidal coils of .002" and .005" lamination thickness. Both material and core are carefully processed under laboratory control to assure uniform characteristics.

Conpernik® — An iron-nickel alloy of the same chemical composition as Hipernik, but of different electromagnetic characteristics produced by a special annealing process. It is most applicable where a component having high ratio of reactance to resistance (high Q) is required. Also used in choke coils and other components having a high d-c component of current.

Other Alloys that serve a wide range of functions are Kovar®, Puron*, Cupaloy*, K42B®, Refactaloy® and Discaloy®. These

*Trademark

the application, these alloys are superior to other magnetic materials and will improve performance.

Hipernik® — An alloy of iron and nickel with small amounts of manganese and silicon added. It has high initial and maximum permeability and low hysteresis loss. It has a wide range of applications — sensitive relays, a-c meters, magnetic shields, audio transformers, instrument transformers, reactors, etc.

Hiperco® — An iron-cobalt alloy containing 1/3 cobalt, 2/3 iron and 1 to 2% of another element to increase the electrical resistivity. Used primarily for aircraft equipment where size and weight saved is a vital factor. Transformers, generators, motors and high speed aerial cameras are some of the uses.

are used for electrodes, contacts, for sealing glass and metal, for tube lead-in wires, and for high strength at elevated temperatures.

INDICATING LAMPS — SWITCHES

Rectangular Minalite® is a medium sized low-drain indicating lamp designed for extreme angular visibility and to provide the utmost in sturdiness, compactness, and appearance. Its design matches modern rec-

Round Minalite® is a compact, medium-drain indicating lamp developed especially for miniature steel switchboards, providing the maximum illumination in the smallest possible space. Since some rigidity was sacrificed to obtain the long slender construction, which permits close center spacing be-

The Westinghouse Minatrol® Switch is a compact control switch of smaller dimensions than the conventional Type W control switch, designed particularly for use on miniature switchboards. It is available in

Construction — The Minatrol is a rotary-type switch with the same design features which have made other rotary-type control switches outstanding in performance. The switch handles 125 or 250-volt control circuits directly, using toggle switches with

Performance — The current-carrying capacity and interrupting ability of the Minatrol is ample to handle the usual control circuit without the use of auxiliary interposing relays or intermediate control voltages. The switches are rated at six amperes continuous and can interrupt a non-inductive

Classification — The Minatrol control switches are of two types:

1. Type C, for stay-put and spring return with fixed handles.
2. Type S, for stay-put with removable key handles.

tangular switchboard devices, such as instruments, relays and control switches. It is intended for general indicating or signal purposes on switchboards, control desks, etc.

tween adjacent lamps, it is intended only for such applications where the wire size is not larger than No. 18.

Complete information on component parts, hardware, receptacles and resistors available are contained in Catalog Section 37-200, which will be sent free on request.

forms to suit the varied requirements of control switch applications, and will handle the full control voltage without interposing relays. Its flexibility of application is practically the equivalent of the Type W switch.

quick-make and quick-break contacts mounted in unit-construction frame. It occupies only about one-fourth of the switchboard space required by the conventional switch and has a pleasing appearance, unmarred by the mounting screws.

load of three amperes at 250 volts and six amperes at 125 volts d-c. The switch will interrupt highly inductive currents up to five amperes at 125 volts d-c or up to one ampere at 250 volts d-c. On a-c, these values can be at least doubled at 250 volts maximum.

Two standard lengths are available, one to accommodate a maximum of four switch units, and the other a maximum of eight switch units. A special twelve-switch unit length is available on order. Request Catalog Section 37-175 for complete information.

WESTINGHOUSE ELECTRIC CORPORATION, P. O. BOX 868, PITTSBURGH 30, PA.

THE ELECTRONIC TUBE DIVISION

ELMIRA PLANT

BATH PLANT

WHATEVER your tube problem, you'll find the right answer in Westinghouse's complete line of RELIATRONTM Tubes. The establishment of the new Westinghouse Electronic Tube Division last year provided Westinghouse with design, engineering and production facilities second to none — 500,000 sq. feet in the most modern plant in the industry. From here come more than 350 types of receiving tubes for television, radio communications, and industrial applications. Picture tubes from 10 to 27 inch sizes in both glass or metal cone styles. Industrial tubes for resistance welding, rf heating, electronic motor control, power rectification, sorting, counting, weighing, broadcasting, Germanium diodes and transistors in experimental quantities. Most important, every Westinghouse RELIATRON Tube has unmatched quality "built-in."

RELIATRON RECEIVING TUBES

MINIATURE TYPE

"G"-TYPE

"GT"-TYPE

The huge new Westinghouse Electronic Tube Division plant at Bath, New York is devoted exclusively to the design and manufacture of RELIATRON Receiving Tubes. Types are available for new equipment and the majority of renewal requirements. Miniatures, GT's, Lock-Ins, Metals, and the larger glass styles all carry the famous Westinghouse brand. Whether your requirements concern televi-

sion, industrial equipment, communications or electronic controls you'll do the job better with Westinghouse tubes. Franchised distributors are located in all principal market areas to give you same-day service. Inquiries on production size orders receive prompt personal attention from Westinghouse, in Elmira, or its regional sales offices.

RELIATRON PICTURE TUBES

ALL GLASS TYPE

METAL TYPE

You'll produce television pictures of better contrast and sharper focus with Westinghouse RELIATRON Television Picture Tubes. More than 24 types from the 10BP4A to the 27MP4 — are available. No matter

what your requirements — round or rectangular shape, magnetic or electrostatic focus, spherical or cylindrical face plate — chances are you will find a Westinghouse Tube will do the job better.

TRANSISTORS AND GERMANIUM DIODES

The Westinghouse Electronic Tube Division is now producing germanium semi-conductor devices. Both P-N-P junction type and point-contact transistors are available. Germanium Di-

odes having a broad variety of reverse working voltage characteristics are also in production. We invite your inquiries on production or sample quantities.

IGNITRONS

IGNITOR CONTROLLED RECTIFIERS

WELDER CONTROL SERVICE

The Ignitron, capable of high current capacity, is the heart of every heavy-duty resistance welding control. Development of the Ignitron by Westinghouse solved the long-standing problem of satisfactory switching of high currents at speeds of 600 or more operations

per minute. Precise control obtainable with this tube over the magnitude and duration of the current flow assures high quality welds. WL-5550/681 has clamp type cooling. All others are water cooled.

RESISTANCE-WELDER SERVICE:

R—Indicates forced air-cooled radiator.
†Class AB, AF Service.

**Max. C.C.S. ratings in Class C oscillator service.

°Per unit, heater can be arranged to operate from either a 6.3 or 12.6 volt supply.

#Forced air-cooled radiator.

*Two filament strands in series with large post at neutral junction; operate in series at 22 volts or two phase with 11 volts per strand.

***This rating applies only with forced air cooling.

##Six filament strands connected from each post to floating neutral. See individual data sheets for connections. Values shown are per strand.

°°Three filament terminals Y-connected in 3 phase.

°°°Three filament terminals Y-connected in 3 phase with neutral center terminal.

EQUIPMENT FOR ELECTRONICS

CIRCUIT BREAKERS AB De-ion®

E TYPE 100 AMP.

F TYPE 100 AMP.

K TYPE 225 AMP.

J TYPE 225 AMP.

L TYPE 600 AMP.

AB DE-ION CIRCUIT BREAKERS comprise a complete line of fuseless protective devices for distribution, power, lighting and electronic circuits. They are used in individual mountings, built-in applications, separate enclosures, switchboards and panelboards.

The sturdy moldarta breaker cases form complete self-enclosures, protecting workers and preventing tampering. Standard construction features are the De-ion arc quenchers, quick-make and quick-break mechanisms, and thermal-magnetic trip elements. Request Price List 29-060.

CONTACTORS of the famous Westinghouse Life-Linecontactor® design are available in four general classes: Reversing Mounted Life-Linecontactors • Size 00 Multi-Pole Relay • Mounted Life-Linecontactors* • Unmounted Contactors.

In addition, they may be modified with built-in pushbuttons, selector switches, control transformers or special combinations of modifications to

suit the user. NEMA enclosures run from Type I, IA, III, IV, V, VII, and IX for Class II, Groups E, F and G for hazardous locations such as explosive dusts. Standard pole combinations are available for 5 to 2,500 amperes, 600 volts maximum, a-c or d-c. Oil-immersed contactors operate up to 5,000 volts at 200 amperes.

RELAYS built for heavy-duty service on industrial electronic equipment are offered in both a-c and d-c. Among the types available are: Thermal Overload • Magnetic Overload • Time Limit • Thermostatic • Auxiliaries • Mechanical • Multi pole • Shunt Coil • Vibrating.

In addition, complete control panels for special applications can be built to order. Write for Price Lists and Dimension Sheets 15-825 and 15-827 for expanded information on types, sizes and ratings.

-- a bright

idea

to help you
sell! --

A Drake Signal Light is as small in cost as in size—yet it can often tip the scale as a sales-closer for *your* appliance.

At a glance, the Signal Light shows Mr. and Mrs. Prospect extra, positive buying reasons. Its on-or-off warning means *safety* and *power-saving*—helps lengthen appliance life by encouraging proper use. Or, by providing an area of light for working or indicator reading, it makes appliance use *easier*. It always adds the extra touch of attractiveness—usefulness—convenience which persuasively says, "Buy me!"

You'll find expertly designed, well made DRAKE Signal and Jewel Light Assemblies on leading makes of appliances, as well as on electronic devices and controls of all kinds. A wide variety of styles and types are available for easy incorporation into *your* products, to get that extra selling punch—and at so low a cost! Send right now for Catalog EM, telling us the type of appliance you have in mind. Our experience often suggests possibilities which you may have overlooked.

Let DRAKE quote on your needs!

Insulation by IRVINGTON

FLEXIBLE TUBING: Extruded Plastic and Varnished

THE IRVINGTON LINE of insulating tubing includes extruded thermo-plastic and varnished types, for all conductor sizes commonly used in electronic wiring. All are characterized by high dielectric and tensile strength, excellent flexibility, smooth surfaces and resistance to acids, alkalis and fumes.

Application	Recommended Types	Dielectric Strength* (vpm)	Tensile Strength (psi)	Remarks
VHF	Polyethylene	1350	1600	High resistance to ozone
LOW-TEMPERATURE	Hyflex Ivi-Flex Transflex	1000 650 1000	3000 1000 3000	-70°F to 167°F Flexible at -80°F Transparent: -58°F to 167°F
HIGH-TEMPERATURE	Temflex 105	1200	3000	Cont. Oper. at 105°C
GENERAL-PURPOSE	IRV-O-LITE XTE-30	1000	3000	Rubber-like, flexible
	Varnished	IRV-O-VOLT: Tubing—cotton, rayon and glass, varnished inside and out; Sleeving—cotton, rayon and glass, saturated. IRVINGTON: Lacquer-coated cotton, rayon and glass tubing. Special types.		

IRVINGTON INSULATING TAPES and YARD GOODS

*Dry test, .020" wall

Available in a wide range of formulations to meet such electronic requirements as: high dielectric strength; resistance to moisture and heat; flexibility at high and low temperatures. Table lists the more commonly used types; consult our engineering department for special requirements.

Application	Recommended Types	Thicknesses	Dielectric Strength* (vpm)	Tensile Strength lbs/1" width
VHF	Polyethylene	.004-.020		
COMPACT EQUIPMENT	Varnished silk	.002-.008	1700-1100	13

Irvington

For Electronic Applications

HARVEL and IRVINGTON Insulating Varnishes

The varnishes listed below represent a few of the many types developed by Irvington for a wide range of uses. All these varnishes offer good-to-excellent resistance to moisture and heat, and most of them also resist the effects of oil, acids and alkalis. Dielectric strength ratings in this table are based on average short-time tests for a film of varnish on paper in the case of baking varnishes; on U.S. Navy Specifications in the case of air drying types.

Method of Drying	Varnish Type	Dielectric Strength (vpm)
INTERNAL BAKING	Harvel 512-C	2100
	Harvel 612-C	2300

Other Insulation Products

HARVEL OIL STOP

Oil Stop is used as a filling compound for enclosed coils in X-ray machines and other types of electronic equipment. It will not soften under heat in service, and is extremely resistant to the effects of acids, alkalis, water, oils and petroleum products.

WIRE MARKERS

Irvington Wire Markers are made in plastic for quick, positive wiring identification that speeds up original assembly and simplifies maintenance and repair work. Sizes and markings to specification.

PUNCHINGS

Insulating gaskets, washers and other parts can be punched to order from most of the materials in the extensive Irvington insulation line. Dies are on hand for many standard sizes and shapes — special designs can be tooled to specification.

TERMALINE Coaxial Line Instruments

TERMALINE Direct-Reading RF Wattmeters 30 mc-2500 mc; 50 ohms; 1/2w.-5kw.

Model 612

The THERMALINE wattmeter is a direct-reading, absorption type instrument for simple, fast and accurate power measurement of transmitters operating between 30 mc and 2500 mc. With the THERMALINE coaxial load resistor dissipating all power applied, a crystal voltmeter circuit built into the input connector of the wattmeter feeds a dc meter which is calibrated directly in RF watts. Accuracy of 5% of full scale or better is assured. Model 611 is the commercial version of the Army-Navy ME-11/U RF wattmeter, widely used by all government services. Most transmitter manufacturers use the THERMALINE wattmeter for production and field test work and recommend it to maintain performance. Frequency Range... 30 to 2500 mc. (See Table) Power Range 1/2 watt to 5000 watts Impedance 50 ohms Accuracy 5% of full scale. VSWR less than 1.1

STANDARD MODELS

(Standard calibration is 30-500 mc. If 30-1000 mc calibration is desired it must be specified)

Model	Freq. Range	Max. Power	Ranges	Scales	Input Connector	Special Features
611	30-500 mc or 30-1000mc	60 W	2	0-15 0-60	Female N. Takes UG-21/U plug	Same as AN-ME-11/U Portable
612	30-500 mc or 30-1000mc	80 W	2	0-20 0-80	Female N. Takes UG-21/U plug	Portable
67	30-500 mc or 30-1000mc	500 W	3	0-25 0-100 0-500	Coplanar. Adaptor to take UG-21/U plug supplied	Meter is shock mounted in aluminum housing separate from termination
67C	30-500 mc or 30-1000mc	2500 W (Water cooled)	3	0-100 0-500 0-2500	Coplanar. Fittings and cable assys to all flexible & rigid lines available	Tap water cooling is required above 500 watts
824	30-220 mc	5000 W (Water cooled)	1	0-5000W	Coplanar. 10 ft of RG-19/U cable with 1 5/8" fitting is supplied	Water cooling

Engineering models available for use between 500-2500 mc. Special scale Model 61 for low powers such as 0-1, 0-5 watts also available.

TERMALINE-Coaxial Terminations

The Termaline coaxial load resistor is designed to have a constant 50 ohm impedance over a wide frequency range. Its unique design puts reactance to work and produces an almost purely resistive load, with little or no sensitivity to frequency change. The active power dissipating portion is the outer surface of a cylindrical film-type resistor, which forms the center conductor of a special self-terminated co-axial structure. Constant impedance properties depend upon shape of coaxial assembly and distribution of resistance along length of outer surface of resistor.

Major use is as a dummy load for high frequency transmitters. Being non-radiating, adjustment of transmitters can be made without violation of FCC rules. Thousands are now being used in military equipment. It is incorporated as standby in many commercial transmitters and as a test load.

Being non-radiating, adjustment of transmitters can be made without violation of FCC rules. Thousands are now being used in military equipment. It is incorporated as standby in many commercial transmitters and as a test load.

0-11,000 mc

50 ohms 5w.-2500w

COAXWITCH—Coaxial Selector Switch

Cut-away View Model 74

This is a 50 ohm switch for use in coaxial circuits. Characteristic impedance is maintained through all switch details and low standing wave ratios result. In V.S.W.R., switch is comparable and as good as the connectors and cable with which it is used.

LOW PASS RF FILTERS

Suppression of low order harmonics in VHF and UHF transmitters may be handled thru use of these filters. Insertion loss and VSWR are very

low thru pass band. Rugged construction thruout assures reliability. All are of 50 ohms impedance and are reversible with equal results. Attenuation in pass band is less than 1/2 db and in stop band 40 db or better is realized.

MODEL	PASS BAND	STOP BAND	MAX. POWER	VSWR	CONNECTORS
844	0-400 MC	500-2000 MC	150 W	1.35	One male and one female N
819-1200	0-1200 MC	1900-4000 MC	100 W	2 to 1	Two female N for use with Models 611 and 612
819-7	0-1200 MC	1800-4000 MC	3.5 KW	2 to 1	Coplanar. For use with Models 67 and 67C

Type N female connectors are standard on all models to receive UG-21/U series plugs. Adaptors may be used to enable switch to be used with other cable and connectors.

Model 844

Helipot

First in precision potentiometers

WHATEVER YOUR NEEDS in precision potentiometers, you know they will be met at Helipot. For the widest selection of types... for the greatest choice of models... for the largest number of in-stock items... for the assurance of a precision potentiometer to meet your exact specifications... come to Helipot... first in precision potentiometers!

MULTI-TURN HELIPOTS

Where highest accuracy and greatest resolution is required... especially where space is limited... a multi-turn potentiometer may be the answer. Helipot, originator of the helical potentiometer, makes multi-turn models in a variety of sizes and designs... one for every purpose. Standard models are described in the following pages... and as with every Helipot product, they may be modified to meet your specifications.

SINGLE-TURN HELIPOTS

Where continuous rotation is needed, there is a single-turn Helipot to meet your requirements. In this type, too, Helipot offers a variety of sizes and designs... one styled specifically for each use. See the following pages for characteristics of the several standard models... and bear in mind that our large and expert engineering staff is always happy to work with you, whether your particular use requires an adaptation of a standard Helipot... or an entirely new model.

NON-LINEAR HELIPOTS

There is an increasing number of important applications for potentiometers which have non-linear (functional) characteristics. As with every Helipot product, we offer a variety of mounting arrangements... and an almost unlimited number of non-linear functions may be reproduced. If your use requires a special empirical function... or if it will be met by one of the more common trigonometric functions... Helipot engineers can design the potentiometer best suited to your needs.

DUODIALS

Helipot engineers have designed several models of multiple-turns-indicating Duodials... for use not only with Helipots, but with any multi-turn device. Duodials add distinction to the finest instrument panels... even more important, they provide the high degree of setting accuracy needed to complement the adjustment accuracy of the Helipot.

Not only does Helipot make a wide variety of sizes, styles, and designs... but Helipot's large staff of expert engineers is always happy to work with you in developing models to meet your own individual needs... in adapting standard models to your particular requirements... or in building entirely new types to meet your own special needs.

The various basic types of Helipots and Duodials are described in detail in the following pages... note particularly the wide range of standard models which are carried in stock.

Keithley Instruments

DC Chopper Amplifier handles microvolt signal sources at frequencies of 0 to 200 cps. Drives nearly all recorders, delivers 25ma, develops 80 volts. Features include mechanical chopper operating at 5000 cps, max gain of 800,000, 0.1 megohm input impedance, 25 microvolts input noise (peak to peak), less than 50 microvolts per hour drift, two calibration signals, input bias for suppressed zero, terminals for attenuating output and equalizing recorders. 115 volt, 60 cps power.

Vacuum Tube Electrometer is an unusually versatile self-contained dc voltmeter. With accessories will measure dc potentials from 0.2 to 20,000 volts, currents from 10^{-5} to 10^{-14} ampere, resistances to 10^{16} ohms. Also an extremely sensitive static detector. Accuracy within 2% full scale, grid current within 5×10^{-13} ampere on all ranges, input impedance over 10^{14} ohms.

Phantom Repeater is an instrument amplifier which greatly reduces measuring errors caused by circuit loading. Input impedance is over 200 megohms shunted by 6 mmf. Gains of 1.0, 10, and 100 accurate within 2%, frequency response 5 to over 150,000 cps, output impedance less than 350 ohms, noise equivalent to less than 70 microvolts at the input.

Electronic Wattmeter measures 0.3 to 300 watts on six ranges. Currents .1 to 1 ampere, with external current-coil shunts available for currents up to 30 amperes. Amplifier to potential coil provides 500,000 ohm input impedance to potential circuit, 0.5 ohm in current circuit; response 20 to 3000 cps; accuracy within 2% full scale on all ranges, all frequencies.

Meter Matcher is a power frequency amplifier. Eliminates meter current errors when using a voltmeter or wattmeter. Gives 150-volt voltmeter or wattmeter effective full-scale ranges of 15 to 600 volts. Input impedance 100,000 ohms to 4.0 megohms on five input voltage ranges, max signal 150 volts rms into resistive meter loads of over 2000 ohms; response 5 to 20,000 cps. Adds less than 0.15% error to measurements.

UNITED  **ELECTRONICS, 42 Spring Street, Newark 2, N. J.**
(TRANSMITTING TUBES EXCLUSIVELY Since 1934)

VACUUM

CAPACITORS

**LOW LOSS,
COPPER ELEMENT
CONSTRUCTION**

Outstanding features of UNITED vacuum capacitors are the employment of large elements and large periphery glass to copper seals, as illustrated. This construction results in a low temperature co-efficient, low R.F. losses and low inherent inductance. End terminals are gold plated to prevent corrosion.

Type designations of UNITED vacuum capacitors symbolize their capacitance ratings and their maximum current and voltage ratings— thus CAP 50/60/35 means:

C
= Capacitance
(50 uuf)

A
= Amperes
(60)

P
= Potential
(35 KV)

The numerals are significant as shown in direct relation to the prefix letters.

When the older types of vacuum condensers were designed, the sole conception of advantage was to attain a voltage breakdown characteristic higher than could be accomplished with condensers of the same physical size with air or other substance as dielectric.

The limitations of the old types of vacuum capacitors resulted principally from high R.F. losses and a high temperature co-efficient. This caused considerable capacitance drift, and the added heat losses in the glass envelope led to external voltage breakdown or internal breakdown due to the liberation of gas. Actual seal puncture in these early type vacuum capacitors was also a frequent cause of failure. Extraneous inductance was caused by the use of conventional ferrous metal rod seals and copper strand leads soldered to the terminal caps, in the old type of construction. The higher the frequency and R.F. power, the more these limitations were accentuated.

All metal parts of UNITED vacuum capacitors are oxygen free, high conductivity copper.

For complete information on UNITED vacuum capacitors, transmitting and special purpose electron tubes write for Catalog 2-GPW.

CAPACITY TOLERANCES

All capacitors identified by Drawing A have a capacity tolerance ± 1 mmfd, except CAP-6/30/20 which is ± 0.5 mmfd. All other capacitors listed have capacity tolerance $\pm 2\%$ of rated values.

Above table lists standard sizes. Special sizes can be furnished within capacity and voltage ranges shown, and inquiries are invited.

UNITED ELECTRONICS, 42 Spring Street, Newark 2, N. J.

Since 1934

VACUUM

CAPACITORS

LOW LOSS, COPPER ELEMENT CONSTRUCTION

COMPARISON OF THE VACUUM CAPACITOR WITH THE MICA, OIL, AIR AND PRESSURE TYPES

The present and potential advantages of vacuum capacitors, compared with air, mica, oil and pressure types will be quickly appreciated by a study of the following tabulation. The comparison is based on a unit or combination for each class condenser of 1000 uuf, 30,000 volts rating. Sizes, values, weights and costs shown are approximate.

Size	Vacuum 6 1/2" x 4 1/4"	Air 10 condensers in parallel 14 1/4" x 9 3/4" x 12 1/4" ea.	Mica 4" x 4" x 6"	Oil 3 cond. in series. 15 1/2" x 18" x 5 1/4" ea.	Press. Cond. 12" diam. 30" long
Total Weight	5 lbs.	250 lbs.	10 lbs.	120 lbs.	100 lbs.
Current	100 amps. 30 Mc.	70 amps. 5 Mc. 140 amps. 10 Mc.	20 amps. at 3000 KC	100 amps. at 540 KC	60 amps.
Cost	\$100	\$200	\$100	\$450	\$300
Comparative Characteristics	Completely enclosed, needs no cleaning; self-healing; immune to changes in atmospheric conditions; minimum capacity drift.	Needs frequent cleaning and affected by changes in air pressure and humidity.	Needs no maintenance but is ruined by puncture of insulation.	Relatively high loss but is dependable and self-healing on arc-over.	In case of arc-over may have to be taken apart to clean plates. Requires connection to nitrogen tank and intermittent check on the pressure.

UNITED ELECTRONICS, 42 Spring Street, Newark 2, N. J.

CTC

CUSTOM OR STANDARD

...The Guaranteed Components

FIND YOUR ELECTRICAL and ELECTRONIC COMPONENTS HERE

Slug Tuned Coils and Coil Forms. Single layer or pie type windings to your specifications. Forms of quality paper base phenolic or grade L-5 silicone impregnated ceramic. Mounted bushings are cadmium plated brass; ring type terminals are silver plated brass. All units include slugs and mounting hardware. Type C (above) available with retaining collars of silicone fibreglas. Note: Regular, CTC Coil Form Kit is available. Also available, new Coil Kit, Type X2060, with windings on standard LS-6 Forms.

Silver-Plated Brass Standard Terminal Lugs. Twenty-eight different types, each available in varied shank lengths, coated with water dipped lacquer for protection during storage. Other finishes include hot-tin, electro-tin, electro-tin lead, cadmium or gold plate on special order. Pressure and hand swagers available for mounting all terminals. Note: Combination screw and solder terminals are available in 3 sizes.

Insulated Terminals. Grade L-5 ceramic, silicone impregnated for maximum performance over broad humidity range. Rivet or screw stud type. 5 lengths of dielectric. Also available: phenolic in rivet or screw-stud mountings; ceramic with internal screw thread.

Hardware. Includes panel screws, thumb screws, dial locks, shaft locks, handles and handle ferrules, tube clamps, terminal board brackets, standoff mounts and spacers.

Terminal Boards. Standard type in cotton fabric phenolic, nylon phenolic or Grade L-5 silicone impregnated ceramic. Custom boards of cloth, paper, glass laminates (phenolic, melamine or silicone resin) imprinted as required, lacquered or varnished to specifications MIL-V-173 and JAN-T-152.

All materials, processes, finishes meet applicable government specifications.

Custom Made CTC Components will be quickly made to your specifications in production quantity.

Write for Free Catalog #400 containing complete data on the entire CTC line. Includes engineering drawings on items pictured here as well as many other CTC components.

CAMBRIDGE THERMIONIC CORPORATION, 438 CONCORD AVE., CAMBRIDGE 38, MASS.

West Coast Stock Maintained by: E. V. Roberts, 5068 West Washington Blvd., Los Angeles 16, California

KEEP YOUR PRODUCTION ROLLING!

Thin wall 3-core construction assures flux continuity...prevents "dry" joints.

Contains only Virgin tin & lead. Tin - 99.75% pure. Lead - 7.97% pure.

Only Multicore has Ersin Flux - high grade water-white rosin, homogeneously activated.

Non-corrosive even after long exposure to humidity.

Sets metal rapidly due to reduced surface tension.

Vigorous fluxing action.

Leaves only pure rosin after soldering.

Perfect joints on difficult metals & alloys even if oxidized.

Total % flux to solder less than any single core solders.

Rigid quality control insures same standards on every Multicore reel.

Conforms with Q-S-571-b and all other pertinent Federal specifications.

On the Assembly line...time is money!

Save the time lost in producing "rejects"; the time lost with ordinary "slow" solders on difficult metals; the time lost in finding "dry" joints.

Save the time...save the money...the efficiency of your plant...the good name of your product!

In every part of the World, leaders in Electronics are insuring their production efficiency with Multicore.

Nothing less will do...
MULTICORE IS THE WORLD'S FINEST SOLDER!

LORD MOUNTINGS *Protect* ELECTRONIC EQUIPMENT from VIBRATION and SHOCK DAMAGE

Plate Form Vertical Snubbing Mountings
—isolate steady vibration plus severe shock. Loads up to 610 pounds per mount.

Plate Form Mountings
—Standard—isolate steady vibration. Stable, compact—easily installed. Loads 1/2 to 120 pounds per mount.

Multiplane Mountings
—isolate vibration from all directions. Light in weight, small in size, they are widely used to mount electronic units.

***Temproof Mountings**
—For Airborne Electronic Equipment
• Designed for use with JAN-C-172A cases.
• Exceed AN-E-19 drop test requirements.
• Maintain efficiency from -80° to +250° F.
*Temperature-proof

Meter Mountings—protect small meters and instruments from destructive vibration. One piece construction, easily installed . . . many sizes for most commonly used models.

VIBRATION and shock are natural enemies of electronic equipment and precision instruments . . . To control the damage which these enemies can do, Lord Vibration Control Mountings and Bonded Rubber Parts are used to very profitable advantage. More than a quarter century's experience in dealing with vibration and shock is yours when you take advantage of Lord engineering assistance. The result of such consultation is full protection for electronic units and sensitive instruments by correctly designed and precisely manufactured Lord Mountings and Bonded-Rubber parts.

If You Supply Equipment to The Armed Forces . . . Lord engineers will assist you to select the type of shock and vibration protection which meets the requirements of applicable specifications. As the major supplier of flexible mountings during World War II, Lord's knowledge and experience will enable you to supply approved equipment protection which is economical, efficient and easily installed.

LORD MANUFACTURING COMPANY • ERIE, PA.

Tube Form Mountings
—Standard—for steady vibration and severe shock. Have great radial stability. Loads from 1/2 to several thousand pounds.

Tube Form Vertical Snubbing Mountings
—isolate steady vibration . . . cushion shock. Good for mobile equipment.

F.H.P. Flexible Couplings—have exceptional torsional flexibility . . . accommodate parallel and angular misalignment. Ratings from 1 fiftieth to 1 hp.

Radiofocal Mounting Bases—Maximum Protection for Airborne Equipment

- Insure protection at steep inclinations.
- Dampers prevent excessive motion.
- Equipment does not sag or droop.
- Made to fit JAN-C-172A cases.

Standard Piezo...

SYNONYMOUS with *Quality*

In crystals "precisioneered" by Standard Piezo Company, only the finest grade Brazilian quartz obtainable is used. In the processing of blanks towards completed crystal units, constant attention is given to all the little details which contribute to a quality product. This is done by means of a system of inspection and quality control developed through years of experience. These are but a few of the factors which have kept Standard Piezo at the forefront of the industry.

Write today for our attractive catalog which completely illustrates and describes each item in the Standard Piezo line. Standard Piezo Company welcomes inquiries, not only for catalog items but for any special application which you may require.

Standard Piezo
COMPANY
CARLISLE, PENNA.

TYPE 1

1,000—12,500 KC

Compact units for transceiver equipment enclosed in an extruded aluminum shield, making it dust proof and resistant to rough treatment. Fixed air gap mounting of the crystal gives stability under vibration and shock. CAA type certified in frequency range 1,200 kc to 10,000 kc. Type 1a furnished with one quartz crystal. Type 1b furnished with one quartz crystal and heater thermostat unit. Type 1d furnished with two quartz crystals but no heater and thermostat combination.

TYPE 20

160 KC to 100 MC

A highly stable, plated, crystal unit, hermetically sealed in a container filled with dry nitrogen. It is the ideal unit for applications where space and weight are a prime consideration and where it is desirable to cover a large frequency range in a given holder. Specially designed mounting gives excellent vibration and shock results. CAA type certified in the frequency range 1 mc to 50 mc.

TYPE 16P

200—20,000 KC

This unit consists of a plated crystal, mounted in a gasket sealed phenolic holder. Designed to operate under conditions where vibration and shock are present. CAA type certified at 200 kc.

TYPE 7

1,750—12,500 KC

Heavy duty holder of molded phenolic with finger pull top and equipped with banana plugs. Pressure mounted unit with gasket sealed holder openings.

TYPE 11

2,250—12,500 KC

This unit is designed to give optimum operation and accurate performance under difficult conditions. It has a variable pressure spring permitting slight frequency adjustments. The unit may be supplied with a fixed air gap, pressure mounted crystal if so desired. This unit is recommended for mobile, marine, and other portable frequency control applications.

TYPE 40

This is a temperature controlled oven accommodating one or two of the type 20 crystal units. Normal operating temperature is 75° ± 5° C with the ambient of -55 to 70° C. Oven draws approximately .9 ampere at 6.3 heater volts.

TYPE 9K

100—7,000 KC

This unit has a precision heater and thermostat to maintain constant temperature control. Heater voltages of either 6, 10, 12, or 15 volts are available. Oven temperature normally set to 55° C.

Q. WHY WIRE?

**A. Cut
Production
Costs**

with "photocircuits PRINTED CIRCUITS" and Dip-Soldered Electronic Sub-Assemblies

CREATE competitive **PROFIT** advantages through lower wiring costs, reduced assembly time, exact reproducibility of circuits, improved reliability, and miniaturization!

Here are a few answers to questions asked about Photocircuits Printed Circuits:

Q. How much less cost?

A. Reductions to over 50% in wiring costs alone have been experienced by manufacturers.

Q. How few "printed circuits" can be bought profitably?

A. As few as 10 circuits are frequently used with profit.

Q. What "printing" methods are used?

A. Any of several well-known printing processes can be used... of which photography, silk screening and

offset printing are a few.

Q. Can "cross through" connections on 2-sided printed circuit chassis be made?

A. Yes, by electroplating... to eliminate costly hardware and assembly time... and to assure greater reliability.

Q. What applications are most generally suited for Photocircuits Printed Circuits?

A. Applications extend to Micro-wave plumbing, Radio and TV chassis, I.F. strips, Antenna filters, Terminal boards, Wiping switches, Flush commutators etc.

PRECISION RADIO EQUIPMENT

Collins 300J 250 Watt Broadcast Transmitter

32V-3 Amateur Transmitter

Collins New Mechanical Filter

Collins 75A-3 Amateur Receiver

Collins 618S 144-Channel HF Transceiver

BROADCAST TRANSMITTERS

AM

300J	250/100 watts
20V	1000/500 watts
21E	5000/1000 watts
21M	10,000/5000 watts

SPEECH EQUIPMENT AND ACCESSORIES

Collins complete line for AM and FM broadcasting is listed in the new *Collins Speech Equipment Catalog*. It pictures and describes a wide variety of high quality speech input consoles, remote equipment, rack mounted audio units, test and control apparatus, transducers, power supplies, meter and jack panels, terminal boards, cabinets — everything needed in building a new station or modernizing an old one. *Collins Speech Equipment Catalog* should be kept in the files of all broadcast engineers as a standard reference work. Your nearest Collins office will be glad to supply a copy to your station upon request.

AMATEUR EQUIPMENT

75A-3 Receiver incorporates the new Collins Mechanical Filter — a new concept in receiver performance. Either 3 kc or 800 cycle bandwidth selected by a front-panel switch. AM signals can be tuned to accept the carrier and either one of the sidebands at will while the other sideband is rejected. Ideal for reception of single sideband signals. It is an extremely stable double conversion superheterodyne receiver, covering the 160, 80, 40, 20, 15, 11 and 10 meter bands. Permeability tuned; crystal controlled h-f oscillator; dial calibrated directly in frequency; extremely sensitive with great tuning accuracy and high signal to noise ratio; 50 db image rejection on all bands; automatic noise limiter; amplified, delayed AVC with quick recovery; miniature tubes.

Price including 3 kc mechanical filter, less speaker... \$530.00
10" speaker in matching cabinet... 20.00

KW-1 Transmitter, one kilowatt input AM phone and CW; covers 160, 80, 40, 20, 15, 11 and 10 meter bands; designed to avoid TVI with additional attenuation in the antenna network and filtered control leads; completely shielded r-f assembly; usual excellent Collins audio with speech clipper and high level low pass filter for bandwidth limitation; single control exciter tuning; single bandwidth switch for entire transmitter; tuning dial similar to 75A-3; output 50 ohms (2.5 to 1 standing wave ratio); PA tubes conservatively operated at one kilowatt. Price... \$3,850.00

32V-3 Transmitter, 150 watts input CW, 120 watts phone; Collins 70E-8A VFO controlled, handswitching, gang tuned; designed for maximum reduction of TVI by means of added tuned circuits in the exciter and an added L section in the unbalanced pi output network plus double shielding and filtering of essential leads. Price... \$775.00

35C-2 Low Pass Filter inserted in well shielded transmission line from 32V-1, 2, or 3, provides approximately 75 db attenuation of harmonic emissions at the television frequencies. Price... \$40.00

INDUSTRIAL COMPONENTS

Autotune, a Collins patented automatic rotary positioning device used for accurate remote control of communication receivers and transmitters by means of adjustable positions. It can also be used for the control of many types of industrial equipment.

Autopositioner, a mechanism which will set a shaft accurately to any one of several fixed positions by remote control. It is fast and quiet and is built for long service.

Instrument Type Motors, high efficiency hysteresis type motors are available in both 1" and 2" frame sizes for special applications to airborne and ground communication transmitters and receivers.

Mechanical Filter gives a close approach to the ideal rectangular selectivity curve by using resonant mechanical elements, rather than tuned electrical circuits. Many operating frequencies and band widths are available. When used in a receiver's IF strip, the carrier and one sideband of an AM signal can be accepted while the other sideband is rejected. 3 kc bandwidth filter is ideal for AM or SSB.

AVIATION EQUIPMENT

618S 144-Channel HF Transceiver, 100 watt power output on 144 crystal controlled channels. Automatically tuned elements insure maximum flexibility and high power output.

51R-3 VHF Receiver, for navigational use of the omnidirectional range.

17L-3 180-Channel VHF Airborne Transmitter, frequency range 118.0 to 135.9 megacycles. All 180 channels easily selected on a simple, positive remote control system. Power output conservatively rated at 8 watts.

51V-2 Glide Slope Receiver, designed for reception of 90/150 cps tone modulated glide slope signals on any of the twenty channels in the UHF range.

**AVIATION • COMMUNICATIONS
FOR EVERY RADIO REQUIREMENT**

Collins 51V-2 Glide Slope Receiver, Approach Horizon, and Course Indicator

Collins 30K-5 2-Channel Communication Transmitter

Collins 430 Series Communication Transmitter

17M 360-Channel VHF Airborne Transmitter, full 360 channels in the range of 118.0-135.9 mc. 50 watt power output with phone emission. Meets ARINC Spec. #520.

51X 360-Channel VHF Airborne Communications Receiver companion to 17M Transmitter. Complete new design to meet ARINC Spec. #520 for 50 kc bandwidth. Has the sensitivity, selectivity and spurious response rejection characteristics required for flight and airport traffic control.

51Z Marker Beacon Receiver is completely dependable, highly selective and free from spurious response. Operates lights with minimum "twilight" indication.

37J-3 VHF Airborne Navigation Antenna, for use with the 51R-3 navigation receiver. Drag, 2.63 pounds at 250 m.p.h.

37R-1 VHF Airborne Communication Antenna, for use with Collins VHF two-way communications system.

37P Airborne Glide Slope Antenna mounts on nose of aircraft, and provides greatly improved pickup and receiver performance.

Integrated Flight System simplifies ILS approaches by presenting precisely computed steering information in conjunction with simplified pictorial type instruments. Instrumentation also simplifies enroute navigation.

Navigation System, the Collins NC-101, provides the pilot continuous position information by automatically computed triangulation, using two VOR systems.

478C IFS Test Equipment, bench tester for IFS Computer, automatic pilots and other flight director equipments.

479T-2 Signal Generator, a precise ramp-test equipment for airborne VOR localizer and glide slope receivers.

479S-3 Audio Signal Generator is used in precision bench testing of omni-range, localizer and glide slope receivers. Output signals for VOR, localizer, and glide slope audio circuit investigations are provided.

GROUND STATION EQUIPMENT

231D-20 Autotune Transmitter, frequency range 3-26 mc. 2.5 to 3 kilowatts phone; 5 kilowatts CW.

430 Series Transmitters, 1 or 2 kilowatts, conservatively rated, phone, CW or FSK. Simultaneous transmission on two or more frequencies if desired. Transmission on any of ten instantly selectable, pre-set channels over entire range from 2-30 mc. Unitized chassis construction combines production economies with custom requirements.

16F-14 Autotune Transmitter, frequency range 2-20 mc. 300 watts phone. 500 watts CW.

30K-4 Transmitter, 2 channels, pretuned to any frequency between 2 and 30 mc. 300 watts CW. 250 watts phone.

32RA-9 Transmitter, 4 channels, pretuned to any frequency between 1.5 and 15 mc. 75 watts CW. 50 watts phone.

51J-3 Receiver provides continuous coverage from 500 kc to 30 mc, with very high stability and tuning accuracy.

51M-6 VHF Rack Mounting Receiver, single channel, pretuned to any frequency between 118 and 136 mc.

51N-2 Receiver, single channel, for A1, A2, and A3 reception, pretuned to any frequency between 2 and 24 mc. Mechanical filter kits available.

242F VHF Transmitter, rack mounted, providing single frequency operation between 118.0 and 136.0 mcs. 50 watts power into 52 ohms.

In requesting complete technical information on any Collins product please specify equipment type number.

NATIONAL VULCANIZED FIBRE

...contributes to an improved product—
copper-clad Peerless Capacitors for Bendix Radios

These copper-clad Peerless capacitors are used by the Bendix Radio Division, Bendix Aviation Corp., on the voice coil circuit and power input lead of their automobile radios. The capacitor is a combination of Peerless Insulation .004 inch thick copper-clad on both sides with .00135 inch copper foil. Punched clean, Ohmeter tests indicate no shorts between the copper foil surfaces. A minimum capacitance of 200 mmf is obtained.

This practical use of Peerless Insulation, a paper-thin grade of National Vulcanized Fibre, is typical of the countless contributions made by *the material of a million uses*—National Vulcanized Fibre—to business and industry.

National's Peerless Insulation was the *first* fish paper and has been accepted as standard ever since. It is smooth, strong and has excellent forming qualities. Write for detailed literature and engineering service information—

NATIONAL VULCANIZED FIBRE CO.

Wilmington

Offices in

Delaware

Principal Cities

Since 1873

National Laminated Plastics
nationally known—nationally accepted

Peerless Insulation, possessing high dielectric strength plus excellent rigidity, is copper-clad on both sides to make these capacitors. The punched parts, selling for approximately 7/10 of one cent, replace commercial types of capacitors costing five or six cents.

SEE NEXT PAGE

n a t i o n a l LAMINATED PLASTICS

for the development of
economical, efficient products

The first laminated plastic, National Vulcanized Fibre, has been used broadly for more than seventy years in many industries. As an insulation material, it helped the electrical industry emerge from its embryonic stage into a full-fledged

economic necessity, broadening the avenues of all economic enterprise. Today, National Vulcanized Fibre and Phenolite, laminated plastic, reach into all industry with thousands of applications; help create more efficient products.

A tough, hornlike material possessing excellent electrical properties and great mechanical strength. It is a converted cotton cellulose, which is chemically changed into a new structural form, having high dielectric strength, excellent machinability, good forming qualities, great resistance to wear and abrasion, long life and light weight. Sheets, rods, tubes, special shapes.

A laminated plastic, bonded into its primary forms, sheets, rods, and tubes, under heat and pressure. It has an unusual combination of properties . . . a good electrical insulator, great mechanical strength, high resistance to moisture; ready machinability. Standard colors are natural, black, and chocolate; mirror, semi-gloss, and dull finishes. Sheets, rods, tubes, special shapes.

The first fish paper—developed for electrical insulation and accepted by the industry because it is strong, smooth, flexible and has excellent forming qualities. It is uniform in thickness; has high dielectric strength. Made in sheets, rolls, and coils in all practical width and thicknesses.

WAREHOUSE STOCKS AND FABRICATING FACILITIES

National Vulcanized Fibre and Phenolite in their primary forms are distributed to our sales and fabricating plants and warehouses throughout the country—selected as to render efficient service to the large industrial sections of the United States and Canada. These strategically located warehouses for stocking the standard forms of National Vulcanized Fibre and Phenolite in stock are located in Wilmington, Chicago, Boston, New York, San Francisco, Los Angeles, Seattle, and Toronto, Ontario.

Beta

- The complete line of high voltage power supplies

Over 120 Standard Designs...
 Ranges from 0-300 to over 300,000 Volts

Beta-Built equipment incorporates proved design features to assure long service life and dependable operation. Beta's experience in the manufacture of power supplies enables our organization to provide superior equipment at lower cost than "shop-built" supplies with the certainty that the requirements of the installation are met. Important, too, is the consulting

service provided by Beta Engineering Representatives to assist you in selecting the appropriate design for your requirements. Whether you require a stock design or special equipment, their services are available without obligation.

Write for detailed information on Beta-Built High Voltage Power Supplies—or for information on a specific problem.

Six Typical Designs

- 1 Model 201
0-30 KV, 2 MA, unregulated. Positive, negative or reversible polarity. Fully portable.
- 2 Model 224
0-40 KV, 2 MA, unregulated. Positive, negative or reversible polarity.
- 3 Model 2008
0-50 KV, 2 MA, unregulated. Positive, negative or reversible polarity.
- 4 Model 217
0-100 KV, 2 or 5 MA, unregulated. Positive, negative or reversible polarity.
- 5 Series 2047
D-C Overpotential Testers. Up to 120 KV and up to 5 MA ratings. Sharp overload cutoff characteristic. Line voltage stabilized.
- 6 Model 213
0-250 KV Cockroft-Walton Generators. Up to 5 MA. Unregulated or regulated. Positive, negative or reversible polarity.

for

PRECISION RINGS

DEMCO collector rings and ring assemblies give you these advantages . . .

ECONOMY . . . laminated construction provides contact metal where required . . . base metal for strength.

HIGH FINISH . . . on contact surface for long wear and noise-free operation.

PRECISION MADE . . . it is unnecessary to add further machine operations.

COMPLETE . . . rotor or pancake type multi-ring and ring-and-brush assemblies supplied.

PRECISION TUBING

PRECISION DRAWN . . . ID held as close as $\pm .001$. Solid coin silver, brass or aluminum Rev. MIL-T-85.

LAMINATED SILVER . . . on ID for

- Low attenuation
- Corrosion resistance
- Highest mirror finish

Laminated silver ID and OD for round tuned lines.

PRECISION "KNOW-HOW"

With nearly sixty years of experience in the production of both laminated and solid precious metals, MAKEPEACE is today an accepted "headquarters" for the many special precious metal products and assemblies called for in the electronic field.

Our staff of thoroughly experienced design and production engineers and metallurgists . . . as well as our research and testing laboratory . . . are all at your service.

Your inquiries are cordially invited and will receive our prompt and interested attention.

THE STANDARD OF QUALITY

HICKOK
INSTRUMENTS

FOR OVER FORTY-THREE YEARS

Laboratory

TUBE TESTER

Engineer's Portable

Designed with professional accuracy for engineers in the radio, television, aviation, communication and industrial fields. Tests all tubes normally encountered in electronic work. Provides increased accuracy for testing high gain type tubes. Permits choice of 3 AC signals. Adjustable DC bias, metered to within 1% giving highest accuracy of the tube performance test. 8 other models available.

Model 539A

type tubes. Permits choice of 3 AC signals. Adjustable DC bias, metered to within 1% giving highest accuracy of the tube performance test. 8 other models available.

Capacitance **METER**
and **TRUE VTVM**

An accurate multi-purpose instrument for laboratory and industrial use. Measures wide ranges of inductance, capacitance, resistance; current and voltages, both AC and DC. Built with 9 inch Zero-Center scale. Matched high frequency probe is included to make this instrument a True VTVM. Peak-to-peak or RMS. Useful to 300 MC. DC probe is available to extend range to 30,000 volts.

Model 209A

frequency probe is included to make this instrument a True VTVM. Peak-to-peak or RMS. Useful to 300 MC. DC probe is available to extend range to 30,000 volts.

Microvolt

SIGNAL GENERATOR

125 KC to 120 MC and 150 to 220 MC on fundamentals

An accurate microvolt signal generator that meets the needs of such high-frequency users as police, fire dept. and military as well as industrial laboratories. Calibrated output from 0.5 to 100,000 microvolts. Also available: 292XAL with continuous coverage. 125KC to 165MC on fundamentals.

Model 292X

100,000 microvolts. Also available: 292XAL with continuous coverage. 125KC to 165MC on fundamentals.

5" Oscilloscope

An outstandingly versatile 'scope designed for general purpose industrial laboratory and television applications. Both driven and recurrent sweep. Wide band amplifier: Frequency response DC, 0-4.5 MC, down 3 db. 17 M. V. per inch sensitivity.

Model 640

Calibrating voltages, triggered sweep, provision for Z-axis modulation, combination light shield, and camera base are provided. Stable, shielded and shock mounted. Three other models are available.

Write for technical details on the complete HICKOK Test Equipment line.

Electrical

INDICATING METERS

For over 43 years HICKOK has pioneered, developed, and improved electrical indicating instruments. Today, HICKOK manufacturers meters of all classes ranging from the most accurate laboratory types with an accuracy of 0.2% of full scale deflection on down to small pocket portable types with an accuracy of 1 1/2%.

A complete line of switchboard types for use on electrical and power switchboards are available in 6" square, 6" round, horizontal edgewise, and up to the very large 14" with an accuracy of 1% or better. Provided in all AC and DC ranges including amperes, volts, watts, frequency, power factor, etc.

A very complete line of panel meters in both round and square types from 2 1/2" to 9" are also available in the popular microammeter, ammeter, voltmeter, wattmeter, etc. This panel meter line is exceptionally complete and includes the very latest ruggedized types to meet military specifications.

HICKOK has pioneered and perfected the smaller panel size 250° meters with a scale 2 1/2 times as long as the conventional panel instrument. Also available, are hermetically sealed 250° meters as well as the standard molded types in many sizes and ranges.

HICKOK has also introduced the internal pivot design to provide a high standard of accuracy and dependability in an instrument with removeable pivots. Though adding considerable utility, this HICKOK sturdy assembly is even thinner than most external pivot designs. Among special movements developed by HICKOK are: electro-dynamometer, galvanometers, true logarithmic deflections, special curves for special purposes and ruggedized designs for highest shock tests.

Full technical information on the complete line of HICKOK instruments and test equipment is available on request. Kindly list details of your requirements.

for Improved Performance
and Even Longer Life

Variac

with NEW Duratrak Construction

Featuring

Good Regulation — output voltage is substantially independent of load

Very High Efficiency — variable autotransformer rather than resistive control makes for very low losses

Smooth Linear Control — the calibrated dial enables accurate setting to any output voltage within the VARIAC's range

Long Life — the new DURATRAK construction insures a life as long as that of fixed-ratio power transformers operated at rated loads

Unaffected by Surges — VARIACS with DURATRAK will withstand initial surges as high as ten times rated current

Small Size — the VARIAC is smaller than any other control of equal power rating

Rugged Mechanical Design — dependable, long-life construction — no delicate parts — easy conversion from panel to table mounting

Minimum Maintenance — an occasional wiping of the brush track with an alcohol-moistened rag (not supplied) is all that is required — under normal conditions the new DURATRAK will not deteriorate

The VARIAC® is the original continuously adjustable autotransformer first made available by General Radio Company over 20 years ago.

Hundreds of thousands of VARIACS have been sold for industrial and laboratory use throughout the world.

NOW a new, improved, brush-track coating is announced to make the VARIAC even more reliable. The new DURATRAK coating — an alloy of silver applied by a carefully controlled process — eliminates all oxidization problems which may become critical under severe conditions of operation.

The DURATRAK coating limits failure to the same factors which affect standard fixed-ratio transformers... breakdown of insulation due to prolonged overheating, resulting from operation at currents in excess of rated over extended periods.

The new DURATRAK brush track coating is but another step in a continual process of development, designed to make the VARIAC the best voltage control you can obtain.

The VARIAC line is listed on the adjacent page. These autotransformers may be used in many circuits to control any device operating from a-c lines. VARIACS can be used singly or ganged for either higher power or for polyphase connections.

Consisting of Variac UNITS and ASSEMBLIES

All "V" model VARIACS have the new DURATRAK — an improved brush track which sets a new high standard in reliability. VARIACS now have higher ratings per unit volume — will operate at overloads for longer periods — will withstand initial surges ten times their rated current — are practically maintenance free.

Single Phase
(60~)

Single Phase
(400-2400)
~

Three Phase
(60~)

- (a) KVA as listed = normal input line voltage x maximum output current.
 (b) Maximum output voltage = line input voltage, for "Line Voltage" output connection.
 (c) Rated current (amperes) should not be exceeded for the overvoltage connection. Output KVA for overvoltage connection = output voltage x rated current.
 (d) Maximum current (amperes) can be drawn at maximum voltage for the line-voltage connection only.

(e) On 208-volt circuits, current ratings remain unchanged, but voltage range and KVA ratings are reduced in proportion to voltage. Overvoltage connections may be used, but are not recommended on 230-volt Wye connections.

All 60-cycle VARIACS can be used at rated voltage and current from 50 to 400 cycles and over, except the 200-B when connected for 0-135 volt output

These VARIACS have the new Duratrak construction.

OHMITE®

FOR

Dependability

RHEOSTATS

All-ceramic and metal, close control rheostats for unsurpassed dependability and smoothness of operation. Ten stock sizes, 25 to 1,000 watts.

TAP SWITCHES

Five compact models, 10 to 100 amperes, AC, up to 12 taps. All-ceramic and metal construction. Silver-to-silver contacts, with self-cleaning rotor.

RESISTORS

A wide range of dependable, fixed, adjustable, tapped, and non-inductive, power wire-wound resistors. Also a wide range of precision resistors.

R. F. CHOKES

Single layer R. F. plate chokes and power line chokes, on steatite or plastic cores. Protected by a special moisture-resistant coating.

Be Right with **OHMITE**

General Plate Products

that solve your Electronic Problems

TRUFLEX THERMOSTAT METALS

TRUFLEX thermostat metals are manufactured in a wide variety of types, each with a different reaction to temperature. Uniformity of metal insures accurate and consistent performance. Precision parts fabricated to exact specifications.

COMPOSITE METALS

Available in practically any combination of precious to precious, precious to base or base to base metals. Combinations for electronics include aluminum-clad iron, nickel-clad iron for anode materials.

ALCUPLATE

Copper-clad aluminum for component cases or cans, chassis, cooling fins, etc., light weight, excellent conductivity. Copper surface is ideal for soft soldering and electroplating.

COMPOSITE CONTACT MATERIAL

Precious metals and alloys bonded to base metals available in following types — overlay, single and double edgelay, single and double inlay, Top-Lay, ready for you to fabricate into contacts.

COMPOSITE CONTACTS

General Plate can supply all types of fabricated composite contacts, buttons, rivets, contact assemblies made to customer's specifications. These contacts give electrical conductivity and long life at reduced costs.

WAVE GUIDE and COLLECTOR RINGS

RECTANGULAR WAVE GUIDES. Solid silver, silver lined brass or aluminum. Sizes to government specifications.
COLLECTOR RINGS. Solid silver or precious metal on base metal. All sizes.

GENERAL PLATE PRODUCTS

- **Alfer, Alnifer, Nifer** — Aluminum and Nickel-clad steel for anode plates.
- **Alcuplate®** — Copper-clad aluminum for component cases, chassis, cooling fins, condenser blades, etc.
- **Alsiplate®** — Silver-clad aluminum for lightweight condensers, etc.
- **Composite Contacts and Contact Materials** — Increased strength and longer life at reduced cost.
- **Collector Rings** — Fabricated from solid precious metals or precious-clad base metals. Sizes ranging from fraction of an inch to few feet in diameter.
- **Truflex® Thermostat Metal** — Sheet, strip, formed elements and assemblies produced to specification.
- **Thin Gauge Metals** — Beryllium copper, nickel, pure beryllium, Haynes Stellite alloys, etc.
- **Platinum-Group Metals** — Sheet, wire, tubing, parts of all types. Complete assay and refining facilities for platinum-group metals.
- **Silver and Gold Brazing Alloys** — Available as sheet, wire, powder and fabricated parts.
- **Bondwich** — Solder-clad brazing shim for carbide-tipped tools.
- **Bronco** — Phosphor Bronze-clad copper for high conductive springs.
- **Conflex** — Copper-clad spring steel for electrical and thermal conductive springs at low cost.
- **#720 Manganese Age-Hardening Alloy** — Corrosion resistant spring material for diaphragms, springs, finger stock, etc.
- **Rectangular Wave Guide Tubing** — Wide range of sizes to government specifications.

Write for catalog PR700

General Plate Composite Metals, made by metallurgically bonding one metal to another, are available in sheet, strip, tubing or wire in various widths, thicknesses and diameters.

Silver, gold and platinum-group metals bonded on base metals give solid precious metal performance at a fraction of the cost of solid precious metal. The precious metal provides specific performance requirements such as electrical conductivity and corrosion resistance while the base metal provides workability, strength, and solderability.

Composite base metals provide a new group of engineering metals with properties not available in solid metals. Their use frequently results in lower material costs as compared to solid metals.

In many electronic applications further economy results when General Plate supplies fabricated parts ready for assembly into your product. General Plate makes an infinite variety of fabricated parts, such as electrical contacts, collector rings and TRUFLEX thermostat metal parts to customer's exact specifications.

General Plate Engineers will gladly help you with your problems.

**You can profit by using
General Plate Composite Metals!**

AMPEX

MAGNETIC RECORDERS

the finest tape recorders

AMPEX AUDIO RECORDERS

Series 300 console

Series 350 table top console on base

Series 400 single case portable

Model 450 console on base

For uses where utmost reliability, "perfect" fidelity and accuracy of timing are of prime importance, Ampex Tape Recorders are universally preferred. America's four major broadcasting networks, the country's leading phonograph record manufacturers and various important musical organizations are among those whose usage has established Ampex as the world's standard of excellence in sound recording.

SERIES 300

These, the finest of the Ampex line, are the machines used where speaking or musical performances justify the best recordings it is possible to make. Because of their supreme reliability, the 300 Series machines are used by major radio networks to originate, delay and rebroadcast important radio shows. Record manufacturers use the Series 300 for master recordings because of their high signal-to-noise ratio and low flutter and wow.

SERIES 350

Newest of Ampex's general purpose audio recorders, the 350 has a 30° slant on the top-plate. This puts reels, editing knobs and all controls within easier reach of the operator. Tape editing is faster and less tedious. A three motor tape transport (also used on the higher priced Model 300) provides excellent tape control and utmost reliability of operation. The Series 350 is unusually accessible for servicing.

SERIES 400

The Series 400 was the first tape recorder to bring the Ampex standard of performance within reach of smaller radio stations, schools, conservatories, high fidelity enthusiasts and semi-professional users. The 400 Series portables are the lightest of the Ampex models and consequently the best suited for professional quality recordings on location.

MODEL 450

For background music, automatic broadcasting and TV test patterns, the Model 450 Continuous Tape Reproducer provides up to 8 hours of continuous unrepeated program. The Model 450 uses 14-inch NARTB reels with double track pre-recorded tapes. Starting, stopping, reversing and program repeating are controlled automatically with no attention from a standby operator.

TAPE DUPLICATOR

Designed to make duplicate tapes at minimum labor cost, the Ampex Tape Duplicator makes from 1 to 10* duplicates simultaneously and employs a time-saving speedup. Double track tapes are made in one pass. Fidelity is high (see specifications). Duplicates of any standard tape speed can be made from masters of any standard speed.

*User has the option of buying from 1 to 10 slaves to operate from one master unit.

*SPECIFICATIONS

	Series 300	Series 350	Series 400	Model 450	Tape Duplicator
Frequency response (Tape speeds shown are not all available in all models)	15 in/sec. — 30 to 15,000 cps. within ± 2 db 7½ in/sec. — 40 to 15,000 cps. within ± 4 db 40 to 10,000 cps. within ± 2 db 3¾ in/sec. — 50 to 7,500 cps. within ± 4 db				
Signal-to-noise ratio (by NARTB Standards)	Over 60 db	Over 55 db	Over 55 db	Over 50 db	Over 45 db
Flutter and wow	Well under 0.1% rms. at 15 in/sec.	Well under 0.2% rms. at 15 in/sec.	Well under 0.2% rms. at 15 in/sec.	Well under 0.4% rms. at 3¾ in/sec.	Ampex Data Bull. 3-3-1
Available mounting	Console, rack and portable				Unmounted

*Full specifications are given in bulletins on each individual series or model.

for every field of use

AMPEX DATA RECORDERS

Ampex magnetic tape machines retain test data in "live" electrical form. Hence a playback of the data is like a rerun of the original test. The tremendous "memory capacity" of magnetic tape retains more complete and detailed information than any other data recording method. The data can be scanned, speeded up, slowed down, automatically reduced or converted to any other electrical, visual or physical form. To cover the widest range of data situations, Ampex data recorders are offered with various frequency ranges, numbers of tracks and modes of recording.

F-M CARRIER TYPE RECORDER — MODEL 306

Explosions, shock waves, geophysical data and other highly transient phenomena can be recorded on the Model 306 with excellent "instantaneous" accuracy. Because the machine uses an fm carrier to modulate the signal, the accuracy of the recording is unaffected by minor tape imperfections.

Also, the Model 306 is able to record the vast majority of all mechanical occurrence, since it covers the extremely useful frequency range from 5000 cycles/sec. down to zero (D.C.).

OPTIONS: One to 14 tracks
Rack, console or combination mounting
Record and playback, record only or playback only

WIDE RANGE DIRECT RECORDER — MODEL 307

With a frequency response from 100 to 100,000 cycles per second, the Model 307 is particularly suited to steady state data occurring over a wide range of frequencies. The 307 has had extensive application in fm-fm telemetering, sharing this field with the Model 500 described below.

OPTIONS: Same as Model 306

PULSE WIDTH RECORDER — MODEL 303

This model can record any type of phenomena that lends itself to pulse width coding. Pulses can range from 60 to 1000 microseconds and will be accurate in duration to closer than 2 microseconds. Since each track on the machine may record commutated data consisting of many channels, it is possible to record hundreds of parallel data channels on one tape on a Model 303 machine.

OPTIONS: Same as Model 306

COMBINATION RECORDERS — MODELS 309, 311, etc.

Special Ampex Data Recorders can incorporate combinations of the heads and electronic circuitry of the 303, 306 and 307. Thus the parallel tracks on the same combination recorder might have the widely differing characteristics of each of those models. For example, on its parallel channels such a recorder might have an overall frequency response of 0 to 100,000 cycles/sec.

OPTIONS: Same as Model 306 (but 2 or more tracks)

"LOW FLUTTER" WIDE RANGE RECORDER — MODEL 500

The Model 500 is a four-track, two-speed magnetic tape recorder designed to achieve extreme stability of tape motion while recording information in the frequency range between 100 and 100,000 cycles. Thus it is able to record fm-fm telemetering data without introducing any objectionable data error from small variations in tape speed. It has the lowest known flutter and wow characteristics of any tape recorder—less than 0.1% peak-to-peak by RDB standards.

Console mounting only
Four tracks only

Series 300 data recorder in rack mounting.

Series 300 data recorder in console mounting. Rack mounting of portions of the electronic components may be necessary on multi-track console mounted recorders.

Type ML-6 **Range**
 1.0 mc - 75.0 mc. supplied per mil Type CR-18, CR-19, CR-23, CR-27, CR-28, CR-32, CR-33, CR-35, CR-36, CR-48 when specified. Hermetically sealed metal holder with glass and metal base. Height of can is $\frac{3}{4}$ -inch. Pins are .050" diameter, spaced .486".

Type ML-14 **Range**
 3.0 - 50.0 mc. Identical in performance to Type ML-6 except height of metal can is $\frac{1}{2}$ -inch.

Type ML-6A
 Identical to Type ML-6 except provided with .093" diameter pins.

Type ML-6W **Range**
 3.0 - 15.0 mc. This unit is same as Type ML-6 except wire leads are provided, eliminating need for crystal socket.

CRITICAL QUALITY CONTROL

Pays Off in Performance of

 *Midland*

CRYSTALS

The quality of Midland Crystals — which is another way of saying the completely dependable job they will do for you — is assured by exacting tests and controls through every step of processing. The finest precision equipment and most advanced techniques known to the industry are used by Midland from selection of raw quartz to final sealing of the crystal.

That's a big reason why Midland has climbed to its present position as the world's largest producer of quartz crystals for use in 2-way communications and other electronic devices.

Midland's engineering staff is ready to help in any project involving the use of crystals.

MANUFACTURING CO., INC.
 3155 Fiberglas Road Kansas City, Kansas

Type ML-4 **Range**
 1.0 - 10.0 mc. Supplied per mil Type CR-5, CR-6, CR-8, CR-10 when specified. Holder is phenolic, gasket sealed. Holder size is $1\frac{1}{8} \times \frac{13}{16} \times \frac{7}{16}$ with .093" diameter pins $\frac{1}{2}$ " long spaced .486".

Type ML-13
 Units of this type are currently undergoing tests on experimental basis. The unit is hermetically sealed. Pin dimensions are the same as our Type ML-6. Height of can is $\frac{1}{2}$ -inch.

Type ML-1A **Range**
 2.0 - 15.0 mc. Supplied per mil Type CR-1A when specified. Holder is phenolic, gasket sealed. Holder size is $1\frac{1}{4} \times 1\frac{1}{8} \times \frac{27}{64}$ with .125" diameter pins $\frac{5}{8}$ " long, spaced at .500".

Type ML-10 **Range**
 15.0 - 50.0 mc. Supplied per mil Type CR-24 when specified. Over-all length is 1.055". Pin contacts, .062" diameter.

WORLD'S LARGEST PRODUCER OF QUARTZ CRYSTALS

PRECISION POTENTIOMETERS

Technology Instrument Corporation potentiometers are designed for application in computing devices, instrumentation, electronic control and servo mechanisms — wherever extreme electrical and mechanical precision is an essential requirement.

As a result of years of custom manufacturing a complete line of standard sizes is available ranging from 7 inches in diameter to the sub-miniature 7/8" in diameter,

providing optimum accuracy in minimum size.

Custom design both mechanical and electrical is a featured TIC service. Precision non-linear pots may be designed to meet customer's requirements from either empirical data or implicit functions. Taps and special winding angles anywhere up to 360° continuous winding can be incorporated into both linear and non-linear precision potentiometers.

The type RVP3-S59 Sine-Cosine potentiometer, one of the many types standard with the Technology Instrument Corporation, performs two operations in a single potentiometer assembly . . . two wipers spaced 90 degrees apart yield both sine and cosine outputs.

1. Total resistance: 20,000 ohms plus or minus 5 per cent between terminals 1 and 3.
2. Accuracy: Plus or minus .5 per cent of the peak to peak amplitude.
3. Maximum voltage: Conservatively rated as 80 volts between terminal 1 and 3.
4. Life: Guaranteed for at least 500,000 complete cycles in either direction at 30 rpm.
5. Potentiometer base: 3" diameter, precision machined aluminum.
6. Resistance Element: Karma wire with temperature coefficient of .00002 parts per degree centigrade.

Type RVT TRANSLATORY POTENTIOMETER

Specifications:

Resistance Range—100 to 100,000Ω for 2 1/2 to 6" strokes.
Resistance Tolerance—±5% (Standard).
Independent Linearity—±1% of Total Resistance (Std.).
Silver Overtravel—5/32 inches at either end.
Power Dissipation—Approx. one watt/inch of stroke length.
Ambient Temperature Range—55° to +80°C.
Temperature Coefficient—.00002 part per degree C.
Life—100,000 complete cycles at 30 strokes/min. or less.
Stroke Lengths—1/2 to 15 inches.

TRANSLATORY POTENTIOMETER provides output proportional to a linear displacement rather than a rotary motion of a shaft.

TIC Pongometer (precision potentiometer noise tester) illustrated with TIC instruments. See page 447.

Over 2 years of laboratory development and testing were required to achieve a sealed resistor design up to Mepco's standard of quality. No sacrifice of our standard time-proven features have been made in order to perfect this sealed resistor.

Completely hermetically sealed, these resistors provide perfect protection against immersion and high humidity.

All requirements of MIL-R-93A and JAN-R-93 are exceeded.

The operating temperature is -65°C to $+125^{\circ}\text{C}$. Temperature coefficients of $\pm .003\%/^{\circ}\text{C}$ to $\pm .017\%/^{\circ}\text{C}$ depending upon your requirements. (Refer to MIL-R-93A).

Other sizes available on special order.

MIL-R-93A NEW SEALED TYPES

WIRE TERMINAL TYPES

Designed for direct connection into circuit without use of additional leads.

These resistors are of the same basic construction and materials as standard JAN and MIL types therefore providing equal dependability and long life.

Low Temperature Coefficient alloys provide $\pm .003\%/^{\circ}\text{C}$ from -65°C to $+125^{\circ}\text{C}$ unless otherwise specified by your requirements.

Resistance tolerances range from $\pm 1\%$ down to $\pm .02\%$. Sets of matched resistors can be supplied $\pm .005\%$ or lower.

Special types not shown can be manufactured to your exact specifications.

RESISTORS

MIL-R-93A JAN-R-93 STANDARD TYPES

Our standard time proven JAN, MIL and Commercial lug terminal resistor.

Manufactured and 100% tested in accordance with the applicable specifications, these resistors are used by every major electronic equipment manufacturer in the country.

Reversed and balanced PI-windings for low inductance, with use of only the finest resistance alloys.

Impregnated with approval fungus, moisture and salt waterproofing compounds.

JAN approved non-hygroscopic steatite bobbin, specially treated prior to winding in order to provide additional protection for fine enameled wire.

Protective fungi resistant acetate label.

Rigid hot solder coated brass terminals for easier soldering.

JAN-R-29 METER MULTIPLIERS

Surpass all requirements of JAN-R-29

HERMETICALLY SEALED:

Insures dependable operation under most severe moisture conditions.

STEATITE PROTECTIVE CASING:

Glazed surface prevents high voltage leakage.

WINDINGS:

"Certified" low temperature coefficient resistance alloys properly "aged" to provide long term stability.

REPLACEABLE INTERNAL SECTIONS:

Eliminate complete loss of unit if damaged.

FERRULE TERMINALS:

Heavy nickel plated brass. Corrosive resistant. Fit standard fuse clips.

Why

are more and more industries

specifying Adlake Mercury Relays

for Timing and Control functions?

Because . . . →

Every
Adlake Relay
gives you
these PLUS
Features:

- HERMETICALLY SEALED—dust, dirt, moisture, oxidation and temperature changes can't interfere with operation.
- SILENT AND CHATTERLESS
- REQUIRES NO MAINTENANCE
- ABSOLUTELY SAFE
- MERCURY-TO-MERCURY CONTACT—prevents burning, pitting and sticking.

*...and every Adlake Relay is
tested...and guaranteed...
to meet specifications!*

For complete details of the broad ADLAKE Relay line, send for your copy of the new ADLAKE Relay Catalog. Address: The Adams & Westlake Company, 1953 N. Michigan, Elkhart, Indiana. In Canada, write Powerlite Devices Limited, of Toronto.

VULCANIZED FIBRE THERMOSETTING PLASTICS

phenolic, melamine and silicone resins in paper, cotton fabric, glass cloth and Nylon base materials

CRAFTSMANSHIP...

Workmen of exceptional aptitude in the special characteristics of vulcanized fibre and thermosetting plastic (phenolics, melamines and silicones) have been trained through the years by BAER specialists in fabrication of such materials. Finest craftsmanship and economy can be depended upon.

MANUFACTURING...

20,000 sq. ft. of manufacturing and storage area plus complete standard and special equipment for most efficient production of large or small orders, assure perfection of product and prompt deliveries. BAER standards are well known.

ENGINEERING...

If you have a problem relating to the use of vulcanized fibre or thermosetting plastics, BAER engineers are always available for consultation. BAER experience and manufacturing techniques are especially valuable in the solution of problems in creating odd shapes with special physical characteristics.

All materials are made in strict accordance with NEMA and/or government standards.

MICROWAVE EQUIPMENT

Features:

- Frequency Range 10 mc-21,000 mc — 4 tuning heads
- Single dial tuning to 1% accuracy
- Spectrum Display variable from 250 kc-25 mc
- Frequency Marker for measuring frequency differences of 0-25 mc
- Supplied with 1-12 kmc broad band attenuators
- Automatic voltage selector for each tuning head

Uses:

- Examine pulse spectrum of magnetrons and klystrons
- Measure noise and interference spectrum
- Broad band receiver from 10 mc to 21,000 mc
- Observe and measure harmonic frequencies of transmitter
- Measure signals separated by small frequency differences
- Measure bandwidth of microwave cavities
- Calibration microwave oscillators and preselectors

Features:

- Single dial tuning to 1% accuracy
- Tracked reflector-no wavemeter or klystron modes to set
- Contained 0-120 db attenuator to ± 1 db absolute
- Internal Modulation-pulse-F.M. external pulse input

Uses:

- Test Sensitivity and frequency of radar systems
- External Sync output allows use as X-Band Test Set
- Testing of microwave components, waveguides, etc.

Features:

- Single dial tuning to 1% accuracy — direct reading dial
- High power output
- Provisions for external modulation
- Large frequency coverage

Uses:

- Source of High Microwave Power over wide frequency ranges
- Testing microwave components, waveguides, VSWR etc.
- Antenna measurements

Features and Uses:

- Well regulated supplies for use with Polarad's Series of Microwave Signal Sources
- Used for powering Raytheon's wide band Klystron tubes

Features and Uses:

- Frequency response flat from 10 cps to 20 mc
- Amplifier Gain 320 (50 db)
- Phase linear with frequency over entire frequency range
- Contained high impedance attenuator 0-50 db and external probe
- Wide band amplification problems

TELEVISION EQUIPMENT

Monoscope Signal Source and Synchronizing Generator are used for the generation of composite Video Signals (test pattern) for testing of Video Systems.

Features:

PT-101

Standard RTMA signals for driving camera

Built in 3" oscilloscope for monitoring output signals and for general maintenance

Simple adjustment controls for all output pulses on front panel

PT-102

Standard RTMA composite Video Signals—3 outputs 2 volts across 75 ohms.

Overall resolution 500 lines

Linear high definition test pattern for laboratory and industrial use

Self contained regulated and high voltage supply

Features:

Special Sync separator for TV signals
5" cathode ray tube

Signal calibration accuracy 2%

Large horizontal expansion amplification—24 tube diameters

Frequency response 4 mc \pm 3 db, 60 cps sq. wave less than 2% tilt

Portable instrument that may be rack mounted

Uses:

General purpose oscilloscope, especially designed for Video Wave form analysis

Features:

Monochrome and/or color signals per FCC and NTSC standards

Resolution, 450 lines or better

12" Kinescope

Portable instrument that may be rack mounted

Horizontal and vertical linearity excellent

Uses:

High Fidelity Picture Monitor—Studio or Laboratory

Use with storage and traveling wave tubes

Model:	Output voltage	Output current
PT-110	400-450 V.	250-300 Ma
PT-111	250-300 V.	100-400 Ma
PT-111D	250-300 V.	100-400 Ma
PT-112	250-300 V.	150-800 Ma

Features:

Electronically regulated power supplies
Ripple less than 30 mv. peak to peak

Rack mounting—dishpan construction—
all parts readily accessible

Centering current for T.V. application

For MAXIMUM MICROWAVE PERFORMANCE

MAGNETRONS

Our MICROWAVE magnetron group produces many magnetron tubes ranging in power from one watt to the 300 kw peak. Our magnetrons incorporate the latest techniques including vacuum cast copper anodes, ceramic wherever possible, and superior new cathode materials. Write for quotations on your requirements. We now are in production on the types 2J42, 6027 (2J42A), 4J50, 4J52, 5789 and the ESM-48.

TR TUBES

We are producing a series of broad-band waveguide type TR tubes for use in radar duplexers. Long life, low leakage and VSWR, and short recovery time are intrinsic in the design of all of our tubes. We would be pleased to quote on the 1B63-A, 1B58, 5927, 5863 and similar types.

ATR TUBES

Representing a tremendous improvement over previous types, the new flange mounting 6276 and 6284 are now available either for retrofitting to existing X-band radars or for new designs. These types eliminate the arcing present in old resonant mounts and occupy less space.

MILLIMETER TEST EQUIPMENT

MICROWAVE now produces a series of waveguide components and test equipment for the millimeter regions. We are expanding our production into the lower frequencies such as the popular X and S bands.

SILICON DIODES

MICROWAVE's new 1N23C low-noise X-band mixer diode represents the greatest improvement in this field since World War II. With suitable circuitry system noise figures of less than 10 DB can be realized. Close limits on RF and IF impedances are held in the manufacture of this diode. The 1N23C can be used in existing systems as a direct replacement for the 1N23B with often as much as 3 db gain in signal-to-noise ratio. MICROWAVE also manufactures in large quantity low cost JAN 1N23B, 1N21B, and 1N21C diodes.

BALANCED PAIRS

Two types of matched pairs are available for use in balanced mixers to reduce local oscillator noise contribution. The 1N23BM and 1N23CM are standard diodes matched within narrow limits for conversion loss, RF and IF impedance. The 1N23BMR and 1N23CMR are pairs with one unit of reversed polarity to allow for simplified mixer design.

OTHER DIODE TYPES

MICROWAVE is extending its new techniques to both mixer and video detectors for other frequencies. A series of coaxial types such as the 1N26, 1N78, and 1N53 will be available by late summer. The SD7000 is available for the 6500 mc region. Write for catalog 53S describing our Silicon Diode line in production.

from AMPHENOL'S 5 PLANTS
 . . . precision-made components
 for the Electronics Industry

With its recent expansion of production facilities, AMPHENOL is supplying Radio-Electronics manufacturers quality electronic components in ever increasing amounts. AN Connectors, RF Connectors, RG Cables — all of the AMPHENOL products which have been confidently used by the industry for so many years—are more in demand today than ever before. Matching this mounting demand is the expanding production of AMPHENOL—production to better serve you.

Not only with those products already cataloged is AMPHENOL able to serve you. The AMPHENOL engineering staff is ready to assist you in the design and development of new products for special applications. Whether it is the engineering of a totally new component or the modification of an existing one, they will sit down with you and help plan the part that you have in mind.

AN CONNECTORS AMPHENOL is the leading manufacturer of AN Connectors. For use in critical power, signal and control circuits, these connectors fully meet government specifications. (In fact, prior to the issuance of MIL-C-5015, AMPHENOL AN Connectors incorporated many features requested by the specifications.)

RF CONNECTORS AMPHENOL RF Connectors give never-failing continuity in the linking of coaxial cable. Available in several different types of construction, they have extremely low RF loss and a performance reputation for durability.

RG CABLES The expert engineering that went into the AMPHENOL RG Cables is reflected in their superior record of dependability and efficiency. Produced to rigid military specifications, strict end-to-end uniformity is just one feature of these remarkable cables. Utilization of polyethylene for most cable dielectrics and Teflon for high temperature applications insures peak performance.

CHATHAM

ELECTRONIC TUBES

Hydrogen Thyratrons

— for Pulse Voltage Generation

TYPE VC-1257

Hydrogen filled, zero bias thyatron with hydrogen generator for generation of pulse power up to 40 megawatts.

TYPE 5948/1754

Hydrogen filled, zero bias thyatron with hydrogen reservoir for generation of peak pulse power up to 12.5 megawatts.

TYPE 5949/1907

Hydrogen filled, zero bias thyatron with hydrogen reservoir for generation of peak pulse power up to 6.25 megawatts.

ELECTRICAL DATA*				
Type	VC-1258	5949/1907	5948/1754	VC-1257
Maximum Peak Forward Anode Potential	1000 volts	25000 volts	25000 volts	30000 volts
Maximum Peak Anode Current	20 amps	500 amps	1000 amps	2000 amps
Maximum Average Anode Current	0.05 amps	0.50 amps	1.0 amps	2.0 amps
Maximum Heating Factor (epy x prr x ib)	1.0×10^8	6.25×10^9	9.0×10^9	1.0×10^{10}
Nominal Filament Power	12.6 watts	95 watts	190 watts	380 watts
Hydrogen Reservoir	No	Yes	Yes	Yes

*More detailed information on electrical and mechanical data will be supplied on request.

TYPE VC-1258

Zero bias miniature hydrogen thyatron for the generation of peak pulse power up to 10 KW.

● A NEW CONCEPT OF HYDROGEN THYRATRON DESIGN! The tubes illustrated represent a departure from conventional hydrogen thyatron designs and are a result of several years of concentrated development work.

They are primarily employed in the generation of peak voltages with durations in the order of microseconds.

Custom-built Electronic Equipment

← 20 Megawatt Hydrogen Thyatron Test Equipment built by CHATHAM to customers' specifications.

● CHATHAM specializes in the development, design, and construction of custom-built electronic equipment to exactly meet customers' requirements. Our capable staff of engineers will furnish prompt estimates or, if desired, will call to discuss your problem personally. Call or write today.

→ Pulse life test equipment built by CHATHAM checks receiver type tubes under pulse conditions.

↑ 5 Megawatt radar modulator built by CHATHAM to rigid government standards.

ELECTRONICS

AND EQUIPMENT

Electronic Tubes

Ruggedized Type Tubes

• The following tubes fully conform to JAN specifications and can be supplied promptly, usually direct from stock:

5R4WGY	2D21W
6AL5W	OC3W
6H6WGT	OD3W
25Z6WGT	2050W

TYPE 395-A COLD CATHODE GAS TRIODE

Requires no filament supply and is used in many grid controlled rectifier and relay applications. Maximum D.C. anode current—10 ma. Maximum D.C. anode voltage—150 volts

TYPE 719-A HIGH VACUUM CLIPPER DIODE

This tube is used primarily for clipper diode service in hard tube modulator circuits. Filament 7 volts, 7 amps... Inverse peak anode voltage 25 kv, Max., peak anode current 10 amps, Max., anode dissipation 75 watts.

TYPE 1Z2 RECTIFIER

A small bulb high voltage vacuum rectifier. Low cathode heating power and low dielectric losses make tube suitable for radio frequency supply circuits. Filament 1.5 volts, .290 amps... Inverse peak anode voltage 20,000, average plate current 2 ma... peak plate current 10 ma.

TYPE 1B46 REGULATOR

A cold cathode glow discharge tube designed for voltage stability. DC operating voltage 82 volts, operating current range 1 ma minimum, 2 ma maximum. Regulation 3 volts.

TYPE 4B32 RECTIFIER

A rugged half-wave Xenon filled rectifier. Operates in any position throughout an ambient temperature range of -75°C to +90°C. Filament 5 volts, 7.5 amp... Inverse peak anode voltage 10,000 average anode current 1.25 amps.

TYPE 394-A THYRATRON

A Mercury vapor and Argon filled thyatron for grid controlled rectifier service. Operates over wide ambient temperature range. Heater 2.5 volts, 3.2 amps... Inverse peak anode voltage 1250, average anode current 640 ma.

TYPE 3B28 RECTIFIER

This rugged half-wave Xenon filled rectifier will operate in any position and throughout an ambient temperature range of -75°C to +90°C. Filament 2.5 volts, 5.0 amps... Inverse peak plate voltage 10,000, average anode current .25 amp.

Chatham Vacuum Switches

SPECIFICATIONS

HOLD OFF VOLTAGE: Internal—10,000 volts rms; External* (at 27,000 feet altitude)—10,000 volts rms; External* (at 40,000 feet altitude)—7,500 volts rms.

INTERRUPTING RATING, RESISTIVE LOAD: 1,000 operations life at 10,000 v, ac, rms—10 amp, ac, rms; 1,000,000 operations life at 10,000 v, ac, rms—2 amp, ac, rms; 500,000,000 operations life at 10,000 v, ac, rms—0.1 amp, ac, rms.

NET WEIGHT (approx.).....2 ozs. MAXIMUM WIDTH (overall).....4 1/4 ins.
 MAXIMUM LENGTH (overall).....3 5/8 ins. MAXIMUM THICK. (overall).....1 1/8 ins.
 *at 50% humidity

HIGH VOLTAGE VACUUM FUSES

Can be supplied by Chatham to exact customers' specifications if ordered in adequate quantity. Call or write for full particulars and quotes.

PULSESCOPE®

The Oscilloscope that portrays the Pulse by

Waterman

SAR

LAB

Classic Examples of Precision Engineering.

Investigations of complex waves take great strides forward when either a Waterman SAR or LAB PULSESCOPE is employed. Their compactness, portability and precision have established a new high in pulse measurement instruments for all electrical work. Each PULSESCOPE has internally generated markers which are synchronized with the sweep with the basic difference the sweep in the LAB PULSESCOPE initiates the markers while in the SAR PULSESCOPE it is the crystal controlled markers initiate the sweep. Power supply requirements of 50 to 1000 c.p.s. at 115 Volts permits operation almost anywhere.

The SAR PULSESCOPE, model S-4-A, is characterized by a pulse rise time of 0.035 microseconds thru a video amplifier with a sensitivity of 0.5 Volts p to p/inch. A vertical delay of 0.55 microseconds is optional. A and S sweeps covering a continuous range from 1.2 to 12,000 microseconds are augmented by R sweeps, which in turn are variable from 2.4 to 24 microseconds. A directly calibrated dial permits R sweep delay readings from 3 to 10,000 microseconds.

The LAB PULSESCOPE, model S-5-A, has equivalent time of 0.035 microseconds, a fixed 0.55 microseconds vertical delay and 0.1 Volts p to p/inch sensitivity, so arranged to assure portrayal of leading edges on displayed signals. A precision calibrated voltage is provided as well as optional sweep expansion of 10 to 1. A built-in test generator voltage is available for synchronizing any associated test equipment.

WATERMAN RAYONIC CATHODE RAY TUBE DEVELOPMENTS

Since the introduction of the Waterman RAYONIC 3MP1 for miniaturized oscilloscopes, scientists in our laboratories have diligently searched for more perfect answers to present day cathode ray tube problems. Such research led to the introduction of the revolutionary new 3SP and 3XP type cathode ray tubes. These tubes were designed with multi-trace oscilloscopy in mind. Every avenue of practical design was explored to produce tubes with bright, sharp traces and high deflection sensitivity at medium anode potentials.

TUBE	PHYSICAL DATA			TYPICAL VOLTAGES				DEFLECTION FACTOR V/IN.		MAX. VOLTS	
	Face	Length	Base	Anode # 3	Anode # 2	Anode # 1	Grid # 1	D1 to D2	D3 to D4	Anode # 3	Anode # 2
3JP	3 inch Round	10 inches	Medium Diheptal 12 Pin	3000	1500	300 to 515	-22.5 to -67.5	127 to 173	94 to 128	4000	2000
				4000	2000	400 to 690	-30 to -90	170 to 230	125 to 170		
3MP	3 inch Round	8 inches	Small Duodecal 12 Pin		1000	200 to 350	0 to -68	140 to 190	130 to 180		2500
					2000	400 to 700	0 to -126	280 to 380	260 to 360

POCKETSCOPE®

Waterman

Pocket Oscilloscope by

HIGH

WIDE

TWIN

light... compact... accurate... portable

HIGH, WIDE and TWIN POCKETSCOPES have the "triple threat" of the oscilloscope industry. Small size, light weight and incredible performance, skyrocketed this team of truly portable instruments paralleled prominence. Each oscilloscope features DC amplifiers in both its vertical and horizontal channels. The **HIGH GAIN, S-14-A POCKETSCOPE**, has a sensitivity of 10 millivolts rms/inch, and a frequency response within -2 db from DC to 200 KC, while the **WIDE S-14-B POCKETSCOPE** is characterized by frequency response within -2 db from DC to 700 KC and a sensitivity of 50 millivolts rms/inch.

The **TWIN POCKETSCOPE** is essentially two **HIGH GAIN POCKETSCOPES** with individual cathode ray tubes, amplifiers, controls, but a common sweep generator. All these are endowed with many identical characteristics. Their sweep generators can be operated as triggered or repetitive over a frequency range from 0.5 cycles to 50 KC, with synchronization polarity optional. Return traces are blanked and provisions are made for modulating the intensity in each cathode ray tube.

Laboratory quality has not been sacrificed in order to accomplish portability and ruggedness. Investigate the many advantages of Waterman **POCKETSCOPES**.

INDUSTRIAL POCKETSCOPE, S-11-A, has become America's popular DC coupled oscilloscope because of its small size, light weight, unique flexibility. This compact instrument has identical vertical and horizontal amplifiers which permit the operation of low frequency repetitive phenomena, while simultaneously eliminating undesirable trace bounce. Each channel sensitivity is 0.1 Volt rms/inch. Frequency responses are likewise identical, within -2 db from DC to 200 KC.

INDUSTRIAL POCKETSCOPE

S-11-A

RAKSCOPE®

S-12-B

The **S-12-B RAKSCOPE** is a rack mounted, JANized version of the famous Waterman **S-11-A POCKETSCOPE**, with the addition of a triggered sweep and a special calibrating circuit for rapid frequency comparisons. The entire oscilloscope is built to occupy but seven inches when mounted in a standard relay rack.

Because provisions are made for applying input signals from the rear, as well as the front, the **S-12-B** is the ideal combination, systems monitor and trouble-shooting oscilloscope. Investigate the multiple applications of this instrument as an integral part of your own rack mounted apparatus.

TANTALUM CAPACITORS ARE BASIC in current electronic trend.....

Fansteel

TANTALUM CAPACITORS

Now, through the use of tantalum, new high standards of electrolytic capacitor performance are available. The tantalum oxide film is the most stable dielectric, chemically and electrically, yet discovered. As a result, Tantalum Capacitors offer advantages not found in any other electrolytic type—long life, space saving, wide temperature range, excellent frequency characteristics, no shelf aging.

Tantalum Capacitors are made by Fansteel and other leading capacitor manufacturers. Ask for current information bulletins on Fansteel Tantalum Capacitors.

Tantalum Capacitors... Dependable Since 1930

Fansteel SELENIUM RECTIFIERS

Fansteel Selenium Rectifiers are produced from top quality materials of the highest purity. They are made in a modern plant where adequate quality control safeguards form an integral part of every operation. Each Fansteel Selenium Rectifier is exactly assembled from carefully matched cells and rigidly inspected.

Fansteel Selenium Rectifiers are both rugged and compact. Aluminum base plates of ample thickness prevent distortion or warping... all insulation is heavy, all hardware strong. Each stack is coated, in manufacture, with one of three standard Fansteel finishes to withstand the most adverse atmospheric conditions under which it is expected to operate.

Fansteel Selenium Rectifiers rate high on a "more service per dollar" basis, too. They have a practically unlimited life. They do not deteriorate when idle. They entail no maintenance expense whatever. Yes, on any basis, you'll find them the *right* rectifier for your products.

INDIANA

PERMANENT MAGNETS

All materials . . . all sizes . . . all shapes . . .

Look to INDIANA for quality permanent magnets — for skill in manufacture — for cost-cutting engineering aid. Strict supervision in every step of production is your assurance of exact magnetic and mechanical characteristics.

Complete Engineering Service

Indiana offers a complete engineering service to help select the best permanent magnet for your application. Backed by years of research and experience gained in the development of thousands of magnetic designs, Indiana engineers have the "know-how" to select the best permanent magnet material and to properly design the magnet. This service involves no obligation on your part.

ON CATALOG MAGNETS

Write for this handy reference book full of detailed permanent magnet information. Ask for Catalog No. 11—Y.

MATERIALS

Indiana's wide variety of magnet alloys permits precise selection.

HYFLUX Alnico V
Cast Alnico
Sintered Alnico
Cunife

Cunico
Chrome Steel
Cobalt Steel
Tungsten Steel

FOR ALL APPLICATIONS

Indiana Permanent Magnets provide uniform high energy for:

RADAR MAGNETRONS

All types and sizes, horns, "U's" and "E's". Indiana quality insures a strong, uniform magnetic field.

LOUDSPEAKER MAGNETS

Indiana Hyflux Alnico V speaker magnets offer a guaranteed energy product of 5 1/4 million BHmax as contrasted with an industry minimum of 4 1/2 million.

MAGNETS FOR METERS, INSTRUMENTS AND CONTROLS

A complete variety for ammeters, indicating instruments, galvanometers, switches, etc.

TV FOCUS COIL MAGNETS

All types and sizes of segmented rings, thin wall rings, etc. for focus coils, ion traps and centering devices.

MAGNETS FOR MOTORS, GENERATORS AND MAGNETOS

Rotors and assemblies in all grades of Alnico.

SEPARATOR MAGNETS

Magnets for all types of industrial processing . . . from pulley separators to can-making machinery.

SPECIALISTS IN "PACKAGED ENERGY" SINCE 1908

Glass to Metal Vacuum Seals

Constantin's latest achievement —

Glass to metal vacuum sealed transistor mounts that provide complete protection from moisture, dust, varying heat conditions and shock. Germanium can be sealed in vacuum or inert gas. A special soldering moat is a feature for easy assembly. Leads are spaced to fit standard sub-miniature sockets and can be supplied 1½" long for soldering directly to circuits.

AN CONNECTORS

Precision construction throughout. Glass to metal vacuum seal assures protection against varying atmospheric conditions. Available in most JAN specifications.

MULTIPLE HEADERS

Plug and standard types. Built to withstand thermal shock and provide stabilized atmospheres. Available in various configurations.

SINGLE TERMINALS AND END SEALS

Terminals available in all combinations of hooks, eyes, tubes, and pierced flats. Test rated from 1,000 to 15,000 volts R.M.S. and 5 to 25 amps. Single end seals available in various sizes for items requiring stabilized atmospheres.

HIGH COMPRESSION SEALS AVAILABLE

CRYSTAL HOLDERS

The highly rigid metal bridge unit is designed to withstand severe strain without deformation. The one piece sealing medium minimizes stresses on the pins which could produce internal strain.

CUSTOM ENGINEERED COMPONENTS

Constantin is capable of manufacturing any glass to metal sealed requirement. Free engineering assistance given upon request.

Hot tin plating at 530 F. facilitates easy soldering, thereby eliminating rejections during assembly. Special plating supplied on request. Glass to Kovar seals, made under Westinghouse patents, are ideal for use in extreme temperatures. Blueprints can be furnished upon request.

L.L. Constantin & Co.

MANUFACTURING ENGINEERS

Rt. 46 and Franklin Avenue Lodi, N. J.

A completely self-contained company equipped with the most modern machine shop and facilities for die construction, stampings, bending, and wire cutting. Also a Glass Department capable of compounding, labeling and sintering. Latest ovens and furnaces for fusing. Advanced plating techniques. Skilled Engineering. These combined features enable us to provide a **TOP QUALITY** product completely manufactured on our premises. Product or sample delivery can be made almost immediately.

VACUUM COATING EQUIPMENT

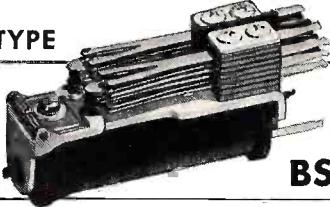

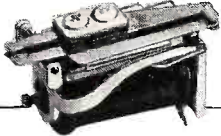

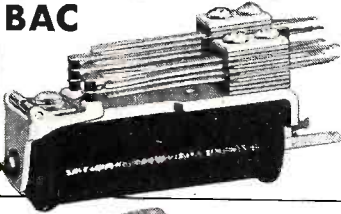

COMBINATION BASE AND FINAL FREQUENCY CALIBRATION PLATING MACHINE FOR QUARTZ CRYSTALS — Model 3

Precision equipment designed to deposit micro-tolerance film of metal (gold, silver, platinum, etc.) on quartz crystal oscillator plates. Operates at vacuum of less than 1/100 micron.

MANIFOLD TYPE FINAL FREQUENCY CALIBRATION UNIT TYPE FFO — Model 4

Unit is engineered to calibrate one crystal every 15 seconds with vacuum of less than ½ micron. May be bench mounted in multiples.

INDUSTRIAL TYPES OF Sterling RELAYS

TYPE	DESCRIPTION	COILS	PILE-UP	SIZE*
 BS	The standard long coil telephone type with twin contacts. Also available with a variety of single contacts.	Single and double wound to 52,000 ohms	Max. of 28 springs in two pile-ups	4 1/8" long 1 1/2" wide 1 1/6 - 2 3/4" high
 GS	The short form telephone type with single contacts of various sizes and metals.	Single and double wound to 25,000 ohms	Max. of 20 springs in two pile-ups	2 1/2" long 1 1/4" wide 1 5/8 - 2" high
 KS	The miniature type for aircraft and similar applications. Reed bearing support provides extreme life and speed. Not recommended for marginal current applications.	Single to 6500 ohms	Max. of 12 springs in two pile-ups	1 1/2" long 3/8" wide single arm 1" wide double arm 1 1/8 - 1 7/16" high
 LS	The miniature type B, applicable where space is a premium and large pile-ups or greater sensitivity than the KS or TS are required. Available with either single or twin contacts and a variety of mountings.	Single and double wound to 20,000 ohms	Max. of 20 springs in two pile-ups	2 1/4" long 1 1/8" wide 1 3/16 - 1 3/4" high
 TS	Similar to the type KS with increased coil capacity and larger spring pile-up. Mounts in most of the same enclosures designed for the type KS.	Single and double wound to 14,000 ohms	Max. of 18 springs in two pile-ups	1 3/8" long 1" wide 1 1/4 - 1 25/32" high
 RS	The Radio Sonde Relay.	Single to 5,000 ohms	1C with armature common to frame	1 1/16" x 1 1/2" x 2 3/8"
 BAC	The AC modification of type BS. An ideal multi-contact type of AC relay where only AC coil power is available.	To 220 volts 25 & 50/60 cycles Single and double wound	Max. of 18 springs in two pile-ups. Less on low voltages	Same dimensions as Type BS
 GSA	The AC modification of type GS where space will not permit the use of the type BAC.	To 220 volts 25 & 50/60 cycles	Max. of 18 springs in two pile-ups. Less on low voltages	Same dimensions as the type GS
HERMETICALLY SEALED TYPES	Sealed enclosures for STERLING relays are available in a variety of enclosure and header types.			
PLUG-IN TYPES	All STERLING relays may be furnished mounted on and wired to the common varieties of radio plugs.			
SNAP-ACTION	The types BS and GS and their variations are available with snap action switches as well as conventional contact springs.			
SPECIALS	A wide variety of special variations of all STERLING relays is available for the unusual application.			
MOUNTINGS	L type brackets and dust covers for the type BS. Dust tight enclosures for the types GS and LS. Mounting strips and covers for types BS and LS to fit standard 19" relay racks.			

* Where two dimensions are given for height, the smaller is for relays with 2 springs and the larger is for the maximum size pile-up.

NEW LOW COST PG* SERIES

MERCURY

CONTINUOUSLY VARIABLE — WIDE RANGE D.C. REGULATED POWER SUPPLIES

Compact, Portable, Easy to Use
Basic Instruments For Laboratory or
Production Tests

Mercury Electronic Company, backed by twelve years of engineering and production experience in the regulated power supply field, presents five new instruments which should be of wide interest to engineers, researchers, technicians and production personnel.

For some time we have felt that a need existed for a laboratory type, low cost, continuously variable regulated power supply which would be small, light, reliable and yet contain the exacting features of our standard line. (Write for complete catalog). Without sacrificing performance or quality in any respect, the PG series has been designed.

The PG series contain the highest quality components, GR Variac control, latest tubes, terminal board construction, aluminum carrying case with handle, etc. Frankly, it is difficult to describe in detail the fine performance and specifications for the PG series in this space. So why not write for our complete catalog now coming off the press. It will cover the PG series as well as other regulated power supplies and equipment now available.

CONTINUOUSLY VARIABLE

Why Electron Tube Buyers do business with Tung-Sol

Tung-Sol's modern manufacturing techniques and advanced quality control methods assure you of a product that is second to none. Tung-Sol makes tubes—no sets—no equipment—just tubes. We do not compete with our customers. Tung-Sol design, development and application engineers work closely together for the sole purpose of producing a better tube so that you can make a better product. En-

gineering assistance is strictly confidential. Tung-Sol service by competent field sales representatives is nationwide. A Tung-Sol delivery promise is a promise. Closest cooperation is maintained to keep deliveries up to your production schedule requirements.

BOND

PRECISION WIRE-WOUND RESISTORS

Find every size type of resistor you need in the famed Bond . . . and you'll find each and every meets the most performance and quality standards. These precision made resistors meet all standard tolerances, in a wide range of alloys for varying resistance values. All are impregnated to meet MIL-R-93 specifications. Other size bobbins, special mountings and terminals are available.

Send today for free catalog and engineering bulletin.

BOND CUSTOM-WOUND COILS: Toroidal, Industrial, Solenoid, Bobbin, Radio, Television Coils.

MEASUREMENTS CORPORATION

Laboratory Standards

QUALITY ELECTRONIC
MEASURING INSTRUMENTS
FOR ACCURATE, DEPENDABLE SERVICE

SINCE 1939, MEASUREMENTS CORPORATION has developed and manufactured a precision line of Laboratory Standards designed for radio, television and other fields of the electronic industry. While our production departments are building instruments currently required by laboratories, manufacturers and the Armed Services, MEASUREMENTS' engineering division is engaged in extensive research on new equipment for the art.

Critical engineering control of all phases of manufacturing, from the selection of component parts, through the production departments, to the final mechanical and electrical inspection, assures every customer of quality instruments that are guaranteed to give accurate, dependable service.

SCINFLEX ASSURES LOW MAINTENANCE BECAUSE IT PERMITS SIMPLICITY

When operating conditions demand an electrical connector that will stand up under the most rugged requirements, always choose Bendix Scinflex Electrical Connectors. The insert material, an exclusive Bendix development, is one of our contributions to the electrical connector industry. The dielectric strength remains well above requirements within the temperature range of -67°F to $+275^{\circ}\text{F}$. It makes possible a design increasing resistance to flashover and creepage. It withstands maximum conditions of current and voltage without breakdown. But that is only part of the story. It's also the reason why they are vibration-proof and moisture-proof. So, naturally, it pays to specify Bendix Scinflex Connectors and get this extra protection. Our sales department will be glad to furnish complete information on request.

- Moisture-Proof • Radio Quiet • Single Piece Inserts •
- Vibration-Proof • Light Weight • High Insulation Resistance
- High Resistance to Fuels and Oils • Fungus Resistant •
- Easy Assembly and Disassembly • Fewer Parts than
- any other Connector • No additional solder required.

Bendix Aviation Corporation

concentrates development, sales and production of special-purpose electron tubes, inverters and AC generators with its dynamotors and small motors at its

Red Bank Division

INVERTERS

AC GENERATORS

SPECIAL-PURPOSE ELECTRON TUBES

DYNAMOTORS

To provide its customers with an unequalled source for special-purpose electron tubes, inverters and AC generators, Bendix Aviation Corporation has placed its entire development, sales and manufacture of these products with its Red Bank Division at Eatontown, N. J. Here in a modern new plant of over 118,000 square feet have been concentrated the most highly skilled personnel and the latest available machinery to produce the highest quality electron tubes, inverters and AC generators possible. At the same time, a full-scale program is being carried on continuously at Red Bank to develop these products for even greater efficiency and versatility. In addition to its new products . . . taken over from the Eclipse-Pioneer Division, Teterboro, N. J. . . . the Bendix Red Bank Division will continue producing its established line of dynamotors and small DC motors. If you require precision items of these types, it will pay you to take advantage of the unique experience and facilities offered to you by Bendix Red Bank.

Here's your complete guide to-

E-I MULTIPLE HEADERS AND SEALED LEADS

with a complete discussion of hermetically sealed

TERMINALS and MULTIPLE HEADERS

including: ENGINEERING DRAWINGS AND RECOMMENDED APPLICATIONS

E-I STANDARD TYPES — Offering a quick solution to problems relating to sealed terminals. Complete information on standard sealed leads, standard multiple headers, octal plug-in headers and end seals is contained in these helpful catalogs.

1. HERMETICALLY-SEALED STANDARD MULTIPLE HEADERS
2. HERMETICALLY-SEALED STANDARD TERMINALS
3. SPECIAL MULTIPLE HEADERS
4. SPECIAL PLUG-IN HEADERS
5. COLOR-CODED TERMINALS
6. END SEALS

E-I SPECIAL TYPES — Where applications indicate special designs, custom seals to specifications can be supplied at economical prices based on mass production methods. Recommendations will be made without obligation on receipt of your drawings or rough sketches. Please mention approximate quantities needed.

ENGINEERS AND DESIGNERS! Request your E-I handy file folder, now.

THE UNIQUE THERMOPLASTIC

with many outstanding properties for

Electronic and Electrical Applications

CHECK THESE MANY ADVANTAGES:

- ✓ High Dielectric Properties
- ✓ Zero Water Absorption
- ✓ Non-wetting
- ✓ Chemically Inert to Acids, Alkalis, Solvents
- ✓ High Impact Strength
- ✓ Excellent Compressive Strength . . . 32,000 to 80,000 psi.
- ✓ Use in Rigid, Flexible or Liquid Forms . . . to suit application
- ✓ Optical Properties Variable
- ✓ Color Range Unlimited
- ✓ Can be filled with fibre glass, graphite, powdered metals, etc.
- ✓ Wide Temperature Utility—from minus 320°F to plus 390°F
- ✓ Low Thermal Conductivity
- ✓ Unaffected by Thermal Cycling
- ✓ Non-carbonizing
- ✓ Non-Flammable
- ✓ Inert to Metal Inserts
- ✓ Dimensionally stable . . . unaffected by temperature, moisture, age
- ✓ Non-porous
- ✓ Can be readily molded; extruded; dip or spray applied—using conventional methods and equipment
- ✓ Can be machined to close tolerances

KEL-F

® Reg. U.S. Pat. Off.

This unique material, since its commercial introduction just a few years ago, has gained wide acceptance through meeting critical "specs" where other materials failed.

Now—available in vastly increased volume from new mass-production facilities and at a cost which is but a fraction of its introductory price—designers should find use of Kel-F convenient and economically sound as well as technically superior for most critical and semi-critical applications.

GREASES

are tube sockets, precision
offer high insulation perform-
under 100% humidity and thermal
conditions... without corona
biting... cut interference from
high temperatures.

Wire insulated with extruded KEL-F
serves in sub-zero to 300°F hookup
applications—continuously... with-
stands up to 410°F without melting...
performs at all frequencies... and in
contact with corrosives and solvents.

Extruded "spaghetti" for aircraft and
other wiring maintains insulation quali-
ties under high temperatures and hu-
midity... stays flexible at sub-zero...
resists cracking at high temperatures...
unaffected by corrosive oils, fuels.

ent parts, such as fuel gage
instruments, readily machined to
0.001", give positive electrical
isolation... maintain critical accu-
racy... immersed in corrosive liquids
prevent moisture "shorting".

High-frequency insulators for 10,000 v,
8 amp. pulses cut leakage and tracking
at high humidity... maintain hermetic
seal at high altitudes, under thermal
cycling and mechanical abuse.

Electronic "Pots" maintain hermetic
seal, dielectric strength through sus-
tained shock, thermal cycling. Inert
to "potting" oils, salt spray... resist
distortion or damage in range of from
minus 180°F to plus 390°F.

Electrical tape (2 mil and up)
resists moisture... high dielectric
strength allows lighter
weight... elasticity permits com-
plete coverage.

One-piece switch rotor carries 75 amp.
surges without shorting in high humid-
ity... resists oils and greases... holds
contacts in alignment at all tempera-
tures and under rough handling.

Coil forms retain dimensions and high
electrical insulation in miniaturized
components exposed to high humidity,
extreme temperatures... superior
strength cuts shock, vibration damage.

Molding, Extruding and Coating Services for Kel-F®... readily available throughout the country...

Kel-F trifluorochloroethylene polymer plastics are extruded, compression, injection and transfer molded on conventional equipment designed to operate from 450°F to 650°F using standard production methods.

Molded and extruded Kel-F polymer plastic forms are dimensionally stable, unaffected by moisture, and are readily machined, punched, drilled, stamped, polished or ground to precision tolerances.

Ask for List of Experienced Molders, Extruders, Fabricators and Coaters

Fluid dispersions of high polymer Kel-F are applied by dip-coating and conventional spraying followed by heat curing.

A special Feature of Kel-F plastic is its amenability to heat treatment which yields a material with controlled rigidity, plasticity or hardness. No special preparation or modification is required, and the inherent chemical, dielectric and physical properties of the plastic are not altered.

Kel-F is available in these "Stock" forms

(Ask for list of sources of supply)

- **Molded Sheets**
Thickness — 1/64" to 1/2"
Diameter — in disc form to 60"
- **Molded Rod**
Diameter — up to 4"
Length — to 12"—24"
- **Extruded Strip**
Thickness — .010" to .0125"
Width — 2" to 4"
Length — to specification
- **Extruded Wire Coatings**
To Specification
- **Extruded Rod**
Diameter — up to 1"
Length — to specification
- **Extruded Tubing and "Spaghetti"**
Diameter — up to 2"
Wall thickness—to specification
Length — to specification
- **Thin Film**
(EXTRUDED AS LAY-FLAT TUBING)
Thickness — .002" to .010"
Width — lay-flat up to 20"
(Total width to 40")

Kel-F is also available in standardized electrical and electronic components; chemical fittings and seals; bags and containers; porous filter media; and many other forms for varied industrial use.

ORDER these basic forms of Kel-F from —

CHEMICAL MANUFACTURING DIVISION, The M. W. Kellogg Company

MOLDING POWDERS (In High or Low Density Powder)

Unplasticized

- #300 For high temperature service
- #270 For less severe temperatures

Plasticized

- #300—P25 With 25% Plasticizer
(Other plasticized compositions to order)

DISPERSIONS

- N-1 Routine spray, dip coating
- NW-25 Flows more readily at fusion temperatures

OILS, WAXES and GREASES

- #1 Light Oil
- #3 Medium Oil
- #10 Heavy Oil
- #40 Waxy Oil (pour point 80-90°F)
- #150 Hard Wax at 70°F
(Greases compounded to order)

Full-Scale Applications Laboratory... now in operation at Jersey City plant...

In connection with the building of the new Kel-F plant facilities for development and applications work have been considerably expanded. A most complete assortment of scientific apparatus and production molding equipment is now teamed with an increased staff of experienced scientists and technicians... to concentrate on the development of improved methods of fabrication as well as new uses for the unique Kel-F polymers.

Here, problems encountered by molders, fabricators or end-product users can be investigated under controlled conditions... to obtain fuller utilization of Kel-F's unique properties... improved, more economical, production methods for plastics fabricators... better design for products.

TIMING DEVICES

SPECIALISTS IN TIME CONTROL

IE INTERVAL TIMER

Turning knob to desired time setting starts time cycle. Progress indicated by pointer traveling towards zero. Built-in push button, to initiate timing cycle, available as optional feature.

IG INTERVAL TIMER TYPE IG

Similar to IE above, but without front plate and housing. Designed for built-in applications, where timer is mounted behind panel and shaft protrudes through to dial and pointer.

RESET TIMER TYPE RE

Pressing built-in start button switches circuits and starts timer. Progress indicated by independent pointer traveling towards zero. At end of cycle circuits switch back and timer resets, ready for a new cycle.

TEC TIME DELAY RELAYS TYPES TE - TEC

Highest accuracy for precision timing. Timing cycle initiated by external means. Micrometer knob on range pointer for extremely precise setting. Progress pointer indicates time remaining.

TF TIME DELAY RELAY TYPE TF

For built-in applications. Provides fixed time delay between closing of external contact and switching of load circuits. Enclosed snap-type switch mechanism.

CF CYCLE TIMER TYPE CF

Permits automatic control of 1 to 8 circuits. Single or multiple cam units permit adjustment to any desired time sequence. May be arranged to stop at the end of one complete cycle or repeat cycle continuously.

V PULSE TIMER TYPE V

Repeats electrical impulse of predetermined duration at the end of any desired time interval which may be set upon the dial. Ideal for such applications as automatic lubricators, conveyors, sludge pumps, bar screens, feed water controls, etc.

PE PERCENTAGE TIMER TYPE PE

Adjustable automatic timer to control percentage of time in which an electrical circuit is closed or open out of a definite time cycle. Ideal to control operating time of an oil burner, furnace, etc.

E RUNNING TIME METER TYPE E

An elapsed time indicator to register total operating or idle time of any machine or system. Excellent for indicating usage time of vacuum tubes or machine tool cutter, etc., in conjunction with a preventive maintenance program.

ET TIME TOTALIZER TYPE ET

A highly accurate stop clock to measure and to indicate elapsed time intervals. Used wherever precise measurement of time is required. Accuracy of better than .02 of 1%.

HTI HERMETICALLY SEALED TIME DELAY RELAY TYPE HTI

Retains high accuracy of standard Cramer timers, but is miniaturized for airborne or mobile applications. Hermetically sealed in steel case and tested to meet most rigid military applications.

SX SYNCHRONOUS TIMING MOTOR

Small synchronous motor for any application requiring constant speed. Exceptionally high torque for its size (30 in. ozs. at 1 RPM stall torque). Instantaneous start and stop. Wide range of speeds from 60 RPM to 1 RPD.

TYPE SX

SX CLUTCH UNIT MOTOR

SX motor with differential gear-type clutch. Used where reset is needed or where extremely accurate clutching is required.

ENCLOSURES SPECIAL TIMERS AND ENCLOSURES

In addition to the standard panel mounting timers illustrated above, Cramer manufactures a complete line of special purpose timers, timers in special enclosures, hermetically sealed devices, etc.

Write for complete information about your timing requirements or for advice on special problems.

BALLANTINE

World's Leading Electronic Voltmeters

SENSITIVE AC VOLTMETERS

ACCESSORIES

AUDIO to 150 kc MODEL 300

Voltage Range 1mv—100v
 Frequency Range 10cps—150kc
 Accuracy 2% ENTIRE RANGE
 Input Impedance 1/2 meg shunted by 30μf

SENSITIVE INVERTER MODEL 700

For Measuring DC Voltages when combined with any AC Voltmeter

Voltage Range 1μv—100v DC
 Ratios DC Input to RMS Output 1:100 & 10:1
 Accuracy 1% 100μv—100v
 Input Resistance >10 meg for 1:100
 50 meg for 10:1

SUB-AUDIO to 150 kc MODEL 302B

Voltage Range 100μv—100v
 Frequency Range 2cps—150kc
 Accuracy 3% 5cps—100kc
 5% elsewhere
 Input Impedance 2 meg shunted by 15 μf*

DECADE AMPLIFIER MODEL 220A

For Increasing the Sensitivity of any AC Voltmeter by 10 or 100 times

Voltage Range 10μv—50mv
 Frequency Range 10cps—150kc
 Accuracy 2% ENTIRE RANGE
 Input Impedance 5 meg shunted by 15μf

AUDIO to 2 mc MODEL 310A

Voltage Range 100μv—100v
 As null detector 20μv min
 Frequency Range 10cps—2mc
 As null detector 5cps—4mc
 Accuracy 3% 10cps—1mc
 5% elsewhere
 Input Impedance 2 meg shunted by 15μf*

MULTIPLIERS MODEL SERIES 1300

For Extending the Voltage Ranges of Ballantine Voltmeters to 1000 and to 10,000 Volts

Voltmeter Model	For Extending Range to	
	1000v	10,000v
300	1300A	1300B
305	—	1305B
302B 310A	1310A	1310B
314	—	1314B

AUDIO to 6 mc MODEL 314

Voltage Range 1mv—1000v
 (100μv—1mv without probe)
 Frequency Range 15cps—6mc
 Accuracy 3% 15cps—3mc
 5% elsewhere
 Input Impedance 11 meg shunted by 6μf
 (1 meg shunted by 25μf without probe)

SHUNTS MODEL SERIES 600

For Measuring Current AC or DC when used with any AC or DC Voltmeter

Model	Resistance	Max Current
601	1 Ω	1000ma
602	10 Ω	300ma
603	100 Ω	100ma
604	1000 Ω	30ma

Current from 0.1μa to 1a can be measured using these shunts with Ballantine Voltmeters and Accessories.

PEAK-to-PEAK MODEL 305

Voltage Range 1mv—1000v pk-to-pk
 Frequency Range 10cps—100kc (sine wave)
 Pulse width 3μsec—250μsec
 Min Rep Rate 20 pulses per sec
 Accuracy 5% for pulses
 Input Impedance 2 meg shunted by 15 μf*

SPECIAL PURPOSE MODELS

To Suit Your Requirements.

Write to us about your special measurement problems.

Famous for SENSITIVITY • ACCURACY • STABILITY

Each Ballantine Voltmeter

- Has only ONE voltage scale with decade range switching.
- Provides the same accuracy of reading at ALL points on the logarithmic voltage scale.
- Has a linear decibel scale.

- May be used as a high gain wide band amplifier.
- Responds to the average value of the input voltage waveform thus avoiding "turn-over" discrepancy.

WRITE FOR MORE DETAILED INFORMATION

*Shunt capacitance is 8μf on all ranges except two most sensitive ranges.

— IF YOU NEED ENGINEERING ASSISTANCE ON SPECIFIC PROBLEMS

The General Ceramics technical staff will be happy to consult with you. Just call or write Sales Engineer, Ferramics Division.

Ferramics offer many outstanding advantages. These widely adopted magnetic core materials have reduced assembly time by eliminating laminations in inductive components, cut costs and reduced space requirements by replacing tubes in digital computers, and revolutionized microwave transmission design by use of gyrator effect. Ferramics have improved designs in numerous other equipments, and have resulted in the development of basically new techniques in still others. Current research indicates still greater gains to come. The complete story on Ferramics is available without obligation.

TABLE OF MAGNETIC PROPERTIES OF FERRAMICS

PROPERTIES	UNIT	A-106	B-90	C-159	D-216	E-212	G-254	H-419	M-1102	I-141	J-472

MAKERS OF STEATITE, TITANATES, ZIRCON PORCELAIN, FERRAMICS, LIGHT DUTY REFRACTORIES, CHEMICAL STONWARE, IMPERVIOUS GRAPHITE AND FERRAMIC MAGNETIC CORES

Dependable Electronic Tubes for...

**TRANSMITTING • RECTIFYING • INDUSTRIAL
SPECIAL PURPOSE • TELEVISION**

F-5680
Used in broadcasting and industrial applications up to 50 Mc.

F-134

Used in high power broadcasting and industrial service up to 22 Mc.

F-892-R
Used in 5 and 10 KW AM transmitters.

TV TUBE

HANDBOOK OF TUBE OPERATION

72 Page booklet giving complete technical data on how to obtain longer service life from your power vacuum tubes. Write Dept. K-613 for your copy.

FEDERAL TV PICTURE TUBES Federal has the precise tube for your popular-size TV tube replacements... rectangular or round with a new high in light output... thrilling performance... long service life.

OVERLOAD RADIATION SWITCH

FOR THE PROTECTION OF RADIATION COOLED POWER TUBES

This new device will increase the life of your tubes. Used in conjunction with any tube, providing the radiant energy at the switch is not less than 1 watt per square inch. When an overload occurs, the device will give an alarm, cut off plate voltage or reduce the plate voltage until difficulty is corrected - When the overload is no longer present, the device will reset automatically. Adjustment is extremely simple - Ask for bulletin.

FEDERAL'S AUTOMATIC CIRCUIT CHECKER

For the Simultaneous Check of Continuity • Transpositions • Shorts

Federal's Automatic Circuit Checker provides a very simple and reliable means for checking and cabling of circuit equipment such as telephone installations, telephone switchboards, communication receivers and transmitters, electronic navigational aides, radio and television sets and cable forms and harnesses. This high speed tester accurately locates wiring discrepancies and reduces test time to a minimum — thereby

cutting production costs. Each conductor is simultaneously checked against all other conductors and ground for: continuity, short circuits, grounds and transpositions. The flexibility of the design permits ready adaptation to varied types of equipment. Federal's Automatic Circuit Checker when used with an electronic bridge checks the resistance of all components wired in the various circuits.

**AUTOMATIC
CIRCUIT
CHECKER**

FEDERAL'S MAGNETIC SIGNAL

Federal's modern Magnetic Drop Signal is outstanding for fast indication and dependable performance . . . under rugged conditions . . . in total darkness. Compact and efficient, this device replaces mechanical operation common to the drop signal. Meets military requirements. Its features include: high-sensitivity; resistance against dust, dirt and moisture; vibration-resistant construction; is non-positional; luminous indicator; signal mechanically restored. A

self contained sensitive indicator. Designed to operate on 8 ma of d.c. or a.c. power. On closure of circuit the target is closed to rotate 90 degrees around its axis presenting a luminescent white surface in place of the normal black surface to indicate a changed condition. As the target rotates, a contact is closed which can be used to actuate other means of signalling such as audio devices.

**MAGNETIC
SIGNAL**

FEDERAL'S MINIATURE ANTI-CAPACITY SWITCHING KEY

airborne and other equipment—when compactness and light weight are important factors. A miniature, light-weight key with 8 "Break-Make" contacts. Each group of 12 contact springs each actuated by a molded phenolic drive with a simple motion of the lever. The contacts are non-locking. Contact springs are molded into units of 4 springs formed and pre-tensioned which reduce adjusting of springs after assembly to a minimum. The complete key pileup consists of 6 interlocking key blocks, mounted into frame with screws. Meets military requirements.

MINIATURE TRANSFORMERS

Miniature Hermetically Sealed input, output and inter-stage Audio Transformers, featuring Federal's new hermetically sealed terminal. Hermetically sealed power transformers and chokes. Meets government specifications.

TELEPHONE TYPE RELAYS

Telephone type relays available with a wide variety of contact combinations and ratings. Single and double coil combinations are available with coil resistances ranging from a few ohms to several thousand ohms.

FEDERAL'S NEW TERMINAL HEADER

For Hermetic Sealing and Miniaturization

Provides greater-than-ever ruggedness, efficiency and service life for transformers, capacitors, condensers, relays and many other sealed components. Meets all requirements of MIL-T-27, Grade 1, Class A. "Floating Electrode" construction. Withstands unusually severe vibration and shock without affecting the hermetic seal. Also retards DC plating. Temp. range: -65 degrees to Plus 500 degrees F. Standard headers supplied with a ceramic of contrasting color in the first terminal location — simplifying terminal number identification on the finished component.

The revolutionary circuit elements that have led the way to important design advances in TELEVISION & RADIO RECEIVERS & ELECTRONIC EQUIPMENT. Wherever DC power is required there is a Federal Radio-TV Selenium Rectifier to do the job... and do it with an efficiency and reliability that is backed by the outstanding reputation of Federal—America's oldest and largest manufacturer of Selenium Rectifiers.

SELENIUM RECTIFIER EQUIPMENTS

**QUALITY-BUILT
MAGNETIC AMPLIFIERS**
Powered by Quality Controlled

Federal

SELENIUM RECTIFIERS

Presently used in a wide range of successful applications for industry and the Armed Forces, such as:

- Voltage Control
- Current Control
- Speed Control
- Position Control
- Temperature Control
- Photoelectric Control
- Counting
- Automatic Regulation

Federal Selenium Rectifiers, in partnership with the right magnetic components, provide Magnetic Amplifiers outstanding for:

- Stability
- High Gain
- Accuracy
- Low-cost Operation
- Long Life
- Fast Response
- Automatic Regulation

Submit your magnetic amplifier requirements to Federal—write to Dept. F-53-B

POWER SUPPLIES: Designed to furnish a dependable and constant source of D-C power. Whether for industrial or laboratory use, these equipments are available in sizes to serve your requirements. For industrial requirements they are used to power magnetic equipment such as chucks, brakes, clutches, screens, separators, drums and pulleys, and also provide power for lifting magnets, relays, circuit-breakers and D-C motors.

THE SELENIUM RECTIFIER DIVISION

Offers Its Outstanding Engineering and Manufacturing Facilities to

GOVERNMENT CONTRACTORS

**Consult us for Aircraft,
Ground and Naval Requirements**

The Selenium Rectifier Division of Federal — the nation's headquarters for selenium rectifiers — is ready to serve you with start-to-finish production of power supplies, battery chargers, voltage regulators, engine starters, cathodic protection and other units—compact, rugged, quiet, dependable power equipments designed for any DC output.

Federal knows selenium rectifiers. Federal has unmatched power conversion experience . . . an experience backed by years of successfully meeting the rigid requirements of contracts for military equipments. And Federal has the capacity to deliver your orders — when you want them!

Mail us your specifications today!

SELENIUM RECTIFIERS for Industrial Service From AC to DC . . . Milliwatts to Kilowatts

Low-cost power conversion . . . efficient, dependable . . . from a-c to d-c. Introducing new, broad range adaptability in diverse fields, conditions and applications. They obtain direct current from any alternating current source. They are small, light, easy to install. They meet all needs of an unattended service.

FOR COMPLETE DATA Write for Federal's Data Booklet on Selenium Rectifiers. An informative guide to characteristics and applications of the industry's most comprehensive line of high quality rectifiers. Address Dept. 913.

The FEDERAL System of ENCAPSULATION

Federal's new method of encapsulating selenium rectifiers and allied components presents an entirely new approach to civilian and military equipment design — particularly where environmental or other unusual conditions necessitate special applications. It is now possible

assemble transformers, capacitors, resistors and other components — interconnected — into single blocks of equipment. Such assembly facilitates the replacement of individual as well as entire groups of components without the necessity of time-consuming repairs. Assures excellent thermal shock characteristics and resistance to vibration and cracking of the sealed unit over wide temperature ranges. Embedments withstand low temperatures to -55°C, as well as high temperatures to plus 125°C. Send for Bulletin F 534 for complete details.

FEDERAL CONTACT PROTECTOR

The Federal Contact Protector permits a rise but not high enough to cause arcing; then the voltage decays to correct line voltage. Its features include:

1. Suppresses contact arcing
2. Extends Contact Life by more than 100 times
3. Reduces circuit failure due to contact erosion (locking, surging, etc.)
4. Minimizes RF Interference
5. Has negligible effect on speed of operation of circuit
6. Needs no attention
7. Is easily installed
8. Requires little space
9. Is low in cost
10. Available as hermetically sealed unit to meet all JAN specifications.

Federal Telephone and Radio Corporation

100 KINGSLAND ROAD, CLIFTON, NEW JERSEY

In Canada: Federal Electric Manufacturing Company, Ltd., Montreal, P. Q.
Export Distributors: International Standard Electric Corp., 67 Broad St., N. Y.

FEDERAL VARIETY OF CABLE TYPES

Federal's cable division produces a variety of H-F cable types. Some of these cables are produced by Federal exclusively. All are made to the most exacting standards of quality and control. The materials used

are the finest research has developed, assuring electrical characteristics. Initial dimensional precision helps to maintain stability over a wide temperature range.

SOLID DIELECTRIC COAXIAL CABLES

consist of a solid or stranded inner conductor, dielectric material, one or two copper wire braids, a synthetic resin protective jacket and, in some cases, a protective armor or

metal braid. Dual coaxial cables are in design to the solid dielectric types, that two accurately-spaced inner conductors are used.

LOW-CAPACITANCE COAXIAL AIR-SPACED CABLES

have a construction similar to that of the solid dielectric types, except that air is made a portion of the dielectric. One method of accomplishing this effect and still maintaining a high dielectric strength is through a con-

struction involving an inner conductor in a thin-walled dielectric tube. This is accomplished by means of a dielectric thread wound in a long spiral.

SPIRAL DELAY, HIGH IMPEDANCE LINES

are constructed with an inner conductor spiraled around a center dielectric core and covered with dielectric, braid and jacket. In

one typical design each foot has an electrical length equivalent to approximately one foot of coaxial cable of similar diameter.

TELEVISION ANTENNA LEAD-IN WIRE

consists of two accurately-spaced conductors over which is extruded the dielectric material. These lead-in wires have no braid, jacket or armor, except in special cases. The advances

in television have meant ever-new approaches to the design of TV lead-in to the point of antenna. It has taken many varied forms, the latest being the tubular shaped "pipeline" lead-in.

SPECIAL CABLE PROBLEMS

Federal Telephone and Radio Corp. maintains a stock of most of the required types. When requirements are so special that they cannot be met by Federal's cable types, Federal research and engineering facilities are readily available to develop any new cable constructions. Charges are based on quantity. Special Orders — like all Federal production — are executed under the high standards maintained by Federal "Quality Control." Every length of cable is carefully checked to see that it meets all tests indicated for the type ordered. Toughness, heat resistance, moisture resistance, dielectric strength, cold-bend — these are just a few of the many tests that must be passed before approval for shipment is given. Federal's consulting service is yours for the asking.

Federal also manufactures many types of plastic-insulated wires and multi-conductor cables for television, intercom, and numerous special purposes.

COMMUNITY TV COAXIAL CABLE

FEDERAL'S "BIG 5" — The answer to any Community TV lead-in problem . . . Engineered for long life, low line loss and DEPENDABLE all-weather signal transmission . . . over the longest link. Federal's K-14, RG-11/U and RG-59/U are the H-F coaxials you can specify with utmost confidence . . . for community TV Distributing Systems in any area . . . for any amplifier system used.

Wherever the annoying, profit-eating problems of signal leakage and revenue loss exist, the answer is Federal's new K-125 and K-126 radiating alternates for RG-11/U and RG-59/U — used in conjunction with Federal's K-14 — the primary lead-in famous for lowest line loss, longest cable runs and fewer amplifiers required. Both K-125 and K-126 are double-shielded and double-jacketed.

All of the "BIG 5" are made to Federal's high standards of quality and that means dependable, all-weather transmission performance.

Principal characteristics of Federal's "BIG 5" of Community TV Coaxial Cable

TYPE	ZO Impedance Ohms	Capacitance per ft. micro-micro farads	DB per 100 Feet				Jacket OD Mills	Weight 1000

RG TYPE CABLES

WITH THE NEW
LOW-TEMPERATURE
NON-CONTAMINATING
THERMOPLASTIC JACKET

Two types of jackets are used by Federal for its standard coaxial cables. The first is Poly Vinyl Chloride, a rugged material capable of standing the tests of time and temperature. This jacket material is contaminating; that is, the migration of the plasticizer through the braid into the dielectric results in some loss of dielectric strength and increase of attenuation after long use.

The second is a non-contaminating vinyl which has all the properties of Poly Vinyl Chloride but will not contaminate the dielectric at temperatures above -25 degrees C.

Federal engineers discovered that under certain severe operating conditions (below -25 degrees C) the second type of vinyl jacket would not withstand the low temperature. To eliminate contamination and solve the cable industry's problem of meeting cold bend requirements of the military services, Federal developed a new low-temperature, non-contaminating thermoplastic jacket—meeting all requirements of the "Exceptions to Specifications JAN-C-17A" (dated March 21, 1949, and amendment thereto dated January 9, 1950).

JAN-C-17A requires conditioning of the cable at -40 degrees C for 20 hours. It is wrapped around a mandrel 10 times the diameter of the cable. The cable is heat-aged for two weeks at +80 degrees C. It is then conditioned again at -35 degrees C for 20 hours, and another cold bend test applied. At no time during the bend tests can fractures or cracks appear on either the jacket or the dielectric.

The new RG types are outstanding for their longer service life under the most adverse conditions. Their non-contaminating feature means there is no reduction in dielectric strength due to molecular migration. They are a primary example of Federal leadership in the development and production of top-quality H-F coaxial cables.

TINNERMAN

Speed Nuts®...

FASTEST THINGS IN FASTENINGS®

**FOR
RADIO-TELEVISION AND
ELECTRONIC EQUIPMENT**

"J" TYPE

"U" TYPE

"J"-TYPE SPEED NUT brand fasteners are self-retaining in screw-receiving positions. They are snapped into place by hand and hold a constant hole alignment; are vibration-proof, require no riveting, clinching or welding.

"U"-TYPE SPEED NUTS perform the same functions as the "J" Type, but are preferred where a full bearing surface on the lower leg of the SPEED NUT is a requirement. Both are made of highest quality spring steel in a wide variety of screw sizes.

SPECIAL TYPES: "U"-TYPE SPEED NUTS are available in many special designs to meet a broad variety of applications. This example shows the "U" type with a ring shaped soldering tab for electrical connections. SPEED NUT is pressed over bakelite panel.

HOW TO APPLY

START BY HAND . . .

. . . zip down, lightning fast over studs, or any unthreaded parts with tool. Locks on smoothest, hardest surfaces; equally effective on wood, metal or plastic.

D-SHAPED STUD ASSEMBLY

An exclusive Tinnerman Push-On feature is its use over D-shaped studs. Diagram shows how 1/4-turn from locked position frees spring tension grip of spring steel prongs on stud where removability is desired.

PUSH-ON TYPE

Push-On type SPEED NUTS are lightning-fast, zip over integral studs, rivets, tubing, nails or other unthreaded parts.

They provide a bite-lock that grips securely on smoothest, hardest surfaces. These self-locking, one-piece fasteners eliminate costly threaded parts, reduce machining of die castings. They provide line balance, reduce costs, speed-up production . . . are the last word in low cost fastening efficiency.

COIL FORM FASTENERS

The SPEED NUT principle of spring tension fastening is particularly adaptable to fasteners for retaining coil forms in communications equipment. SPEED NUT Coil Form Fasteners are quickly and easily installed and assure vibration-proof adjustments. Millions of SPEED NUT fasteners are performing cost-cutting assembly jobs on all types of radio, TV and communications equipment.

Core screw is first threaded into SPEED NUT. Prongs provide correct tension on screw.

Coil tube is inserted into the SPEED NUT and retained by means of 4 small barbs on inside of SPEED NUT.

Assembly is then snapped into chassis. Tab on leg of SPEED NUT fits into small hole in panel to prevent SPEED NUT from turning.

SPECIAL TYPES: Coil tube assembly is simplified by any one of these three SPEED NUTS. Takes only a few seconds to complete trouble-free attachment of coil tubes. SPEED NUT prongs provide constant pressure to maintain tuning adjustment. Note that C6811 has "L" shaped soldering tab. C4801 retains coil tube only and has clearance hole for core rod.

C 4801

C 6601

C 6811

COMPRESSION RINGS

Easily adapted to all thermo-plastic knob-to-shaft assemblies, they eliminate inserts, set screws; provide lower mold costs, permit thinner walled hubs. Insure permanent attachments and prevent cold-flow loosening.

TUBULAR TYPE SPEED CLIPS

HOW TO APPLY

1. Snap into place by hand. Cam-like prongs compress, then spring out when inserted into hole, holding Clip in position.
2. Line up second part of assembly; start rivet or unthreaded stud into Clip.
3. Seat rivet; turned-in end of SPEED CLIP bites rivet makes a locked, vibration-proof attachment. Perfect where only one side of the assembly is accessible!

ELECTRICAL HARNESS CLAMPS

Provide easiest, safest attachments for wire harness installations in electronics equipment. It can be pre-assembled to wire bundles; opens and closes without the use of tools for easy servicing. Positive locking feature prevents any accidental opening. Has special extruded insulation. Available in clamp sizes from 1/8" to 1 1/16" diameter.

Precision Analog Computer

Designed to meet the demand for a highly accurate, dependable, and versatile general-purpose analog computer for solving problems in dynamics for industrial, research, educational, and military groups. Features a new high-gain, low-drift, contact-stabilized d-c amplifier with outstanding frequency response and power output characteristics; centralized operation from a control console which houses the problem board and its bay, attenuators, initial condition potentiometers, limiters, and other operating controls; precision network

components contained in a controlled environment to insure reliable and accurate performance; a grounded 1800 position problem board which confines all terminal leakages to ground.

VARI PLOTTER
MODEL 205J

Variplotter - MODELS 205G and H

A self-balancing potentiometer type recorder designed to record one variable d-c voltage as a function of a second variable d-c voltage. Model 205G is a single pen board that will present a single X vs. Y plot. Model 205H has an additional arm and pen allowing it to record two independent sets of X vs. Y data simultaneously. Static error is .05 per cent of full scale at 70 degrees Fahrenheit. Dynamic error averages .05 per cent of full scale plus the static error. Standard sensitivity is 50 millivolts per inch or 1.5 volts for full scale deflection of 30 inches. Maximum writing speed is 8-1/2 inches per second. Continuously variable uncalibrated scale factor and parallax controls are provided for each axis.

Variplotter - MODEL 205J

Essentially the same characteristics as the Models 205G and H described above except that the plotting surface is vertical. The plotted result, in the form of an inked line, is presented on a 30 inch square of paper which is held firmly to the plotting surface by a unique vacuum system. Static error is .05 per cent of full scale at 70 degrees Fahrenheit and dynamic error average .05 per cent of full-scale plus the static error. Maximum writing speed is 8-1/2 inches per second. Standard sensitivity is 50 milli-volts per inch or 1.5 volts for full-scale deflection of 30 inches. Where floor space is limited, the MODEL 205J Variplotter is recommended for your recording needs such as analog computer output, guided missile data, engine performance, etc.

Digi-Verter Group - TYPE 17-31A

The Digi-Verter can be used to convert digital information, such as that obtained from card reading machines or tabular lists, into analog form suitable for presentation as a point plot on a Variplotter plotting board. It is designed to accept two four-decimal digit numbers and their signs from an IBM machine such as Type 513, 517, 519, 523, etc. Complete operating controls include power switch, feed switch, input switch, storage clear, and scale factor and parallax controls for both X and Y. Scale factor will provide plot expansion up to 10 times and parallax controls allow the zero-zero origin to be located anywhere on the plotting surface. The complete digital plotting system consists of the Digi-Verter, Data Input Keyboard, Model 205G Variplotter plotting board

Functional Potentiometers

There are two models of sine-cosine potentiometers available—Type 462 which is a single unit and Type 315 which provides two sets of sine-cosine functions. Accuracy, is within .15% of the theoretical voltage for all points throughout 360° of shaft rotation. Angular resolution is .005% of 360° and electrical resolution, expressed as a percentage of the total voltage applied across one 90 degree quadrant is with .05%.

MIL-Line precision deposited carbon resistors give you new stability—without premium cost

Here are the deposited carbon resistors made to your order . . . to meet the increasingly severe conditions of service without costly hermetic sealing. A new tough and durable protective coating insures accurate, stable values and high insulation resistance. Originally developed for use in military apparatus, MIL-Line deposited carbon resistors are equally advantageous in commercial and industrial uses. Whatever your needs, you'll find MIL-Line means extra long life and extra reliability. Insist on MIL-Line always for premium performance—without premium cost.

MIL-Line Types and Resistance Ranges

Military Type	Radell Type	Nominal Length ($\pm 1/16$)	Dimensions Diameter ($\pm 1/32$)	Leads ($\pm 1/8$)	Rating	Resistance Range	Maximum Working Voltage
RN15	CD 1/2 PR	1/2	5/32	1-1/2	1/2 W	25 ohms to 2 meg.	350
RN20	CD 1/2 MR	19/32	11/64	1-1/2	1/2 W	25 ohms to 2 meg.	350
RN25	CD 1/2 SR	13/16	11/64	1-1/2	1/2 W	25 ohms to 10 meg.	350
RN30	CD 2 SR	15/16	19/64	1-1/2	1 W	25 ohms to 10 meg.	1000
		2-1/16	19/64	1-1/2	2 W	25 ohms to 30 meg.	2000

Note: MIL-Line resistors are available in resistance tolerances "F," "G," and "J" (1%, 2% and 5%) and perform in accordance with temperature coefficient characteristic "X" as defined in specification MIL-R-10509A.

For complete information write Radell Corporation, United States Sales Office, 7900 Pendleton Pike, Indianapolis 25; or phone Cherry 2466.

This ingenious Spring Back Tester determines the temper of strip and sheet metals for electronic parts in thicknesses of 0.020" or less. It does this by measuring the "spring-back" when specimen is released after bending.

Used to check bowed, bent and offset cathodes for degree of deformation, this Optical Comparator also checks the width and location of circumferential beads.

Cup-Testing Apparatus determines the amenability of very thin nickel strip to deep forming. The combination of temper, grain size, and ductility of the raw material is measured accurately.

Sensitive to .00005", this Electronic Micrometer reads cathode tolerances with repeated exactness. Light walls of Lockseam Cathodes tend to spring slightly when mechanical micrometers are used—and readings, therefore, are not exact. The Electronic Micrometer standardizes this measurement variable and supplies uniform readings.

The "E" Dimension Gauge measures the critical spacing between the ceramic surface and the surface of the emitting cap in Disc Cathodes. Tolerance limits must be accurate to $\pm 0.0005''$ since the dimension controls cut-off voltage and adds uniformity to the characteristics of cathode-ray tubes.

This Cathode Tab Tester, also developed by Superior, is used to "Production Control Test" the strength of tabs on Lockseam Cathodes. The tab is bent back and forth by the Tester until failure results. If it breaks before a specified minimum number of 90° bends are completed, the material is rejected.

Superior Specialties: SEAMLESS AND LOCKSEAM NICKEL CATHODES, CATHALOY CATHODES, DISC CATHODES, ANODES AND GRID CUPS, FABRICATED TUBULAR PARTS.

of the Critical Tests

Superior Tubing Must Meet

Every day we query these and other super-accurate machines about Superior tubing and the analyses from which we make it.

Answers—precise to the 3rd and 4th decimal place—enable us to deliver:

► An eyebrow-raising assortment of tubular parts for the electronics industry.

► Unfailing quality and dependability in each of these products.

Superior customers have often taken these things for granted. But Superior's Quality Control Program cannot take anything for granted! Rigid controls, beginning at the original melt, continue through every stage of drawing and fabrication. Result: Parts that stand up to the toughest and most precise electronics applications!

We could show only a few typical parts on these pages. So we've elected, instead, to detail our full line in literature which is yours for the asking.

If, however, you use cathodes in your work, we can supply Seamless or WELDRAWN† tubing for these parts or Lockseam* cathodes made from strip in either Nickel or Cathaloy** metals... pound or shaped to specified lengths, plain or beaded (embossed). Also anodes, grid cylinders and cups, disc cathodes, and other tubular parts for cathode ray gun structures.

Superior will be glad to work with you in developing, designing and producing the parts you need. If you have a tubing problem, get in touch with us now. The handy coupon will bring you full information, and preliminary consultation costs you nothing. There's no obligation.

Reg. U.S. Trademark, Superior Tube Co.
Manufactured under U.S. Patents.
*U.S. Trademark applied for.

Superior

THE BIG NAME IN SMALL TUBING

All analyses .010" to 5/8" O.D.
Certain analyses in Light Walls up to 2 1/16" O.D.

CATHALOY is a new line of nickel cathode alloys for both Seamless and Lockseam type cathodes. It meets exacting requirements for low impedance, high emission and long life—assures tube reliability, increased mechanical strength, full service.

Developed in Superior Laboratories, this Collapse Tester is now accepted by A.S.T.M. The instrument is used to determine the degree of resistance to bending in finished cathodes.

The Flat-Faced Hand Micrometer checks cathode length and is accurate to .001". Conical Faced Barrel Micrometer checks wall thickness to tolerances of .0001". The Flat Faced Barrel Micrometer checks O.D. and bead dimensions, can be read to .0001". The Ultra Precision Barrel Micrometer measures shaped cathodes (O.D.) and beads and is readable to .00004". The "Go" and "No Go" pin gauges measure the inside diameter of round cathodes.

Superior Tube Company, Electronics Division
2504 Germantown Ave., Norristown, Penna.
I am interested in tubing for the following part(s).

.....

Please send me full technical data on Superior tubing suitable for such applications.

HAMMARLUND

DATA TRANSMISSION-SELECTIVE CALLING AND SUPERVISORY CONTROL EQUIPMENT

POINT TO POINT SIGNALING

The Hammarlund Standard Duplex Signaling Unit consists of a tone generator and receiver designed to operate over wire lines, telephone power line carrier, and radio or microwave communications circuits for signaling, dialing, slow speed telemetering, supervisory controls or other information. Transmitters and receivers are available for 36 frequency channels between 2000 and 6475 cps. This equipment is being used by military and governmental agencies, pipeline and power companies, railroads and other groups requiring remote on-off switching, continuous indication of operating conditions, and automatic detection of wire line or power source failures along their systems.

PROTECTION THROUGH SUPERVISORY CONTROL

The Hammarlund "Multi-Gate" Remote Supervisory and Control System is engineered to provide highly efficient, fully reliable operational controls of important remote equipment such as used by refineries, pipeline utilities, railroads, civil defense and other commercial, as well as military, groups. Because of a unique design by which a single tone activates a receiver, which in turn will then accept a second tone to operate a relay, this equipment can be used where disturbances on connecting wire or radio circuits make ordinary tone-operated remote controls impractical. Up to 21 individual on-off functions can be handled over a single circuit employing only 7 audio signaling tones.

SELECTIVE CALLING OR SIGNALING

Hammarlund Selective Calling equipment, added to 2-way radio system used to control large fleets of vehicles, or distant fixed stations, adds privacy, speed, safety, quietness and convenience to day-in-day-out operations. By the push of a button the dispatcher within 0.8 of a second selects the station which he wants to contact. Only the selected operator or group of operators can receive the call. If the operator of the car or station being called doesn't answer, an indicator lamp remains lighted to show he was called. This simple equipment can be added to any present installation, or incorporated in any type of installation now projected.

THE HAMMARLUND MANUFACTURING CO., INC.

COMMUNICATION RECEIVERS

The New "HQ-140-X"

"HQ-140-X" is a new superheterodyne type receiver that provides amateurs and other short wave listeners with all the advantages of modern professional design and circuitry. In addition, it incorporates the outstanding features that have made Hammarlund "HQ's" famous for quality and performance. This receiver retains the high degree of sensitivity and selectivity of the "HQ-129-X," and in addition features notably improved frequency stability and image ratio. It covers a continuous range of frequencies from 540 kc to 31 mc, or 155 meters to 9.7 meters, in six bands.

Wide spread tuning is supplied on the four higher frequency bands, and actual calibration in the 80, 40, 20, 15, and 10 meter amateur bands. Many types of noise and other interference have been substan-

tially reduced by the outstanding noise limiter and the special Hammarlund patented crystal filter.

FEATURES

TUNING RANGES: .54—1.32 mc, 1.32—3.2 mc, 3.2—5.7 mc, 5.7—10 mc, 10—18 mc, and 18—31 mc.

CALIBRATED BAND SPREAD: 3.5—4 mc, 7—7.3 mc, 14—14.4 mc, 20.9—21.6 mc, and 28—30 mc.

TUBE LINE-UP: 6C4 Oscillator, 6BA6 RF Amplifier, 6BE6 Mixer, 6BA6 1st IF Amplifier, 6BA6 2nd IF Amplifier, 6BA6 3rd IF Amplifier, 6AL5 combination detector, AVC and noise limiter, 12AU7 1st AF Amplifier and BFO, 6V6GT/G Audio Power Output, OC3/YR105 Voltage Regulator and 5U4G Full Wave Rectifier.

The "SP-600-JX"

The "SP-600-JX" communications receiver, now also available to hams, is a masterpiece of receiver design and already is world-known for its outstanding construction and performance.

This professional receiver, with its six bands covering the frequency spectrum from 540 kc to 54 mc, is being used in large quantities by military and governmental agencies, as well as by commercial agencies, for both single and diversity reception.

This magnificent receiver is a 20 tube dual conversion superheterodyne. The power supply is an integral part of the receiver chassis. Operation on any of six crystal controlled fixed frequency channels within the range of the receiver is immediately available. This designates it as the perfect receiver for point-to-point and network operations. Pre-arranged day and night fixed frequencies. With crystal control you can select your desired channels immediately.

Stability is .001 to .01 percent depending on frequency to which receiver is tuned, image rejection is 80 db to 120 db down, and spurious responses are at least 100 db down. Sensitivity is 1 microvolt CW and 2 microvolts AM while selectivity for the three calibrated crystal and three non-crystal ranges is from 200 cycles to 13 kc. Radiation is negligible with no cross-talk in multi-receiver installations.

"FC" and "FNC" COUPLINGS

FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform

force-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

STANDARD STOCK TYPES

CODE FC-46-S	Insulated flexible coupling
CODE FNC-46-S	Non-insulated flexible coupling

"NZ-10" CAPACITORS

FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-

thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

HAMMARLUND

"BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION—Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver-plated beryllium-copper. Tapped studs on the silicone

treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity, 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator. *High Speed Ball-Bearing Models Also Are Available.*

CODE	CAPACITY/SECTION		SERIES CAPACITY		PLATES	
	Max.	Min.	Max.	Min.	Rotor	Ea. Stator
BFC-12	14.5	3.4	7.6	2.2	4	3
BFC-25	27.3	4.8	14.1	2.9	7	6
BFC-38	40.1	6.2	20.6	3.6	10	9

"MAC" CAPACITORS

FEATURES—The "MAC" provides the low minimum capacity essential for use as a trimmer in the VHF range. It was engineered to achieve the smallest dimensions practical to meet the requirements of a miniaturized component.

CONSTRUCTION—Its silicone treated steatite base is only 3/4" x 5/8". Rotor and stator are

soldered assemblies and are of brass, silver-plated. Rotor and stator terminals are positioned to permit short leads. The threaded bearing is provided with flat sides to permit single hole mounting.

SPECIFICATIONS—Straight line capacity. Screw-driver adjustment. Air gap is 0.017" nominal. Tested at 750 V. R.M.S., 60 cycles.

CODE	CAPACITY		PLATES	CODE	CAPACITY		PLATES
	Max.	Min.			Max.	Min.	
MAC-5	5.0	1.4	5	MAC-15	14.2	2.2	15
MAC-10	8.7	1.7	9	MAC-20	19.6	2.7	21

"APC" CAPACITORS

FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

CONSTRUCTION—Brass rotor and stator are soldered to brass supports. Nickel-plated phosphor

bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

CODE	CAPACITY		PLATES
	Max.	Min.	
APC-25	25.	3.0	7
APC-50	50.	3.9	14
APC-75	75.	4.6	20
APC-100	100.	5.5	27
APC-140	140.	6.7	37

SPECIFICATIONS—Straight line capacity characteristic. Hexagonal collar on slotted shaft permits rotor adjustments. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

"MAPC" CAPACITORS

FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

CODE	CAPACITY		PLATES
	Max.	Min.

MAPC-50	50.	3.2	19
MAPC-75	75.	3.9	29
MAPC-100	100.	4.5	38

SPECIFICATIONS—Straight line capacity. Screw-driver or socket wrench adjustment. Air gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

"HFA" and "HFB" CAPACITORS

SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal soldered to the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFB" is a dual, balanced rotor

transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but otherwise incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFB" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

60 Cycle Test Voltage:
 "HFA"—"A" 800 V. R.M.S., "B" 1200 V. R.M.S.
 "E" 1750 V. R.M.S., "HFB"—"C" 1500 V. R.M.S.
 "E*" 3000 V. R.M.S.; plates have rounded edges.
 †Has front and rear supporting panels.

"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its

sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver-plated beryllium-copper spring wiping against a wide disc on the rotor.

SPECIFICATIONS—Straight line capacity. Air gap is 0.0245" nominal.

CODE	CAPACITY		PLATES
	Max.	Min.	
RMC-50-S	50.	7.3	7
RMC-100-S	105.	9.5	14
RMC-140-S	143.5	11.0	19
RMC-325-S	327.	17.5	43

"VU" CAPACITORS

FEATURES—A uniquely designed UHF tuning capacitor using completely new concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 Mc. Capacitor sections are in series to eliminate rotor wiper and the rotor. It utilizes Pyrex balls to form precision bearings and to completely eliminate the rotor. Thus, noise generated by rubbing metal-to-metal contact and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each end. This permits vacuum tube and inductor to be mounted adjacent to each other on opposite sides of the capacitor to minimize circuit inductance.

CODE	SERIES CAPACITY		PLATES/SECTION
	Eff.	Min.	
VU-20	22.5	3.35	11
VU-30	31.5	3.5	15
VU-45	45.0	3.8	21

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

"MC" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give a choice of mounting, connections and capacity characteristics. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. The

"MCD" is a split-stator panel-mounted capacitor.

SPECIFICATIONS—Straight line or "midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" single section tuning capacitor employs

"HFD" dual capacitor, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver-plated beryllium-copper wipers for each

section assure long life and maximum contact efficiency. Single hole panel mount or base mounting.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"APC" rotor and stator design. Extra long bearing and positive contact nickel-plated phosphor-bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole panel or base mounting.

Consistent QUALITY...

Put  On the Map

On air map or road map of New Jersey, you will see the name "Aircraft Radio" marking our location just N.N.W. of Boonton.

Names don't appear on the map overnight. It takes stability and reputation. And as we approach our 25th anniversary, it is gratifying to know that A.R.C. has been "put on the map" in another sense, too. All over the world, A.R.C. is known and our communications and navigational instruments are widely used and trusted.

A.R.C. has become a standard of excellence in its field because it is quality-built for precision rather than price. Into each unit go the finest of components—plus 24 years of specialized engineering experience.

MELAMINE JACKS

The design of the #J-1 series jack represents an optimum combination of electro-mechanical elements. A BRASS THREADED BUSHING is molded as an integral unit with the MELAMINE BODY. Melamine material possesses excellent mechanical and electrical properties, and, further, offers a natural resistance to fungus. The BERYLLIUM COPPER SPRING CONTACT is heat treated and silver plated. Terminal lug is solder dipped.

BRADLEY RECTIFIERS AND PHOTOCELLS

VACUUM PROCESSED FOR PERFORMANCE AS RATED

SELENIUM

- Bradley's exclusive vacuum process assures dependability and long life.

POWER RECTIFIERS

(SE11 Series) Power Rectifiers, Ratings from 50 milliamperes to thousands of amperes. Available in half-wave, full-wave bridge, voltage multiplier, center tap full-wave, polyphase and special connections to customer's requirements. Supplied with, or without brackets. Full wave ratings per plate convection cooled:

- Type R Plate size 1" x 1" to .2 amperes.
- Type S Plate size 1 $\frac{3}{16}$ " x 1 $\frac{3}{16}$ " to .3 amperes.
- Type T Plate size 1 $\frac{1}{2}$ " x 1 $\frac{1}{2}$ " to .6 amperes.
- Type U Plate size 2" x 2" to 1.2 amperes.
- Type V Plate size 3" x 3" to 3.0 amperes.
- Type W Plate size 4" x 4" to 6 amperes.
- Type X Plate size 5" x 6" to 12 amperes.

MINIATURE HIGH VOLTAGE RECTIFIERS (SE8 Series) Completely sealed in phenolic housings, or (SE6) hermetically sealed in glass tubes. Ratings up to 6000 volts peak inverse and 12.5 ma D.C. per unit. Units in series for higher voltage. Sizes from $\frac{1}{4}$ " diameter to $\frac{3}{8}$ " diameter.

VALVES (SR Series) For magnetic amplifier and special applications. Hermetically sealed to meet all specifications.

RADIO-TV RECTIFIERS

(RS Series) Rated from 50 ma to 500 ma D.C. output. Peak inverse up to 500 volts. Plate size from 1" x 1". Length $\frac{1}{2}$ " to 1 $\frac{1}{2}$ ".

COPPER OXIDE

- Vacuum processing and gold contacts assure minimum aging, minimum temperature error.

HIGH CONVERSION RATIO RECTIFIERS

(CX4D Series) for electric control and instrument work. Ratings to 100 ma D.C. output and up to 12 volts A.C. Completely enclosed housing. Size $\frac{7}{8}$ " x $\frac{3}{4}$ ", from $\frac{1}{2}$ " to 2" long. Single 6-32 screw mounting.

MINIATURE HERMETICALLY SEALED RECTIFIERS (CX23 Series)

Modulators and bridges with matched sections for detecting phase differentials in A.C. currents and small D.C. potentials applied to balanced A.C. circuits. Maximum 2 volts continuous as modulators, 6 volts as bridges.

INSTRUMENT RECTIFIERS

(CX2E Series) Rated up to 6 volts A.C., 4.5 volts D.C., 5 ma D.C. for conventional circuits and special current control applications. Two $\frac{7}{64}$ " diameter mounting holes. 3" gold leads.

MODULATORS AND VARISTORS

(CX3E Series) with current and temperature characteristics balanced to better than 1% over a range of -40°C. to 70°C. Up to 12 volts A.C., 8 volts D.C., 5 ma D.C. Hermetically sealed.

DIODES

Selenium and Cuprous Oxide

For low current diode requirements. Excellent stability over a broad range of temperatures. Rugged and conservatively rated to provide a wide margin of sustained operating dependability under overload conditions of moderate severity.

PHOTOELECTRIC CELLS

Self-Generating

Convert light into electric energy. No external power source required. No current drain when inoperative. Rugged, light weight, true to rating. Many sizes, shapes, mountings.

Specify **STONE**

for your paper tube requirements
and you will get the benefit of 126 years
of industrial experience.

STONE'S COIL BOBBINS

Spiral electrical insulating tube assembled with fibre, pressboard, or plastic flanges—Quality controlled manufacturing conditions mean close, accurate specifications—Inside diameters can be furnished from 3/16" to 2"—Heads or flanges—plain, recessed, embossed, notches or holes for leads—Wide selection of base materials plus low tooling cost mean specification changes can be made easily and inexpensively.

STONE'S SPIRAL ELECTRICAL TUBES

Made of dielectric krafts, fish paper, asbestos, plastic films—As small as .046" ID and lengths as short as .040"—Wall thicknesses .002" to .125" depending upon materials and ID—More than 200 types and thicknesses of materials enable Stone to develop and produce special items to meet the requirements of the electronics and electrical industries. These include tubes with various end closures, notches, punchings, printing and stampings—To meet lower moisture absorbent requirements, government or underwriters' specifications, we dip or impregnate in paraffin, high melt waxes, thermo-setting and thermo-plastic resins.

STONIZED SPIRAL PHENOLIC TUBES

These paper-base phenolic tubes have high dielectric strength, low moisture absorption, and good dimensional stability—Can be furnished in various grades to meet specific requirements having inside diameters as low as 1/16", various wall thicknesses and lengths—Available with special formed ends, punched, notched, slotted, and printed.

Our controlled manufacturing process enables us to furnish these tubes to accurate specifications at low cost.

Stone's specialty is small diameter spiral wound insulating tubing from 3/64" to 1" ID, although larger sizes are available. Stone tubes are custom-made and close tolerances naturally result. Yet these custom-made tubes are mass produced, which means low cost to many hundreds of America's leading manufacturers.

BRADLEY RECTIFIERS AND PHOTOCELLS

VACUUM PROCESSED FOR PERFORMANCE AS RATED

SELENIUM

• Bradley's exclusive vacuum process assures dependability and long life.

POWER RECTIFIERS

(SE11 Series) Power Rectifiers, Ratings from 50 milliamperes to thousands of amperes. Available in half-wave, full-wave bridge, voltage multiplier, center tap full-wave, polyphase and special connections to customer's requirements. Supplied with or without brackets. Full wave ratings per plate convection cooled:

- Type R Plate size 1" x 1" to .2 amperes.
- Type S Plate size 1 $\frac{3}{16}$ " x 1 $\frac{3}{16}$ " to .3 amperes.
- Type T Plate size 1 $\frac{1}{2}$ " x 1 $\frac{1}{2}$ " to .6 amperes.
- Type U Plate size 2" x 2" to 1.2 amperes.
- Type V Plate size 3" x 3" to 3.0 amperes.
- Type W Plate size 4" x 4" to 6 amperes.
- Type X Plate size 5" x 6" to 12 amperes.

MINIATURE HIGH VOLTAGE RECTIFIERS

(SEB Series) Completely sealed in phenolic housings, or (SE6) hermetically sealed in glass tubes. Ratings up to 6000 volts peak inverse and 12.5 ma D.C. per unit. Units in series for higher voltage. Sizes from $\frac{1}{4}$ " diameter to $\frac{5}{8}$ " diameter.

VALVES (SR Series) For magnetic amplifier and special applications. Hermetically sealed to meet all specifications.

RADIO-TV RECTIFIERS

(RS Series) Rated from 50 ma to 500 ma D.C. output. Peak inverse up to 500 volts. Plate size from 1" x 1". Length $\frac{1}{2}$ " to 1 $\frac{1}{2}$ ".

COPPER OXIDE

• Vacuum processing and gold contacts assure minimum aging, minimum temperature error.

HIGH CONVERSION RATIO RECTIFIERS

(CX4D Series) for electric control and instrument work. Ratings to 100 ma D.C. output and up to 12 volts A.C. Completely enclosed housing. Size $\frac{7}{8}$ " x $\frac{3}{4}$ ", from $\frac{1}{2}$ " to 2" long. Single 6-32 screw mounting.

MINIATURE HERMETICALLY SEALED RECTIFIERS (CX23 Series)

Modulators and bridges with matched sections for detecting phase differentials in A.C. currents and small D.C. potentials applied to balanced A.C. circuits. Maximum 2 volts continuous as modulators, 6 volts as bridges.

INSTRUMENT RECTIFIERS

(CX2E Series) Rated up to 6 volts A.C., 4.5 volts D.C., 5 ma D.C. for conventional circuits and special current control applications. Two $\frac{7}{64}$ " diameter mounting holes. 3" gold leads.

MODULATORS AND VARISTORS

(CX3E Series) with current and temperature characteristics balanced to better than 1% over a range of -40°C. to 70°C. Up to 12 volts A.C., 8 volts D.C., 5 ma D.C. Hermetically sealed.

DIODES

Selenium and Cuprous Oxide

For low current diode requirements. Excellent stability over a broad range of temperatures. Rugged and conservatively rated to provide a wide margin of sustained operating dependability under overload conditions of moderate severity.

PHOTOELECTRIC CELLS

Self-Generating

Convert light into electric energy. No external power source required. No current drain when inoperative. Rugged, light weight, true to rating. Many sizes, shapes, mountings.

FOR MORE INFORMATION

Please write for a copy of THE BRADLEY LINE. We welcome special rectification problems.

STONE'S COIL BOBBINS

Spiral electrical insulating tube assembled with fibre, pressboard, or plastic flanges—Quality controlled manufacturing conditions mean close, accurate specifications—Inside diameters can be furnished from 3/16" to 2"—Heads or flanges—plain, recessed, embossed, notches or holes for leads—Wide selection of base materials plus low tooling cost mean specification changes can be made easily and inexpensively.

STONE'S SPIRAL ELECTRICAL TUBES

Made of dielectric krafts, fish paper, asbestos, plastic films—As small as .046" ID and lengths as short as .040"—Wall thicknesses .002" to .125" depending upon materials and ID—More than 200 types and thicknesses of materials enable Stone to develop and produce special items to meet the requirements of the electronics and electrical industries. RMC DISCAPS

APPROVED AND USED BY LEADING MANUFACTURERS

"Heavy Duty" By-Pass DISCAPS

TYPE B

*Rated 600 V.D.C.W. Flash test 1200 V.D.C.

SPECIFICATIONS

TYPE B BY-PASS SERIES—GUARANTEED MINIMUM VALUE

POWER FACTOR: 1.5% Max. @ 1 KC (initial)
 POWER FACTOR: 2.5% Max. @ 1 KC (after humidity)
 WORKING VOLTAGE: 1000 V.D.C.
 TEST VOLTAGE (FLASH): 2000 V.D.C.
 LEADS: No. 22 tinned copper (.026 dia.)

INSULATION: Durez phenolic—vacuum waxed
 INITIAL LEAKAGE RESISTANCE: Guaranteed higher than 7500 megohms
 AFTER HUMIDITY LEAKAGE RESISTANCE: Guaranteed higher than 1000 megohms

"Stable Capacity" DISCAPS

TYPE D

SPECIFICATIONS

POWER FACTOR: 1% Max. @ 1 K C (initial)
 POWER FACTOR: 2.5% Max @ 1 K C, after humidity
 WORKING VOLTAGE: 1000 V.D.C.
 TEST VOLTAGE (FLASH): 2000 V.D.C.
 LEADS: No. 22 tinned copper (.026 dia.)

INSULATION: Durez phenolic—vacuum waxed
 INITIAL LEAKAGE RESISTANCE: Guaranteed higher than 7500 megohms
 AFTER HUMIDITY LEAKAGE RESISTANCE: Guaranteed higher than 1000 megohms

CAPACITY TOLERANCE: ±20% at 25° C or G.M.V.

ELECTRICAL CIRCUIT CONNECTORS

..can solve your toughest weight and space problems!

Our Engineering and Development Department can help you with your requirements for special connectors.

SERIES "A"

1/2 ACTUAL SIZE

DESCRIPTION

LIGHTWEIGHT AIRCRAFT TYPE

Polarized; Rack, Panel or Cable mounted—with Hood or Clamp and Cable strain relief.

Types Available

Receptacle	Plug
A7S	A7P
A10S	A10P
A15S	A15P
A18S	A18P

(Figures in above Code Nos. indicate number of contacts.)

SERIES "HMRE"

ACTUAL SIZE

HERMETIC PLUG

Each special contact fused in glass into special base plate provided for soldering into a rectangular hole in an hermetically sealed housing or bulkhead. Used with Standard "MRE" Receptacle.

Plug

HMRE7P-G
HMRE9P-G
HMRE14P-G
HMRE18P-G
HMRE20P-G
HMRE21P-G
HMRE26P-G
HMRE34P-G
HMRE41P-G
HMRE50P-G

(Used with Standard MRE Receptacles)

SERIES "SMRE"

ACTUAL SIZE

SUB-MINIATURE

For Aircraft, Instruments and Portable Equipment

Light weight, Polarized. Self-aligning with special guide pins. Rack, Panel or Cable mounted with Hood and Cable strain relief.

Receptacle	Plug
SMRE7S-G	SMRE7P-G
SMRE14S-G	SMRE14P-G
SMRE20S-G	SMRE20P-G
SMRE26S-G	SMRE26P-G
SMRE29S-G	SMRE29P-G
SMRE34S-G	SMRE34P-G

(Other sizes to meet your requirements)

SERIES "CR"

1/2 ACTUAL SIZE

MINIATURE PRESSURE-TIGHT

This connector is typical of several recent designs requiring a miniature connector (1/2" dia. x 1 1/4" lgth.) in an aluminum die-cast shell. It is sealed with neoprene gaskets around the inserts and around each contact for pressure-tight construction.

Receptacle (Panel)	Plug (Cable)
CRS-2S	CRS-2P

(Standard type, pin contacts in plug)

Receptacle	Plug
CRS-2P-R	CRS-2S-R

(Reversed type, pin contacts in receptacle)
(5 contacts #20 AWG)
(2 contacts #18 AWG)

SERIES "MRE"

2/3 ACTUAL SIZE

MINIATURE

For Aircraft, Instruments and Portable Equipment

Light weight, Polarized. Self-aligning with special guide pins. Rack, Panel or Cable mounted with Hood and Cable strain relief.

Receptacle	Plug
MRE7S-G	MRE7P-G
MRE8S-G	MRE8P-G
MRE9S-G	MRE9P-G
MRE12-2S-G	MRE12-2P-G
MRE14S-G	MRE14P-G
MRE18S-G	MRE18P-G
MRE20S-G	MRE20P-G
MRE21S-G	MRE21P-G
MRE26S-G	MRE26P-G
MRE34S-G	MRE34P-G
MRE41S-G	MRE41P-G
MRE50S-G	MRE50P-G
MRE75S-G	MRE75P-G

SERIES "B"

2/3 ACTUAL SIZE

DESCRIPTION

MINIATURE INSERT IN SPECIAL SHELL

Aluminum die-cast shells available in 3/8" and 1-7/32" dia. with bayonet locking for quick engage and disengage. Shells have synthetic rubber gaskets. Flanges permit mounting of receptacle in panel or housing and special gland construction provides cable entry in plug.

Types Available

Receptacle (Panel)	Plug (Cable)
B12S	B12P
B14S	B14P
B24S	B24P

(Standard type, pin contacts in plug.)

B12P-R	B12S-R
B14P-R	B14S-R
B24P-R	B24S-R

(Reversed type, pin contacts in receptacle.)
(Figures in above Code Nos. indicate number of contacts.)

SERIES "SA"

2/3 ACTUAL SIZE

LIGHTWEIGHT AIRCRAFT SMALL

Polarized; Rack, Panel or Cable mounted—with Hood or Clamp and Cable strain relief

Types Available

Receptacle	Plug
SA7S	SA7P
SA10S	SA10P
SA15S	SA15P
SA18S	SA18P

(Figures in above Code Nos. indicate number of contacts.)

SERIES "HM"

ACTUAL SIZE

HERMETIC PLUG (Round Hole)

Special contacts fused in glass into special base plate provided for soldering into a round hole in an hermetically sealed housing or bulkhead. Used with Standard "M" Receptacle.

Plug

HM4P
HM5P

(Used with Standard M4S, M5S or M7S Receptacles)

SERIES "QRE"

2/5 ACTUAL SIZE

QUICK-DISCONNECTING SELF-ALIGNING

Spring-loaded contacts for ease in separation. Self-aligning with special guide pins. Rack, Panel or Cable mounted with Hood and Cable strain relief.

Types Available

Receptacle	Plug
QRE6S	QRE6P
QRE12S	QRE12P
QRE18S	QRE18P
QRE24S	QRE24P
QRE34S	QRE34P
QRE208S	QRE208P
AQRE12S	AQRE12P
MAQRE18S	MAQRE18P

SERIES "M"

4/5 ACTUAL SIZE

MINIATURE

For Aircraft, Instruments and Portable Equipment

Light weight, Polarized, Locking Ring. Panel or Cable mounted with Hood and Cable strain relief.

Types Available

Receptacle	Plug
SM1S	SM1P
SM2S	SM2P
M4S	M4P
M5S	M5P
PM6S	PM6P
M7S	M7P
M9S	M9P
M12S	M12P
M48S	M48P

(Figures in above Code Nos. indicate number of contacts.)

SERIES "F"

2/5 ACTUAL SIZE

SPECIAL CONNECTORS

Unique design permits the use of two sizes of wire — #20 and #14 AWG—and assures uniform electrical and mating characteristics. Light-weight, polarized and panel mounted, these connectors are available with or without guides.

Types Available

Receptacle	Plug
F5S-G	F5P-G
F2S-8P-G	F2P-8S-G
F9S-9P-G	F9P-9S-G

(Figures in above Code Nos. indicate number of contacts. First figure for #20 AWG, second figure for #14 AWG.)

MANY FEATURES are covered by our Pat. No.'s 161900, 162795, 2411861, 2466370, 2513080, 2526325, 2532538. Other Pats. Pend.

MONOBLOC* CONSTRUCTION eliminates unnecessary creepage paths and reduces possibility of moisture and dust pockets and provides stronger molded parts.

MOLDED MELAMINE body parts insure greater mechanical strength and high dielectric and arc resistance.

PRECISION MACHINED CONTACTS are gold plated over silver for consistent electrical conductivity, prevention of corrosion and ease in soldering.

Connectors & components meet applicable government specifications.

WINCHESTER PRODUCTS AND WINCHESTER DESIGNS ARE AVAILABLE ONLY FROM WINCHESTER ELECTRONICS, INCORPORATED

Write or telephone our Engineering Department for information on the above or other connectors—or for consultation on difficult connector problems. Many other standard and special types available.

INSULATING
TUBING and SLEEVING

INCLUDES SAMPLES AND DESCRIPTIONS OF THE FOLLOWING...

VARGLAS SILICONE Class H insulating materials were pioneered by our Laboratory. Retain flexibility, electrical properties and mechanical strength in temperatures ranging from -85°F. to 500°F. Available in tubing, sleeving, lead wire, tying cord.

PERMAFIL-IMPREGNATED VARGLAS TUBING Fiberglass braid coated with General Electric's Permafil resin. Extremely tough, resistant to solvents and elevated temperatures, highly flexible. Can be bent or twisted with little or no loss of dielectric strength. Coils and standard 36" lengths.

VARGLAS SLEEVING AND TUBING Numerous types and grades—including synthetic-treated, varnished, lacquered, saturated, litewall and others.

VARGLAS NON-FRAY SLEEVING Fiberglass braid normalized to remove all organic impurities. It will withstand temperatures up to 1200°F. Recommended where dielectric properties are not paramount. Three types available.

VARFLO TUBING AND SLEEVING Vinyl-coated Fiberglas in full range of sizes, colors and grades. Extremely flexible with excellent heat aging qualities. Low priced.

VARFLEX COTTON TUBING AND SLEEVING Varnish or lacquer impregnated—for applications where MIL-I-3190 Class A materials are specified. All NEMA grades.

SYNTHOLVAR EXTRUDED TUBING Made in various standard formulations of vinyl polymers. Has high dielectric and tensile strength—will not support combustion nor absorb moisture. Type EG Approved under MIL-I-631A. Several others to meet special requirements.

NEW! VARGLAS SILICONE RUBBER SLEEVING AND TUBING—the culmination of 5 years of research—for applications requiring extraordinary flexibility. Details on request.

MAIL COUPON TODAY FOR SAMPLES!

VARFLEX CORPORATION,
 308 N. Jay St., Rome, N. Y.

Please send me free folder containing samples of your electrical sleeving and tubing.

ALNICO MAGNETS

Alnico permanent magnets are usually made to the customers' drawings and specifications, but some sizes and shapes are offered as stock items for use during the initial or experimental phases of a project. A few such stock types are listed below and these are available in Alnico V, with surfaces marked "f" finish ground, unless ordered without this grinding. A greater variety of stock items will be found listed in our Alnico magnet catalog PM-102A. Most Alnico magnets are sand cast and are subject to the

usual limitations and variations of sand castings, and Alnico materials are also quite hard and somewhat brittle. Alnico V is usually the preferred type of material due to the very high value of energy product which it possesses, and represents the best value in terms of gauss per dollar.

If Alnico magnets of types and shapes other than those listed are required, a blueprint should be furnished for quotation. Complete information should be

included including tolerances, grinding required, type of Alnico and direction of magnetization. The tolerances which may be expected to be held without grinding for both cast and sintered magnets are shown in tables below.

Small magnets are sometimes furnished in sintered Alnico, and three such parts are shown in this listing. Most sintered magnets require rather expensive tooling and are usually only considered when the quantity required is large.

SPECIAL MAGNETIC MATERIALS

INDUR is a soft magnetic material consisting of 49% cobalt, 49% iron, and 2% nickel. It is made up to special order in the form of bars, plates, and forgings. Its saturation value of about 24,000 gauss is particularly useful for pieces and other magnetic structures where high field strengths are required.

ALLOY is a new ferro magnetic material developed by the Bell Telephone Laboratories whose temperature coefficient of elastic modulus may be controlled over a wide range and which has good ferro magnetic stability and mechanical strength. This alloy contains about 42% nickel, 9% molybdenum, balance iron, and is usually made in

the form of cold-rolled strip. This alloy is used for reeds of vibrating reed selectors.

VICALLOY is a permanent magnet alloy containing about 10% vanadium, 50% cobalt, and the balance iron. It may be fabricated in the form of castings, hot-rolled bars and forgings, or cold-rolled strip and wire. The coercive force of this material may range from 200 to 300 oersteds and the remanence from 3,000 to 10,000 gauss. 2-mil cold-rolled tape has been used as a magnetic recording medium. Parts fabricated from hot-rolled bars and forgings have been used as rotors in hysteresis clutches and motors.

CUNICO is a special purpose permanent

magnet alloy composed of copper, nickel, and cobalt. It may be produced in the form of small bars, strip or wire, or in sintered form. This alloy has a nominal coercive force of 700 oersteds, a remanence of 3200 gauss, and an energy product BHmax of about .80 x 10⁶.

CUNIFE is a special purpose permanent magnet alloy of copper, nickel, and iron whose magnetic properties are developed after extensive cold-working. It is, therefore, normally produced only in the form of wire or cold-rolled tape. It has a coercive force of about 500 oersteds, a remanence of 5400 gauss, and an energy product BHmax of about 1.35 x 10⁶.

SILECTRON "E" CORES

Silectron 3-phase "E" cores are made from highly oriented silicon steel. Insulated strip of the proper width is wound on a mandrel and the resultant core assembly is heat-treated, bonded, and cut so as to provide two core halves.

Careful production control of this process results in accurately dimensioned and matched core halves whose effective air gap at the butt joint is very small. The use of "E" cores results in weight and size reduction as well as higher efficiency and possible cost savings.

All Arnold 3-phase "E" cores are tested under 3-phase operating conditions for exciting current and core loss. The 4 mil type AJ-TH cores are tested at 400 cps at a peak flux density of 15,000 gauss. The 4 mil type A-TA cores, are tested at 60 cps at a peak flux density of 10,000 gauss. The test coils are delta connected in making these 3-phase tests.

BANDING TOOLS AND ACCESSORIES

The COREBINDER tool, used in tensioning Corebinder strapping around core assemblies, weighs less than 12 ounces, and requires only one hand to operate. It has an AUTOMATIC TENSION REGULATOR which enables it to be set to the degree of tension desired (37 1/2 lbs., 75 lbs., or 150 lbs.) and will automatically slack when that tension has been achieved. No further tension is possible nor will tension already achieved be lost until the tool is released. A BUILT-IN CUTTER completes the advanced features of this unique strapping tool. With this COREBINDER method, transformer assembly is simplified

considerably, time of assembly is substantially reduced, costs are cut, and the possibility of assembly error is eliminated. Using this method, the operator will be able to achieve uniform regularity of tension on core after core.

MATERIALS USED:

#1991 COREBINDER TOOL — weighs less than 12 ounces; is simple to operate with one hand; has a built-in cutter and an automatic tension regulator.

#500 HAMMER-CUTTER — this is an auxiliary tool which can be used to pre-cut COREBINDER strapping to predetermined lengths.

General Office & Plant: Marengo, Illinois New York: Empire State Bldg. Boston: John Hancock Bldg. Los Angeles: 3450 Wilshire Blvd.

MOLYBDENUM PERMALLOY POWDER CORES

Molybdenum Permalloy cores are produced from insulated powder of the alloy containing about 2% molybdenum, 81% nickel and the balance iron. This powder is pressed into cores at pressures of about 100 tons per square inch and they are then annealed in an atmosphere of hydrogen. The finished cores have high electrical resistivity and permeability, and low hysteresis and eddy current loss. The shift of permeability due to strong magnetization is negligible, and the permeability remains fairly constant over a wide range of flux densities.

In order to obtain a constant permeability over a definite

temperature range, a small amount of powder of a special Ni-Mo-Fe alloy having a low Curie point is added to the regular powder. Cores manufactured from this stabilized powder have a change of permeability of less than $\pm 0.1\%$ over specific temperature ranges. The regular unstabilized powder has a change of permeability of about plus 1% per 100° F. temperature change.

A number of different sizes of toroids are produced in four different permeabilities for use at various frequencies up to 200 kc. The electrical specifications and tolerances are tabulated below:

Permeability, μ	Core Loss Ohms/Henry/unit of μ	Core Loss Test Frequency	Magnetic Stability to D. C. Magnetization
125 \pm 10	0.24 max.	1800 cps	$\pm 0.5\%$
60 \pm 5	1.70 max.	8000 cps	$\pm 0.3\%$
26 \pm 2	76 max.	75 kc.	$\pm 0.2\%$
14 \pm 1	65 max.	75 kc.	$\pm 0.1\%$

The core finish is a baked enamel or varnish as shown in the table below. In the case of cores with finishes 2, 4 or 5, each core is tested for the dielectric strength of the core finish. It is placed between two moist felt pads and a 60 cycle rms voltage is applied. The test voltage is 1250 volts for core finishes #2 and #4, and 2650 volts for core finish #5.

The techniques required for producing powder cores of Molybdenum Permalloy preclude the possibility of fabricating complicated shapes. Although the major usage is centered

around the use of the toroids listed below, other sizes and shapes may be available for special applications.

Molybdenum Permalloy powder cores are used in telephone and communications work for loading coils; for high pass, low pass, band pass and band suppression filters, and for resonant circuits, all of which require the use of high Q toroids. They are also frequently used in decade inductors and interference filters on power circuits.

Cores may be furnished stabilized in regard to permeability as noted:

Type A—Unstabilized—Approximately 1% per 100° F.

Type B—Stabilized $\pm 0.1\%$ from 55° F. to 95° F.

Type D—Stabilized $\pm 0.1\%$ from 30° F. to 130° F.

Cores with finishes 2, 4, 5 designed to permit winding with heavy Formex insulated wire without supplementary insulation over core.

Cores are coated with various types of enamel and varnish finishes:

#2—Enamel—500 volt rms 60 cycle breakdown requirement

#3—Wax tight varnish—no breakdown requirement

#4—Wax tight varnish—500 volt rms 60 cycle breakdown requirement

#5—Enamel—1000 volt rms 60 cycle breakdown requirement

For the execution of design-through-production projects of complex lightweight electro-mechanical products for airborne and other specialized applications, Dalmo Victor maintains:

- . . . A staff of some 200 scientist-engineer specialists in microwaves, mechanics, servo systems, materials
- . . . Four plants with 350 machine tools, 189,000 square feet of space including 135,000 square feet of production and service area; 40,000 square feet of engineering, testing and model shop

Let this skilful, unique organization help with your problems.

DALMO VICTOR *DV*

Meeting Today's Demand for

POWERSTAT VARIABLE TRANSFORMERS

deliver a continuously adjustable output voltage from a-c power lines

A POWERSTAT variable transformer is an autotransformer of toroidal core design with a movable brush tap that is rotated to deliver any required output voltage from zero to, or above, line voltage. Important features include: excellent regulation, high efficiency, conservative ratings, zero waveform distortion, rugged mechanical construction and smooth control. Numerous standard POWERSTATS in ratings from 150 VA to 100 KVA are available for 115, 230 and 460 volt, single and three phase operation. Most are offered in either manual or motor-driven models. The chart lists some of the most-called-for types. Others — designed for specific applications — are available for every requirement. Consult us about your specific needs.

* These units are supplied with an "L" terminal which allows connecting in the field to limit the output voltage to the applied voltage. If "L" type connection is required on other models, the "L" must be included in the type number when ordering.

† When these POWERSTATS are "L" connected so that the output voltage does not exceed the applied voltage, the frequency range is 50/60 cycles.

** When a motor-drive is required, prefix the letter "M" together with the speed designation letter to the type number. Z — 6 seconds, Y — 14 seconds, X — 19 seconds and W — 45 seconds for full range travel. Since the driving motors are frequency sensitive, be sure to specify whether 50 or 60 cycles is required. Only manually-operated unit weights are listed. For motor-drives, add 10, 11 and 14 pounds to the 116-216, 1126-1226 and 1156-1256 types, respectively.

STANDARD TYPES FOR VARIED APPLICATIONS

POWERSTAT VARIABLE TRANSFORMERS for

OIL-COOLED OPERATION

TYPE O-1126

By immersing a POWERSTAT in transformer oil, the rating above normal air operation is increased and duty in a corrosive atmosphere is possible. A standard line is offered in various ratings and sizes.

EXPLOSIVE ATMOSPHERES

TYPE X-1126

To provide safe operation in hazardous areas where a small arc of spark could cause an explosion, explosion proof POWERSTATS are available. Standard models are approved by Underwriters' Laboratories for Class 1, Group D service.

HIGH CURRENT NEEDS

2106LC

LIMITED OUTPUT RANGE

Relatively large amounts of power can be controlled by a small POWERSTAT when used in conjunction with a fixed-ratio transformer. This combination is known as a POWERSTAT Line Corrector. It can be used to correct line voltage variations to maintain a specified output voltage and to supply a limited output voltage range. A multitude of ratings are available.

Look to SUPERIOR ELECTRIC for all VOLTAGE CONTROL NEEDS

Voltage Control Apparatus

STABILINE AUTOMATIC VOLTAGE REGULATORS

maintain a constant output voltage regardless of line or load changes

MADE IN 2 DISTINCT TYPES TO MEET YOUR NEEDS EXACTLY

TYPE IE (INSTANTANEOUS ELECTRONIC)

... for the most exacting control. Completely electronic with no moving parts. Correction is instantaneous. Waveform distortion never exceeds 3%. Output is held to within ± 0.1 per cent of nominal for wide line variations and to within ± 0.15 per cent for any load current or load power factor change from lagging .5 to leading .9. Standard types are listed below. Special units can be engineered to meet specific requirements.

TYPE IE5101R

TYPE IE51002R

TYPE EM (ELECTRO MECHANICAL)

... for controlling large industrial loads or providing zero waveform distortion. Consists of an electronic detector circuit controlling a motor-driven POWERSTAT variable transformer that feeds a buck-boost auxiliary transformer. Features include: high efficiency, insensitivity to magnitude and power factor of load and no effect on system power factor. Standard models are offered in ratings from 2 to 100 KVA.

ADDITIONAL FEATURES

1. Available with Standard Ceramic Insulation.
2. Available with bakelite base and screw terminals.
3. Available hermetically sealed.
4. Available with auxiliary contacts.
5. Available for low capacity.
6. For intermittent operation only.
7. Available in double-break contact arrangement.
8. Available with ceramic insulation only.
9. Listed by Underwriters' Laboratories, Inc.
10. Designed to handle a maximum of 75 watts of radio frequency up to 150 megacycles when inserted in a properly terminated 52 ohm line.
11. MIL-R-5757A

NOTE 1.
Minimum coil data applies where shock and vibration are not a factor.

NOTE 2.
Maximum coil data based on 85°C rise above 20°C ambient for continuous operation except for mercury type relay which are based on 65°C ambient.

NOTE 3.
The following relays are AN Approved:
SKHN-CC-CC PBHN-9D
SKHW-CC-CC PBHN-12D
PBHN-6D PBHS-9D
PBHW-6D

 AMPLIFIERS ★ MASTER OSCILLATORS ★ MONITORS

TYPE 110, MODEL 5

DUAL DIVERSITY RECEIVER

Used for dual spaced diversity reception in high speed radio tele-printer, telegraph or telephone service, using any common modulation, such as FS, CW, ICW, phone, etc. Complete receiver is housed in a rack type, fully enclosed cabinet. Provided with specially modified receivers, monitor speaker, IF monitor, master oscillator, and the necessary patching arrangements. Can be supplied with any combination of terminal equipment for reception of radio tele-printer, undulator tape and program service, or for remote use where the intelligence is transmitted via landline or UHF link.

Receiver is shown with terminal equipment as recommended for general communications usage. The units are (top to bottom) Monitor speaker, Receiver #1, Variable Master Oscillator, Receiver #2, Patching Panel, IF Monitor, Converter, Tone Keyer, Blank panels. For special features of this receiver see individual units described on the preceding pages.

FREQUENCY and SHIFT MONITOR SYSTEM

METER: TYPE 127, MODEL 2
 MONITOR: TYPE 106, MODEL 4

This system consists of a Type 106 Frequency and Shift Monitor and a Type 127 Frequency Meter. It is designed as a secondary standard to monitor the frequency and amount of shift of transmitter carrier outputs. It is particularly intended to measure the frequency shift of a mark and space (FS) signal either when setting up for traffic or under normal keying conditions.

The Monitor's stability is better than 2 cycles per megacycle over an ambient temperature range of 0-50° C—using crystals having a temperature coefficient of only 3 parts/million/degree C. Range is 2.5-30 mc with 10 crystal-controlled frequencies (separate panel trimmers for each); use of external oscillator also provided for. Frequency Shift range is 10-10,000 cps. Less than 100 millivolts RF input needed for 2 volts audio output.

The Frequency Meter is specially designed with selectable normal and fast-acting damping factors, permitting frequency measurements of signals while keying. Its accuracy is 2% of full scale for the ranges 0-200, 500, 2000, 5000, 20,000 cps.

TEST BAY FOR TONE TELEGRAPH SYSTEMS

The Northern Radio Company Test Bay for Tone Telegraph Systems provides a complete terminal of test apparatus for testing, alignment and maintenance of Multi-channel Frequency Shift Telegraph Systems.

When used with such equipment, it performs the following main Functions: (1) rapid and simple precision measurements of mark, Space and Center Frequencies at both sending and receiving terminals; (2) precision Frequency adjustment of F/S Tone Keyers to specified channel Frequencies; (3) accurate tuning of F/S Converter Units; (4) rapid evaluation of signal distortion; (5) measurements of tone and telephone

line levels at both receiving and transmitting ends; (6) measurement of telephone line attenuation; (7) over-all system checks and alignment; (8) performance tests of Tone Multiplex Systems and associated equipment; (9) quick localization of systems faults; and (10), monitoring of all wave forms such as keying, keyed tone, etc.

The Test Bay consists of Electronic Square Wave Keyer (Dotter), Cathode Ray Oscilloscope, Frequency Counter, Volume Level Indicator and Rack including blank panels, patch cords and test probes.

TYPE 168

TONE CHANNELING SYSTEMS

Complete package systems of Multi-Channel Tone Equipment (both AM and Frequency Shift) are available for line or radio link systems.

when you think of fastening
think...

DOOR RETAINING SPRINGS

Here is help in securing the *right* fastener for your particular needs in metal-to-metal and metal-to-wood applications. SOUTHCO engineers work with you to find the standard or special fastener that means lowest overall costs.

Holding power, speed and ease of installation, elimination of special tooling, convenience of use in opening and closing applications . . . each factor involved is analyzed to assure the best fastener at lowest possible cost. When special designs are indicated, the experience and background of SOUTHCO engineers in solving thousands of fastener problems can be of special value to you.

When you are faced with a fastener problem, write SOUTHCO Div., South Chester Corporation, 1417 Finance Bldg., Philadelphia 2, Pa. District Offices are located in principal cities.

CINCH

The vast engineering behind every Cinch component concerns itself primarily with the problems of perfection, precision and performance in all phases of communications and industrial electronic equipment. Cinch small individual assemblies have always fully performed the service for which they were designed and in many cases have anticipated engineering needs of the future. So that today, judged by service, and by numbers in use as well as by testimonies of users, CINCH PARTS ARE STANDARD. They meet the demands for higher quality materials and closer tolerance in all communications and industrial control equipment.

Subsidiary of United-Carr Fastener Corporation, Cambridge, Mass.

HIGH-VOLTAGE CERAMIC CAPACITORS

... Result of extensive research by Hi-Q engineers to produce high-voltage units with same dependable adherence to specifications, ratings and tolerances which characterize all Hi-Q components. Special dielectric material and new designs for high working voltages in relation to size. Available in slugs, disks, plates, tubulars.

PLATE ASSEMBLIES SAVE SPACE AND LABOR

... Most versatile of electronic components. Virtually endless combinations of capacitors and resistors in single units. Limited only by "K" of material, and physical size. Contribute to dependable miniaturization. Simplify assembly. Reduce number of soldered leads.

SPECIAL HI-Q COMPONENTS ... Developed to meet special needs. These special components meet all requirements as established by RTMA for class 2 ceramic dielectric capacitors. Can meet class 1 requirements if necessary. Trimmers, stand-off capacitors, feed-thru capacitors, eyelet feed-thrus, resistor-capacitor combinations, low-inductance ribbon and lug leads, etc.

CARBOFILM PRECISION RESISTORS

... Further improved by newly-developed Wilkor coating material W-65 and the ceramic hermetically-sealed cases. New material specifically developed to meet military specifications MIL-R-10509A. Units can be mounted close to other components with minimum capacitance effect. Also in uncased types.

BOROFILM PRECISION RESISTORS

... Featuring extremely low temperature coefficient of resistance. Available in resistance values up to 20,000 ohms, with temperature coefficient of 100 PPM or less. Furnished as standard coated units, and also in metal or ceramic hermetically-sealed cases. Ideal for any application requiring high-precision resistors.

FUNCTION = FITTED

Components

A Touch of Tomorrow in the Components of Today! Embarking upon its 31st year of pioneering and producing the finest in electronic components, Aerovox presents this capsule information on some of its latest capacitor and component developments.

Indeed, to initiate, coordinate and check on all Aerovox products the company maintains an outstanding research and engineering development at New Bedford. Over and above the usual standard types of capacitors, resistors and certain electronic equipment, Aerovox is constantly anticipating radio-electronic trends with advanced designs, materials and production facilities.

For capacitors and resistors and electronic specialties truly *function-fitted* to your circuitry, other components and operating requirements—consult Aerovox specialists!

REGULATED DC POWER SUPPLIES

... Incorporating use of magnetic amplifier techniques — eliminating all vacuum tubes. Provides extremely dependable, trouble-free precision equipment for industrial and laboratory uses. Minimum of 20,000 hours' continuous service. Available in variety of voltages and frequencies. Output: 300 v. D.C. with plus/minus 1% regulation from 0 to 200 MA. Less than 1% ripple.

MAGNETIC AMPLIFIERS

... Acme's extensive "know-how", gained through the development of magnetic amplifiers, can provide you with the precise component to fit your exact need. Power gain as high as 10 million. Carrier operating frequencies from 60 cps to 100 kcs. Power output up to 20 watts. Input sensitivity of 0.10 microwatt. In the "instrument grade" class.

RADIO RANGE FILTERS

... Depending on frequency required, Acme can supply standard or miniaturized filters with either toroidal or laminated inductors. Where required, these filters can be manufactured to hold very close phase shift tolerances and close output ratings over wide temperature ratings. Acme can build the "toughest" ones!

HIGH-TEMPERATURE METALLIZED CAPACITORS . . . A major Aerovox development. Ideal for miniaturization. Units of wide usage and are giving excellent performance. Full-voltage operation up to 100° C and 125° C with voltage derating. Unique zero-setting solid dielectric — maximum shock and vibration-proof — no oil leakage.

ELECTROLYTICS FOR TRANSISTOR APPLICATIONS . . . A sub-sub-miniature electrolytic, Type HA, designed especially for new transistors. Marked size reduction — considerably smaller than any previously available commercial unit. Typical example: 6 v. 1 mfd. unit shown measures only 1/8" dia. X 1 1/16" long.

OIL-FILLED CAPACITORS FOR RUGGED SERVICE . . . Choice of impregnants that are function-fitted to operating conditions. Many different case styles—metal-case tubulars and bathtubs, round-can and rectangular-can transmitter units, large steel-case units, widest choice of mountings and terminals, etc.

We solicit your

PROBLEMS and NEEDS

To expedite the handling of inquiries and orders, you are respectfully referred to the following divisions:

ed wiring." **AEROVOX CORPORATION**, New Bedford, Mass.

All types of capacitors for all purposes — paper, electrolytic, oil-filled, molded tubulars, mica, silver-mica, metallized-paper, motor-starting, filters, etc. Also

Corporation, Olean, N.Y.

Specializing in ceramic capacitors of all types, trimmers, resistor-capacitor combinations, plate assemblies, radio chokes, etc. **HI-Q DIVISION**, Aerovox

om wire-wound units, etc. **WILKOR DIVISION**, Aerovox Corporation, 2882 Detroit Ave., Cleveland 12, Ohio.

Precision resistors — Carbofilm units including hermetically-sealed types; Borofilm units for extremely low temperature coefficient of resistance;

toroidal inductors, magnetic amplifiers, etc. **ACME ELECTRONICS, INC.**, 300 N. Lake Ave., Pasadena 4, Calif.

Electronic equipment specialties — wide variety of wave filters, radio range and band-pass filters, delay lines, regulated DC power supplies,

HIGH-TEMPERATURE MICA CAPACITORS . . . Suitable for operation at temperatures as high as 125° C. Increasingly used in military and special commercial applications. Available in all molded bakelite-case styles: low temperature coefficient units in the "F" characteristic of JAN is almost standard. Silver-micas also.

INTERFERENCE FILTERS . . . Latest units provide maximum attenuation from 150 KC well up into UHF range. Extra rugged, extra compact, extra efficient, by any comparison with previously-available filters. In several standard types for wide variety of uses. For extraordinary requirements, special filters can be developed and built.

"PRINTED WIRING" TO YOUR ORDER . . . Aerovox offers a radically new form of printed wiring. Employs silver as the conductor. Many distinct advantages. Essentially, this printed wiring offers fidelity of reproduction of original wiring design, with excellent adhesion of conducting material to base material. No corrosive chlorides or other harmful materials used in production.

For Basic Plug-in Unit Building Blocks, it's

ALDEN

Now you can design your equipment for greater accessibility, simple servicing, 30-second restoration of service by plug-in replacement units, with Alden Standard Components.

ALDEN TERMINAL CARD SYSTEM to make circuitry in compact vertical planes

PREPUNCHED TERMINAL MOUNTING CARDS give tremendous flexibility to lay out almost any circuitry, for Plug-in Packages or Alden Basic Chassis.

MINIATURE STAKING TERMINALS mount in any pattern on Cards. Ratchet slots hold elements for fast soldering without pliering or wrap-around.

JUMPER STRIP stakes right under Terminals, providing common circuit without soldering.

CARD-MOUNTING TUBE SOCKETS for miniature 7-pin and 9-pin, and octal tubes.

TYPICAL CIRCUITRY. Arranged for Alden "20" Package. At right, for mounting Alden Basic Chassis. See details below.

These planes become plug-in units thru ALDEN PLUG-IN PACKAGE COMPONENTS

4 SIZES OF PLUG-IN PACKAGES

BASIC COMPONENTS FOR 4 SIZES OF PLUG-IN PACKAGES

To make vertical circuitry units into compact plug-ins here are components for 7-pin, 9-pin, 11-pin and 20-pin packages. Conceived with tremendous design flexibility allowing only a few parts to accommodate tremendous variety of circuitry, both shielded and open. Bases grooved to receive up to 3 Terminal Cards. Brilliant color coding for quality appearance and quick locating to mating sockets, non-interchangeable in the "11" and "20" Series.

ALDEN "20" PACKAGES SHIELDED OR OPEN

SPACE-SAVING ARRANGEMENT OF PACKAGES. SOCKETS PERMIT TIGHT PACK ARRANGEMENT.

How to organize planes of circuitry as plug-in chassis, with ALDEN CHASSIS COMPONENTS

ALDEN BASIC CHASSIS
Simple U frame is open-sided. Terminal cards simply snap in. You have 100% accessibility for soldering final connections and making service checks. Hinged front panel is separable for mounting its components as separate easy sub-assembly. All production is by in-the-open sub units assembled with utmost ease.

COMPLETED CHASSIS
Here the chassis is completely assembled, fitted with slide-in Back Connectors and Serve-A-Unit Lock and inserted in rack mounting Case which has mating Back Connectors and receives the bullet nose of the Serve-A-Unit Lock which pilots, draws in, locks and ejects the Chassis. Portable Cases below receive Chassis in same manner.

ALDEN SERVE-A-UNIT LOCK
The Serve-A-Unit Lock used in the Alden Basic Chassis pilots the chassis to accurate mating of the Back Connectors, and with a twist of the wrist draws in and locks securely in any plane and with sufficient pressure to seal compression gaskets. A reverse twist ejects chassis. This Lock is designed to make ANY plug-in unit speedily accessible for checking, servicing or replacement. Installed as shown.

ALDEN BACK CONNECTORS
These slide-in Back Connectors mate all connections from Basic Chassis to the case and give one point of contact for all in-out leads. Mounted in orderly row on Chassis with no overlap row on Back Plate of Case, they permit direct, efficient wiring, with no congestion of critical leads. They eliminate rats-nest congestion of conventional connectors because leads are instantly accessible, and can be color coded and numbered for easy identification. Contacts can be jumped for test.

4 SIZES OF PLUG-IN CHASSIS

ALDEN UNI-RACKS, single or double tier, house all sizes of Alden Chassis — stack as at right.

Build your own plug-in, slide-in chassis with this ALDEN SERVE-A-UNIT KIT:

IT'S AS SIMPLE AS THIS
Arrange Alden Side Rails (1) and Alden Lock Frame (2) to suit your chassis. Alden Serve-A-Unit Locks (3) mount in your chassis to engage pre-punched holes in Alden Lock Frame (2) to pilot, draw in, lock or eject.

Arrange Alden Connectors (4) in orderly row on Alden Lock Frame. Mount mating Back Connectors on your Chassis.

— and as "Tell-tales" to instantly spot trouble in any plug-in use ALDEN SENSING ELEMENTS

Here are tiny sensing and indicating elements that really make sense. Require a minimum of panel space. Assemble by simplest production methods. Give your equipment quality appearance, safety convenience in use and servicing.

MINI-TEST POINT JACK — 110 BCS. Only 1" overall this Jack has famous Alden wrap-around contact efficient after thousands of insertions. For checking any critical voltage from front panel while in operation.

ALDEN PAN-I-LITE — 86L. Only 7/8" overall, this life makes it practical to put an indicator anywhere needed. Unbreakable 1-piece lens-light — replaceable from front. Brilliant illumination, assorted colors.

ALDEN PAN-I-LITE — 44L. Glowing signals immediately blown out with it. Serviced entirely from front of panel.

REQUEST CATALOG describing Alden's complete integrated line of components including Pre-wired Connectors, AC Outlets, completely molded with connectors, Static Magnetic Memory, Toroidal Coil Winding, Harnesses, Adapters, Test Equipment, Telegraph Keys.

ALDEN PRODUCTS CO. 112 N. Main St., Brockton 64, Mass.

SIMPLIFY PRODUCTION WITH ALDEN PRE-WIRED CONNECTORS

If you're designing any equipment that has to be connected, manufactured in volume, standardize on this complete service of connectors designed to Cut Your Assembly Problems, Simplify Your Purchasing, Eliminate Quality Problems.

ALDEN PRE-WIRED CONNECTORS ARE UNIQUE

are attached to the top contact, assembled at high speed with no danger of cold joints, and minimum use of solder.

Molded insulation surrounds each contact and lead, saving space and eliminating danger of insulation peeling.

This system actually provides *strain relief* for each contact without UL knots, fishpaper or bulky clamps.

① Solder tab and bond give great strength in vertical direction. ② Molded clip pockets restrict all movement of the lead to this vertical direction so that 22-gage wire will break before the Alden Solder Tap connection gives.

See how beautifully Alden solves your connector problems by packing greater reliability into less space at lower cost!

SINGLE LEAD DISCONNECTS
Miniature hi-voltage disconnects. Phenolic or polyethylene insulation. UL safety collar.

8101M/F

Speaker Connector Series

TWO TO SEVEN LEAD
Beautiful detachable terminal connectors that do away with terminal strips, save soldering and cabling.

TWO AND THREE LEAD
Excellent miniature antenna lead-ins or signal connectors.

HA Series

Non-interchangeable Series

TWO TO ELEVEN LEAD
For cables having several connectors, prevent misconnects by specifying Alden Non-Interchangeable Connectors.

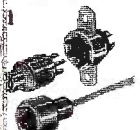

ONE TO FOUR LEAD
Compact inexpensive connector with UL safety collar for carrying AC power or signal.

MINI DUO-DECALS
Have only 3 parts: "Top Connected" contacts, leads, molding. Voltage breakdown exceeds that of tube base.

212/5 212

ONE TO FIVE LEAD
Plugs, Connectors and Sockets that answer most needs for 1 to 5 shielded leads.

C-R TUBE CONNECTORS
Quality equipment for instruments, TV, radar, Magnal, duodecal, diheptal. 100% insulation each clip and lead.

211 214

CAPS for every purpose
Completely prewired—Phenolic, Injection

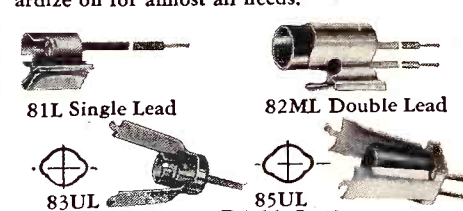

Phenolics, completely insulated for receiver, transmitter or TV tubes.

Integrally molded with insulation, lead and grid in one piece to meet any environmental and electrical conditions.

DIAL LIGHT SOCKETS

Designed for low-cost high-volume production, with tailored leads ready to drop aboard your equipment. 4 basic designs you can standardize on for almost all needs.

81L Single Lead 82ML Double Lead
83UL Single Lead 85UL Double Lead

QUALITY ELECTRICAL COMPONENTS specially designed for volume production, eliminating screwdriver and terminal posts, reducing assembly into your equipment to simple spot weld or rivet.

CONVENIENCE OUTLET

402ACE 402ACFL

World's smallest, most rugged. Complete series of tiny outlets with solder tabs or tail-on leads. Assemble by simple possible spot weld or rivet. Now you can include convenience outlets where never before possible.

SAFETY FUSEHOLDER

440-FH

1—Internal split ferrule prevents fuse breakage. 2—Ejector spring holds fuse tight and noiseless, aids ejection. 3—U-Shaped contact withdraws blown fuse.

DETACHABLE LINE CORD

202FIAC

Reduce all problems to just a tiny plug mounted in your equipment. Subtract bulky underwriters knot and cumbersome cord production problems. Add customer convenience and sales appeal to your equipment.

Advertisers: How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

MODEL 541/A
DOSIMETER CHAMBER

MODEL 389/C THYAC

MODEL 510
ROENTGEN RATE METER

VIBRATORS

VIBRATOR
POWER SUPPLIES

MODEL 287 MINOMETER

A simple, efficient and accurate instrument, for measuring stray radiation and extremely small gamma and X-ray quantities, designed to measure exposure of medical and laboratory personnel working in the vicinity of gamma or X radiation. Equipment includes the minometer charger—reader and a 0.2 roentgen pocket ionization chamber. The chamber is similar to a fountain pen in shape and size, with a pocket clip for easy carrying. The 0.01 and 0.001r chambers can also be supplied for measuring minute amounts of stray radiation. Complete with Minometer, 0.2r pocket chamber and instruction manual. Shpg. wt. 5 lbs.

MODEL 561 CHARGER

The Model 561 Dosimeter Charger is used to charge all direct reading pocket chambers including the Model 541/A. A battery-operated unit with an internal light source and the necessary charging system. One control knob makes the charger ultra-simple to operate. Should the operator exert too much pressure on the dosimeter during charging, a spring in the charging socket yields to prevent damage to the dosimeter. Charging range 110-225V. Complete with batteries, instructions. Size 5" x 4" x 4". Shpg. wt. 5 lbs.

MODEL 541/A DOSIMETER CHAMBER

The Model 541/A 0.2 roentgen pocket chamber is direct reading. Hermetically sealed, by fused glass-to-metal seals, and mechanically rugged. A self-contained quartz fiber electrometer complete with an optical system permits reading the dosimeter at any time. The 541/A offers more information, than an indirect-reading dosimeter, because it enables the user to keep a con-

The Model 531 is designed for light-weight portable equipment requiring a low-drain high-voltage power supply. It is a shunt-driven, single-pole double-throw type. The unit is shock-mounted in sponge rubber and hermetically sealed in a steel can to preserve the precision with which it has been made and tested.

The Model 542 Vibrator is intended for very low-power, series driven applications and is normally in series with the transformer with approximately 1/2 V across the coil. This unit

The MODELS 517 and 532 are efficient, compact vibrator type power supplies designed for providing regulated high and plate voltage outputs for counter tube, photomultiplier and associated electronic circuits.

Advantages of these units include:
 High conversion efficiency
 Space and weight efficiency
 Improved performance by use of regulated output voltages
 Internal potting and hermetic sealing for reliable operation
 Minimum life of 1000 hours
 Easy mounting and replacement
 Vibrator power supplies can be made to order in many combinations of input and output voltages and currents. We invite inquiries for special requirements.

tinuous check on his accumulated dose and accordingly. Accuracy is $\pm 10\%$ with cobalt 60 and $\pm 15\%$ of the true dosage .08 MeV to 2.0 MeV.

MODEL 389C THYAC

A portable geiger counter survey meter for the laboratory and field. Three ranges of sensitivity: 0-800, 0-8000, and 0-80,000 counts per minute or, on request, 0-0.2, 0-2, and 0-20 milliroentgens per hour from Radium in 0.5 millimeters of Pt. Sensitive to beta and gamma radiation. May be used with scintillation probe. New Model 389C features off-on indicator light, improved case, circuit refinements. Indication by earphones or ratemeter. Uses a 1.3 V RM-4 mercury cell and a 4.5 V. Eveready #736 battery. A high efficiency vibrator power supply provides regulated high voltage for better accuracy. Complete with counter tube, earphones, carrying strap, batteries and instruction manual. Size 10 x 5 x 7". Wt. 5 1/2 lbs. Shpg. wt., 12 lbs.

MODEL 510 ROENTGEN RATE METER

An accurate instrument for continuously monitoring the intensity of X-ray beams or gamma radiation in roentgens per minute. An ionization chamber is used on the tip of a 12" by 1/2" diam., 1/2 lb. probe. The probe is connected to the main chassis by a 45 ft. flexible cable. A range selector switch and zero set knob are the only controls on the chassis. The selection of the four scales: 0-3, 0-10, 0-30 and 0-100 roentgens per minute permits the operator to make all readings on the upper two-thirds or more accurate portion of the meter scale. Also available with a probe extending the ranges to 1000r/min. or a sealed clinical probe. Complete with standard probe, cable, instrument, and instruction manual. Shpg. wt., 35 lbs.

VIBRATORS

is also shock-mounted in sponge rubber and hermetically sealed in a steel can.

Other vibrators, modified for particular applications, are available on special order.

HI-MEG RESISTORS

Victoreen Hi-Meg resistors are designed for applications requiring extreme stability and accuracy. Elements are vacuum sealed in glass envelopes then aged for lasting stability.

**Tolerance from Specified Value $\pm 10\%$
 Temperature Coefficient $\pm 0.15\%/^{\circ}\text{C}$
 Voltage Coefficient $-0.03\%/V$
 Maximum Voltage 1000 V

SPECIFICATIONS

Resistance R.T.M.A. Values . . . 10^5 to 10^{12} ohms

*Higher values to order
 **Also available within $\pm 5\%$ or $\pm 2\%$ of specified value up to 5×10^{12} ohms

VOLTAGE REGULATOR TUBES

Designed for low current voltage regulator tubes and added to an extensive series of corona regulators and negative glow discharge tubes. They are designed to stabilize a wide range of battery-operated vibrator high voltage power supplies, for reference, for voltage limiting, for control in D.C. amplifiers and for regulating potential in general.

MIL specifications on special order.

GENERAL SPECIFICATIONS

Many standard voltages: 50 to 15000 volts (nominal)
 D.C. starting voltages: About 5% above nominal
 D.C. regulated voltage tol. from nominal: Varies ± 2.0 to $\pm 5.0\%$
 Voltage regulation: $\pm 1.5\%$
 Maximum rating regulation current: Varies 100 to 250 μa (except glow tubes to 250 MA)

SUBMINIATURE ELECTROMETER AND D.C. AMPLIFIER TUBES

Types 5800 tetrode and the type 5886 pentode and 5800 mil filament power subminiature tubes are designed specifically for electrometer applications where low grid current is a paramount consideration.

Conditions where high transconductance is desired.

The type 5828 is a conventional low filament power triode.

Other subminiature types include the 5799 high vacuum half wave rectifier and the VX-10 thermal time delay relay.

SPECIFICATIONS

Plate current 1.25 volts at 10ma. *JAN tubes available except for 5828. **Other Gm may be obtained at the expense of higher I_c by operating at higher I_b .

COUNTER TUBES

Victoreen Counter tubes are a series of self-exciting geiger tubes designed to cover the full field of beta, gamma, X-ray and cosmic ray measurements. Some meet the needs of laboratory reliability and accuracy, others are

adapted to the more rugged requirements of portable operations.

A convenient socket, our part No. 380-26, is available for probe or chassis mounting of the IB85 and 6306 tubes.

"UNITIZED" PULSE CONTROL EQUIPMENT

Saves
valuable research
and testing time

Always in the past, it has been necessary to custom design pulse test equipment for each individual application—this has proved a most costly and time-consuming engineering operation. But now the major portion of this work can be eliminated through the use of Burroughs "Unitized" Pulse Control Equipment. These standardized units are complete within themselves and each performs one basic operation, such as generating, mixing, gating, counting, etc. The units can be arranged and rearranged in almost any manner necessary to simulate actual conditions of usage for the component part being tested.

AS AN EXAMPLE—MEASURING THE BEHAVIOR OF MAGNETIC CORES

Pictured here is a Burroughs Core Tester BCT-300 designed to swiftly and accurately measure the "switching time" and "squareness ratio" of toroidal cores. The unit is made up of eight standard Pulse Control units (one Low Frequency Pulse Generator 1004C, a Flip-Flop 1101C, a Coincidence Detector 1201B, and five Pulse Delay units 1301C) mounted in a rack with other accessory equipment. The

output of this unit may be observed on a standard laboratory oscilloscope. Power is supplied from a 9101C power supply.

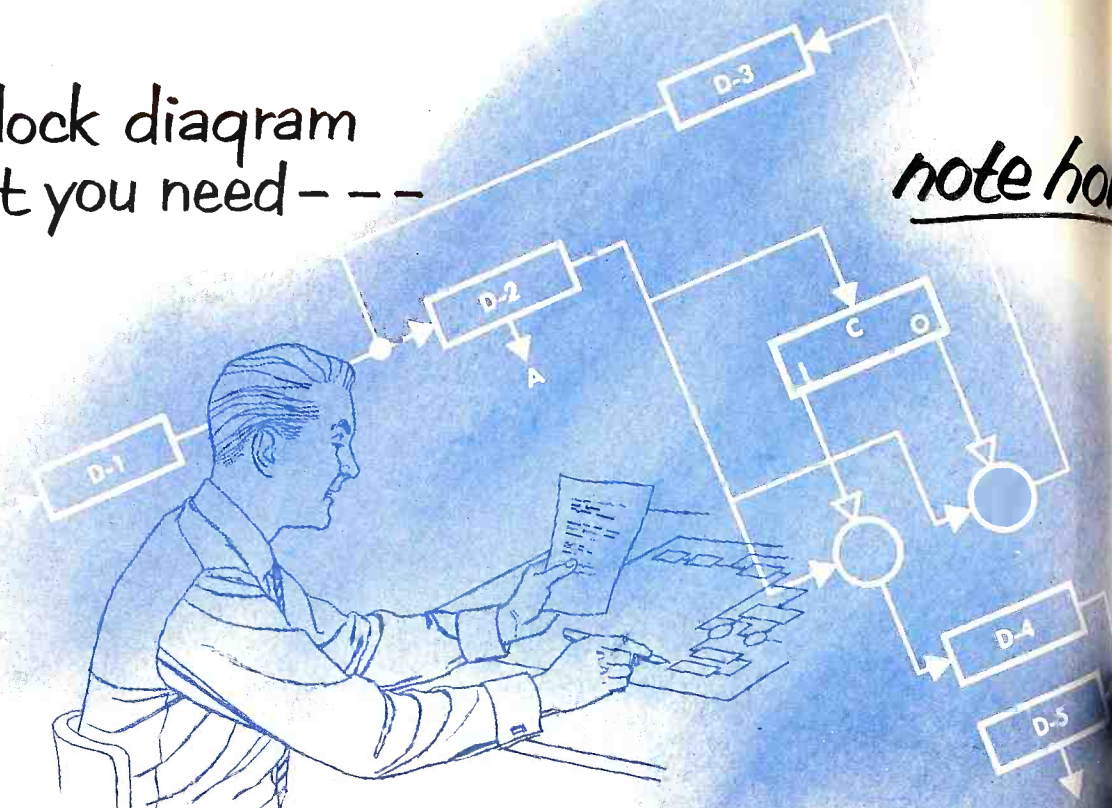

This BCT-300 is typical of the many possible applications of Burroughs "Unitized" Pulse Control Equipment. Pertinent characteristics and specifications of the individual units will be found on the following pages.

note how

PULSE GENERATOR

Type 1004C — Generates 0.1 microsecond pulses at frequencies continuously variable from 15 to 650,000 cycles per second, in five overlapping bands. Output circuit is designed to match 93-ohm RG-62/U cable.

A symmetrical multivibrator is used to control the frequency. The output amplitude, which is not affected by changes in frequency, can be varied from 10 to 32 volts and the polarity of the output pulse is reversible.

Type 1002B — Generates 0.1 microsecond pulses (approx.) at frequencies continuously variable from 0.2 megacycles to 4.5 megacycles in four overlapping bands.

A calibrated, L-C controlled, sine-wave oscillator controls the frequency. The output amplitude, which is only affected by frequency changes in the ranges above 2 megacycles, can be varied from 10 to 32 volts and the polarity of the output pulse is reversible.

Type 1003A — This unit consists of three separate pulse generators mounted on a single panel, each section of which is capable of generating 0.1 microsecond pulses in three different ways.

1. Single pulse push-button operation.
2. The output pulse is generated by coincidence action of a push-button and a positive synchronizing pulse.
3. The output circuit acts as a pulse standardizing circuit when fed by external pulses. The output circuit is directly triggered by an input pulse with no push-button action.

Two inputs for each pulse generator are provided: one, "Synchronizing Input," for synchronization of push-button pulses; the other, "Low-frequency Input," for triggering the output circuit directly, without the use of the push-button. Positive pulses are available with output amplitudes adjustable from 0 to 35 volts.

PULSE GATER

Type 1501B — This unit comprises a gate generator with a manually adjustable gate length and an independent coincidence detector. The duration of a gating pulse is continuously adjustable from 0.3 micro-

seconds to 5,000 microseconds in four overlapping ranges. The Pulse Gater replaces a Pulse Delay Unit, a Flip-Flop, and a Coincidence Detector for the purpose of generating pulse trains.

COINCIDENCE DETECTOR

Type 1201B — Two independent coincidence detectors are mounted on one panel. These units are designed to sense coincidence between the output signal of a flip-flop and 0.1 microsecond pulses. Two inputs are provided for each unit. Grid No. 1 is designed to accept 0.1 microsecond pulses with minimum amplitudes of 13 volts. Grid No. 3 is designed to accept the output of Type 1101C flip-flop or equivalent.

is designed to sense coincidence between the output voltage levels of as many as five flip-flops.

The principal difference between this unit and the Type 1201B coincidence detector is that the Type 1201B is designed to sense coincidence between a flip-flop output and 0.1 microsecond pulses, while the Type 1202A is designed to sense coincidence between output of one flip-flop and as many as four other flip-flops.

Type 1202A — Two separate coincidence detectors are mounted on one panel. Each

As many as six inputs may be driven in parallel from a single flip-flop output.

"STANDARDIZED" PULSE CONTROL EQUIPMENT

shown here can be mounted on a 19-inch rack and arranged to fit your specific requirements

PULSE DELAY

Type 1301C—In this unit, a 0.1 microsecond input pulse triggers a single-shot multivibrator of controllable period, and a 0.1 microsecond pulse of reversible polarity is regenerated at the end of the multivibrator period. The delay of the 0.1 microsecond output pulse is continuously adjustable in five overlapping ranges from 1 microsecond to a maximum of about 80,000 microseconds.

In addition, a rectangular pulse with a duration equal to the delay period between the 0.1 microsecond input and output pulses is brought out to a jack on the front of the panel through a d-c coupled cathode

follower so that it can be used for observing the time delay oscilloscopically.

Type 1302A—This unit delays 0.1 microsecond pulses by means of a tapped delay line in 0.05 microsecond steps from 0.1 to 1.9 microseconds. Reversible output polarity of variable amplitude is also provided.

Type 1303B—This unit, which provides a fixed delay of 0.1 microsecond is designed to be connected in cascade with RG-62 U coaxial cable without mismatch. Input and output cable connectors are mounted on a flanged box $4\frac{1}{2} \times 3 \times 1\frac{3}{4}$ inches.

FLIP-FLOP

Type 1101C—The flip-flop is a bistable circuit designed specifically to provide an output voltage level to be used as a gate in coincidence circuits. The unit contains a pentode Eccles-Jordan circuit capable of being switched at rates up to 2.5 megacycles per second with 0.1 microsecond pulses.

There are three inputs—zero, one, and complement—operating with minimum am-

plitudes of 12 volts. Two output jacks marked "Zero Gate" and "One Gate" supply either 0 volts or -23 volts at an impedance level of approximately 680 ohms.

There are two neon lights on the front of the panel which indicate the position of the flip-flop. There is also a terminal block on the rear of the unit which can be used to operate indicator lights installed at a remote point for visual monitoring.

GATED CHANNEL SELECTOR

Type 1402C—This unit is designed to sense coincidence between the output signal of a flip-flop and 0.1 microsecond pulses and to feed the output to four separate jacks. The input section is similar in action to that of coincidence detector, Type 1201B. Each of the output pulse positions has its own amplitude control and three-position toggle switch which is used to select

pulse polarity or reject the output pulse. The ability of the unit to select any or all of the four output circuits in any combination permits the unit to be set up for a parallel binary code, where each output can be used to represent a single binary digit. The unit is also useful for feeding as many as four terminated lines from a single source.

MIXERS

Type 1601A—This mixer has four input positions which feed a common output through crystal diodes. Four standard input connectors and one output connector are mounted on a box $2\frac{1}{2} \times 2\frac{1}{2} \times 1$ inch.

Type 1602A—This mixer is a panel-mounted twin mixer functionally equivalent to two of Type 1601A except with five input connectors and one output connector for each mixer.

Burroughs Accessory

PULSE CONTROL EQUIPMENT

-necessary for fast circuit assembly

POWER SUPPLY—Type 9101C

This unit is a magnetically regulated d-c power supply providing the seven voltages necessary for the operation of several pulse generators, flip-flops, coincidence detectors, etc. Each d-c voltage is automatically regulated to within ± 1 per cent of the selected voltage for load variations from 10 per cent load to full load, and for a-c line input variations of ± 8 per cent. Two separate transformers, each with tapped primaries and two secondaries, supply a total of 50 amperes of heater current at 6.3 volts.

The unit, which is operated from a 115-volt, 60-cycle, 20-ampere single-phase power source, has each of the seven output voltages interlocked by relays, thus providing protection from loss of voltage in any of the supplies, and has fuses for over-current protection.

MOUNTING RACK—Type 7002A

This is a standard 19-inch relay rack with plug-in power outlets available along each side. Approximately 70 inches of mounting space are available. Overall dimensions of the swivel-caster unit are $73\frac{1}{4} \times 20 \times 21$. It is finished to match the remaining units in the line.

A few current users of "Unitized" Pulse Control Equipment

Massachusetts Institute of Technology
University of Michigan
Consolidated Engineering Corporation
National Union Radio Corporation
The Catholic University of America
Stanford Research Institute
Magnetics Research Company

Originally created to speed up and simplify the building of electronic test equipment at the Burroughs Research Center, "Unitized" Pulse Control Equipment is now being used by many leading organizations in electronic research.

More than 500 of these pulse control panels were used in the construction of the high speed digital computer now in operation at the Burroughs Research Center. They represent the primary reason why it was possible to complete this unique machine in only nine months.

Incidentally, the services of the Burroughs computer are now available, on a fee basis, to interested organizations, both

public and private. Typical computer users and their solved problems are: Westinghouse Aviation Gas Turbine Division — Turbojet engine design and performance calculations. Philco — Antenna calculation. Bell and Howell — Optical ray tracing. Hydrocarbon Research, Inc. — Stress analysis of pipe. Roger Bellows & Associates — Correlation of psychological tests on personnel.

For full information and consultation regarding Burroughs "Unitized" Pulse Control Equipment, the Burroughs Digital Computer, or other problems related to electronics or magnetics, call or write Department 12, Electronic Instruments Division, Burroughs Research Center, 511 North Broad St., Philadelphia 23, Pa.

QUALITY + PERFORMANCE

Burnell meets exacting design requirements in Toroids and Filter applications

PARTIAL LISTING OF BURNELL TOROIDAL COILS

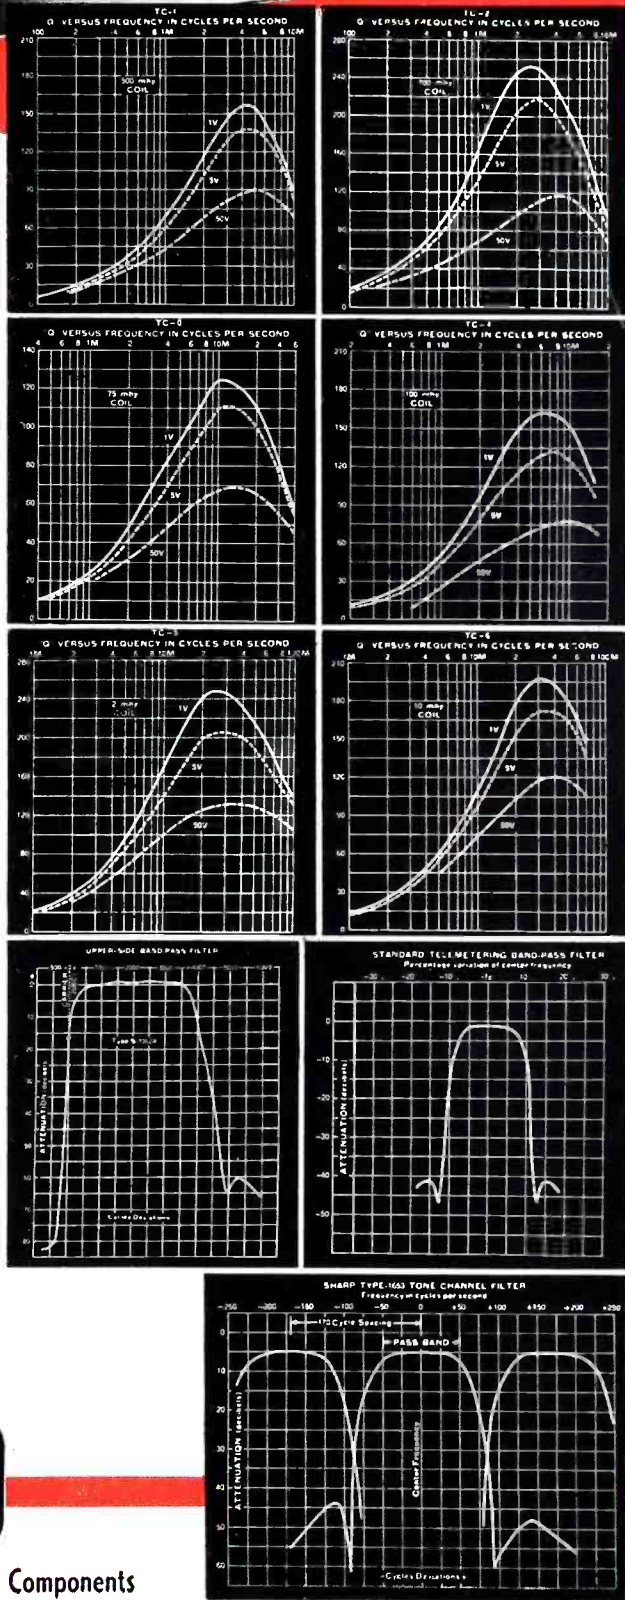

- TC-1** The "work horse" of toroids, nominal in size and weight with a high Q over a wide frequency range available in any inductance up to 15 HYS.
- TC-2** Most widely used in applications below 2500 cycles. Available in any inductance up to 150 HYS. Molybdenum core permeability 125.
- TC-0** The "Wedding Ring", most popular of all sub-miniature Toroids for aircraft and guided missiles filters available in any value up to 4 HYS.
- TC-4** At frequencies above 1000 cycles Q is only slightly less than TC-1. Available in any inductance up to 10 HYS. Core permeability 125.
- TC-5** Same size as the TC-4 but wound on a core with a permeability of 60 with inductance range of .5 MHYS to 500 MHYS. Also available in temperature stabilized type.
- TC-6** Similar to TC-0 and widely used between 20 KC and 100 KC with highest efficiency obtained at inductances below 50 MHYS.

TOROIDAL COMMUNICATIONS AND AVIATION FILTERS

BURNELL & COMPANY ANNOUNCES THE DEVELOPMENT OF A NEW SERIES OF FILTERS FOR COMMERCIAL SINGLE SIDE BAND RECEIVING EQUIPMENT. FOR MOST APPLICATIONS THESE FILTERS CAN REPLACE THE MORE EXPENSIVE AND HARD TO GET CRYSTAL FILTERS. THESE FILTERS RESULT FROM A NEW APPROACH WHICH EMPLOYS A 25 KC I.F. SYSTEM. BROCHURE AVAILABLE FOR DETAILED INFORMATION.

TONE CHANNEL FILTERS for multiplex telegraph receiving and transmitting systems are available in a variety of band widths and standard channel spacings, at all frequencies from 425 cycles to 3825 cycles.

TELEMETERING FILTERS are manufactured in conformance with the most widely accepted specifications for telemetering systems. We are currently producing telemetering filters for every channel from 400 cycles to 70,000 cycles in band widths of 15% to 40%. Available in special case sizes for industrial applications.

Exclusive Manufacturers of Communications Network Components

SQUARE PULSE GENERATORS for the MILLIMICROSECOND TO MICROSECOND RANGE

Model 100

Model 200

For nuclear pulse work, radar, TV, wide band amplifiers and in the design, calibration, and servicing of fast electronic systems.

NOW—New Square Pulse Generators with a rise time of one millimicrosecond (10^{-9} seconds) and a pulse width which can be varied from one millimicrosecond to several microseconds is commercially available. Positive and negative pulses of 100 volts maximum amplitude are generated; the pulse amplitude can be varied from 100 volts to 0.006 volts in 1 db steps. The output impedance is matched to the common impedance coaxial cables in use.

MODEL 100—Single pulse output

MODEL 200—Double pulse output—

(each pulse may be individually attenuated and delayed)

MODEL 300—Three or more pulse outputs

SEE SEALTRON FOR SEALS

GLASS-TO-METAL HERMETIC SEALS—

World's most complete line—over 1600 types and sizes, some small enough to be mounted on $\frac{1}{8}$ " centers. Protect vital electrical assemblies from moisture, atmospheric changes, corrosion, dirt, leakage. Also used as feed-through and stand-off terminals.

MULTIPLE HEADERS—

610 types always available—wide range of styles, shapes, pin arrangements. Can be incorporated into any panel or chassis requiring multiple connections. Fit standard receptacles. If required our engineers will design and build specially.

SEE SEALTRON SEAL-SERVICE

SEAL ASSEMBLIES:

Sealtron will solder seals into your assemblies, will guarantee hermetic perfection. Our technicians build to your specifications—eliminate your specialized operations, cut down overhead, release key personnel for other work.

Here's Complete Seal Assembly Service—

1. We stamp or form brackets and panels.
2. We solder, weld, or braze seals. Mount studs, inserts, brackets—all components—into complete package." Ready-to-use.
3. We supply feed-through or stand-off seals.

FLEXIBLE LEAD WIRES BUILT INTO MULTIPLE HEADERS

Sealtron welds flexible lead wires right into multiple headers. Eliminates difficult soldering in "close quarters"—saves space. Sealtron "Built-in" leads meet AN specifications, eliminate space-taking mechanical attachments required with soft-soldered leads, takes up as little as $\frac{3}{16}$ " on back of panel.

METALLIZATION

Metallized glass and ceramic windows, tubes, discs, rods, coil forms—for use in hermetically sealed units. Built to your specifications—ready for soldering.

"Send for our new easy-to-use catalogue-brochure today and remember—Sealtron protects sensitive parts."

Lucille

Our engineers are always ready to help you with design problems, will develop special seals, seal assemblies, metallized units to suit your needs.

7 Reasons why Regohm is a natural for your control system

This compact, electro-mechanical controller provides sensitivity, speed of response and system stabilization under severe operating conditions. Its design and operating features have made Regohm useful for automatic control systems in which heavier, more expensive and complex, but less accurate equipment had previously been the only available solution.

① SMALL SIZE • Regohm is a compact, plug-in device; lightweight, extremely rugged and position-free. The unit's small size does not limit its power-handling capacity. This makes Regohm a "natural" where economy of space and weight are your major considerations.

② POWER AMPLIFYING • Regohm is a high-gain electro-mechanical power amplifier. Milliwatt variations in signal energy can control energy changes millions of times greater.

③ IMPEDANCE MATCHING • Signal and controlled circuits are isolated, both electrically and structurally. Signal coils may have ratings from 0.01 to 350 amperes. Controlled resistors on a panel in which Regohm is plugged, can have values from zero to infinity, depending on the controlled system.

④ SYSTEM STABILIZING • A thoroughly reliable, sturdy dash-pot aids in system damping. It can easily and readily be adjusted over a wide range to match the dynamic character-

istics of the Regohm to those of your present system.

⑤ ANALYTICALLY DEFINABLE • The response of Regohm is independent of the rest of the servo system. Its response characteristic can be expressed in terms of conventional "transfer functions." Regohm acts as an integrating error-rate proportional controller. No appreciable steady-state error can occur. Regohm's effect can be calculated in advance, simplifying design and facilitating prediction of performance.

⑥ CONTINUOUS CONTROL • In "closed loop" systems a high-speed averaging effect occurs as Regohm's armature oscillates over a small amplitude. This provides intermediate values between step resistances and results in continuous, stepless control in systems operating at power frequencies and below.

⑦ LONG LIFE • In properly engineered installations, Regohm's life is measured in years. Plug-in feature simplifies replacement and maintenance—there are no parts to renew or lubricate. Shelf life is substantially unlimited.

Our engineering and research facilities can help you apply Regohm to your servo system or regulator problem. Write for Bulletin 505.00, containing a complete discussion of Regohm's characteristics and applications. Address Dept. E, ELECTRIC REGULATOR CORP., Norwalk, Conn.

Electronic Gears and Gear Drives by

WESTERN GEAR WORKS

Do you have a problem involving the design of gears or gear drives for electronic application? For operation of servo-mechanisms, computers, adjustment of radar or other antenna systems, for auto-tune transmitters? Do you require "just ordinary" gearing or extremely accurate "precision class" gears?

Whatever your need, whatever the type gear or gear train, you will find the engineering assistance and complete facilities available at Western Gear Works. Specialists who know and understand your problems are ready to go to work for you. Your inquiries are invited; write, wire or telephone us now, at Western Gear Works, Executive Offices, Post Office Box 182, Lynwood (Los Angeles County), California, Telephone NEVada 6-2161.

Illustrated are a few typical examples of electronic gearing designed for customer requirements.

FERRANTI

TRANSFORMERS

HERMETICALLY SEALED

A NEW LINE OF STANDARD TYPES

- Designed to MIL-T-27 specifications
- MIL-T-27 standard steel cases
- Rugged sealed terminals
- Core and coil securely anchored to mounting studs
- High Vacuum impregnated

These types have been selected to provide standard, readily available components of the highest quality, including the specific types chosen by ASES for universal military use.

Complete specifications on this wide range of units are contained in a new catalog. Your copy will be sent promptly on request.

In addition to the group listed in this catalog, we manufacture reactors and transformers of all varieties, including the more economical types for use where conditions do not require the superior qualities of those listed in our catalog. We can offer competitive quotations on types to suit your exact needs.

COIL FORMS

XR-50
 These mica-filled bakelite coil forms may be wound as desired to provide a permeability tuned coil. The form winding length is 11/16" and the form winding diameter is 1/2 inch. The iron slug is 3/8" dia. by 1/2" long.
XR-51 same but with brass slug.

High-grade ceramic coil forms conforming to JAN specifications. May be wound as desired to provide a permeability-tuned coil. Extra lugs provided

XR-60 Grooved for #26 wire with iron slug
XR-61 Grooved for #26 wire with brass slug
XR-62 Not grooved, winding length 1 1/4" with iron slug
XR-63 Not grooved, winding length 1 3/4" with brass slug

XR-70 Grooved for #19 wire with iron slug
XR-71 Grooved for #19 wire with brass slug
XR-72 Not grooved, winding length 1" with iron slug
XR-73 Not grooved, winding length 1" with brass slug

COUPLINGS

TX-1, Leakage path 1".

TX-9
 This small insulated flexible coupling provides high electrical efficiency when used to isolate circuits. Insulation is steatite. 1 5/8" diam. Fits 1/4" shaft.

TX-10
 A very compact insulated coupling free from backlash. Insulation is canvas bakelite. 1-1/16" diam. Fits 1/4" shaft.

TX-19
 A steatite insulated flexible coupling for 1/4" shafts. Conservatively rated at 5000 volts peak. Diameter 1 3/8", length 1". Length and flash-over voltage can be increased by turning collars outboard.

TX-23
 A deluxe insulated flexible coupling designed for coupling 1/4" shafts. Will handle a maximum radial misalignment of 1/16" also 2 degrees maximum angular misalignment.

TYPE	CORE	"A" DIM.	"B" DIM.

XR 92	BRASS	1 3/4"	3/8"
XR 93	IRON	1 3/4"	3/8"

SAFETY GRID AND PLATE CAPS

SPP-9
 Ceramic insulation. Fits 9/16" diameter.

SPP-3
 Ceramic insulation. Fits 3/8" diameter. National Safety Grid and Plate Caps have a ceramic body which offers protection against accidental contact with high voltage caps on tubes.

GRID AND PLATE GRIPS

Type 12, for 9/16" Caps
Type 24, for 3/8" Caps
Type 8, for 1/4" Caps

National Grid and Plate Grips provide a secure and positive contact with the tube cap and yet are released easily by a slight pressure on the ear.

CAPTIVE NUTS

National Captive Nuts of stainless steel may be pressed into aluminum and certain types of brass sheet metal to provide integral flush-mounted tapped holes in a wide variety of sizes. Four basic types have been designed for metal thicknesses of 1/16", 3/32", 1/8", 3/16" and 1/4".

DIALS, MECHANISMS AND KNOBS

H (gray or black)

The HRS series knobs are a popular easy to grip knob. They are molded of high quality plastic and have 1 3/8" dia. Chrome plated bevel skirts fit 1/4" shafts available in the following scales:

HRS-1	ON-OFF	through 30°
HRS-2	5-0-5	through 180°
HRS-3	0-10	through 300°
HRS-4	Single etched line	
HRS-5	0-10	through 180°

H (gray or black)

A HRS type knob without the chrome plated skirt but with a white dot for spotting relative control settings.

HRT-M

A smaller version of the HRT — now available in choice of gray or black — is 1-7/16" in diameter.

AD Dial

The original "Velvet Vernier" mechanism in a metal skirted 1 1/3" in dia. ratio 5 to 1. It is available with 2, 3, 4, 5 or 10 scale and fits 1/4" shaft. Mechanisms also available separately.

N Dial

The four-inch N and AD Dials have engine divided and stamped scales respectively. The N Dial has a decimal vernier; the AD Dial employs a pointer. The planetary gear has a ratio of 5 to 1, and is contained within the body of the dial. 2, 3, 4, 5 or black scale. Fits 1/4" shaft. Specify scale.

N

HRM KNOB

This straight knurl brass, satin chrome finished knob with arrowhead fits 1/4" shaft. See catalogue for description.

PRECISION-WOUND R.F. CHOKES

R-100 R-100U R-100S R-100ST

These RF chokes are identical electrically, but differ in mounting provisions. The R-100 employs pigtail leads; the R-100U has pigtail leads and a removable stand-off insulator; the R-100S has cotter-pin lug terminals and a non-removable stand-off insulator; the R-100ST has a 6-32 threaded stud at each end. These chokes are available in 2.5, 5 and 10 millihenry sizes and are rated at 125 milliamperes.

R-300 R-300U R-300S R-300ST

These RF chokes are similar in size to R-100 series but have higher current capacity. The R-300U is provided with a removable stand-off insulator at one end. The R-300S has a non-removable stand-off insulator and cotter-pin lug terminals. The R-300ST has a 6-32 threaded stud at each end. Inductance values of 0.5, 1.0, 2.5 and 5.0 millihenries are available with a current rating of 300 milliamperes. R-300, R-300U, R-300S and R-300ST are identical electrically.

R-33

The R-33 series chokes are 2-section RF chokes available in 10, 50, 100 and 750 microhenry sizes. Also available in this series is a single layer solenoid choke of 1 microhenry inductance. All are rated at 100 milliamperes. The chokes are wound on a 5/8" long form and range in diameter up to 5/16" maximum.

R-50

R-50-1

The R-50 series chokes are 3 and 4-section RF chokes and available in 0.5, 1, 2.5, and 10 millihenry sizes. They are rated at 100 milliamperes. The chokes are wound on a 1" long form and have a maximum diameter of 15/32". The 10 millihenry R-50-1 choke is wound on an iron core.

R-152

For use in the range between 2 and 4 Mc. Ideal for high power transmitter stages operated in the 80 meter amateur band. Inductance 4 m.h., DC resistance 10 ohms, DC current 600 ma. Coils honeycomb wound on steatite core.

Commercial Electronic Equipment

The National Company has designed and built many types of electronic equipment to rigid specifications for military, scientific and commercial purposes. The U. S. Navy, and other government agencies, as well as the nation's largest airports are among the many users of National equipment. Send inquiries to the Commercial Division.

PRECISION LABORATORY ★ TEST EQUIPMENT ★

New RF STEP ATTENUATOR*

Small, rugged ladder attenuator achieves attenuation accuracy and low vswr from dc to uhf. Suitable for all signal and sweep generators in this frequency range.

Care in design assures maximum flexibility in mounting, drive, and types of input and output connections.

Easily adaptable for inclusion in different types of test equipment and in laboratory and production test applications.

SPECIFICATIONS

- **MAXIMUM STEPS**
Ten (eleven contact positions)
- **ATTENUATION RANGE**
Up to 120 db total
Attenuation per step optional
- **OUTPUT IMPEDANCE**
50 or 75 ohms nominal

- **INPUT IMPEDANCE**
100 or 150 ohms nominal
50 or 75 ohms optional

- **INPUT AND OUTPUT VSWR**
1.1 to 1000 mc at 50 ohms

- **ACCURACY**
 $\pm .3$ db per 20 db step
from its dc value up to 1000 mc

*Patent pending

**STANDARD SIGNAL GENERATOR
SG-25**

An R.F. Signal Generator operating over the frequency range 10kc to 50 megacycles. Output voltages adjustable from 0.1 microvolts to 0.1 volts across 50 ohms with an accuracy of ± 1 db. Built in crystal calibrator provided for accurate frequency setting. Internal modulation 400 and 1000 cps. Operates on 115 volts, 50 to 1000 cycles. Complete with accessories.

VARIABLE FREQUENCY POWER SUPPLY VS-500

VS-500 has been primarily designed for the purpose of testing Electronic Equipment. . . . uses ac power sources of frequencies ranging from 50 to 3000 cycles. However, it finds many other laboratory applications such as testing transformers over a wide frequency range, at high power levels, operating synchronous motors at variable speeds. Many attractive special features are incorporated.

MODEL PP-180 REGULATED DC POWER SUPPLY

A dependable source of power over a voltage range of 180 to 360 volts D.C. at 100 MA and 6.3 volts A.C. at 5 amps. from input of 105 to 125 volts 50 to 60 cps. Regulation approximately 1% over the D.C. voltage range 0 to 75 MA. Total noise and hum less than .005 volts for any rated condition of operation.

STANDING WAVE INDICATOR SW-12

Accurately indicates standing wave ratios 1:1 to 4:1. Operates on 115 volts 50 to 800 cycles. Designed for use with a square law crystal detector or bolometer probe which samples R.F. voltage from a slotted line. Of shock resistant, non-microphonic construction. Complete with carrying case and detachable cover.

Products of The House of Resistors*

Armed Services requirements as to corrosion-resistant materials and plating, low-temperature operation, vibration, rigid electrical and mechanical specifications, etc., can be incorporated in any of the Clarostat units.

COMPOSITION-ELEMENT CONTROLS (Series 48)

5/8 DIA. FOR MINIATURIZATION

Linear, 500 ohms to 5 megohms.
Taper, 2,500 ohms to 2.5 megohms;
10% resistance at 50% C.W. rotation.
Rated at 0.2 watt for linear units.
300° rotation.
Shaft locking device may be incorporated upon request.
Single and multiple units available.

Engineering Bulletin No. 121

COMPOSITION-ELEMENT CONTROLS (Series 47)

15/16 DIA.

Linear, 500 ohms to 5 megohms.
Tapered, 1,000 ohms to 5 megohms.
Rated at 0.25 watt for linear units.
Standard taps at 30% or 70% of effective rotation.
300° rotation without switch; 330° with switch.

Engineering Bulletin No. 117

COMPOSITION-ELEMENT CONTROLS (Series 37)

1-1/8 DIA.

Linear, 500 ohms to 10 megohms.
Tapered, 1,000 ohms to 10 megohms.
Rated at 0.5 watt for linear units.
Standard taps at 37 1/2%, 50% and 62 1/2% of effective rotation.
300° rotation without switch; 330° with switch.

Engineering Bulletin No. 112

COMPOSITION-ELEMENT CONTROLS (Series 51)

2" DIA., HI-VOLTAGE, HI-RESISTANCE

Resistance range, 5,000 ohms to 50 megohms for linear units.
Rated at 1 watt.
Insulation, 10,000 volts D.C. to ground, 4,000 volts maximum across end terminals.

Engineering Bulletin No. 119

WIRE-WOUND CONTROLS (Series 49)

3/4 DIA. FOR MINIATURIZATION

Linear, 10 to 10,000 ohms.
Rated at 1 watt.
Mechanical and Electrical rotation 300°.
360° Mechanical rotation available. Max. 355° Electrical.
Shaft locking device may be incorporated.
In single or multiple units.

Engineering Bulletin No. 104

WIRE-WOUND CONTROLS (Series 43)

1-1/8 DIA.

Linear, 1 to 10,000 ohms.
Tapered, submit your requirements.
Rated at 2 watts, for linear units.
Mechanical rotation 300°. Electrical 280° without switch; 260° with switch.

Engineering Bulletin No. 116

WIRE-WOUND CONTROLS (Series 58)

Linear, 1 to 50,000 ohms.
Tapered, 5 to 25,000 ohms.
Non-inductive 1 to 12,000 ohms, linear only.
Linear, 3 watts.
Mechanical rotation 300°. Electrical 280° without switch; 240° with switch.

Engineering Bulletin No. 118

CONSTANT-IMPEDANCE PADS (Series CIT-58)

Attenuation zero to 30 db in first 90% of C.W. rotation, approx. linear. Infinite attenuation reached in last 10%. Impedance range from 2 to 10,000 ohms, standard values. Refer to bulletin. 2.5 watts continuous DC rating. Series C18 rated at 10 watts. "L" pads, Bridged "T" pads, Bridged "H" pads, available.

Engineering Bulletin No. 102, and Bulletin No. 111

HIGH-PRECISION CONTROLS (Series 42a)

Up to 18 sections in one unit assembly. Single shaft. No back lash. Linear: 10 to 100,000 ohms standard. Max. resistance: 350 ohms per degree of rotation. Tapered, submit your requirements. Linearity up to $\pm 0.5\%$. Power rating for linear units, 3 watts per section. Standard rotation: Mech. 290° ; Elec. 280° .

Engineering Bulletin No. 142

WIRE-WOUND CONTROLS (Series MH)

"HUMDINGER" **

Ultra-compact potentiometer or rheostat. 2 to 1,000 ohms, only linear resistance feasible. Rating, 1 watt. Intermediate taps are special. Metal dust-proof cover available.

Engineering Bulletin No. 103

POWER RHEOSTATS (Series 25 & 50)

Full power rating even at $1/3$ of rotation. 25-watt, $1/2$ to 2,500 ohms; 50-watt, $1/2$ to 5,000 ohms. Linear and tapered. Tandem units available. 25G and 50G approved under MIL-R-6749 specifications.

Engineering Bulletin No. 115

"GREENOHM" * POWER RESISTORS

Fixed, 4 to 200 watts; adjustables, 10 to 200 watts. $\pm 5\%$ for values of 50 ohms and higher. $\pm 10\%$ for values below 50 ohms. $\pm 1\%$ special. Intermediate taps, upon order. Widest choice of mountings and terminals. Non-inductive units made to specifications.

Engineering Bulletin No. 113

"GREENOHM JR." ** POWER RESISTORS (Series GJ)

C7GJ, 7-watt, 0.5 to 5,000 ohms. C4GJ, 4-watt, 0.5 to 1,000 ohms. Standard resistance tolerance $\pm 10\%$.

Breakdown voltage between surface and resistance element, > 2500 volts A.C. Ceramic tube casing. Inorganic materials throughout. Pigtail terminals, standard.

Engineering Bulletin No. 110

POWER RESISTORS (Series ZT)

STACK-MOUNTING

30, 40, 55, 65 and 75 watt ratings. 0.5 to 65,000 ohms maximum. Mounting collars provide adequate free-air circulation for maximum heat radiation.

Engineering Bulletin No. 113

"GLASOHM" * FLEXIBLE RESISTORS (Series FXG and FYG)

Used as resistors and also as miniature heating elements. Ratings per winding inch: FXG, 1-watt; FYG, 2-watt. Clinch-grip ferrule ends with bare pigtail terminals. Other terminals, special.

Engineering Bulletin No. 105

METAL-CLAD MOLDED RESISTORS (Series MMR)

From 5 ohms to 15,000 ohms per winding inch. Ratings: 5 watts per winding inch, mounted on metal. $2 1/2$ watts in free air. Intermediate taps. Horizontal and vertical mountings.

B & W TEST INSTRUMENTS

DISTORTION METER, Model 400. A highly sensitive instrument having a wide range of applications in the audio measurements field. Noise and distortion measurements with a minimum input of .3 volts. Measures harmonics up to 100 cycles. A variable filter provides single frequency suppression between 30 and 15,000 cycles.

AUDIO OSCILLATOR, Model 200. This low-distortion field laboratory instrument provides stable, accurately-tuned audio frequencies from 30 to 30,000 cycles. Output response better than ± 1 d. b. from 500 to 5,000 cycles with 500 ohm load.

FREQUENCY METER, Model 300. An indispensable instrument for accurate and direct measurement of unknown frequencies from 0 to 30,000 cycles in 6 ranges. Operates with a minimum of .25 volts input and any waveform with peak ratios of less than 8 to 1.

RF SIGNAL DETECTOR, Model 404. Combines R-F detection and audio bridging circuits to complement any distortion meter lacking these features. When combined with the Model 400, noise and distortion measurements can be made from AM carriers or in balanced and unbalanced audio circuits. Freq. range 400 KC to 30 MC.

WAVE CLIPPER, Model 250. When driven by the Model 200 Audio Oscillator or equivalent it replaces a square wave generator in most tests. Provides a clipped sine wave for accurate analysis of audio circuit characteristics.

GRID-DIP METER, Model 600. A highly sensitive, accurately calibrated grid-dip meter, auxiliary signal generator and absorption wave meter. Frequency range 1.75 to 260 MC in 5 overlapping bands.

FILTERS — DISCRIMINATORS

B & W high-pass, low-pass, and band-suppression filters and discriminators for R-F or audio filtering meet a broad range of special design and performance requirements. For extremes of temperature and humidity these units are available to meet Mil-T-27 specifications.

ity these units are available to meet Mil-T-27 specifications.

TOROIDS. B & W offers full facilities for the design and manufacture of Toroidal coils in ranges up to 200 KC, with inductance and Q values to specific requirements. Available in hermetically sealed cases, potted or unmounted.

B & W SPECIAL COMPONENTS

INDUSTRIAL COILS. Single-layer solenoid coils • Universal-wound coils of single, multiple pie, and progressive construction • R-F, I-F, and Oscillator coils • Traps, R-F and Delay line chokes—are but a few of many types B & W is equipped to design and build to meet specific needs.

EDGEWOUND COILS. B & W rotary and fixed heavy-duty edgewound copper inductors are available in stock or custom-built models for high-power transmitters, R-F heating equipment, antenna phasing networks and other radio and electronic apparatus. Various inductance and current ratings are available in both types. Fixed or rotating links can be supplied on special models.

BARKER & WILLIAMSON, INC.

237 Fairfield Ave., Upper Darby, Pa.

SILVER GRAPHALLOY BRUSHES

Silver GRAPHALLOY Brushes have been widely used because of LOW and CONSTANT CONTACT DROP, EXTREMELY LOW ELECTRICAL NOISE and LONG LIFE . . . especially for *rotating strain gages, thermocouple circuits, synchros, guided missiles, fire control equipment, transducers, radar and sonar equipment, servo-mechanisms, selsyns and dynamotors.**

The GRAPHALLOY process was patented 40 years ago and the name GRAPHALLOY has been our copyrighted trademark since that time. While this company has been selling GRAPHALLOY for the past 40 years recent developments have added materially to its properties. Over 30 grades are now used in a wide variety of applications. Silver GRAPHALLOY Brushes on 1/2"-diameter coin silver slip rings have been used successfully in highly critical electrical circuits at speeds up to 100,000 R.P.M. *Our Engineering Department will assist in determining the exact grade of GRAPHALLOY for your needs.*

BRUSH AND SPRING ASSEMBLY

Silver GRAPHALLOY Brushes are available for the standard Brush Holders described in the next column. Springs are supplied, as part of the assembly, to give the correct brush pressure for each brush application. Shunts are provided where necessary to insure extremely low electrical noise level and for carrying heavy currents.

COIN SILVER SLIP RINGS

Standard Coin Silver Slip Rings, both *cylindrical* and *flat* types, are illustrated below. We recommend the cylindrical type ring with three brushes per ring . . . spaced at 120°. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type or slip ring assemblies can be furnished with leads attached.

Standard "Flat" rings have 1/4" radial contact surface and 1/8" radial spacing between adjacent rings.

Part No.	OD	ID	Thickness	Part No.	OD	ID	Width

electrical
requirements

CYLINDRICAL SLIP RING and Brush Holder Assembly

CYLINDRICAL SLIP RING ASSEMBLY

FLAT SLIP RING ASSEMBLY

ing equipment, the measure-
changes in resistivity or emf
brought out by means of slip
and brushes. To obtain intelli-
formation under these condi-
extraneous circuit noise level
kept below the signal level.
ver GRAPHALLOY Brushes, in
ation with Coin Silver Slip
reduce the extraneous noise
extremely low values, they have

been used extensively in rotating strain
gage and thermocouple applications.
Noise levels as low as 20-50 microhms
in a 100-ohm circuit have been obtained
with Silver GRAPHALLOY Brushes. (*We
will develop and manufacture your
complete assembly!*) Commutators and
choppers for the production of square
wave signals or for pulse systems can
be manufactured to meet your circuit
requirements.

GRAPHALLOY CONTACTS

oy, because of its inherent non-welding
franching characteristics, is used widely
as . . . especially where positive break-
quit is required.

GRAPHALLOY BUSHINGS

With military requirements demanding operation
from -80° to $+200^{\circ}$ F., GRAPHALLOY Bushings,
which are inherently oilless, have been used suc-
cessfully in potentiometers, synchros, cameras,
and missiles. Properly designed GRAPHALLOY
Bushings will take considerable shock (50 g.).
They have replaced oil-lubricated bushings for
the following reasons:

- 1) Lower friction at room temperatures.
- 2) No oil to solidify at low temperatures.
- 3) No oil to carbonize at prolonged elevated temperatures.

GRAPHALLOY BRUSHES

are used on
such equipment as . . .

- SERVO SYSTEMS
- SYNCHROS
- SELSYNS
- CHOPPERS
- RADAR
- GYROS
- INVERTERS
- PULSE SYSTEMS
- GUIDED MISSILES
- DIGITAL COMPUTERS
- WAVE GUIDES
- SONAR
- TRANSDUCERS
- TORQUE INDICATORS

AMERICAN ELECTRICAL
HEATER COMPANY
DETROIT 2, MICH., U. S. A.

**THE BEST ION TRAPS
AT LOWER PRICES**

World's Largest Ion Trap Builder
Slip-on Type—Model T-312
 Simplified steel construction lowers manufacturing costs by fully utilizing, in addition, the Alnico Permanent Magnet's maximum efficiency. This makes Model T-312 the **LOWEST PRICED ION TRAP ON THE MARKET.** Installs in 2-3 seconds. Construction with steel tension spring.
 Weighs only 3/5 ounce.

Door-Saving Snap-on Type Model E-437
 Instantly. Just snap on; stays put. Saves valuable production man hours with **EXCLUSIVE** snap-on feature. Reduces your cost because priced below competition. Construction of hardened spring steel.
 Weighs only 1/2 ounce.

Both Models Fit Any TV Picture Tube.
 Heppner has built over 16,000,000 Ion Traps to date and is the world's largest Ion Trap manufacturer.

Model E-437

The most economical way to FOCUS a TV tube
THE ORIGINAL FOCOMAG

CUTS RECEIVER COSTS BY ELIMINATING CENTERING AND FOCUSING RHEOSTATS. Also lowers cost of power transformer. Perfectly focuses 27", 21" and all smaller tubes having magnetic deflection. Highly efficient ring magnet uses only 4 oz. Alnico P.M.

NO HARMFUL EXTERNAL FIELD. Ring magnet is completely enclosed by the external shunt (an original Heppner design). This prevents the leakage field from having any magnetic effect on other components. Uniform field produced by ring magnet.

FLEXIBLE NYLON ADJUSTING SHAFT ELIMINATES BREAKAGE. Picture-positioning lever. You specify mounting arrangement.

REDUCE YOUR SET COSTS...

ALNICO P. M. SPEAKERS
 with exclusive "no-rub" Voice Coil

Absolute uniformity to your specifications because: The **PERFECTLY ROUND "NO-RUB" VOICE COIL** (An **EXCLUSIVE** feature) is manufactured by keeping each coil on a separate hardened steel sleeve during winding and all other pre-assembly operations. Each voice coil is thus perfectly round when installed in the speaker. There are no egg-shaped coils to cause rubs.

ALNICO P.M. SPEAKERS in 3", 3 1/2", 4", 5", 4"x6", 8", 10", and 12" sizes are available. .68 oz., 1 oz., 1.47 oz. or other standard Alnico P.M. sizes. Plugs, transformers and/or brackets to your specifications.

Guaranteed-count Electro-dynamic Speakers

Each field coil used in the Electro-Dynamic line is guaranteed to contain the given number of turns within standard tolerance. Quality is fully controlled because all field coils are wound by Heppner. There are no wire stretching or other quality-reducing shortcuts to cause deviation from the resistance and wire size specified.

Originated by Heppner.
CENTERING DEVICES

for use with Electrostatic TV Tubes of all sizes. Distortion-free beam is assured by uniformity of field. Will not de-focus beam.

It is tested in both open and closed position before shipment.

FERRITE ROD ANTENNAS

Inductances held to $\pm 1/2$ of 1%. With windings and mountings to your specifications or without mountings.

FLY-BACK TRANSFORMERS

Manufactured with exacting control at all stages. Made to your specifications.

To help keep your costs down, call in Heppner engineers to assist in designing and developing new Electro-Magnetic Components. Unusually fast delivery. Write for further information today.

BNC

CONNECTORS BY KINGS

The BNC Connectors shown are small, lightweight Connectors designed for use with small cables such as RG-58/u, RG-59/u and RG-71/u. Widely used for video and aircraft test equipment, they are recommended for frequencies as high as 3000 M.C., where impedance matching is important. The BNC series is used successfully in the region of microwave frequencies.

Whether your connector requirements call for the BNC series, N series, the new C series or special adaptations of standard connectors, you can rely on Kings. Our staff of highly specialized engineers invite your inquiries.

C Series Connectors are a greatly improved mechanical and electrical type of co-axial connector. They are constant impedance and are designed for use with 50 ohm, middle size RF cables.

The C Series like every co-axial connector made by Kings is the result of constant research and development. Engineering ingenuity and precision manufacture have put "Connectors by Kings" in the front-line of communications equipment for industry and the armed services.

If you have a connector problem consult Kings. You'll be glad you called on Kings first.

Here's How HARRISON RADIO * . . . Simplifies Your Procurement Problems

1

complete stocks . . .

Nine floors of a tremendous inventory of parts and equipment to expedite your development project or keep your production line rolling.

2

prompt delivery . . .

Because "Harrison Has It!" or can get it for you quickly from our many advantageous factory contacts.

3

lowest prices . . .

Efficient business operation and large scale purchasing enables us to sell everything at the lowest possible prices.

4

standard brands . . .

A single order to Harrison brings you the products of over 200 leading electronic parts and equipment manufacturers.

5

guaranteed satisfaction . . .

On every item and transaction, backed by a 29-year reputation for integrity.

You can always depend
on our Fast-Moving
INDUSTRIAL DEPARTMENT
for ALL Your
Electronic Equipment

Bill Harrison

Here's the heart of our Industrial Department — your team of experienced electronics specialists equipped to make your purchasing of electronic parts and equipment, Fast . . . Easy . . . Thrifty!

These men speak your "language", know what you need and how to get it for you in the shortest possible time. They're a friendly, conscientious crew . . . eager to save you time and money!

Industrials, labs, government agencies and institutions appreciate fast service when they need critical electronic components. That's why HARRISON RADIO emphasizes delivery FROM STOCK! . . . made possible by nine floors of parts and equipment that cover everything from a resistor to a complete transmitter.

Get to know our industrial staff and make HARRISON your single source for ALL your electronic materiel.

Stupakoff

CERAMIC & MFG. CO.

LATROBE, PENNSYLVANIA

GLASS-TO-METAL SEALS

Perfectly closed and durable air-tight assemblies are made with Stupakoff Kovar-Glass Seals. The use of hard glass for these seals insures the highest degree of protection against thermal shock and weathering.

Among the various types of standard Stupakoff Kovar-Glass Seals are: Single Terminal, for all feed-through applications requiring a single electrode with tubular, solid or flattened and punched center lead; High Voltage, for special feed-through application where higher voltage-flashover and surface leakage ratings are required; Stand-off Terminals, specially useful as test and connection points; Strain-Relief Terminals, patented design developed especially for welding and brazing; Multi-Header Terminals, for applications requiring a number of terminals in a limited area.

In addition, Stupakoff designs and makes special seals for use where standard designs are not applicable. All types are readily produced in large or small quantities as required.

Stupakoff Kovar-Glass Seals are fully described in our new catalog, 453, sent free upon request.

STEATITE AND OTHER CERAMICS

Stupakoff is a leading manufacturer of ceramic products for electrical and electronic applications for all voltages, frequencies and temperatures. Parts are made of Alumina, Cordierite, Forsterite, Magnesia, Porcelain, Zircite, Titanates, Stupalith and Steatite—plain, ground, metallized or assembled.

Where thermal shock conditions prevail, parts made of Stupalith will withstand extremely severe service. Stupalith parts range in weight from a fraction of an ounce to several pounds, and are made in simple or intricate shapes, by pressing, extrusion, casting or ramming. Safely used at temperatures up to 2400 F.

Stupakoff Temperature-Sensitive Resistor Ceramics are used for temperature indicating and measuring equipment such as Radiosonde, for infrared light source and for heating elements. Supplied complete with terminals, in the form of rods, tubes, discs, bars, rings, etc.

For by-pass, lead-through blocking, standoffs and trimmer applications; also for temperature-compensating service, Stupakoff offers Ceramic Dielectric materials having coefficients from P-100 to N-2700 and high K materials up to K-6000. Made in the form of tubes, discs, and special shapes, plain or silvered.

Steatite products are fully described in catalog 951; data on other materials will be furnished upon request.

PRINTED CIRCUITS

...ning in one compact, sealed unit a specified
of prewired resistors and capacitors of pre-
...ues, Stupakoff Printed Circuits save space
...nt, speed assembly, reduce costs, minimize
...errors. The resistors and capacitors are
...in circuits designed in accordance with the
...ents of individual applications. By using
...Printed Circuits instead of the individual
...nts, soldered connections are reduced up
...assemblies are lighter and more compact,
...mbly time is reduced and better products

...sturdy, compact, accurately produced units
...in many sizes, a typical one being 1 x 1½ x
... (as leads).

...as for resistors, capacitors and conductors
...ated" on vitreous high-dielectric ceramic
...permanently bonded to the ceramic surface
...olled curing, and protected from abrasion
...idity by a tough, impervious plastic coating.
...leads are soldered in place, ready for con-
...to the assembly.

Write for bulletin 1151,
containing complete spe-
cifications of a number of
typical standard circuits
and detailed information
on the design and con-
struction of Stupakoff
Printed Circuits.

CERAMIC-METAL ASSEMBLIES

Stupakoff specializes in the application of metal to ceramic parts for a variety of purposes, such as metallized ceramic induction coils for radio receivers and transmitters; metallized ceramic shafts for air-tuning condensers; metallized plates for making fixed rigid assemblies; printed circuits; ceramic trimmer condensers; terminals and terminal boards; strain and lead-in insulators; and many other ceramic-to-metal products.

To combine ceramic and metal parts into one permanent unit, Stupakoff utilizes extensive experience with both materials. Methods of assembly employed by Stupakoff include: metallizing, soldering, pressing, spinning and others. Among the metals assembled to ceramics are silver, copper, brass, stainless steel, monel and Kovar.

Stupakoff high-precision ceramic assemblies offer many opportunities to reduce costs, increase production and improve electrical and electronic equipment. Full details will gladly be sent upon request.

Kovar*

PROVED BY EXPERIENCE

THE MOST DEPENDABLE

**GLASS-SEALING
ALLOY**

The ideal alloy for glass sealing, Kovar matches the expansivity of certain hard glasses over the entire working temperature range. It resists mercury attack, has ample mechanical strength and seals readily with simple oxidation procedure. It is available as sheet, strip, foil, rod, tube, wire—or fabricated into cups, eyelets, leads and other shapes. The prominent users of KOVAR and the length of time they have employed this metal are convincing proof of satisfaction.

Kovar is a cobalt, nickel, iron alloy, manufactured under very carefully controlled conditions. It attributes its success to the following characteristics:

1. Seals readily into hard or thermal shock resistant type glass.
2. Has substantially the same expansivity as the glass from -80° C to the annealing point of the glass.
3. Produces a permanent vacuum tight seal.
4. Is readily machined or fabricated to permit the use of small and intricate shapes.
5. Is of controlled composition to permit duplication of results.
6. Resists mercury attack.
7. Is usable in any thickness; no need to feather edge on tubular or intricate shapes.
8. Is relatively inexpensive, eliminating restraints on sizes and capacity.
9. Can be welded, soldered, and brazed to other metals.

Full information on the use of Kovar is given in Stupakoff Bulletin 145, which we will send upon request.

MAGNETIC MODULATOR

Now Available in 60 and 400 Cycle Designs

CONVERTER WITH HIGH SHOCK AND VIBRATION RESISTANCE AND PRACTICALLY UNLIMITED LIFE—OPERATION IN AMBIENT TEMPERATURES FROM -55°C TO $+200^{\circ}\text{C}$

Magnetic Modulator is designed to convert low level dual polarity DC signals into AC signals of corresponding amplitude and phase. A descriptive list of specifications is shown in table to the right.

TYPICAL SPECIFICATIONS

Weight 4 oz. Output impedance 5,000 ohms
 Temp. rise negligible Output at null 10 mv. rms. max.
 Life unlimited Output phase... 0 or 180 ± 5 deg.
 Harmonic Distortion Less than 10%, above 0.1V output

We specialize in control systems and MAGNETIC AMPLIFIER components for automatic flight, fire control, analog computers, guided missiles, nuclear applications, antennas and gun turrets, commercial power amplifiers, and control systems.

ILLINOIS ELECTROLYTIC CAPACITORS

...A COMPLETE CAPACITOR LINE OF TIME-TESTED QUALITY!

Customer acceptance of high quality Illinois electrolytic capacitors has made them world famous — and for good reason!

For more than 19 years, ILLINOIS CONDENSER COMPANY has lead the field in new developments, bringing even greater dependability and longer life to these capacitors of "Time Tested Quality".

There is an Illinois electrolytic capacitor for every application. Listed below are only a few of the more popular Illinois types. Write for new Illinois catalog — now!

UMT Specifically designed for use in high quality equipment. Complete line meets all government JAN specifications. Hermetically sealed, shock resistant. Newly designed molded capacitor design and terminal construction.

UMS Inverted screw mounting, hermetically sealed. Entire line fully meets all government JAN specifications.

UMC Popular for use in telephone equipment, power factor correction voltage stabilization, high current energy sources, motor starting and other types of phase shifting networks. Available in capacity ranges up to 10,000 MFD and from 5 to 500 W.V.D.C.

UMP Ideal for communication, radio and TV. Standard twist prong mounting. Uses recently developed molded capacitor construction and will operate efficiently under wide temperature ranges. Remains stable under all operating conditions. Available in capacity ranges from 40 to 3,000 MFD and from 10 to 525 W.V.D.C.

This popular pigtail type in aluminum can features internal riveted construction that assures immunity to shock vibration. Available with or without cardboard insulating sleeve, with tinned wire leads or solder lugs in capacity ranges from 1 to 2,000 MFD from 3 to 700 W.V.D.C.

Ideal for replacement or original equipment, this type has flexible wire leads, is sealed with high temperature compound, has electrolytic grade cardboard tubes and has radial or tangential leads attached. Supplied in common single, four section types or dual negative with separate cathodes. Available in capacity ranges from 25 to 250 MFD from 5 to 500 W.V.D.C.

LN Has screw neck type mounting, extruded aluminum cans and is available in 1" to 1½" diameters. Capacity ranges from 8 to 80 MFD and from 450 to 600 W.V.D.C.

BT (Bathtub) Developed for military, fixed and portable communication equipment. Has hermetically sealed, drawn metal case with corrosion resistant finish. Will stand shock and vibration. Fully meets government JAN specifications. Available in any capacity range required and from 25 to 600 W.V.D.C.

PE For use in all communication equipment, fixed and mobile. Plug-in octal base, hermetically sealed. Features new molded through pin design. Available in types to meet all government JAN specifications.

Only One Source gives you Double Duty TV!

Highest Quality Studio
Programming Resources — plus

Portable Packaging for Maximum
Studio-Field Flexibility!

When you invest in GPL TV *studio* equipment, you're buying *field* equipment as well. Every GPL unit provides unparalleled flexibility, light weight, easy handling, precise control. Let GPL engineer *your* station, from camera to antenna. Have *The Industry's Leading Line* — in *quality*, in *design*.

Camera Chain Model PA 600

Camera Unit

Precision-built, lightweight, fast-handling. Push-button turret, remote iris control, remote focus and range selection. Easiest to service.

Camera Control Unit

Touch-identified controls. 8½" monitor tube. Split or single headphone intercom system. CRO views horizontal, vertical, and vertical sync block. Iris control.

Camera Power Unit

Rugged, dependable, compact. Matched to other units in GPL chain. Standard relay panels swing out for maintenance.

Model PA 604

Synchronizing Generator

Affords maximum circuit reliability without operator adjustment. Binary counters and delay lines, stable master oscillator. Built-in power supply.

Complete TV Station Installations from Camera to Antenna

Model PA 605

Video Switcher

Full studio flexibility anywhere. Control can view, preview, fade, dissolve, etc. Views any of 5 inputs, 2 remotes, outgoing line. Twin fade levers.

Model PA 101

3-2 Projector

Portable sync unit. No need for special phasing facilities. Projects rear-screen or "direct in." Ideal for remote origination of film. Relieves load on Telecine.

Model PA 100 A

Professional TV Projector

Highest quality 16-mm projector, designed specifically for TV. Delivers 100 foot-candles to tube. Sharp, steady pictures from 4000-foot film magazine.

Model PA 607

Remote Control Box

Provides revolutionary remote control of camera focus, lens change. Styled to match other components in the GPL TV line.

o your most exacting requirements

⊙ Backed by fifty years (1903-1953) of fine-wire specialization! During all this time we have supplied bare and insulated wires to many of the most critical wire users.

Your specifications and requirements for *insulated wires* in the East are processed by our Winsted Division; in the West, the Cassopolis Division has been established to facilitate rapid shipments. Insulators and others requiring *bare wires* should contact the Ossining Division for prompt and efficient service.

Our research and development staff is always available to aid our customers in their requirements.

SPECIAL WIRES
(Ossining Division)

Silver-plated wires in coarse and fine sizes, for high-frequency conduction and high-temperature applications.
Electro-tinned, soft-annealed wire.
Other specialty wires to meet specifications.

BARE WIRES

What is your Delay or Regulating Problem?

For the most effective solution use the
SIMPLEST, MOST COMPACT
MOST ECONOMICAL
HERMETICALLY SEALED

AMPERITE

THERMOSTATIC DELAY RELAYS

STANDARD

Provide delays ranging from 2 to 120 seconds.

- Actuated by a heater, they operate on A.C., D.C., or Pulsating Current.
- Hermetically sealed. Not affected by altitude, moisture, or other climate changes.
- Circuits: SPST only—normally open or normally closed.

Amperite Thermostatic Delay Relays are compensated for ambient temperature changes from -55° to $+70^{\circ}$ C. Heaters consume approximately 2 W. and may be operated continuously. The units are most compact, rugged, explosion-proof, long-lived, and—very inexpensive!

MINIATURE

TYPES: Standard Radio Octal, and 9-Pin Miniature.

PROBLEM? Send for Bulletin No. TR-81

BALLAST-REGULATORS

T9 BULB

- Amperite Regulators are designed to keep the current in a circuit **automatically regulated** at a definite value (for example, 0.5 amp).
- For currents of 60 ma. to 5 amps. Operates on A.C., D.C., or Pulsating Current.
- Hermetically sealed, light, compact, and most inexpensive.

Maximum Wattage Dissipation: T6 1/2 L—5W. T9—10W.

Amperite Regulators are the simplest, most effective method for obtaining **automatic regulation** of current or voltage. **Hermetically sealed**, they are not affected by changes in altitude, ambient temperature (-55° to $+90^{\circ}$ C), or humidity. Rugged; no moving parts; changed as easily as a radio tube.

Write for 4-page Technical Bulletin No. AB-51

NEY

PRECIOUS METAL ALLOYS

For ELECTRICAL and ELECTRONIC APPLICATION

CONTACTS

CONTACTS, brushes, wipers, slip rings, commutator segments and similar components for electrical instruments and apparatus represent a field in which Ney Research has a long list of important accomplishments. Ney precious metal alloys specially developed for these applications are widely and very successfully used. And now enlarged manufacturing facilities have been added to meet the steadily increasing demand.

SLIP RINGS AND COMMUTATOR BARS

NEY #90 Alloy, overcomes many of the disadvantages of coin silver when used in slip ring and commutator bar applications. Actually a modification of coin silver, NEY #90 is subjected to a carefully controlled processing

that produces a uniform hardness of 120-130 Brinell which has been found best for slip ring type applications. Since performance is also markedly influenced by surface condition, especially when brush pressure must be low, NEY #90 Alloy rings are given a specially developed finish that greatly reduces wear and electrical noise. NEY #90 Alloy is available in seamless tubing in all sizes up to 4" O. D., also in the form of plate, rod, wire and fabricated parts.

TEST RESULTS

Illustrations at right are typical test results of PALINEY* #7 . . . a Ney Precious Metal Alloy . . . being used for sliding contacts on nickel-chrome wire-wound potentiometers in comparison with phosphor bronze contacts. Figures show low initial error and maintained linearity of PALINEY* #7 performance. Condition of both contacts and windings after test indicate practically no wear.

Cathode Ray Oscillograph (Top Right) showing percentage error of standard potentiometer after one million cycles or two million sweeps of phosphor bronze contact over the wire. Initial linearity was $\pm .17\%$ and the error increased to $\pm 28\%$ plus noise.

(Bottom Right) Performance of standard potentiometer modified by substitution of PALINEY* #7 contact after one million cycles or two million sweeps over wire. The initial error was reduced to $\pm .12\%$ and this linearity was maintained throughout the test.

*Reg. T.M. of The J. M. NEY Co.

LOOKING FOR A

Perfect Mate?

PL259

SO239

COAXIAL CONNECTOR CO. offers a fresh, economical and improved approach to the manufacture of the "Old Reliables." Practical know-how stands solidly behind every connector made by Coaxial.

It has been proved time and again that our J.A.N. precision-made connectors have been held aloft as a standard for the industry. Pride of workmanship coupled with a short manufacturing cycle insures the kind of product that you want when you want it.

Design problems? Engineering information? Special requirements? Engineering specialists will give you the benefit of Coaxial's know-how.

UHF SERIES CONNECTORS

For dependable low-cost, general purpose use. Satisfactory up to 200 megacycles and may be used with caution up to 500 megacycles.

AN Designation PL-259, PLUG (NT. 49190)

Non-weatherproof type. Mates with UHF female. Two-piece construction. For use with Cable RG-/U: 8, 9, 10, 11, 12, 13, 63, 65.

AN Designation PL-259A, PLUG (NT. 49195)

Similar to PL-259. It is a 3-piece unit for ease of handling. Non-weatherproof. Mates with UHF female. SO239.

AN Designation SO-239, NT. 49194 Receptacle

Mates with male plugs PL-259, PL-259A, UG-203/U. Non-weatherproof, single piece construction. For use with Cable RG-/U8, 9, 10, 11, 12, 13, 63, 65.

Also available special Adapter for the above Plugs (UG-175/U, UG-176/U) used with RG-58/U, RG-59/U, RG-62/U and other small cables.

FREE! Cross Reference Chart! Just ask for it or for more information.

ELECTRO TEC CORPORATION
 SOUTH HACKENSACK • NEW JERSEY

ELECTRO TEC is now tooled up, with new expanded facilities for production of large Slip Ring Assemblies to exact customer specification. Sizes range up to 24" in diameter, either cylindrical or disc type.

The exclusive ELECTRO TEC PROCESS*—the electro-deposition of hard silver rings into an accurately machined plastic blank—consistently yields a high degree of dimensional accuracy, excellent concentricity, and a jewel-like ring finish. This process also eliminates expensive tooling and mold charges, frequently lowers costs to 30% of other methods of manufacture. The silver rings are uniformly hard for long life—75-90 Brinell.

ELECTRO TEC one-piece construction precludes dimensional variation due to accumulated errors. The plastic base is fully cured before rings are plated into it, thus preventing separation of base material from the rings.

ELECTRO TEC LARGE SLIP RING Assemblies are widely used in Radar Equipment, Fire Control Systems, Test Tables and many other critical applications. Light weight combined with rugged durability recommends their use in airborne applications.

Every user knows the ELECTRO TEC reputation for quality and superiority in miniature and sub-miniature slip ring assemblies.

S.S. WHITE PRODUCTS

for ELECTRONIC and RADIO EQUIPMENT

FLEXIBLE SHAFTS

S.S. White offers a wide choice of flexible shaft combinations made up in lengths to users' or government specifications.

FOR POWER DRIVES

Available in a comprehensive selection of sizes, load capacities, and other characteristics to meet a wide range of power drive requirements.

FOR REMOTE CONTROL

For either manual or mechanical control. Featured by minimum backlash (i.e., low deflection in either direction of rotation), and easy, jump-free operation.

THE FLEXIBLE SHAFT HANDBOOK — 3rd Edition has 260 pages of facts and data on flexible shaft selection and application. A copy will be sent free to any engineer who writes for it on his business letterhead.

FLEXIBLE SHAFT ADAPTERS

Used to connect flexible shafts in close quarters or where space conditions prevent a direct connection without bending the shaft to the point of possible damage. Drawings and specifications on request.

INDUSTRIAL "AIRBRASIVE" CUTTING UNITS

For laboratory and production work

Utilizes a fine jet of gas-propelled abrasive particles to perform a wide variety of high precision operations including cutting, etching, deburring and controlled removal of surface coatings.

Applications include: cutting spiral bands on deposited carbon resistors; "trimming" conductive material on printed circuits; cutting germanium; drilling fine holes in glass and tubing.

Samples of your product or material will be tested to determine the suitability of the "Airbrasive" Unit for your requirements. No obligation. Write for Bulletin 5212.

PLASTIC PLUGS AND CAPS

THREADED TYPE. Provide inexpensive protection to threaded openings and studs during shipment, storage or maintenance operations. Made of tough, non-brittle plastic, they will not chip or break easily and can be used over and over again. In N.P.T. Standard, Machine Screw and Metric Threads. Write for Bulletin P-5203.

ELASTOPLASTIC TYPE. Slipped into or over the ends of plain tubing, elastoplastic plugs and caps seal out dirt and moisture and prevent damage. They hold by friction fit and are easy to apply and remove. Write for Bulletin P-5107.

MOLDED RESISTORS

These "all-weather" resistors have inherent low noise level and good stability in all climates.

HIGH VALUE RANGE—10 to 10,000,000 megohms for scientific and industrial control, measuring and laboratory equipment, as well as many high voltage applications.

STANDARD RANGE—1,000 ohms to 9 megohms. For commercial radio, telephone, telegraph, television, etc. Also used in a variety of USN equipment.

Also available are S.S. White 80X High Voltage resistors rated at 4 watts in a range of resistance values from 100 to 100,000 megohms. Write for Bulletin 4906.

ELECTRO TEC

PRECISION-MINIATURE

slip ring assemblies AND COMMUTATORS

offer all these advantages:

EXCLUSIVE* ELECTRO TEC TECHNIQUES

insure closer tolerances, absolute uniformity, and the ultimate in miniaturization

Electro Tec units are the product of an exclusive manufacturing technique that results in accuracy unattainable by conventional machining methods. In this process a plastic is moulded around wire leads. Accurate machining reduces this blank to the proper shape, complete with grooves. Hard silver is deposited into grooves by electroplating to produce the required rings. Final machining insures concentricity and dimensional accuracy. The result is one-piece, unitized construction with conducting rings of 90 Brinell hardness.

Diameters of these assemblies range from .045" to 24" cylindrical diameter. Cross-sections may range from .005" to .060" or more. Rings are polished to a jewel-like finish and can be held to 4 mils or better. Even the smallest sizes withstand a 1000 V.A.C. breakdown test. Most types easily withstand rotational speeds up to 12000 rpm.

ELECTRO TEC Assemblies are Specified by the Nation's Leading Precision Instrument and Equipment Manufacturers for Proven Greater Dependability, Longer Life, Smoother Functioning.

The uniformly superior performance of Electro Tec slip ring and commutator assemblies in thousands of industrial and governmental applications has resulted in wide adoption of these components by most leading manufacturers of precision instruments and equipment. Although these products provide improved performance and extra dependability, prices are strictly competitive. Write today for fully illustrated literature.

Belock Precision Miniatures

engineered for laboratory and commercial instrumentation

Precision in smaller packages is the requirement of today's Servo design. To meet this requirement, we are proud to introduce these completely new designs to our list of standard precision components.

Precision miniature differentials are designed for applications where space is at a premium without a sacrifice in accuracy. Low break-away torque, adjustment for wear and dual planetary gears for high torque capacity are combined in this design to give maximum performance in a minimum of space.

Integral Servo motor gear heads are designed and built for high accuracy Servo performance. Ball bearings, stainless steel construction and precision gearing incorporate into the gearheads the advantage of low backlash, long life and high torque capacity. Your inquiries are invited.

Hughes
Diodes
are

**FUSION
SEALED
IN
GLASS**

for electrical
stability

GLASS-TO-METAL fusion sealing for electrical stability is an exclusive feature of **HUGHES GERMANIUM DIODES**. The final seal in precision assembly operations is made at a temperature exceeding 700° C.

Proved in billions of vacuum tubes, the glass-to-metal seal has been incorporated to full advantage in diode manufacture for the first time by the Hughes-developed process of fusion sealing. The result is a unique germanium diode whose elements are encased in a rigid *one-piece* glass envelope, which assures permanent freedom from moisture penetration.

THE **HUGHES GERMANIUM DIODE** employs no wax or solder, and has no mechanical joints or pressed-in parts to shift position.

Each **HUGHES DIODE** is humidity-cycled.
Each **HUGHES DIODE** is temperature-cycled.
Each **HUGHES DIODE** is JAN shock-tested.

Recently announced new High-Conductance diodes, created by Hughes Research and Development Laboratories, set new standards of diode conductance. Characteristics of these high-conductance diode types, indicated in red, are shown in the table below.

HUGHES GERMANIUM DIODES have proved consistently able to meet exacting requirements in airborne electronic equipment for navigation, fire control and guided missiles.

Volume orders for most types of **HUGHES DIODES** can be filled from stock. Diodes are also tested to special specifications, including high-temperature electrical requirements.

HUGHES GERMANIUM DIODE ELECTRICAL SPECIFICATIONS AT 25° C.

ACE Bulletin 3

Shut

RADIO INTERFERENCE

"IN" OR "OUT"

Nine out of 10 screen rooms used in meeting today's exacting specifications were made by ACE!

These sturdy shielded enclosures provide a **GUARANTEED** attenuation of 100 db from 0.15 to 1,000 megacycles and to closely approach this attenuation at 10,000 mc. They are ideally suited for keeping "background" radio interference influence from affecting sensitive R-F measurements or for shielding equipment that would otherwise cause serious radio broadcast or TV noise.

Features include low R-F impedance door design; complete facilities for power, water, gas, air conditioning or ventilation service entries; access doors; "cell type", single screen or solid shield and many others.

**Installed in
a few hours!**

Ace rooms are supplied in pre-built sectional form for quick, easy erection. They can readily be enlarged or relocated.

**MEET EXACTING
SPECIFICATIONS**

**INCLUDING JAN-1-225, 16E4 (SHIPS),
MIL-1-6181 AND OTHERS WITH AN
ACE SHIELDED ENCLOSURE!**

ACE ENGINEERING and MACHINE Co., Inc.

3644 N. Lawrence St., Philadelphia 40, Pa., Telephone: REgent 9-1019

Ready reference throughout the year... this Mid-June issue of electronics serves the industry in the exacting manner that it requires.

The **electronics BUYERS' GUIDE**

provides users with the only accurate and reliable product source available in the electronic industry...

They refer FIRST to the "GUIDE."

PRESTO SHOWCASE

of the world's finest recording equipment

T A P E E Q U I P M E N T

**BEST PRESTO TAPE
RECORDER RC-11**

"Unitized" construction with capstan drive unit. Reel sizes 6 and 8 inches; three enclosed heads; automatic operation; heavy ribbed aluminum housing. PRESTO's most advanced tape mechanism.

**LONG-PLAYING TAPE
REPRODUCER PB-17**

Designed especially for background music in industrial plants, entertainment locations, ships and trains. Eight hour tape cycle at 3 3/4" / sec.; dual track; 4800 ft. reel capacity; frequency resp. is 50 to 8,000 cps. (± 2 db)

**TURNTABLE-DRIVEN TAPE
REPRODUCER TL-10**

Most amazing development to hit the recording field in years. Makes any standard 16" turntable quickly adaptable to tape. Turntable acts as motor; speeds of 7 1/2" / sec. and 15" / sec. Plugs into standard studio speech input equipment; no preamplifier required.

PORTABLE PT-920

Portable tape machine is shown with new RA-1 reel adapters which allow reel size to 10 1/2 inches. Three heads without friction clutch or friction. Frequency response 20 to 17,000 cps. frequency response dynamic range.

R E C O R D I N G A M P L I F I E R S

PRESTO 92-B

PRESTO's famous 60 watt recording amplifier for rack mounting. Removable front panel makes maintenance easy. Selector switch and one meter indicate output level and tube plate currents. Push-button selector for recording characteristics. Response: 20 to 17,000 cps.

PRESTO PORTABLE 90-B

Qualities of high fidelity studio console but portable, with complete facilities for remote operation. Distortion of less than 1.5% at maximum output. Equalizers for flat, NAB 33 1/3 rpm, phono, NAB playback and automatic. Three-microphone input with mixer and master gain control.

D I S C E Q U I P M E N T

AUDIO CONSOLE 8 D-G

At the finest instantaneous and accurate. Has radial cantilevered cutting ring no turntable contact. 1-D Direct gear drive and twin microgroove. Different feed pitches in each microgroove. 250 lpi. microgroove.

**PRESTO TRANSCRIPTION TURNTABLE
10-B**

Here is an improved model of the famous PRESTO 10-A which has been the preferred turntable in hundreds of broadcast stations. The 10-B is a rim-driven table of exceptional accuracy with 3-speed mechanism. Offered as chassis only or in console cabinet.

PRESTO PORTABLE RECORDER 6-N

World favorite! Unusual reliability under all recording conditions. Low mechanical noise level. Speed accuracy excellent at 78 and 33 1/3 rpm. Equipped with 1-D cutting head. Microgroove attachment available at extra cost.

PLASTICON GLASSMIKE CAPACITORS

glass housing, plastic dielectric, temperatures to 125°C. Resistance 10,000 megohms min. ASG type for DC applications; LSG for RF use; PAG where stability and temperature co-efficient is required. TAG and MAG for over 125° C.

PLASTICON TYPE "M" miniature CAPACITORS

with new Mylar Film*. Resistance 125,000 megohms minimum. Temperatures to 140° C., small size—light weight. Voltage ranges from 100 to 600 V DC. Available with either or both ends insulated and with any selection of brackets.

PLASTICON DC RECTANGULAR CAPACITORS

(CP70 style), voltage ranges from 600 V DC to 100 KV DC or higher. Designed for audio filter, coupling and by-pass service in electronic, control, and other similar equipment. Temperature characteristics to suit individual application.

PULSE FORMING NETWORKS and CAPACITORS

utilizing plastic films for higher volt per mil loading and lower losses in capacitor dielectric. Smaller size and weight, longer life. Stable performance at high temperatures. Ranges of voltage up to 60 KV.

PLASTICON HI-VOLT POWER SUPPLIES

in the following ranges: 2,000 V, 5,000 V, 12,000 V, 15,000 V, 30,000 V, and 50,000 V, at frequencies at 60 cycles and 400 to 1,000 cycles. Small size, light weight, engineered for various applications.

SPECIALLY DESIGNED CAPACITORS

for unusual applications where plastic film dielectric is essential. Examples: ultra high resistance (1014) capacitors for radiation counters (Nuclear), and RF power capacitors for transmitters, dielectric and induction heaters.

ALL-PLASTIC PLASTIMIKE CAPACITORS

The first all plastic tubular capacitor for use in Radio and TV sets. All-plastic case. Mylar* dielectric good to 125°. Epoxy resin seal. 400, 600, and 1,500 V DC ranges. Competitively priced with previous types of plastic tubulars.

PLASTICON GLASSMIKE Jr. CAPACITORS

Junior version of CP's famous glassmike, for filter and by-pass use in Radio and TV sets. Glass case, plastic dielectric, good to 100° C., 500, 600, and 1,000 V DC ranges. Competitively priced to paper, plastic cased tubulars.

Your engineering problem will receive the immediate attention of our design and specification engineers.

Like increasing your own

production facilities!

JOHN GOMBOS COMPANY

MANUFACTURES ELECTRONIC PARTS, COMPONENTS, ASSEMBLIES

to your design — accurately . . . economically . . . on schedule

● **VARIABLE CONDENSER.** Closely tracking, rotor plates built to contour tolerances of five ten-thousandths of an inch. Stator plate assembly soldered to within one thousandth of an inch.

Make John Gombos Company an "annex" to your plant. Turn over to us the responsibility of manufacturing the parts your own facilities are not geared to produce . . . jobs that are crowding your schedules. Increase your plant capacity without additional overhead. Through efficient organization, experienced and highly skilled workmanship, close supervision and constant research . . . by utilizing the most advanced machinery and testing equipment, we are able to meet the strictest performance requirements. For more than a decade, we have been serving the leaders in the electronics industry who demand quality, accuracy and dependability.

Specialists in Microwave Components

Our varied experience in the manufacture of precision electronic parts, as well as machine parts, used in the communication and aircraft industries, includes fabrication of beryllium copper, molybdenum, tantalum, Palladium, Monel, plexiglass, polystyrene and many other materials. Some of the microwave components we have produced are: radar filters, crystal converters, cavity tuners, connectors and adapters, tees and directional couplers and precision waveguides. Other examples of precision work include magnetic tuners, crystal-heater ovens and cathode-ray tube parts.

Design & Engineering Assistance

● **CONNECTOR AND ADAPTER ASSEMBLIES,** including crystal converters and waveguide connectors. Materials are beryllium copper and phosphor bronze. Examples of precision screw machine, milling and boring operations. Tolerances as close as two ten-thousandths of an inch.

● **FOUR WAY TRACKING SWITCH.** With its component parts, this assembly shows examples of stamping, milling and screw machine work. Accurate alignment of crossbar contact points and free function of plunger and handle sub-assemblies are "musts".

● **MICROWAVE CAVITY.** Made of stainless steel, gold plated; tolerance, five ten-thousandths of an inch limit. Extra fine thread on shaft; class 3 fit between mating surfaces.

Sarkes Tarzian® "Centre Kooled"

SELENIUM RECTIFIERS

Radio Type Designed primarily for use in radio and television receivers these low cost rectifiers have also found wide application in electronic equipments. Rated at 130 volts AC input, standard types with current ratings from 10 to 450 milliamperes are available for prompt delivery from stock.

High Voltage Sarkes Tarzian High Voltage Rectifiers are available in two current ratings. In half wave circuits the type 1 cell is rated at 25 milliamperes DC and the type O cell at 5 milliamperes. Maximum voltage rating available in a single half wave stack is approximately 12,000 volts peak inverse. Sarkes Tarzian high voltage rectifiers have found wide application in military equipments as well as photo-flash power supplies. Type O and 1 rectifiers are also available in full wave bridge and center tap connections.

Power Type Fourteen cell sizes ranging in size from 1/4" diameter to 4 1/4" x 12" are available in Sarkes Tarzian Power Rectifiers. This large selection promises an extreme flexibility in design therefore economical, compact, designs are available for any practical voltage or current range of requirements. Sarkes Tarzian engineers will recommend the design for your application.

Embedments
A recent "first" in the industry, Sarkes Tarzian embedments offer the advantages of hermetically sealed rectifiers at a fraction of the size, weight and cost.

Diodes
Currently available in two sizes, (1/8" and 5/16" housing) Sarkes Tarzian diodes are designed for use as limiters, voltage, low current relay voltage and many other very current applications.

Please write, wire or phone for complete information on all types of Sarkes Tarzian Selenium Rectifiers.

Advertisers:

**How about
 the
 NUCLEAR
 field?**

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

BRISTOL SYNCHRONOUS MOTORS

2 Inches in Diameter

BRISTOL "CIRCLE B" SYNCHRONOUS TIMING MOTORS

Provide exceptional power. Range up to 16 in. oz. torque continuous duty and 84 in. oz. torque intermittent duty at 1 r.p.m. Operate in any position with a minimum of vibration or noise. Compact—fit into 2" circle, 1⁷/₆₄" deep. Speeds from 1/6 r.p.m. to 1800 r.p.m.

BRISTOL ELAPSED TIME INDICATORS

For industrial or laboratory applications. Model ET-1A counts to 99,999 hours, by hours. Model ET-1B counts to 9,999.9 by tenths of hours. Advantages: Dependable Bristol "Circle B" synchronous timing motor, extreme compactness — 2" diameter by 2¹/₈" depth. Low cost. Easy panel or unit mounting.

BRISTOL LOW SPEED MOTORS

Designed for applications calling for extremely low speeds at light loads. S-200 series available at speeds from 10 revolutions per hour to one revolution per month. Features: Small size—2" diameter by 1⁵/₈" deep. Torque limited by gear train to 1 in. lb. continuous—5 in. lbs. intermittent use.

Bristol Motors are available for 24, 110, or 220 volts, 50-60 cycles. They are widely specified for timing devices, motion displays, defrosters, clocks, washers, ranges, dryers, time delay relays, general control equipment, and many other applications. Reversible and tandem motors are available.

A Wide Range of Winding Machines for a Wide Range of Coils

"LATTICE-TYPE" COILS

Radio and Television

No. 84 Winding Machine

Model	Wire Range	Max. Dia.	Traverse	RPM	Coils at Once	HP	Floor Space
84	#19-42	5"	1/32"-1 1/2"	400-750	1, 2, 3 or 4	1/4	26" x 31"

"Gainer mechanism" and calibrated "strap-type" tensions insure accurate, uniform winding, quick change-over. Simple design, rugged construction assure long life.

LAYER-WOUND COILS

Cotton-Interwoven or Non-Insulated

Nos. 96 and 103 Winding Machines

Model	Wire Range	Max. Dia.	Traverse	RPM	Coils at Once	HP	Floor Space
96	#19 to 46	6"	1/16"-3 1/4"	500-1800	1 or 2	1/4	30" x 26"
103	#19-38, 46	7"	1/2"-8"	200-1200	1 or 2	1/2	40" x 36"

Wire and cotton mechanically guided. Automatic counter. Quick change-over. Adjustable for wide range of coil sizes.

GUTTER-WOUND COILS

for Heavy Duty

No. 98 Winding Machine

Model	Wire Range	Max. Dia.	Traverse	RPM	Coils at Once	HP	Floor Space
98	#8-20, 30	1 1/2"	1/4"-12"	35-135	1 or 2	3/4	4'9" x 3'1 1/2"

Automatic guiding. Wire turns placed in grooves formed by preceding layers—for maximum density. Automatic stop at end of coil or end of each layer, as required.

SPOOL-WOUND COILS

No Insulation Between Layers

No. 102 High Speed Winding Machine

Model	Wire Range	Max. Dia.	Traverse	RPM	Coils at Once	HP	Floor Space
102	#20-44	3 1/4"	1/16"-2 7/8"	500-4700	1 Per Head	1/2	51" x 34" (3 heads)

Standard machine, 3 individually operated winding heads. Output is synchronized on basis of handling time per coil. Wire-layer length quickly adjusted. Automatic stop.

PAPER-INSULATED COILS

In Stick Form

Nos. 104 and 107 (Automatic Feed) Winding Machines

Model	Wire Range	Max. Dia.	Traverse	RPM	Coils at Once	HP	Floor Space
104	#19-42	4 1/2"	1/16"-5"	0-2500	3 to 14	1/2	48" x 36"
107	#19-42	4 1/2"	1/16"-5"	0-2500	4-30	1	76" x 42"

Coils wound in stick form—3 to 14 on No. 104; 4 to 30 on No. 107. Sensitive "strap-type" tensions insure smooth flow of finest wires. Paper or acetate sheet automatically inserted. Uniform overlayer at all diameters. Adjustable traverse mechanism. Automatic stop. Rapid transfer of wire turns.

PAPER-INSULATED COILS

Hand-feed

No. 108 Stick Winder — modern - - - flexible

Model	Wire Range	Max. Dia.	Traverse	RPM	Coils at Once	HP	Floor Space
108	#20-42	5"	5/16"-4"	325-2300	4 to 30	1/2	72" x 36"

Manually-operated machine designed for production & job work. Quick set-up. Maximum flexibility. Dial control of adjustments. Strap tensions. Round or rectangular coils. 1/2 in. min. inside diameter with 24, 25, or 26-in. paper.

FOR WINDING COILS IN QUANTITIES

RIVER-HARRIS

WIRE AND RIBBON

Resistance and Radio Alloys

RESISTANCE—There are Driver-Harris Alloys for electrical resistance requirement. Most widely used are: **Nichrome*** and **Nichrome* V**, for winding large value resistors where overall size is limited, but dependability is essential.

Constantan, for fixed stability and constant resistance under normally variable operating conditions; excellent for winding precision bobbins, potentiometers, National Bureau of Standards type resistance standards.

Platinichrome*, most frequently specified for precision resistors in electric meters and laboratory testing devices because of its finer sizes it has a temperature coefficient of only $\pm .00002/^\circ\text{C}$.

Alumel*, high ohmage, 800 ohms/cm² at 20°C., makes extremely small resistors. Especially suitable for series resistors requiring negligible temperature coefficient of resistance. Thermal e.m.f. against copper only .002 millivolts between 0°C. and 100°C. Its higher specific resistance

permits use of larger diameter wire than with other alloys. . . . Plus a total of more than 80 *electrical heat and corrosion-resistant* alloys which singly, or in combination fill any electrical resistance specifications.

FOR RADIO—Always abreast of the latest developments in radio metallurgy, Driver-Harris has been headquarters for Radio Alloys since the earliest days of the industry. In greatest demand are:

. . . **Nickel and Nichrome***, for plate strip. Thin but rigid, they take a tightly adhering heat radiation coat.

. . . **Gridnic* Alloys**, having a very low electron emission—especially suitable in tubes where back-emission is involved.

. . . **Cathode Sleeve Material**: special melted Nickel Alloys to meet any emission requirements.

Other widely accepted D-H Alloys meeting or exceeding most radio specifications are: *Nilvar**, #42 Alloy, #52 Alloy, and *Nickel "A", "D", "E", "Z"*.

In addition to these we manufacture over 80 different *electrical heat and corrosion-resistant* alloys. If your resistance requirements are different tell us about them and depend on it... Driver-Harris will develop the alloy best suited to your specifications.

Nichrome is made only by

Driver-Harris

JAN APPROVED

AEL has produced and supplied over 100,000 JAN 5962/BS-101 Corona Discharge Voltage Regulator Tubes (equivalent to 401 shown here) to the U. S. Navy—Signal Corps and prime contractors like Admiral, Westinghouse, Kelly-Koett and Hoffman. Because of the experience gained by the mass manufacture of these tubes, AEL is able—now—to furnish Corona Discharge V-R Tubes, both fixed and variable, to suit a wide range of voltage and current applications.

**Corona Discharge V-R Tubes
New Freedom for Circuit Designers**

**SALIENT
FEATURES**

- Stabilized Voltages from 300 to 4000 Volts
- Currents up to 2 milliamperes
- Low Dynamic Resistance
- No hot cathodes
- Unlimited Life
- Weight—less than an ounce
- Size—smaller than a pen

**TYPICAL
APPLICATIONS**

- Cathode Ray Oscilloscopes
- Airborne Radar Power Supplies
- TV receivers and monitors
- Voltage Reference Tubes
- Radiac Equipment
- X-ray Equipment
- Electron Microscopes

SPERRY GYROSCOPE COMPANY

SPERRY KLYSTRON TUBES and *Microline*† INSTRUMENTS

Stemming from its sponsorship of the development of the klystron in 1938, Sperry has had vast experience in the manufacture of these tubes for low, medium and high power applications. As a result of Sperry's pioneering in microwave measuring techniques, this company has a complete line of *Microline* instruments which include every type of device essential to precision measurement, in the entire microwave field.

For further information on the equipment listed below or on new development of klystrons and microwave test units, write or telephone our Special Electronics Department or our nearest District Office.

SPERRY GYROSCOPE COMPANY

DIVISION OF THE SPERRY CORPORATION • GREAT NECK, NEW YORK
CLEVELAND • SAN FRANCISCO • SEATTLE • LOS ANGELES • NEW ORLEANS

AGE or PREHEAT

upto 100

vacuum tubes

50 hour

ability tests . . .

You can quickly apply any normal voltage and/or load to any tube element for practically all receiving and many transmitting types with the P.T.L. Aging and Plate, filament, screen and grid voltages may be varied as desired.

Multiple banks of ten production type sockets accommodate extra small seven, noval nine or miniature tubes. Each bank is individually controlled so that up to different tube types may be tested simultaneously.

Contained filament and cathode power is supplied together with adequate bias voltages. Overload protection is included in all circuits.

Among the users of PTL equipment are:

RCA

IBM

ECLIPSE PIONEER

ESSEX WIRE

FORD INSTRUMENT

PHILCO

GENERAL MOTORS

ELECTRIC AUTO LITE

REMINGTON RAND

WESTINGHOUSE

Other production equipment:

SYNCHRO ERROR
TEST SET

R-F COIL and CONDENSER
TEST SET

VACUUM TUBE TEST SET

*Custom manufacturing and
designing*

**Fast, accurate, VISUAL
indication of the null point
for A-C bridges**

With the P.T.L. Type 239 Bridge Null Indicator you can see by simultaneous and independent indications, the reactive and resistive unbalances of A-C bridges on a 3" cathode ray tube. After a simple initial set-up, no further manual operation is required.

The indicator amplifier has gain sufficient to give 1 inch deflection for 20 microvolts output signal. At maximum sensitivity, the hum and noise level is less than 2 microvolts. Continuous tuning in 9 ranges adequately reduces harmonic errors from 20 cps to 10 Kc. A.V.C. is incorporated to reduce overload distortion and speed production testing. The equipment is very useful in a laboratory as well as being essential for production testing of audio coils, condensers, etc.

CLEVELAND • SAN FRANCISCO • SEATTLE • LOS ANGELES • NEW ORLEANS

AGE or PREHEAT

up to 100

vacuum tubes

for 50 hour

reliability tests . . .

You can quickly apply any terminal voltage and/or load to any tube element for practically any receiving and many transmitting types with the P.T.L. Aging Block. Plate, filament, screen and grid voltages may be varied as desired.

Multiple banks of ten production-type sockets accommodate all, small seven, noval nine or miniature tubes. Each bank is individually controlled so that up to ten different tube types may be tested simultaneously.

Self contained filament and heater power is supplied together with adequate bias voltages. Overload protection is included in all circuits.

Among the users of PTL equipment are:

RCA

IBM

ECLIPSE PIONEER

ESSEX WIRE

FORD INSTRUMENT

PHILCO

GENERAL MOTORS

ELECTRIC AUTO LITE

REMINGTON RAND

WESTINGHOUSE

Other production equipment:

**SYNCHRO ERROR
TEST SET**

**R-F COIL and CONDENSER
TEST SET**

VACUUM TUBE TEST SET

*Custom manufacturing and
designing*

**Fast, accurate, VISUAL
indication of the null point
for A-C bridges**

With the P.T.L. Type 239 Bridge Null Indicator you can see by simultaneous and independent indications, the reactive and resistive unbalances of A-C bridges on a 3" cathode ray tube. After a simple initial set-up, no further manual operation is required.

The indicator amplifier has gain sufficient to give 1 inch deflection for 20 microvolts of input signal. At maximum sensitivity, the hum and noise level is less than 2 microvolts. Continuous tuning in 9 ranges adequately reduces harmonic errors from 20 cps to 20 Kc. A.V.C. is incorporated to reduce overload distortion and speed production testing. The equipment is very useful in a laboratory as well as being essential for fast production testing of audio coils, condensers, etc.

PENNSYLVANIA TESTING LABORATORY

Specializing in Research, Design, Development and Manufacture of Electronic Production Testing Facilities.

DOYLESTOWN, PENNSYLVANIA

ANTENNA MANUFACTURERS FOR THE ELECTRONIC INDUSTRY

MICROWAVE ANTENNAS

Workshop antennas are widely used in microwave communications. Railroads, pipelines, utilities, television relay, and overseas networks have found Workshop precise engineering and rugged construction to fully meet their requirements. Workshop was first with a complete microwave antenna line, and continuing development by the Gabriel Laboratories maintains that leadership.

940 mc—For the 940 mc band a center-fed parabolic antenna is available in diameters of four or six feet. Both models terminate with a weatherproof type "N" connector for use with RG-8/U cable.

2000 mc—A new Offset Feed Antenna has been designed to cover the entire 2000 mc band requiring only one feed. The offset design removes the horn feed from the radiated field of greatest intensity, resulting in less energy being reflected into the horn feed. Measurements of 1.2 maximum VSWR can be maintained over the 1700 to 1990 mc band with this six-foot antenna.

7000 mc—After years of development and research, the engineers of the Gabriel Laboratories have produced a sensational antenna feed with outstanding electrical characteristics. This new antenna feed design maintains a VSWR of less than 1.13 over a 300 mc band for each of nine models covering a range of 5900 to 7425 mc. Available in 4-, 6-, and 8-foot diameters.

Accessories—Heavy-duty Workshop mounting clamps, model CP-4 6, provide a tilting range up to 3 3/4° and attach to pipe diameters of 2 1/2" to 4". Specifically designed for the harshest weather conditions, the Workshop heater permits continuous antenna operation in sleet, hail, ice, or snow.

UHF TELEVISION TRANSMITTING ANTENNAS

To meet the broadest requirements of isolated communities as well as large metropolitan areas, the Gabriel Laboratories has designed a high-gain UHF television antenna for Workshop which combines simplicity, ruggedness, and reliability.

With 25 and 14 power gain models in production, this new antenna is already rated as one of the best by electronic engineers. Its radiation pattern is the closest approach to a cosecant curve of any antenna now available. Efficient electrical design provides excellent impedance characteristics and makes possible null fill-in and adjustable beam tilt, if desired.

A standard input flange for 3 1/8" coaxial line makes the antenna readily adaptable to the use of waveguide. In addition, provisions for mounting a 300 mm beacon are incorporated in the antenna top.

Simple mechanical design results in a relatively low-cost antenna which has no insulator except for gas seal, no de-icing problems, and no field repair problems. The plastic weatherizing windows which protect the radiating structure are dyed "international orange," according to the latest F.C.C. regulations, so that the antenna never requires painting. Galvanized, welded steel construction assures excellent rigidity, corrosion resistance, and long life.

COMMUNICATION ANTENNAS

Directional—Workshop Directional Antennas are expressly designed for commercial point-to-point communications. Six-element arrays, consisting of two bays of reflector, dipole, and director provide unparalleled performance. A model for each frequency band assures constant impedance and a low VSWR for maximum efficiency. Models cover the 29 to 50 mc, 72 to 76 mc, and 140 to 174 mc bands.

Beacon—For omni-directional coverage Workshop High-Gain Beacon Antennas give you performance that is outstanding and dependable. These antennas are "series fed" to insure that the power is equally divided between the radiating dipoles for concentration of energy on the horizon. All radiating elements are completely weatherproofed. Models are available for the 144 to 162 mc and 450 to 470 mc bands.

ENGINEERING AND CONTRACT SERVICE

Workshop handles scores of special government and commercial antenna problems every year from design through production. New acquisitions of \$300,000 in machine tools provide one of the most complete antenna production facilities in the world, available for the design, manufacture and test, to your specifications, of complete antenna assemblies. These new facilities are supplemented by the Gabriel Laboratories in Needham, Mass., which has long enjoyed a reputation as one of the leading antenna laboratories.

If your product or service requires antennas or waveguide components—research, design, test or production—get in touch with Workshop. Write or phone Norwood 7-3300.

UHF transmitting antenna for television—featuring null fill-in, a Workshop exclusive.

Model 2K6T, six-foot offset feed antenna, covers entire 2000 mc band.

Model 7K4B2, four-foot parabolic antenna, for 7000 mc band.

Model 9406, six-foot diameter antenna, covers the 920-960 mc band.

ACCURATE GUIDE^{CO}

PRESSURE RESEARCH
VELOCITY MEASUREMENT
DISPLACEMENT MEASUREMENT
STRUCTURAL MEASUREMENT

Model 3700C

STABILIZED
Electro Pressuregraph
ELECTRONIC EQUIPMENT

Measures and records pressure time studies of dynamic or transient pressure phenomena. Drift and temperature stabilized. Up to 200' of pick-up cable can be used. Range: .5 to over 5,000 PSI. Frequency response: 1 to 20,000 CPS.

Applications: Engine cylinder pressure studies. Engine analysis for servicing. Carburetor development. Fuel research. Hydraulic valve lifts. Injector pressure studies. Oil pump development. Explosions in power transformers.

Electro Magnetic Pickup
ELECTRONIC EQUIPMENT

Model 3010-A

New magnetically operated impulse generator indicates rate of motion at all speeds without physical contact. Motion of nearby metal object produces a voltage output proportional to object's rate of motion or speed. Requires no external magnet, can be actuated by any magnetic material on a moving part.

Applications: Used for precision ignition timing. Acceleration and velocity studies. Synchronizes voltages for oscillograph; markers for angular or linear position. Indicates RPM, operations, angular or linear motion. Serves as tachometer when used with voltmeter. Controls electrical devices.

Electro Dynamic Micrometer
ELECTRONIC EQUIPMENT

Model 3600-A

Measures and records dynamic or static displacement, vibration or movement of any metal body without contact, down to .0001 inch. Measures eccentricity, axial vibration, radial whip, bearing clearance, radial expansion with acceleration and reciprocating movement.

Applications: Vibration in motors. Valve travel, bounce. Eccentricity of commutators, slip rings. Travel, bounce of relay contacts. Shaft whip. Whip of pulleys, wheels, gears.

Electro Sonometer
ELECTRONIC EQUIPMENT

Model 4100

Measures Young's modulus of elasticity by means of sound vibrations to determine resonant frequency of any solid material for structural characteristics.

Pick-up at end of object, converts vibration from driver at other end into electrical energy, as oscillator is tuned to proper frequency, meter shows point of resonance.

Applications: Metal, Carbon Electrodes, Aluminum, Wood, Castings, Concrete.

Specify

**ADVANCE
RELAYS**

for
precise
circuitry

There are many reasons why Industry specifies **ADVANCE RELAYS**: They meet or surpass Military and Civilian requirements—many types have AN approval—many are hermetically sealed—all are lightweight—small—and all are precision-built for efficient, trouble-free, long life performance.

If you have relay problems involving contact loads, coil resistances, close differential, timing features, input sources, critical environment or any particular requirements involving unusual or accurate circuit behavior, **ADVANCE** can supply the relay.

A complete line of relays for radar, radio, electronic and electrical equipment applications.

MYCALEX

LOW-LOSS MINIATURE, SUB-MINIATURE AND UHF TUNER TUBE SOCKETS

These sockets cost no more than ordinary phenolic types yet electrical characteristics are far superior. Dimensional accuracy and uniformity are unexcelled.

PRODUCED IN TWO GRADES

MYCALEX 410 is approved fully as Grade L-4B under N.M.E.S. JAN-I-10 "Insulating Materials, Ceramic, Radio, Class L."

MYCALEX 410X is lower in cost but its insulating properties greatly exceed those of general purpose phenolics.

Both types available in 7- and 9-pin miniature, sub-miniature and UHF. All are injection molded to high precision.

MYCALEX

- economical, widely applicable machines and molds to close tolerances

As a highly developed glass-bonded mica insulation backed by over a century of continued research and successful performance. In its present state of development, MYCALEX combines every important characteristic of a modern, permanent, efficient electrical insulating material. MYCALEX is supplied in sheets or rods, can be injection or compression molded in any shape, is readily machineable, and can be fabricated in practically any shape. Dielectric losses are very low from 60 cycles to 24 kilomegacycles per second, arc resistance, volume resistivity and other electrical characteristics meet the most rigorous requirements. Physical properties are equally outstanding.

**assembly service for
hermetic sealing of electronic units**

Specify

Heldor!

**cans and covers to mil-t-27
and commercial specifications**

**compression-type hermetic seal
bushings and terminals**

Heldor's vast background and facilities as the leading manufacturer of components for hermetic sealing are now being used by producers of selenium rectifiers, oil-filled condensers, transformers and similar electronic units for the complete final assembly and the actual hermetic sealing. Heldor's Assembly Service, to them, offers 5 major advantages:

1 SAVE MONEY

As manufacturers of components for hermetic sealing—cans, covers and terminals—HELDOR is in the unique position of being able to save money on the complete assembly of hermetically sealed electronic units. Several manufacturers, now using this Heldor Assembly Service, have eliminated their own hermetic sealing operations because this HELDOR service saved them substantial sums of money.

2 NO PARTS INVENTORY

When HELDOR does the complete assembly and sealing of your products, you no longer need an inventory of components. HELDOR maintains its own inventory of MIL-T-27 and NON-STANDARD cans and covers as well as compression-type terminals.

3 SPEEDY DELIVERY

HELDOR'S production facilities enable it to deliver completely assembled units—already hermetically sealed—much faster (and less costly) than you can do it in your own plant. Many manufacturers in your field have already discovered this fact . . . to their obvious advantage. Why not you?

4 NO HEADACHES

As one of the nation's leading specialists in hermetic sealing and its allied fields, HELDOR'S background and technical "know-how" is second-to-none. You can forget about the problems of hermetically sealing components when you use HELDOR Assembly Service.

5 MADE TO YOUR SPECIFICATIONS

HELDOR'S precision production and assembly service is geared to meet the most rigid of hermetic sealing specifications.

**TRY HELDOR ON YOUR NEXT HERMETIC SEALING PROBLEM.

on Calibrator

frequency oscillator provides fundamental output over entire if and rf ranges, with controlled check points at 2.5-Mc and intervals. Provides 4.5-Mc crystal-signal for inter-carrier alignment and markers at TV carrier frequencies. Output useful in the UHF range. 39C is a heterodyne frequency meter, standard (with 3 crystals supplied), a horn generator, and a TV re-broadcast set. Complete with cable.

Television Sweep Generator
WR-59C

Covers all VHF TV channels on preset fixed positions. Continuous tuning range from 300 Kc to 50 Mc covers video and intermediate frequencies. Precision-type vibrating capacitor provides up to 12-Mc maximum sweep width, flat within ± 1 db, with good linearity. Has balanced output dual-piston attenuator for varying output voltage from 0.1 volt to 5 microvolts. Includes blanking for zero-reference line on 'scope. Complete with cables.

Master VoltOhmyst®
WV-87A

Has big $7\frac{1}{2}$ " meter. Measures dc voltages accurately in high-impedance circuits, with ac present. Also reads rms values of sine waves and peak-to-peak values of complex waves or recurrent pulses, with dc present. Measures resistance from 0.1 ohm to 1000 megohms, current from 10 microamperes to 15 amperes. Features $\pm 1\%$ tolerance multiplier and shunt resistors, a meter movement having an accuracy within $\pm 2\%$ and a tracking error of only $\pm 1\%$. AC operated. Complete with cables and probes.

Ohmyst®

measures complex waves from 0.2 volt volts, peak-to-peak. Has an over-all accuracy for dc measurements of $\pm 3\%$ full scale dc voltage from 0.02 volt to ... rms values of sine-wave voltages volt to 1500 volts. Has 7 non-skip ranges for both resistance and voltage. Frequency response flat from 30 cps to approximately 150 Mc up to 150V range. AC operated. Complete with cables and probes.

Junior VoltOhmyst®
WV-77A

Measures dc from 0.05 volt to 1200 volts; ac from 0.1 volt to 1200 volts rms; and resistance from 0.2 ohm to 1 billion ohms; five overlapping ranges in each case. Uses electronic bridge circuit, 200-microampere meter movement and $\pm 1\%$ carbon-film multiplier resistors. Over-all accuracy, $\pm 3\%$ for dc measurements on plus setting. Frequency response flat from 30 cps to 3 Mc up to 60V range. AC operated. Complete with cables and probes.

on scope

CR tube and direct-coupled, push-pull, amplifier. Frequency-compensated and calibrated attenuators. Front-panel 1-volt peak-to-peak calibrating voltage with screen scaled for direct reading of peak voltage. Response flat to dc, less than -2 db at 500 Kc. Deflection sensitivity, 10.6 millivolts per inch. Input resistance, 10 megohms. Capacitance probe, 10 megohms. Probe diameter 9.5 mmf. Complete with cables.

Special-Purpose Probes

High-voltage probes for measuring voltage of TV power supplies and other high-voltage sources. WG-289 has microphone-type connector; WG-290 has phone-tip connectors. WG-264 Crystal-Diode Probe, for measuring ac voltages from 10 Kc to 250 Mc. WG-291 Demodulator Probe, for observing envelope of modulated waveforms. WG-222 DC/Direct Probe of slip-on type, with built-in 1 megohm resistor. Slide switch permits measuring resistance, dc voltage, and ac voltage without changing probes.

Television Oscilloscope
WO-56A

Uses 7" CR tube and direct-coupled, 3-stage, push-pull, vertical and horizontal amplifiers. Dual controls for "coarse" and "fine" adjustments. Frequency-compensated and voltage-calibrated attenuators on both amplifiers. Response flat within -2 db from dc to 500 Kc, within -6 db at 1 Mc. Vertical deflection sensitivity, 10.6 rms millivolts per inch. Magnetic shield on CR tube. Cables included.

ASTRON

CAPACITORS & FILTERS

Manufacturers in the radio, TV and electronic fields are making it a habit to specify ASTRON—for capacitors and filters built to a new high standard of performance and dependability. ASTRON pioneered the quality field, and today leads it, with a complete range of standard and special types, suited to a wide variety of applications. Whatever your needs, you'll find the answer at ASTRON.

SAFETY MARGIN*

Dry Electrolytic Capacitors

Extremely compact and stable capacitors, embodying the latest developments in electrolytic design. Built with a "Safety Margin" that protects against unusual weather or operating conditions. Choice of leading TV and electronic manufacturers. Variety of container styles and mountings to suit your needs.

METEOR*

Subminiature Paper Capacitors

Designed for operation to 125°C. without derating, through use of ASTRON's special high temperature impregnant, X-250*. Exceptional capacitance stability over the entire temperature range, high insulation resistance, low power factor, unusually low resonance loss and high test voltage. Meets all Armed Forces requirements. Wide variety of designs, or to your specifications.

BLUE-POINT*

Bonded Capacitors

Through an exclusive new design and manufacturing process (patent pending) developed by ASTRON engineers, the new Blue-Point capacitors provide heat and moisture protection to a degree never before possible in molded plastic capacitors. The blue point which identifies this capacitor bonds itself to the outer shell and leads, forming the tightest seal against moisture ever produced. Dry-assembled for consistent high quality and protection against contamination. Mineral-oil impregnated for continuous operation at 85°C. Heat resistant, non-inflammable outer shell and bond will not burn or melt under soldering iron. Positive anchored leads.

OIL FILLED Capacitors

Mineral-oil filled and impregnated, hermetically sealed. Designed for dependable performance under the most severe operating conditions. Meet the most rigid military specifications. Available in a wide variety of government specified case styles.

FOR COMPLETE INFORMATION ON ANY ASTRON PRODUCT, WRITE, OUTLINING YOUR REQUIREMENTS, TO:

255 Grant Avenue, E. Newark, New Jersey

RF INTERFERENCE FILTERS

One of America's largest manufacturers of RF interference filters, ASTRON is currently supplying filters in production quantities to leading aircraft and electronic manufacturers. ASTRON pioneered and developed subminiature filters and is today the nation's leading supplier of filters where small size and light weight, as well as dependable performance, are required.

Our filter specialists are equipped to recommend and design special filters for every electrical and physical requirement.

METALITE®

Metallized Paper Capacitors

Ideal for military and commercial applications due to their extremely small size, light weight and unique self-healing properties. The ultimate in capacitor miniaturization and dependability, available in a wide variety of standard and special types.

HY-METS*, ASTRON's newly developed high temperature METALITE metallized paper capacitors provide all the desirable features of METALITE capacitors plus operation over a wide temperature range to +125°C. with exceedingly dependable performance characteristics.

SLIP-RING AND COMMUTATOR ASSEMBLIES

This Instrument Corporation of America plant contains the most modern and complete facilities available anywhere in the world for the exclusive production of Miniature Slip-Ring and Commutator Assemblies to precision standards. It is now in full scale production to meet your requirements in the fastest possible time at the lowest possible cost.

COMPLETE ENGINEERING AND PRODUCTION FACILITIES AVAILABLE

Our assemblies can be supplied at low cost. Quality is the highest in the industry. Dimensional accuracy and other characteristics are excellent and these units are highly recommended for instruments such as synchros, etc.

PIECE ELECTRO-PLATED FOR EXTREME ACCURACY

Wherever extreme dimensional precision, accurate concentricity and high dielectric qualities are required, the electro-deposition method is recommended . . . the production of which is licensed under an exclusive arrangement with the Electro Tec Corporation.

TYPICAL SPECIFICATIONS:

Sizes: .035" to 24"
Cylindrical or Flat

Cross-sections: .005 to
.060" or more

Finish: Polish to 4
Micro-Inches or Better

Breakdown: 1000 V or More
Hi-Pot Inter-Circuit

Ring Hardness: 75 to 90 Brinell

Rotation Speeds: To Over 12000 RPM

Surface Protection: Palladium and Rhodium or Gold Prevent Tarnish, Minimize Wear

Our engineering staff is at your service at all times for consultation.

Would you take this advice?

Avien's gages must be more accurate than yours. That's why manufacturers and engineers are coming to Avien.

If you were at the instrument panel of a jet, a transport, a four-engine bomber...

You want the most accurate "advice" in the world! Avien gages are examples of the excellent advice a pilot gets from Avien gages:

GO HOME! With unequaled accuracy, Avien fuel gages tell the pilot when it's time to turn back. Avien gages work gravimetrically, with no moving parts in the fuel tank.

SWITCH TANKS! On planes with many fuel tanks, Avien gages tell him exactly where the fuel is. Avien also makes fuel control systems that automatically maintain center-of-gravity location.

STOP FUELING! On transports, Avien's more accurate gages permit a closer computation of fuel load — allows a pilot to carry a heavier payload.

SLOW DOWN! When Avien's Jet Tailpipe Thermometer tells the pilot "too hot" the pilot knows it's time to ease off and cool down. The servo principle gives this gage longer scale.

OPEN COWL! On reciprocating-engine aircraft, the Avien Cylinder Head Temperature Indicator gives warning before the engine heat exceeds safe operating limits. Again, new accuracy using the servo principle.

TAKE OFF! Avien's Jet Engine Thrustmeter tells a quick power story for jets, tells the pilot exactly what power is available.

Avien gages are not only more accurate and reliable — they're smaller, simpler, lighter. That means benefits in building planes as well as flying them.

Right now, Avien produces over 10,000 major instrument components each month for the aviation industry.

We've attracted a lot of new business, and a lot of top-notch engineers. We want more of both. If you're an aircraft manufacturer, call us right now. If you're a good engineer, send a detailed resume to Department E.

Speaking of engineers, one of our top men was asked a question recently about other fuel gages in the field.

"We're making them obsolete," he said. Then he added thoughtfully: "Even some we've made ourselves."

AVIATION ENGINEERING CORPORATION
34-56 58th STREET, WOODSIDE, L. I., NEW YORK

EDISON

Hermetically Sealed

TIME DELAY RELAYS

APPLICATIONS: Cathode Protection • Gyro Erection • Motor Starting • Integration • Holdovers • Overload Protection • Cycling Durations • Current Interruptions • Emergency Circuit Switchovers

MODEL 501

SPECIAL FEATURES:

- Precision Timing: Factory adjusted after sealing
- Rugged Construction: Ceramic base; all parts welded or riveted exclusive shock springs
- Exclusive spring-mounted contact minimizes contact chatter and relieves stress of bimetal flexure
- Hermetically Sealed in independent arc-quenching atmosphere for extra long life

SPECIFICATIONS:

- Vibration and Shock Resistant: Withstands vibration of 1/16" overall amplitude at 55 cps and impact of 50 g
- Ambient Compensated: from -60 to +85° C
- Mounting: Standard intermediate octal socket
- Seated Height: 3 1/4" Diameter: 1 1/4" Weight: 1 1/2 to 2 1/4 ounces
- Contacts: SPST N/O Heater Input: 5 watts nominal
- Tolerances: Reoperating time ±20%
Recovery time ±20%
Heater voltage ±10%. Contact operation will be positive but some variation in timing will occur.
- Ambient: At -60 or +85° C timing may vary an additional 10% over 25° C tolerances.

TIMING VALUES

Operating Time: the interval, in seconds, between the application of heater voltage and relay contact closure.

Reoperating Time*: the interval, between removal of heater voltage and opening of relay contacts.

Recovery Time*: the interval between removal of heater voltage and restoration of 85% of the Operating Time. (The figures of 85% has been arbitrarily selected in order to define this value more accurately because of the asymptotic nature of the heating and cooling curves.)

Operation when heater voltage is maintained until bimetals reach saturation temperature.

*NOTE: INSTANTANEOUS VALUES are those obtained by opening heater circuit the instant contacts operate. SATURATED VALUES are those obtained by opening heater circuit after heater has been energized long enough to thermally saturate entire structure. Saturation time varies from 3 minutes for short time relays to 1 hour for long time relays.

MODEL 207 MINIATURE

Meets vibration and shock requirements for airborne and industrial applications

Ambient Compensated: -60 to +85° C

Seated Height: 2 1/4" Diameter: 3/4"

Mounting: Miniature button 7-pin Weight: 1/2 ounce

Contacts: SPST N/O Contact Rating: 2.5 amps @ 125 v. ac. Heater Input: 2.5 watts (Nominal)

Delay Periods: 5-120 seconds

Tolerances: Reoperating Time ±20% at nominal voltage and 25° C

Recovery Time ±20% at nom voltage and 25° C

Heater voltage ±10%. Contact operation will be positive but some variation in timing will occur.

EDISON

Sealed THERMOSTATS

Edison Sealed Thermostats are single-pole, single-throw (normally open or closed), temperature operated electric switches, hermetically sealed in an inert, arc-quenching gas.

BASIC ADVANTAGES

SEALED ASSEMBLY—Operation not affected by any form of dust, moisture, grease, oil, dirt, corrosion—or time. Operate safely in explosive atmospheres.

CLOSE DIFFERENTIAL—Operation without snap action eliminates mechanical inertia, resulting in practically zero temperature differential—in cases less than 0.1° C.

RESPOND TO ALL TYPES OF HEAT—Radiant energy passes freely through glass envelope, and conducted or convected heat is rapidly transferred to bimetal contact arm by the encased gas.

RUGGED AND DURABLE—Withstand shock up to 50G. Provide long dependable service without change of original control point in locomotive car wheel bearings, embossing presses, heavy machinery. Many given current breaks every few seconds over years of operation without any apparent wear.

MINIATURE THERMOSTAT Model 210

Actual
Size

STANDARD TYPE
SEALED THERMOSTAT

5. MINIMUM VIBRATION EFFECTS—Unaffected by vibration up to .031" amplitude, at frequencies from 0 to 60 cps. Will operate satisfactorily in any position—either fixed or changing.

	STANDARD TYPES			
	S1-1A	S1-2A	D1-2A or 2B	D8-2A or 2B
CHARACTERISTICS	Most sensitive and accurate Edison thermostat. For highest precision sets within $\pm 0.5^\circ\text{C}$ of specified control point and holds it within $\pm 0.2^\circ\text{C}$ of set temperature at $\frac{1}{4}$ amp load when properly applied.	Lowest priced sealed Thermostat. Carries highest rating of Underwriters' Lab. for sensitivity and dependability when mounted for fire alarm service.	Primarily designed for low voltage, low current applications, continuous duty. Platinum contacts.	The General purpose Edison thermostat.
USES	Continuous service wherever extreme accuracy and dependability required. Satisfactory where contact must be made and broken every few seconds over years.	For alarm and low-wattage control service.	General control use at voltages below 25 volts and currents under 2 amperes.	General control use. Continuous operation for years without change in operating temperature.
APPLICATIONS	Radio crystal ovens, fine instruments, air conditioning, railway car temperature control.	Diesel engine bearings and radiators, motor windings, railway wheel bearings, converter ovens, etc.	Crystal ovens—temperature control of electronic measuring equipment.	Radio transmitters, transformers, ovens, air ducts, etc.

INSTRUMENTS

FOR COUNTING AND CONTROL

GLOW TRANSFER COUNTER

Model 162 may be used as a counter, or as a fast push-button resettable Register, or as a slow scaler. This self-indicating counter has a maximum capacity of 1,000,000 counts and maximum speed of 2,000 CPS. Accepts positive or negative pulses, 5 to 75 volts. Resetting is by manual push button or remote control. (See tube description below.)

PRE-SET COUNTER (Glow Transfer)

Model 164 is used for batch or operational counting and recording at any pre-set count from 0 to 9,999. Maximum counting speed is 4,000 CPS; pre-set operation totalizer count — 0 to 999,999, indicated by electro-mechanical register. Counting units and relay are plug-in type for easy removal or replacement. Register has plug-in type connection. Prototype shown at left.

REGULATED HIGH VOLTAGE SUPPLIES

The 306R series are low current, stabilized High Voltage Supplies with continuously variable output from 500 to 3000 volts D.C. (to 2000 volts @ 1MA.) Output regulation — less than 0.01 percent output change per percent input change. Choice of positive or negative grounded models; single unit in cabinet, or for rack mounting; or double unit, either polarity, on single rack panel. *Inquire about other types of high voltage supplies.*

GLOW TRANSFER COUNTING TUBES*

For use in totalizers, batch counters, and where capabilities of mechanical registers are exceeded, these tubes offer comparatively high speed, lack of moving parts, and silent operation. Self-indicating, with low current drain; tubes may be cascaded, reset by push-button. Decade or scale of 12 tubes with counting speeds to 2,000 CPS now available; higher speeds available soon.

* Ericsson Telephones, Ltd., (Etelco) tubes are distributed solely in the U.S. and Canada by Atomic.

ELECTRICAL RESET REGISTERS

Model 1238B used singly or in multiples (with selective resetting) serves as production control, time element registers, and many other purposes. The electrically actuated six-digit register may be reset by panel switch, remotely by push-button, or by wired connection to counting units. Another model, #1248B, has predetermined count for controlling external circuits. Models are available uncased for use in original equipment.

Roanwell
SPECIALISTS
in
"Long Life"
SWITCHES

Roanwell has a vast experience in the engineering and manufacturing of a variety of push-button and thru-cord switches. Made to rigid specifications under quality control procedures approved by military agencies. Typical Roanwell developments are shown below.

No. 238. Compact, positive acting, long-life shorting type switch; 3-contact normally open, for press-to-talk, to-signal, or to-operate. Detent action gives positive assurance of make and break. Solid silver contacts and shorting bar.

No. 959. Exclusive detent switch with coil spring in unique over center design to insure long life. Waterproof in use, due to molded rubber switch cover on operating lever. Double pole permits simultaneous use of two separate circuits; obtained as a conventional DPST switch.

No. 961. Same as No. 959, except push button is used to actuate detent spring. . . . Both #959 and #961 are life-tested for over 1-million operations under normal operating conditions.

THRU-CORD SWITCH #992

Designed so that cordage connections are clear of switch mechanism; 2 independent SPST switches; single lever operations. First circuit may be locked in position.

RADIO-ELECTRONIC ELECTRICAL & MECHANICAL parts

from powders

CROLOY RADIO RODS . . .
For antenna and loop substitutes; "Q" of 250 as against 80 for small loops; all desirable cross-sections, diameters, lengths.

CROLOY CORES . . .
Molded in widest variety of shapes and sizes; deflection yokes expand TV-tube deflection without corresponding voltage increase; slash TV transformer bulk.

CROWLEY MAGICORES . . .
Reduce cost and raise gain in slug tuners, R.F. and I.F. coils; fabricated in widest variety of shapes and sizes; meet critical characteristics, in radio, TV and electronic applications.

CROMAG . . .
The permanent-magnet ceramic material; exceptionally high coercive force; suitable residual induction for widest range of applications — ion traps, focusing devices, loudspeakers, polarized relays, small motors, meters, etc.

CROWLEY POLYIRON . . .
For microwave hardware; permeable dielectric of higher attenuation than other commercially-available dielectrics.

CROLITE . . .
Extruded, pressed or machined steatite and other severe-service insulators — electrically and mechanically custom-fitted to exacting requirements. Widest variety of characteristics, sizes, shapes.

Try Crowley first — the pioneer . . . the outstanding "know-how". . . the tried-tested-proven facilities geared to your largest or smallest needs alike. Ever since the dawn of radio, Crowley has met the severe-service insulation requirements of the rapidly expanding art and industry. Cathode-heater twin-hole tubing, no thicker than pencil lead, was developed by Crowley. Tube bases, sockets, trimmer bases, coil forms, tube parts and so on have been produced by Crowley in tremendous quantities. Crowley has supplied the major portion of iron cores, microwave components, ceramic-permanent-magnet bodies, and other parts from powders. You play safe — experience-wise, engineering-wise, production-wise, economy-wise — when you try Crowley first!

Button Stem Annealer

All types of ovens, annealers and special heating equipment. Complete vacuum exhausting equipment **DESIGNED** and **BUILT** to fit customer requirements.

STEINER-IVES COMPANY

Springfield Road Unionville 2-7474 Union, New Jersey
Builders of Steiner Ovens Since 1889

An Ounce of Paper

can save
a Pound
of Steel!

IN DESIGNING COILS for power transformers, the efficiency of the layer insulation you specify can make a tremendous difference in the cost of the finished transformer.

Frequently a coil size may be reduced enough to utilize a smaller frame. Dimensions can sometimes be changed to simplify production and greatly lessen the incidence of scrap resulting from slippage.

Hartford City Paper Company has been manufacturing layer insulation for almost sixty years. Rapid strides have been made in improving the complete line of Electrical Glassine and Coil Kraft papers to meet the ever growing needs of the electronics industry.

We produce and stock Coil Kraft from .0006 inches to .005 inches thick in 3 densities.

SAMPLES, data sheets and price lists are available upon request. Before placing your next order, write and get the Hartford City Paper Company facts on how to get more efficient results from your layer insulation paper.

Advertisers:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

Stycast Customized Casting Resins

Electronic Embedment techniques, as you may have discovered, have distinct advantages—and hidden pitfalls. Emerson & Cuming know-how can show you how to build-in the specific qualities you need with one of its standard resins — or a plastic specially formulated for your particular use.

Stycast resins are simple to use. They are manufactured for but one purpose: To make superior electrical embedments.

Stycast 40 A clear, transparent, casting resin used for preliminary embedments of electronic circuits or components, and permanent castings where visual inspection is required. Temperature range: -10°C to $+150^{\circ}\text{C}$. *Coil assembly used in high speed photographic equipment operating at 22,000 volts.*

Stycast 1030 CM A tough, black, rubbery material with high impact strength for embedments used over a temperature range from -90°C . to $+170^{\circ}\text{C}$. *Monopole transformer at left sealed in Stycast 1030 CM.*

Stycast 4030 CM A black, opaque, quick-curing material, well adapted to production applications. Temperature range: -65°C . to $+200^{\circ}\text{C}$. *G-E Binary Scaler; entire circuit potted in Stycast 4030 CM for stabilization and hermetic sealing.*

Stycast 5050 CM Combines good low and high temperature characteristics with excellent adhesion and high insulation qualities. *Glass thermister sealed in aluminum housing to withstand underwater pressure of 300 psi.*

Stycast 35 Polystyrene casting resin with excellent electrical qualities. Dielectric constant 2.6; dissipation factor below 0.0009 from 60 to 10^{10} cycles. *Well adapted to this Waveguide Plug and to many RF applications.*

Stycast TP A material which combines excellent electrical and physical qualities over a wide temperature range: -65°C . to 135°C . Dielectric constant 2.6; dissipation factor below 0.002 from 60 to 10^{10} cycles.

Write for data on Stycast Resins and brochure of recent applications. Let's discuss your problem.

WAVEGUIDE

PROVED IN SERVICE

conserves **POWER**

in

UHF-TV!

UHF POWER LOSS WITH 3 1/8" COAXIAL TRANSMISSION LINE

Length of Transmission Line	Total Loss	ERP*	Approximate Power Loss
1000 ft.	3 db	50 kw	50 kw
500 ft.	1.5 db	70.7 kw	29.3 kw
100 ft.	0.3 db	93.5 kw	6.5 kw

*Assuming 100 kw ERP with a perfect transmission line

Small increments of attenuation in coaxial transmission lines result in excessive power losses when used in conjunction with hi-gain antennas in the UHF range. This loss of effective radiated power is often as high as 50%.

The best solution to the problem is waveguide. Waveguide provides lower attenuation, greater coverage for equal antenna height . . . it can be used in combination with UHF coaxial line . . . requires no dehydration or pressurization.

PRODUCT DEVELOPMENT has pioneered the manufacture of Waveguide, and stands ready to assist you in all phases of this important new development. Write for Chart TC-1256, Attenuation of Coaxial Lines and Waveguide in the UHF Range, and for information related to your specific needs.

ROBINSON **MET-L-FLEX** all-metal mounts for vibration isolation and shock protection

FOR AIRBORNE ELECTRONIC EQUIPMENTS, INSTRUMENTS AND CONTROLS

SERIES 878 TWIN UNIT MOUNT ASSEMBLY

The assembly consists of two Series 7001 MET-L-FLEX Unit Mounts on a flanged tie-plate for attachment to your own tray or mounting base. S-1 and S-2 standard bases incorporate this assembly. Special widths and load ratings available. See Dwg. 878 B for details.

Robinson Model Number	Load Rating lbs. Each End
878-1	1/2 to 1
878-2	3/4 to 1 1/4
878-3	1 1/2 to 3
878-4	2 1/2 to 5 1/2
878-5	5 to 10

SERIES 892 UNIT MOUNTING BASE

Designed and manufactured in conformance with JAN-C-172A and included specifications. "Proof Tested" Construction. Uses two Series 878 MET-L-FLEX Twin Unit Mounts and Bonding Jumpers. See Dwg. 892 B for details.

Robinson Model No.	Standard Designation	Load Range in Pounds	Weight in Lbs.
892-1	MT-S-1	6-12	1.25
892-2	MT-S-2	10-22	1.35

SERIES 831 UNIT MOUNTING BASE

Designed and manufactured in conformance with JAN-C-172A and included specifications. "Proof Tested" Construction. Employs four Series 7002 MET-L-FLEX Unit Mounts and Bonding Jumpers. See Dwg. 831 B for details.

Robinson Model No.	Standard Designation	Load Range in Pounds	Wgt. in Pounds
831-1	MT-A1-B	10-24	2.40

831-13	MT-B1(2)-D2	40-80	2.70
831-14	MT-C1(2)-C	40-80	2.80
831-15	MT-C1(2)-D	40-80	2.85

ROBINSON MET-L-FLEX Engineered Mount-Systems, Mounting Bases and Unit Mounts are compact, rugged and effective. They feature an exclusive all-metal resilient element, made of knitted stainless steel wire, fabricated and compressed. This cushion provides wide environmental tolerance with high built-in damping, resulting in "Sea level performance at any altitude". Its non-linear reaction characteristics permit optimum performance under load variations of as much as $\pm 50\%$ of mean ratings. Auxiliary MET-L-FLEX limiter pads afford additional protection against extreme overloads and impacts.

Further "Plus Features" exclusive with MET-L-FLEX Mounts and Mounting Bases are: negligible drift rate; wide temperature tolerance (-90°C to $+175^{\circ}\text{C}$); amazingly long service life without maintenance. They completely lack those faults and weaknesses inherent to mountings incorporating organic or plastic materials.

The "Plus Features" of Robinson Mountings, providing performance in excess of current specifications, pay off maximum protection of the mounted equipment.

For complete performance and construction details, write for Technical Bulletins EB-700 and EB-750 and the telephone number of your local representative.

*MET-L-FLEX is the copyrighted designation for the all-metal resilient cushions developed and pioneered by Robinson.

Mounting Bases to meet your exact dimensional and load requirements are available on special order.

**SPECIAL PURPOSE
INSULATED WIRE**

THE WILLIAM

BRAND

AND CO., INC., WILLIMANTIC, CONN.

MINIATURIZATION WIRE

Specially developed for use in electronic equipment within the range of -55°C to $+105^{\circ}\text{C}$, and maximum operating voltage of 600 volts rms. This wire is ideal for use in miniaturized equipment as both hook-up wire and lead wire for transformers, chokes and other components, where space is at a premium and operating temperatures are high. Available in both standard and flexible . . . in solid colors or candy striped with 1, 2 or 3 tracers.

The primary insulation is Turbo 540, an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalis and fungus. Over the primary insulation there is an extruded jacket of nylon to give added mechanical protection and abrasion resistance.

LOW TENSION AIRCRAFT WIRE & CABLE

The conductor consists of a stranded tinned copper wire. The primary insulation is an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalis and fungus. This wire has excellent electrical properties and has a

rated working voltage of 600 volts rms. This wire has an outer protective nylon jacket, with or without shield.

For general use. Low tension construction has excellent electrical and physical characteristics, light weight, and low space factor.

Made To MIL-W-5086 & MIL-C-7078 Specifications

COAXIAL SWITCHES and MICROWAVE TEST EQUIPMENT of advanced electronic design

General Communication Company, pioneers in the coaxial switch field, offers you a complete design, engineering and manufacturing service.

Not limited to the production of standard switches, General Communication Company is geared to help solve any coaxial switch problem you may have.

COAXIAL SWITCHES

Designed for compactness and light weight, with minimum V.S.W.R., insertion loss and crosstalk.

General Characteristics:

Frequency Range: 0 to 10,500 Mc.
V.S.W.R.: 1.2:1 maximum to 3000 Mc.
Insertion Loss: 0.3db maximum.
Crosstalk: Greater than 60 db at 3000 Mc.
Greater than 40 db at 10,500 Mc.
Operative Life: 10,000 cycles minimum.
Construction: Weatherproof.
Available with N, BNC, C, HN, BN or LN connectors.

REMOTE CONTROL, 28 VDC TYPES — Weight: 25 oz. (average). Size: 4 1/2" x 3" Diameter (average).

Radial connector configuration — Single circuit, 2 to 6 positions. Switching Time: 0.2 second (average). Switching Rate: 40 cpm (continuous).

Spring Return: Radial connector configuration. Single circuit, 2 positions. Switching Time: 20, milliseconds. Duty Cycle: on 30%, off 70% (min. "off", 1 sec.).

Transfer Switch — Parallel connector configuration. Double circuit, 2 positions. Switching Time: 0.1 second (average). Switching Rate: 40 cpm (continuous).

REMOTE CONTROL, 115 VAC TYPES

Spring Return — Parallel connector configuration. Single circuit, 2 positions. Optional manual control. Switching Time: 27 milliseconds. Switching Rate: 45 cpm. Weight: 3 1/2 lbs. Size: 5 5/8" x 6 1/4" x 4" overall.

and our latest model:

Radial connector configuration — Single circuit, 2 to 6 positions. Switching Time: 0.3 second (average). Switching Rate: 20 cpm (continuous). Weight: 24 to 28 oz. depending upon connectors. Size: 4 1/2" x 3" Diameter.

MANUAL CONTROL TYPES

Radial connector configuration — Single circuit, 2 to 6 positions. Weight: 8 to 16 oz. (depending upon connectors). Size: 3 1/8" x 3" Diameter.

Parallel connector configuration — Single circuit, 2 to 6 positions. Weight: 21 to 25 oz. (depending upon connectors). Size: 4" x 3" Diameter.

X BAND TEST EQUIPMENT

Test sets BHX and CBX are portable microwave signal generators, designed for testing and adjusting beacon equipment and radar systems.

The frequency range of these test sets is 8500 mc to 9600 mc. They can measure external signals or supply a known output signal. Frequency is measured by a precision meter with calibrated dial. Power is measured by means of a calibrated RF attenuator and a thermister bridge type wattmeter.

THE NEW TURNER ADA 95D

**THE FIRST SLENDER DYNAMIC
AT A POPULAR LOW PRICE . . .**

Sleek and slender as a modern space rocket . . . graceful lines artfully blended . . . high quality performance . . . new low cost . . . the most exciting advance in the microphone field . . . the new TURNER ADA 95D!

The excellent sound characteristics of this new jet-shaped dynamic make it ideal for high quality P.A. and recording work . . . its inconspicuous,

slim shape lets speakers be seen as well as heard.

Maximum sensitivity to voice and music with Alnico V magnets and moving coils; frequency response, 70 to 10,000 cps; output level, -58 db; standard 5/8"-27 coupler swings microphone in 60° arc; satin-chrome finish; 20 ft. removable cable set; choice of 50, 200, 500 ohms or high impedance.

Switch models also available.

attractively styled . . . permanently plated . . .

THE NEW TURNER 90 CARBON MOBILE MICROPHONE

Designed by Turner to add eye appeal to mobile applications. Choice of heavy duty push-to-talk switch, on-off relay circuit switch, or on-off microphone and external relay switch. Equipped with 2 or 4 conductor cable, reg-

ular or Koiled Kord (5 ft. extended). Choice of hook for hanging or bracket for wall or dashboard mounting. Frequency response, 200 to 4,000 cps; output level, -42 db; 200 ohms nominal DC resistance.

STEVENS*

hermetically sealed

THERMOSTATS

Bright plated or dull black finish. Terminals to customer specification. Thermostats shown approximately 3/4 size.

Stevens Hermetically Sealed Thermostats—specially engineered for precision control of devices or equipment subjected to dust, moisture or corrosive atmospheres—are tightly, permanently sealed in corrosion-resistant metal cans. Some models have neoprene covered terminals. Virtually any type mounting bracket available.

Stevens Hermetically Sealed Thermostats are available in two basic styles: Type M bimetal disc for high-current circuits; Type C bimetal strip for low-current circuits, or for use in conjunction with disc types. Both models feature a bimetal thermal element that eliminates artificial cycling or life-shortening "jitters."

If your problem involves fast, accurate control of temperature under rugged atmospheric conditions, specify Stevens Hermetically Sealed Thermostats—they add to the life and sales of your product.

*Stevens also makes a complete line of standard bimetal disc and strip thermostats. Write for data.

Type M thermostat patented; Type C, patent applied for

A-4659

STEVENS

manufacturing company, inc.
MANSFIELD, OHIO

TIMER, electronic

Provides split-second timing with no-filament tube.

Compact, electronic timer eliminates need for frequent replacement of tubes. Timer uses type 5823 cold-cathode tube; there is no wear on tube during stand-by, and timing is instant and accurate without warm-up. No recharging time required, so immediate re-cycling is possible.

Ideal for short intervals. 0.03 to 24 seconds.

Easy time adjustment. Small time intervals can be spread over 320° dial.

Four time ranges. Can be furnished with full-scale range of 1.5, 3, 6, 12 or 24 seconds.

Eight-ampere contacts. Single-pole, normally open contacts close at start of time cycle; SPDT contacts operate at end of cycle. All contacts independent of timing circuit.

Small size. 3 7/8 x 4 3/4 x 2 inches.

RELAY, electronic

operated by high-speed, low-energy pulses

Type CK electronic relay picks up impulses too small to operate mechanical relay and holds circuit closed long enough for heavy mechanical equipment to be actuated by impulse.

Fast response. Relay operates on contact of less than 0.5 millisecond.

High sensitivity. Above response speed obtainable even thru contact resistance as high as 500,000 ohms.

Adjustable actuating time. Relay operates in 10 milliseconds after impulse and stays "on" for time adjustable between 0.25 and 1.5 seconds.

Isolated switch circuit. Isolation transformer allows initiating contacts to be independent of line.

Long life. Cold-cathode tube energized only when pulse is received.

Easy maintenance. Plug-in relay good for millions of operations, and neon glowlamp lasting thousands of hours, are easily replaced.

Small size. Only 3 7/8 x 4 3/4 x 3 inches.

Ward Leonard Electric Controls

Result-Engineered for Superior Performance

RHEOSTATS Ring Type

New Bulletin 1110 VITROHM Ring Type Rheostats assure the utmost in dependability, accuracy, and long service life, in both fixed and variable current control applications.

Newly designed for use in electronic, industrial, and other equipment where smooth, gradual resistance change is essential.

Core and base, molded of finest ceramic materials, are bonded together by VITROHM enamel. Special alloy resistance wire toroidally wound on core and held permanently secure by enamel. Design of drive shaft and contact arm eliminates backlash, assuring uniform contact pressure and smooth operation.

Ratings

25 watt rings from 1 to 2500 ohms 50 watt rings from 1 to 7500 ohms
Based on 300° C rise in 40° C ambient in accordance with NEMA and U.L. Inc. standards

Standard Resistance Tolerance
+20, -10 percent

Write for VITROHM Rheostat Bulletin 1110.

RELAYS

Ward Leonard makes an extensive line of a.c. and d.c. magnetic relays for automatic control, including heavy duty, intermediate, midget, timing and sensitive types.

All Ward Leonard relays are service-tested and proved under the most critical operating conditions. They are extra rugged to insure positive action and to prevent dislodging of parts by electrical or mechanical shock. They are built on molded Bakelite or metal bases with all essential parts locked in position by the most practical, effective method.

Every part meets exacting specifications

to assure proper action of the magnetic circuit and effective transfer of electrical energy to the circuits which the relay controls. Contacts are capable of handling their load with ample provision for overload. All parts are insulated for protection against high voltage. Metal parts are of corrosion-resisting material or plated for protection against corrosion.

Ease of installation and service are carefully considered in each design. At the same time, compactness is achieved throughout in keeping with electrical and mechanical requirements.

Write for Ward Leonard Relay Catalog.

RESISTORS

To meet industries' latest demands for VITROHM resistors, new styles, types and sizes are constantly added to Ward Leonard's already broad resistor line. Complete, up-to-the-minute information on stock and made-to-order VITROHM resistors is now available in Ward Leonard's new VITROHM Resistors Catalog No. 15.

All components of every VITROHM resistor are made by Ward Leonard, the only manufacturer who makes, not just assembles, all parts.

Vitreous enamel coating and ceramic cores are formulated and made by Ward Leonard, wire is drawn to their specifications. This means that all parts are uniform in quality, balanced in respect to thermal coefficient of expansion.

The "result-engineered" features of Ward Leonard VITROHM resistors have made them universally accepted as a measure of quality by designers, engineers, manufacturers, and scientists.

Write on your business letterhead for new VITROHM Resistors Catalog No. 15.

MOTOR CONTROLS

Full line of a-c and d-c Ward Leonard motor starters and controllers, magnetic contactors and control accessories.

Write for Ward Leonard Motor Control Catalog.

DIMMERS

Resistance, auto-transformer and reactance type dimmers for theatre, auditorium, studio lighting control.

Write for Ward Leonard Dimmer Bulletins 71-7

RHEOSTATS—Plate Type

Complete line of Ward Leonard VITROHM pressed steel plate type rheostats meets every requirement.

Ward Leonard field rheostats are offered in several multiples of field resistance values to meet various operating conditions. They are designed for a straight line relation between the steps of the rheostat and the field current.

VITROHM rectangular contact rheostats have been developed where a finer degree of control in electrically operated equipment is necessary.

Write for Ward Leonard Rheostat Bulletin 60a.

CHROMASTER

CHROMASTER is the new, simplified industrial chrome plating process for increasing life of cutting tools and wear parts three to ten times.

CHROMASTER plating units with built-in power supply are available in 20, 50, 250 amp and larger sizes. Chromasol, an economical, non-critical chrome solution, plates directly on industrial steels, cast iron, and most ferrous metals.

Write Ward Leonard for complete CHROMASTER details.

IGNITION SHIELDING

Complete harness assemblies with detachable unit leads or rewirable leads. Igniter or ignition lead assemblies for jet and reciprocating aircraft engines and military vehicles.

FLEXIBLE METAL TUBING

For electrical shielding, mechanical protection, fluid lines, conduits and ducts, pressure lines, and high and low temperature applications. Material, shapes and sizes to specification.

"AERO-SEAL" HOSE CLAMPS

Precision worm drive — for aircraft, automotive, marine, special-purpose and industrial use. Vibration-proof — will not work loose. Corrosion-resistant steel.

ACTUATING SYSTEMS

Electrical, mechanical, and hydraulic actuators for aircraft controls, valve closures, landing gear, or virtually any other type of equipment to manufacturer's specifications.

WELDED DIAPHRAGM BELLOWS

"Job engineered" to meet your requirements and make possible the use of bellows in applications where they could not previously be considered.

SPECIALIZED CONNECTORS

For electronic, aircraft, ordnance and communications equipment. Water-tight or pressure sealed types, panel types, quick disconnects, or other types for your new and special applications.

SPRINGS, WIRE FORMS, STAMPINGS

of ferrous and non-ferrous metals.

HELICAL SPRINGS

All types — compression, extension, torsion; with ends open, closed, ground, necked-down, or looped; to standard tolerances or special load tests.

WIRE FORMS

RF coils, chokes, antenna coils, vacuum-tube parts. A vast collection of multi-purpose jigs enables us to make all kinds of wire forms.

MULTIPLE-SLIDE STAMPINGS

High-speed production, with low-cost tooling, is made possible thru the use of a full line of automatic, four-slide machines and power presses.

SPECIALIZING IN BERYLLIUM COPPER

SPRINGS IN STRIP FORM

You can cut handling costs and speed automatic assemblies with strips of semi-attached springs fixture heat-treated for uniformity and close dimensional tolerance — at low cost.

ADVANTAGES

When you need unusual precision of shape, extreme freedom from drift, consistent uniformity of pressure, accurate calibration, long endurance, or other features peculiar to your service, you can save time and money by calling on LEE experience in beryllium copper.

SHORT-RUN SERVICE

For pilot runs, experimental parts, and low-production orders, you get quick delivery at reasonable cost from our special short-run service, on both helical springs and stampings.

HEINZE BLOWERS

TYPE DD

Double blowers for applications requiring 100 CFM of air. Powered by Type D shaded pole induction motor. Requires infrequent oiling. Non-radio interfering. For 115 volts, AC, 60 cycles. 35 watts. 3150 RPM (free air). Other voltages and frequencies on request.

TYPE DS

Single blower, with all the advantages of Type DD, but approximately half the air delivery. 115 volts, AC, 60 cycles. For CW and CCW operation. 35 watts. 3100 RPM (free air). Other voltages and frequencies on request.

TYPES ZSD AND ZRD

Quiet, dependable units, delivering 100 CFM. 4 pole motor and large balanced air rotor. ZRD has absolute minimum of vibration. 115 volts, AC, 60 cycles. 1650 RPM (free air) 45 watts. Available for 230 volts or 50 cycle operation.

TYPES ZSS and ZRS

Most compact 50 CFM blowers available. Sturdy low speed Z shaped pole induction motor, 3/8" balanced air rotor. 115 volts, AC, 60 cycles. 1650 RPM (free air) 40 watts. Can be supplied for 230 volt operation. Various mountings.

TYPE F

For cooling electronic tubes in transmitters, induction heaters and diathermy equipment. 115 volts, AC, 60 cycles. 3000 RPM (free air). F2S, single blower, 10 CFM. F2D, double blower, 20 CFM.

SUB-FRACTIONAL HORSE POWER MOTORS

10 standard types. Special blowers or motors made to your specifications.

ELECTRONICS ENGINEERS WHO KNOW ARE SPECIFYING

Klincher LOCKNUT

for
High Temperature
Fastening up to

1600°

... particularly where
high frequency vibration,
tensile strength and re-usability
are factors!

Reasons are many why Klincher is getting first call on more and more of the really tough fastening jobs in the Electronics industry. For instance, on critically vital thermocouples Klincher Locknut permits use of desired torques without causing stud failure or unnecessary wear of stud threads.

In rectifiers, too; in chassis connections and terminal posts ... wherever bolts, studs or axle shafts must be preserved, Klincher Locknuts excel.

Inquiries invited regarding specialized Locknut problems. Write for data and experimental samples, giving size and application. Address Dept. E-6-3

KLINCHER ADVANTAGES:

- Easy to inspect for positive assurance of tight connection.
- Free running feature reduces assembly time.
- Only one piece to stock and handle.
- Ideal for hand and power wrenches.
- Manufactured in stainless and other materials, in machine screw sizes No. 4 and up, and all fractional sizes.

EQUIPMENT FOR MANUFACTURE OF

- Incandescent Lamps
- Miniature, Standard
- Vacuum, Gas-Filled
- Photo-Flash, Surgical, Special
- Fluorescent
- Hot & Cold Cathode, Neon
- Electronic Tubes
- Glass & Metal
- Receiving, Transmitting,
- Power, Therapeutic, X-Ray,
- Television, Neon,
- Photo Electric Cells
- Wire Forming & Cutting
- Tungsten, Molybdenum
- Copper Clad Wire
- Bases for Lamps & Radio Tubes
- Metal, Bakelite
- Pharmaceutical Glassware
- Ampules, Vials, Test Tubes
- Hydrometers, Thermometers
- Syringes, Eye Droppers,
- Lenses, Cocille Shapes
- Stirring Rods, Vacuum
- Flasks, Thread Rollers

A WORD TO OUR FRIENDS

For the past thirty-three years Eisler has supplied the most important equipment used in the production of radio tubes, incandescent lamps, television tubes and allied products.

We thank each and every one of our customers—not only in the United States, but in all parts of the world—who have patronized our business for the past 33 years and have used Charles Eisler's machines. Many of these companies have become the world's largest and most outstanding industries, starting with Eisler's equipment. We thank them for their past patronage and hope that we will receive their continued support for many years to come.

With best wishes from

Dr. Charles Eisler M.E.

MULTI-CHANNEL SCOPES & MULTI-GUN TUBES THAT Tackle the TOUGH Jobs!

✦ **Dual Channel Scopes**—Wide band, high gain. Separate intensity, focus, & axes controls on each channel. #H-21A: DC to 200kc, #H-23: DC to 1mc, #H-25: DC to 10mc.

✦ **Four Channel Scopes**—Same separate controls. #H-43, DC-200kc range, for use with continuous film strip camera. #H-45, DC to 300kc range, sensitivity over .028 Vdc/in.

✦ **Multi-Tube, 8 Channel Scopes**—For film strip seismography recording, etc. #H-81, AC amp. #H-82, DC amp., greater sensitivity.

✦ **Multi-Gun C.R. Tubes**—Complete line from 1-gun to 10-gun types, special purpose tubes—virtually every type capable of commercial manufacture.

✦ Representative types only—write for catalog covering the complete line.

*Crucible Alnico Magnets
help ruggedize*
Roller-Smith Instruments

13% smaller—same magnetic strength

When the Roller-Smith Corporation decided to ruggedize their electrical instruments to meet Military Specifications, they discovered that they needed a smaller permanent magnet — one that would do the same job as the old one they were using.

They called on Crucible's technical service for assistance. In short order, Roller-Smith's objective was attained. For through improved design, and better quality control in production, Crucible developed an alnico magnet that was 13.5% smaller and lighter than the previous one . . . but with the same magnetic strength.

The Roller-Smith story is typical of the many cases solved with Crucible Alnico Magnets, because Crucible magnets have the highest gap flux per unit of weight of any on the market. Crucible has been the leading producer of Alnico Permanent Magnets since the industry started. When you have a magnet problem, call on Crucible.

THERMAL TIME DELAY RELAYS

Stainless steel mechanism welded into a single integral structure and supported at both ends for unequalled resistance to vibration and shock. Heater built inside expanding member for maximum efficiency and protection. Rolling contact action for positive operation.

Features:

Hermetically sealed adjustable type • Miniature and octal sizes — metal shells • Time Delays — 3 sec. to 5 min. • Heater voltages up to 230 • Fully temperature compensated • Meet military specifications • Contact rating — 6 amp. at 115 v. AC

Type RM

Type RO

Typical Uses: Delaying plate voltage application • Producing hold-over interval after interruption of power • Delaying automatic shut-down until a fault has continued for a specified period

HOT WIRE TIME DELAY RELAYS

Features: Time delays down to $\frac{1}{2}$ second • Complete recovery in a few seconds • Delays adjustable • Hermetically sealed in metal shell • Miniature size • Heater voltages up to 32 volts • Fully temperature compensated • Contact rating—3 amps. at 115 v. AC

THERMAL CRITICAL-VOLTAGE & CRITICAL-CURRENT RELAYS

Features: Time constants—1 sec. to 200 sec. • Adjustable operating point • Minimum differential • Independent of ambient temperature • Independent of frequency • Hermetically sealed in metal shell • Miniature size • Small, light, and noiseless

Typical Uses: Over- or under-voltage alarm or cut-off • Overload protection • Voltage or current regulation

IF YOU USE ENCLOSURES, CHASSIS AND RACKS LIKE THESE...

**KARP SHEET METAL FABRICATIONS
WILL MEET YOUR HIGHEST
STANDARDS OF QUALITY**

**KARP FABRICATIONS WILL CUT
YOUR ASSEMBLY COSTS**

**KARP FABRICATIONS
ARE COMPETITIVELY PRICED...
FOR LONG RUNS OR SHORT**

With a Karp-built enclosure, chassis or rack, every dimension is correct; every hole accurately located. Your production costs are cut, for your components are easily assembled. No more slow-downs due to poorly built cabinets.

And Karp Metal will supply you with these custom-built fabrications at competitive prices. Let us help you with your sheet metal problem. Send us your blueprints—we'll promptly quote prices and delivery.

KARP METAL PRODUCTS CO.

Division of H & B American Machine Company
215 63RD STREET, BROOKLYN 20, N. Y.

FACILITIES

FOR ENGINEERED SHEET METAL FABRICATIONS: in aluminum or steel
long run or short • spot, arc, gas or heliarc welding • any type finish.

- Modern plant—3 city blocks long
- Thousands of dies available
- Most modern of sheet metal fabricating equipment
- U. S. Air Force Certified Welding Facilities
- Air-conditioned spray room...complete baking facilities
- Complete sub-assembly facilities

CAREFULLY CRAFTED for MATCHLESS PERFORMANCE

DALOHM

DEPOSITED CARBON RESISTORS

for

ACCURACY and STABILITY

Years of intensive research and development bring you all the accuracy and stability of a wire wound resistor with the economy of a deposited carbon resistor.

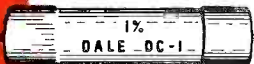

Dalohm deposited carbon resistors are manufactured under rigid controls in a special furnace developed exclusively by Dalohm engineers. This process eliminates soot, insuring still greater stability.

Pure carbon in crystalline form is bonded to a selected ceramic core and then sealed against moisture with a special silicone coating material having a high dielectric strength, excellent thermal conductivity, and high resistance to abrasion.

Temperature coefficient 200 PPM per degree C for the lower resistance ranges up to 500 PPM per degree C for higher resistance ranges. 1% accuracy.

THREE RESISTANCE RANGES

 DC-1/2 — 1/2 Watt
1 Ohm to 5 Megohms

 DC-1 — 1 Watt
1 Ohm to 10 Megohms

 DC-2 — 2 Watts
5 Ohms to 50 Megohms

ALSO—FOR MINIATURE INSTALLATIONS

 DCS-1/2 — 1/2 Watt
1 Ohm to 2 Megohms

Individually packed in plastic tubes for your protection

Also available in hermetically sealed units and special small sizes for transistor applications.

Write, Wire or Phone George Risk, 1316 28th Ave., Columbus, Nebraska, for price and delivery. Phone 2139.

DALE PRODUCTS, INC.
COLUMBUS, NEBRASKA, U.S.A.

Ready reference throughout the year... this Mid-June issue of electronics serves the industry in the exacting manner that it requires.

The electronics BUYERS' GUIDE

provides users with the only accurate and reliable product source available in the electronic industry...

They refer FIRST to the "GUIDE."

CAREFULLY CRAFTED for MATCHLESS PERFORMANCE

MINIATURE POWER RESISTORS

for those

TIGHT SPECIFICATIONS

Silicohm miniature power resistors are carefully designed and skillfully made for all applications where the equipment must survive the most severe environmental, shock and vibration conditions. They are completely welded from terminal to terminal, coated with special silicone material, and impervious to moisture, salt ions, vapor and gases.

RS TYPES

Silicone sealed offering maximum resistance to abrasion, high dielectric strength, and maximum heat dissipation.

RH TYPES

Silicone sealed in a die-cast, black anodized radiator finned housing and mounts on sub-panel for maximum heat dissipation.

- Temperature coefficient 0.00002/degree C
- Ranges from 0.1 Ohms to 55,000 Ohms, depending on type
- Tolerance 0.05%, 0.1%, 0.25%, 0.5% (above 1 Ohm); 1%, 3%, 5% (all ranges)

WW TYPES

For critical applications. Exceed JAN-R-93A or MIL-R-93A specifications.

- Temperature coefficient 0.00002/degree C
- Ranges from 0.05 Ohms (.05 to 1 Ohm on lug type only) to 3 Megohms
- Tolerances as low as 0.05%

Individually packed in plastic tubes for your protection

Advertisers: How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are making an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

**MIL-R-93A
SERIES**
Lug Terminals
Wattage Ratings:
¼ to 1 watt
Tolerance: 1% to .02%
Resistance Range:
.1 ohm to 4 meg.
Exceed all MIL-R-93A
specifications

**COMMERCIAL
SERIES**
Lug Terminals or
Radial Leads
Tolerance: 1% to .02%
Wattage Ratings:
½ to 5 watts
Resistance Range:
.1 to 15 meg.
Same construction as
MIL-R-93A series

**MINIATURE
SERIES**
Radial or Axial Leads
Wattage Ratings:
.15 to 1.5 watts
Resistance Range:
.1 ohms to 1.6 meg.
Physical Size: 3/8" dia.—
¼" to 1¼" long

**SUB MINIATURE
SERIES**
Radial or Axial Leads
Wattage Ratings:
.1 to .5 watts
Physical Size: ¼" dia.—
¼" to 1½" long
For use where space
is important

**CENTRAL AXIAL
LEAD TYPES**
Wattage Ratings:
¼ to 1 watt
Physical Size: ¼" to 7/16"
dia.—5/8" to 1¼" long
Small, rugged, self-
supporting, designed for
ease in assembly

Sub-Sub Miniature Series—The smallest precision wire wound resistors. For use in tight spaces. Only 3/32" long by 7/16" diameter.
Hi-Temp Series—For applications requiring resistors capable of withstanding severe thermal shock and extreme temperatures. Operate from -65° to 200° C. Available in all types shown.
Hi-Watt Series—Available in all series shown. Wound with special low temperature coefficient wire to provide power dissipation ratings up to 10 watts.
Encapsulated Series—Hermetically sealed resistors completely immune to immersion and humidity. Designed to exceed all MIL-R-93A requirements.
Our Engineering Staff welcomes the opportunity to help you with YOUR problems! For further details write for Bulletin E-6!

CLEVELITE*

LAMINATED PHENOLIC TUBING

GRADE FOR EVERY NEED!

eters—wall thicknesses and lengths to meet or special adaptations.

RADIO AND TELEVISION their use is almost universal. They have high insulation resistance and moisture absorption. Their low dielectric loss is suitable for ultra high frequency applications.

ELITE is produced in seven grades.

GRADE APPLICATION

- Improved postcure fabrication and stapling.
- Special grade for TV yoke sleeves.
- Improved general purpose.
- X Superior electrical and moisture absorption properties.
- E Critical electrical and high voltage application.
- AX Special grade for government phenolic specifications.
- F Special for very thin wall tubing having less than .010 wall.

is more than ever before—the first choice in the electronic and electrical industries.

It combines proven performance with low cost and excellent service!

Wherever high dielectric strength, low moisture absorption, mechanical strength, low loss and good machineability are of prime importance . . . the combined electrical and physical properties of

CLEVELITE are essential

audiorecords*

A superior lacquer, applied by a patented coating process, gives a mirror-smooth surface with positive thread throw, brilliant h-f response, and freedom from background noise. An important improvement, perfected in 1948, makes all Audiorecords permanently resistant to humidity.

RED LABEL AUDIORECORDS—exceed the most exacting demands for the highest quality professional recordings.

YELLOW LABEL AUDIORECORDS—the popular choice for all general-purpose recording.

REFERENCE LABEL AUDIORECORDS—provide maximum economy for test cuts, reference recordings, auctions, etc.

BLUE LABEL AUDIORECORDS—ideal for schools, homes, and general amateur use. Same lacquer as professional discs, but thinner aluminum base.

MASTER AUDIORECORDS—the choice of professional recordists for use where pressings are to be made. Give fine results with either silvering or gold sputtering.

WESTON Instruments

Sensitive Relays
 A line of sensitive relays including the Model 705 which provides positive operation at levels as low as 1/2 microampere. Non-chattering magnetic contacts handle up to 10 watts at 120 volts.

Panel and Switchboard Instruments
 A complete line of instruments in all types, sizes and ranges required for switchboard and panel needs . . . including d-c, a-c power frequencies and radio frequency, rectifier types and D.B. meters.

Model 697 Volt-Ohm-Milliammeter
 One of a line of pocket-size meters, Model 697 combines a selection of a-c and d-c current, and resistance ranges. Ideal for maintenance testing and many inspection requirements.

Model 1411 Inductronic D-C Amplifier
 Stable amplifier provides high degree of resolution even at fractional loads. Reaches steady full scale deflection in a fraction of a second. Interchangeable plug-in range standards for either microamperes or millivolts.

Industrial Circuit Tester—Model 785
 A multi-range, multi-purpose, ultra-sensitive analyzer, for laboratory and industrial checking of electrical and electronic circuits. Has 28 practical scale ranges; measures d-c and a-c voltage, d-c and a-c current, and resistance. Accessories available to extend ranges. Compact and portable; furnished in either oak or steel case.

Model 686
Electronic Tube Analyzer
 Tests tubes under exact operating potentials. Accurately determines true mutual conductance of all tubes, in accordance with manufacturers' rated operating conditions, or under special operating conditions.

High Frequency Electronic Analyzer
Model 769
 A three-in-one instrument providing a self-contained Volt-Ohm-Milliammeter, a high impedance electronic D-C Volt-Ohmmeter, and a probe type Vacuum Tube Voltmeter for use to 300 megacycles. Exceptionally stable and accurate. Has specially designed extremely small RF and D-C probes.

WHEN YOU NEED POTENTIOMETERS THAT HAVE

... GUARANTEED EXTREME ACCURACY
... HIGH RESOLUTION

... LOW TORQUE
... LOW NOISE LEVEL

... LONG SERVICE LIFE
... SMALL SIZE

... your best choice is FAIRCHILD PRECISION POTENTIOMETERS

... and here's why

Products—Precision is literally designed and built into Fairchild Precision Potentiometers. Shaft, mounting plate, and housing are made to extremely close tolerances. Windings are custom-made by an exclusive technique.

Service—Each Fairchild Precision Potentiometer is

custom-built with windings tailored to individual applications. Therefore, Fairchild engineers can help in solving many complex problems, and their recommendations are offered without obligation. Similarly, the services of the Fairchild Potentiometer Sample Laboratory are available at nominal cost.

Manufacturing Know-How—Fairchild originally made potentiometers for its own equipment because no units then available were satisfactory from the standpoint of precision. Present manufacturing practice is based on new knowledge gained since then, and constant refinement of this knowledge.

Experience—Over ten years of comprehensive experience in design, manufacture, and application are now behind Fairchild Precision Potentiometers. The first application was the Fairchild Computing Gunsight. Today's applications not only cover a wide range of military equipment, but extend to electrical computing systems for machine-tool controls, process controls, telemetering, and analog computers of all types.

tolerance on both linearity and over-all resistance may vary or be improved, depending on resistance value required.
Maximum resistance range will vary according to function. Tolerance on over-all resistance of non-linear windings is ±5%.
Electrical function angles can be held to tolerance of ±1° by special order.
No shorted section.
Linearity up to ±0.30% on the higher resolution windings by special order.
Linearity up to ±0.10% on the higher resolution windings by special order.
Linearity up to ±0.05% on the higher resolution windings by special order.
With maximum of 3:1 slope ratio in high resistance ranges.
Centerless-ground stainless steel to 0.2500 in. (+0.0000, -0.0005).
Machined to 0.5000 in. (+0.0000, -0.0005).
Machined to 0.7500 in. (+0.0000, -0.0005).

m By adding dummy cup section, 19 taps can be provided.
n Two taps can be provided by slight design modification using terminal board clamp screw modified for wiper terminal.
p Two or more taps can be provided by slight design modification using additional boards. 13 taps can be provided by addition of terminal board sections.
q Depending on spacing requirements and without moving bridge or wiper terminal.
r No slip rings provided for taps, but within the cup 16 taps can be provided depending on spacing requirements and without moving the bridge or wiper terminal.
s One turn of wire.
t Varies with resolution.
u Life will be dependent upon specific potentiometer required.

THESE SOLUTIONS TO PRECISION POTENTIOMETER PROBLEMS ARE TYPICAL OF FAIRCHILD'S PRODUCTS, SERVICE, AND KNOW-HOW

Quick and easy replacement of ganged precision potentiometers to simplify maintenance resulted in a series of packaged Fairchild plug-in units like this. Entire gang can be replaced in a few minutes because only end mounting plates are fastened down. No wires to disconnect or solder. Test points are provided on top of each potentiometer for quick checking.

Electrical accuracy of the Fairchild Precision Potentiometers in this radar control assembly must match the mechanical precision of the gears. All of the potentiometers are non-linear (single-cycle log) and, in addition to the 1% linearity tolerance, the units in each pair must track each other within a taper tolerance of 0.1 to 1.0%. This means that the potentiometers in each pair must be identical with each other almost turn-for-turn.

Low noise level, high resolution, extreme linearity, long life were the requirements that made engineers select the Fairchild Type 747 Precision Potentiometer for this computer assembly. These inherent qualities commonly result in the specification of Fairchild Precision Potentiometers for computer assemblies, calibration controls, servo mechanisms, and other instruments.

Accurate resetability in both the single-solution and integrating potentiometers was a prime consideration in this integrating computer application. Fairchild Precision Potentiometers can accurately reset to any selected resistance rotation angle, thereby eliminating hunting and carry-over errors.

Space saving and elimination of error accumulation resulted from ganging two Fairchild Type 736 non-linear potentiometers, specially wound to an empirical function, with a highly accurate Fairchild Type 747 linear unit on a common shaft.

Extremely high functional accuracy and mechanical precision that eliminates backlash and binding, which would cause serious errors in the computing system, are the principal reasons the Fairchild Precision Potentiometers were incorporated in this computer for a radar-gunfire control system.

• **FOR YOUR NEXT PRECISION POTENTIOMETER PROBLEM** be sure you have full information about Fairchild Precision Potentiometers and related services, including the Fairchild Potentiometer Sample Laboratory. You can get these details by writing today to Potentiometer Division, Fairchild Camera and Instrument Corporation, Park Avenue, Hicksville, Long Island, New York, Department 140-38J.

FAIRCHILD

PRECISION POTENTIOMETERS

WHEN YOU NEED POTENTIOMETERS THAT HAVE

... GUARANTEED EXTREME ACCURACY
... HIGH RESOLUTION

... LOW TORQUE
... LOW NOISE LEVEL

... LONG SERVICE LIFE
... SMALL SIZE

... your best choice is FAIRCHILD PRECISION POTENTIOMETERS

... and here's why

Products—Precision is literally designed and built into Fairchild Precision Potentiometers. Shaft, mounting plate, and housing are made to extremely close tolerances. Windings are custom-made by an exclusive technique.

Service—Each Fairchild Precision Potentiometer is

custom-built with windings tailored to individual applications. Therefore, Fairchild engineers can help in solving many complex problems, and their recommendations are offered without obligation. Similarly, the services of the Fairchild Potentiometer Sample Laboratory are available at nominal cost.

Manufacturing Know-How—Fairchild originally made potentiometers for its own equipment because no units then available were satisfactory from the standpoint of precision. Present manufacturing practice is based on new knowledge gained since then, and constant refinement of this knowledge.

Experience—Over ten years of comprehensive experience in design, manufacture, and application are now behind Fairchild Precision Potentiometers. The first application was the Fairchild Computing Gunsight. Today's applications not only cover a wide range of military equipment, but extend to electrical computing systems for machine-tool controls, process controls, telemetering, and analog computers of all types.

PRECISION POTENTIOMETERS

from design to production line...

the STAVER company

serves the electronics industry **2** ways

the
STAVER
line of
electronic
specialties

mini-shield* and clip

Types to fit *all* miniature tubes. Locks tube in socket, prevents vibration. Engineered to accommodate variations in diameter.

sub-mini-shield

Combination shield, clip and mount, for sub-miniature tubes. Close tube-to-shield contact for maximum heat dissipation. Firm clamping action. Easy to mount.

mini-spring*

A vibration-proof tube guard that keeps a steady axial downward pressure and provides sideways support in vertical or horizontal mounting position. Locks or releases tube at touch of a finger.

assemblies

Special electronic assemblies—to your specifications—controls, relays, connectors, switches, terminal boards, etc. Design assistance when required.

stampings

Simple or intricate... large or small quantities. Automatic equipment—close tolerances. Non-ferrous metals a specialty.

Instruments and components

i n s t r u m e n t s

Electronik function plotter

Automatically plots the relation between any two variables, showing one directly as a function of the other. 11-inch full scale chart travel (Y-axis); cogged neoprene belt drive provides minimum hysteresis. Reference index makes vertical positioning of chart easy. Spring-loaded rollers prevent chart slippage.

For information, write for Data Sheet No. 10.0-5.

Electronik duplex two pen recorder

Simultaneously measures any two independent variables on a single chart. Has two independent measuring systems, each with its own pen. Both pens can traverse the full 11-inch chart. Both measuring circuits are standardized simultaneously by one push-button. Any desired combination of ranges.

For information, write for Data Sheet No. 10.0-6.

Electronik narrow span recorder

Measures spans as narrow as 100 microvolts, readable to 0.1 microvolt, without need for external pre-amplifier. Applicable to temperature-difference and other measurements requiring high resolution. Available as a precision indicator, strip chart recorder, or circular chart pneumatic controller.

For information, write for Data Sheet No. 10.0-8.

Electronik 1/2-second recorder

Features pen speed of only one-half second for full 11-inch chart travel. Ideal for recording rapidly changing variables. Chart speeds as fast as 4" per second are available. Improved velocity damping prevents overshoot.

For information, write for Data Sheet No. 10.0-13.

Electronik adjustable span recorder

The instrument of a hundred ranges. Span is adjustable from 1 to 50 millivolts. Zero can be shifted by plus or minus 100 percent of the maximum span. All adjustments are readily made by means of calibrated dials on the front of the instrument.

For information, write for Data Sheet No. 10.0-10.

accessories

Among the instrument accessories specifically useful for research work are special purpose thermocouples . . . pencil, button, skin, probe and molten metal types . . . and precisely calibrated bare thermocouple wire in a choice of gages. Thermocouple extension wire is available in a selection of insulations to cover varying requirements for ambient temperature, abrasion and moisture resistance.

For information, write for Catalog No. 100-4.

... to speed your research

components

converters

Convert low power d-c signals to 60 or 400 cycle alternating voltages. Unaffected by atmospheric pressure changes. Designed for extremely low thermal emf, and thoroughly shielded against electromagnetic and electrostatic pickup. Particularly useful in null detection or error voltage measurements.

Electrical Characteristics of 400 cycle Converters

(60-cycle converters similar except as noted)

Driving Coil Input: 18 volts, 94 milliamperes, 400 cycles (within 10%). (60-cycle model: 6.3 volts, 60 ma.)

Contact Rating: SPDT switching. Nominal rating 6 volts to 1 microvolt, 1.0 milliampere, maximum power, 1000 microwatts.

Symmetry: Within 5%.

Load Characteristics: Resistive or inductive.

Shielding: Shell and coiled shield grounded.

Vibration Resistance: Output voltage varies less than 2% under accelerations up to 10 g.

Phase Shift: 45 to 50 degrees between output voltage and driving voltage. (60-cycle model: approx. 17° lag.)

Stray Pick-up: Electrostatic: 2×10^{-10} volts per ohm of input circuit impedance; Electromagnetic: 2×10^{-5} volts, constant to 2×10^6 volts.

For further information, send for Data Sheets No. 10.20-1 and 10.20-5.

servo amplifier systems

Comprises a converter (if the signal to be detected or measured is d-c); amplifier; and balancing motor. Ideal for null detection and correction of error signals.

Amplifier No.	Input Impedance Ohms	Sensitivity Volts	Over-all Voltage Gain	60-Cycle Output Current	60-Cycle Output Voltage
351921	400	2×10^{-6}	10^6	0-12 ma.	0-154
354547	7000	0.5×10^{-6}	4×10^6	0-12 ma.	0-154
351921*	3000	0.05×10^{-6}	40×10^6	0-12 ma.	0-154

*This amplifier has an added stage of amplification, with special features to eliminate spurious signals resulting from thermal emf's and stray a-c pick-up.

For further information, send for Data Sheets No. 10.20-3 and 10.20-4.

Brown 60-cycle balancing motor

Totally enclosed and self-lubricated; provide positive positioning. Nominal characteristics:

	27 RPM MOTOR	54 RPM MOTOR	162 RPM MOTOR	333 RPM MOTOR
MAXIMUM TORQUE	85 inch ounces	43 inch ounces	19 inch ounces	4-5 inch ounces
MAXIMUM POWER	6500 inch ounces per min. at 17-18 rpm.	6700 inch ounces per min. at 30-32 rpm.	8150 inch ounces per min. at 100 rpm.	8750 inch ounces at 190 rpm.
POWER REQUIREMENTS	Line field—9.5 watts. Amplifier field—4 watts.			

For further information, send for Data Sheet No. 10.20-2.

THESE products . . . and the many other *ElectroniK* instruments, Brown Electronic Components and special primary elements . . . are accelerating countless research projects.

Your own research program, too, can benefit from the versatility and precision of Brown instrumentation. Your inquiry is invited.

QUALITY TOROIDAL COILS BY SICKLES

- High volume winding of toroidal coils to close inductance, balance and "Q" tolerances.
- Design and assembly of precision wave filters or communication networks.
- Quality manufacture of pulse transformers.
- Magnetic memory units.
- Design and production of magnetic amplifiers.

The manufacture of coils must be founded upon a precise engineering base and precise engineering controls for quality mass production.

For 30 years Sickles has specialized in the design and manufacture of coils and coil assemblies. Now Sickles' vast experience and special skills are being applied to the techniques of components which require toroidally wound constructions.

To your problems Sickles brings unexcelled engineering and production techniques, extensive fabrication facilities, unusually complete instrumentation and test equipment, unique and high technical abilities.

More than a quarter of a million toroidal wound transformers by Sickles are already in service.

ONE PIECE CATHODES, STEM LEAD EYELETS, APERTURE CUPS, CATHODE RETAINERS, CATHODE SPACERS, POLE PIECES, SUPPORT STRAPS.

TOP APERTURE SPACERS FOR MAGNETIC AND ELECTROSTATIC FOCUS GUNS

Illustrated are typical examples of our wide range of parts and assemblies specified by leading Gun and Tube manufacturers for conventional and advanced Cathode Ray Tube designs.

J & H Seamless Anodes and Grids are produced on precision deep drawing machines from high quality strip material — entirely free of contaminant lodging seams and crevices. Parts are deburred and finished by our exclusive processing procedures to the highest degree of surface lustre and uniformity.

A three fold expansion in manufacturing area together with greatly expanded modern production facilities enables us as a completely independent supplier to quickly provide you with the highest quality parts either from our extensive line of standard designs or special parts engineered and designed to your requirements.

Our completely equipped tool and die shop in conjunction with high speed automatic production facilities together with our new parts assembly section is prepared to undertake your most exacting and critical parts and component problems from design to completed product.

As a supplier to some of the foremost government defense contractors we are experienced in the production of highly precise parts and stampings used by the armed services for electronics and other specialized applications.

Investigate J & H facilities for your standard or special parts requirements today. Profit by the economy of quality parts engineering and manufacturing.

Langevin...

TRANSFORMERS

- ▶ to military specifications
- ▶ for your special performance requirements

You are sure of prompt service from Langevin, because

1. We have on hand, at all times, hundreds of types and sizes of wire, core materials, cases, terminals, brackets — everything needed to build all kinds of special transformers.
2. Your samples and short runs are handled in our model shop, manned and equipped for high-speed service.
3. Complete MIL-T-27 tests for qualification approval can be made in our own laboratory. This often hastens your contract completion by many weeks.

Depend on Langevin for pulse transformers, charging reactors, saturable reactors, hi-cycle transformers, and units built to the most rigid specifications.

New Portable Battery-Operated Spring-Motor Tape Recorder

The Magnemite

For all field recording without AC power. Smaller and lighter than a portable typewriter, the Magnemite* actually makes field recordings that can be played on any studio console equipment. Completely self-powered, the Magnemite* does away with bulky and cumbersome generator storage batteries and rechargers.

Just check these unusual features:

- Noiseless and vibrationless governor-controlled spring-motor assures constant tape speed.
- 100 operating hours per set of inexpensive flashlight-type dry cell batteries.
- Earphone monitoring while recording, and earphone playback for immediate quality check.
- Operates in any position, and is unaffected by movement or vibration during operation.
- Warning indicator tells when to rewind and shows when amplifier is on.
- Broadcast models weigh 15 pounds. Slow speed models weigh only 10 pounds.
- Requires no more desk space than a letter head, measuring only 11 x 8½ x 5½ inches.

There's a choice of 5 different models for any recording need. High fidelity units meeting primary and secondary NARTB standards, which record and play back frequencies up to 15,000 cycles, are available for broadcast stations, critical music lovers, and scientific research. For investigation, missionaries, reporters, and general dictation while traveling, there are units which play up to 2 hours per reel of tape.

Write Dept. 112 for complete descriptive literature and direct factory prices.

LEADERSHIP HAS ITS ROOTS IN RESPONSIBILITY... *Specify Bliley..* FOR 23 YEARS THE FOREMOST NAME IN CRYSTALS

Military types CR15, CR16, CR18, CR19, CR23, CR24, CR27, CR32, CR36, CR47 are representative of current production by Bliley. Complete range of types and cross reference index is given in Bulletin 43.

MILITARY

SHIP-TO-SHORE

Types MC7, SR5 and SR8 are suggested for shipboard dependability. Price and details given in Bulletin 44.

BROADCAST

Types BC46T, MO3B, TC92 are first choice for automatic temperature control in AM, FM and TV transmitters. Consult Bulletin 43 for basic details.

SPECIAL PURPOSE

Types SR10 and MC9 provide wide range frequency choice for TV service, diathermy and citizens band. Request Bulletin 44 for price and description.

COMMUNICATIONS

Type BH6A is the predominant choice for land mobile and airborne applications. Consult Bulletin 43 for basic information.

STANDARD

Types KV3, MC9, SMC100 and MS433 cover reference frequencies from 100 kc through 10.7 mc. Price and "stock tolerances" given in Bulletin 44.

AMATEUR

Types AX2 and AX3 together with Bliley packaged oscillator Model CCO-2A were designed to bring precision and price together in the Ham Bands. Price and details are given in Bulletin 44.

ULTRASONIC DELAY LINES

Custom built fused quartz delay lines provide high stability and precision time intervals for manipulation of pulsed or pulse modulated signals. Consult Bulletin 45 for technical information.

FREQUENCY STANDARDS

Model BCS-1A is a high stability instrument for precision reference at 100 kc. Ideal choice for research and development laboratories. Descriptive information given in Bulletin 43.

BUYERS'
GUIDE

**By the
electronic
industry
itself...*

Ready reference throughout the year... this Mid-June issue of electronics serves the industry in the exacting manner that it requires.

The electronics BUYERS' GUIDE

provides users with the only accurate and reliable product source available in the electronic industry...

They refer **FIRST** to the **"GUIDE."**

Just off the Press...

THE MOST COMPLETE CATALOG OF CORES IN THE INDUSTRY

Including Ferrites and Molded Coil Forms

Now... with the acquisition of Ferricore, Inc., a plant fully equipped for the precision production of ferrite cores (see ad on opposite page), the famed Moldite line comprises cores for every electronic purpose. In addition to adding ferrite cores,

Moldite has also resumed production of Molded Coil Forms. You'll find everything fully described in our new catalog. Send for a copy... NOW. And, at the same time, request samples for design, pre-production and test purposes.

FERRITE CORES
MOLDED COIL FORMS
(iron and phenolic)
MAGNETIC IRON CORES
FILTER CORES
THREADED CORES

PULSE CAPACITORS

25 to 100 KV 50 Megawatts

Designed for extremely low temperature rise when used in pulse-forming networks above 25,000 volts. Can pass 2500 amperes at 0.0005 duty cycle.

Catalog No.	Mfd.	Peak KV	Body dimensions (inches)
GPC-601672	0.0167	60	8x8x24 3/4 H.
KPC-401252	0.0125	40	5x6x24 H.
APC-401672	0.0167	40	5x6x24 H.
RPC-402509	0.0250	40	6x7x24 3/8 H.
APC-357501	0.0075	35	5x7x8 3/8 H.

PULSE-FORMING NETWORKS

Any pulse width from 0.1 to 40 microseconds. Any impedance from 5 to 500 ohms. Any voltage rating from 1000 to 25,000 volts. Write for data sheet.

GLASS-TERMINAL TUBULAR CAPACITORS

midget • metal-cased hermetically sealed

Metallized-paper types in ratings of 0.01 to 10 mfd, voltage ratings from 150 to 600 volts d-c, and temperature ranges of -55 to +85C with mineral-wax or mineral-oil impregnation and -55 to +105C with silicone-fluid impregnation. Foil-paper types are rated

0.001 to 1.0 mfd; with silicone-fluid impregnation, they operate at 200-1000 volts d-c from -55 to +125C; with mineral-oil impregnation, they operate from -55 to +85C. Write for catalog giving complete list of sizes.

JAN-C-25 CAPACITORS

Types CP53, CP54, CP55, CP61, CP63, CP65, CP67, CP69, and CP70. Write for catalog giving complete listing of capacitances, voltages, dimensions, and mounting styles.

RADIO INTERFERENCE FILTERS

We manufacture radio interference filters in all sizes, ratings, and styles. A few popular items are listed below; for special requirements, utilize Tobe's unequalled experience and facilities in the field in which, as early as 1929, this company was known as "the pioneer and recognized authority"

SUB-MINIATURE WIDE-RANGE

Filterette No. 1561-A . . . weighs only one ounce; in case only 1 1/8 x 1 x 11/16 inch; handles 3 amperes at 0-400 cps; provides better than 40 db attenuation from 0.150 to 400 megacycles.

MINIATURE • 20-AMPERE

Filterette No. 1547 . . . gives better than 86 db attenuation through most of the 0.150 to 1000 megacycle range; hermetically sealed in case 2 x 2 x 1 3/16 inches; operates at 500 volts d-c or 130 volts a-c to 1700 cps; meets military specifications for use from -55 to +105C.

MINIATURE • 5-AMPERE

Filterette No. 1558 . . . specially designed for aircraft service; hermetically sealed case only 1 1/4 x 1 1/8 x 1 3/4 inches; attenuation above 86 db from 0.6 to 30 megacycles; operates at 130 volts, 0-1000 cps; designed for bulkhead mounting.

FEED-THRU POWER-LINE FILTER

Filterette No. 1600 . . . uses the efficient feed-thru construction originated by Tobe to provide high attenuation over a broad frequency band; carries 10 amperes at 125 volts, 0-1000 cps; hermetically sealed in metal case 3 1/4 inches long by 1 1/8 inches in diameter; threaded bushing for single-hole mounting.

FILTER PACKS

Multi-circuit filter packs combine, in a single, compact housing, all the elements needed to suppress radio interference in many separate circuits. Designed and built to your circuit requirements, Tobe Filter Packs provide better miniaturization than individual filters, and reduce the space to be pressurized, with no sacrifice in filter performance. Call on us for recommendations in your early design stages — where we can do the most to help you.

SCREEN-BOOTH FILTERS

Used throughout industry to keep radio interference out of shielded areas. Handle high current with negligible voltage drop. Designed for easy installation in conformity with correct electric wiring practices.

Cat. No.	Amps.	Volts		Case sizes — inches		
		D.C.	A.C.	H.	W.	L.
1217	10-15	250	250	1 11/16	3 3/8	8 5/16

Kay-Lab ELECTRONIC INSTRUMENTS

set new standards of accuracy and performance to solve your research and production problems

You'll discover newer, better, easier ways to solve your electronic research and production problems when you use Kay-Lab precision electronic and electro-mechanical instruments. Join the leading research laboratories, manufacturers, government agencies, and universities which depend on Kalbfell Laboratories for the finest instruments and for complete, competent engineering and research service.

Kay-Lab MICRO-MIKER

The Dynamic Micro-Miker measures capacitance and inductance under OPERATING CONDITIONS. Voltage at test lead does not overload amplifier stage and total inter-electrode capacity (including Miller Effect) and stray capacity may be measured. Used in design of video amplifiers, vacuum tube studies, wiring capacity measurement, manufacture of delay lines, and in all other jobs where dynamic or small capacities are significant. Features Kay-Lab etched circuit construction. Capacity range — .1 to 1000 MMFD $\pm 1\%$. Inductance range — 1 to 240 Microhenries.

Kay-Lab LOGATENS

These are non-linear attenuating networks whose output voltage amplitude is a linear function of the logarithm of input voltage. Several models available, allowing for dynamic range of 60 DB and accuracy of 0.5 DB. Used for computer applications, dynamic compression, radar, sonar, or any other applications of signal compression or logarithmic conversion.

Kay-Lab PLUG-IN AMPLIFIERS

These units are designed primarily for use with Kay-Lab Logatens. Three standard models available: (1) PRE-AMPLIFIER, high impedance input, 60 DB gain; (2) DRIVER AMPLIFIER will produce 10 volts amplitude across Logaten's input; and (3) DETECTOR AMPLIFIER capable of producing 10 volts output with .1 volt input. All units are stabilized with negative feedback and have response flat within 1 DB from 5 cycles to 50 KC.

Kay-Lab DECADE AMPLIFIER

This general purpose pre-amplifier has stabilized gains of 40 DB and 60 DB, and maximum gain of 80 DB. Amplifier response is flat from 1 cycle to 1 megacycle. Capable of producing 40 volt RMS output into a 5000-ohm load or 10 ma. current into low impedance load. Hum and noise on all ranges is below 20 millivolts. Kay-Lab etched board wiring technique featured.

Kay-Lab .01% STABLE ABSOLUTE DC POWER SUPPLIES

These high powered standard cells are absolute sources of DC voltage, independent of output load and supply voltage variation. They feature long time drift stability and absolute output voltage calibration of .01%. A unique circuit is used whereby output is compared with a standard cell, which insures absolute stability and calibration. Units are available in wide range of voltage and output current from a few milliamps to 12 amperes. The packaged sub-assembly design is easily adapted to special requirements. Various standard models are available for operation in the 0 to 600 volt range and from 140 milliamps to 12 amperes. Constant current models available.

Kay-Lab SUPER-REGULATOR SYSTEM

This provides the ultimate in power supply output impedance and hum noise level and was designed to convert ordinary power supplies into precision laboratory instruments. It has a DC output impedance of .005 ohms and output hum and noise less than 50 microvolts.

Kay-Lab CHOPPER STABILIZER

Affords standard cell stability and accuracy to output voltage of any ordinary regulated power supply. Can be used directly with Kay-Lab Super-Regulator. Maintains the absolute calibration of power supply output to within .01%, and stabilizes output drift to a few parts per million.

OTHER Kay-Lab PRODUCTS

- TWIN-T-FILTERS — complete line of rejection type filters — from .01 to 1,000 cycles — immediately available from stock.
- METER CALIBRATION UNIT — precision standard source of DC voltage and current for meter calibration and reference.
- SPECIAL FILTERS — complete engineering facilities for custom low pass, high pass, and band pass filter manufacture.
- PEAKED AMPLIFIERS — selective frequency high Q amplifiers, from .01 cycles to 1 KC.
- SERVO STABILIZER — plug-in unit with variable rate control for stabilizing AC servo systems.
- ELECTRONIC THERMOSTAT — amplifier and relay system for more exact temperature control of Logatens and other devices.
- LOGARITHMIC TIME BASE — converts linear oscilloscope time base to logarithmic system.
- HIGH POWER AMPLIFIER — high power amplifier flat from 10 cycles to 1 megacycle with low impedance output.
- DIGITAL ATTENUATOR — servo positioned potentiometer system for use with analogue computers.
- DIGITAL VOLTMETER — analogue to digital converter displaying continuous voltage in absolute digits.

Kay-Lab PRECISION ELECTRONIC INSTRUMENTS

KALBFELL LABORATORIES, INC. / 1090 Morena Boulevard — San Diego 10, California
 Post Office Box 1578 Telephone: Woodcrest 6359

Environmental Test Equipment

L-SERIES

Laboratory Unit for complete environmental testing of aircraft instruments and equipment at a temperature range from +185°F. to -100°F., relative humidity simulation from 20% to 95%, and altitude from ambient atmospheric pressure to 80,000 feet or higher.

S-SERIES

These units will automatically maintain temperature conditions within a range from -85°F. to +185°F. In addition, units which incorporate humidity conditions will provide humidity from 20% to 95% between +35°F. and +180°F. Dry and wet bulb temperature ranges can be extended to meet other requirements.

EXPLOSION

Explosion chamber to meet all MIL, JAN, USAF, AN, and other specifications for testing of instruments and equipment in explosive atmosphere at altitudes up to 50,000 feet. Unlimited altitude simulation available. Bowser ignition system (Patent applied for) and safety devices, plus automatic fuel metering are typical features of this chamber.

Special Engineering

Bowser Technical Refrigeration maintains a complete engineering staff to solve special test problems for the aircraft industry. All test chambers can be furnished with power drives into the test chamber. Also available as accessories are test racks to special design, optical viewing arrangements, pressurized and explosion proof connectors, special high voltage in- and outlets, radio shielding and connections for testing hydraulic equipment. To meet individual requirements, other special instrumentation, accessories and sizes are available.

SAND & DUST

Sand and dust chamber to meet all MIL, JAN, USAF, AN, and other test specifications for aircraft and electronic components. Provides testing facilities in air-suspended sand and dust at air velocities of 100 and 2300 feet per minute. Accurate temperature control of the air is provided by automatic heating and refrigeration equipment. Electronic density indication and control are available.

Environmental Test Equipment

WALK-IN ROOMS

Bowser Walk-In Rooms are available with UNLIMITED altitude simulation, temperature range from -100° to $+200^{\circ}\text{F.}$, and relative humidity from 20% to 95%. With sectionalized panel construction any size or shape room can be manufactured for field assembly in the field. Smaller sizes are preassembled at the factory. Special accessories and instrumentation can be engineered and installed to individual specifications.

H-SERIES

Relative Humidity Simulation Unit which will automatically maintain humidity conditions from 20% to 95% at temperatures from $+35^{\circ}\text{F.}$ to $+185^{\circ}\text{F.}$ (Dry Bulb).

T-SERIES

The new Units are ideal for all types of processing requiring extraction of heat. The wide range of temperatures down to -100°F. and lower also allows complete testing of products under conditions of extreme cold. In addition, storage of products is particularly effective because of the close control tolerance and dependability featured in all Bowser units. Other applications for which these units are well suited are stabilization of metals, aging of metals, expansion fitting, conditioning for tensile tests etc.

U-SERIES

These units are designed specifically for production processing of aircraft instruments, accessories and equipment. Temperature ranges from $+158^{\circ}\text{F.}$ to -80°F. Relative humidity simulation from 20% to 95% and altitude simulation to 55,000 feet are provided.

THE HIGH-PRECISION LINEAR POTENTIOMETER

MICROPOT precision ten-turn potentiometer

BORG MICROPOT TEN-TURN POTENTIOMETER: Built to fit the specifications of control system engineers and designers . . . constructed with Micro accuracy for precise voltage adjustments . . . featuring an assembly scientifically designed, machined, assembled and automatically machine tested for linearity of $\pm 0.1\%$ and 0.05% , zero-based. MICROPOTS ARE AVAILABLE IN 1.15 to 3 OHM and 30 to 250,000 OHM RANGES FOR IMMEDIATE SHIPMENT.

BORG MICRODIAL: Two concentrically mounted dials: one for counting increments of each turn and the other for counting turns . . . delivered completely assembled with dials synchronized. Outstanding features include smooth, uniform action . . . no backlash between incremental dial and potentiometer contact . . . less wear, only one moving part aside from the two dials . . . contact position indicated to an indexed accuracy of 1 part in 1,000.

MICROPOT—MICRODIAL CATALOG SENT PROMPTLY ON REQUEST

**BORG
MICRODIAL
746-A**

A precision ten-turn indicating dial assembly. Has screw locking device on operating knob.

**BORG
MICRODIAL
746-B**

Same as 746-A but has knurled locking screw mounted externally to operating knob.

Advertisers:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

..OFFERS REDUCED COSTS!

..FASTER DELIVERIES!

—on "short run" metal forming and drawing

HYDROFORMING sharply reduces tooling time...costs—new process speeds delivery

Kaupp provides design and project engineers an economical and quick method of obtaining short run development pieces. Punch and nest ring are the only tools required... rubber diaphragm backed by hydraulic oil acts as the die member of the tool. Perfect surfaces are assured. Less time is consumed in tool making, therefore tooling costs are considerably lower. Contact us on your next short run order... hydroforming by Kaupp will save you time and money!

Punch and nest ring are the only tool requirements as hydraulic oil functions as the die member.

45-01 NORTHERN BOULEVARD, LONG ISLAND CITY 1, N. Y.
 MANUFACTURERS OF SCIENTIFIC PRECISION EQUIPMENT FOR OVER 30 YEARS

LUNDEY TERMINALS

These are ceramic, compression-type terminals, with neoprene or silicone rubber as the sealing member. Single conductor terminals are available with diameters from $\frac{1}{4}$ " to $1\frac{1}{8}$ ", working voltages from 1000 to 15,000 V, and current ratings up to 400 amperes. Multiconductor assemblies are available in several types. This group will cover a wide range of electronic applications.

Lundey Terminals are constantly increasing in use because they give freedom from surface tracking, excellent resistance to thermal and mechanical shock, high voltage and current ratings and top performance under military specifications. Lundey Associates are constantly working with new materials, well as improving existing materials, to provide better sealing of gases, vapors and chemical compositions. Temperature and pressure ranges are constantly being improved. Factory and field engineering facilities are available to the client whether standard or special designs are involved. Lundey Associates stands ready to produce necessary special designs to meet the particular specifications of the purchaser. The Lundey Associates catalog includes complete specifications of the standard line of terminals. Field representatives are located throughout the United States and in the Toronto-Montreal area in Canada.

Teflon's unique characteristics are utilized externally to produce these superior properties: assembly by simple tooling in a drilled or punched hole — no extrusion needed; high resistance — no extrusion resistance stability during temperature changes; humidity-resistant; effective spring loading; miniature size, with a mounting distance of $1\frac{5}{64}$ " on centers. Silicone or neoprene rubber is used internally to give an hermetic seal which meets MIL-T-27 specifications. Current rating is 8 amperes. Three electrode styles are available.

In this terminal, Lundey Associates has made use of the unique properties of Teflon coupled with an ingenious construction to produce a terminal for use in the UHF region. The terminal has high RF insulation resistance and low capacitance. This group is available in either feed-thru or stand-off types.

You Can Speed Production-Line Soldering with New, Active, Non-Corrosive RTS 200

Federated Metals' new RTS 200 rosin core solder has proved in production operations to be 5 ways better than ordinary rosin solders:

30% GREATER SPREAD—by test the spread of RTS 200 is 30% greater than that of conventional rosin core solders.

4 TIMES FASTER OXIDE PENETRATION—oxide films and corrosion products on the parts you are soldering need not slow down operations. RTS 200 pierces these retarding agents 4 times faster than ordinary solders.

NON-CORROSIVE—despite the exceptional activity of the RTS 200 flux at soldering temperatures, there is *no harmful corrosive residue* when tested under the high humidity conditions of military specification MIL-S-6872.

NON-TOXIC—the chemicals used in RTS 200 flux are commonly used in industry and have no toxicity factor whatsoever.

STABLE FLUX—experience of over one year with the type flux used in RTS 200 shows that it is just as active after standing as when used immediately. If you store RTS 200 for extended periods, you need not worry about its stability, as you do with ordinary solders.

Try this new, industry-tested active solder *today*. Available in a variety of wire sizes, compositions and quantities. For information see your distributor or write any one of Federated's 14 plants or 22 sales offices across the nation. There is one near you.

Rack Mounting

A program of redesigning the present line of amplifiers and oscillographs so they may be mounted in standard 19-inch racks is now under way. The unit above is the BL-962 Rack Mounting D. C. Amplifier.

ACOUSTIC AND TEST INSTRUMENTS

The following instruments are manufactured in Denmark by The Bruel and Kjaer Company and distributed exclusively in the United States and Canada by Brush Electronics Company:

- BL-1012 Beat Frequency Oscillator
- BL-1502 Deviation Test Bridge
- BL-1604 Integration Network for Vibration Pickup BL-4304
- BL-4304 Vibration Pickup
- BL-2105 Frequency Analyzer
- BL-2109 Audio Frequency Spectrometer
- BL-2304 Level Recorder
- BL-2423 Megohmmeter and D.C. Voltmeter
- BL-3423 Megohmmeter High Tension Accessory
- BL-4002 Standing Wave Apparatus
- BL-4111 Condenser Microphone
- BL-4120 Reciprocity Calibration Apparatus and Accessory
- BL-4708 Automatic Frequency Response Tracer

BL-222 Combination Double-Channel Magnetic Oscillograph

Combination Oscillographs retain basic features of Brush direct inking recorders and offer additional feature of optional use of electric stylus for special recording conditions. Heart of oscillograph is magnetic penmotor, reproducing electrical signals in the frequency range from d.c. to 120 cps. Three speed paper drive provided. Adequate for virtually every recording need. A BL-944 Power Supply is furnished with either model.

BL-320 Universal Amplifier

When used with Brush Magnetic Direct Inking Oscillograph, it is a complete package for measurement of strains. Simply operated, producing records which are immediately available and easily interpreted. Records either static or dynamic strains up to 100 and direction as well as magnitude of measured strain can be read from the

BL-206 Six-Channel Magnetic Oscillograph

Consists of six magnetic penmotors mounted in a line, recording on 12"-wide paper. On standard units, a paper speed of either 125 mm/second, 100 mm/second, 50 mm/second or 25 mm/second plus 1/10 of this speed can be provided. Other combinations available on special order. Dimensions: 20" x 17" x 17". Provides excellent recording medium for multiple gage recording, vibration analysis, wind tunnel work, etc. Either A.C. or D.C. Amplifier to fit particular applications. Linear frequency response from d.c. to 100 cps, used with our amplifiers.

BL-932 D. C. Amplifier

Designed for use with Brush Magnetic Direct Inking Oscillograph, also used to make recordings of many types of phenomena heretofore measured only with the aid of complicated intermediate equipment.

Voltage gain is sufficient to give 1 chart mm. deflection per mv. input. Novel design features combined with both plate and heater voltage regulation reduce effects of power line fluctuation. Zero signal drift amounts to not more than 1 chart mm. per hour. Frequency response essentially uniform from d.c. to 100 cycles per second.

Magnetic Recording and Reproducing Equipment

Single and Multichannel Recorders—
Recorders.

BL-2304 High Speed Level Recorder

Designed for acoustical and electro-acoustical measurements, incorporating a potentiometer controlled moving-coil stylus drive system and a variable speed paper drive.

BL-1012 Beat Frequency Oscillator

An audio signal generator of particular use in conjunction with Level Recorder.

BL-2002 Heterodyne Voltmeter

A high frequency selective vacuum tube voltmeter for range 20 kc to 27 mc, measures both amplitude and modulation. Full scale deflection from microvolts to 10 volts.

BL-1502 and BL-1507 Deviation Test Bridges

For high-speed production checking of resistors, capacitors, inductors. Indicates percentage deviation from standard on large meter with zero point in center. Full scale deflection at 7% and 25%.

BL-4708 Frequency Response Tracer

For analyzing audio frequency response of amplifiers, receivers, loudspeakers, microphones, etc. CR tube synchronized with Beat Frequency Oscillator presents plot of response in db vs. frequency. Audio Oscillator 0-20,000 cps... constant amplitude radio freq. oscillator 1 mc mod. 30%. Oscillograph Component, 50 db range provided through logarithmic amplifier. Trace area 35%

Phones

- Model A-206 Headphone
- Model A-1 High fidelity headphones
- Model A Lorgnette phone
- Model A-303 Hushatone® speaker
- Model A General purpose headphones
- Model A Single phone

Brush crystal phones possess the following outstanding features:

1. Bimorph® crystal drive element of such high impedance that line or circuit characteristics are not affected when monitored by Brush phones.
2. Wider range response with more uniform output.
3. Compensation for ear coupling.
4. Light-weight, rugged, shock-proof construction.

Microphones

- Model A-109 Microphone
- Model A-106 Microphone
- Model A-1 Vibromike® contact-type microphone

PIEZO-ELECTRIC ELEMENTS for electro-acoustical and electro-mechanical applications: Plates of Rochelle salt; Ammonium Dihydrogen Phosphate (ADP); Lithium Sulphate; Barium Titanate (Brush Ceramics A & B); Potassium Tartrate (DKT); Cylinders, curved plates, bowls and other shapes of Barium Titanate (Brush Ceramics A & B); Bimorphs* of Rochelle Salt; Ammonium Dihydrogen Phosphate (ADP); Barium Titanate.

BA-109 Microphone

The Brush Model BA-109 microphone using the improved Acoustical® was created for public address, home recording and amateur applications. The Metalseal® crystal in-maroon plastic and brushed chrome.

- Response from 40 to 10,000 cps.
- Output Level 54 db. below 1 volt/dyne cm².
- Non-directional.
- High Impedance equivalent to approximately .002 mfd. (1.8 meg. ohms at 1,000 cycles.)

Model "A" General Purpose

Designed for GENERAL PURPOSE applications including laboratory, studio and skilled amateur home use. The Bimorph® crystal drive element insures wide range response (100 to 8,000 cps.) and high sensitivity. High impedance; ideal for multiple installations.

BA-206 Headphone

Designed for use where high fidelity and smooth frequency response are of paramount importance. They are especially applicable to broadcast monitoring, to laboratory use in the study of sound measurements, audiometry and similar exacting headphone applications. Features exceptionally flat frequency response. Impedance of 100,000 ohms at 1000 cps; no transformer required. Ideal for multiple installation. Sensitivity is approx. 6.3 dynes/cm/volt at 1000 cps.

BA-106 Microphone

The Brush Model BA-106 is a high quality microphone incorporating the hermetically sealed Acoustical® with sintered bronze damping. Metalseal® crystal is used for protection against conditions of high humidity. This microphone offers unexcelled response in microphones of this type and price range.

Vibration, shock or low frequency wind noise do not affect the performance of this microphone. Output level 50 db. below 1 volt/dyne/cm².

ELECTRO-OPTIC ELEMENTS—Unpolished blanks of Ammonium Dihydrogen Phosphate (ADP); Potassium Dihydrogen Phosphate (KDP) for electro-optic shutters, etc. *Trade Mark

MAGNETIC COMPONENTS

- Single Channel record-reproduce and erase heads
- Multichannel record-reproduce heads
- Miniature record-reproduce heads and erase heads
- Magnetic Rubber Bands

- Model A-1090 Record/Reproduce Head
- Model A-1110 Erase Head

Single-Channel Heads

The new magnetic head is designed for dual-track recording/reproducing on 1/4-inch tape. It features: dimensional stability . . . Mu-metal shielding . . . single-hole mounting . . . high output . . . greatly extended frequency range . . . embedded construction.

FOR COMPLETE INFORMATION WRITE

Brush Electronics Company, Department K-7
35 Perkins Avenue, Cleveland 14, Ohio.

Cartridge Types

The BK-900 series heads were designed for single-channel recording on any magnetic medium. Available in track widths of 0.014 inch and wider. These heads have precision-lapped gap, synthetic resin dip, balanced magnetic construction, individually wound poles and accurate azimuth alignment.

Magnetic Rubber Bands

Magnetic recording bands are made from a special neoprene rubber base that has been pigmented with a high efficiency magnetic recording oxide and lubricated to eliminate wear of head and material.

BRUSH ELECTRONICS

INDUSTRIAL AND RESEARCH INSTRUMENTS
PIEZO-ELECTRIC MATERIALS • ACOUSTIC DEVICES
MAGNETIC RECORDING EQUIPMENT
ULTRASONIC EQUIPMENT

Multichannel Heads

Available in encased assembly or cartridge assembly.

Design Features

- Balanced magnetic structure with gaps at front and rear.
- All gaps in precise alignment.
- Individual channels are cast into one integral block of specially selected synthetic resin.
- Complete assembly is non-microphonic and impervious to moisture.
- Mu-metal shields between individual channels.
- Ground lead supplied for shields and pole pieces.
- Wide range temperature operation.
- Special design features may be supplied to meet your requirements.

VICKERS

Magnetic Amplifiers

For more than 20 years, Vickers engineers have pioneered developing and producing magnetic amplifiers. The superior design and performance of Vickers amplifiers—manufactured in production volume for five years—are demonstrated thousands of functioning systems.

For custom amplifiers, Vickers engineering and manufacturing experience minimizes design and production time and cost. If you are seeking improved controls, you, too, may find that the solution already exists in Vickers design experience, in the more than 100 Vickers Standard Magnetic Amplifiers.

Standard amplifiers range from milliwatts to kilowatts in the following categories:

VICKERS HIGH PERFORMANCE SERIES STANDARD AMPLIFIERS, for applications demanding optimum performance, have the greatest power gain with shortest response time. High Performance Standard Amplifiers are available up to 108 watts for 60 cycle power—and up to 385 watts for 400 cycle power.

VICKERS HIGH GAIN STANDARD AMPLIFIERS serve intermediate power level applications with lower cost per watt output in the 1.5 to 1100 watt range. In this range, amplifiers are available for 60 cycle power, 120-

volt single phase, or 240-volt three phase.

VICKERS STANDARD HIGH POWER AMPLIFIERS, for high power applications, provide lowest cost-per-watt output. Amplifiers operating from 60 cycle power sources of 120, 240, or 440 volts, single phase, or 240 volts, three phase are available.

VICKERS LOW SIGNAL LEVEL STANDARD AMPLIFIERS operate with control power as low as 10^{-10} watts. They are suitable for low-level sources such as thermocouples and photocells. Gain and balance are adjustable.

Learn how Vickers Magnetic Amplifiers can solve your control problems. Detailed information specifications and engineering assistance will be promptly provided upon request.

IDEAS

in the making

Araldite Bonding and Casting Resins developed by Ciba Research are simplifying manufacturing methods, improving product efficiency, and opening new fields of product development. You will want to know more about them.

ARALDITE® EPOXY RESINS

BONDING AND LAMINATING TYPES

ARALDITE TYPE NO.	PHYSICAL FORM	STORAGE LIFE	METHOD OF CURE	BOND STRENGTH* ALUMINUM TO ALUMINUM (psi)	REPRESENTATIVE APPLICATIONS
AN-100	Natural or amber colored powder	Almost unlimited at room temperature	Heat cure	4000-4500	Bonding of metals. Laminating.
AN-101	High viscosity liquid	1 year	Room temperature	2000-2500	Bonding and sealing of metal to glass. Bonding of porcelain, plastics to plastics, non-absorbent leathers.
AN-102	Low viscosity liquid containing solvents	1 year	Room temperature	1400-1600	Bonding of metal to metal and metal to wood.
AN-103	Non-flowing paste (tan color)		Heat cure	1200-1400	Bonding of loose-fitting joints.
AN-104	Non-flowing paste (tan color)	1 year	Room temperature	1000-1500	Bonding of loose-fitting joints. Bonding of rubber to metal.
AN-107	Heavy paste (tan color)	3 months	Heat cure	3000-3200	Laminating. Metal to metal bonding.
AN-111	Low viscosity liquid containing solvents	9 months	Heat cure	2000-2500	Bonding of metal to metal or other heat-resisting materials. Impregnating by vacuum method. Laminating.
AN-115	Medium viscosity liquid containing solvents	3 months	Heat cure	2500-3000	Impregnating, laminating and bonding.

A D1002-49T

CASTING AND IMPREGNATING RESINS

ARALDITE TYPE NO.	PHYSICAL FORM	STORAGE LIFE	METHOD OF CURE	POT LIFE	DIELECTRIC PROPERTIES	SHRINKAGE	REPRESENTATIVE APPLICATIONS
N-501	Amber solid	1 year	Heat cure	1-4 hrs.	Excellent	½-2%	Casting, potting, encapsulating. Impregnating glass cloth for dry lay-up.
N-502	Thin liquid	1 year	Heat cure Self cure	3-6 hrs. 1-4 hrs.	Good	½-2%	Casting, potting, encapsulating.
N-503	Liquid	1 year	Heat cure Self cure	3-6 hrs. 1-4 hrs.	Excellent	½-2%	Casting, impregnating glass cloth for wet lay-up.
N-504	Very thin liquid	1 year	Heat cure Self cure	7 days 1-4 hrs.	Good	< 2%	Impregnating, casting, potting, encapsulating.
N-505	Gray solid	1 year	Heat cure	1-2 hrs.	Excellent	< 1%	Potting and encapsulating high and low temperature service and thermal shock resistance.

DEPENDABLE ELECTRICAL INSULATION

BH TUBINGS AND SLEEVINGS

BH "1151" SILICONE RUBBER FIBERGLAS TUBING AND SLEEVING

A revolutionary Fiberglas Class H (inorganic) insulation for continuous operation through a temperature range of -90°F. to 400°F. No dielectric loss from handling, bending or operational stresses. Won't craze or crack when used to cover bent wire. No deterioration at high spot temperatures of 500°F. for 4 hours. Grades H-A-1 through H-C-2.

BH 649 FIBERGLAS TUBINGS AND SLEEVINGS

A superior insulation that keeps rated dielectric strength after rough handling and severe abrasion. Flexibility and other physical properties unaffected after 1500 hours at 105°C., as well as standard tests for NEMA Classes B-A-1, B-B-1 and B-C-1.

BH EXTRA FLEXIBLE FIBERGLAS SLEEVING

Comparable to single saturated (B-C-3) sleeveings but completely flexible, even after exposure to heat aging, since no hardening varnish is used. Non-fraying because of patented braid treatment.

BH SPECIAL TREATED FIBERGLAS SLEEVING

An unsaturated sleeveing for temperature applications up to 1200°F. Patented process retards raveling without the use of impregnants or binders.

BEN-HAR SPECIAL TREATED FIBERGLAS TUBING

Grades A-1 and B-1, meets normal operating and baking temperatures without stiffening or cracking. Will not fray or split in handling.

BH GRADE C-3 SILICONE FIBERGLAS SLEEVING

Non-raveling and non-combustible. Working temperatures range from 400°F. to -85°F. It is moisture-proof with high leakage resistance.

SATURATED FIBERGLAS SLEEVING

Available in Grades C-1, C-2 and C-3. Special treated to prevent fraying.

BH RAYON OR COTTON-BASE SLEEVING AND TUBING

Tubing: Magneto Varnished Tubing Grade A-2.
Flexible Varnished Tubing Grade B-2.
Sleeving: Saturated Sleeveing Grades C-1, C-2, C-3.

Here are the major Bentley, Harris products. Check them for the type of electrical insulation you need to protect your product. We invite you to send for samples to make your own tests. Feel free to call on the BH Laboratories for help in specific insulation problems — we welcome tough assignments. Write for complete BH Insulation details, or additional catalog information.

Address Dept.-E-13

BH Fiberglas SLEEVINGS

BENTLEY, HARRIS MANUFACTURING COMPANY, CONSHOCKEN, PENNA., U.S.A.

Ready reference throughout the year... this Mid-June issue of electronics serves the industry in the exacting manner that it requires.

The electronics BUYERS' GUIDE

provides users with the only accurate and reliable product source available in the electronic industry... they refer FIRST to the GUIDE."

You'd never buy a clock this way

You don't ask to see the pieces of a clock. You *expect* it to perform as its makers say it will. You listen, you look, you buy. In short, confidence sells more clocks, automobiles, and *instruments* than investigation and analysis combined.

Do your instruments inspire this instant confidence? Do they *look* scientific, precise, accurate? Or do they have dials that are cluttered, hard-to-read, old-fashioned? . . . a sure sign that their operation is also cluttered and old-fashioned.

Don't underestimate this point. Having made millions of dials and nameplates for all kinds of instruments and timepieces, we know how dial design can effect saleability. So, take a hard look at your product line, and see if there's room for our experience.

We make self-luminous, fluorescent, phosphorescent, or *nonluminescent* dials — etched, lithographed, engraved, photographically reproduced, or screened — also edge-lighted panels — in other words *whatever* type you need . . . made with emphasis on accuracy and appearance. We also make special, high-accuracy scientific dials, in as small quantities as required. Literature on request. Simply address Dept. E-6, U. S. Radium Corp., 535 Pearl St., New York 7, N. Y.

MAKERS OF: Luminescent Materials: Radioactive, fluorescent, phosphorescent • Powders: Cathode-ray tube, television tube • Radium Locators: Pendants, lenses, buttons, screws, markers • Static Eliminators • Radioactive Foils — Alpha-Ray Ionization Sources • X-Ray Screens • Processed Isotopes • Neutron Sources • Radiation Sources and Standards.

DIALS • NAMEPLATES • EDGE-LIGHTED PANELS

Lapp

TUBE SUPPORTS for air-cooled tubes

No longer is it necessary for equipment manufacturers to design supports for forced-air-cooled tubes. After producing many such special designs, Lapp has engineered and built a complete series of insulating supports for air-cooled tubes. Use of these supports facilitates design of transmitter and other high-power circuits. Simple, compact, efficient and attractive in appearance, in porcelain or steatite, they make for economical production, easy interchangeability, and availability of replacement units. Write for Bulletin 301, with complete description and specification data.

INSULATION FOR WATER-COOLED SYSTEMS

For carrying cooling water which must undergo a change in position of Lapp porcelain eliminates troubles arising from water contact and conductivity, sludging and electrolytic attack of fittings. The cleanliness and high resistance of cooling water is assured—for positive cooling and long tube life.

LAPP PORCELAIN WATER COILS

Twin-hole and single-hole models in sizes to provide flow of cooling water from 2 to 90 gallons per minute. Cast aluminum mounting bases, lead pipe or flexible metal hose for attachment.

LAPP PORCELAIN PIPE

Inside diameters $\frac{3}{4}$ " to 3", in straight, 90° and 180° elbows, fittings. Swivel-type connections. Standoff insulators attach directly to fitting bolts. Write for Bulletin 301 with specifications for Lapp Porcelain Water Coils and Porcelain Pipe.

LAPP GAS-FILLED CONDENSER Capacitance for high-voltage, high-current

The record of more than 15 years' service, in thousands of installations, proves the reliability of the Lapp Gas-Filled Condenser. For duty at high voltages and high currents, this unit offers advantages of extreme compactness . . . low loss . . . high efficiency factor . . . constant capacitance under temperature variations . . . grounded tuning shaft . . . and rugged sturdiness. Units available in five tank diameters, 7" to 24" . . . in fixed or variable capacitance . . . capacitances to 60,000 mmf; current ratings to 100 amperes at 1 mc; voltages to 100 Kv peak. Write for Bulletin 301.

ENTRANCE INSULATORS

To eliminate losses which occur in ordinary types of bushings at radio frequency, Lapp units use air as major insulation, porcelain path being lengthened by its "bowl" shape. In wide variety of types for most electrical and mechanical requirements.

STAND-OFF INSULATORS

Dependable mechanical and electrical performance—and trim good looks. Hundreds of standard and special types available.

Write for Bulletin 301, listing entrance and stand-off insulators.

ANTENNA STRAIN INSULATORS

The largest of the porcelain rod insulators shown develops 12,000 lb. strength. Available, as specified, with rain shield and/or corona rings. Smaller units, in porcelain or steatite, for all strain or spreader use. Engineering and production facilities also available for special performance units. See catalog 301.

PLUG-AND-RECEPTACLE UNITS for sectionalizing circuits

For panel-rack or other sectionalized circuits, Lapp offers a variety of plug-and-receptacle units. Any number of contacts can be provided (in multiples of twelve). Male and female contacts are full floating, for easy alignment and positive contact. Contacts

silver plated, terminals tinned for soldering. Insulation is steatite, the low-loss ceramic... non-carbonizing even under leakage flashover resulting from contamination, moisture or humidity. Write for complete electrical and mechanical specifications and recommendations.

ANTENNA TOWER INSULATORS

Most of the world's radio towers are supported by Lapp insulators, including the tallest guyed mast ever built. Through the Lapp "compression cone," immense loads can be carried by electrical porcelain. Write for data on Lapp footing insulators for self-supporting radiators, mast-base insulators, or guy insulators.

SPECIAL ASSEMBLIES

Business is electrical porcelain, its application, manufacture, and assembly. Our skill is in our knowledge of the capabilities, and limitations, of insulation... in engineering ingenuity to meet requirements... and in efficient production. We have need for insulating parts and associated sub-assemblies, we may be able to show you how they can be made most economically, to perform most efficiently.

In Socket Screws & Keys

ALLEN

Don't take it for granted that any hex socket screw is an Allen. There's only one way to take advantage of world famous Allen standards of precision fit and the strength and temper of special purpose Allenoy steel, in precision socket screws and keys: Specify genuine Allens, and be sure they come in the black and silver striped Allen package. Sold everywhere through leading Industrial Distributors exclusively. We will gladly give you the names of those in your locality and answer technical questions direct from factory Engineering Headquarters.

ALLEN O HEAD SET SCREWS: Achieve maximum *holding* power at the point by securing their *locking* action through uniform accuracy of fit, pitch diameter and perfect thread lead.

ALLEN O HEAD CAP SCREWS: Permit more compact design. Clean "pressur-formd" sockets and burr-free threads speed assembly work.

ALLEN O HEX KEYS: Size marked and made from special Allenoy steel for greater strength. Chamfered ends for quicker, easier insertion.

METAL FABRICATION

To Your Specifications

Abalon's excellent engineering facilities and expert production supervision are at your service.

We have a large stock of dies on hand and complete up-to-date facilities for metal fabrication from any type metal with any type finish.

Estimates per your blueprints cheerfully given.

PRECISION ENGINEERING IN ELECTRONICS

Telemetry and Data Handling Equipment
Special Components

GROUND STATION EQUIPMENT

Installations for reception and all forms of handling and reduction of data from pulse width and FM/FM radio telemetry systems • Custom-engineered and custom-built to hold equipment to a minimum consistent with accuracy, operation ease, reliability • Functional mounting of components assures servicing ease — and flexibility for ready unit expansion with any of the following:

- Specialized receiving equipment
- Magnetic tape field storage and playback
- Regenerative integrator for PM signals
- Channel selector for PW systems with automatic zero and channel sensitivity adjustments, and
- automatic missing pulse insertion.
- Oscillographic film reader, with line center finder
- Tabulated numerical output
- Punched card output
- Graphical output

DATA HANDLING EQUIPMENT

Automatic or semi-automatic devices for marked reduction of time, expense, man-power usually required to place volumes of recorded data in final usable form • Input data — film records, varying DC voltages, magnetic tape recordings, etc.— processed point by point, at high rates, with automatic correction for zero drift, scale factor, and measuring system non-linearities • Outputs available as continuous plots on film or paper, with scale and time coordinates, as DC voltages, as pulse coded signals for remote transmission, or as electrical indications for existing tabulating and card punching devices • All systems custom-designed for accuracy and economy; custom-assembled from special purpose components devised in continuous engineering of data handling systems.

PULSE WIDTH RADIO TELEMETERING

PW/PM Small, rugged units particularly suited to vehicular use where many different variables must be continuously transmitted

- 30 data channels
- 215-235 mc Carrier-crystal controlled
- Based on RDB telemetry standards
- 4 watt RF power output
- 30 cps sampling rate
- 1% system accuracy
- 1/2% linearity
- 0.5 volt DC inputs
- 60 g sustained acceleration
- -40° to +60°C
- Vibration — 1/8 in. at 60 cps
- Single or two pole form
- 3 1/4 in. diam.; 7 in. length; 7 lbs. weight
- Primary power 30 volts, 3.5 amps

Note: Also available without dynamotor. Transmitters available separately. Integral subcommutator if more channels are desired.

PW/FM For higher power output, with space no factor. Still highly reliable over long distances. Components readily accessible for replacement to extend unit life.

- Based on RDB telemetry standards
- 215-235 mc Carrier
- Max. drift — .04%
- 10 watt RF power output
- 30 data channels
- 30 cps sampling rate
- 1% system accuracy
- 1/2% linearity
- 0.5 volt DC inputs
- 60 g sustained acceleration
- Vibration: 1/8 in. at 60 cps
- 10 kc oscillator supply for AC pickup included
- 4 1/4 in. diam.; combined length 10 lbs. combined weight
- Primary power 30 volts at 5.7 amps

Note: Model PAD-1 Power Amplifier-Dynamotor unit may be added to increase transmitter power to 40-50 watts. Transmitter of Transmitter-Dynamotor packages available separately.

HIGH-SPEED ROTARY SAMPLING SWITCHES

ASCOP designs and manufactures switches to your most difficult and exacting requirements. Here are a few typical examples:

TYPE F Built to withstand vibration, shock, temperature and altitude extremes. Switching designed for airborne radio telemetry systems. Motors for 27, 12, and 6 volts. Up to 30 poles, each with 30 contacts. Sampling speeds from 0.1 to 20 rps.

TYPE U Custom-designed for limited space applications. Complete with drive motor, yet only 1 in. in diameter. A single pole samples 32 fixed contacts at the rate of 100 rps.

TYPE L For high performance with space secondary. Single pole samples 120 fixed contacts at rates up to 500 rps. Connection to external drive through 1/4 in. steel shaft running in sealed bearings. Special contact material for long service-free life.

TYPE V For precision in sampling plus long life. Synchronous drive permits selection of single pole sampling of 60 fixed contacts at many rates from 1 rps. to 1 rev. per day. Adaptable, through variety of mounting terminals, for use as a component in industrial instrumentation systems.

STACK

FIXED RESISTORS

JAN-R-11 TYPES

Styles
RC10, RC20,
RC21, RC30,
RC31, RC41,
and RC42.

Write for
Stackpole
Bulletin J-2.

$\frac{1}{2}$ -, 1-, and 2-Watt Sizes in
all RTMA Preferred Values

Fully insulated and moisture-protected by phenolic sleeves, Stackpole resistors are available in all standard and many special values for radio, television, military and commercial uses. In addition, Stackpole offers special resistors for automotive, lightning arrestor, capacitor discharge, surge and other uses.

Write for Stackpole Catalog
RC-9.

VARIABLE RESISTORS

VERSATILE SWITCHES

Small, reliable
line switches are
made in ratings
and circuitry for
every need in-
cluding portable
and auto radios.

Stackpole offers a dependable selection of volume and tone control potentiometers, etc. for radio, instruments, and other equipment. Single, ganged, and concentric switch designs are available in values from 500 ohms to 5 megohms and in ratings from .5 watt. Types range from the midget LR control for TV to the conservatively rated .6 watt Type LP for heavier duty wear. Special taps, extended bushings or other features can be supplied. Write for Catalog RC-9.

IRON CORE HEADQUARTERS

The widespread use of high Q coils with a consequent reduction in complicated circuitry has resulted in no small part from Stackpole engineering that has made new and better iron cores available at attractive prices. Stackpole production includes practically all types in common use — including cores for high- and low-frequency

coils and transformers, chokes, and side-molded types for permeability tuning — as well as numerous special types.

For all styles — standard or special — Stackpole manufacturing techniques assure iron cores of outstanding dependability and uniformity. Write for Catalog RC-9.

Fixed Composition CAPACITORS

47 TYPES

0.1 to 10.0
mmf. RTMA
5%, 10%,
and 20%
tolerances.

Type GA

Unmatched for low cost, high stability, and scarcely larger than $\frac{1}{2}$ -watt resistors, Stackpole "GA" capacitors are the most efficient way to couple or by-pass R-F circuits. Sturdily molded of high-dielectric constant material, these low-value capacitors have physical and electrical advantages that save assembly and testing time in virtually every R-F circuit. Write for Stackpole Catalog RC-9.

MOLDED COIL FORMS

for fast, low cost assembly

Inexpensive Stackpole molded coil forms permit smaller coils and pave the way for simplified point-to-point wiring with a minimum of soldered connections. Either axial or hairpin leads, securely anchored, are available. Types can also be supplied with iron core sections, thereby increasing Q materially, decreasing the amount of wire for a given inductance, and reducing stray magnetic fields. Write for details and samples to specifications.

STACKPOLE

Ceramag[®]

THE REALLY UNIFORM FERROMAGNETIC CORES

**Lower Losses with Higher Efficiency . . .
Lighter Weight — Smaller Sizes
Much Higher Permeability**

Standard Stackpole Ceramag Cores provide permeabilities in the order of 10 to 1 or higher by comparison with conventional iron cores. In addition, they have less corona effect and operate much cooler due to eddy current losses resulting from their high resistivity.

The remarkable uniformity of Ceramag Cores has long made them first choice of leading television producers. Typical applications include use as cores for flyback transformers, cathode ray tube deflection yokes, width control; low-loss inductors; I-F pulse and coupling transformers; and various others where Ceramag offers distinct advantages. Details on standard and special Ceramag grades are covered in *Bulletin RC-9A*.

LOW COST SWITCHES

**for instruments, radios, appliances,
toys, small motors and similar uses**

Press up your product—add to its convenience and "saleability" with these sturdy, low-cost slide switches! Over 20 fractional amperage and new 3 amp. types for fractional HP motors are available. Most types can be supplied with or without detent, spring-return, or other features to match your specifications exactly. Modifications, including adaptations for rotary or plunger action, can be produced economically. Write for new *Stackpole Switch Bulletin RC-9B*.

CARBON & GRAPHITE SPECIALTIES

Solve Friction, Temperature, Corrosion, Shaft Sealing, Arcing, and many other problems

- Anodes • Battery Carbons • Bearing Materials • Brazing Furnace Boats • Brushes of all types for rotating electrical equipment • Carbon and Graphite and Molded Metal Contacts • Chemical Carbons • Clutch rings • Dash Pot Plungers • Electric Furnace Heating Elements • Electrolytic Anodes • Friction Segments • Glass Molds • Carbon Ground Rods • Mercury Arc Rectifier Anodes • Metal-Graphite Contacts • Power Tube Anodes • Rail Bonding Molds • Rare Metal Contacts • Resistance Welding and Brazing Tips • Seal Rings (for gas or liquid) • Special Molds and Dies • Salt Bath Rectification Rods • Spectrographite • Trolley and Pantograph Shoes • Voltage Regulator Discs • Water Heater and Pasteurization Electrodes • Welding Carbons • Welding Plates and Paste

CARBON-GRAPHITE DATA BOOK

Newly revised and enlarged, *Stackpole Catalog 40A* contains helpful data on carbon, graphite, and carbon-graphite properties and their engineering uses.

GET THIS ^{BIG} 48 Page CATALOG

Just out, the new *Catalog RC-9* gives detailed specifications on the latest Stackpole Electronic Components described on these pages. Write on your business letterhead for your copy.

STACKPOLE CARBON COMPANY, ST. MARYS, PENNSYLVANIA

**NEED A GOOD SOURCE
FOR TERMINALS?
HERMASEAL MAKES ALL
KINDS, ALL SIZES!**

SMALLEST TO LARGEST—Hermaseal manufacturers Sealed Terminals in an extremely wide range of sizes. Terminals for very low to very high voltage, with tubular electrodes for high current-carrying capacity and with solid electrodes for moderate current requirements. Need Complete Assemblies? We have facilities for soldering terminals to your transformer covers . . . evacuating and pressure filling enclosures.

**END CAPS FOR
CONDENSERS.
FIVE STANDARD SIZES
TO FIT MOST NEEDS!**

When you need Tubular Button End Caps for condensers . . . end caps that must meet *high quality* standards . . . yet cost is a factor . . . and you need them in a *hurry* . . . call on Hermaseal!

Hermaseal is a top specialist, a pioneer in hermetically sealed terminals, sealed headers and allied parts for the radio-electronics industry.

**HERMASEAL GLASS
SEAL TUBES HELP
SPEED-UP ASSEMBLY!**

You can save time, cut down on rejects because Hermaseal Seal Tubes have metalized ends for easy soldering to end caps. Hermaseal Seal tubes are available in a wide range of stock and special styles and sizes.

THE HERMASEAL COMPANY, INC.
1101 LAFAYETTE ST., ELKHART 50, INDIANA

Let Hermaseal Help You with Header and Sealed Relay Assembly Problems!

Simple or complex, standard or special, Hermaseal makes them all, 2-electrode crystal holder bases, standard octal headers up to 18-terminal headers available in complete range of sizes, styles and patterns. Hermaseal can do the wiring and supply enclosures, with either dry air fill or vacuum-pumped and pressure-filled with dry nitrogen, for relays, transformers, choke coils, etc. Hermaseal hermetically sealed assemblies meet all specifications, are available in wide range of sizes and adaptations to meet specific requirements.

Transistor Bases and Hermetically Sealed Enclosures! Pioneered and In Production at Hermaseal!

Ask for Hermaseal Help with your transistor application problems. We have solved many of the difficulties of heat and humidity protection and mounting germanium diodes, point-contact transistors and junction transistors for a wide variety of applications. Hermaseal's experience with new glasses, metal alloys, and smaller, close-tolerance seals, is at your service.

1101 LAFAYETTE ST., ELKHART 50, INDIANA

TUNABLE REFLEX TYPES FOR X-BAND RADARS AND BEACONS

Rugged construction for high-shock applications; integral leads for high-altitude unpressurized operation; low-voltage low-noise operation with rapid warmup—on frequency in 30 seconds—production lots, quantity prices.

Type	Frequency, kmc	Local Oscillator		High Power		Terminations	Tuner
		Resonator Voltage, v	Power Output, mw	Resonator Voltage, v	Power Output, mw		
V-260	8.5-10.0	200	15	350	125	3-pin base	slotted shaft
V-270	8.5-10.0	200	15	350	125	integral leads	slotted shaft
V-280	8.5-10.0	150	12	350	140	3-pin base	lock nut
V-290	8.5-10.5	150	12	350	140	integral leads	lock nut

FOR MICROWAVE RELAY SYSTEMS

Long life; low distortion; low long-time drift in tubes for transmitter and local-oscillator microwave-relay service in the frequency bands tabulated.

Type	Frequency kmc	Power Output, mw	Resonator Voltage, v	Tuner
X-26 (A to F)	5.925-7.725	1000 25	750 300	slotted shaft
V-53	10.7-11.7	50	300	slotted shaft
V-54	10.5-12.2	100	350	lock nut

FOR LABORATORY MEASUREMENTS, SPECIAL USES

Excellent microphonic characteristics; smooth-operating shaft tuners have minimum chatter and backlash; X-13 in production lots, quantity prices.

Type	Frequency kmc	Power Output, mw	Resonator Voltage, v	Tuner
X-12	12.4-17.5	30	600	micrometer
X-13	8.2-12.4	250	500	micrometer
V-55	8.2-11.5	600	500	lock nut
V-58	8.5-10.0	620	500	slotted shaft

TWO-RESONATOR OSCILLATOR AND AMPLIFIER TYPES

Fixed-frequency x-band radar and beacon tubes for severe service. Non-microphonic characteristics; molded silicone-rubber connections and integral leads for high-altitude unpressurized operation (except X-21); power outputs as high as 8 watts c-w, 500 watts pulsed.

Type	Frequency kmc	Power Output, w	Resonator Voltage, v	Gain db
X-21 (oscillator)	9.1-11.0	5	1300	...
V-23 (oscillator)	9.1-11.0	5	1300	...
V-27 (amplifier)	9.1-11.0	8	1300	10
V-62 (amplifier)*	9.1-11.0	8	1300	10
V-63 (oscillator)	8.5-9.4	5	1300	...

*V-62 has control grid for amplitude modulation

MULTIPLIER AND MULTI-RESONATOR-AMPLIFIER TYPES

For high-power uhf transmitters, the V-42 series comprises six 15-kilowatt amplifiers covering the entire uhf television band. Linear operation up to 12 kw sync output with 60 watts drive. Gain is 27 db.

For high-power pulse transmitters the V-45 and V-82 in combination permit low-level crystal control with

peak power of 8 kw at 2½ per cent duty cycle. The V-45 is a 5 to 1 frequency multiplier (1862 to 9310 mc) operating at a resonator voltage of 700 v. The V-82 is a pulse amplifier with a high-level power gain of 57 db operating at 9310 mc with a resonator voltage of 18 kv. (Total output presently committed, delivery 1954).

Special Varian klystrons are regularly being engineered to meet unusual application requirements. New types are constantly being developed.

Advertisers

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

NUCLEAR RESONANCE

HIGH-RESOLUTION SPECTROMETER

Research functions in the nuclear-resonance field are served by the Varian Model V-4300 High-Resolution Spectrometer capable of spectra identifications as illustrated below. These are derived from the variations in chemical bonding which result in slight shifts in the resonant frequency of the various protons present in a compound.

The standard instrument operates at a fixed crystal-controlled frequency of 30 mc and is used for studies of narrow lines, chemical shifts and fine structure in the resonances from hydrogen and fluorine nuclei.

VARIABLE-FREQUENCY SPECTROMETER

Varian Model V-4200 is also available. It operates over a range of frequency from 2 to 16 mc and with magnetic fields up to 14 kilogauss. This broad coverage permits observation of nuclear-resonance signals from practically every isotope possessing a finite magnetic moment.

HIGH-HOMOGENEITY ELECTROMAGNET

Large volumes of homogeneous magnetic field are provided for such applications as nuclear- and paramagnetic-resonance work, Zeeman studies, and beam deflection, by the Varian Model V-4012 Laboratory Electromagnet (center unit), which has 12-in. diameter pole pieces. Operating with a standard 1 1/4-in. air gap, the magnet provides a field uniform to at least 1 part in 50,000 throughout a

volume not less than 1 cu. in. With a magnet input of 4 kw, various pole configurations give a range of field from 7,000 to 37,500 gauss.

Other Varian magnets include the V-4008, an 8-in. pole-diameter electromagnet and the V-4007, a 6-in. unit, both similar to the Model V-4012, as well as several types of large laboratory permanent magnets.

POWER SUPPLIES AND ASSOCIATED UNITS

Special highly-regulated power supplies are available for magnet operation. Illustrated (right unit) is the Model V-2100 Power Supply which is capable of holding magnet current to 1 part in 10⁵ for a 10 per cent line-voltage change. This unit also features negligible long-time drift and circuitry for injection of (a) field sweeping voltages and (b) nuclear-

resonance field-regulating voltages.

Varian also manufactures the Model V-4400 Magnetic-Field Meter and Stabilizer which utilizes the gyromagnetic properties of atomic nuclei to reduce measurement of magnetic field to a direct measurement of frequency—simultaneously providing an error signal which can be used to activate field-stabilization equipment.

COMPLETE LABORATORY FACILITIES

Further advances in the art are being explored in the Varian Nuclear Resonance Applications Laboratory. This advanced facility is staffed with ex-

perienced chemists and physicists and fully equipped with the most highly developed instruments.

20 MC to 1000 MC

NOISE AND FIELD INTENSITY METER MODEL NF-105

(Commercial equivalent of AN/URM-7)
Three quick-change tuning heads.
Single knob tuning for easy scanning.
Built-in impulse generator serves as calibrator.
Carrier and peak reading VTVM.
Aural slideback.
Coaxial step attenuators.
Regulated "A" and "B" supply.

150 KC to 80 MC

NOISE AND FIELD INTENSITY METER, MODEL NF-114

(Commercial equivalent of AN/PRM-14)
Eight band turret switch.
Two tuned RF amplifiers on all bands.
Built-in impulse generator.
Carrier and peak reading VTVM.
Aural slideback.
Dry batteries or 115 Volts AC operation.
Subminiature construction.

UHF IMPULSE GENERATOR MODEL IG-115

PULSE WIDTH: 0.0005 microseconds (5×10^{-10} seconds).

FREQUENCY SPECTRUM: 10 KC to 1000 MC, flat within $\pm 1/2$ DB.

OUTPUT LEVEL: 70,000 microvolts per megacycle bandwidth adjustable over a 70 DB range.

AT-50

AT-60

UHF ATTENUATORS MODELS AT-50, AT-60

50 ohm resistive T-networks of concentric line construction.

FREQUENCY RANGE:
AT-50: DC to 4000 MC.
AT-60: DC to 3000 MC.

VSWR: Better than 1.1 at all frequencies.

ACCURACY: $\pm 1/2$ DB.

RATED POWER:

AT-50: 1 W continuous
1 KW peak

AT-60: 2 W continuous
2 KW peak

AT-101

STEP ATTENUATOR MODEL AT-101

Uses AT-50 pads in a six-step coaxial turret arrangement.

COAXIAL CRYSTAL MIXER MODEL CM-107

Broad Band, Fixed Tuned.
225 MC to 5600 MC in 8 models.
Input and L.O. VSWR better than 2- to 1.
L. O. rejection at IF output better than 30 DB.

4 KC to 110 KC

NOISE AND DISTORTION ANALYZER MODEL ND-110

BROAD BAND SENSITIVITY: -80 DBM.
NARROW BAND SENSITIVITY: -110 DBM.
Narrow band uses crystal lattice network for proper band pass characteristics.
Measures true RMS power of sine wave or complex signals.

RESISTORS • FOCUS COILS DEFLECTION YOKES

Precision-built for critical electronics applications

Whatever your requirements for top quality wire-wound components, you can count on I-T-E. Power resistors, precision resistors, deflection yokes, focus coils—all I-T-E products are specially designed and

precision-built to meet critical commercial and government specifications. Broad engineering background, extensive production facilities, and close control assure *quality* components in any *quantity* you require.

I-T-E POWER RESISTORS

Non-hygroscopic ceramic foundations are in accordance with JAN specifications.

Purest resistance wires are uniformly wound to prevent shorted turns and excessive hot spots. All connections silver-soldered.

Vitreous enamel coating (organic if required) provides a glazed moisture-repellent surface with fast heat-dissipation qualities.

Advanced production methods assure high stability, long life.

Standard Tolerance: $\pm 10\%$, $\pm 5\%$ and less made to order.

Standard fixed resistors:
5-200 watts

Adjustable resistors:
10-200 watts

Oval resistors:
30-75 watts

Ferrule resistors:
12-200 watts

Special resistors:
built to specifications

I-T-E PRECISION RESISTORS

High-quality wire alloys are used—free from internal stresses and strains.

Semi-automatic precision winding method assures even tension—eliminates hot spots.

Hermetic or vacuum-impregnated sealing for protection against destructive effects of sales, moisture, and atmospheric conditions.

Accelerated aging process prior to calibration assures accuracy.

Critical quality control eliminates all resistors which do not come up to high I-T-E standards.

Standard Tolerance: $\pm 1\%$. Specified tolerances down to $\pm 0.05\%$.

Type A: lightweight, hermetically sealed—for precision operation up to 125° C. Surpass JAN R-93, Characteristic A, and MIL R-93 A specifications.

Type B: vacuum-impregnated, moisture-resistant. For JAN R-93, Characteristic B, specifications.

Ratings from 0.01 ohm-10 megohms, 0.125-5 watts.

90° DEFLECTION. FLARED WINDINGS.

70° DEFLECTION. FORM-WOUND.

I-T-E DEFLECTION YOKES

Up to 90° deflection without neck shadow. Design allows $\frac{1}{8}$ " pullback on neck of TV tube.

High sensitivity provides full deflection at low line voltages.

Full focusing for sharp horizontal and vertical focus. Excellent side and corner resolution.

Shrink-proof insulation between horizontal and vertical coils.

Minimum "pincushion" distortion—as result of special I-T-E coil design.

Thorough electrical and visual pretesting—for shorts, inductance, resistance, induced voltage, insulation breakdown, cross-talk.

I-T-E FOCUS COILS

High quality focus coils—small, compact, lightweight. Precision-built to commercial or government specifications. For use with tubes up to 90° deflection. Minimum spot distortion. Retain proper focus over wide range of line voltage variations.

◀ **Hermetically-sealed electromagnet type** for government use. Meets MIL-T-27 specs. Precision-wound of fine, uniform copper wire. Sealed in nitrogen—for minimum temperature rise.

Permanent magnet type for government use. Meets MIL-T-27 specs. *Locked* controls assure uniform focus after severe shock and vibration. ▶

voltage, and small,
low-voltage equipment
used for diagnostic and
therapeutic purposes
For industrial radiography
High energy electron
equipment for sterilization
of pharmaceuticals and food

In ELECTRONICS
Co-axial cables for television,
etc. Radar equipment, wave
guides, similar apparatus

AN IMPORTANT NEW DIELECTRIC GAS,
General Chemical's Sulfur Hexafluoride is
gaining attention for a wide range of high-
and low-voltage electrical and electronic
equipment. Many now consider Sulfur
Hexafluoride to be superior to any other
available gaseous insulation from the
standpoint of dielectric strength, chemical
stability, and non-condensing characteris-
tics. Under certain conditions, the dielec-
tric strength of SF₆ is superior to liquid
insulating materials.

TO HELP YOU KNOW MORE about this in-
ert, non-toxic gas, General Chemical is of-
fering its specially prepared Sulfur Hexa-
fluoride Technical Bulletin (SF₆A). The
bulletin contains selected data on the phys-
ical properties of Sulfur Hexafluoride, as
well as details concerning the advantages
of its use for high voltage electrical equip-
ment. The information in this bulletin may
suggest applications for your products and
processes which you will want to investi-
gate further.

Tailor-Made Fasteners in Volume Quantities

MINIATURE BATTERY CONNECTORS

For use with small "B" batteries; afford quick and positive polarized electrical connections and worthwhile space savings on such small equipment as portable radios or hearing aids.

FEMALE ANODE CONNECTORS

Made from cold rolled steel and plated to specification; this part provides the high voltage connection to a metal picture-tube strap, or all other connections.

FISHTAIL RATCHET PLATE

Made in a wide range of sizes to hold on smooth metal, die-cast or plastic studs. For use on refrigerators, radio cabinets, washing machines and other products to hold medallions, nameplates, etc.

VIBRATOR GROUNDING FASTENERS

Holds 1½" dia. beaded or non-beaded vibrator in any position to radio chassis. Vibrator Can grounded to frame. Holding prongs designed to hold several types of Cans.

NYLON SNAP-IN NUT

Designed for the attachment of shelf supports or channels to porcelainized sheet metal line. Used with sheet metal screws they provide high pull-values and no chippage.

RUBBER FOOT

Snap-in Rubber Foot for Record Changers and Phonograph Mountings eliminates threaded member, lock washer and nut thereby speeding assembly time and reducing costs.

SHELF SUPPORTS

Plastic Shelf Supports designed to snap into porcelainized hole. Driven pin expands Trimount section securing fastener without porcelain chippage. Variety of shapes and sizes.

INDICATOR-LIGHT PLUG BUTTONS

Snap-in type for electrical appliances. Removable. Jeweled or plain glass. Some plastic. Designed in a wide range of colors, shapes and sizes.

PLUG BUTTONS

Made to snap into hole sizes 1/8" to 3". Can be embossed with ornamental or functional designs. Removable. Supplied with various finishes, in a variety of shapes and sizes.

TUBING AND WIRING CLIPS

For use in electrical and hydraulic systems. Holds wires and tubing firmly, without chafing, under extreme vibration. Made in hundreds of sizes.

TRIMOUNT STUDS

Designed to hold two or more thicknesses of material together. Easily installed by hand. Insure vibration proof attachment. Permanent or removable attachment. Wide variety of shapes and sizes.

DOT

Parts illustrated are representative of the thousands of different specialized fasteners and allied devices designed and manufactured in volume by United-Carr and its subsidiaries for leading manufacturers of electronic equipment. United-Carr's wide and varied experience with special fastening problems in the automotive, aviation and appliance fields provides an unequalled background of technical knowledge which may well be applicable to your special needs.

UNITED-CARR
FASTENER CORP.

CAMBRIDGE 42, MASSACHUSETTS

Ucinite Electrical Assemblies

BATTERY CONNECTORS

Wired snap-on units for use with batteries equipped with United-Carr electrical snap fasteners. Wiring to customer's specifications.

BANANA PINS

Four sizes of plugs with one-piece beryllium copper springs. Adaptable mounting ends in threaded, staking, or solder lug types. Similar Mating Jacks also available.

SHOCK MOUNTS

Offered in several sizes—brackets and durometer of rubber bushings can be varied. With threaded Teenuts or plain bushings. Insulated versions if needed.

ANODE CONNECTORS

Plug button contacts for positive, firm connections. Corona resistant neoprene or silicon shields in straight or right angle types. Wiring to customer's specifications.

TUBE CAPS

Positive gripping, heat treated steel springs in corona resistant metal housing. Insulated or non-insulated. Wired to specifications. Type shown has silicon shield for special application.

TUBE SOCKETS

Ceramic octals and special types. Ring or saddle mounting. Open ended plates for shock mounting with rubber grommets. J A N types.

SWITCHES

Slack type switches manufactured as a licensee. Variety of rotary and push-button assemblies to specifications.

SNAP SWITCHES

Precision, momentary contact push-button switches. Small and dependable. Several circuit arrangements. Water tight version shown.

TEST JACK

Ucinite's quality jack for .080 probes. Beryllium copper contacts. Nylon insulation in colors. Metal shell for firm dependable mounting.

POINTERS

Slide pointers. Two sizes of carriages adjustable to variations in rails and adaptable to any indicator design.

METAL STAMPINGS

Volume production in Metal stampings. Years of engineering and tooling skill available to solve your particular problem.

With years of specialized experience in the electronics field and complete facilities for the volume production of small metal stampings as well as the assembly of metal to plastic and ceramic components, Ucinite is fully equipped to supply you with special electrical parts and assemblies... designed, assembled, wired and marked to your specifications. For complete design, engineering and production service, call your nearest Ucinite field engineer.

The UCINITE Company

DIVISION OF UNITED-CARR FASTENER CORP.

Newtonville 60, Massachusetts

LF... HF... UHF... Microwave Test Equipment

RADA-SWEEP: An all Electronic sweeping oscillator for use in aligning radar IF strips. Swept by symmetrical sawtooth also used for sweeping the oscilloscope. Marks individually switched on or off. Separate attenuators used on pip marker and high frequency outputs. True zero level reference

baseline provided on scope display.
 CENTER FREQ... Switchable to 30 or 60 mc—Others to order
 SWEEP WIDTH... Switchable to 3 or 20 mc
 MARKERS... Narrow pulse type crystal positioned at 25, 35, 55, 65 mc
 PRICE... \$395 with marks as above. Marker frequencies changed or added on special order.

THE MICROWAVE GAIN SET. (for use down to VHF): A complete system for making precision measurements of gain or loss in microwave components or systems. The IF amplifier-metering portion, available separately as the Model 620-A Amplifier-Detector Set, having an input frequency of 70 mc., may be used with other signal sources and local oscillators to provide measurements down to the VHF range. It consists of a pre-amplifier, calibrated attenuator, amplifier-detector and power supply. The 500-A Double Klystron Power Supply and "Centilators", Microwave Signal Sources, both optional, are also available. With its high gain and ultimate accuracy, the Set is capable of accurate loss measurements in the vicinity of zero loss, as well as where losses are as great as 80 db.

READABLE to 0.025 db
 ACCURACY within 0.1 db of attenuator calibration.
 MEASUREMENTS with available power as low as -80 dbm.
 AVAILABLE with or without RF-HEADS. May be used in conjunction with signal source and local oscillator for any frequency range.
 EXTREMELY well regulated to prevent disturbance of measurements due to drift of gain or tuning.
 PRICE—Model 620-A Amplifier-Detector Set...\$2,250

MEGA-MATCH: Displays reflection coefficient over wide frequency range. Measures reflected energy. Used for designing broad band antennas and matching transformers, checking impedance matching of TV RF

transformers and tuners, and measuring transmission line terminating impedances.
 FREQ. RANGE... 10 to 1000 mc FREQ. SWEEP... To 30 mc in width
 SENSITIVITY... Reflection coefficients down to approx. 0.01 up to 500 mc and 0.1 from 500 to 1000 mc can be seen. PRICE...\$895

MICROWAVE MEGA-MATCH: Same function as Mega-Match, except frequency range is 8500 to 9700 mc., and 1" x 1/2" X-band waveguide is used for the delay system. PRICE...\$895

MEGA-PULSER: Provides a source of very narrow pulses for use in testing the transient response of wide-band circuits and the correctness of termination of transmission lines. 3 different pulse repetition rates and 4 different pulse widths for wide band video amplifier transient response studies. Operates with internal or external triggers.

OUTPUT PULSES:
 AMPLITUDE... Approx. 150v pos. or neg.;
 WIDTH... 0.025, 0.05, 0.1, 0.25 micro-sec.;
 REPETITION RATES... 100, 1000, 2000 pps.;
 IMPEDANCE LEVEL... 53.5 ohms
 RISE AND DECAY TIME... Approx. 0.01 micro-sec.;
SYNCHRONIZING PULSES:
 AMPLITUDE... Approx. 50v pos. or neg.;
 IMPEDANCE LEVEL... Approx. 250 ohms;
 TIMING... Synchronizing pulses precede output pulses by 0.25 micro-sec.
 PRICE...\$195

CALIBRATED MEGA-SWEEP: The widest range sweeping oscillator available. Covers approximately 50 kc to 900 mc with maximum sweep rate of at least 30 mc.

SINGLE CONTROL TUNING... 50 kc to 900 mc
 SWEEP WIDTH... continuously variable 0 to 30 mc
 SAWTOOTH SWEEP... no phasing
 PRICE...

MEGA-SWEEP: An alternate model of the above with many of the same features except that it lacks single dial tuning and direct indication of approximate output center frequency. PRICE...

111-A CALIBRATED MEGA-SWEEP: Provides much higher sweep width to 40 mc, and same general features as Calibrated Mega-Sweep. Includes blanking for zero level baseline. Frequency range and output as follows:

Frequency Range	Output Impedance	Output Voltage (In)
1. 10 mc—950 mc	70 ohm unbalanced	0.15 Volts
2. 450 mc—900 mc	300 ohm balanced	0.3 Volts

Price...\$575

Model Video MARKA-SWEEP: All electronic video sweep oscillator. Crystal positioned marks of pulse type provided at 1, 2, 5, 10, 15 and 20 mc are fed directly to the oscilloscope. By use of external signal generator a variable frequency pulse type marker is available. Output max. is 0.3 v. from a 72 ohm internal impedance.
 SWEEP RANGES... 50 kc to 5 mc, 50 kc to 10 mc, 50 kc to 20 mc
 SAWTOOTH SWEEP... Sweeps video output and deflects oscilloscope horizontal axis.
 Zero level baseline provided on oscilloscope PRICE...\$495

KILO-SWEEP: Applies sweep generator techniques of visual alignment to the 50 kc to 2 mc frequency range. Simplifies and speeds adjustment of high fidelity receivers and high selectivity intermediate frequency amplifiers in communication receivers. Sweep width control allows continuous adjustment of width up to a maximum of 100 kcs.
 SWEEP... All electronic, linear symmetrical sawtooth. Sweep rate adjustable.

MARKERS... Up to 6 crystal positioned pulse type marks fed to scope vertical amplifier. 3 located at 0.5, 1, and 2 mc. Others specified by purchaser.
 ZERO LEVEL BASELINE... Produced on oscilloscope pattern.
 ATTENUATORS: Individual switched... 20, 20, 10 db
 Continuous... Approximately 20 db PRICE...

SONA-SWEEP: Very similar to Kilo-Sweep. Frequency range and sweep width adapt it to measurement and alignment of ultra high frequency amplifiers in Sonar and carrier-current communication systems. Adapted to work on high Q systems, since sweep rate is variable to below 5 cps. Coverage from 5 to 200 kc. with maximum sweep rate of 20 kc. Supplied with crystal marks at 5, 10, 15, 20, and 200 kc. PRICE...\$525

MICRO-PULSER: Provides rectangular pulses over a wide range of repetition rates. Feeds radar systems and components, transient response of video amplifiers and other electrical systems. Has variable delay between synchronizing pulse and output pulse. Pulse output may be used to pulse modulate an RF carrier to obtain a signal for testing transient response of high frequency band amplifiers. PRICE...\$195

Industrial Instruments... Production Test Equipment

TELEVISION PRODUCTION TEST EQUIPMENT

Model RF-P MARKA-SWEEP:

All electronic switchable TV sweep generator with narrow sweep markers not affected by receiver alignment. 15 mc wide sweep and narrow crystal positioned markers at picture and sound carrier frequencies on each of 12 VHF channels. IF band included. Output 70 ohms unbalanced and 300 ohms balanced (with matching device supplied).
PRICE...\$795

Model IF MARKA-SWEEP: An all electronic switchable IF TV sweep generator covering all present ranges. Includes crystal positioned sweep type markers not affected by receiver. For dual IF or intercarrier receivers. Generally similar to Model Video. PRICE...\$295. Crystal marks (up to 9) \$15.00 each extra.

MEGA-PIX: A crystal controlled television picture and sound RF signal source. Requires composite video signal. Provides output on all 12 channels for complete production line testing. PRICE...\$990

ULTRA-SWEEP: A precision UHF Sweeping Oscillator providing unusually high output. Designed for the production line testing of UHF TV receivers and tuners, as well as general laboratory applications. For information regarding markers, please contact the factory.

FREQUENCY RANGE... 450 mc to 900 mc Price...\$650
SWEEP WIDTH... Continuously variable from 0 to 50 mc
OUTPUT... 5 volts into 75 ohms terminated. ZERO LEVEL BASELINE produced on oscilloscope pattern

ATTENUATORS...
Switched: 20 db, 20 db, 10 db, 6 db, 3 db Continuous: Approx. 3 db
DETECTOR... built in

OTHER EQUIPMENT

MICROWAVE MEGA-NODES: Sources of random noise provided in six waveguide sizes. May be used for measurement of noise figure, receiver gain and calibration of standard signal sources. Noise figure obtained by comparing noise output of a system with the amount of noise introduced by the instrument. Particularly useful for checking over-all performance in radar systems. Available in following waveguide sizes covering following frequency ranges:

RG 69/U — 1200 to 1400 mc RG 49/U — 3950 to 5850 mc RG 51/U — 7050 to 10,000 mc
RG 48/U — 2600 to 3950 mc RG 50/U — 5850 to 8200 mc RG 52/U — 8200 to 12,400 mc

NOISE OUTPUT (ALL GUIDES): 15.8 db ± 0.25 db

MEGA-NODE SR.: A calibrated random noise source providing output over a wide frequency and power range. Used in measuring noise figure, receiver gain, and for voltage calibration of standard signal sources. Reads noise figure directly without band width computation.

FREQ. RANGE... 100 mc to 3000 mc
OUTPUT IMPEDANCE... 50 ohms
Unbalanced
NOISE FIGURE RANGE... 0 to 20 db

METER CALIBRATION:
Linear in DB noise figure
PRICE...\$995

VIBRALYZER: Analyzes signals in the 5-4400 cps region in 3 frequency ranges, with broad and narrow analysis filters on each range. For studies of transient and steady state vibration signals on aircraft, ships, rotating and reciprocating machinery. Directly writes analysis results on non-photographic recording paper. PRICE...\$2500

SONA-GRAPH: Three dimensional or Fourier Analysis of transient or steady state signals 80-8000 cps on non-photographic recording paper.

SONALATOR: Three dimensional display on oscilloscope of audio or impulse wave 100-4000 cps.

SONA-STRETCHER: Slows time scale of recorded speech to one-half without change in frequency distribution.

SONACTOR: Speech pitch extractor with visual display for all normal voices.

ATTENUATORS: Models 20 and 21 HF switchable attenuators.
FREQ. RANGE... dc to 500 mc
INPUT & OUTPUT IMPED... Model 20—53.3 ohms; Model 21—70 ohms
ATTENUATION... 41 db in 1 db steps; 10 db fixed.
ACCURACY... 0.1 db per db of attenuation at 500 mc.

WAVEMETERS: A high-Q micrometer-controlled coaxial X-band wavemeter. 8500 to 9700 mcs.

NOTE: All prices are F.O.B. factory and may change without notice.

Read directly from meter of the MEGA-NODE.
FREQ. RANGE... 5 to 220 mc
OUTPUT IMPEDANCES:
Unbalanced... 50, 75, 150, 300, Infinity
Balanced... 100, 150, 300, 600, Infinity
PRICE...\$295

MEGA-NODE: A calibrated random noise source providing selection of several output impedances with balanced or unbalanced output. Used in measuring noise figure, receiver gain, and for voltage calibration of standard signal sources. Noise figure obtained directly from meter of the MEGA-NODE.

NOISE FIGURE RANGE:
0 to 16 db at 50 ohms
0 to 23.8 db at 300 ohms
METER CALIBRATION:
Linear in DB noise figure.

ANALYZER, WIDE BAND: A high resolution tachometer that accurately measures average speed and slow or fast variations in that speed. To study hunting in synchronous motors, oscillations and torsional vibrations in coupled shaft systems, the effect of flywheels, clutches, etc. With a follower wheel it measures linear speeds of belts, wires, rolled products, etc. Excellent transducer for "rate" systems. Covers range of 500 to 9000 r.p.m., can be extended.
PRICE...\$1950 complete with oscilloscope.

Advertisers:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

TOP PERFORMANCE COSTS LESS
with
JOHNSON
Type "C" and "D" Capacitors!

TYPE D Dual

TYPE C Single

Tough, and of rugged construction, JOHNSON Type "C" and "D" capacitors are reliable, yet simply manufactured. Designed for use in medium power RF equipment, their functional engineering permits rapid, accurate assembly; resulting in lower construction costs and a lower sales price. The finest materials available today are used in the fabrication of JOHNSON Type "C" and "D" capacitors, and have been thoroughly tested and found ideally suited for their application.

CONSTRUCTION

Heavy aluminum end frames, .051" plates and 5/16" tie rods assure extreme rigidity. Rotor contacts are laminated phosphor bronze. Dual models have center rotor contact for electrical symmetry. Low-loss Steatite insulators are located outside the most intense RF fields and used solely to support stator assemblies. Shafts are 1/4" diameter, cadmium plated with 3/4" rear extensions.

Mounting brackets furnished for normal or inverted mounting. End frames drilled and tapped for panel mounting, special brackets or mounting of accessory components.

SPECIAL TYPES

Variations from standards such as special capacitances, ball bearings, dynamically balanced rotors, stainless steel shafts and right angle drive duals can be furnished in production quantities.

BUYERS'
GUIDE

**By the
electronic
industry
itself...*

Ready reference throughout the year... this Mid-June issue of electronics serves the industry in the exacting manner that it requires.

The electronics BUYERS' GUIDE

provides users with the only accurate and reliable product source available in the electronic industry... They refer FIRST to the "GUIDE."

Panel Indicators for all Applications

JOHNSON PILOT LIGHTS

All the qualities needed for clear, positive indication are available in all Johnson Pilot Lights. Furnished from stock with full or controlled brilliance; faceted or smooth jewels, plain or frosted. Colors are clear, red, green, amber, blue or opal.

TRUE COLOR INDICATION

147-1034 UL Approved. Internally frosted jewel with plastic backing color disc eliminates false indication from external light. Color does not appear until lighted. Disc may be specially imprinted and arranged for continuous visibility or only when lamp is lighted.

WIDE ANGLE

147-1220 UL Approved. For economical, continuous operation with neon or low powered incandescent bulbs. Double contact bayonet base contains series current-limiting resistor. Red, amber or clear Lucite cap transmits light with good efficiency.

ECONOMY DETACHABLE SOCKET

147-800 Chrome plated friction jewel holder. Lamp replaceable from front or rear of panel. Socket detachable from panel bushing. Insulated solder terminals. For miniature screw, candelabra screw or bayonet based bulbs.

VARIABLE LIGHT INTENSITY

147-1519 Camera type shutter. Rotation of jewel head varies light from full brilliance to off. Uses G6 double contact bayonet based bulb. Other types available with polarized discs for light variation.

Send for Catalog 973

Select Pilot Lights exactly suited to your needs from the complete Johnson line. Write us your requirements and we will be glad to suggest suitable selections.

JOHNSON variable inductors

for **RF** power applications.

To meet the needs of RF power equipment manufacturers, JOHNSON builds a most diverse line of variable inductors. These range from 3 to 50 amperes current capacity, inductance to 300 microhenries in standard types. Characteristics of all models are: high frequency insulation grade L4 or better, low contact resistance, rigid construction. Two typical examples of JOHNSON variable inductors are:

224-2-1

Variable inductor for high power applications. Winding is $\frac{1}{2}$ " copper tubing rated to 50 amperes current. Inductance continuously variable to 16.5 microhenries. Spring loaded silver plated roller contact permits adjustment with full power applied. Insulators are glass bonded mica; cast aluminum end frames are slotted to minimize Eddy current losses. Overall di-

mensions: length $21\frac{1}{8}$ ", width 9", height 9". Available in eight standard models, maximum inductances 10 thru 110 microhenries. Variations from standard units such as special inductances, dual inductors for push-pull applications can be readily furnished in production quantities.

229-201

10 microhenry rotary inductor for 100 watt applications. Winding is #14 tinned copper wire with variable pitch for efficient extended frequency range. Beryllium copper tension springs maintain rolling contact. Overall size: length $4\frac{1}{2}$ ", width $2\frac{1}{2}$ ", height 3". Other inductors in the same series utilizing #12 and #16 tinned copper windings, maximum inductance 37 to 300 microhenries.

In addition to these illustrated types, the JOHNSON line includes many other variable and fixed inductors for low, medium and high power applications. Fixed inductors are available with single or multiple windings, fixed or variable coupling windings and with electrostatic shields.

For further information on all types of JOHNSON inductors, write for catalog 973—yours on request.

Advertisers

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

PERFORMANCE PROVED...

JOHNSON SPECIAL SOCKETS

*Engineered for longer life
Designed for top performance*

JOHNSON electrical components include a complete line of special sockets for virtually every electronic application. Engineering skill, the result of years of specialized experience, and the most modern manufacturing facilities assure you of stock or custom-fabricated sockets that are both durable and dependable.

The special sockets shown here, variations of JOHNSON standard types, were designed to meet the punishing requirements of the 100 hour salt spray test. Construction successfully resists salt water corrosion, moisture condensation, and fungus growth; all contacts and contact springs are heavily silver plated to insure low loss and a positive electrical connection. Terminals are hot tin dipped, bases are of grade L-4 Steatite insulation with glazed top and sides. To provide added protection, all other surfaces are DC-200 impregnated.

122-101-14

122-217-8

122-211-14

122-101-14—Designed for Septar base tubes such as the 826, 829, 832, etc., this special socket has an anodized aluminum shell and provision for mounting mica button capacitors directly to the socket base. Five nickel plated, phosphor bronze retaining springs hold tubes securely in place and permit trouble-free operation in any position. A recessed base, solidly mounted on fungus resistant, phenolic washers, positively eliminates any contact movement.

122-217-8 thru 122-228-8—A series of ceramic wafer sockets designed to accommodate standard receiving tubes. Locating grooves speed tube insertion . . . beryllium copper retaining springs hold tubes firmly in place. Recessed phosphor bronze contacts

prevent movement; countersunk rivets and boss located mounting holes permit sub-panel mounting.

122-211-14—A bayonet type socket for all tubes equipped with "50 watt" bases. Double beryllium copper filament contacts (.0005" silver plated), and hot tin dipped integral solder terminals insure positive contact with a minimum loss. Brass shell is .0003" nickel plated—ceramic base extends beyond contacts, increasing breakdown voltage rating.

JOHNSON special sockets, made to order in production quantities, meet all JAN material specification requirements. The complete JOHNSON standard socket line is listed in catalog 973, available on request.

Inquires are invited, and wherever possible we will gladly quote on "specials" to meet military requirements.

CAPACITORS, INDUCTORS, SOCKETS, INSULATORS, PLUGS, JACKS, DIALS, AND PILOT LIGHTS

230 SECOND AVENUE SOUTHWEST . . . WASECA, MINNESOTA

Simplify the purchase of laminated and molded plastics for your electrical insulation requirements, by calling on C-D-F first. Here under one progressive management are the technical and production facilities required to deliver the goods without question, without fail.

From Vulcanized Fibre to Teflon, from the world's largest Dilecto tube to the smallest washer, C-D-F's fabrication know-how can save your time and money. Large, modern plants staffed by skilled technicians, alert, helpful sales organization.

VULCANIZED FIBRE

SHEETS • TUBES • RODS • RECEPTACLES

Vulcanized Fibre made from pure cotton rag paper, chemically treated so that fibres adhere completely and form a permanently solid mass, is an inexpensive, lightweight, electrical insulator of great mechanical adaptability. This hard, bone-like material is tough, resilient and strong. Its great physical strength, high dielectric strength coupled with arc resistance, arc quenching characteristics and adaptability to machining and forming operations have found for it many applications in modern industry.

Machining and punching of fibre are economical operations. Many C-D-F Vulcanized Fibre grades may be readily drawn and formed into a variety of shapes. Repeated moistening and drying during fabrication does not alter the nature or quality of the material.

C-D-F Vulcanized Fibre . . . it's new and yet old and reliable . . . always low-cost and available.

3 IMPORTANT SHEET GRADES WITH GOOD INSULATING QUALITIES

BONE . . .

A high density (1.40 specific gravity) hard material used for intricately machined parts where dimensional changes must be minimized. Has high mechanical strength, resistance to wear and compressibility. Used in a wide variety of electrical applications where the operating voltage does not exceed 250 volts. Particularly recommended for applications requiring good wear and arc resistance.

THICKNESS	SHEET SIZE
1/32 to 3/16"	46" x 70"
Over 3/16 to 5/8"	48" x 80"

COMMERCIAL . . .

A tough, pliable, strong material for general use. Has medium density, with good mechanical properties and high dielectric strength under dry conditions along with excellent punching and machining characteristics. This fibre can be used and formed into thousands of low-cost, dependable components.

THICKNESS	SHEET SIZE
.004 to 2"	48" x 84"

DIAMOND INSULATION . . .

A hard-surfaced chemically treated insulating paper (Fish Paper). Easy to bend, firm punch. Has high dielectric strength, stands extreme bending without cracking. Free from metallic particles. Rolls and ribbon rolls for automatic machines made up to 1/16" thick in various widths to order.

THICKNESS	SHEET SIZE
.004 to 1/8"	48" x 84"

DILECTO

SHEETS • TUBES • RODS • COLD FORMED PARTS

POST-FORMING Certain Dilecto grades (CF-1, XF, GB-SF, MEC-1F) may be formed to special shapes by heating and placing in an inexpensive cold mold. The thermoelastic properties of these Dilecto laminates open many production and design opportunities. Already widely used by the aircraft industry, Post-Forming Dilecto merits full investigation by every alert manufacturer. Write for complete C-D-F engineering service.

DILECTO ROLLED OR MOLDED TUBING finds wide usage in radio and electrical equipment because of excellent insulating and mechanical properties. Impregnated paper or fabric is rolled on a mandrel between heated pressure rolls, then oven baked or press cured in a heated mold to set up the resin.

MICABOND

Only the finest mica splittings are used in Micabond tapes, plates, tubes and fabricated parts. They are placed for completely leak-proof coverage, with strong binders used. Available in a wide range of sizes with many different backings including fiberglass, silk, cellophane, cotton and paper.

New . . . Silicone Bond Tape. Fiberglass one or both sides of Class H insulation. This inorganic tape withstands temperatures from 50° to 75° C. higher than Micabond (organically bonded) material.

Dilecto, a laminated phenolic material, meets the need for a non-metallic lightweight insulating material that is moisture resistant, good electrically, strong and adaptable to all fabricating operations. Some grades have exceptionally high mechanical strength — tensile, flexural, impact; others have high dielectric strength, high insulation resistance, high arc resistance and low loss factor.

Dilecto is a laminated material made from a base of either cellulosic paper; heavy or fine weave woven cotton fabric or mat; asbestos paper, woven asbestos fabric or mat; woven glass fabric or mat; and is coated with a synthetic resin.

The selection of the proper base material, the proper resin in the correct proportion is C-D-F's job, but the end user must realize how important it is that he fully understands what dividend results can be gained mechanically, and electrically, and from a cost standpoint, by getting the very best C-D-F material for the project. Here is a brief, yet complete listing of Dilecto sheet grades, each one with a combination of proven characteristics built into the material for the specific job.

SHEET GRADES (Rod and Tubing similar to sheet stock)

- X For mechanical applications when electrical properties are secondary.
- P For punching (Paper-based grades).
- XX For electrical applications requiring mechanical strength.
- XXX For high humidity applications with minimum cold flow.
- L For mechanical applications requiring fine machining.
- C For mechanical applications requiring toughness plus impact strength, for chemical and special applications.
- CE and LE For electrical uses requiring greater toughness than paper-based grades.
- GB For applications requiring heat resistance and high mechanical strength. For high heat applications.

SPECIALTIES made for a variety of structural, mechanical and electrical applications. There's one to fit your needs.

TEFLON

SUPPORTED AND UNSUPPORTED SHEETS AND TAPES

Due to the non-flammability and high heat resistance of Teflon,* it easily meets both Class B and Class H A.I.E.E. standards for maximum hot spot insulation temperatures. Teflon coated glass fabric laminates withstand 250° C. continuously and up to 300° C. intermittently without apparent degradation from oxygen.

A Teflon laminate has practically zero water absorption. The dissipation factor and dielectric constant of Teflon laminates are both extremely low over a wide frequency range. From 60 to 100 mc., the dissipation factor range is between .005 to .0005 and the dielectric constant ranges from 2.8 to 2.5 when measured in a field perpendicular to laminations.

* du Pont's tetrafluoroethylene resin.

PRINTED CIRCUITS . . . C-D-F Copper-clad Teflon does not absorb water, is resistant to surface leakage under high humidity and withstands temperatures over 200° C. At 100 megacycle frequency, the average loss factor is .0033. Because electrolytic copper sheet is used, it is free from impurities and is available in wide widths.

COILS AND CABLES . . . High voltage wires and cables use multi-layer wrappings of both unsupported and supported C-D-F tapes of Teflon to increase transmission line efficiency and to give permanent, trouble-free protection to cables of all types, including coaxial cables.

SPIRAL TUBING

CIRCLE • SQUARE • FLUTED • THREADED

C-D-F spiral tubing is stiff, sturdy, crush resistant. It has good tensile strength along with good dimensional stability under varying atmospheric conditions. It is low in cost, a strong material made of spiral-wound kraft paper which is impregnated with phenolic resin. Can be sawed, drilled, tapped, punched. Standard lengths are 2 to 4'. There are 13 standard grades. Write or call C-D-F about special sizes or grades.

General electrical, radio and television applications; coil forms for solenoids, transformers, relays, circuit breakers, and television tuners and deflection coils. Also used for selenium rectifier tubes and for containers and protective wrappings requiring extra strength and rigidity.

Property (1/16" thickness)	A.S.T.M. Test Method	Unsupported	Supported
Dielectric Strength	D-149		
Parallel to laminations, KV	Short time	70	65
	Step by step	55	50
Perpendicular to laminations, VPM	.005" thick	1500	800
Short time	.060" thick	600	700
Dissipation Factor, 10 ⁶ cycles	D-150	.00055	.0007
Dielectric Constant, 10 ⁶ cycles	D-150	1.87	2.6
Loss Factor, 10 ⁶ cycles	D-150	.0010	.0013
Arc Resistance, seconds	D-495	over 250	over 160
Insulation Resistance, megohms	D-257	over 10 ⁶	over 10 ⁶
Surface Resistance, megohms per cm	D-257	over 10 ⁶	over 10 ⁶
Volume Resistivity, megohms per cm	D-257	over 10 ⁶	over 10 ⁶

CELORON

A fabric based laminated or molded thermosetting phenolic plastic. May be supplied in sheets of all laminated construction, or molded from macerated fabric or a combination of macerated and laminated construction in a mold to the desired shape. Parts, either sheet stock or molded, may be machined to close dimensional tolerances. Celoron is chemically inert, insoluble, infusible. Unaffected by rapid temperature changes (may be used at 110° to 120° C.), it combines impact strength, dielectric strength, moisture and heat resistance, and has dimensional stability.

VULCOID

A resin-impregnated vulcanized fibre in sheets, tubes, rods, and fabricated parts. Approved by the Underwriters' Laboratories as Class A Insulation because of its good dielectric characteristics. Economical, easy to machine and punch, and is considered an intermediate grade between Vulcanized Fibre and a laminated phenolic.

NEW BOOKS

INSTRUMENT ENGINEERING

Vol. 1—Methods for Describing the Situations of Instrument Engineering

First of a 3-volume work giving a complete and unified study of the science of measurement and control, treating the subject as an established field of engineering. This volume develops a system of concepts, notations, diagrams, and mathematical forms for describing the performance of physical devices and variations in physical quantities. It provides a description of the physical circumstances under consideration by means of diagrams, mathematical forms, curves, and numerical data. By C. S. Draper, W. McKay, and S. Lees, Dept. of Aeronautical Engineering, MIT. 269 pp., 3 1/2 x 11, 93 illus., \$6.00.

**ELECTRONIC
ANALOG
COMPUTERS**

Gives aid in the design and operation of electronic computers of the d-c analog type used as differential analyzers and equation solvers. Shows procedure for setting up problems that lessens chief error of faulty assignment of scale factors. Gives samples of practical applications. Covers design of computer circuits, auxiliary components, and complete installations to meet specific needs. By Granino A. Korn, Staff Engr., Lockheed Aircraft Corp., and Theresa M. Korn, formerly Engr., Boeing Aircraft Co. 378 pp., 70 illus., \$7.00

**HARMONICS, SIDEBANDS
AND TRANSIENTS IN
COMMUNICATION
ENGINEERING**

As Studied by Fourier and Laplace Analysis

An authoritative reference on communication-engineering analysis. Deals not only with the Laplace, Fourier, and Taylor analyses but also with their application to all important phases of electrical communications. Shows how harmonic and transient analysis are applied to radio radar, television, and nuclear electronic problems; fully treats sideband theory. Considers both the mathematical and engineering viewpoints throughout. By Louis Cuccia, Res. Eng'r., RCA Lab. Div. 456 pp., 273 illus., \$9.00

TO THINK FASTER than the human brain, *TO ACT FASTER* than the human reflex... this is the control problem inherent in the tremendous speed potential of guided missiles and jet aircraft.

Early recognition of this basic problem enabled Kearfott to direct its outstanding development and production facilities to practical solution. Kearfott control components are setting new standards for precision and speed of response. Gyros and synchros of uncanny accuracy; compact servo

motors having high torque-to-inertia ratios, have been developed from basic research to an available production reality. Creative design for quantity production provides the answer in precision components today, for the control problems of tomorrow's aviation.

This engineering skill and the matching production facilities of Kearfott are available to you for the development and manufacture of components for your systems. Technical bulletins describing standard items will be sent on request. Your inquiries on both standard products and special purpose units are invited.

KEARFOTT COMPONENTS INCLUDE:

Gyros, Servo Motors, Synchros, Servo and Magnetic Amplifiers, Tachometer Generators, Hermetic Rotary Seals, Aircraft Navigational Systems, and other high accuracy mechanical, electrical and electronic components.

PRECISION TRANSFORMERS

Voltage reference transformers for use in computers and instrument transformers for laboratory use are standard production items of Transformers Inc.

Voltage ratio accuracy of $\pm 0.5\%$ can readily be obtained while accuracies as low as $\pm .01\%$ have been achieved for special applications. The phase angle can be as small as .1 milliradian (approximately 20 seconds).

Transformers Inc. has special facilities for the accurate measurements of voltage ratio and extremely small phase angles. Special techniques have been developed by our laboratory staff to manufacture precision transformers with predictable accuracy and permanency. Any assistance required in the application of precision transformers to specific problems will be furnished free of charge by our engineering staff.

Samples of voltage reference transformers have been submitted to the *National Bureau of Standards* for calibration and have been found to have a voltage ratio accuracy of better than $\pm .05\%$.

AUDIO TRANSFORMERS

Transformers Inc. has one of the most complete laboratories for the design of audio transformers. Our plant facilities permit us to manufacture large quantities at better than competitive prices. Although Transformers Inc. does not carry any stock items a special sample department is equipped to manufacture small quantities of audio transformers that are not commonly available. We also solicit inquiries on plate power and filament transformers for either large production quantities or samples.

INDUCTANCE MEASUREMENT—Any operating condition can be simulated in the range of 0-1000V A.C. and 0-5 Amps. D.C.

DEVELOPMENT OF AUDIO TRANSFORMERS—All characteristics of audio transformers in the range of .01 cycle to 10 M.C. can be measured and evaluated.

POWER LOSS MEASUREMENT—Losses as low as 15 micro watts in the range of 20 c to 200 K.C. can be measured and analyzed and possible improvements effected.

PULSE TRANSFORMER DESIGN—Try methods commonly used in the design of pulse transformers have been supplanted by use of special equipment.

MINIATURE TRANSFORMERS

Air-borne electronic equipment has created a need for small transformers with particular emphasis on light weight. Small sizes are obtained by the use of special core material and light weight requirements are met by special encapsulating methods. TRANSFORMERS, INC. is a recognized source for miniature transformers for military or industrial use. We carry a large stock of special alloy laminations in a great variety of sizes.

SUB-MINIATURE TRANSFORMERS

Even greater miniaturization can be effected in special cases by either reducing the efficiency of the transformer or by making the operating requirements less stringent.

All inquiries on miniature and sub-miniature transformers will receive prompt attention. In view of our large inventory on special alloy laminations samples of miniature and subminiature transformers can be made promptly.

PULSE TRANSFORMERS

Transformers Inc. has the proper engineering, production and testing facilities for the manufacturing of all types of pulse transformers. We are currently manufacturing a great variety of pulse transformers of the miniature size used in blocking oscillators. These transformers are used in conjunction with standard vacuum tubes to produce pulses with a width as small as .1 microsecond, and with repetition rates up to 5000 p.p.s. We are also equipped to manufacture power pulse transformers as used in radar equipment. We are at present designing and developing a power pulse transformer with a peak power output of 4 megawatts and a peak voltage of 61 kilovolts to be used in conjunction with a magnatron.

HIGH TEMPERATURE TRANSFORMERS - CLASS "H"

Class "H" transformers can be divided into two distinct groups.

GROUP 1

The first group are those that operate in extremely high ambient temperatures. They are of normal weight and size.

GROUP 2

The second group are those transformers that of necessity have been made so small in size by reducing their efficiency so that the attendant losses cause high temperature during operation.

In addition to these two groups there is a third in which the ambient is high and miniaturization has been effected. Transformers Inc. is in a position to make samples as well as large quantities of these types of transformers.

Transformers Inc. meets all requirements for

CLASS A • HIGH TEMPERATURE-CLASS "H" • MINIATURE
SUB-MINIATURE • MIL-T-27 • COMMERCIAL GRADES

electronics
BUYERS' GUIDE

FME for **ELECTRONIC TEST EQUIPMENT** ranging from **10 kc. to 4000 mc.**

During the present national emergency, practically our entire output of test equipment goes to the armed services; but Federal has traditionally been a government supplier, a relationship which has existed over a period of many years, dating back to 1921. During World War II, Federal received five successive Army-Navy E Awards—for its achievements in both the electronic and mechanical fields.

We now manufacture precision electronic equipment as follows:

- SIGNAL GENERATORS
10kc. to 4000mc.
- HETERODYNE FREQUENCY METERS
100mc. to 10,000mc.
- RADIO RECEIVERS
.54mc. to 54mc.
- HIGH FREQUENCY COMMUNICATION SYSTEMS
- PRECISION COMPONENTS SUCH AS ATTENUATORS, BUTTERFLY TUNERS, ETC.

F. M. E. has 3 completely integrated plants consisting of over 200,000 square feet of production space, with unusually complete engineering and tooling facilities, and combining every requirement for designing, fabricating, assembling and testing electronic instruments from the raw materials to the finished product.

Signal generators and frequency meters, typical of the test equipment developed and manufactured by Federal.

KAHLE MACHINES

for Automatic Production of

TRANSISTORS
ELECTRONIC TUBES

from

Sub-miniature to Cathode Ray

More than forty years of precision-engineering experience is built into the Kahle machines which are supplied to the electronics industry for general purpose or for special purpose. Hundreds of production problems have been presented to Kahle — in every case Kahle has designed and developed a machine to produce results as specified. Kahle specializes in equipment for manufacturing sub-miniature, miniature, standard, cathode ray, transmitting tubes and transistors . . . and other glass parts in limited quantity for laboratory needs or for maximum production runs.

Illustrated at right and below are a few representative machines:

(1) MODEL 2148, Automatic Lead Wire Welding Machine. (2) MODEL 2179, Automatic Button Stem Machine; (3) MODEL 1384, Sub-miniature Button Stem Machine; (4) MODEL 2185, CR Tube Combination Neck Cutting and Neck Splicing Machine.

A RELAY for every application...

From extremely sensitive to heavy duty relays... whatever the need... you'll find Signal Engineering Relays built to meet the severest operating conditions.

Backed by more than a quarter-century of specialized engineering experience, each relay embodies design features which insure accurate, efficient and dependable operations to meet exacting standards of performance. That is why... whenever performance counts... Signal Engineering Relays are used as components by many of the largest manufacturers of electronic equipment and devices, and for other control operations by leading industrial firms everywhere.

Many of our relays are designed to meet Navy and military applications without modification. Other standard relays available, or relay assemblies modified to fit various armed services' requirements.

Tell us your requirements and we will gladly submit our recommendations.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potential can be.

SUPERIOR PERFORMANCE

On 3 to 20 Megacycles

The LA-239 C Oscilloscope

DATA

- 1. Wider Bandwidth:** Complex waves from 5 Cycles to 15 Megacycles. Sine waves from 3 Cycles to 20 Megacycles.
- 2. Extended Sweep Frequencies:** Linear from 10 Cycles to 20 Megacycles internally synchronized. Triggered sweep, from single random impulses to regular pulse-intervals up to as high as 20 Megacycles.
- 3. Square Wave Response:** Rise time 0.042 Microseconds; only 5% droop on flat-topped pulses as long as 30,000 Microseconds duration.
- 4. Greater Stability:** Electronically regulated power supplies throughout to maintain accuracy and constant operation under varying line conditions or line surges. You can display surges on the line from which Model LA-239C is being powered without distortion of the trace!
- 5. Higher Signal Sensitivity:** Maximum sensitivity without Probe: 10.4 millivolts. With Probe: 100 millivolts. (Maximum signals, 125 V. Peak and 450 V. Peak respectively.)
- 6. Timing Markers:** Interval Markers of .2; 1; 5; 20; 100; 500; or 2,000 Microseconds may be superimposed on the trace for the accurate measurement of the time base.
- 7. Voltage Calibration:** Signal amplitude compared against a 1,000 cycle square wave (generated internally) the amplitude of which is controlled by a step-and-slide attenuator calibrated in peak volts. (A jack is provided to deliver 40V Peak for use in calibrating other instruments.)
- 8. Sweep Delay:** Any portion of the sweep longer than a 10 Microsecond section may be expanded by 10:1 for detailed study of that portion of the signal.
- 9. Power Source:** 110 to 130 V AC; from 50 to 1,000 cycles. 295 Watts. (Fused at 4 amperes.)
- 10. Dimensions:** In Bench Cabinet: 19½ in. Wide; 15¼ in. High; 16¾ in. Deep. In Rack Mounting (With cabinet removed to fit standard relay rack): 19½ in. Wide; 14 in. High.

THE LAVOIE MODEL LA-239C has been designed to surpass the high performance of the TS-239A/UP, which has been the standard test oscilloscope for the Armed Services since its introduction. Model LA-239C is the result of a long period of research and development which has included the study of new tubes, new circuits, and new techniques. Rugged design has been combined with functional simplicity to produce an instrument as attractive as it is efficient.

To create a circuit that will produce a certain complex wave form, or study transients and pulse phenomena, no better precision instrument is available today.

Lavoie Laboratories take pride in offering this precision oscilloscope as the combination of engineering perfection and manufacturing skill.

Lavoie Laboratories, Inc.
MORGANVILLE, NEW JERSEY

DESIGNERS AND MANUFACTURERS OF ELECTRONIC EQUIPMENT

CUSTOM BUILT TRANSFORMERS

Raytheon can furnish custom engineered transformers to fit any special need. Typical units include: single or polyphase power transformers, blocking oscillators, servo transformers, chokes, audio components, filters, saturable magnetic components, etc. Cased or open types to meet the most exacting MIL specifications, as well as Underwriters' Laboratories and R.T.M.A. requirements.

TOROID-L UNITS

TOROID-L coils wound on powdered permalloy cores, high permeability solid materials or stamped "O" cores. Facilities for all types of winding including litzendraht winding, winding heavy wire on wedding ring coils and square coils wound from strip materials. Other Toroid-L Units include: transformers, filter networks for audio or ultrasonic work, lumped parameter delay lines and magnetic amplifier coils. Write for specific information.

VOLTAGE STABILIZERS

TEN WAYS BETTER

1. Deliver accurate AC voltage within $\pm 1/2\%$
2. Stabilize output with more precision
3. Regulate better at full load
4. Hold up better under overload
5. Better no-load to full-load regulation
6. Accept wider input voltage range
7. Less voltage change as units heat up
8. Less change in output as frequencies fluctuate
9. Smaller, lighter, more compact; no moving parts
10. Cost less to operate

Standard catalog types rated from 15 to 2000 watts as illustrated, are available through 125 authorized distributors. All models operate on input of 95 to 130 volts, 60 cycle, single phase current; compensate within 1/20 second; maintain voltage within $\pm 1/2\%$ of rated output. Special custom-built units in ratings from 5 to 10,000 watts are also available to meet special needs. Write for complete information.

STANDARD CONTROL KNOBS

Raytheon control knobs offer CUSTOM style and quality at STANDARD cost. Made of tough, durable "Tenite II" (cellulose acetate butyrate), injection molded with anodized aluminum inserts and dual setscrews. All types and sizes to fit 1/4-inch diameter shafts. Miniature (70 series) round, dial and pointer knobs also available for 3/8-inch shafts.

MATTE OR MIRROR FINISH

Black knobs available with high gloss "mirror" finish for commercial applications or non-reflecting "matte" finish for government equipment. Manufacturers interested in colored knobs are invited to submit their requirements for quotation.

(All Knobs Shown 1/2 Size)

WELDPOWER*

STORED ENERGY WELDING UNITS

Raytheon Condenser Weldpower Control Units and Weldpower Welding Heads are designed especially for precision welding light gauge non-ferrous and ferrous metals. They are widely used in the Electronics Industry for assembling tubes and other components; attaching pigtailed to condensers, resistors, batteries, etc.; welding contacts involving similar or dissimilar metals and countless other small part assembly jobs.

Weldpower welding is precisely repetitive, completely dependable. It offers the important advantages over soldering, conventional AC welding or other assembly methods of time saved, fewer rejects, increased production and lower cost. Write for complete information.

*Reg. U. S. Pat. Off.

Raytheon stored energy Weldpower Control units are available in three models with appropriate Weldpower heads.

ABC

ABP

The new Radio Broadcasting facilities at Accion Cultural Popular, in Sutatenza, Colombia, used for combatting illiteracy in Latin America. This station, utilizing a Type XT-2-A, 25/40 KW Short Wave broadcast and communication transmitter, is the highest power installation in northern South America. Maurice I. Parisier and Co. furnished the transmitter plant and was responsible for the over-all station erection supervision.

Dedication of the Maurice Parisier & Co. Type XT-transmitter on April 1953 by Cardinal Ciriaco Luque of Colombia.

TYPE XT-2-A 25/40 KW SHORT WAVE BROADCAST AND COMMUNICATION TRANSMITTER

All assembling done with parts, manufacturing drawings and specifications supplied by the General Electric Co.

- 40 KW A-1 Transmission (Telegraph and Frequency Shift Keying)
- 25 KW A-3 Transmission (Broadcast Quality)
- Carrier Frequency: 3.5 to 22 Mcs.

Fully guaranteed performance, in accordance with Federal Communications Commission's Standards of Good Engineering Practice Methods.

DELIVERY FROM STOCK SUBJECT TO PRIOR SALE

MAURICE I. PARISIER & CO. ARE EXPORT MANUFACTURERS' REPRESENTATIVES FOR:

Transmitting and Receiving Tubes, Magnatrons, Klystrons, Thyratrons, TR and ATR Tubes, and all types of laboratory measurement equipment
Communication Equipment for Armed Forces

Liaison between U. S. and European manufacturers for engineering and production assistance.

TWO NEW

IN-RES-CO RESISTOR TYPES

TYPE PM RESISTORS

...for positive hermetic sealing, immunity to high temperature, moisture and salt spray

DESIGNED TO EXCEED MIL-R-93A SPECIFICATIONS

Type PM resistors were specially developed by IN-RES-CO to meet the demand for hermetically-sealed units featuring extremely lightweight yet capable of withstanding severe exposure to moisture and salt spray. They are imbedded in a specially developed

high temperature compound having the same T.C. of expansion as the wire and coil form, thus eliminating stresses inherent in other constructions which cause eventual failure. The compound used is an exclusive development of IN-RES-CO.

TYPE PM-1 .25 Watt, Non-Inductive

WIRE	SIZE	MAX. RES.
KARMA*	.001"	250,000 OHMS
KARMA*	.00135"	150,000 OHMS

INSTRUMENT RESISTORS COMPANY

FOR TOUGH

MILITARY and COMMERCIAL

APPLICATIONS

TYPES PT & PL RESISTORS

.. for compact size and lightweight when hermetic sealing is not required

DESIGNED TO MEET MIL SPECIFICATIONS

Types PT and PL resistors offer the same space and weight saving advantages as the PM series. Although these units are not hermetically-sealed, they feature the same protective fungicidal coating and are the perfect answer where minimum size and weight, high

accuracy and rugged durability are essential. As noted in the specifications, the PT types have lug terminals and the PL types feature wire leads. Both types are otherwise similar in most respects, including maximum resistance values and choice of resistance alloys.

TYPE PT-1 .25 Watt, Non-Inductive

WIRE	SIZE	MAX. RES.
KARMA*	.001"	250,000 OHMS
KARMA*	.00135"	150,000 OHMS
NICHROME*	.001"	200,000 OHMS
NICHROME*	.00135"	125,000 OHMS
MANGANIN	.0015"	40,000 OHMS

BODY 1/2" dia., 7/16" long
TERMINALS: Hot-tinned brass lugs
TYPE PL-1 — Same as PT-1 except radial wire leads, 1 1/2" lg., No. 20 B & S tinned copper

TYPE PT-2 .5 Watt, Non-Inductive

WIRE	SIZE	MAX. RES.
KARMA*	.001"	800,000 OHMS
KARMA*	.00135"	180,000 OHMS
NICHROME*	.001"	750,000 OHMS
NICHROME*	.00135"	150,000 OHMS
MANGANIN	.0015"	50,000 OHMS

BODY 1/2" dia., 9/16" long
TERMINALS: Hot-tinned brass lugs
TYPE PL-2 — Same as PT-2 except radial wire leads, 1 1/2" lg., No. 20 B & S tinned copper

TYPE PT-4 1 Watt, Non-Inductive

WIRE	SIZE	MAX. RES.
KARMA*	.001"	1.5 MEGOHMS
KARMA*	.00135"	500,000 OHMS
NICHROME*	.001"	1.25 MEGOHMS
NICHROME*	.00135"	400,000 OHMS
MANGANIN	.0015"	140,000 OHMS

BODY 1/2" dia., 1" long
TERMINALS: Hot-tinned brass lugs
TYPE PL-4 — Same as PT-4 except radial wire leads, 1 1/2" lg., No. 20 B & S tinned copper

TYPE PT-10 2 Watts, Non-Inductive

WIRE	SIZE	MAX. RES.
KARMA*	.001"	6 MEGOHMS
KARMA*	.00135"	2 MEGOHMS
NICHROME*	.001"	5 MEGOHMS
NICHROME*	.00135"	1.5 MEGOHMS
MANGANIN	.0015"	500,000 OHMS

BODY 5/8" dia., 2-1/8" long
TERMINALS: Hot-tinned brass lugs
TYPE PL-10—Same as PT-10 except radial wire leads, 1 1/2" lg., No. 20 B & S tinned copper

TYPE P-81 .5 Watt, Non-Inductive

WIRE	SIZE	MAX. RES.
KARMA*	.001"	400,000 OHMS
KARMA*	.00135"	150,000 OHMS
NICHROME*	.001"	350,000 OHMS
NICHROME*	.00135"	140,000 OHMS
MANGANIN	.0015"	50,000 OHMS

BODY 3/8" dia., 3/4" long
TERMINALS: Radial wire leads, 1-1/2" lg., No. 22 B & S tinned copper
MOUNTING: Clearance hole for No. 4 screw through center

TYPE P-81-S .5 Watt, Non-Inductive

Available with same windings and maximum resistances as P-81 type but supplied with Bakelite shell for protection against mechanical injury and shorts in confined space.

BODY 7/16" dia., 3/4" long
TERMINALS: Axial wire leads, 1-1/2" lg., No. 22 B & S tinned copper
MOUNTING: Clearance hole for No. 4 screw through center

NOTE 2: 1% Tolerance standard on all units shown. 0.1% supplied at extra cost.

FAST QUOTATIONS AND DELIVERIES — *IN-RES-CO* invites inquiries on all types of wire wound resistors for military or commercial applications in any quantity large or small. Modern expanded facilities insure prompt, efficient service on both standard and custom-built resistors.

PACKAGED ELECTRONIC COMPONENTS

for design and production

ECONOMY

Servomechanisms, Inc., pioneers in the "packaged function" technique, offers the economy-minded designer and manufacturer of electronic and electromechanical control systems, outstanding savings in development and production costs through the use of plug-in electronic components. These standard plug-in components may be used immediately in the laboratory breadboard stage or in quantity production, thus relieving the user of design and production problems and reducing the electronic plug-in components to a purchased parts status.

This advanced design philosophy provides a new standard of **reliability, interchangeability, and ease of maintenance.** Servomechanisms, Inc., facilities are available for the development and production of special "packaged electronic functions" and complete systems.

Titeflex

Rigid and Flexible WAVEGUIDES

TITEFLEX, INC., 534 Frelinghuysen Ave., Newark, New Jersey

There is nothing so important in a waveguide as electronic satisfaction. The price of a waveguide is usually small by comparison with the cost of manufacturing and testing the assembly in which the waveguide is used. Failure of a waveguide, therefore, to meet requirements might jeopardize a costly investment in labor and materials and increase operational failures.

Titeflex Waveguides, both rigid and flexible, are competitive in price. They are much more. They are made to such close tolerances, and so carefully inspected and tested under quality control supervision that you can accept our test figures, if you choose to, without duplicating inspection.

Titeflex is valued as an authority in working out difficult waveguide problems; and as a source of dependable delivery—two points you may want to keep firmly in mind. We have the plant, the productivity, and the people—ready to help you. Write for information and free literature.

RIGID

Titeflex specializes in the design and fabrication of rigid waveguide components such as directional couplers, rotating joints, duplexers, mixers, adaptors.

FLEXIBLE

Flexible (Waveflex) Waveguides are so fabricated that critical dimensions are retained regardless of twisting or bending. Flexible Waveguides improve design, compensate for expansion or movement, make assembly easy.

Remember this traffic stopper at the IRE Show. It's a torture test. Flexed well over 1,000,000 times, Waveflex flexible Waveguides gave no evidence of failure or loss of physical or electrical properties.

Waveguide Tests by this department without a thorough electrical back-up. Every single Titeflex flexible Waveguide is tagged before shipment with its test score JAN-W-287 specifications.

AMPEREX

ELECTRONIC CORP.

230 DUFFY AVE., HICKSVILLE, L. I., N. Y.

HIGH VOLTAGE

MODEL LAB-40

CONTINUOUSLY VARIABLE REGULATED 25 TO 40 KV DC POWER SUPPLY

Unit has a 4 to 6 KV focus tap for use with flying spot kinescope recording and television projection tubes, etc. Regulations of 0.5% at 1 milliamperes. Available either with locking controls or standard knob.

Dimensions: 19" wide x 12 1/4" high x 15" deep

With Meter \$620 Net
Less Meter \$545 Net

MODEL LAB-30PN

REVERSIBLE POLARITY—CONTINUOUSLY VARIABLE 1 TO 30 KV DC POWER SUPPLY

Regulated DC Power Supply with regulations of 0.5% at milliamperes. Up to 2 milliamperes may be drawn from 20 KV down. This 16 tube unit is of the RF type consisting of a separate oscillator and buffer feeding the power oscillator into a doubler rectifier. Regulations accomplished through feed-back into a DC amplifier plus simultaneous output control of the buffer. Polarity reversible from front panel. Standard Rack Model—19" wide x 12" high x 13" deep. Standard Bench Model—21" wide x 14" high x 15" deep.

With Meter \$670 Net
Less Meter \$595 Net

MODEL LAB-30 is a positive polarity output regulated High Voltage DC Power Supply with same electrical characteristics and dimensions as the LAB-30PN.

With Meter \$570 Net
Less Meter \$495 Net

MODEL RG-30M

CONTINUOUSLY VARIABLE 15-30 KV REGULATED DC POWER SUPPLY

A high grade supply which incorporates a voltage tap in the range of 4 to 6 KV for use with 5ZP16, 5TP4 and flying spot tubes. Regulations better than .5% at 1 milliamperes. In wide use for theatre and transcription recording systems. Dimensions of HV unit—19" x 12 1/4" x 13".

RG-30M.....\$295 Net

UNIT SHOWN LESS FRONT PANEL

MODEL PN-30R

REVERSIBLE POLARITY CONTINUOUSLY VARIABLE
1-30 KV UNREGULATED DC POWER SUPPLY

A light, compact unit in wide use for insulation testing, precipitators and laboratory research. Polarity reversible from front panel. Current output—approx. 2 milliamperes at 20 KV; 250 microamperes at 30 KV. Input—110 V AC 60 cycles. Dimensions—19" x 12 1/4" x 13".

PN-30R (Rack Model).....\$205 Net

SPELLMAN

TELEVISION CO., INC.

3029 WEBSTER AVENUE
BRONX, N. Y. Kingsbridge 7-0306

HIGH VOLTAGE

MODEL PN-60

REVERSIBLE POLARITY RF DC POWER SUPPLY

Polarity changes made on front panel. Continuously variable from 0 KV to 60 KV. Current output 1 milliamperes at 60 KV. Overall Dimensions 22½" x 21" x 15". Ideal for electrostatic paint spraying, capacitor charging and testing as well as many other uses.

PN-60 Complete with meter \$675 Net

MODEL 2040

UNIT SHOWN LESS FRONT PANEL

40 KILOVOLT DC POWER SUPPLY

Available with either positive 40 KV output or negative 40 KV output. A compact high quality unit adaptable for nuclear physics, electrostatic paint spraying, dust precipitation, insulation testing, television and other industrial uses. Has voltage range of approximately 15 to 40 Kilovolts. If power supply for TV use is required, a voltage output of approximately 4 to 6 KV is available through a tap. The 15 to 40 KV variance in voltage controlled through a knob on the front panel. Output voltages supplied through a 4 ft. length High Voltage safety cable. Dimensions: 19" L x 14" W x 12" H. Specify desired polarity when ordering.

MODEL 2040 \$136 Net

MODEL 4575
4½ KV
POWER SUPPLY

LESS METAL HOUSING SHOWN

This compact, well designed, ruggedly built DC supply has an output voltage of 4½ KV at 1 milliamperes. By varying the DC input the output voltage can be varied from approx. 1 KV to 7½ KV. Dimensions 5½" H x 5" D x 4¼" W.

MODEL 4575 less low voltage DC supply \$32.50 Net

HIGH VOLTAGE METER

0-30 KV SPECIFICATIONS

VOLTAGE RANGE: 0-30 Kilovolts —at 50,000 ohms per volt sensitivity. Measures high voltage circuits with very light loading.

POLARITY REVERSING SWITCH:

Permits measuring of positive or negative voltages from ground with maximum safety. Switch may be operated without arcing while the voltage is being applied. Off-position of this switch locks the sensitive meter movement for transportation.

OVERALL SIZE OF CASE: 7" wide, 9" long, 5" high.

MODEL 451 \$79.50 Net

ELECTRALAB designs and manufactures PRINTED CIRCUITS

for practically any electronic unit

Illustrated is an ELECTRALAB printed circuit for an automobile radio. Note the neatness of circuitry. You can easily see how assembly time was reduced to a minimum. This is a good example of printed circuits use where a circuit must be duplicated many times with unerring accuracy.

Here are some of the unlimited applications for ELECTRALAB printed circuits:

- Hearing Aids
- Timing Devices
- Industrial Controls
- Business Machines
- Guided Missiles
- Radar
- Television
- Motor Controls

ELECTRALAB printed circuits MERELY SAVE YOU MONEY . . . by . . .

- Cutting assembly time and labor costs
- Eliminating certain operations
- Lowering reject waste
- Reducing inventory costs
- Saving testing and inspection time
- Simplifying trouble-shooting and servicing

Why don't you take advantage of ELECTRALAB's engineering facilities before you design or re-design your circuit?

SELENIUM RECTIFIERS

MILLIONS IN SERVICE THROUGHOUT THE WORLD

INDUSTRIAL TYPE RECTIFIERS

For a multiple of applications; power supplies, magnetic amplifiers, electroplating, battery charging, etc. Available in current rating from milliamperes to thousands of amperes, and from a few volts to thousands of volts.

HALF-WAVE RADIO TYPE RECTIFIERS

Economical rectifiers for many and varied applications. Especially applicable for radio and TV. Available in current ratings through 500 ma.

ENCAPSULATED RECTIFIER TYPES

For adequate protection for military and other stringent uses. Recommended for use where size and weight are important considerations; such as aircraft applications.

CARTRIDGE HIGH VOLTAGE ASSEMBLIES

With either pigtailed or ferrules. These versatile cartridge assemblies rated at 5 mils are available in voltages ranging to thousands of volts.

See our listings of Germanium Diodes and Germanium Transistors on the page opposite.

HERMETICALLY SEALED UNITS

Built to special requirements to meet unusually stringent conditions. Designed to meet individual needs.

HIGH TEMPERATURE TYPES

These selenium rectifiers are capable of operating in an ambient temperature of 125° C., with no increase in the size of the cell as compared with a similar rectifier operating in a normal ambient.

Our engineering department will be glad to aid you in the solution of your rectifier problems. Submit your requirements and let us make recommendations...without obligation, of course! See our catalog in Sweet's Product Design file...or write us requesting Bulletin E.

RR Germanium Diodes

FEATURING POLARITY AT A GLANCE!

The taper of the diode case allows polarity identification at a glance or at a touch thus speeding up assembly and reducing the possibility of error in connecting the diode into the circuit. Taper also prevents rolling, especially when the leads are cut off to permit mounting the diode in clips!

RR Germanium Transistors

POINT CONTACT TRANSISTORS

Available in a variety of stable controlled types suitable for both fast and medium speed switching circuits and high frequency amplifiers. Advanced mechanical design for economical production... Heat conducting metal case; standard basing; choice of soldering or plug-in.

PHOTO TRANSISTORS

To operate power relay with one junction transistor as DC amplifier.

JUNCTION POWER TRANSISTORS

... For audio power up to 2 watts.

PNP JUNCTION TRANSISTORS

Tiny, stable high gain units, most economical of power, may be soldered in place or socketed in a recommended RTMA transistor socket. They are suitable for audio amplifiers, servo amplifiers and transformer-coupled carrier amplifiers. Available in plastic or hermetically sealed in metal and glass.

Unit illustrated at right hermetically sealed.

Our engineers will be glad to offer suggestions regarding your Germanium Diode and Transistor applications without obligation. Write to Dept. E.

PRECISION-ENGINEERED

MAGNETIC AMPLIFIERS

BY

Standard packaged line of Magnetic Amplifiers designed for servo system applications. Facilities available to engineer, design, manufacture tubeless servo systems, variable speed drives, magnetic voltage—current—frequency regulators.

PUSH-PULL MAGNETIC AMPLIFIERS—High gain, high-performance, completely packaged Magnetic Amplifiers. Designed to drive two phase induction servo motors. Polarity reversible D.C. input signal is amplified and results in phase reversible A.C. output. Demodulators to work from A.C. signals with these amplifiers are available.

ADJUSTABLE MAGNETIC SERVO AMPLIFIERS—Similar to Push-Pull Magnetic Amplifiers except that means are provided to stabilize servo loop with stabilizer networks. Data given includes servo loop performance for use with A.C. and D.C. transducers.

MAGNETIC AMPLIFIER SERVO SYSTEMS—Servo systems (single speed and 1-and-36 speed). Specific servo loop performance is published.

SATURABLE TRANSFORMERS—Lower gain Push-Pull Magnetic Amplifiers for use on 400 cps powerlines with A.C. or D.C. operated double triode preamplifier. When A.C. is applied to the plates B-power supply is eliminated and tube acts as phase sensitive demodulator for A.C. signals. Designed for servo applications to drive two phase induction servo motors.

TRANSISTOR MAGNETIC AMPLIFIERS—The *TRANSI-MAG**, a new standard transistor magnetic amplifier, to work with our standard line of magnetic amplifiers. Input sensitivity: 0.1 volt or better.

The New Automatic Universal TRANSISTOR CURVE TRACER

Specifications:

TRANSISTOR TYPES: NPN-PNP — Junctions — Point Contacts

TRANSISTOR CONNECTION: Grounded base or grounded emitter

TRANSISTOR CURVES: Output (V_c vs. $I_c | I_e$); Transfer (V_e vs. $I_c | I_e$)

VERTICAL CALIBRATOR: 0-1, 10, 100 volts

HORIZONTAL CALIBRATOR: 0-1, 10, 100 volts

QUADRANTS: I, II, III, IV

SWEEP VOLTAGE: 0-100 volts

BIAS CURRENT: Zero plus eight equal increments. Stepped automatically or manually.

FIXED BIAS CURRENT INCREMENTS: 10, 20, 50, 100, 200, 500, 1000 microamperes

CONTINUOUSLY VARIABLE BIAS CURRENT INCREMENTS: 0-1 milliampere

MANUAL BIAS RANGE: 0-8 milliamperes

BIAS CURRENT METER: 0-100, 200, 500, 1000 microamperes full scale 0-2, 5, 10 milliamperes full scale

WRITE FOR COMPLETE INFORMATION TODAY

LOAD RESISTANCE: 100-10,000 ohms
DIMENSIONS: 16"x10"x8"
ACCESSORIES FURNISHED: Transistor receptacle
ACCESSORIES AVAILABLE: Transistor forming attachment

USES: Designing transistor circuits—comparing, matching and selecting—detecting anomalies—studying effects of temperature, age, normal usage, overloading—detecting failures and cause.

FEATURES: Tests NPN, PNP, Junction, Point Contact Transistors — flexible to accommodate new types.

Dynamically plots entire family of curves simultaneously on standard laboratory DC oscilloscope.

Function switch selects: output or transfer curve in grounded base or grounded emitter connection.

Calibrating axis generated internally as integral part of display are always in correct quadrant.

Automatic or manual operation by means of stepping relay.

Curves displayed in any quadrant—origin always indicated.

Retrace not blanked — anomalies easily seen.

3% accuracy independent of scope drift and calibration.

Measures current gain.

RADIO FREQUENCY SYSTEMS AND INSTRUMENTATION

DFG-2
AND
DFM-3

RADIO DIRECTION FINDERS FOR EVERY APPLICATION

LF, HF and VHF models can be supplied for every application. When requesting information, describe intended use.

STANDARD MODELS

MODEL	FREQ. RANGE	ANTENNA	INDICATION
DFG-1	0.54-20 Mc	Crossed Adcock with goniometer	Aural-Null
DFG-2	0.54-30 Mc	4-element spaced aerial	Automatic Visual Indication
DFM-1	0.54-30 Mc	Rotatable Loop	Aural-Null
DFM-2	0.54-20 Mc	Crossed Loops with goniometer	Aural-Null
DFM-3	0.54-30 Mc	Crossed Loops with goniometer	Automatic Visual Indication

MODEL 2400 CRYSTAL CONTROLLED SIGNAL GENERATOR

Positive crystal control from 150 Kc to 150 Mc; precision zero-leakage measurement of output level from 1 to 100,000 microvolts; and metered modulation free from FM distortion. These features of the Model 2400 Signal Generator make it possible to preset channels "on-the-head," to

know receiver sensitivity without guessing, and to standardize squelch threshold control settings. Ideal for testing and aligning airline radio equipment, radar IF strips and TV tuners. Write for additional information.

MODEL 1232B SECONDARY FREQUENCY STANDARD — Rack Mounted

Here is a versatile precision instrument every laboratory needs for frequency comparison, measurement and synthesis, useful from 1 KC TO ABOVE 1000 MC. Oven-controlled crystal oscillator in special circuit provides accuracy better than 1 part per million. Self-contained crystal-controlled interpolation feature permits fast, direct measure-

ment of frequency. Harmonics delivered are strong and uniform in amplitude. Standard harmonic intervals are 1, 2, 5, 10, 50 and 100 Kc. Output level for 100 Kc harmonics: 100 millivolts from 100 Kc to 5 Mc; 50 millivolts to 75 Mc; 25 millivolts or more to 85 Mc.

SERVOTHERM INFRARED RADIATION INSTRUMENTATION

1312
BOLOMETER
1321
PREAMPLIFIER

SERVOTHERM THERMISTOR BOLOMETERS are small, rugged, fast sensitive infrared radiation detectors, suitable for spectrophotometric, industrial, and military applications. Furnished with SERVOFRAX window, sensitivity extends from 1 to 13 microns wavelength (other windows also available). Typical time constant, 5 milliseconds maximum. Write for data sheets TDS-1312 and TB-1312.

1350 AMPLIFIER
1330 POWER
SUPPLY

RECORDING AMPLIFIER Model 1350 includes a.c. amplifier, decade attenuator, and detector. It drives 5 ma. recorder to record envelope of 1 to 1500 cycle carrier (as used in spectrophotometry). Designed for use following 1321-2 preamplifier or wherever a 5-5000 c.p.s. amplifier or amplifier detector is required.

1322 PREAMPLIFIER

SERVOTHERM LOW-FREQUENCY PREAMPLIFIERS are low-noise, low-microphonic, stabilized miniature preamplifiers for audio frequencies and down to 1/2 c.p.s. at microvolt and millivolt input levels. Suitable for use in radiation measurement, geophysical, electro-medical, etc. Model 1321 also serves as bolometer mount. Model 1322 is a potted plug-in style.

SERVOTHERM LOW-FREQUENCY PREAMPLIFIERS

1360 PYROMETER

SERVOTHERM POWER UNIT is a superior regulated power supply having extremely low noise frequencies down to 3 c.p.s., especially designed to power a Servotherm Bolometer and Preamplifier. Will also power Recording Amplifier. Operates from 115 volts 60 cycles.

SERVOTHERM RADIATION PYROMETER is designed for remotely measuring or controlling thermal radiation of objects to over 1000° C. (four ranges). Time constant under .025 seconds, field of view 1° x 1°. Optical head may be located any distance from object, and fits standard tripod. Pyrometer Model 1360 includes optical head with Servotherm Bolometer and preamplifier, Recording Amplifier, Power Unit, and connecting cable.

SERVOFRAX LENSES

SERVOFRAX GLASS transmits infrared and far infrared radiation from 0.6 to 13 microns wavelength. Chemically and physically stable, it is superior to other available materials. Index of refraction is 2.4 and transmission 72% in the 2-8 micron region. Raw glass and finished lenses are available. Write your requirements.

SERVO ANALYSIS AND SYNTHESIS EQUIPMENT

1100 SERVOSCOPE

SERVOSCOPE is a signal generator with synchronized phaseable sweep. Produces sub-audio sine waves, square waves, and modulated carrier signals for testing servos and other very low frequency amplifying or control systems. Trans-

fer characteristics, frequency and phase response, and step-function response may be quickly evaluated. Hundreds of Servoscopes are saving their cost to our customers by speeding up otherwise tedious measurements.

Output 0-25 volts. Synchronized sweep 0-150 volts. Operates on 50 to 800 c.p.s. carrier. Accuracy, frequency 1½%, phase 1°. Input 115 V. 60 c.p.s.
Model 1100A—0.1 to 20 c.p.s.
Model 1100B—0.15 to 30 c.p.s.

1170 SERVOBOARD

SERVOBOARD is a set of precision mechanical parts, including an ample assortment of gears, shafts, bearings, hangers and mounting plate, which, when coupled to the necessary motors, tachometers, synchros, potentiometers and amplifiers, rapidly builds a flexible experimental mechanical assembly of a servo system, com-

puter or regulator. The Servo board was developed as an aid to the design of servomechanisms by providing means for quickly synthesizing the electromechanical parts of the control system. Components may be located in an infinite number of positions because of the hairpin clamp method of assembly employed.

1120 SERVO AMPLIFIER

SERVO AMPLIFIERS with self-contained power supplies:

MODEL 1120 is a 60 c.p.s. amplifier with built-in 90° phase shift. Three matched inputs permit operation as

a position servo with tachometer stabilization or as a rate servo. Output 10 watts.

1121 SERVO AMPLIFIER

MODEL 1121

A small and light 400 c.p.s. amplifier. Three inputs (two a.c. high gain and one d.c. low gain) are provided. Output, 10 watts continuous, 18 watts

reversing or intermittent. Also available without cover for installation as a component.

1100 SERVO LABORATORY

SERVO LABORATORY

This analysis and synthesis equipment includes a selected list of equipments required in the Servo Test and Development Laboratory. These equipments are grouped in a carefully arranged package to permit the servo designer readily to synthesize a wide variety of systems from standard components and test them with maximum efficiency and time economy. Complete flexibility is provided by

standardized interchangeable, plug-in electronic components and efficient and versatile mechanical breadboards. Electrical interconnections are facilitated by terminating the various circuits in jack panels which can be quickly cross-connected by patch cards as desired. Many sizes and arrangements of Servo Laboratory equipment are available — write your requirements.

DATA SUBJECT TO CHANGE WITHOUT NOTICE.

SERVOSCOPE, SERVOBOARD, SERVOTHERM, SERVOSYNC and SERVOFRAX are trademarks of the Servo Corporation of America.

Exclusive Techniques and Services for Better Design and Increased Output — at Lower Cost

Micro-Processing is an advanced technique, exclusively developed by I-S, which permits greater design latitude—because the springs are tempered *after* forming. Combined with the extraordinary spring properties of beryllium copper, M/P assures an extremely high degree of uniformity. Comparison with conventionally-made springs has shown M/P to be 2 to 10 times more accurate. With this exclusive technique, we consistently predict and rigidly control the critical shapes, dimensions and elastic properties designed for your specific application.

Thousands of applications by leading manufacturers of electronic and electrical equipment have proven the economy—of both time and actual product cost—obtained through using I-S Micro-Processed beryllium copper springs.

Quality-Control

To assure the high standards of uniformity set for all I-S springs, each coil of beryllium copper strip and wire is laboratory tested and certified before using. Rigid inspection procedures are maintained at every phase of the processing and fabrication.

Free Engineering Service

The specialized experience and knowledge of our engineering staff is at your disposal on any problem of spring design. Often you can affect considerable economy through our knowledge of spring *fabrication*. Then, too, our vast experience in limitations of functional properties in spring design helps you meet your production deadlines. There is no cost or obligation for this service.

I-S Short Run Service

For pilot model testing, "small-fry" orders . . . You can easily and economically check your design performance with regular production line springs of beryllium copper—without the cost of regular production quantities, or without resorting to inaccurate handmade springs.

Our Short Run service was organized expressly to handle small quantity production at low cost—on springs made specifically to your own design. Ask about this service—it's prompt and economical.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

The right bandwidth for your work

DC to 5 MC
5 cycles to 10 MC

Browning
TEST EQUIPMENT

These

2

Browning

'scopes

give

you these valuable features

Model OA-16 . . . an extremely versatile instrument having d.c. amplification with extended high-frequency response and sweeps ranging from seconds to microseconds.

FEATURES

- Bandwidth—from d.c. to 5 megacycles
- Deflection sensitivity—50 peak-to-peak millivolts per inch
- Internal provision for balancing out d.c. components
- Trace position remarkably independent of line voltage
- Sweep speeds 0.4 μ sec. per cm. to 1 sec. per cm.
- All sweeps below fastest range expandable 5 times for detailed examinations
- Sweep may be recurrent, or triggered by positive or negative external pulses or by vertical amplifier signals.

Model OL-23 . . . combines the functions of an oscilloscope and a synchroscope for observing repetitive phenomena or single transients. Broadband amplification, fast sweeps, and high beam-accelerating potential make this 'scope particularly desirable in observing and measuring steep wavefronts and fast pulses.

FEATURES

- Bandwidth—from 5 cycles to 10 megacycles
- 4000-volt accelerating potential
- Sweeps expandable up to the maximum writing rate of the sweep circuits
- Fast sweeps—to 0.1 μ sec. per cm.
- Step-controlled attenuation continuously adjustable between steps
- Calibration accurate to 5%
- Sweep delay ranges of 100, 1000, and 10,000 μ sec.

Each instrument is contained in a blower-cooled steel case 13 $\frac{3}{4}$ " wide, 15 $\frac{3}{4}$ " high, and 22" deep. Case and panel are finished in green, with knobs and markings in frosted aluminum. Prices, complete with tubes:

Model OA-16\$745.00
Model OL-23\$890.00

Prices are net F. O. B. Winchester, Massachusetts

WRITE TODAY FOR FULL TECHNICAL INFORMATION

Oscillosynchroscope ON-5 A/X

Low-priced instrument satisfies requirements for basic laboratory equipment to be used in pulse work. Sweep writing rate continuously variable over a wide range; broad frequency coverage; high sensitivity; self-calibrating on the X and the Y axis. Prices: ON-5A...\$4800
ON-5X (with video delay)...\$5300

Klystron Power Supply TVN-11

Well-regulated, low-ripple-content power supply provides all necessary voltages for operation, modulated or unmodulated, of small Klystrons and other low-power reflex tubes. Internal modulator for square-wave or saw-tooth modulation. Internal metering for critical currents and voltages. Price.....\$3200

Standing Wave Ratio Amplifier TAA-5B

May be operated broadband or selective between 500 and 5000 cycles. Protective circuits prevent burnouts of bolometers and crystals. Output may be fed to meter or d-c recorder. Price.....\$3600

FM Modulation Monitor MD-33

Checks modulation for compliance with F. C. C. regulations. Complete coverage 25-174mc in two bands, no crystals or plug-in coils. Meter shows swings up to 20 kc. Flasher shows excessive voice peak modulation. Price.....\$3300

NATVAR FLEXIBLE ELECTRICAL INSULATING MATERIALS

VARNISHED FABRICS AND PAPERS

VARNISHED CAMBRIC

cut for application to regular smooth surfaces; bias for irregular surfaces. Supplied in all standard sizes and thicknesses, in yellow or black and greasy, tacky, mica-dusted, and dry finishes. Yellow has higher resistance to mineral oils and is therefore used extensively in oil immersed applications; black has better electrical qualities and is therefore recommended for applications where dielectric strength, power factor and insulation of these qualities even under humid conditions is important. Varnished cambric is manufactured to conform to the latest revisions of A.S.T.M. Standards and A.S.T.M. Specifications. Full width rolls, 25 yd. and 50 yd.; sheets, 36" x 36" and 24" x 36", standard; other lengths and sizes on special order.

VARNISHED CAMBRIC TAPE

cut or seamless bias, in all standard widths and thicknesses, yellow or black, greasy, tacky, mica-dusted or dry. Characteristics same as for varnished cambric. Accurately slit for use in taping heads. Standard widths 36 yd. and 72 yd. rolls.

VARNISHED CANVAS AND DUCK

recommended for applications where electrical insulation is subject to mechanical strain and abuse. Widely used as phase insulation in electrical machines. These high strength fabrics are coated with the same type varnishes as Natvar varnished cambric. Full width rolls, 25 yd. and 50 yd.; sheets 36" x 36" and 24" x 36", standard; other lengths and sizes on special order.

VARNISHED SILK

high dielectric strength insulation with great flexibility and mechanical strength. Particularly applicable to relays, magnetos and other electrical parts used in airborne equipment, where space and weight are important considerations. Available in yellow only; finish, dry. Full width rolls, 25 yd. and 50 yd.; tapes, 25 yd. and 50 yd.; bias cut strips approximately 1/2 in.; standard; other lengths on special order.

VARNISHED RAYON

used as an alternate for varnished silk, and used in substantially the same applications. High tensile and dielectric strength with exceptional electrical properties. Available in yellow only; finish, dry. Full width rolls, 25 yd. and 50 yd.; tapes, 25 yd. and 50 yd.; bias cut strips approximately 1/2 in.; standard; other lengths on special order.

VARNISHED FIBERGLAS

insulation (130°C) used primarily to insulate equipment which operates at temperatures above the normal safe working range of varnished cambric. Permits higher current densities with consequent reduction in size and weight. Has great mechanical strength and excellent dielectric properties. Available in standard weave or open-weave; yellow or black; standard commercial sizes and thicknesses; standard finish, dry; other finishes on specification. Full width rolls, 25 yd. and 50 yd.; sheets, 36" x 36" and 24" x 36"; tapes, 36 yd. and 72 yd.; standard; other sizes on special order.

GLASS COATED FIBERGLAS

insulation (180°C) used wherever reduction of size and weight are important. Retains its excellent mechanical and dielectric properties at high temperatures. Full width rolls, 25 yd. and 50 yd.; tapes, 36 yd. and 72 yd.; standard; other lengths on special order.

VARNISHED PAPERS

highly inert rope and kraft stocks selected for uniform thickness, high dielectric strength and coated with highest grade electrical varnish. Yellow varnished condenser type tissues, single or multiple ply; black varnished heavy papers, single ply. Full width rolls, single ply, 25 yd. and 50 yd.; multiple ply, 25 yd.; sheets, 36" x 36" and 24" x 36"; tapes, 36 yd. and 72 yd., standard; other sizes and lengths on special order.

COMBINATION INSULATIONS

Slot cell insulation is a combination of 100% rag paper stock firmly cemented to a layer of varnished cambric, either straight or bias cut. The high dielectric strength and moisture resistance of Natvar varnished cambric with the toughness and abrasion resistance of rag paper make a slot insulator which will withstand pounding and chafing without impairment of its electrical properties. Available in black and yellow; full width rolls, 25 yd. and 50 yd.; sheets, 36" x 36" and 24" x 36", standard; other lengths and sizes on special order.

Aboglas® insulation is a new class B insulation (130°C) consisting of a layer of varnish saturated asbestos paper sandwiched and securely bonded between two layers of varnished open-weave Fiberglas. It is less expensive than mica combinations and does not flake. Excellent resistance to breakdown even under extreme heat, moisture, abrasive dust, oil and grease. Standard sheets approximately 36" x 36"; other sizes on special order.

Other duplex and triplex composite insulations such as silicone coated Fiberglas, Quinorgo, Mylar, etc. are also available.

FLEXIBLE TUBING AND SLEEVING VARNISHED OR LACQUERED

Electrical grade rayon (class A) or Fiberglas (class B) braid coated or saturated with high grade electrical varnish or lacquer. Available in all NEMA grades and standard A.S.T.M. sizes. Wide range of vivid colors for coding. Standard lengths, 36"; sizes #20 to #10 available in 500 ft. spools in lacquered only. Cut pieces 3/8" or longer furnished on specification.

EXTRUDED PLASTIC TUBING AND TAPE

NATVAR 400 VINYL TUBING AND TAPE

Natvar 400, for applications requiring high resistance to both heat and oil, is approved by Underwriters' Laboratories for continuous operating temperatures of 105°C. It remains flexible under continuous operation immersed in hot oil. It is a well balanced plastic that is tough, elastic, flexible, resistant to abrasion and tear, inert and resistant to ozone, oils, waxes, alkalis, acids and most solvents. Available in transparent, black, opaque white, yellow, red, green, blue, and brown. Tubing is stocked #24 to #15 in 500 ft. spools; #14 to 1/2" in 100 ft. coils; 9/16" to 1 1/4" in 50 ft. coils; 1 1/2" and larger in 25 ft. coils; cut pieces 3/8" or longer on specification. Tapes, standard length, 36 yd.; standard color, black.

V.I.T. 200 VINYL TUBING

V.I.T. 200 is a general purpose tubing with excellent flexibility through a temperature range of -40°C. to +85°C. Will not support combustion. Shows no disintegration or flaking when immersed in oil. In general has the same inherent characteristics as Natvar 400, but slightly higher tensile strength, averaging 3600 p.s.i. Stocked in same lengths as Natvar 400. Cut pieces 3/8" or longer furnished on specification.

NATVAR STYROFLEX® FILM

Specially processed flexible polystyrene film developed for insulation of UHF coaxial cables and capacitors. Excellent mechanical and electrical properties. Available in thicknesses .0004" and thicker in precision cut tapes up to approximately 10" width.

EXTRUDED PRINTED MARKERS

Printed with indelible vinyl ink on Natvar extruded tubing cut to specified lengths. All combinations of letters, numbers, and symbols available for identification of circuits, terminals, airplane electrical systems, etc. Wide color range for coding.

SPECIAL PRODUCTS

In addition to Natvar standard products, there are many Natvar products developed for a special application. These materials, now in limited production, are available on special orders.

Where specifications call for materials with special mechanical or electrical characteristics, check with our representative in your area, or directly with us. If the materials you are looking for are not already in production, our engineers will be glad to work with your engineers to provide a practical answer.

electronics BUYERS' GUIDE
ABC

TIC INSTRUMENTS

Complex Plane Analyser

Type 250A

Plot the Poles and zeros of your system on the complex frequency plane and gather the following design information.

The Complex Plane Analyser solves magnitude and phase angle responses for any sinusoidal frequency. Exponential and complex driving functions determined. Complete transient response for impulse, step and other inputs. Root locus plotting simplifies solution of closed-loop systems. Multiplies and divides complex vectors giving magnitude and angle of the product vector. A compact, system design instrument.

Impedance Measurement Audio Frequency

Z-Angle Meter Type 310 A

30 to 20,000 c.p.s.

Measures impedance directly in polar coordinates as an impedance magnitude in ohms and phase angle, in degrees $Z/\pm\theta$. 310-A measures, with equal ease, pure resistance, inductance, capacitance or complex impedances comprised of most any RLC combinations. Range: Impedance (Z), 0.5 to 100,000 ohms; Phase Angle (θ), $+90^\circ$ (X_L) through 0° (R) to -90° (X_C). Accuracy: Within $\pm 1\%$ for impedance and $\pm 2^\circ$ for phase angle. Price: \$470.00.

Phase Measurement

Phase Meter Type 320 AB

Frequency Range 20 cycles to 100 kc.

All electronic instrument that directly measures phase angle between two periodic voltages from zero to 360° . Readings made directly without balancing on four scale ranges, 0 to 36° , 0 to 90° , 0 to 180° , and 0 to 360° . Voltage Range: 1 to 170 volts peak; Terminals for recorder; Relay Rack mounted or cabinet; Absolute accuracy: 1% of full scale plus 3%; Incremental accuracy better than 1%.

Price: with Cabinet \$565.00

Precision Phase Meter Type 322A

is an ultra-high precision phase measuring instrument which utilizes the same principles of phase measurement as the Type 320AB Phase Meter.

More elaborate circuit design techniques permit phase angles to be read with an accuracy of $\pm 1'$ from 0 to 360° without ambiguity over the frequency range from 20 cycles to 20 kilocycles. Useful frequency range extends up to 1 megacycle. Precision of phase angle reading obtained is within $\pm 1^\circ$ so that changes in the relative phase angle between two voltages can be read with an accuracy of $\pm 0.1^\circ$. Instrument measures phase angle difference between positive going zero axis crossings independent of wave form. Input impedance is approximately 4.7 megohms shunted by 13 μf . Recorder terminals are provided.

Primary Phase Standard — Type 7000 A

Provides two voltages of the same frequency whose relative phase angle is precisely known and continuously variable from 0 to 360° . Frequency: Available for operation at any one fixed frequency from 60 cycles to 20 kcs. Accuracy: $\pm .05$ degrees; with special operating techniques $\pm .01$ degrees.

Wide Band Amplifier Type 500-A

Designed for use as a general purpose laboratory amplifier and also with the phase meter at voltage levels below one volt. Features high gain, negligible phase shift and wide band width.

Outstanding specifications: Amplification—10; 100; 1000 selected by rotary switch . . . Accuracy $\pm 2\%$ nominal . . . Frequency response— $\pm 0.5\text{db}$ from 5 cycles to 2mc on gain of 10; $\pm 0.5\text{db}$ from 5 cycles to 1.5 mc on gain of 100; $\pm 0.8\text{db}$ from 5 cycles to 1mc on gain of 1000 . . . Phase shift $\pm 2^\circ$ from 20 cycles through 100kc . . . Gain stability—constant with line voltages (105-115v). Input impedance—160 megohms shunted by 7 μf . Output impedance—approximately 200 Ω (from cathode follower). Price: with Cabinet \$205.00; with Relay Rack \$200.00

Ponogometer Type 394 A

A precision potentiometer noise tester designed for laboratory and production quality control in the manufacture of single or multi-turn precision potentiometers. Monitoring the transient contact noise resistance appearing between the wiper and resistance element, both audible and visual indications are given when threshold level is exceeded.

Range: Equivalent Noise Resistance threshold level adjustable from 10 to 5000 ohms. Lower levels can be set up by means of accessory amplifiers.

Wiper Exciting Current: Constant 1 milliamperes. For other values accessory current sources can be set up. Price \$350.00.

Power Oscillator — Type 410 A — 100 kc to 10 mc.

(Special models 46.5 kc to 4.65 mc available.)

Power oscillator for use as bridge driver and general laboratory measurements. Features: High stability, high output (approximate 30 volts), 50-60 Ω output impedance, expanded frequency scale, direct reading output meter, compact design. Price: \$385.00.

Technical Catalog—yours for the asking. Contains detailed information on all TIC Instruments, Potentiometers and other equipment. Get your copy without obligation — write today. For TIC Precision Potentiometers see page 97.

REED FREQUENCY METERS • ELAPSED TIME METERS
SWITCHES, Instrument and Test Equipment Quality: ROTARY, LEVER, TOGGLE
for THE ELECTRONIC INDUSTRY

Model 30-F
 Full Range, Double Window

Model 36-FX-21
 21-Reed Meter in 3 1/2" Case

Model 34-FHXX
 9-Reed in 3 1/2" Sealed Case

Model 41-FX
 Dual Range in 4" Case

Model 15-FHAC
 5-Reed in 1 1/2" Sealed Case

Model 33-FP-9M
 Portable, Metal Case
 TS-328 A/U (400 cy. type) Shown

NEW TOGGLE SWITCHES

J-B-T announces the manufacture of toggle switches of the quality required by Specification JAN-S-23. The most popular types, corresponding to Series ST-40, ST-42, ST-50 and ST-52, are tooled. Your inquiries are welcomed.

MOLDED ROTARY SWITCHES

Fully Enclosed Single and Multi-Gang Shorting and Non-Shorting 14 and 20 Positions 1 to 6 Decks (Model MS-14-2 Illustrated)

- All moving contacts enclosed—eliminates dirt and corrosion.
- Contact lugs permanently integrated into switch assembly.
- Sturdy construction with 3-post deck suspension, double-grip collector arms, and rectangular drive shaft through decks for precision indexing.
- Interchangeable, electrically and mechanically with J-B-T Series SS-14 and 20 position Laminated Switches, widely used by industry and the Armed Services.

Normal carrying capacity (not make-and-break) 1 amp.; maximum momentary capacity (not make-and-break) 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S. Average contact resistance 0.007 ohms or less. Also available in 6-pole or 12-pole double throw construction.

LAMINATED ROTARY SWITCHES

(Model SS-14-2 Illustrated)

Used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

LEVER ACTION SWITCHES

(Model SS-14-1L4 illustrated)

Excellent for test equipment and communications systems, these switches use the same high quality parts as the SS-14 series. Bracket mounting holes 1 5/8" apart; single deck types may be mounted in groups 3/4" between centers; two-deck types, 1 1/16" between centers.

DISTRIBUTOR SERVICE

Standard J-B-T items are available through authorized electronics parts distributors.

ASK FOR CATALOG 652

PORTABLE REED FREQUENCY METERS

Meters illustrated are typical panel mount—portable—for use where constant or accurate frequency is important to efficient operation of equipment.

Permanently Accurate within $\pm 0.3\%$ or better at reference temperature, depending on the model. This accuracy is not affected by poor wave form, external magnetic disturbances, or voltage fluctuations.

Design and Type for Every Service. Made in a wide variety of portable and panel case styles, reed groupings and frequency ranges from 12 to 525 cycles and above; 100-130 volts furnished unless otherwise specified. Rugged Construction of simplified, patented design, with no moving parts to wear out or require out of calibration. Ideal for field and mobile applications.

Portable for Electronic Circuits because of relatively low power consumption and J-B-T meters with high Q and sharp, immediate response.

3 1/2" SEALED Types

Meters sealed, glass-to-metal construction solder terminals, meet or exceed the standard electrical requirements of JAN-I-6 and MIL-6A including the 3000 volt breakdown. Use the front mounting dimensions specified. Max. barrel diameter, 2 1/16"; 2 7/8" overall behind flange. While not regularly produced, these meters are in volume production.

1 1/2" SEALED Types

Model 15-FHAC (illustrated half actual size). Read 400 cycles, 2 reeds, 8-10 volts, for use as follower circuit. Widely used on audio meters to standardize output. Meets intent of MIL-6 and amendments on sealed meters. Max. barrel diameter, 1 1/2" diameter; detachable flange, 1 1/2" diameter; solder terminals.

Model 15-FH Series (not illustrated)—Same case, read, 5 reeds, 58-62 cycles, 100-130 volts. Variations such as 6 reeds, 25 or 400 cycle ranges and higher voltages available on special order.

ELAPSED TIME METERS

For Maintenance, Tube Life Data, and Operating Time Records—on Motor Generators, Transmitters, Receivers, Rectifiers, Test Set-ups, etc.

Model 31-EX (illustrated) also known as running-time or total time meter, registers in 1/10 hours to 9,999.9 hours, then automatically resets. Normally stocked for 60 cycles, 110-130 volts. 3 1/2" standard meter mounting. Variations such as 50 cycles; 230 volts; 0-99,999 hours; and 3" rectangular case available on special order.

SEALED TIME METERS

Model 31-EHXX—Completely sealed meter, reading 0-9,999.9 hours, same as Model 31-EX above. Glass-to-metal construction, solder terminals, and 3 1/2" detachable flange, all match XX metal frequency meter case.

Model 33-EHXX—Newest of the J-B-T elapsed time meters is this unit operating on 400 cycles, 110-125 volts, to read 0-9,999.9 hours in 1/10 hour steps. It is presently made only in 3 1/2" flange sealed metal case, 2 3/4" diameter, 4" deep behind panel.

FREQUENCY—TIME METERS

Combination Reed-Frequency—Elapsed Time Meters—One Meter Does The Work of Two

Model 31-FE (illustrated) pioneered by J-B-T, saves panel space and cost, and encourages periodic maintenance. 3 1/4" flange, metal case, 4 1/32" overall depth, standard. 3 1/2" case known as 31-FEX-1 supplied on custom orders. 5 reeds, 60 cycle range, standard; 7, 9, 11 reeds or 50 cycle range on special order.

Molded Tube Sockets

for High Production Applications

Recent addition to METHODE line of TUBE SOCKET ACCESSORIES is this new "Twist-On" type of tube shield and base, mounted in combination with molded sockets, as illustrated. Projecting lugs on shields provide direct ground to chassis under screw pressure and a reliable shock and vibration proof mount.

Other METHODE PRODUCTS include:

- Laminated wafer tube sockets
- Military tube and crystal sockets
- Panel Connectors
- Printed circuit sockets
- Tube shields

MICRO makes, and makes possible

• • • NEW PRODUCTS

► By SIZE, TYPE, and MATERIAL • MICRO provides the widest selection of small ball bearings made to precision quality.

► DIMENSIONS of complete assemblies range from 1/2" overall diameter down to .1000".

Seven RADIAL and three other series are standard in chrome and stainless steels with some available in beryllium copper. SPECIAL SIZES and MATERIALS are also considered.

► TOLERANCES are ABEC5 or BETTER.

NEW • • •

► The MICRO RETAINER (R) bearings, first developed by NHBB in the U. S., are a significant improvement for sizes previously available only in the full type. The retainer produces smoother running and lower friction. The crown retainer has long been in use, and many sizes are also being equipped with the new ribbon type — a two-piece cylindrical-pocket, cone-controlled and balanced retainer.

SQUARE, RECTANGULAR, ROUND

Standard-type PARAMOUNT paper tubes used for millions of coil forms and other applications. Hi-Dielectric. Hi-Strength. Kraft, Fish Paper, Red Rope, Acetate, or any combination wound on automatic machines. Any size from 1/2" to 30" long, from .450" to 25" I.P. Produced from wide range of stock arbors or specially engineered for you.

NEW "PARAFORMED" TUBES SQUARE OR RECTANGULAR

Entirely new technique in tube making developed and perfected by PARAMOUNT. Perfectly flat side walls, sharp square inside corners, and very small radius on the four outside corners. Spiral wound, not die formed. No sharp outside edges to cut wire. No need for wedges to tighten winding on laminated core. Full rigidity and physical strength. Permits winding coils to closer tolerances. Allows faster automatic stacking of coils. Approved and used by leading manufacturers. *No extra cost!*

PARAMOUNT PAPER TUBE CORP.

616 LAFAYETTE ST., FORT WAYNE, IND.

Standard of the Coil Winding Industry for Over 20 Years

For
Simple more logical grouping of winding units to insure quiet, smooth, trouble-free operation.

For
More economical construction and lower maintenance cost.

For
A more direct alignment in remote control or power transmission around corners.

PHAZOR NULL METER
Pat. Pend. MODEL 100A

22950 F.O.B. New York, N. Y.

A phase sensitive null detector wherein noise and harmonic voltages are effectively eliminated.

- For use in conjunction with bridge and potentiometer circuits.
- Simplified and precise zeroing of synchro devices.
- Allows separate adjustment of phase and magnitude in null circuits.
- Eliminates the necessity for filters.

SPECIFICATIONS

Input Impedance
High Gain... 2 megohms shunted by 30 mmfd.
Low Gain... 2.5 megohms shunted by 15 mmfd.
Sensitivity... 6 millivolts off-scale deflection
Frequency Range... 30-10,000 cps (higher ranges available)
Selectivity... 40 db. down on all noise & harmonics
Reference Input Power... 10 milliwatts
Maximum Input Voltage... 125 volts RMS
Peak Input Voltage... 400 volts
Power Supply... 105-125 volts, 60 cps, 25 watts
Dimensions—Hgt. 9 in., Width 15 in., Depth 8 in.
Weight... 25 pounds

MINIATURIZATION
Thru constant research, Acme transformer engineers have developed designs, that save pounds and ounces in weight and provide long-life performance. We build miniature transformers by the thousands, each individually performance tested.

PRESSURIZED SEAL
Here is a transformer design with terminals sealed under pressure with a resilient sleeve that accommodates expansion and contraction of temperature changes.

PLASTIC COATING
This is one of a number of ways that plastic has been adapted to seal transformers or individual coils for service in humid atmospheres or under conditions which breed fungi.

DEVELOPMENT

**COMPRESSION
MOLDED**
Plastic Toroid

*Meet JAN temperature and humidity requirements

We consider this development revolutionary as the development of the molded mica capacitor. The bothersome mounting problems and fragility of the uncased toroid have been entirely eliminated. Complete uniformity of dimensions are maintained by precision molds. To keep mounting pressure off the plastic bushing of brass is molded into center. Type "A" provides a center hole to clear a 6-32 screw. Type "B" is threaded for a 6-32 screw. Taping is complete for molding any of the .90 x .40 coils. The complete unit is compact, measuring only 1/2" by 1/2" thick.

Complete data available on request; samples will be furnished for your evaluation.

013	4.0 Hy	1.55x .65	50-200 KC	145 @ 70 KC	3 150

REMARKS

Qmax—Values taken at approx. .01 lac. Q decreases with increasing current to about .50 Qmax at 1.0 lac—higher inductance values have lower Qmax at lower frequency due to dielectric losses of winding distributed capacity. All values are for inductors wound with Heavy Formex wire.

T.C.—Temperature characteristics as follows:

- approx. 100 ppm/°F
- \pm .1% 55 to 90°F
- \pm .1% 30 to 130°F

(most types with temp. characteristic 1 are available with characteristic 3 at no sacrifice in performance)

lac—r.m.s. current which raises 0.1 Hy inductor to max. (2% above initial) inductance — (1% increase occurs at approx 0.35 lac.

Custom miniaturization of filters is achieved through use of miniaturized components and advanced design techniques.

Uncased coils adjusted to your specifications.

Moistureproof Plastic Coated Toroids available in all types.

COMMUNICATION ACCESSORIES

Company

HICKMAN MILLS, MISSOURI

Via C.A.C. Beechcraft, we are only hours away from you—we solicit the invitation to discuss your problems across your own desk.

WHITNEY BLAKE

CORD and CABLE

FOR POWER SUPPLY
AND ELECTRONIC
APPLICATIONS

FEATURE ADVANCED DESIGN
PROVIDE LONG
DEPENDABLE SERVICE

Over a half-century of experience in the wire industry . . . a development laboratory constantly searching for improved materials, better constructions . . . the finest equipment for extruding rubber, neoprene, polyvinyl chloride, polyethylene, nylon, and other insulating materials . . . highly skilled workers

. . . a rigid quality control system . . . all combine to assure you that Whitney Blake cord and cable are the best available.

We are prepared to help solve your cord and cord set engineering problems as well as to furnish a wide variety of products under the following general classifications.

MULTICONDUCTOR COMMUNICATIONS CABLES
in a wide range of conductor sizes. Shielded or unshielded, multiconductor or multipair types with a choice of insulating and jacketing materials.

COAXIAL AND TWINAX CABLES
for high frequency applications.
Army-Navy approved RG types.

MICROPHONE CABLES with neoprene jackets.

SOUND SYSTEM WIRES
with rubber, Plastite® or textile insulation.

Flexible Cords

DYNAPRENE® neoprene jacketed cord and rubber jacketed cord for power supply. Listed by Underwriters' Laboratories.

CORD SETS custom built to your specific requirements. Using either standard cordage or cord designed to fit your particular application, Whitney Blake can fabricate regular line cords or special purpose cords having attached or integrally molded rubber or Plastite fittings.

Coiled Kords

Retractable cords for power supply or communication uses. Standard Underwriters' types and special shielded multiple conductor types including nine conductor cable. (Manufactured by Whitney Blake Company and sold through Coiled Kords, Inc.)

Contact our representative in your area for additional information and help with your wiring problems.

VECTRON'S MICROWAVE

Spectrum Analyzer

SPECIFIC BAND COVERAGE AT THE OPERATING FREQUENCIES YOU NEED

Interchangeable R. F. Heads save expense . . . save space Vectron's Spectrum Analyzer with interchangeable R. F. Heads eliminates the extra cost and bulk of equipment which covers large areas in bands you never use

conversion or adaptation Every Vectron R. F. Head can be placed in immediate operation, without conversion or adaptation, in the Vectron SA20 or SA20 Spectrum Analyzer Chassis

Microwave Radar and Communications Equipment The Vectron SA20 Spectrum Analyzer presents visually the frequency distribution spectrum of the power output of pulsed or CW microwave oscillators and can be used as a sensitive RF detector for checks and measurements in the design, production and maintenance of microwave radar and communications equipment and components

Vectron's New OSCILLATRON

The new self-contained; self-powered crystal controlled transistor oscillator.

FREQUENCY STANDARD

Have your Vectron representative demonstrate it today or write for latest bulletin.

FEATURES

- Large, clear 5" oscilloscope pattern
- Standard bezel to accept camera, hood or filter
- Minimum number of controls . . . maximum operating convenience
- Double conversion assures maximum stability
- Built in regulated supply for Klystron oscillator
- Easy access for maintenance or adjustment
- New provision for D. C. Filament supply for Klystron oscillator

SPECIFICATIONS

- Overall Gain — 130 decibels
- Sensitivity — Approx. — 60 dbm for 1 usec. pulse width
- IF Bandwidth — Choice of 50 kc, recommended for CW and 0.2 to 2 usec. pulse widths, or 20 kc, bandwidth to 5 usec
- Sweep Frequency — 10 to 30 cps standard — available to 2 cps and with long persistence tube
- Power Supply 105-125 V, 60 cycles
- New low noise 70 kc IF strip for higher usable gain

Write Today For Bulletin SA20 and a free copy of the new Band Code Reference Table

VECTRON, inc. *Electronic and Electro-Mechanical Equipment*

The only miniature snap switch

... where size and
high rating
come to terms
with cost

Here's a new ally for the design engineer in his effort to keep quality high and cost low. TYNISWITCH fits in the smallest places, yet handles the load of switches much larger and more expensive. Basic design is readily adapted to new products or special applications.

In its simplified construction, TYNISWITCH introduces many new principles of switch design that add up to efficient switching at low cost.

Thorough laboratory tests have proven its dependability and durability at high operating speeds and over millions of cycles.

Where your equipment design calls for the best switch value for the money, investigate the advantages of TYNISWITCH. Special models can be developed for you economically by TYNISWITCH engineers. Write for technical details and engineering design sheets.

"GUIDE."

Advertisers:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

Look to

SESSIONS

for dependable

SWITCH TIMERS

designed to meet your specific needs

as a designer . . .

You'll welcome the smart, up-to-the-minute design of Sessions Switch Timers — each accentuates the individual beauty of your most advanced style clock radios, television receivers and other timed appliances. With Sessions, you can choose from a variety of standard stock models or —if you prefer—experienced Sessions Engineers will help you develop custom-styled units to meet your special requirements.

as an engineer . . .

You'll want nothing less than the dependable, kitten-quiet operating efficiency and split-second accuracy of a Sessions Timer. All Sessions Timers feature a compact, demountable, self-starting motor which operates at a low subsynchronous speed . . . assures longer life . . . eliminates

annoying buzz of high-speed gears. Negligible a.c. field simplifies mounting requirements.

as a manufacturer . . .

You'll appreciate the overall economy of Sessions Switch Timers. Because Sessions Timers cost less than other dependable makes, you can sell Sessions-equipped appliances at a price that automatically promotes rapid turnover . . . satisfies customers.

as a P. A. . . .

You can save time and trouble . . . order top quality timers to meet every requirement, from one dependable source of supply. All are factory tested and guaranteed for one year.

Write now for complete details. The Sessions Clock Company, Timer Div., Dept. 276, Forestville, Connecticut.

GRAYHILL SWITCHES

**GRAYHILL NO. 2000
SNAP ACTION SWITCHES**

Momentary contact, single pole, single throw type. Audible click when switch is activated. Designed for manual actuation only. Contact gap .015". Single hold panel mounting. Two hex nuts. Bushings 15/32"—32 thread.

**NO. 2201 NORMALLY OPEN
NO. 2202 NORMALLY CLOSED**

Rating—10 Amps., 115 volts, AC, Non-Inductive
1 Amp., 115 volts, DC

**GRAYHILL NO. 4000
PUSH BUTTON SWITCH**

Non-snap action. Momentary contact, single pole, single throw type. Designed for manual actuation only. Single hole panel mounting. Bushing (15/32"—32 thread) and hex nut assembly.

**NO. 4001 NORMALLY OPEN
NO. 4002 NORMALLY CLOSED**

Rating—1/2 Amp., 115 volts, AC

Grayhill No. 3000 ROTARY TAP SWITCH

For special-circuit combination applications. 1 to 12 decks. 2 to 11 contacts per deck. Rated at 20 Amps., 115 Volts, AC.

**GRAYHILL NO. 5000
MINIATURE
ROTARY
TAP SWITCH**

NON-SHORTING (break before make) and **SHORTING** (make before break). From 1 to 6 decks. Accommodates up to 10 contact positions on each deck. With 10 positions, switch rotates 360° in either direction. When 9 or less positions—stops permit rotation only through required positions. Bushing, 3/8"—32 thread. Behind panel length from 15/32" (1 deck) to 2 7/8" (6 decks).

Rated to break—1 Amp., 115 volts, AC
to carry—5 Amps., 115 volts, AC

**GRAYHILL
MINIATURE SERIES 23
PUSH BUTTON SWITCH**

Momentary contact—single pole—single throw.

Bushing 5/16"—32 thread.

Rated 1/4 Amp., 115 volt, AC, non-inductive.

No. 23-1—Normally open.

Overall dimensions: 1.047" x 1/2"

Vibration -

Electronically

Programmed!

NOW the most important advance in the field of vibration testing since Calidyne first introduced the 2500 pound shaker, 600-1250-2500 pound force shaker systems with electronic power supplies for programmed complex waveform and feedback testing.

SHAKERS — A complete line of electrodynamic shakers, force output ranging from 25 pounds to 2500 pounds for conventional vibration testing to JAN and MIL specifications.

CALIBRATION SYSTEMS — Designed specifically for calibration of vibration pickups, the Calidyne Model 1 and Model 6C Calibrators with associated power supplies and accessories provide two basic and complete systems for rapid and accurate calibrations of accelerometers and velocity pickups.

ACCELEROMETERS — D.C. operated accelerometers of exceptional sensitivity are available in standard ranges from 5 to 50g. Typical corresponding natural frequencies from 200 to 500 cps, 15 volts output at rated g. Accessories designed for use with these accelerometers include compact nesting battery power supplies and coupling circuits as well as A.C. operated supplies.

METERS — The Calidyne Company offers three instruments designed for use in vibration measurements. **The Vibration Meter** — a battery powered unit designed for use with standard velocity pickups. Direct reading of acceleration velocity or displacement.

The Signal Monitor — A.C. operated and designed for use in monitoring table motion of shakers having velocity signal generators. Reads directly — acceleration in vector g or displacement in peak-to-peak inches.

The Vibroscope uses the Calidyne Accelerometer and provides direct meter reading of vibration level in acceleration, velocity or displacement units and a calibrated oscilloscope for waveform and frequency indications.

STANDARDS — **The Calivolter** provides a precise tool for voltage standardization and general calibration work. Easily checked against primary laboratory standards.

There's a *University* Loudspeaker

RUGGED!

DEPENDABLE!

VERSATILE!

FOR EVERY COMMERCIAL AND INDUSTRIAL APPLICATION

TRUMPETS Model 7102 exemplifies the rugged construction and progressive engineering behind every University product. Model 7102 is the *only* loudspeaker ever approved by Underwriters' Labs for Class II Groups E, F, & G hazardous area duty. Features include re-entrant trumpet (pioneered by University) for compactness and greater efficiency, heavy duty 25 watt driver unit with exclusive University "W" shaped Alnico V magnet, and *built-in* line matching transformer with impedances of 16, 45, 500, 1000, 1500, and 2000 ohms. See general catalog for trumpets of all sizes.

BREAKDOWN-PROOF DRIVER UNITS Model PA-30 embodies features developed by University and never successfully imitated. Ratings are conservative, and construction is to well known University standards which have made our drivers famous for their dependable performance. PA-30 is rated at 30 watts, with response 80-10,000 cps, and is the first to have a multi-tap built-in line matching transformer. Exclusive "rim centering" construction of mechanism and use of University "W" shaped Alnico V magnet insures high conversion efficiency, permanent voice coil alignment regardless of shock or vibrations. Weatherproof throughout.

PAGING AND INTER COM SPEAKERS These feature reflex air columns with hermetically sealed driver units. They are widely used for intercommunication and paging of all types. Efficiency is high and reproduction exceptional at any volume level. Directional, radial, or bi-directional types available. Weather-proof finishes permit use anywhere. Typical of University pace-setting design is the Cobra-12 illustrated, which provides optimum area coverage with minimum power input. Power rating is 12 watts, frequency response 250-10,000 cps, dispersion angle 60° x 120°. Swivel mounting bracket provides full flexibility.

SUBMERGENCE-PROOF SPEAKERS These types are designed for use where extreme ruggedness and immunity to spray, gases, live steam or dust are essential. Function even under water, drain automatically, operate continuously regardless of exposure. Models available for directional or radial projection, wall or bulkhead mounting, swivel mount and with or without built-in line matching transformer and attenuator. Design is ideal for railroad use, shipboard, industries, docks, rough mobile work, etc. Model MM-2, illustrated, is rated at 15 watts continuous IPM, frequency 300-6000 cps, impedance 16 ohms.

FOR ALL HIGH FIDELITY REPRODUCTION REQUIREMENTS

WIDE RANGE CONE SPEAKERS Model 6201 comprises a superb 12" cone speaker with a driver type tweeter mounted coaxially. The cone speaker features a 24 oz. "W" shaped Alnico magnet and edged treated cone for distortion-free low frequency response. Tweeter has wide angle horn. A built-in LC crossover network and external high frequency attenuator are included. Capacity is 25 watts, response 45-15,000 cps, impedance 8 ohms. Other cone speakers for high fidelity, as well as submergence-proof or blastproof service for commercial and military applications.

HI-FREQUENCY TWEETERS University offers a complete line of single and double tweeter units for both 2000 and 600 cycle crossover. Exclusive University "reciprocating flare" horn construction assures uniform wide angle dispersion. A complete line of accessories are included—crossover networks, adapter for mounting tweeter on a standard cone speaker, etc. These tweeters may be added to any standard amplifier and speaker to provide the finest in high fidelity reproduction—and at a very low cost.

PANELS, LIDS, DOORS MADE RF-TIGHT BY LOW COST METHOD

Electronic Weatherstripping, made of knitted wire mesh compressed to various sizes and shapes, effectively "seals" these openings against RF leakage as weatherstrips seal doors and windows.

Openings such as these are necessary for operating and servicing the electronic equipment housed in the metal cabinets. Yet these same openings destroy the shielding efficiency which an "unbroken" metal container would otherwise provide. Careful machining of mating surfaces

"Thermatron built by Radio Receptor Co.,

these openings is an obvious answer. Such work is expensive, and the close fit is often destroyed by repeated openings and closings, by warping of the lid or door and by corrosion of the metal surfaces. Numerous latches, screws, and other fasteners, closely spaced to help keep these joints RF tight, but are a time consuming nuisance when the cabinet must be opened and closed, and they are expensive to purchase and install.

Metex Electronic strips and gaskets eliminate these objections. Being made of metal, they are conductive; and when knitted they are resilient and conform to normal surface irregularities. They do not "block" the otherwise leaky openings with a gasket of flexible metal, and they seal the cabinet as effectively as a conductive shield as if the openings had been made.

Metex electronic strips and gaskets are easy to install. Not only are they inexpensive, but their use may well save more than their cost by eliminating many conditions that would otherwise be necessary. They are available in different sizes, dimensions and resiliencies to meet the varied requirements of specific electronic applications and can be made of various metals or alloys selected to meet actual or anticipated corrosive conditions.

A bulletin giving detailed information is available on request from the manufacturer, Metal Textile Corporation, East First Avenue, Roselle, N. J.

flux
in solder, cores, too...

the right size is important!

AND ONLY

KESTER SOLDER

GIVES YOU

5

ENGINEERED CORE SIZES!

Just as in selecting the right hat size, it's important to select the correct core size in Flux-Core Solder to give you the proper predetermined amount of Flux needed to do the job right. Core size, which controls the ratio of flux to solder regardless of strand size, is always uniform with Kester.

Kester Solder meets all applicable Government and Military specifications

With five different core sizes, available only in Kester Solder, you're sure of the desired solder-spread and absolute control of flux residue. This is a "job-insurance" feature, only to be had with Kester, that will see you through satisfactorily in your production on those exacting government contracts, and all other soldering.

MODEL E-10

SYNCROGEN

A MULTI-WAVE FORM GENERATOR AND PULSE SYNCHRONIZATION UNIT . . .

The E-10 provides, at repetition rates of 1 cycle per second to 100 kilocycles per second: 1. Sawtooth waves; 2. Square waves or Square Pulses, one microsecond to one second duration with rise time of 0.15 microseconds; 3. Integrated or Differentiated versions of the square waves and pulses. All outputs are simultaneously available and independently variable in amplitude. All outputs may be synchronized, triggered or gated by sine waves, pulses or other complex wave forms.

Additional applications of the SYNCROGEN include: oscilloscope sweep phaser, delayed pulse generator, oscilloscope trace expander, frequency divider, and pulse time or pulse width modulator. The SYNCROGEN is an excellent educational demonstrator and useful electronics laboratory accessory.

Price \$175.00 net f.o.b., N.Y.C.

Gray

RESEARCH

Networks and independent stations everywhere recommend and approve Gray professional equipment for broadcast station use. Such broad acceptance is not unwarranted. The products here mentioned are designed and engineered by audio and video specialists . . . incorporate highest quality and serviceability . . . are rightfully leaders in the industry.

...for the finest equipment for AM-FM-TV station use

Gray TELOP I (TELEvision Optical Projector)

Make PROFITS GROW for TV Stations. The Gray Telop projects low-cost, easily produced TV 'commercials'. Without key-stoning, any two photos, titles, slides, etc., or small objects may be broadcast with superimposition, lap dissolve or fade-out. Four optical openings. Strip material may be used horizontally or vertically with Drives shown below.

Gray TELOP II

With the versatile Gray TELOP II you can produce an amazing variety of professional-quality commercials at low cost. TELOP II presents selling messages with opaque cards, photographs and transparencies. You can get the effect of superimposition, lap dissolve and fade-out. Only limitation is your imagination. One operator does it all!

Gray 3A TELOJECTOR

Compact, portable unit for automatic, remote control projection of standard 2 x 2 slides in uninterrupted sequence . . . with studio effects of fading, lapping and superimposition. Projection alternates between two lens systems, with slide turrets changeable in seconds.

Gray 55A FILM CAMERA TURRET

Enables a single camera to serve up to 3 projectors. Centered on a rugged 'square' pedestal, requires a minimum of space. Heavy duty ball bearings. Rotates 360°.

Gray 11A VERTICAL SCROLL DRIVE

Attaches to any optical openings of the Telop. Accommodates roll stock vertically to televise commentary or the commercial in the same way movie introductions are projected.

Gray 60A FOUR-WAY FILM MULTIPLEXER

A precision arrangement of mirrors for operation of pairs of projectors simultaneously into a single TV camera or individually into two separate cameras. Enables a greater number of projectors to be used with fewer highly expensive TV cameras.

Gray 12A HORIZONTAL TAPE DRIVE

Attaches to optical openings of the Telop. News ticker tape fed from 8-mm reels is projected on any part of the screen, top to bottom, horizontally. May be used with test pattern or other commercial.

Gray 13A LIGHT BOX

Provides back lighting of transparencies for Telop use.

Gray 15R REVERSE CLOCK

For use where reversal is required. Designed to permit superimposing of the commercial or other copy.

Gray EQUALIZERS

MODEL 602B EQUALIZER has been specially engineered to provide constant velocity frequency response for both conventional and LP records. Four steps — flat, transcriptions, good records, poor records. Gray Equalizers used as standard professional equipment by broadcast stations.

MODEL 603 — Has 5 control positions. For both GE and Pickering cartridges.

Gray 108B VISCOUS DAMPED TONE ARM

For all records — 33 1/3, 45 and 78 r.p.m. Radically new suspension development on the viscous damping principle for perfect tracking of records and elimination of tone arm resonances. Instant cartridge change with automatic correct stylus pressure. Solves all transcription problems. IDEAL FOR LP RECORDS. For Pickering and GE cartridges.

Gray 106SP TRANSCRIPTION ARM

Designed to meet strictest requirements of modern highly compliant pickup cartridges. Three cartridge slides furnished enable GE 1-mil, 2 1/2-mil or 3-mil cartridges or Pickering cartridge to be slipped into position in a jiffy. No tools or solder! Superb reproduction of 33 1/3, 45 or 78 r.p.m. records. Low vertical inertia, precisely adjustable stylus pressure.

Please write Dept. RH for bulletins describing the above equipment.

GRAY RESEARCH

and Development Co., Inc., Hilliard St., Manchester, Conn.

Division of the GRAY MANUFACTURING COMPANY—Originators of the Gray Telephone Pay Station and the Gray Audograph

Celco

Manufacturers of:
TRANSFORMERS VARIABLE REACTORS
MAGNETIC AMPLIFIERS

1. OUTPUT, MATCHING, COUPLING, AND POWER SIGNAL 400 CYCLE TRANSFORMERS: used where reliability and miniature size is required, such as control amplifying systems. Supplied with any special lead wires or terminations.

2. DUAL MAGNETIC AMPLIFIERS: all types used in latest 400 cycle aircraft control amplifiers for Servo Systems.

3. VARIABLE REACTOR: used today in tuned resonant circuits for vacuum tube voltage regulating systems. Suitable for experimental laboratory work where a HI-Q and wide range of inductance is required.

4. TRIPLE MAGNETIC AMPLIFIER: used in aircraft automatic pilots, by both the Army Air Force and Navy.

5. HERMETICALLY SEALED TRANSFORMERS: designed to conform to military specifications for hermetically sealed transformers, magnetic amplifiers and reactors.

6. FLY BACK: HORIZONTAL OUTPUT AND HIGH VOLTAGE TELEVISION TRANSFORMER: manufactured for extra quality performance at very low costs.

COMMERCIAL USE

Omni-Range; Dme; Line Course Computers; Automatic Pilots; Navigation; Transmitters and Receivers; Oil Burner Ignition; Fly Back; Vertical Output; Linearity Controls.

MILITARY USE

Servo Amplifiers; Adjustable Reactors; Transistor Magnetic Amplifier; Class H Transformers; Drone Control; Guided Missile; Voltage Control; Marine Control; Sonar; Celco Research.

ROTOR CASTINGS

Celco

centrifugally casts MOTOR ROTORS!

CELCO—leading specialists in centrifugally cast rotors for military low inertia and conventional commercial motor applications, offers a complete service on rotor sizes from .375" O.D. to 4" O.D. Celco's exclusive centrifugal casting process guarantees high density with no porosity in the bars and end rings of the squirrel cage.

Other centrifugally cast products are motor housings, special bushings, rings and impeller blades which are cast from various alloys. Radio frequency induction heating equipment permits casting of high melting temperature alloys.

Celco engineers have had extensive experience in experimental and development work. The knowledge that they have gained through the years permits them to design rotors that add superior performance to your finished motor.

APPLICATIONS

- | | | | | |
|--------------------|---|------------------|---|------------------|
| Low Inertia Motors | • | Automatic Pilots | • | Computers |
| Spinners | • | Omni-Range | • | ADF |
| Actuator | • | M G Sets | • | Mark V, VII, XIV |

Let CELCO "Cast Away" your rotor casting problems.

marion

ELECTRICAL INDICATING INSTRUMENTS

HERMETICALLY SEALED METERS

HM2 (2 1/2")

HM3 (3 1/2")

HM4 (4 1/2")

HM Series

Marion true glass-to-metal hermetic sealing . . . long accurate life under adverse conditions of humidity, dust and hazardous atmospheres. Magnetically shielded.

MARION "REGULARS"

phenolic and metal cases—designed for commercial application where hermetic sealing or ruggedization is not required. All Alnico construction. Reliable high torque performance in moderate price range.

MODEL 52N Series 52

Accurate dependable service in smallest practical form. Model 52N (JAN MR24, MR25) 2 1/2" round phenolic case. 52S, 2 1/2" rectangular phenolic case. Model 52 RM, narrow flange brass case. Also available in brass case without flange, 52RMS.

MODEL 53SN Series 53

Standard 3" commercial rectangular type (Model 53SN). Also available in 3 1/2" round phenolic case (Model 53RN) (JAN MR34, MR35).

MODEL 55

Large 4 5/8" x 4 1/8". Critical readability on 100° scale. Extremely accurate. Most popular case style in test equipment field.

MODEL 56

6 1/2" x 5 1/4" phenolic case. Large open face with 100° scale in 5 1/2" arc.

MODEL 57

8 1/2" x 7" open face, extra long scale. More than a mere overgrown 3" meter. Enlarged pole shoes—higher torque movement—higher damping factor. Accurate within 1%.

ELECTRICAL INSTRUMENT COMPANY

408 Canal Street, Manchester, New Hampshire, U. S. A.

RUGGEDIZED METERS

HS Series

HERMETICALLY SEALED

Exceptionally accurate and sensitive even under extreme conditions of shock, vibration, mechanical stress or strain, weather and climate. Outstanding performance in any application. 2 1/2" and 3 1/2" types have standard A.S.A. dimensions.

HS1 (1 1/2")

HS2 (2 1/2")

HS3 (3 1/2")

RELATED PRODUCTS

NULL INDICATORS

HS2 (2 1/2")

Ruggedized, Hermetically Sealed. Used primarily as bridge and potentiometer balance indicators and where an instrument with very high sensitivity about the zero or balance point is desired. Sensitivity at this point is 1 μ a per mm. or higher; the meter's shielded core construction give sharply logarithmic attenuation as it departs from null point and provides ample overload protection.

HS3 (3 1/2")

HM3ET (3 1/2")

ELAPSED TIME INDICATORS

HM2ET (2 1/2")

Two sizes, 2 1/2" and 3 1/2", standard JAN dimensions for panel mounting. Operating range -55°C to +85°C. Hermetically sealed. Magnetically shielded. Registers in 1/10 hour steps to 9999.9 or hour steps to 99999. Durable, self-starting synchronous motor. Available for 110-125, 220-250 volts, 50 or 60 cycles A.C.

M-2

MULTI-RANGE METER TESTER

The only instrument of its type available today. Used for production inspection and calibration of electrical indicating instruments and to maintain high measuring standards in the laboratory. It is also used as a precise production limit bridge permitting acceptance tolerances to be set for any value from $\pm 1/2\%$ to $\pm 20\%$. Overall accuracy for current measurements better than 1/4 of 1%. Resistance range 0-5000 ohms. Power source 115V AC 60 cycles. Complete, no accessories required.

MARION MODEL PM1 PORTABLE BENCH TYPE INDUCTION SOLDERING UNIT

Improves and speeds up production of small components. Low cost, low powered and portable. Size: 15 3/4" x 21 1/2" x 15". 150 lbs. Power supply: 115 volts 60 cycles. Draws 775 watts full load, 100 watts standby.

NEW CONFUSION-PROOF MARION MULTI-DIALER

A multi-scale instrument which exposes only one scale to view at a time. At the same time, it automatically switches the appropriate internal or external circuitry associated with that scale. Five amperes and ranges in volts, milliamperes, microamperes and amperes. Ideal for panel, bench or field.

PRECISION BUILT CAPACITORS and GERMANIUM PRODUCTS

MINIATURE CAPACITORS

- Smaller than JAN — made in accordance with Electrical and Environmental requirements of JAN-C-25 or MIL-C-25A.
- Hermetically sealed case, glass-to-metal.
- Voltages from 100 to 1,000 WVDC.
- Series "XH" — 2500, 2600 and 2700, Operating Temperatures -55°C to $+125^{\circ}\text{C}$. Hi-Temperature Gudeman Impregnant No. 257.
- Series "X" — 2500, 2600 and 2700, Operating Temperatures -55°C to $+85^{\circ}\text{C}$. Hi-Temperature Gudeman Impregnant No. 257.
- Series "X" — 1800, 1900, 2100, and 2200, Operating Temperatures -55°C to $+85^{\circ}\text{C}$. Hi-Temperature Wax Impregnant.
- Tab or Extended Foil construction.
- Insulated or Uninsulated types.
- Various mounting styles available.

ELECTROLYTIC CAPACITORS

- Voltages from 10 to 475 WVDC.
- Hi-Temperature Operation 65°C to 85°C .
- 99.9 Purity Anode Foil.
- Paper Tubulars and Metal Cased units.
- Separate Air-Conditioned Plant.

MOLDED CASE CAPACITORS

- Voltages from 100 to 1600 WVDC
- Extended Foil — Non-Inductive Construction
- Mineral Oil Impregnated — Operating Temperatures -55°C to $+85^{\circ}\text{C}$.
- Hi-Temperature Phenolic Molded Case
- Rugged — Durable — Hard — Compact
- Leads soldered to brass eyelets firmly embedded in molded case — cannot work loose
- Ground end identified by projection in case and by colored band — sight and feel identification

GERMANIUM DIODES

- "Cat Whisker" Type Contact.
- AC-Electro Pulsed Contact.
- Controlled Purity single germanium crystal soldered to pin.
- Brass end caps securely locked in place — Integral with case.
- Low loss ceramic case.
- Tinned copper or nickel pigtails 1/32" Dia.

Here are but a few of the many types and styles of Gudeman Capacitors and Electronic Components designed for Military and Commercial applications.

Gudeman's complete line of precision built products include Fixed Paper Dielectric Capacitors, Metallized Paper, Plastic Film Dielectrics, Glass Case Capacitors, Power Factor Correction, Filters and Germanium Diodes.

In addition the Gudeman Company manufactures Fixed Paper Dielectric Capacitors in accordance with JAN-C-25.

For assistance on any special application or design problem write to the Gudeman Engineering Dept.

FOR VIBRATION TESTING

MODEL C-25

MB VIBRATION EXCITERS and CALIBRATORS

Producing results quickly, dependably, and often *visually*, MB Exciters have many important applications. For example: (1) Fatigue testing of mechanical and electrical structures to destruction under dynamic loads . . . (2) Determination of noise sources in automobiles, bodies and chassis, air conditioning equipment, blowers and similar equipment . . . (3) Shake testing of electrical components such as relays, switches or radio chassis to determine the ability of components to operate under high vibratory loads . . . (4) Determination of damping characteristics of rubber, steel, brass, plastics and other materials . . . (5) Identification of resonant frequencies and modes. These exciters also provide a convenient means for determining natural modes of wings, stabilizers, fin and control surfaces or aircraft structures.

These exciters are designed to conduct vibration tests to MIL-E-5272 and 41065-B and other specifications.

Model ACS-25 automatic cycling system for MB Models C-5 and C-25 Vibration Exciters. Exceeds requirements of MIL-E-5272. Provides for (1) Automatic control of frequency and acceleration or amplitude. (2) Automatic amplitude or acceleration control, manual frequency variation.

Model No.	Rated Force	Total Stroke	Power Supply	Usable Range c.p.s.
S-D	10 lb.	1/2 in.	Electronic	20 to 20,000
C-31*	25 lb.	1/2 in.	Electronic	4 to 70,000
C-1*	50 lb.	1/2 in.	Electronic	4 to 70,000
C-11*	50 lb.	1/2 in.	Electronic	4 to 70,000
S-3	200 lb.	1 in.	Rotating	3 to 500
C-5	750 lb.	1 in.	Rotating	3 to 2000
C-25	2500 lb.	1/2 in.	Rotating	3 to 1000
C-100	10,000 lb.	1/2 in.	Rotating	3 to 1000
C-250	25,000 lb.	1/2 in.	Rotating	3 to 1000
C-500	50,000 lb.	1/2 in.	Rotating	3 to 1000

* Also suitable for calibration of vibration pickups.

FOR VIBRATION MEASUREMENTS

MB VIBRATION METERS

Precision Model M-1 and M-3 meters offer complete, compact units for vibration measurements when used in conjunction with the MB vibration pickup. Provide for accurate readings of accelerations, velocities, amplitudes. Simple, rugged, battery- or AC-operated, and portable, these instruments are outstanding for quality control or research.

MB VIBRATION PICKUPS

Are sensitive to low amplitude vibration . . . can be used with wide range of equipment . . . simple field adjustment converts from horizontal to vertical use . . . electrically damped . . . maintains calibration over wide temperature ranges . . . resonant frequency below 5 c.p.s. Several models including Type 122 which is usable at temperatures up to 500°F.

FOR VIBRATION ISOLATION

MIL-I-5432 (AN-I-16a) can be met with Isomode* Type 17 vibration isolators which are available for loadings of 1/2 to 100 pounds per unit. An outstanding feature is the equal spring rate in every direction.

ISOMODE* INDUSTRIAL-TYPE ISOLATORS—These units provide large deflection ratings together with high load capacity, small size, and exceptional stability. Have equal spring rates in all directions—mount at any angle—absorb vibrations for every plane. Unit load-range 50 lbs. to 2500 lbs. Write for the *Isomode* Design Chart.

OTHER TYPE ISOLATORS also available, including units for special applications; Isomode grommets; mounts with small dimensions. Contact us on your specific requirements.

* Reg. U. S. Pat. O.

Turret Terminals - Terminal Boards - Hardware

CHOOSE YOUR TERMINALS FROM THIS HANDY GUIDE

You'll find all the most popular terminal styles in this chart; for detailed specifications, ask for your copy of our new catalog No. 52-E.

FOR YOUR MINIATURIZED EQUIPMENT

We can furnish miniature terminals, miniature section boards, and miniature terminal boards made to your specifications — including fungus-proofing and other requirements of military specifications. Write for details.

NEW! MOLDED SILICONE PLASTIC TERMINALS

greatly improved characteristics — at standard cost. In five sizes and three mounting types, to meet the widest variety of applications. Write for full details.

For the first time, insulated turret terminals are available in a new molded silicone plastic with

SKL PRECISION INSTRUMENTS

FOR YOUR MEASUREMENT PROBLEMS

• QUALITY • ACCURACY • EASE OF OPERATION

VARIABLE PRECISION FILTERS: SERIES 300

All SKL Series 300 precision variable electronic filters are designed to have responses identical to constant k-pi section filters. The filters have 18 db per octave per section attenuation in the rejection band.

MODEL	FUNCTION	CUT-OFF FREQUENCY RANGE	ACCURACY
300	Hi or low pass	20 cps to 200 kc	±3%, 20 cps to 20 kc ±5%, 20 kc to 200 kc
302	Band pass & rejection	20 cps to 200 kc	"
305	Hi or low pass	2 cps to 20 kc	±3% over entire range
306	Band pass & rejection	2 cps to 20 kc	"

WIDE-BAND CHAIN AMPLIFIERS: SERIES 200

Broad bandwidth, short rise time, stable gain, and linear phase shift make SKL Chain Amplifiers ideal for amplifying either continuous wave signals or pulses. Each model comes complete with a regulated power supply.

fiers ideal for amplifying either continuous wave signals or pulses. Each model comes complete with a regulated power supply.

MODEL	BANDWIDTH	GAIN	APPLICATIONS
202C	1 kc - 210 mc	20 db	Pre-amplifier
200B	1 kc - 210 mc	10 db	Phase Inverter
214B	200 cps - 100 mc	30 db	Pulse Amplifier for C.R.T.
212A TV	40 mc - 225 mc	21 db	TV Distribution System

504 SQUARE WAVE GENERATOR

A rise time of .03 microseconds and a wave form without tilt or overshoot characterize the performance of this moderately priced instrument. The Model 504 Square Wave Generator has a frequency range from 0.5 cps to 500 kc in seven steps. The output voltage is continuously variable from 0 to 11 volts peak to peak. The unit comes complete with its own regulated power supply.

503 PULSE GENERATOR

Provides a rectangular pulse shape with a rise time of less than 1 millimicrosecond. Pulse width is varied by changing length of external cable; minimum pulse width less than 1 millimicrosecond while maximum pulse width is unrestricted. Pulse repetition rate is variable from 50 to 150 pps. The pulse output voltage is continuously variable up to 150 volts; either positive or negative. Output impedance is 50 ohms. The Model 503 Fast Rise Pulse Generator is a convenient instrument for testing the response of any wide-band network.

600 CATHODE RAY INDICATOR

are positioning, intensity, focus, and astigmatism controls.

Designed to utilize the high writing speed capability of the type 5XP cathode ray tube in applications too advanced or special for standard oscilloscopes. In conjunction with the Model 610 Sweep Generator writing speeds up to 500 centimeters per microsecond may be observed. Conveniently mounted on the front panel

610 SWEEP GENERATOR

Provides continuously adjustable sweep speeds of from 0.05 to 500 centimeters per microsecond for a C.R.T. or other applications requiring a linear, rapidly-rising voltage. Used with the SKL Model 600 Cathode Ray Indicator, ignition voltages, lightning, dielectric breakdown and other very fast pulses may be displayed in detail.

WIDE-BAND TELEVISION DISTRIBUTION SYSTEM: SKL manufacturers complete T.V. distribution systems for community, apartment house, and industrial use. Details upon request.

The Finest in Precision Equipment

New **A. W. HAYDON COMPANY**

STOP CLOCK

High Speed Stop Clock Accrued Seconds Indicator With Fluorescent Dial and Hands . . . Also Available For Other Intervals.

This new, hermetically-sealed *Stop Clock* further enlarges the complete line of A. W. HAYDON COMPANY A.C. and D.C. Timers, time delay relays and timing motors. This accurate, panel-mounted timer totalizes hundredths of a second up to a minute. Hermetically-sealed, it weighs approximately 2 lbs. Comes with automatic reset.

SPECIAL FEATURES:

- Precision timing measuring hundredths of seconds to one minute.
- Automatic reset.
- Hermetically sealed.
- For operation on 50, 60, or 400 cycles A.C. or 20-30V D.C. 400 cycle unit has D.C. clutch.

A. W. HAYDON CO. 400 CYCLE MOTOR has improved performance for aircraft use.

- Light in Weight — Small Compact Size.
- Now . . . you can run timing systems directly from 400 cycle power.
- Features fast start and stop, as well as high torque, and reversibility.
- Get all the facts in the new A. W. Haydon Co. catalog, described below.

SERIES #5700 CHRONOMETRIC D.C. GOVERNED TIMING MOTOR

- Extreme accuracy — 1/10 of 1%.
- Wide range of voltage, temperature, load.
- Light weight . . . Compact.
- Reversible.

SERIES 5300 D.C. TIMING MOTOR

- Rugged, Accurate, Reliable.
- Compact . . . Reversible, variable speed.
- Special windings available for operation from vacuum tubes or as tachometer generator.

TIME DELAY RELAY WITH ADJUSTABLE DIAL A.C. SERIES 11400 OR D.C. SERIES 6400

- Wide selection of time range.
- Features ease of adjustment.
- Flexible, compact design.
- Positive operation.

HERMETICALLY SEALED TIMER SERIES 6400, 11400, 7900, 12900, 3600

- Maximum protection against weather, humidity, explosive atmospheres, and high altitude.
- Light weight, corrosion-resistant enclosure.
- Flexible design.

REPEAT CYCLE TIMER A.C. SERIES 13600 OR D.C. SERIES 3600

- Durable . . . Long life.
- Wide range of time cycles.
- Multiple control circuits.
- Easily adaptable to meet specific requirements.

DELAYED-RESET TIME-DELAY RELAY

New time-delay relay uses basic "Series 6400" d-c. and "Series 11400" a-c. time delay relay. Makes possible delayed reset proportional to time delay, and a circuit reclosure time proportional to length of current interruption. Reset is controlled by escapement mechanism.

THE *Mayhill* **PLATING PROCESS**
GUARANTEES

ACCURATE PLATING
IN
ELECTRONICS!

Since 1946, M-W LABORATORIES has electroplated precious metal for suppliers to the U. S. Army, U. S. Navy, Atomic Energy Commission and to leading manufacturers in the electronics industry.

M-W LABORATORIES, featuring their Mayhill Plating Process, are equipped to plate these precious metals: gold, silver, rhodium, palladium, albaloy and indium.

Controlled thickness, smoothness, color, hardness and adhesion of plating is assured through constant testing by our own chemists and engineers, in our chemical and metallographic laboratory.

Contact us for a no-cost-to-you consultation on your plating problems.

 and effort on
**ELECTRONIC
 PROBLEMS IN
 COMMUNICATIONS**

This new Markus and Zeluff book helps you do it. It gives you easy access to essential information on many important recent developments in radio communication, radio broadcasting, television, and radar.

In the same convenient style as their other books, the authors have selected 252 outstanding articles from recent issues of *Electronics*—then condensed, classified, and indexed them for your easy reference.

The result is a reference book that will save you hours of duplicative research—giving you circuits, equations, charts, nomographs, and other job data on major electronics fields.

Just Published

**ELECTRONICS FOR
 COMMUNICATION
 ENGINEERS**

Edited by JOHN MARKUS and VIN ZELUFF
 Associate Editors, *Electronics*
 624 pages, hundreds of illustrations, \$10

This compact volume presents important work of other engineers, making it practical and economical to begin a new problem with others have left off—rather than starting from scratch. Its 252 articles contain a wealth of design equations, charts, nomographs, tables, etc. Because of its authoritative and detailed coverage, every article has permanent reference value—each contributes to a book that will more than pay its own way in your reference library.

**16 CHAPTERS
 COVER**

- amplifiers
- antennas
- audio
- cathode-ray tubes
- components
- electronic music
- filters
- measurements
- microwaves
- oscillators
- power supplies
- propagation
- pulses
- receivers
- transmission lines
- transmitters

**Full coverage
 electronic music**

A helpful feature in chapter on Electronic Music, a relatively new branch of electronics that is growing rapidly more important each day. Compiled here are articles giving information on both commercial and custom-built electronic organs.

Much of the material in the audio section supplements the basic articles on electronic music, since an audio amplifier is an essential part of every electronic organ.

Radar and television circuit developments are treated and explained in each appropriate chapter rather than being grouped in a separate chapter.

LEDEX rotary solenoids solve remote control problems!

The many production applications of Leduc Rotary Solenoids vary from the dependable, snap-action tripping of airborne bomb releases to the actuation of rugged, hydraulic valves in heavy duty materials handling equipment. These compact, powerful, shock resistant Solenoids are manufactured with diameters from 1 1/8 to 3 3/8 inches. Predetermined rotation up to 95° can be engineered to suit your product's requirements. Starting torques for 45° stroke range from 1/4 pound-inches to 50 pound-inches.

Leduc Rotary Solenoids operate on direct current and are adaptable for various types of power take-offs, mountings and dust covers as illustrated at the right.

We supply to quantity users and solicit the opportunity to be of assistance in engineering a Leduc Rotary Solenoid to meet your product's requirements.

Magnetic action moves the armature along the solenoid axis. This action is converted into a rotary motion by means of ball bearings on inclined races.

MODEL NO.	2	3	5	6	7	8
Diameter	1 1/8"	1 3/8"	1 7/8"	2 1/4"	2 3/4"	3 3/8"

Weight lbs.	1/8	1/4	1/2	1	2 1/4	4 1/4

*45° stroke intermittent duty

LEDEX circuit selectors and stepping relays give remote control for multiple complex circuits.

Leduc Circuit Selectors and Stepping Relays can be remote controlled, are Rotary Solenoid operated, have positive detent action and are self-stepping or external impulsing. Many versatile designs of stepping, counting, adding and subtracting, latching, and circuit selecting relays are made possible by the combination of the Leduc Rotary Solenoid and wafer type rotary switches. Self-stepped or externally impulsed, the device is immediately adaptable to many remote control applications. A choice of wire sizes permits a wide range of operating voltages and power requirements. Various types of mountings further increase its adaptability. In addition to its positive control of multiple, complex circuits, a reserve of mechanical power is available for the performance of many duties other than switching operations.

Write today for complete information on Leduc Rotary Solenoids and Leduc Circuit Selectors.

TENNEY SERVO UNIT

Portable air conditioning unit which may easily be attached to various types of laboratory enclosures—impact machines; tension machines; torsion testers; cold boxes and similar equipment. Through its use, articles undergoing testing, aging or weathering can be subjected to wide variations of humidity, heat and cold. Photo shows servo attached to companion chamber.

**TENNEY TEMPERATURE
AND HUMIDITY CHAMBERS**

These chambers provide positive control of wet- and dry-bulb temperatures, humidity, and air circulation; and are designed for research and production testing of physical quality, fragility, tension, and all other pertinent factors, at constant conditions or on planned program cycles.

Model TR—Precision recorder controllers permit accurate simulation and check of temperatures to +200°F. Meets all Mil and JAN specifications for low- and high-temperature requirements by incorporation of temperatures down to -100°F. Humidities within 20%-95% range. Built in a variety of standard sizes.

Model TH—Specifically designed for a temperature range of +35°F to +180°F, and a humidity range of 20%-95%. Accurately simulates, controls, and checks all above-freezing temperatures. Can incorporate program control for meeting a wide variety of Mil specifications if desired. Manufactured in many standard sizes.

TENNEY SUB-ARCTIC INDUSTRIAL CABINETS

Designed for low-temperature testing of metals, radios, instruments, plastics, liquids, chemicals and pharmaceuticals. Temperature ranges of -40°F, -60°F, -95°F and -150°F are standard for each size.

8670

For further information on these and other Tenney test equipment, write to Tenney Engineering, Inc., Dept. J 26 Avenue B, Newark 5, New Jersey.

Advertisers

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this growing NEW field. Ask them to show you what your potentials can be.

EVER-LOK®

R&S RECEPTACLES, PLUGS AND CORD CONNECTORS

...FOR HEAVY-DUTY UTILITY AND INDUSTRIAL APPLICATIONS

R&S Ever-Lok heavy-duty plugs and receptacles carry full-rated load currents safely and with the greatest of ease under severe operating conditions. Industry and Utilities specify these rugged cord connectors because Ever-Lok has the right combination of features for heavy-duty service applications.

Outstanding Ever-Lok advantage is an automatic locking grip that prevents faulty contacts and accidental disconnection in service. Every Ever-Lok plug grips fast and holds forever despite every tug or pull — yet separates instantly with a finger-tip twist of the powerful bayonet type lock.

Good products need good connections — and Ever-Lok always provides a happy ending to cord connector problems.

Write for literature EL-6

R&S Ever-Lok complete lines are available from Midget type 10 amperes to 200 amperes heavy service types . . . standard or reverse service . . . fused and non-fused types. Also a complete Ever-Lok Multi-circuit line from 2 to 12 poles, for sound and control equipment.

TYPICAL APPLICATIONS FOR Midget EVER-LOK DEVICES in the Electronic and allied industries

Adaptable as components for:

- Accelerometers.
- Amplifiers: Audio Frequency, Audio Input Systems, Keying, Ultrasonic, and Vibration Pickup, etc.
- Battery Chargers.
- Blowers, Small.
- Broadcast Input Control.
- Cameras: Cathode Ray Oscillograph, Television, and X-Ray.
- Chambers, Humidity Test.
- Chronoscopes.
- Communication Systems: Airport Traffic Control, Portable Installation, Radioteletype, etc.
- Controls: Counter, Sorting, and Register, etc.
- Converters: Frequency Shift.
- Detectors: Electrocardiographs, Electroencephalographs.
- Gages: Measuring, and Electronic Inspection.
- Geophysical Apparatus.
- Indicators.
- Inverters.
- Machines.
- Meters: Sound Level, etc.
- Monitors.
- Oscillographs.
- Radar Systems, & Equip't.
- Receivers: Communication, Portable and Mobile; Radio Direction
- Recorders: Facsimile, Materials Thickness, Sound and Phonograph, Sound Level, and Strain.
- Spectrometers, Mass.
- Television Systems.
- Transmitters.
- Turntables: Recording and Transcription.
- Vibration Analysis Equipment.
- X-Ray Equipment.

HOOK-UP WIRE

TYPE SRIR, with glass braid covering in colors.
 Gauge sizes: #24 to #8 stranded, solid or flexible.
 Material: Extruded synthetic resin; flameproof, resists oil, easily cleaned.
 Weaving: Closely woven fiberglass in solid colors; white, black, brown, red, orange, yellow, green, blue and any of 100 combinations.
 Finishing: Smoothly finished with tough flame resisting lacquer.
 Voltage rating: 1000 RMS, diameter no larger than ordinary 600 RMS.
TYPE SRIR, plain or with nylon braid in colors.
TYPE SRLV, plain or SRLV(J) with nylon sheath: small diameter wire, 105° C rating, in all colors for miniature wiring.
TYPE SRMV, plain or SMRV(J), nylon jacket: 600 volt, 105° C hook-up wire.
TYPE SRHV, with either glass braid or nylon sheath: for voltage ratings of 2500, 5000 and 10,000 DC in electronic applications.
TYPE ANRW, plain or with cotton braid: for good abrasion and heat resistance. Insulated with neoprene compound for 600 volts, withstands baking at 250° F without damage - for leads on coils and transformers.

TYPE SRHT (Synthetic Resin High Temperature) is the designation for a series of hook-up wires for high temperature applications, and is made in gauge sizes #26 to #6, in all colors, with various types of coverings to be serviceable under different conditions and temperature ratings.
SRHT(GS): rated at 200° C, has a tinned copper shield with silicone treated fiberglass braid.
SRHT(SG); **(SN)**; **(GV-22-2)**; **(GV-22-3)**: single, two and three conductor wires for telemetering use.
SRHT(NN): rated at 125° C, is nylon braid covered and finished with flexible nylon coating.
SRHT(CV): rated at 150° C, is covered with a unique abrasion resistant braid saturated with silicone resin.
SRHT(GV): rated at 200° C, is covered with fiberglass braid saturated and finished with silicone resin.
SRHT(GF): rated at 250° C, is covered with glass braid saturated and finished with "Teflon."

NEW DESIGNS

TYPE ANNN: improved performance over temperature range -55° C to 100° C for aircraft electronic equipment.

TYPE SRPF(SN): new 125° C shielded wire. Miniature size, high abrasion, moisture, insulation resistance and stable capacitance over wide temperature range.

SHIELDED WIRES DESIGNED WITH LOW INTERNAL NOISE CHARACTERISTIC

BIW CABLE #626: #22 gauge, "Teflon" insulated, double shielded with outer protective glass braid. Diameter 0.150". Offers low noise (div.) characteristic for use with instruments utilizing piezoelectric effect. Stable over a temperature range of -60° F to 400° F.

BIW CABLE #634: #29 gauge, low capacity (18 mmf./ft.) of similar performance to #626 except with single shield. Diameter 0.125".

BIW CABLE #634A: same as #634 with double shield. Diameter 0.150".

"TEFLEX" HIGH TEMPERATURE 600 VOLT LEAD CABLES

PATENTED

Designed to meet the requirements of electrical equipment operating at high temperatures - a flexible cable of higher dielectric strength and insulation resistance, smaller in diameter, flameproof, resistant to corrosive vapors, acids and solvents. BIW "Teflex" cables fill the need for high temperature cables operating in wet locations and under severe conditions. All types are made in all sizes from #22 to #2 AWG in 600 volt rating and in high voltage ratings as may be required from 1000 to 25,000 volts.

BIW TYPE PFGV: consists of flexible copper conductor insulated with a laminated layer of DuPont "Teflon" sealed with silicone to form a moisture-proof insulation which remains flexible after exposure to high processing temperatures and may be operated at 200° C continuously. Covered with a unique heat and abrasion resistant braid.

BIW TYPE PFGGV: with double braid covering.

BIW TYPE PFGF: with "Teflon" finished glass covering.

CUSTOM MADE MULTI-CONDUCTOR NEOPRENE SHEATHED CABLES

PATENTED

These cables employ the use of laminated "Teflon" tape insulation which remains flexible over temperatures from -80° F to 400° F and withstands these temperatures with little change in electrical or physical properties. The suffix "GV" refers to a "Teflon" tape and treated fiberglass covering which can be rated at 400° F. The suffix "GL" refers to a glass braid; "NL" refers to nylon braid, lacquer coated, smaller in diameter which can be rated at 250° F.

INSUROK PLASTICS

LAMINATED INSUROK

Available in sheets, rods, tubes, and fabricated parts, in many grades, sizes, and thicknesses. Meets practically any requirement for uniformity, machinability, dielectric, printed circuitry, and physical strength.

MOLDED INSUROK

Parts molded from specially developed plastics materials as required for your product. Standard materials also used. Produced by compression, transfer, or injection process. Metal inserts molded into position.

RICHARDSON OFFERS YOU A Complete Range of TECHNICAL SERVICES

Richardson offers its wide experience in developing special plastics materials for your product. Also, research, design, and extensive engineering services without cost or obligation. We provide molding, laminating, molded-laminates, and fabrication facilities and techniques. This assures the correct selection of material and process for each application.

RESEARCH

For over one-quarter century, Richardson has pioneered in the development of new plastics and the improvement of old.

DESIGN

Experienced engineers analyze your requirements and help you select material, form, and process best suited to your needs.

PRODUCTION

Richardson has the plant equipment and know-how to handle even the largest, most difficult molded or laminated job.

FABRICATION

Complete facilities for punching or machining parts to your design and in any quantity.

AN

AN Series... conforming to military specification MIL-C-5015. 15 diameters and 260 layout patterns for the aircraft, communications, instrument and electronics industries. 6 approved shapes, AN 3100 to AN 3108. AN-M Series also meets the specification.

AN-M

AN-M Series... 5 basic shell shapes, 12 shell size diameters and 105 layout variations in resilient material insulation. For resistance to moisture, vibration and high gravitational forces.

K, RK

K, RK Series... 8 basic shell shapes, 8 diameters and 204 cataloged layout variations. Special Acme thread. For aircraft, communications, instrument and electronic applications.

DP

DP, DPB, DPD, DPD2, DPR and DPM Series... Used for rack-and-panel instrument panel and sub-assembly applications. Rectangular in shape with 27 basic layout variations in DPB and DPD.

P, O

P and O Series... 22 shell shapes and 7 layout patterns... used in audio and video amplification, tape recording and related applications.

X, XK, XL

X, XK and XL Series... 23 basic shell shapes and 8 layout arrangements for cord-end or wall mounting... engineered for audio-circuitry but applicable to many low level circuits and wide electrical uses.

D, U

Sub-Miniature Connectors... The D and U Series for cord-end, rack-and-panel or wall mounted applications. The D Series has 3 basic shapes with up to 50 contacts. Used for portable radio, audio circuitry and like applications. The hermetically sealed UH Series, cylindrical with 4 basic shell shapes, accommodates up to 12 contacts in 12 layout patterns. DH Types used for hermetically sealed miniature components.

GS

Hermetically Sealed Connectors... with steel shells and contacts withstand high pressures. Available in the GS, KH, DH and U Series. Insulation is a vitreous material, fused under high temperature to shell and steel contacts thus forming a permanent hermetic seal that allows no leakage.

Send for a copy of the Cannon Plug Guide. It will help you understand the vast application coverage of the Cannon line and lead you to the right connector for your own application. Be sure to see Cannon's informative film, "Contact", available for free showings. Write to Modern Talking Picture Service, Inc., 45 Rockefeller Plaza, New York 20, N. Y., for film.

HIGH VACUUM PUMPS

MECHANICAL, OIL SEALED

Almost without exception in the United States and in an increasing number of plants abroad, Kinney High Vacuum Pumps are standard equipment for exhausting lamps and tubes. They also provide low absolute pressures for sintering alloy metals, coating lenses, refining rare metals and producing blood plasma, penicillin and other drugs. They are used effectively wherever a high vacuum pump can be applied including cyclotron evacuation, atom smashing, and condenser vacuum service in power plants. Over 10,000 installations serve a wide variety of fields.

The plungers in Kinney Vacuum Pumps have no contact with cylinder surfaces due to the unique method of automatic lubrication, resulting in a no-clearance pump of extremely long life. Simple and efficient in design, these pumps have established an impressive record for dependability and low cost operation.

SINGLE STAGE VACUUM PUMP

MODELS VSD AND DVD

Nine pump sizes cover a capacity range from 13 to 1800 cu. ft. per min. with motors from 1/2 to 75 h. p., respectively. VSD Models are furnished either air or water cooled (except Model VSD 556 - air cooled only). All DVD Models furnished water cooled only. Single Stage Pumps on a blank test produce low absolute pressures of 10 microns (.01 mm Hg.) or better.

Model VSD Single Stage Vacuum Pump

COMPOUND VACUUM PUMP

MODELS CVM 556 AND CVM 8610

Four sizes of Compound Pumps are available in capacities of 2, 4.9, 15.2, and 46 cu. ft. per min., respectively. The working mechanism is similar to the Single Stage but the two cylinders are connected in series. The Compound Pump

Model CVM 8610 Compound Vacuum Pump

has an air cooled casing of unique design and special provision for oil sealing and lubricating the high vacuum working parts. These compound pumps test to low absolute pressures of 0.2 micron (.0002 mm Hg.) or better.

SMALL VACUUM PUMPS

MODELS CVM 3153 AND CVM 3534

These small Kinney Vacuum Pumps combine the advantages of small size and high pumping speed. Model

Model CVM 3153

CVM 3153 has a free air displacement of 2 cu. ft. per min.

Model CVM 3534

It weighs only 70 lbs., complete with its 1/4 h.p. motor. Model CVM 3534 has a displacement of 4.9 cu. ft. per min. Its weight: 140 lbs. with 1/2 h.p. motor. Both pumps test to low absolute pressures of 0.2 micron (.0002 mm Hg.) or better.

KINNEY VACUUM VALVES - VACUUM OIL

Kinney Vacuum Tight Valves facilitate testing vacuum installations. Special metal bellows eliminate the leakage at the valve stem which occurs with ordinary valves having stuffing boxes. Three types of valves are available - steel, cast iron, and bronze. Write for Vacuum Tight Valves Bulletins.

The oil supplied with the Compound Pumps is carefully processed to insure low vapor pressure and suitable viscosity. It is available under the name "Kinney Super X Vacuum Dried Oil."

AIRCRAFT

TRANSFORMERS

Keystone is a *respected* source for special purpose and custom-made aircraft transformers and magnetic amplifiers. As suppliers to several of the nation's leading prime contractors, we're accustomed to working to unusually difficult standards of accuracy . . . so far as weight, quality and electronic accuracy are concerned.

If you require miniature transformers you'll also find KEYSTONE an unexcelled resource. Engineering service available. Get acquainted with the KEYSTONE brand of service and dependability at once.

"Moto Mag"
Registered Trademark
of Keystone Products Co.

This is the **FIRST** of five pre-designed magnetic amplifiers that will save precious engineering time. If you're designing an aircraft unit — design it around this KP-10-400 Magnetic Amplifier. Then watch your costs tumble down!

MOTO-MAG KP-10-400 is useful in positioning servos, computers, servo motor controls, remote control devices and other units requiring variable phase power. Send for Mechanical and Electrical specifications. Since units are already built, single pieces are available for experiments and tests at modest cost.

Prompt attention given all inquiries

Lavite CERAMICS

... are available with
any specific
physical characteristics
you may want

For more than 77 years, Lavite Technical Ceramics have been constantly improved to meet current requirements. We have increased our facilities—research, design and manufacturing—to help you meet the drastic demands for ceramics of specific physical characteristics. We invite you to submit your problems to our engineering department for individual study and recommendation—or, perhaps one of the well known and proved standard "Lavite" Ceramics will satisfy your needs. Which ever it be, we will give your requirements immediate attention. Write for general characteristic data on all "Lavite" Ceramics.

Sales Offices in Principal Cities

CONSIDER THESE FOR IMMEDIATE DELIVERY

"Lavite" STEATITES

S-10 and S-15 for ordinary radio and general medium-frequency requirements. S-201 and S-300 for ultra low loss—high frequency applications.

"Lavite" SEMI-STEATITES

S-25H with good electrical properties at high temperatures. R-10 for element supports, in electrical appliances.

"Lavite" CORDIERITE

S-40H, S-12H and R-15 for special application for extreme thermal change when a low linear coefficient of expansion ceramic is required.

"Lavite" MULLITE

R-20 and R-25 for light duty refractory applications.

"Lavite" ZIRCON PORCELAIN

Z-200 and Z-300 with excellent all around properties including: (1) low electrical loss; (2) high mechanical strength; and (3) thermal shock resistant.

"Lavite" FIRED STONE GRADES

N(M) and A for mechanical parts, where special tools are not required and tolerances can be maintained. Especially adaptable for models.

"Lavite" TITANATES

Available in a range of types and properties including low, intermediate and high "K" groups.

"Lavite" FERRITES

Permeability factor 1000 initial—3000 maximum and curie point of 250° F. Particularly adapted for television and frequency modulation.

Here's Help with AN Connector Performance and Assembly Problems

Solid Shell AN. Snap-in retaining sleeve (exclusive with G.E.) cannot work loose, yet releases quickly with a screw driver and insert removes for inspection or soldering. Design permits use in tight places normally requiring split shell connectors. Meets MIL-C-5015.

Split-Shell 90° Angle AN. Top removable for wire inspection without unmating or disassembling from conduit or cable. Split-shell ease of wiring with advantages of solid shell construction. Meets MIL-C-5015.

Split-Shell Straight AN. Reduced number of metal parts and weight — plus — improved connector performance. Full length split permits rapid and complete disassembly. Meets MIL-C-5015.

Hermetically Sealed. Extremely rugged. Withstand mechanical shock of 100 G's, thermal shock from -300°F. (liquid air) to +500°F. (in oil), voltage breakdown of over 1000 V., operating pressures up to 7000 p.s.i. depending on applications and brazing temperatures as high as 1500°F.

For complete catalog showing all shell styles and insert arrangements send this coupon.

4 WAYS TO END ALL CORD AND CABLE SERVICE FAILURES

Economically

GRIPMASTER STRAIN RELIEFS

Interruptions due to cable and cord connection failures are eliminated because they anchor the cord to the product at the point of strain. GRIPMASTER Strain Reliefs can withstand pulls up to 100 lbs., and are acceptable to Underwriters Laboratories. All types Reg. U. S. Pat. Off.

PROTECT

YOUR PRODUCT
at point of strain

Protect product saleability too — by insuring long life for cords, cables and conductors. Genuine "GRIPMASTER" Strain Reliefs provide these vital features—

- ★ Anchor cords to housings
- ★ Eliminate taping or threading
- ★ Prevent unraveling
- ★ Prevent cord pull damage
- ★ All sizes and styles
- ★ Easy to apply
- ★ Inexpensive

Gripmaster Strain Reliefs are "tremendous trifles" that make good products better!

Ask for samples.

WIRE BINDING SLEEVES—Preventing fraying of cord ends, these specially-treated rubber tubes are available in five sizes to fit wires to .790

VECO

THERMISTORS

ANALYSIS CELLS

VECO Analysis Cells utilize VECO THERMISTORS. Analyzing and reference elements are Sealed in Glass—unaffected by corrosive gasses or liquids.

Available with any type of reference gas sealed in, if desired . . . new high-pressure seal withstands 1,000 psi . . . flow pipes easily connected . . .

VECO Analysis Cells provide new efficiency for instrumentation • gas analysis • combustion study — for chemical research, hospital and college laboratories, food storage protection — cells designed and manufactured to your specific requirements.

tiny beads solve problems in Measurement and Control of thermal, electronic and physical energy!

VECO Thermistors are made in the forms of Beads, Rods, Discs, and Washers — Stocked in a wide range of resistance values—or can be produced in quantity to your exacting specifications.

Distinguished from other sensing elements by extreme variations of electrical resistance with relatively minute thermal changes—approved and accepted by Government Agencies.

Victory's staff of engineers and physicists are ready to recommend the proper VECO Thermistor for • vacuum manometry • oscillator stabilization • temperature measurement • flow measurement • temperature compensation • surge protection • radar power measurement • volume limiting • gas analysis • temperature control • time delay • voltage regulation, as well as for any other new or unusual measurement or control application. Write today!

NEW APPLICATION! Veco Thermistor, 51A101, is used in the new Westinghouse electric range as the vital sensing device in the "Electronic Eye" thermostat that controls cooking temperatures.

NEW! ENGRAVED
INSPECTION STAMPS

of VINYLITE

Better than rubber

* 3 ways

VINYLITE
IS ACID-PROOF

Acid etching inks, used for permanent stamping on metal and all non-porous surfaces will eat away at rubber. Vinylite resists this action — gives longer life by far!

ENGRAVED VINYLITE STAMPING
GIVES RAZOR-SHARP IMPRESSIONS EVERY TIME

Heavy base inks will clog shallow rubber stamp faces rapidly. Our deep-molded engraved VINYLITE stamp faces have more than three times the depth of ordinary rubber stamps. Markings always remain super sharp . . . an important advantage since this mark is a permanent record of your inspector's approval.

VINYLITE
HAS CUSHION-LIKE RESILIENCE

Our VINYLITE molding process includes a timed curing that imparts to this versatile plastic all the elasticity of rubber. Resilient VINYLITE resists abrasive action, conforms to irregular surfaces . . . and lasts much longer!

**BEST OF ALL
VINYLITE
IS ADAPTABLE
TO ANY
MARKING
DEVICE!**

We recommend the following
for standard inspection procedures:

**HOW ABOUT

Subminiature Precision RATE-GYROS

less than 1 inch diameter
less than 2 inches long
weight only 3 ounces

The smallest rate gyroscope in production. Performance and accuracy are not sacrificed with this reduction in size. The high degree of sensitivity is achieved through the unique design of the pick-off which is basically differential transformer. The wheel is a hysteresis-type synchronous motor rotating at 24,000 RPM with an angular momentum of 32,600 C.G.S. units. Due to the small mass of its components the gyro is practically insensitive to shock and vibration. The flexibility of the design allows modifications to meet specific requirements.

GENERAL SPECIFICATIONS (Model 7)

Dimensions — $\frac{1}{16}$ " O.D., $1\frac{1}{16}$ " long	Damping — 0.5 Critical
Weight — 3 oz.	Altitude — 0-60,000 feet
Range — 420°/second	Maximum Linear Acceleration — 60 G axis
Pick-off Excitation — 6.3 Volts, 400 Cycles	Maximum Shock Acceleration — 60 G axis
Motor Excitation — 6.3 Volts or 26 Volts, 400 Cycles	Maximum Vibration (0 to 300 cps) — 5 any axis
Resolution — Better than .05°/second	
Sensitivity — 14 millivolts/degree/second	
Resonant Frequency — 85 cps	

Self Clearing HYDRAULIC SERVO VALVE

- TWO STAGE
- FOUR WAY

Absolutely sealed against magnetic particles, this two stage transfer valve exerts a clearing force of several hundred pounds in the first stage in removing any sludge, dirt or metal particles that tend to jam the valve. By amplifying low level electric energy into controlled hydraulic energy, the valve is suitable for any servo system where greater accuracy and high response are of prime importance. Modifications of the torque motor characteristics and valve flow are possible to meet a variety of applications.

GENERAL SPECIFICATIONS

Weight — Less than $1\frac{3}{4}$ lbs.	Flow — Up to 12 GPM
Size — $1\frac{1}{16}$ " x $2\frac{1}{16}$ " x $5\frac{1}{2}$ "	Pressure — Up to 3000 PSI
Volume — Less than 18 cubic inches	Leakage at Zero Signal — 60 cc/min.
Output — Up to 14 HP	External Leakage — None
Dirt Clearing Force — Up to 500 lbs.	Resolution — 0.03%
Power Amplification — 5000 times	Response — Flat to 150 cps
Input Power — Less than 2 Watts	Time Constant — 0.001 Sec.
Input Current — 15 MA	Life — Over 4,000,000 Cycles

PACKAGED BRIDGE COMPARATOR

PHASE
COMPARISON

AMPLITUDE
COMPARISON

A well balanced hermetically sealed bridge for both phase and amplitude comparison. Utilizing two complete bridges with appropriate switching resistors, the phase comparator has a wide frequency range and high dynamic response. This permits its use as a modulator, demodulator, switch, rectifier or chopper. Having no moving parts, the Sanders Associates Phase Comparator is mechanically secure against shock acceleration and vibration. It has standard octal mounting and is mechanically interchangeable with mechanical choppers and electronic tube comparators.

GENERAL SPECIFICATIONS

Frequency Response — 0-5000 CPS	Amplitude — 60 DB
Maximum Reference Voltage — 120 Volts RMS	Conversion Efficiency — 85%
Maximum Signal Voltage — 60 Volts RMS	Maximum Ambient Temperature — +85 degree C
Dynamic Range (Fixed Reference Amplitude) — 46 DB	Mounting — Standard Octal Socket
Dynamic Range (Variable Reference)	Size — 1" Diameter x 3" Long
	Weight — 2 Ounces

Ready-to-use TAPE RESISTORS

THE ULTIMATE IN
PRINTED CIRCUIT
TECHNIQUES

An advanced technique in printed circuitry now makes available tape resistors for commercial and military applications. The flexibility of the Sanders Associates Tape Resistor permits this resistive component to be engineered into the initial printed circuit design. The Tape Resistor is sold in uncut tape rolls or as cured pre-cut resistors, in a wide range of performance characteristics which makes it suitable for a variety of printed circuit applications.

GENERAL SPECIFICATIONS (Precut Resistors)

Size — $\frac{1}{8}$ " Long, $\frac{1}{8}$ " Wide, $1/100$ " Thick	Humidity — 95% at 40 degree C for 24 Hours
Resistance Range — 100 Ohms to 10 Megohms	Temperature Coefficient — Within Requirements of JAN-R-11
Resistance Tolerance — Plus or Minus 10%	Shelf Life — 18 Months Minimum
Power Rating — $\frac{1}{8}$ Watt at +200 degree C	Load Life — 500 Hours Minimum $\frac{1}{4}$ Watt at 200 degrees C
Operating Temperature Range — Minus 55 degree C to plus 200 degree C	Voltage Coefficient — 0.035% per Volt

"The Minicube" SUBMINIATURE BLOWER

1 INCH LONG
1 INCH WIDE
1 INCH HIGH
OUNCE

DELIVERS
3 CU. FT./MIN.

OPERATES BETWEEN -200°C AND +200°C.

A truly subminiature blower designed for cooling or circulation of air for all subminiature applications. The universal mounting, negligible space and weight allow the "Minicube" to be used in almost any type of equipment. The hysteresis-type motor rotating at 24,000 RPM is designed for operation at temperatures up to +200° C. Models are also available for normal temperature operation (-55° to +85° C).

GENERAL SPECIFICATIONS (Model 2)

Size — 1" x 1" x 1"	Temperature Range — Minus 200° C Plus 200° C
Weight — 1 ounce	Expected Life — Over 1000 Hours
Capacity — 3 cubic feet per minute	
Power — 3 Watts, 400 Cycles, 6.3 Volts or 26 Volts

reliability in electronics

TYPE 2003
Same as Type 2007 (at right) except Tube 12AT7 and 5 pig-tail components are external.

TYPE 2007, BASIC UNIT
Contains shock-mounted fork, double triode and all circuitry. Output, 400 or 500 cycles. Accuracy ± 1 part in 50,000. Octal base container, 1 1/2" x 4 1/2". Weight, 10 oz. Power required, 75 to 200 V.-D.C. at 1 to 5 m.a. and 6.3 V. at 300 m.a. Designed for MIL equipment.

TYPE 2001-2, BASIC UNIT
Frequencies, 200 to 3000 cycles. Dividers and multipliers available for lower and higher frequencies. Output, 6 V.—JAN construction.

TYPE 2005, UTILITY
Provides 10 Watts at 110 V. Precision frequencies from 50 to 500 cycles. Input power, 50 to 500 cycles, 45 Watts.

TYPE 2121-A, LAB. STANDARD
Outputs, 60 cycles, 0-110 Volts, 10 watts; 120-240 cy. impulses. Input, 50-400 cycles, 45 Watts.

TYPE 2111A, POWER UNIT
50 Watt output. 0-110-220 V. at 60 cycles or any frequency 50 to 1000 cycles.

Precision FREQUENCIES

GUARANTEED ACCURACY
1 PART IN 100,000 (.001%)
except where otherwise noted

The basis of these frequency standards is an electronically actuated high-precision fork, temperature-compensated and hermetically sealed against barometric changes. The partial list of uses at the right not only suggests the broad range of applications but also proven dependability where there can be no compromise with accuracy. Please request details by Type No. Our engineers are available for advice or cooperation on related problems.

THE NEW

Custom

DC-AC CONVERTER

These latest of all Carter DC to AC Converters are specially engineered for professional and commercial applications requiring a high capacity source of 60 cycle AC from a DC power supply. Operates from storage batteries, or from DC line voltage. Three "Custom" models, delivering 300, 400, or 500 watts 115 or 220 V. AC. Wide range of input voltage, 12, 24, 32, 64, 110 or 230 V. DC. Unequalled capacity for operating professional recording, sound movie equipment and large screen TV receivers. Available with or without manual frequency control feature.

MAIL COUPON FOR CATALOG

Carter Rotary Power Supplies are made in a wide variety of types and capacities for communications, laboratory and industrial applications. Used in aircraft, marine, and mobile radio, geophysical instruments, ignition, timing, etc. **MAIL COUPON NOW** for complete Dynamotor and Converter Catalogs, with specifications and performance charts on the complete line.

Vector SOCKET-TURRETS

BACKGROUND FOR CIRCUITRY

Vector Socket-Turrets and Plug-In units provide a unique method for mounting electronic circuit components, saving space and increasing efficiency. Catalog numbers shown in bold face type are the most popular types.

OCTAL, MINIATURE and NOVAL SOCKET-TURRETS

Sockets are standard bottom mounting with steel saddles carrying 4 ground lugs. Body is mica-filled phenolic carrying wrap-around brass contacts, cadmium plated. Terminal posts are 1/2" O.D. with 1/16" wall, made of Grade XXXP laminated tan phenolic joined to socket. Six plated brass terminals at far end of turret plus three, six or none near socket. Mounting holes required are: for Octal 1" ctr. hole, side holes spaced 1-5/16" for 0.134" saddle holes (a larger type is also available—See 'A' below); for 7 pin miniature, 5/8" ctr. hole, side holes spaced 7/8" for 1/8" saddle holes; for 9 Pin Noval, 3/4" ctr. holes, side holes spaced 1 1/8" for 1/8" saddle holes.

Catalog Numbers			Height	Description
10-O-12T	10-MB-12T	10-NB-12T	2 1/2"	12 term. in 2 rings spaced 1 3/8"
10-O-9T			2 1/2"	9 term. in 2 rings spaced 1 3/8"
8-O-12T	8-M-12T	8-N-12T	2"	12 term. in 2 rings spaced 1"
8-O-9T	8-M-9T	8-N-9T	2"	9 term. in 2 rings spaced 1"
6-O-6T	6-M-6T	6-N-6T	1 1/2"	6 term. in 1 ring only
	S7	S9		Shield Base for attaching shields

Height measured from chassis to far end of turret.

For variations not always available from distributors but obtainable at the factory:

- Add 'A' to No. for large octal socket (1 1/2 Mtg. Ctrs., 1 1/8" hole).
- Add 'J' to No. for 'MFE' socket casting, beryllium contacts, silver plated, hot tin dipped.
- Add 'U' to No. for 4-40 U nuts which slip on saddle for easy mounting.
- Add 'C' to No. for impregnation of turret for moisture and fungus protection.
- Substitute 'L' for 'O' in No. if loctal socket required, (1-1/16" hole, 1-5/16" mtg. ctrs.).

Note: Letters are printed on all above turrets to indicate terminal positions. A-F inclusive appear on remote end, G-L inclusive on row near socket (H, J, L for 3 terminal rows). "A" and "C" over "1" of socket. Socket-Turrets are covered by Patent Nos. 2,604,584 & 2,624,775.

SADDLE NUTS: A 'U' type nut which slips over standard socket saddles has been especially designed to promote easy mounting on the chassis. For #4-40 machine screws. Order as #440-U nut or simply add 'U' to number of socket ordered.

TEST ADAPTERS

Vector Test Adapters are ideal for making measurements from the tube side of electronic equipment, where it is inconvenient to reach into the wiring compartment. The adapter is simply inserted between tube and socket completing the circuit and providing test tabs connecting with tube elements.

The T-789 set combines the 7-pin and 9-pin miniatures and octal in a plastic case. Or adapters may be obtained separately as follows:

Catalog No.	Tube Type	Body Dia.	Skirt Dia.	Length less Prongs	Lead Shielding
T-7-M	7 Pin Min.	0.74"	1.03"	1.47"	None
T-8-O	8 Pin Octal	1.26"	1.56"	1.50"	None
T-9-N	9 Pin Noval	0.87"	1.16"	1.47"	None
T-789 Set of above three types in case (1.75" x 3.75" x 2.62")					

TUBE BASE PLUGS

These plugs fit the 7 and 9 pin miniature sockets and are useful for many experimental or plug-in purposes.

Cat. No.	Type	Dimensions (Fig. 1)								Retainer Ring No.
		A	B	C	D	E	F	G	H	
P7	7 Pin Min.	1 1/8"	17/32"	5/16"	.291	3/16"	.621	.568	.126	None
P9	9 Pin Noval	1 1/8"	17/32"	5/16"	.291	3/16"	.748	.700	.126	None

MINIATURE BALL BEARINGS

WITH 'BIG BEARING' CONSTRUCTION

When you use RMB miniatures in instruments and small mechanisms, you get engineering features which you expect to find only in anti-friction bearings of much larger size. For example, RMB Type RF FILMOSEAL bearing (illustrated) has these important design details:

- A—Deep groove races, uninterrupted by filling slot.
- B—Balanced, two-piece ball retainer.
- C—Non-rubbing capillary oil seal.
- D—Dust shield.
- E—Precision tolerances.

In the manufacture of all RMB bearings, no matter how small, there is never any compromise with the principles of good bearing design.

Over 250 RMB Types and Sizes

<p>PIVOT Self-aligning</p>		<p>The simplest and most compact of the miniature types. Use them where size, weight and cost must be kept low, yet where you want the low friction and greater endurance of a ball bearing. <i>Typical applications:</i> Meter movements, small gear trains, lever pivots. <i>Sizes:</i> From .043" to .423" O.D.</p>
<p>ANGULAR CONTACT Self-aligning with inner race</p>		<p>Similar in capacity and application to the pivot types, but somewhat easier to install because they take cylindrical shafts. These types, as well as the pivot types, are self-aligning, will carry thrust and radial loads. <i>Sizes:</i> From .157" to .787" O.D.</p>
<p>RADIAL Without inner race</p>		<p>Particularly useful where loads are relatively light, low starting torque and high shock and wear resistance are important. <i>Typical applications:</i> Pivots for balance arms; shaft supports in control and recording mechanisms. <i>Sizes:</i> From .1181" to .4724" O.D.</p>
<p>RADIAL Deep Groove with inner race</p>		<p>These Conrad type precision ball bearings, with deep groove design and balanced ball retainer, provide maximum load capacity, high running speeds, long life. <i>Typical applications:</i> Small motors, sound recorders, computers, potentiometers. <i>Sizes:</i> From .1181" to .8661" O.D.</p>
<p>OTHER TYPES</p>		<p>MANY SPECIAL TYPES AND DESIGNS NOT SHOWN HERE ARE ALSO AVAILABLE IN A WIDE RANGE OF SIZES. WRITE FOR COMPLETE CATALOG, WHICH INCLUDES A DISCUSSION OF DESIGN PROCEDURE FOR BALL BEARING SELECTION.</p>

THE REMARKABLE PERFORMANCE

of REXOLITE 1422

DIELECTRIC CONSTANT VS FREQUENCY

DISSIPATION FACTOR VS FREQUENCY

DISSIPATION FACTOR — EXTREMELY LOW OVER ENTIRE R.F. & U.H.F. RANGE
DIELECTRIC CONSTANT — NO CHANGE WITH FREQUENCY

This wonderful insulation performance coupled with a high heat distortion point (105°—113°C) and the resulting good machinability make Rexolite 1422 an amazing High Frequency insulation. It equals or excels all but a few of the fine qualities of the much more expensive fluorocarbons. Even in the "few," it is superb in its own right and very close to the fluorocarbons — as

in the case of Dielectric Constant shown in the above chart.

Rexolite 1422 is a carefully controlled cross-linked polystyrene. Developed by two of the country's greatest laboratories and manufactured for 10 years, Rexolite 1422 is highly dependable in quality, uniformity and performance.

If you have RF or UHF insulating problems calling for sheets, rods, castings or imbedments, check Rexolite 1422. We welcome problems. Write to us for information, full size copies of the above charts and technical bulletins.

THE REX CORPORATION

HERE'S HOW: Each Sealnut* has three parts — black Silicone cap, nickel-plated brass nut, and Silicone O-ring. The nut bears against the control panel for mechanical rigidity and is pressure sealed by the O-ring. The cap seals switch shaft. Sealnuts have operated without leaking at external hydraulic pressures of 200 lbs./in. They remain flexible to -65°C , meet operating and service life requirements of Spec. MIL-B-5423 and are approved by U. S. Air Force, Navy and Signal Corps.

HOW TO ORDER: Tell us what switch you want to seal, and we'll send Sealnut data, samples and price list.

*U. S. Patent 2462023

Model 107
Weight: 75 lbs.
Size: 12 x 7 x 7
Operates on 115 volts 60 cycles, uses 15 watts

HOW TO CHARGE MAGNETS Safely and Quickly—

Fig D The Model 107 Magnet Charger will charge any shape or kind of permanent magnet saturable by a 20,000-ampere charging current. Design of end permits use of special adapters in addition to bar and I-conductor provided with unit. Special wound fixtures may also be used for charging type and ring magnets.

Hundreds of these Chargers are in daily use throughout industry, in laboratories, instrument and airline maintenance shops, and among government services. The unit is self-contained, simple to operate; all exterior parts can be handled during complete charging cycle without danger to operator. Rugged and designed for production charging, average magnetizing cycle under 5 sec. Net price \$105.

Fig E The Model 206 Booster Unit connects between Model 107 and power source, increasing charging current 30%. Net price \$49.75.

Fig I Type HA-5371 Handle with mounting Swings 180°. Conforms to MIL-T-945A. Made of black anodized aluminum, gripping area coated with black vinyl. Grip feels warm and comfortable. Price \$1.85 ea.

CRYSTAL TESTING EQUIPMENT

These three crystal impedance meters were specifically designed to test quartz crystals per MIL-C-3098. They are used to determine equivalent electrical parameters, such as load capacity, effective resistance, series capacitance and inductance. From these parameters the crystal's performance index can be calculated. Units operate from 105/115 volt 50/1720 cycle source and fit a standard relay rack. Panels measure 7 x 19.

Fig F The Model 460 (TS-537/TSM) C. I. Meter tests quartz crystals in the frequency range of 75 to 1100 kc. Three resistance ranges are calibrated: 0 to 990 ohms, 0 to 9,900 ohms and 0 to 99,000 ohms. Load capacitance from 12 to 110 uuf. Net \$520.

Fig G The Model 459 (TS-330/TSM) C. I. Meter is used for crystals in the frequency range of 1 to 15 mc. Two resistance calibration ranges are available: 0 to 99 ohms and 0 to 9,900 ohms. Load capacitance calibrated from 12 to 110 uuf., using calibration chart. Net \$560.

G

Fig H The Model 531 (TS-683/TSM) C. I. Meter tests crystals in the frequency range of 10 to 140 mc. Twelve calibrating resistors of 10, 22, 30, 40, 51, 60, 68, 82, 91, 100, 120, and 150 ohms, plus a 100-ohm variable resistor are used for resistance calibration. Net \$550.

H

INSTRUMENT CALIBRATION STANDARDS

Fig J Model 261B Standards calibrates AC meters to 0.5% thru ranges of 10 millivolts to 1500 volts and 1 microampere to 200 amperes. Uses Weston Mod. 341 and 370. Electronic generator provides 50/1600 cycles test voltage, controlled sine wave. Operates on 105/125 volts, 50/1600 cycles, w/internal voltage regulator. Price \$9250.

Fig K Model 262B Dual Potentiometer Standards for calibrating meters to 0.1% thru a range of 1 millivolt to 1500 volts and 1 microampere to 150 amperes. Uses L & N Brooks Mod. 7 pot. and Weston Mod. 4 standard cells. Voltage and current ranges separate for calibration of watt meters. Operates on 105/125 volts, 50/1600 cycles, 350 watts, with internal voltage regulator. Interlocks and hood protect instrument under test and operator from accidental overloads. Price \$14,300.

K

Fig L Model 260B Standards calibrates DC meters to 0.5% thru ranges of 1 millivolt to 1500 volts and 1 microampere to 150 amperes. Uses special Weston precision voltmeter and ammeter. Operates on 105/125 volts, 50/1600 cycles, with internal voltage regulator. Price \$8770.

All prices are FOB Boonton, N. J. and subject to change without notice.

RADIO FREQUENCY LABORATORIES, INC.
Boonton 2, New Jersey

It's **VERSATILITY** that sells **SANBORN** in the field of **Industrial Recording**

As indicated by references at the right, you may have a choice of five different instruments (A) for quick and convenient standard rack mounting in the system at A₁, PLUS a choice of up to four different type amplifiers (B) or any combination of these amplifiers with the

SANBORN **FOUR-CHANNEL** **OSCILLOGRAPH** **RECORDING** **SYSTEM** (MODEL 67)

DC PREAMPLIFIER

AC PREAMPLIFIER

DC CONVERTER—for low level DC recording such as thermocouple output.

TRIPLEXER—when coupled to a DC amplifier permits the recording of three events in one channel.

THRESHOLD MONITOR provides means for the control of voltage levels or rate of change.

DC (General Purpose) AMPLIFIER

STRAIN GAGE (Carrier) AMPLIFIER

SERVO MONITOR AMPLIFIER—a phase discriminating AC amplifier used in servo design and testing.

As shown in the diagram, removing or interchanging any of the amplifiers or other instruments is simply a matter of sliding the unit in or out of the mounting rack where contact is made automatically by plug-in connectors. Screws at the four corners of the panel hold the instrument in place.

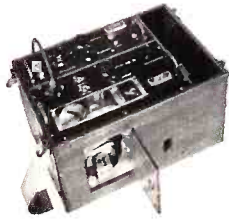

Other features of this system which add to Sanborn **VERSATILITY** are the choice of eight paper speeds—50, 25, 10, 5, 2.5, 1.0, 0.5 and 0.25 m/sec, and the use of either 4-, 2-, or 1-channel recording paper.

And, of course there are these popular Sanborn advantages: a high torque movement (200,000 dyne cms per cm deflection), direct inkless recording in *true rectangular coordinates*, and provision for code and line markings.

Sanborn Recording Systems may be used to record any one or more of a wide variety of phenomena whose characteristics range from static to 100 cycles per second. If your recording problem is not one which can be solved by standard Sanborn equipment, our engineers will be glad to suggest ways in which modifications of it may fit your requirements.

A complete catalog of Sanborn Industrial Recording Equipment will be sent gladly on your request.

SANBORN
COMPANY
CAMBRIDGE 39, MASS.

One channel Model 128/141 above and two-channel Model 60 at right both incorporate Sanborn recording advantages which include interchangeability of amplifiers and (with Model 60) preamplifiers.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS. Particularly in instrumentation and laboratory equipment, there is a crossover of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELEC-TRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

ADVERTISERS IN
NUCLEONICS ABP

NOW RELIABLE CAPACITORS

...for prompt delivery!

National Capacitor Company offers you a full range of quality-controlled standard* paper or plastic dielectric capacitors. These are reliable, long-life capacitors manufactured under careful supervision — free from chemical impurities which might affect the circuit and/or cause breakdown.

National's Engineering Service also makes available *special* capacitors, produced to your own specifications — under the same rigid quality control as its standard products — *for early delivery dates.*

*includes those to JAN-C-25 specifications.

National's wide selection of construction offers you the optimum in mechanical and electrical design.

Dielectric	{ Paper (Kraft — normal density, Kraft — low density, Linen), Cellulose Acetate, Polyester, Polystyrene, Polyethylene, Teflon.
Impregnant	{ Mineral Oil, NCQ1 (Polybutene), Natcol I, Natcol II, Polyester, Silicone Oil, Chlorinated Diphenyl, Epoxy Resins, IN420, Hallowax, Mineral Wax.
Conductor	{ Aluminum Foil, Tin-Lead Foil, Metalized Paper, Metalized Plastic, Copper Foil.
Case	{ Metal tubular, Bathtub, Deep drawn, Fab. case solder seam, Welded tank, Glass tubular, Paper tubular, Uncased.
Terminals	{ Compression-type phenolic, Steatite standoff bushing, Silicone rubber, Glass seal, Glass, Teflon, Neoprene, Glass tubular.
Brackets Mountings	{ Spade, Foot, Channel, Tangential, Radial, Screw-base, Twist-lock, Fuse-clip, Feed-thru, Ring-clamp.

Subminiature PULSE-FORMING NETWORKS

Illustrated is National's Pulse-Forming Network NC-34. The original unit from which this was adapted was over five times this size. This illustration actual size.

Rated as follows:

3 KV DC; .005 microfarads;
50 ohms impedance; pulse
repetition rate per sec. — 1000;
average life — 30,000 hours;
ambient temp. up to 90°C.

WHY

Permoflux Cee-Cors?

Because no other type
Transformer Cores
have all these
Features

Cee-Cor matched pairs are dip-sealed in plastic for shipment. When received, simply break the seal, removing the protective jacket, and the core is ready for assembly.

Permoflux Cee-Cors are grain-oriented, silicon steel, strip wound cores for transformer, inductor and magnetic-amplifier applications. Manufactured to exacting mechanical and electrical tolerances for cores of the highest efficiency and dependability. They are unsurpassed for use where space, weight and heat are critical factors.

Available in the popular 1-mil, 2-mil, 4-mil, and 12-mil types, Permoflux Cee-Cors are applicable to all standard transformers from miniature pulse units to powers.

NEW PRECISION INSTRUMENTS FOR HIGH FREQUENCY WORK

DECAVIDERS

Extend range of standard Frequency Counters . . . No loss of accuracy . . . Gains of up to 1000:1 with some models . . . Also responds to transient wave forms provided spectrum lies within the pass band of the amplifier.

Freq. Counter Range	Decaider Model No.	Extends Range to	Price*
Up to 10 mc	1020	10 mc.— 20 mc.	\$295.00
Up to 10 mc	10100	10 mc.—100 mc. (9 ranges)	495.00
Up to 1 mc	110	1 mc.—10 (1mc.—10mc.) (9 ranges)	395.00
Up to 100 kc	10	100 kc.— 10 mc. (10 ranges)	545.00

* F.o.b. Caldwell, N. J.

Model 10100 DECAVIDER

• No Loss of Accuracy
Converts a 10 mc counter to 100 mc by feeding any signal between 10 mc and 100 mc into the DECAVIDER. Switch to the proper range (9 ranges) and connect in your 10 mc counter. Read the counter, and add a fixed frequency determined by the range setting of the DECAVIDER. ACCURACY REMAINS THE SAME. Control provided for adjustment. Price: \$495.00, f.o.b. Caldwell.

For HIGH FREQUENCY (100-900 mc) LOW LEVEL COUNTING
Model 100-500—Freq. Rg. 100-500 mc—\$795.00
Model UHF—Freq. Rg. 450-900 mc—\$895.00

THE DECA-SWEEP

Combined Decade-switched Sweeping Oscillator and precision crystal controlled Signal Generator. Eliminates tedious point by point measurements. Several models available.

THE DECALATOR

Provides 9,000 Separate Frequencies—each crystal controlled. Direct reading Decade Switched Oscillators. Decalators are new type of signal generators. A heterodyne system is used which combines the output of two separate high frequency crystal controlled oscillators in a double balance modulator. This system reduces the distortion products to a minimum and insures high stability with unusual accuracy.

*for
Maximum:*

- ✓ Accuracy
- ✓ Stability
- ✓ Ruggedness

RIGID, uncompromising quality control techniques, scientifically developed inspection and test procedures at each stage of manufacture, insure the absolute dependability of every Keystone Crystal!

Keystone Piezo crystals, now in use throughout the world in military and commercial applications, are justifying the high processing standards we established years ago!

Whatever your need, in standard or special frequency control units, pressure mounted or plated, count on Keystone for the right answer! Our engineering and research personnel and facilities are available for developing your particular requirement. We invite your inquiries.

capacitors

Optimum Solution

unicon Polystyrene Capacitors

Unicon Polystyrene Capacitors are characterized by extremely high insulation resistance and Q , and very low power factor and dielectric absorption.

Thus they are ideal elements for use in electronic analyzers and computers, in tuned circuits and wave filters, as standards of capacitance, and in radiation detection and power supply circuits.

Unicon Polystyrene Capacitors are available in many different types of housings as well as uncased for potted assemblies. Standard sizes available for prompt delivery are listed below.

unicon Plastic Dielectric Capacitors

Unicon Type D capacitors employ a newly developed plastic resin film as a dielectric.

The power factor, dielectric absorption, and temperature co-efficient of these condensers are much better than those of oil paper capacitors. They compare favorably in size with metallized paper capacitors of equal ratings and give far superior performance. Operation to 125°C is permissible. When high insulation resistance, without simultaneous low "soakage" and/or low power factor, is required, Type D capacitors make an excellent low-price substitute for Polystyrene or Teflon capacitors.

Unicon always gives your capacitor problems the Optimum Solution.

NOTES:

- Style 1 is hermetically sealed glass tube with metal end caps.
- Style 2 is hermetically sealed rectangular metal can. See JAN C-25 drawings of CP 70 cans for outline drawings.
- Style 3 is hermetically sealed metal "bathtub" cans. See JAN C-25 drawings of CP 53 cans for outline drawings.
- 3% capacity tolerance is standard for polystyrene capacitors. 5% capacity tolerance is standard for type D capacitors. Specials to 1% for Polystyrene and to 2% for type D capacitors are available at extra cost.

Surco

WIRE · CABLES · TUBING

OPERATING TEMPERATURES FROM -60°C TO 210°C

SIZES FROM 32 TO 4/0

A Coaxial Cables—“Surco” coaxial cables include a wide variety of types, such as low capacity, extra flexibility, small diameter, microphone 2 conductor, and high temperature “Teflon”. Conform to Military Spec. Jan-C-17A. Many special designs. If you have a coaxial cable problem consult us.

B Miniature Wire & Cable—“Surco” miniature wire and cables are made in conductor sizes down to No. 32 AWG in stranded and solid. Close control in manufacturing permits small finished diameters on both single and multi-conductor cable. Available in standard colors with and without nylon jacket or shielding in the various vinyl or polyethylene compounds.

C “Surflene” Insulated Hook-up Wire—“Surflene”, extruded monochlorotrifluoro-ethylene, has excellent resistance to heat, abrasion, and most chemicals, including nitric acid. Having high dielectric strength and insulation resistance, it is especially useful in totally enclosed applications with continuous temperatures up to 135°C . “Surflene” is available in 15 solid colors and wall thicknesses down to 0.008”. “Spiralon” colors presently under development.

D Multi-Conductor Cables—“Surprenant” multi-conductor cables are available with conductor sizes from No. 32 AWG and larger, with or without nylon jacket or shielding and can be made to specification for special design and applications. Close tolerances permit unusually small overall diameters and “Spiralon” color coding permits easy identification even when hundreds of conductors are involved.

E New Improved Aircraft Wire—Surprenant new lightweight, smaller diameter MD wire (vinyl-glass braid-nylon) and the standard Surprenant sandwich construction (vinyl-glass braid-vinyl-nylon) give excellent overload safety, high and low temperature performance, good electrical properties and have a nylon jacket giving greater resistance to abrasion, fungus, moisture, hydraulic and other oils (nylon braided jacket on sizes 10 AWG and larger for greater flexibility) and are made to conform to MIL-

W-5086. “Surprenant” also offers nylon jacketed—polyvinyl-chloride construction made to conform to Military Spec. AN-J-C-48A.

F “Spiralon”—“Surco-Spiralon” color coding is available on all vinyl, polyethylene, and nylon insulated wires, with or without nylon jackets. One, two, or three color stripes are available in the standard Nema colors providing almost unlimited color identifications.

Solid color insulation is also available in the 10 standard Nema colors.

G “Surco” A-10 For (105°C) Hook-up Wire—A-10 is an unusually high grade vinyl insulating compound developed in our own laboratories for a better hook-up wire. It has excellent resistance to deformation, soldering, high temperature, low temperature and aging; high electrical properties; Underwriters Lab. approved for continuous operation to 105°C without fibrous covering. A-10 insulated wire made to conform to MIL-W-16878.

JAN-C-76 Hook-up Wire—Made to conform to Military Spec. (WL-SRIR-SRHV-SRRF) in all sizes. WL available with nylon jacket or glass braid. The nylon jacket has greater abrasion resistance and high surface resistivity under adverse conditions. SRIR-SRHV-SRRF available with primary insulation only or with the addition of a glass braided covering. All standard colors including “Spiralon” spiral striping.

H “Surco” Tubing—“Surco” vinyl tubing is available in special formulations to provide low temperature (-65°C), high temperature (U.L. approved for 105°C), high dielectric strength, flexibility and colors. Standard compounds are carried in stock in regular sizes. Polyethylene and nylon tubing are also available and are carried in stock in natural color, limited sizes.

I MIL-W-5274A Radar & Electronic Hook-up Wire—Made to conform to Air Forces Spec., this wire offers excellent low temperature performance. Nylon jacketed, it has high abrasion resistance and superior surface resistivity even under adverse humidity conditions, making it very adaptable for high impedance circuits.

**Extruded
THIN-WALL Teflon
INSULATED (210°C)
HOOK-UP WIRE**

Extruded Thin-Wall Teflon Insulated (210°C) Hook-Up Wire—Continuously operable over the range from -90°C to 210°C without appreciable deterioration, extruded “Teflon” (polytetrafluoroethylene) is now available in walls as thin as 0.010” (type WTE) and 0.015” (type RTE). Teflon combines non-flammability, chemical and solvent resistance, high volume and surface resistivity with extremely low electrical losses. This wire is available in all flexible strandings from AWG 30 to AWG 10 and conforms to performance requirements of MIL-W-16878. Colors conform to MIL-STD-104.

ADD SHOCK PROTECTION

to your most delicate instruments

with the *Bird* CUSHION JEWEL ASSEMBLY

Actual tests show that BIRD Cushion Jewel Assemblies perform better and are less subject to damage under the most severe conditions than conventionally mounted jewels. Eliminate damage to jewel-bearings and their mountings from vibration, shock, or improper adjustments by inexperienced operators.

- Bird Cushion Jewel Assemblies provide:*
- Inexpensive shock-proofing for any instrument
 - Variable cushioning to suit different operating conditions
 - Mounting to any specification
 - Controlled movement of jewel — no loose assemblies

We want to show you how BIRD Cushion Jewel Assemblies can add shock protection to your instruments. Send us specifications and sizes of jewel bearings in your instruments for samples of Cushion Jewel Assemblies for testing in your plant.

Quality
Controlled
Jewels to Your
Specifications

Chart shows four types of jewels commonly used, with dimensional specifications to customize each type for your production. Specify quantity, type, dimensions, and whether desired unset or set in screws or bushings. We will quote prices and deliveries or provide samples to your specifications.

Advertisers:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

SMALL PARTS can play a BIG PART in...

Lower Production Costs!

Leading manufacturers in the electronics, machinery, appliance and toy fields have been saving substantially by using precision Multi-Swage parts instead of those previously made by turning, drilling, stamping or forming.

HERE ARE ONLY A FEW TYPICAL
TINY PARTS MADE BY BEAD CHAIN'S
Economical, Dependable
MULTI-SWAGE METHOD

LET BEAD CHAIN MAKE YOUR

Tiny Parts to your
Specifications
at far less cost!

The advanced manufacturing method developed and used exclusively by Bead Chain swages practically any type of small tubular part from flat stock into precision forms with positive, tight seams . . . and does it *Automatically*. If you can use high-volume production . . . we can deliver it at a much faster rate . . . and at far less cost! Scrap is eliminated! Deliveries to you are dependably prompt!

We can supply you with parts that are beaded, grooved, shouldered and made with almost any metal. Diameters up to 1/4", lengths to 1 1/2"

This catalog can save you a lot of production time and money! Write for it

GET PROOF-POSITIVE COST COMPARISONS!

Send us a blueprint or sample and quantity requirements. We will quickly show you the big economies we can deliver.

ELECTRIC INSTRUMENT & CONTROL HEADQUARTERS

YES, OFF-THE-SHELF SERVICE

Electro-Tech maintains one of the largest and most complete stocks in the country of electrical meters, instruments and industrial control equipment—representing over 250 top lines.

Yes, our warehouse is bulging with standard stocks of

Counters	Solenoids	Toggle Switches
Panel Meters	Tachometers	Shunts (Electrical)
Transformers	Thermometers	Meggers
Switchboard Meters	Thermostats	Solenoid Valves
Micro Switches	Rectifiers	Pyrometers
Photo Electric Equipment	Rheostats	Multimeters
Relays	Timers	Oscilloscopes

and Laboratory Standard Instruments

In addition, we manufacture and stock *Special Test Equipment* • Electric Heating Units • Current Transformers • Pyrometers • Thermocouples • Rectifiers.

Our laboratory is available for repair work, rescaling, recalibration and special calibration of your electrical and industrial instruments. Often months are saved by rescaling and calibrating stock instruments to your specifications.

electro/mechanical

VARIABLE INDUCTORS

A new type of tuning unit, adding the stability of a properly-aged permanent magnet (replacing the uncertain D-C Power Supply) to the versatility of an electrically-variable inductor (high-frequency saturable-core reactor).

The operating center frequency is established by manual setting of a shunt on the magnet bias; an ingenious arrangement of control and signal coils allows selection of the parameters best suited to the user's needs.

Typical use is as a tuner with a manual range of 3-to-1 or better, with the oscillator F-M'd about any manually-set frequency. Vari-L electro/mechanical Variable Inductors are ideal for ultrasonic devices, telemetering oscillators, F-M transmitters, and similar equipments.

CML TEST EQUIPMENT PERFORMANCE

Model 1435 Variable Frequency Electronic Generator

Frequency Range: 50-6000 cps in 4 ranges
Frequency Control: Single dial, direct reading, linear scale in 4 ranges: 50-180; 170-600; 540-1800; 1700-6000 cycles.

Power Output: Nominal rating 2,200 w continuous duty.

Output Voltage: The controlled output voltage is continuously adjustable from 40 volts to 140 volts. Normal performance is considered at the 120 volt RMS output where the change in output voltage from no load to full load of 2200 watts will not exceed 2%.

Waveform: The waveform varies slightly from no load to full load. At full load, the distortion is less than 7%.

Power Supply: Any 60 cycle single phase source between 208 and 260 volts capable of carrying a 5Kw. load with good regulation. A tapped auto transformer is provided to take care of this range of input voltages.

Model 1430 Electronic Generator

Similar to Model 1435 except power output is 1400 watts. Power input 3500 Watts.

Model 1100-1110 Electronically Regulated Power Supplies

Power Source: 110-115-125 volts, 50-60 cycles.

D.C. Power Output: 200 ma from 225 volts to 300 volts. 180 ma from 300 volts to 320 volts.

Total noise content in output is less than 5 millivolts. Regulation: less than 1 volt change from no load to full load. Unregulated heater supply 6.3 volts at 5 amperes.

Model 1130 Regulated Power Supply

Power Input: 105 to 125 volts, 60 cycles.

D.C. Output: 210 volts to 310 volts 0 to 400 ma.

Regulation less than 1% from no load to full load at 310 volts. Below 270 volts at any load, or below 300 ma. load at any voltage, regulation is better than 1 volt.

Total noise content in output does not exceed 10 millivolts at 310 volts-400 ma. at any load below 270 volts or at any voltage below a 300 ma. load noise output is less than 5 millivolts.

Model 1420 Variable Frequency Electronic Generator

Frequency Range: 50-6000 cycles in 4 ranges. 50-180; 170-600; 500-1800; 1700-6000 cps.

Power Output: 300 watts continuous duty. Maximum distortion at full output into resistive load less than 5%.

Regulation no load to full load within 2%.

Nominal regulated voltage output 80-120-135-215-255 or 270 volts.

Power input 115 volts 60 cycles 1 Kw.

Model 1010 Rotobridge

Automatic Inspector For Production Line Testing.

Checks equipment for opens or shorts in wiring. Checks tolerance of resistors at 5%, 10% or 20% as required.

Resistance Test Range: 200 ohms to 2 megohms at 5%. Tests smaller and

larger values at 10%.

Tests one circuit per second, up to 119 circuits in one cycle. PROVIDES NUMERICAL indication of every defective circuit.

Model 1210B Stroboscope

Stroboscope lamp mounted in small probe.

Range 480 to 60,000 rpm in 4 ranges individually calibrated on fundamentals 80-1000 cycles.

Vibrating reed for calibration.

Accuracy of reading better than 1%.

Overall maximum departure from calibration less than 3%.

Power Supply requirements: 105-125 volts, 50-60 cycles

Model 1440 Three Phase Oscillator

Model 1440: Three Phase Oscillator Frequency Range 17000 cycles. One, two or three-phase output. Phase relationship of all phases adjustable through 360 degrees

Model 1135 Regulated Power Supply

Power Input: 105-125 volts 50-60 cycles.

Output #1: 0-200 ma from 0-170 volts; 160-300 volts in two ranges. Noise less than a millivolt.

Output #2: Regulated "C" bias 0-100 volts.

Output #3: Unregulated 6.3 volts 5 amp. ac.

MODEL 1515 MEGOHM METER

Range: 0.4 to 100,000 megohms in 5 overlapping ranges

Accuracy: better than 5% on all ranges at all points on the scale.

Guarding: The instrument is efficiently guarded on all ranges so that atmospheric conditions do not affect its accuracy.

Pure Nickel — Nickel Clad Copper — Monel† — Inconel† — Incoloy†

For

The Electronic and Electrical Fields

Electrical Properties: The relatively low thermal expansion of Inco Nickel alloys, Alray electrical resistance alloys and Almet Stainless Steel reduces thermal stresses associated with local heating. Many of the high Nickel alloys offer excellent resistance to oxidation at high temperatures combined with high resistivity making them ideally suited for heating elements. A list of properties for electrical resistance is as follows:

Type	Composition	Electrical Resis. Ohms/Cir. Mil Ft.	Coefficient of Linear Expansion 10 ⁻⁶
Inco Nickel Alloys			
Inconel	88 Ni, 12 Cr	590	11.5
"A" Nickel	99+ Ni	58	13.3
Alray Electrical Resistance Alloy			
Alray "A"	80 Ni, 20 Cr	650	17
Alray "C"	62 Ni, 15 Cr	675	17
Almet Stainless Steels			
Almet 300 Series	18-25 Cr, 8-20 Ni	600 to 425	8.0-9.6
Almet 400 Series	12-18% Cr	360	5.7-5.9

Magnetic Properties: Nickel at room temperature is magnetic, but when heated to temperatures above 354° C, it becomes non-magnetic. The addition of aluminum, silicon, or silicon chrome is made to the pure Nickel to lower its non-magnetic transformation temperature. For completely non-magnetic applications where excellent corrosion properties are needed, Almet 300 Series are used. Where corrosion is not the deciding factor and magnetization is important, the 400 series Stainless should be used.

Spring Properties: †Monel, †"K" Monel, †Duranickel, †Permanickel, †Inconel and †Inconel "X" along with Type 302, 304, 316, and 420 Stainless Steel are the outstanding spring alloys. These high Nickel and Stainless alloys offer low cost and outstanding resistance to corrosion, oxidation and relaxation at elevated temperatures.

Technical Service: One of the best equipped metallurgical laboratories in the wire drawing field is at our customers' service. Competent engineers are able to give you full assistance with your problem.

Write Department "E" for our catalogs and literature on Inco high nickel alloys, Almet Stainless Steels and Alray resistance wire.

PROSPECT PARK, PA.

• You can design new interest, provide more information, create appealing movement and put sell action to work with Sterling indicating meters. Just think of the possibilities they suggest—as directional meters such as are used on television antenna rotors, or as ammeters, voltmeters, etc. But don't stop there—you can have shape, size, color, finish and almost any form you might need for your adaptation—you might even be dreaming up a toy, gadget, or atomic whatsit to which electrical or mechanical indicating action will give unusual appeal. One fact you'll want to know is that Sterling meters are moderate in cost—actually inexpensive when you consider their great sales value. Want to do some exploring? We'll be glad to help.

STERLING IDEAS

SEE THEM NOW!

This file folder is chock-full of information on Sterling meter models (A.C. and D.C. Panel, Resistance, Pocket in Ammeters, Voltmeters, etc.) plus examples of specially designed indicating meters for interesting applications. Send for your copy today.

Direct Coupled Wide Band Amplifier

AEL Model 251 DC Amplifier

A unique instrument to amplify small DC and high frequency potentials found in research in such fields as physiology, geophysics, strain measurements and analog computing.

Response Frequency response, flat $\pm 2\%$ to 20,000 cps, is usable to at least 100 kc.

Gain Differential voltage gain of 100,000 stabilized by negative feed back to $\pm 1\%$.

Noise Less than 10 microvolts of noise at widest bandwidth with input shorted.

Drift Drift is less than 5 microvolts per minute with the AEL 351 Power Supply.

Input Input impedance is 100 meg. with less than 0.1 microamp. grid current.

Output Low output impedance directly drives oscillographs, recording instruments.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS. Particularly in instrumentation and laboratory equipment, there is a crossover of use in the electronic and in nuclear field.

But, there is very little cross-over in subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation in one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

For the "Firsts" in Fluorocarbons

TEFLON* and KEL-F† STOCK and FABRICATED PARTS

The United States Gasket Company offers the most complete line of sheets, rods, tape, tubing, bars, cylinders and fabricated parts — custom-molded and machined to specifications.

This means one source for all your requirements—with uniform high quality assured by the most modern specialized facilities for low-cost, close-tolerance production. Ask for Catalog No. 300 and 500.

TEFLON "ALLOYS"

Chemelec Mixtures, which are "alloys" of Teflon, offer the product engineer a whole new family of materials. These alloys retain most of the outstanding qualities of pure Teflon and add new properties to meet particular material requirements.

If you want TEFLON "alloyed" with metal, glass, ceramics, carbon, mica, quartz, alnico, asbestos, silicate, calcium, or boron, etc., bring us your problems. Ask for Catalog No. MI-400.

SOLDERABLE TEFLON

Chemelec Multi-Bond Metal Faced Teflon permits the bonding and hermetic solder sealing of this dielectric material to metal components.

The bond between metal surface and the Teflon is micro-crystalline in nature—an interlocking metal-permeated surface layer of the fluorocarbon.

Metal facings include practically all the ferrous and non-ferrous metals, the ferro-magnetic group and the precious metals. Catalog No. MI-424.

CEMENTABLE TEFLON

Chemelec Multi-Bond Cementable Teflon is a specially prepared fluorocarbon which will adhere to metal, glass, wood, fibre, asbestos, plastics, leather, ceramics, or other substances by the use of suitable commercial cement.

A broad field of electrical, mechanical and chemical applications is opened to product engineers. Write for Catalog No. MI-443.

Help for DESIGNERS who can use these properties of POLYPENCO® TEFLON*

To any man wanting to gain the full benefits of Teflon, Polymer offers this complete service . . .

- ① **Technical Help in Application:** Polymer controlled quality Teflon is the result of Polymer Corporation's early pioneering in the field of extruded specialty industrial plastics. At your request, Polymer engineers will work with you on the newest ideas and techniques to apply and fabricate POLYPENCO Teflon easily, economically.
- ② **Dependable delivery of shapes and parts to meet your specifications:** Polymer offers complete stocks of POLYPENCO Teflon rod, tape, tubing and slab. In addition, you can also get quick delivery of controlled quality Teflon parts *fabricated* to your individual specifications.

For the kind of "shirt sleeve" help that goes right to work in helping you apply and use POLYPENCO Teflon, take this step now: Drop us a line on your company letterhead for full details. No obligation, of course.

Ask for these quick facts on Teflon — how it is applied and prices on shapes available.

ABC

ABF

Why put up with this costly,
time-wasting step any longer?...

FULL EXTENSION — Continuous
bearing action permits smooth,
easy chassis removal. Locks in
fully extended position, must be un-
locked to return.

ROT RELEASE — Withdrawing
release rods disengages them from
locking mechanism, enables per-
fectly balanced unit to be tilted by
hand raising.

PIVOT — Unit locks in 45
or 90 degree position. Spe-
cial pivoted positions can be ob-
tained to fit individual requirements.

FULL TILT — Maintenance and
access easily made. Access to com-
ponents is gained in a few seconds.
Special slides can provide plus or
minus 180° tilt.

Design accessibility into your equipment

When repairs and maintenance of electronic equipment are needed, wasted time costs money! Alert manufacturers have totally eliminated the laborious step of "getting at" vital components by installing Grant Industrial Slides. Is your equipment mechanically up to its high electronic standards? If not, Grant offers you:

Stock Slides — A great variety of types, suitable for most needs, is *in stock* and available for immediate delivery.

Custom Slides — A complete research and engineering staff is ready to assist you at your plant, convert your blueprints into working plans and develop slides that suit your needs perfectly.

Selenium Rectifier Power Units

D.C. POWER SUPPLIES MODEL SV-30-20

INPUT: 117V, 60 cycle, single phase.
OUTPUT: 0-30 volts at 0-20 amps. D.C.
CONTROLS: Powerstat, Heinemann magnetic circuit breaker, Klixon thermal circuit breaker, rectangular voltmeter and ammeter accurate to 2%, neon pilot light, 5 way binding post output.
SV-30-20 full wave rect. D.C. \$260.00
SF-30-20 3% ripple. \$300.00
SA-30-20 0.4% ripple. \$340.00

D. C. LABPACK

INPUT: 117 volts, 60 cycle, single phase
OUTPUT: 0-28 volts at listed current, continuously variable
CONTROLS: Powerstat, circuit breaker, neon pilot lamp, on-off switch, voltmeter and ammeter accurate to 3%, 5 way binding posts for output.

Model L 28-5, 5 Amperes full wave rectified D.C. \$87.50
Model LF28-4, 4 Amperes D.C. 2% ripple. 107.50
Model L 28-10, 10 Amperes full wave rectified D.C. 155.00
Model LF28-8, 8 Amperes D.C. 2% ripple. 170.00

The illustrated standard units represent the power supplies we manufacture. Many applications designed to the exact requirements of the user, giving maximum utility together with economy. Part quotation and delivery.

POWER CONVERSION FOR—

Production and laboratory testing of D.C. apparatus from A.C. power lines, allowing continuous variation of D.C. voltage and current to simulate changing battery or line voltage conditions. Commercial operation of vibrator power packs, dynamotors, D.C. motors, relays and other devices which require D.C.

- Replacing storage or primary batteries.
- Life testing of battery operated equipment.
- Battery charging.
- High current selenium rectifier plate power supply.

A CLAMP FOR EVERY SPECIFICATION

In electronics or any part of the electrical field where clamps are needed for rigidity and stability in holding tubes, compact plugs or socket type units, Augat clamps provide the answer. Approved and used in electronic equipment for the armed forces, an innumerable variety of stock numbers are ready for immediate delivery while clamps made to your specifications can be had easily and quickly. They have withstood a two hundred-hour salt spray test with no adverse effect.

AUGAT ADJUSTABLE TUBE CLAMPS ARE 3 WAYS MORE DEPENDABLE!

1. Made of 18% nickel silver for greater fatigue value, tensile strength and durability.
2. Available in an endless variety for standard and special type tubes.
3. Rigidly tested; meets all requirements of government specifications.

Solve radio problems more quickly, easily, accurately

The 1197-page

RADIO ENGINEERING HANDBOOK

Keith Henney

Editor-in-Chief

Consulting Editor of *Electronics*

Fourth Edition, 1197 pages, 6 x 9
1038 illustrations, \$12.00

HERE is a handy volume embracing a general index of constantly needed reference material covering all fields and aspects of radio engineering. Concise, dependable, arranged in easy-to-use form.

What the Standard Handbook, Marks Handbook, and others are in their respective fields, Henney's Handbook is in the radio field.

IN scope, this book ranges from fundamental theory to a discussion of newest circuits, amplifier systems, short-wave systems, etc. From modulation, developments in television to the design of craft radio, and other applications are covered.

Here's the help you get

- 1197 pages of carefully selected accurate charts, tables, circuits, diagrams, formulas
- 23 sections covering all the most needed subjects for engineers and radio technicians—fundamentals to specialized applications
- Every section prepared by one or more experts, to assure you dependable, expert answers to your problems in design and practice.
- More than 1000 illustrations give a clear picture of the many different circuits, parts, and characteristics that the radio engineer needs with.
- Fourth Edition gives a wealth of material on modern developments in every field and aspect of radio engineering—from inductance, capacitance, supply systems, and electron tubes, to modulation systems, and code reception.

HAVE THIS HELP RIGHT NOW

Just send the coupon now—pay in easy terms only after you examine the book

McGraw-Hill Book Co., 330 W. 42nd St., N.Y. 36, N.Y.

Send me Henney's RADIO ENGINEERING HANDBOOK for 10 days' examination on approval. In 10 days I will send \$4.00, plus few cents for delivery, and \$4.00 a month until \$12.00 has been paid. Otherwise I will return the book postpaid.

TOROIDS and FILTERS

for the QUALITY CONSCIOUS USER

When reliable performance is a fundamental requirement, Lenkurt components prove worthwhile to manufacturers in such diverse fields as guided missile development and ultra-fidelity recordings. Lenkurt's extensive design and manufacturing facilities, coupled with rigid test procedures, provide components to meet the most stringent operating requirements.

LENKURT TOROIDAL COILS are specially wound to any feasible design. Several standard case styles are also available. Close control of characteristics begins with manufacture and inspection of cores. Then full control of distributed capacitance, self-resonance and temperature stability is assured by experienced operators of specially designed winding machines. Each coil is accurately tuned, vacuum impregnated and rechecked to assure compliance with user's specifications.

LENKURT FILTERS offer many important advantages where reliable performance is required. Each coil and capacitor is carefully measured and tested for proper characteristics. Components are rigidly mounted to assure freedom from damage due to vibration or shock. With laboratory equipment specially adapted for production use, each separate mesh as well as each completed filter is tuned and adjusted for optimum operating characteristics.

LENKURT DECADE INDUCTORS are guaranteed to an overall accuracy within one per cent of inductance value. Using calibrated toroids of exact values, decade boxes are designed for the user's convenience with emphasis on visibility of markings and pleasing external appearance.

OTHER LENKURT COMPONENTS include specialty transformers, phenolic terminal blocks and powdered iron cores. Manufactured by procedures developed to meet the precision requirements of Lenkurt carrier telephone and radio systems, these Lenkurt components have the quality needed for reliable performance.

Submit your component problems to Lenkurt. Your inquiries will receive prompt attention.

Lenkurt

ELECTRIC SALES CO.
SAN CARLOS 1, CALIFORNIA

RCP — A Test Line With Advanced Design . . . For Field, Laboratory and Industrial Use

UHF and VHF "DO-ALL"
SIGNAL Generator Model 750

Complete in one instrument — a SIGNAL GENERATOR, MARKER GENERATOR, and BURN GENERATOR covering all the Band VHF channels for every TV and M Receiver.
Manufacturer insures accuracy of within 1% over the entire range of 9 Mc Mc. • All VHF frequencies are fundamentals. • RF's and IF's are calibrated on a large etched drum dial. • Steady horizontal bars, bars and cross hatch pattern intelligibly produced on all channels.
Price: \$79.50

"DO-ALL" Peak-To-Peak
VT VM — Model 655

Provides for the accurate measurement of complex waveshapes, with peak-to-peak voltages able to be read directly from the scales of the instrument. Serves a variety of industrial applications in the maintenance of vibrator power supplies, AC generators and industrial equipment utilizing complex waves. Supplied with the New "RCP SOLDERLESS" Test Leads.
Features:
• Peak-to-peak AC measurements of from .2 V to 2000 V on 7 ranges. • AC RMS measurements of .1 V to 1500 V on 7 ranges. • DC measurements of from .02 V to 1500 V on 7 ranges. • RESISTANCE measurements of from .2 ohms to 1000 Megohms on 7 ranges. • Size: 10" x 6" x 5". • Wt: 7 lbs. 12 oz.
Price: \$59.50 Net

MODEL 533 M MIDGETSCOPE

A 3" scope with high sensitivity and wide band response — Weighs only 9 pounds. • Masterfully Engineered for Top Performance. • All Controls on Front Panel. • Quality — Dependability — Accuracy — Economy. • Operates in Either Horizontal or Vertical Position.
CHECK THIS PERFORMANCE
Sensitivity . . . Vertical — 20 millivolts (.020 volts for 1" rms deflection on CRT face). Horizontal — .6 volts. Frequency Response . . . 2 db from 20 cycles to 180 kilocycles. Excellent Transient Response. Push-Pull Deflection . . . For undistorted Response — Eliminates Parallax. Full Vertical and Horizontal Expansion of Trace. Input Impedance . . . Vertical — .5 megohms shunted by 50 MMF. Horizontal — .5 megohms shunted by 70 MMF. Size: 11 3/4" x 7 3/4" x 5 1/2". Model 533M complete, ready to operate. \$99.50 Net

Model 324 — "DO-ALL"

Tube and Battery Tester — Packs Into One Instrument The Performance of Four Sufficient Facilities to Test. 1. TV and Radio and Special Purpose Tubes. Sockets for all standard 4, 5, 6, 7, octal, loctal, miniature and subminiature are provided. Tests transmitting, hearing aid, ballast, pilot light, gaseous rectifiers and tuning indicator types. 2. Cathode Ray Tube. Checks all magnetic deflection types right in the set or carton. Will locate and isolate all shorts or leaks. 3 Batteries. Tests popular portable battery types under load. Indicates true condition of battery under check. 4. All This and a Reactivator Too — Gives extra life to otherwise dim or bad picture tubes. Two Styles To Meet Your Service Needs — Model 324C — Counter model with open style metal case. Price: \$69.95. Model 324P — Combination portable — counter model. Includes battery test leads. Price: \$79.50

TEST LEADERSHIP BY RADIO CITY PRODUCTS COMPANY

. . . has become generally accepted by manufacturers who have to meet close government specifications. Specialized test lead and probe engineering has served the custom needs of leading manufacturers the world over. If you have accessory test problems or a contract which necessitates a specialized probe, check with RCP engineers — they have the test know-how to meet your test lead problem.

(A) "RCP SOLDERLESS" TEST PROD NO. 950
A completely new patented solderless design. All internal. Assures a better contact electrically and mechanically. Neat smart 5/16" pencil type prod with actived handles.
No. 950 Red or Black (Specify Color) \$.27 each

(B) "RCP SOLDERLESS" TEST LEADS NO. 921
Finest solderless test leads. Made with the new "RCP Solderless" test prod (No. 950 described above). Test leads are .48" long, pliable, kinkless .41 strand #18AWG wire insulated for 6000 volts.
921 Standard Phone Tip . . . \$1.08 pr.
921S Standard Spade Lug . . . 1.08 pr.
921A Standard Alligator Clip 1.20 pr.
923 Insulated Phone Tip . . . 1.41 pr.
923S Insulated Spade Lug . . . 1.41 pr.
923A Insulated Alligator Clip 1.53 pr.

(C) RETRACTO-LEAD NO. 930
A self coiling retractable test lead that will not lose tension. Made with a fine quality heavily insulated stranded wire that has a built-in permanent curl. The prod is the new "RCP Solderless". The Retracto Lead is needed on every test bench and lab. Eliminates tangled lines — shorts — messy benches. Extended leads are 7 1/2 feet long. Phone tips are insulated.
No. 930 \$2.95 pair

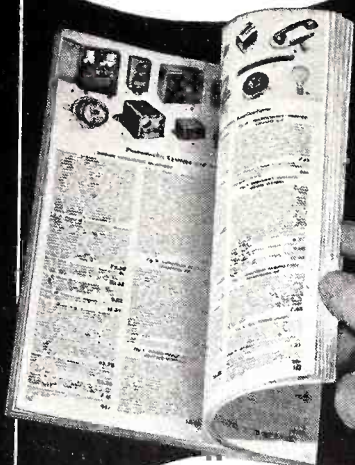

(D) TEST LEAD NO. 901
High quality test leads for professional use under all working conditions. Slim, good looking 5/16" pencil type prod handles are firmly soldered to well insulated, kinkless, stranded wire. Leads are 48" long.
901 Standard Phone Tip . . . \$.96 pr.
901S Standard Spade Lug96 pr.
901A Standard Alligator Clip 1.08 pr.
903 Insulated Phone Tip . . . 1.29 pr.
903S Insulated Spade Lug . . . 1.29 pr.
903A Insulated Alligator Clip 1.41 pr.

(E) HEAVY DUTY HIGH VOLTAGE TEST LEADS NO. 910
"Scientific" High Voltage Test Leads are designed for use up to 30,000 volts with a good safety factor. Features include — 7" heavy duty prod — heavy duty hardened steel prod point — triple barrier leakage guard — heavy duty kinkless leads 54" long with negligible leakage.
No. 910 \$3.60 pair

(F) BAR KNOB
A scientifically designed smart looking bar knob. Will not crack or split. Easier to grip because of flat parallel surfaces. Large recessed cup allows this knob to go flush over even the largest lock nut. Size: 1 1/4". Available in red or black.
No. 990 Bk. 10c

BUYERS' GUIDE

Attention!... ELECTRONIC DEVELOPMENT ENGINEERS

Reduce your problems with the
NEW EUREKA "SNAPPER"

THERMAL TIME DELAY RELAY

Features... Snap action. Single Pole Double Throw.
Lightweight. Low operating temperature. Operates in
any position. High contact rating. Gas filled. Low
heater current. Durability
and long life.

EUREKA'S "SNAPPER"

VOLTAGE: 6.3, 26.5
115 volts (A.C. or D.C.)
or as required

AMBIENT TEMPERATURE RANGE:
-60°C. to +80°C.

ENVELOPE: Miniature,
or octal metal.

TIME DELAY PERIODS:
Preset from 5 seconds up.

VACUUM: Evacuated, inert
gas filled.

HEIGHT: 1 1/4" maximum seated.

EUREKA PRESENTS POSITIVE

SNAP ACTION

The ELIMINATION OF CHATTERING is accomplished with the incorporation of "POSITIVE SNAP ACTION" in the EUREKA "SNAPPER" ... LEADING ELECTRONIC MANUFACTURERS have acknowledged the new EUREKA "SNAPPER" as a major advancement in this field, and have already accepted this relay as a standard component of their latest equipment.

Inquiries are invited... send for our "Bulletin Number Snapper"

BREW

DELAY LINES

accuracy guaranteed

Flexible Delay Lines

Meet exacting requirements. Special delay measurement apparatus *insures complete uniformity and close tolerances*. Two types . . . Short Lines (type "A"), delays from .1 to 3 microseconds and Long Lines (type "B"), delays from 2 to 10 microseconds.

Specifications: Distributed constant type passive circuit networks. Impedance 1200 ohms \pm 15%. Delay held to .05 microseconds tolerance. 2 MC bandwidth. Available in stick form or in cans. Hermetically sealed, non-nutrient construction. Meet JAN specs.

Ultrasonic Delay Lines

Solid Ultrasonic delay lines are available in either pure fused Quartz for long, precise, compact delay units or in a new temperature stable material up to 75 microseconds. All lines are in shock proof hermetically sealed mounts with appropriate contact provisions.

Specifications: Frequency ranges from 5 to 100 MC. Bandwidth 5 MC at 20 center frequency to 14 MC at 50 MC center. Delays accurate to .1%. Low attenuation of delayed pulse. Spurious responses 60 DB below delayed pulse. Triple travel at least 30 DB below delayed pulse.

Brew Delay Lines are used in both government and commercial applications. Designers and manufacturers find Brew's engineering "know-how", manufacturing facilities, *prompt delivery, and cooperation* go a long way in solving their needs. Send today for catalog information . . . or send us your requirements.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS.

Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

SOLID

SHIELDED ENCLOSURES

for Suppressing R-F Interference

- PORTABLE
- WEATHER-PROOF
- AIR CONDITIONED

Here's the all-weather copper enclosure that surpasses all normal requirements for radio interference suppression. Based on Uniform Field tests of an independent laboratory, RFI Solid Shielded Enclosures are guaranteed to produce at least 100 db attenuation from 200 kc to 1000 mc. In actual use even greater attenuation may be expected.

These sturdy enclosures are fabricated from Lindsay Structure framing, widely known for its ease of assembly, disassembly, and durability. Solid copper panels rigidly bolted to copper-plated steel channels offer the highest strength-to-weight ratio of any commercial shielded enclosure made.

Standard RFI enclosures are available in many standard sizes to suit your requirements. Various services such as power, water, gas, and transmission lines may be brought into the room. For complete details, including performance graphs, applications, and sizes available, write for Bulletin No. 1.

DC-AC CHOPPERS

New 1953 Models for Military Use — 0-500 CPS

Tops in Performance — Tops in Dependability

Stevens-Arnold choppers are electro-mechanical precision vibrators that are used as modulators or demodulators. Designed specifically for airborne applications, and 1000 hours operation.

- Gold contacts used exclusively. Gold is the only material that assures superior chopper-performance in the critical 0-1½ volt DC range.
- Multiple testing guarantees uniformity. Before shipment, each unit must pass *two* complete operating tests at 3 different temperatures — -55°C., +25°C. and +85°C.
- Not only are all military specifications met, but liberal safety factors have been provided to meet emergency conditions of voltage and frequency. Example: — frequency tolerance 0-500 cps, coil voltage tolerance +30% -20%.

Also Available 60-CYCLE TYPES

A complete line of single and double-pole types.

JK STABILIZED H-7

Frequency Range 3 to 16 mc
Holder material black phenolic
Pressure mounting, stainless steel electrodes
Water and Dust Proof
Military type FT243 holder,
CAATC No. 3R1-1

JK STABILIZED G-9, G-9J

Frequency range 1.20 KC to 300 KC
Hermetically sealed glass holder
Wire mounted, gold or silver plate crystals
6V6GT envelope, octal base
MIL HC-15/U

JK STABILIZED HEAT JKO-3

Holds one type H-17 unit (Military HC6/U)
Temperature adjustable 50 to 70°C
Ambient range depends on operating temperature desired
Heater 6.3 volts at 1½ amp.
Standard 5 pin base

JK STABILIZED H-18

Frequency range 80 kc to 2 mc
Hermetically sealed metal holder
Wire mounted, plated crystals
H18 has octal base, H18-L has 2 pins 1/8" dia. on 3/4" centers, H18-5 has standard 5 pin tube base.

H-18

JK STABILIZED H-4

Frequency Range 1800 kc to 16 mc
Holder Material Black Phenolic
Pressure Mounting, Stainless Steel Electrodes
Water and Dust Proof
Military Type HC1/U Holder

JK STABILIZED H-9

Frequency Range 85 to 300 kc
Holder base Black Phenolic
Holder can Anodized aluminum
Wire mounted silver plated crystal
Water and Dust proof
Especially light and compact.

JK STABILIZED HEAT JKO-2

Holds two type H17 units (Military HC6/U)
Normal temperature 75° ± 5°C.
Ambient range — 55 to 70°C.
Heater 6.3 volts, under 1 amp.
Standard octal base

H-17

JK STABILIZED H-17

Frequency Range 200 to 500 kc and 1 to 75 MC
Hermetically sealed metal holders
Wire mounted, plated crystals
Two type H-17 holders fit loctal socket
H-17 is military type HC6/U, CAATC No. 3R1-3

**JK STABILIZED BROADCAST UNIT
JK57M & JK87M**

Frequency range 400 kc to 1750 kc adjustable ± .01%
Normal temperature 60°C ± 2°C (adjustable ± 10°C)
Ambient range for 60°C operation, — 20 to + 58°C
Heater 6.3 volts at 1½ amp.
JK57M has standard 5 pin base, JK87M has octal base
Low temperature coefficient plate will stay within FCC tolerance during warmup from normal room temperature
F.C.C. approved for broadcast use.
JK57MT & JK87MT have thermometer

**JK STABILIZED HEAT
JK07, JK07E**

Will hold any JK type crystal except H-6, H-18T and H-19
Normal operating temperature 50°C ± 2°C
Will hold temperature as much as 75°C above the ambient.
Supplied complete with Johnson No. 237 socket.
JKO-7E has sealed-in-glass thermostat for greater precision and longer life.
Available as JK07 or JK07E with 6.3 volt 10 watt heater or 115 volt 12 watt heater on either model
Ideal for frequency standards and broadcast (FM & TV) FCC approved.

dependable instruments

- Recording oscillographs
- galvanometers
- bridge balances
- amplifier systems
- associate equipment

700B Multi-Channel Recording Oscillograph

The only oscillograph using up to 12" recording media that can be conveniently mounted in a standard 19" relay rack.

- Operation, control and loading from one surface.
- Designed for rack or table mounting.
- Direct monitoring of galvanometer light spots while recording.
- Up to 36 channels.

Sensitive . . . Rugged Galvanometers

Outstanding features are high sensitivities and ruggedness of construction. Simple and rapid adjustment in vertical and horizontal planes.

- Solid case construction . . . completely dustproof.
- New, convenient connector terminals.
- Rotational limit stop.
- Low zero drift.

500B Portable Recording Oscillograph

Compact and lightweight providing maximum portability and versatility where it is desired to record up to 12 phenomena.

- Direct monitoring while recording.
- Right angle monitoring hood.
- Automatic aperture adjustment.

Galvanometer Assembly

The arrangement of galvanometers side by side in a common magnetic field makes possible the use of a maximum number of channels in an oscillograph of minimum dimensions. Permanent magnet assemblies are available for mounting two or six Heiland Galvanometers or multiples of six.

- Overall dimensions of six trace bank with galvanometers:
5 7/8" (H) x 3" (D) x 1 7/8" (W)

A-401 Portable Recording Oscillograph

Optional 8 volt battery pack provides self contained power source affording complete portability and flexibility of application.

- Completely portable . . . optional 8 volt battery supply.
- Direct monitoring while recording.
- Compact: 7" x 12 1/4" x 9"
Lightweight: 39 lbs.

"82-6" Bridge Balance and Strain Indicator

The "82-6" provides a simple, accurate means of calibrating static and dynamic output from resistive type transducers, or strain gages, before feeding these phenomena into a recording oscillograph. Static and slowly changing phenomena may be read directly on the sensitive output meter.

- One panel operation permits standard relay rack mounting or two-position table mounting.
- Individual channel control for coarse and fine voltage, balance, calibration and attenuation.

New, Miniature 35mm Recording Oscillograph

Designed and developed to meet an increasing demand for a small, lightweight oscillograph with accuracy of amplitudes and timing, uses 35 or 50mm paper of film.

- All operating controls on one surface.
- Compact: 10 1/8" x 6" x 4 1/4"
Weight: 15 lbs.
- Remote speed control . . . 8 recording speeds.
- Up to 12 galvanometers.

(For Delivery February, 1954)

Amplifier System

Carrier linear/integrating amplifier system. Flat response 1,000 cycle with carrier amplifier. Flat response beyond 2,000 cycles with linear/integrating amplifier. High output power. Small . . . compact . . . designed for rack or table mounting.

(For delivery October 1st)

WALTHAM

TELEPHONE PLUGS

Waltham Telephone Plugs and Jacks are nationally recognized as the "Standard of Quality" — they are manufactured from the finest materials by skilled craftsmen using the newest, most modern equipment. Our engineering staff is available for consultation without obligation on any plug or connector problem.

Manufactured in strict accordance with JAN P-642 Specifications.

We are a Signal Corps approved and accepted source for the following plugs and jacks:

PJ-047B	PJ-068	Style D	JJ-033
PJ-051	PJ-291	JJ-022	JJ-034
PJ-054B	PJ-292	JJ-024	JJ-048
PJ-055B	PJ-540B	JJ-026	JJ-055

All plugs can be supplied with red shells — specify when ordering.

Attention . . . ELECTRONICS MANUFACTURERS!

Stop your
wire marking
problems **COLD!**
with New heatless

Kodifier®

marking
machine

Markings Can't Rub Off!

The new KODIFIER heatless marking machine produces absolutely permanent code markings. **Nothing** removes them: rough use, solvents, abrasion.

Ribbon Delivers Cold Printing! Specially-formulated INDELI-DENT process ribbon penetrates and permanently adheres to and unites with vinyl plastic materials: poly-vinyl-chloride and polyethylene.

Quick-Change Rotary Type! With One spin of type wheel . . . you change your code. Thus, KODIFIER is ideal for **short runs** where codes must be changed **frequently** . . . and serves equally well in **production** work where code remains **constant**.

FREE Facts & Samples! Write today for free, processed markings and colorful brochure, "How To Stop Wire-Marking Problems Cold." Dept. G-7.

HIGH POWER Waveguide TERMINATIONS

plex', a new ceramic lossy material, is now available in waveguide, high power terminations and attenuators from Electro Impulse Laboratory.

This new material is extremely durable, provides a strong adhesive bond to waveguide walls, withstands temperatures up to 2000° F, and handles the thermal shock efficiently.

It withstands up to 2000° F (does not emit steam or water, characteristic of dummy loads using a Portland cement and graphite mixture for the lossy material.)

The waveguide loads use walls that are poor conductors, which means a more efficient removal of the heat generated in the load, and less tendency toward pulsepower breakdown (arcing) as may occur in designs which use filling material in the waveguide.

HTS-1500 is an S Band, waveguide termination capable of 1500 watts dissipation in still air. It has a V.S.W.R. of less than 1.1 over the range of 2700 to 3400 mc. **Price \$185.00**

HPTXS-175 is an X Band, waveguide termination, capable of 200 watts dissipation in still air. It has a V.S.W.R. will not exceed 1.1 over the range of 8500 to 10,000 mc. **Price \$55.00.**

Many other standard terminations and attenuators available, non standard terminations made to specifications.

X BAND FREQUENCY POWER METER FPM-3

The Electro Impulse Laboratory Frequency Power Meter FPM-3 is a portable, completely self-contained instrument capable of frequency and power measurements over the range of 8500 to 9600 megacycles. It employs a direct reading type of frequency meter with an absolute accuracy of ± 4 mc and a relative accuracy of ± 1 mc on frequency differences of up to 60 mc.

Power measurements are accurate to $\pm .1$ db on power levels of 0-1 milliwatt and ± 1 db on power levels of 1-1000 milliwatts. A crystal detector circuit is also incorporated to allow the wave shape of the signal to be observed on an external scope.

Provisions for coupling to RG 51/U or RG 52/U waveguide or to coaxial source are provided. **Price \$275.00**

X BAND SPECTRUM ANALYZER

The model 6X Spectrum Analyzer uses a sensitive superhetrodyne receiver circuit, electronically regulated power supply and a cathod ray tube for visual presentation of information.

Its frequency meter circuit is of the direct reading type with an absolute accuracy of ± 4 mc over the range of 8500 to 9600 mc. It employs a directly calibrated attenuator capable of 0-30 db attenuation. Either coaxial or waveguide input may be used.

This instrument may also be used as a signal generator, and has provisions for external modulation of the R.F. oscillator for this service. **Price \$950.00**

X BAND TEST SET MODEL X-12

The Model X-12 Test Set is a portable X Band Signal Generator, with a self-contained wavemeter and power monitor. It will generate either pulsed or CW, RF power. Basically the unit consists of a 2K25 Klystron oscillator and associated "plumbing" a pulser for the oscillator which permits triggered or self-synchronous operation, a direct reading Thermistor bridge for power measurements, a metalized glass, RF attenuator calibrated in decibels below 1 milliwatt, a direct reading, reaction type wavemeter, and a regulated power supply.

The Thermistor and wavemeter are so designed that they may be used to measure the frequency and power of R.F. signals from an external source. On such measurements the attenuator is calibrated in db above 1 milliwatt, giving a power range of .1 to 1000 milliwatts, in the frequency band of 8500 to 9700 mc. V.S.W.R. will not exceed 1.35 at any attenuator setting within the frequency range. **Price \$700.00**

UHF POWER METER

The UHF power meter model PM-10 is a completely self-contained, cable-field or laboratory test instrument which consists of a line termination capable of 90 watts dissipation, and a power measuring unit which may be calibrated from 1 to 60 watts full scale.

This unit employs an oil filled, air cooled line termination which has a V.S.W.R. of less than 1.3 in the range of 0 to 1200 mc. V.S.W.R. in the power measuring range of 20 to 600 mc does not exceed 1.1. The power measuring circuit employs a resistive voltage divider, is free of spurious responses and has negligible error from response to frequencies over the range of 20 to 600 mc. The unit employs two scales, 0 to 15 and 0 to 60 watts, but may be calibrated for any full scale reading from 1 to 60 watts. R. F. connector is located at rear of instrument, facilitating direct connection to transmitter.

The power measuring circuit employs a standard silicon crystal, (type) which requires no special selection. The unit may be readily calibrated using accurately known 60 cps voltage when change of scale or special operating conditions require. The power meter is hermetically sealed, shock mounted, 200 microampere meter. Components are fully shielded from the effects of strong R. F. fields.

The meter housing is detachable from the main housing assembly, and is connected by a self storing 25 ft. cable, for use when it is desired to use the line termination at a remote location. **Price \$135.00.**

TUNED V.S.W.R. AMPLIFIER, MODEL A-12

The model A-12 Tuned V.S.W.R. Amplifier contains a sensitive, highly stable bridged amplifier of improved design, which may be tuned over the range from 500 to 10,000 cps, or used as a wide band amplifier. When used as a tuned amplifier for V.S.W.R. measurements, interference and random noise will not give false V.S.W.R. indications.

The scale is graduated to read V.S.W.R. from 1 to 4 on one range, and power standing wave ratio from 0 to 30 db, on three ranges. Input may be either from a bolometer or a crystal source, and output may be indicated on the self-contained meter, or on an external meter.

This instrument may also be used to measure R.F. attenuation in conjunction with a cable bolometer. **Price \$250.00.**

ELECTRO IMPULSE Laboratory 62 WHITE STREET • RED BANK, N. J.
RED BANK 6-0404

FOR VHF AND HF COMMUNICATIONS

Semi-flexible coaxial cables, $\frac{3}{8}$ " and $\frac{7}{8}$ " diameter. Folded Unipole antennas from 25 to 174 MC. Omni-directional. Cardioid antennas, for interference reduction and for base stations located at edge of service area. From 25 to 174 MC.

Bi-directional antennas for "Figure 8" pattern. Ideal for covering highways, pipe lines, utilities. From 25 to 174 MC.

Corner Reflector antennas, for uni-directional coverage with substantial forward gain. All communications bands from 25 to 960 MC.

The new Types 224 and 225 omni-directional antennas for 148-174 and 450-470 MC. Low cost—high performance.

High gain omni-directional antennas, Type 3000 for 148-174 and Type 4000 for 450-470 MC.

Yagi antennas for uni-directional coverage. 148-174 and 450-470 MC.

A complete line of antenna kits, tuning units, and distribution systems for HF antenna arrays.

**LOOK TO ANDREW FOR ALL OF YOUR
ANTENNA AND TRANSMISSION LINE NEEDS!**

GOAT

ELECTRONIC COMPONENTS

Goat manufactures a line of tube shields for 7 & 9 Pin Tubes in the miniature field and split wraparound and seamless for various Loktal Tubes. For complete specifications write for our Catalog E52.

MINIATURE TUBE SHIELDS Series G1700

PLAIN

G1702 is a plain shield for a 7 pin miniature with .812 I.D. used with our G1710 and G1770 Base Clips.

G1705 is a plain shield for a 9 pin miniature with .850 I.D. and used with our G1780 Base Clip. (Above used with wafer type sockets.)

FLUTED

G1700 - The fluted tube is furnished for 7 pin only and is used where tight fit on the tube is necessary.

LANCED

G1702-2 is a lanced shield for 7 pin miniatures.

G1709 is a lanced shield for 9 pin miniatures.

These shields are used where tight fit on the tube is required and allows for expansion.

BEADED

Beaded shields for the 7 and 9 Pin Miniatures are used with Saddle Socket type only which includes our G1707 for 7 pin and G1706 for 9 pin and covers various lengths of tubes.

STANDARD TUBE SHIELDS G1332 Series

SEAMLESS

G1332 Series - seamless and fluted for GT/G, G and Loktal tubes in numerous variations. Complete specifications are listed in our E52 Catalog.

WRAPAROUND—LOKTAL

G1222 Series are wrap-around shields manufactured in four sizes to fit various tube types—Rings G691-1 and 2 are used on wraparound shield under high vibration conditions.

WRAP-AROUND— MINIATURE

G3560 is a wrap-around shield for effective shielding at low cost.

All GOAT miniature tube shields are produced from coated, cold-rolled steel stock. The particular finish—whether zinc, cadmium or electrolytic tin plate—varies, depending on availability of materials.

TUBE CLIPS Miniature and Standard

GOAT base and ground clips are manufactured to exacting specifications to assure positive electrical grounding of the tube and tube shield. Like the tube shields, GOAT clips are classified for miniature and standard tube use. The miniature clips are of the prong base clip type, the spring steel prongs affording a firm grip on the shield yet permitting deliberate removal as often as necessary. The standard clips include this type as well as ordinary prong clips, tube ground clips and dual-purpose base ground clips.

GOAT

PRECISION METAL STAMPINGS

GOAT specialized equipment and mechanical facility in its use permits manufacture of highly accurate, precise and precise stampings from metal ranging from .005" to 1/8" thickness. We can draw to a depth of 1/2" or a blank diameter of approximately 9".

Besides stamping, drawing and blanking, the GOAT Company facilities include equipment for riveting, shearing, staking, spot welding, plating and assembling.

INCREDUCTOR*
Controllable Inductor

The inductors sold by C. G. S. Laboratories, Inc., are of the controllable variety and are marketed under the trademark INCREDUCTOR. They incorporate at least one control and one signal winding. The signal winding inductance is controllable over ranges as great as 400 to 1 through variations of the current in the control winding.

Our units feature small size, low driving power (generally milliwatts), fast response, high Q's, (typically from 30 to 150). Models are available for use up to 100 mc. They are light weight, rugged and shock resistant. Typical applications include high speed switching, FM, AFC and sweep oscillators, receiver front ends, all remote control problems, etc.

C. G. S. Laboratories, Inc., Systems Engineering Specialists have successfully used INCREDUCTOR techniques in modern commercial equipments and industrial electronic applications.

See our ads in ELECTRONICS for January, March and June.

Write for technical literature and prices.

MINIATURIZED S-Band Cavities

Typical Data: Length 4 1/2" Diameter 1" Weight 8 ounces.

Originated by C. G. S. Laboratories, Inc., our S-Band Cavities have been perfected in cooperation with Evans Signal Laboratory. They utilize the pencil tube series, and feature peak powers up to 1 kw on pulse, or average powers of at least 25 mw on CW. A single control provides up to 200 mc tuning range, or even more in some applications. End tuned and side tuned models are available. Upper frequency limit is 3400 mc on pulse types, 300 mc on CW models. Temperature drifts as low as ± 2 mc from -50 to $+70^\circ\text{C}$ are available. All applicable JAN specifications are met, including shock and vibration.

PRECISION TRANSFORMERS

... for Exacting
MILITARY AND INDUSTRIAL REQUIREMENTS

Atlas offers a thoroughly reliable source of custom built transformers. We design — to your performance requirements — transformers incorporating the latest manufacturing techniques. Atlas precision controlled processes and inspection assure reliable performance.

Atlas facilities are arranged for fast delivery of small or large scale production. Testing facilities include a wide range of instruments, insuring exhaustive testing of even the most exacting circuits. We manufacture to MIL-T-27 or ANE-19 government specifications. Available are all standard transformers: power, pulse, audio, interstage, output, modulation, phase changing etc., as well as all types of chokes, reactors, bobbins and layer wound coils.

We specialize in:

MAGNETIC AMPLIFIERS and associated circuit development for industrial sensing and control applications.

INSTRUMENT TYPE REFERENCE TRANSFORMERS and bridge transformers featuring: phase errors as low as $1/20^\circ$, ratio errors to $1/100$ of 1%.

Construction Types:

- Hermetically sealed cans
- Fosterite
- Scotch cast
- Open type

New Development for ELECTRONIC EQUIPMENT

FUNGUS-PROOF NYLON

LACING CORD and FLAT BRAIDED TAPE

Mold and micro-organisms need no longer impair the efficiency of the lacing cords and tapes used in your electronic equipment. For Heminway & Bartlett's Nylon Lacing Cords and Tapes are *fungus proof!* They have high abrasion resistance and low moisture absorption. Their finish has the desirable malleability of wax and is non-toxic to humans. Samples gladly sent on request.

HEMINWAY & BARTLETT

To meet the demand for matched resistors to operate within a specified tolerance over a wide set of temperature ranges, E.P.R. has developed a technique for matching resistors to their temperature coefficients.

Each resistor is "pedigreed" for its individual T.C. characteristics by plotting its T.C. curve on a graph. These graphs are then correlated, and matching curves selected to assure perfect tracking of the matched sets over the required temperature range.

EASTERN PRECISION RESISTOR CORP.

RICHMOND HILL 18, NEW YORK

PRECISION WIRE WOUND RESISTORS

conforming to
Mil R-93A specifications

Our extensive line of standard resistors offer immeasurable technical utility. meet general requirements . . . and can be made with resistance values covering an extensive range and tolerances . . . They will withstand a maximum load under severe operating conditions and include fixed, tapped, non-inductive, and precision resistors . . . are individually encased to provide years of unflinching performance.

Advanced Electronic Engineering has demanded a highly stabilized ultra-precision wire-wound unit; and now EPR offers several basic designs; numerous adaptations and variations; styles, shapes and sizes for practically every application.

Understand TV Technology fundamentals • circuits • equipment

Here is the volume that gives you working knowledge of the complete television system—prepares you fully for technical work in designing television systems—operating television equipment—or understanding the details of receiving equipment. Much has been done in advancing television technology in the past few years, much more is to come. This book gives you essential grounding and the knowledge of day's practice that will equip you to take advantage of the opportunities ahead in this field.

Just Published! 2nd Edition

TELEVISION ENGINEERING

By Donald G. Fink

Editor, *Electronics*; Vice Chairman, National Television System Committee

721 pages, 512 illustrations, \$8.50

This outstanding book meets the need for grounding in the engineering and technical fundamentals of television. The whole television process, from studio to receiver, is covered. Aspects peculiar to television technology, such as scanning and wave-form analysis, illumination and colorimetry, camera tubes and picture tubes, are treated in detail, starting from first principles. The principles of operation of television systems, in black-and-white and color are covered, and the book describes in detail the design, operation, and use of television equipment.

Brings you these new features:

COLOR TV:

Two chapters devoted to color television fundamentals and description of six color systems.

Explains many NEW DEVELOPMENTS:

- stagger tuning of i-f amplifiers
- intercarrier sound reception
- distributed amplification
- the keyed clamp circuit
- offset carrier reduction of co-channel interference
- tonal gradation correction amplifiers
- reaction type power supplies
- batwing and superturbo transmitters and radiators

CIRCUIT DIAGRAMS: Contains complete circuit diagrams, with tube types and component values of nearly every item of equipment in the television system, including sync-signal generator, cameras and camera controls for live pickup and film, and microwave relay transmitter and receiver.

10 DAYS' FREE EXAMINATION

McGraw-Hill Book Co., Inc.,
330 W. 42 St., NYC 36

Send me Fink's TELEVISION ENGINEERING for 10 days' examination on approval. In 10 days I will remit \$8.50, plus few cents for delivery or return book. (We pay for delivery if you remit with this coupon; same return privilege.)

- PROMPT DELIVERY
- WIDE SELECTION OF RANGES
- METERS DESIGNED TO SPECIAL REQUIREMENTS

These meters feature a special D'Arsonval type movement. Expert design, fine materials, and rigid quality control throughout manufacture permit extreme miniaturization while retaining high performance standards. Accuracy is held to $\pm 3\%$ of full scale deflection. The light, strong metal cases are easily mounted in any panel. Waterproof models designed to meet applicable sections of government specifications are available. Special scales, ranges and other characteristics can be provided adapting these instruments to practically any electrical measuring requirement.

If your instrument problem demands the smallest possible size and weight combined with accuracy and dependability, we can help you. Write for engineering data sheets covering our standard instruments—or simply submit your specifications to our engineering department.

TUNGSTEN LEAD-IN WIRES

Quality leads make quality tubes . . . and for over 30 years The Engineering Co., under personal supervision of Daniel Kondakjian, has been making quality precision lead-in wires for vacuum tight seals, for lamps, radio tubes, electronic devices and other special applications. Precision machines, capable of holding these fine wires so that they are accurately located and carefully spaced, assure high operating efficiency and uniformity in the finished product.

Parts are made to customer's blue prints or specifications. Specializing in leads of tungsten, moly, nickel, nickel clad copper and copper alloys. Send us your blue prints or specifications. Kovar leads and stampings.

ELECTRON TUBE BASES

The quality and performance of electron tubes depend upon quality bases and caps. We make all types, including an all-glazed ceramic base. Our hydrogen-tube bases go up to 6.25 diameter. Precision equipment and careful inspection in our plant assure the finest quality in caps and bases. Our engineers will be happy to serve you in any problem.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should also be advertising in NUCLEONICS. Particularly in instrumentation and laboratory equipment, there is a crossover of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent issue, but are missing such presentation before one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELEC-TRONICS are also the sales representatives of NUCLEONICS. They have much evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

JAN NEW High Voltage INSULATED COUPLINGS

FOR RUGGED USE

Greater Than 15KV Breakdown
Plain or Locking Types

CHECK THESE ADVANTAGES

- ✓ Capacitance, shaft to tip: 1.7 mmfd.
- ✓ Temperature range: -75° to +175°C.
- ✓ High torque load: 10" lb. Max.
- ✓ Completely vibration and shock-proof single unit construction — molded Melamine to Metal.
- ✓ Non-corrosive, moisture and fungus proof.
- ✓ Used in approved Air Force and Navy Equipment; Meets MIL series armed forces specs.
- ✓ Fits standard slotted potentiometers *without machining.*
- ✓ Wide range of shaft lengths.

STOCK DELIVERIES

- 5" CRT Bezels for flat or curved faced Cathode Ray Tubes complete with engraved scale
- Bushing Extender
- Shaft Lock
- Offset Extension Shaft Coupler
- Trimmer Covers
- Tube Shields, etc.

KELLOGG

MIDGET
Condenser
Microphone

Check These Features

- Uniform Dependable Response
- Exceptional Calibration Stability
- Laboratory and Industry-Proved Performance

For precision sound measurements!
For high quality recording! Proved
by sixteen years of reliable use by
Industry. Fully satisfies the most
exacting requirements of Labora-
tories for reliability, stability and
accuracy. Send for full informa-
tion today—NOW!

KELLOGG

Magnetic Impulse
Counter

- The long life normal to relay equipment!
- Occupies space of only two telephone relays!
- Operates over same wide range of pulse ratio and frequency as a chain of counting relays!

Simple! Saves Space! Saves Money! . . .
Wide application to many fields—from
industrial control to any system where
trains of impulses, such as generated by a
telephone dial, are counted. Your letter-
head will bring full particulars.
Write now!

Whenever you have requirements for tele-
phone terminating equipment for Micro-
wave Systems, check with Kellogg—Ring-
down and dial Selective Calling Equip-
ment—Signalling Oscillators—Hybrid Ter-
minations—Strap Attenuators—Line and
Patching Jacks—Jack Fields.

INVERTERS

CONVERTERS

WOUND FIELD AND
PERMANENT MAGNET TYPES

DYNAMOTORS—available in 8 diameters from 2¼" (1 lb.) and up. For radio and sound apparatus in airborne, marine, vehicular or portable applications. These highly efficient dynamotors have low ripple and regulation. For any DC output voltage. They have outputs from 5 to 1000 watts and regulated or nonregulated voltages up to 1500 volts DC. Two to four commutator combinations in enclosed or ventilated types with or without filters.

MOTORS, GENERATORS, FREQUENCY CHANGERS, etc., in all industrial and marine types to standard or special design. 1 to 600 HP, DC and AC, all frequencies, including 400 cycles, with Drip Proof, Splashproof, Enclosed or Explosion Proof enclosures.

As designers and manufacturers of industrial motors and light weight rotary power supplies for more than 25 years we solicit your inquiries and specifications.

VITREOUS ENAMEL RESISTORS

Manufacturers of resistors conforming to JAN-R-26-A specifications in stack mounting types RW20 thru RW24 and in tubular types RW29 thru RW47 in characteristics G & J. Also commercial type wire wound resistors from 5 watts to 200 watts in fixed and adjustable styles made to your specifications.

PRECISION WIRE WOUND RESISTORS

For use where high resistance, low temperature coefficient of resistance, close tolerance and non-inductive balanced windings are required. Sturdy terminal construction with lug or wire leads. High resistance to moisture and accuracies to 0.1%.

METAL CASED CIMALOHM RESISTORS

Single and multiple section units enclosed in a metal case for better heat dissipation in Radio and Television applications. Silicone treated to give better than 10 Megohms insulation resistance after exposure to 95% humidity conditions.

We also manufacture potentiometer strips for antenna rotator and similar applications. Let us assist in solving your problems involving wire wound resistors.

TRADE MARK

ELECTRICAL MEASURING INSTRUMENTS

RUGGED • ATTRACTIVE • MODERATELY PRICED

TYPES—ammeters, milliammeters, voltmeters, AC and DC. Resistance meters.

ACCURACY—well within 5%. AC meters are double vane, repulsion type with jeweled bearing; DC meters are polarized-vane solenoid type.

METAL CASES—three basic styles, round or rectangular, all requiring 2-5/32" hole. Zero adjustment available on some D.C. models. Also pocket type.

DIALS—all metal—age and moisture resistant. Special calibrations, one to five colors.

USES—plate current and voltage readings; battery charging and emergency lighting units; TV antenna rotator indicators; voltage regulators, transmitter receivers, etc.

STOCKED—by leading electronics parts distributors. Ask for Bulletin G-56.

**8 sizes to meet circuit requirements
 of high stability, accuracy & low cost**

Electra carbon coat resistors provide the precision, stability and accuracy to meet a variety of applications and requirements in advanced electronic circuits. Electra offers the benefits of low voltage coefficient, low capacitive and inductive characteristics in high frequency applications, in addition to small physical size and economy.

STABILITY — regardless of resistance tolerance all Electra deposited carbon resistors are equally high in stability.

ACCURACY — $\pm 1\%$ is standard but resistance value tolerances of $\pm 2\%$, $\pm 5\%$ and $\pm 10\%$ are available.

ECONOMY — When the advantages of stability, accuracy and small physical size are considered, Electra resistors are your most economical buy.

PART NUMBER	Wattage	Maximum Rated Voltage	Resist. Range	* DIMENSIONS	
				Length A	Dia. B
DC-1/4	.125	250	4 Ω 250 K Ω	9/32"	5/64"
DC-1/4	.25	300	5 Ω 1 Megs	17/32"	3/32"

For the First Time Anywhere

POWER SUPPLIES WITH REGULATION AND STABILITY MEASURED IN PPM*

*PARTS PER MILLION

- Regulation within 20 PPM* for line voltages of 105 to 130V.
- Load regulation better than 40 PPM* from zero to 500 ma.
- Stability within 100 PPM* per day under average conditions.
- MORE STABLE THAN BATTERIES.
- Short warmup period of 20 minutes.

MODEL 301A. — Voltage: 7.5 to 750 volts. Current: 0 to 500 ma. Ripple: less than 10 millivolts. Auxiliary voltages of —350 and —700 vdc. at 10 ma. —1/2% regulation, less than 4 millivolts ripple; and 6.3 volts center-tapped at 10 amperes.

MODEL 300N. — Performance same as 301A but voltage range 750 to 3000 vdc. at 0 to 30 ma. No auxiliary outputs.

MODEL 300E. — Performance same as 301A but voltage range —1000 to —1500 vdc. at 0 to 100 ma. Auxiliary output of 6.3 vac. at 1.5 amp. SPECIAL MODELS. — Special models are available with output voltages from millivolts to kilovolts either positively or negatively grounded and at currents from milliamperes to amperes.

ALSO

SERIES 400 PRECISION POWER SUPPLIES

- For nuclear work.
- High stability — close regulation.
- Electronically regulated.
- High voltage — low current.

MODEL 400B. — Output: 1000 to 5000 vdc. Current: 0 to 1 ma. Regulation against line voltage 105 to 130 v. is within .01%. Regulation against load is .01%. Short term stability is .01% — long term stability is .1%. Ripple less than .01%.

MODEL 400C. — Same as 400B except output: 500 to 1500 vdc.

These models available with positive side grounded.

rotary multipole switch ESCO TYPE-A

The ESCO
Type-A
Rotary Switch
is a
compact,
multipole switch
for tap,
transfer,
and
selector
service.

It can be furnished for continuous rotation, in both directions, through eight positions, or can be provided with movement limited to from two to eight positions. An important advantage of the Type-A switch is that it has an exceptionally sturdy detent mechanism that assures positive positioning of the switching elements at all eight positions.

Movable contacts carried on molded-phenolic rotors engage fixed contacts distributed around the circumference of recessed, molded-phenolic disks so constructed that the make and break action is wholly contained within an insulating enclosure. Assemblies of fixed and movable contacts to suit varied switching needs can be combined so that as many as seven different sections can be controlled by a single knob.

ELECTRICAL RATINGS — TYPE-A SWITCH		
Service	Amperes	Volts
Continuous current	10 a-c/d-c	125
	5 a-c	125
Interrupting	0.75 p. f. lamp load	125
	3 a-c	125
	5 d-c	30
	1 d-c	125

Heavy-duty rotary switches rated at 10, 30, 60, 100, or 200 amperes are also available from ESCO. Bulletins giving detailed specifications on all ESCO switches will be furnished on request.

**NEW,
Miniature
PULSE TRANSFORMERS**

Pulse widths as low
as 0.05 microseconds!
Rise times less than
.005 microseconds!
2, 3, and 4 windings,
tapped if desired!

Developed for radar, missile and computer circuits. New design techniques and the use of highly stable special iron cores have enabled PCA to produce, in quantity, the world's smallest, most efficient pulse transformers.

The new units are hermetically sealed, and are impregnated or imbedded in a special plastic. They will not support combustion, and can operate indefinitely at temperatures ranging from -70° C. to $+125^{\circ}$ C. Leads will withstand a five pound pull.

For complete specifications
write to:
PCA ELECTRONICS, INC.

TYPICAL SPECIFICATIONS:

Model No. 101-0.1
Pulse width 0.1 microsecond
Rise time005 microseconds
Weight less than .03 ounces
Size 11-32" diameter
The MPT 101-0.1 meets MIL-T27 test specifications, including Table 1A Humidity Resistance Tests, and is resistant to corrosion.

New, Miniature Delay Lines

for Radar, Missile and Computer Applications

These new PCA Delay Lines are extremely compact and efficient. They will operate satisfactorily in ambient temperatures that vary from -65°C . to $+125^{\circ}\text{C}$. An epoxy resin potting compound gives maximum resistance to corrosion and moisture. Most models are available in hermetically sealed metal cans.

PCA Delay Lines can be designed to customer specifications. Your inquiries regarding specific applications are invited. Quotations will be sent without obligation.

Available in a wide variety of mountings and types.

Distributed constant
Lump constant
Tapped • Untapped

Typical range of specifications

PULSE WIDTH— a fraction of a microsecond to more than 10 microseconds.
RISE TIME— From .07 $\sqrt{\text{delay}}$ to 0.5 $\sqrt{\text{delay}}$.
IMPEDANCE— 50 ohms to several thousand ohms.
RIPPLE CONTENT— under 10%.

FORD INSTRUMENT COMPONENTS

Ford Instrument Company makes the finest precision instruments and mechanisms for industry and the armed forces.

FORD MECHANICAL DIFFERENTIALS with single spider gear—available in $\frac{3}{16}$ ", $\frac{1}{4}$ " and $\frac{5}{16}$ " shaft diameters—high accuracy, low friction.

FORD TELESYN UNITS are available in wide selection of sizes—proved precision accuracy, corrosion and fungus resistance mean better synchros when you specify Telesyn.

FORD SERVO MOTORS (60 and 400 cycles) for extremely low inertia and high frequency response. $\frac{1}{5}$; $\frac{1}{2}$; $1\frac{1}{2}$; $2\frac{1}{2}$; 5; 10-watt models in both low and high voltage, including magnetic amplifier controlled types.

FORD ELECTRICAL RESOLVERS available in sizes 23 and 31—interchangeability, temperature compensation -60°F to $+160^{\circ}\text{F}$, highest accuracy, adaptability, 400 cycle frequency.

Ford Instrument also makes magnetic amplifier systems, computers, converters, mechanical integrators and other instruments and equipment. Write for more details.

Toroids

Are you a producer of —
 Guided Missiles
 Microwave Systems
 Magnetic Amplifiers
 Carrier
 and other equipment requiring
 toroidal coils and components?

When . . . call on Torwico
 whose engineering and production
 facilities stand ready to supply
 you with—
 High Q Toroidal Inductors
 Toroidal Transformers
 Discriminator & Oscillator Coils
 Magnetic Amplifier Coils
 Tuned Circuits
 Filters
 Low Level Audio Transformers

Toroidal Coils —
 wound or designed to your
 Specs — Exact turns or In-
 ductance Tolerance — Vac-
 uum wax impregnated or
 coated with special encap-
 sulating material

Shielded Components —
 Hermetically
 sealed, potted
 or filled with
 an inert gas to
 meet MIL-T-27
 requirements

Only Torwico

Offers a Terminal Header with the
 Inclusive Floating Terminal. This
 construction produces a rugged
 terminal which can withstand ex-
 cessive vibration and shock —
 thermal shock from -65° F. to
 100° F.

The silicone insulations are par-
 ticularly effective in retarding DC
 arcing.

With all of their definite advan-
 ces, Torwico Terminals are sur-
 prisingly low in cost and are made
 consistent with the quality stand-
 ards needed to meet rigid military
 (MIL-T-27, Grade 1, Class A) and
 civilian specifications.

Please write for samples and send
 for detailed specifications for
 applications.

TORWICO ELECTRONICS, INC.
 100 Beltinghuysen Ave., Newark 5, N. J.

this TEFLON* gives you uniform parts...

electrically... dimensionally

*Non porous FLUOROFLEX®-T assures electrical stability.
 It's stress relieved for uniform machinability.*

It's in the processing—not in the appearance—that the
 real difference in Teflon shows up. Natural discolora-
 tions don't mean a thing to performance. But variable
 properties do.

That's why Fluoroflex-T products are extruded or
 molded under rigid control. Specially designed equip-
 ment compacts Teflon powder to the critical density—
 which not only prevents porosity, but also assures
 highest tensile strength. Resistoflex processing relieves
 internal stresses to provide better dimensional stabil-
 ity without any porosity. In short, Fluoroflex-T rods,
 tubes and sheets offer *uniformly* optimum properties.

All this means non absorbent insulators, for opti-
 mum UHF performance . . . and also uniform machin-
 ing with fewer rejects. Why not specify Fluoroflex-T
 for *your* Teflon parts? For more information write for
 Bulletin FT-1.

*DuPont trade mark for its tetrafluoroethylene resin.

**An Insulating Varnish
for every ELECTRICAL UNIT**

FOR EVERY ELECTRICAL WINDING, there is a Borthig Insulating Varnish that will efficiently do the job... including several special materials for television components and custom built coils.

BAKING VARNISHES:

No. K-252 Clear Synthetic Baking Varnish and No. F-150 Black Synthetic Baking Varnish: These excellent, general purpose baking varnishes are modern, polymerizing types and offer the maximum efficiency.

AIRDRIYING VARNISHES:

No. 308 Black Synthetic Airdry and No. 353 Clear Synthetic Airdry: Where baking facilities are not available and also for application to shallow coils where deep penetration is not essential.

FINISHING TYPE INSULATING VARNISHES:

No. 400 (Homogenized) Red Enamel, No. 354 Clear Synthetic Airdry and No. 301 Black Oilproof Spirit Varnish: These protective coatings are generally applied over previously treated motor and transformer units as additional protection.

The No. 400 and No. 354 with a suitable fungicide added will meet the Army-Navy requirements for tropicalization. Ask for No. 400 F-5-X or No. 354 F-5-X.

No. 613 Red Masking Compound: For masking metal surfaces—just brush it on, allow 5 or 10 minutes to dry and peel it off after baking cycle—surface will be clean.

No. 545 Clear Lacquer: A special material for TV deflection yokes and small coil applications.

SOLVED PROBLEMS are another product we deliver!

REGISTERED

Capacitors

MIFILM SUBMINIATURE CAPACITORS WITH PLASTIC "MYLAR" * DIELECTRIC

Good-All production techniques make it possible for MIFILM capacitors to be available in sizes smaller than other miniaturized brands. All Good-All MIFILM miniaturized metal enclosed hermetically sealed capacitors normally operate between -65°C and $+150^{\circ}\text{C}$. Insulation Resistance, 10^{15} ohms. Power Factor less than .5%. Sizes from .173" dia. x $21/32$ " long (.001 mfd, 600 VDC) to .750" dia. x $1-15/16$ " long (1 mfd, 600 VDC) slightly larger sizes to 1000 VDC. We invite sample orders for your inspection.

Good-ALL

MARBELITE

"Hard as marble," and popularly priced, this Good-All development is the standard for leading Radio and TV manufacturers. Generally smaller than RTMA specifications MARBELITE capacitors normally operate in the -30°C to $+100^{\circ}\text{C}$ range. Built for any climate, MARBELITE capacitors can be further miniaturized to meet your needs. Standard sizes from .001 mfd to 1 mfd in 100 to 1000 VDC. Write for catalog sheets M-503.

MIRACLE X

Paper dielectric, metal enclosed, hermetically sealed, MIRACLE X impregnated capacitors. Capacity change less than 5% from -50°C to $+125^{\circ}\text{C}$. Meets or exceeds size requirements of MIL-C-25. Available with all type mounts. Sizes from .235" dia. x $11/16$ " long (.001 mfd, 600 VDC) to 1" dia. x $2-3/16$ " long (1 mfd, 600 VDC).

Model A-4920 frequency-shift terminal

Model A-4920 is a complete frequency-shift terminal offering extremely high selectivity and S-N-R. Uses two separate crystal controlled receivers to permit dual diversity reception. Built to highest commercial standards. Highly conservative component ratings . . . trouble-free proven performance.

Model 5123 FSK Converter

Model 5123 is a low-cost FSK Converter offering excellent selectivity and S-N-R. Provides DC output to operate teletype as well as tone output. Three, optional frequency audio tones are available for operation directly into carrier telephone systems.

Model A-4722, FSK transmitting keyer

Model A-4722, a standard FSK transmitting keyer at moderate cost. Unit has exceptional frequency stability. Frequency range, 2 to 7 mcs. Separate power supply is included.

Also . . .

Single and multi-channel transmitters
. . . high frequency fixed and mobile
transmitters and receivers.

Your inquiries are invited.

ROTARY ELECTRICAL EQUIPMENT

... designed to meet your specifications

Booster Dynamotor Unit
Model D Y X—2712

Built to rigid military specifications. Operates at input of 14 volts, 5.5 amps, continuous duty. Externally fan cooled, complete with radio noise filter. For aircraft use.

The precision engineered booster dynamotor unit shown above is typical of the many special solutions provided by EEPKO engineers for tough military and industrial applications. Thoroughly field tested and proved, this motor performs satisfactorily under the most extreme conditions of service.

Whether your power problem relates to a highly developed radar unit or an industrial control device, EEPKO'S research and development engineering facilities are available to you. Because of our specialized experience in the design and manufacture of precision rotary electrical equipment, we can often save you both time and money in finding the most practical answer for you.

Moreover, once the design is established, you can count on EEPKO'S manufacturing skill to produce the equipment you need with unsurpassed, unvarying quality. Whatever your power problem—simple or complex—EEPKO engineers will welcome the opportunity to work with you.

Sel-Rex Precious Metals for Plating

**Pioneers in
the Development
of Modern
Precious Metal
Plating Processes**

Outstanding developments by Sel-Rex in precious metals for plating have resulted in better quality at less cost for both decorative and industrial platers. Superior engineering skill and long experience in the plating field make Sel-Rex your best choice for all precious metal plating needs.

Sel-Rex **BRIGHT GOLD PROCESS** produces pore-free "mirror bright" deposits regardless of thickness. Eliminates need for scratch brushing or buffing. Gives excellent metal distribution and deposit is twice the hardness of conventional gold. Ideally suited for specification thickness in barrel or still plating.

Sel-Rex **BRIGHT RHODIUM SOLUTIONS** provide a brilliant, durable deposit that will withstand severe abrasion. The chemically stable solution is ideal for specification plating of protective coatings that will not corrode or tarnish in any atmosphere.

Sel-Rex **SILVER SOL-U-SALT** (Potassium Silver Cyanide) in pure crystalline form is completely soluble in water. Eliminates old fashioned mixing, calculating or filtering. Eliminates hazard of airborne dust—no insoluble particles in the bath to cause rough deposits.

Consult our engineers on any precious metal problem. No obligation. Detailed literature available on request.

SEL-REX PRECIOUS METALS, INC.

229 Main Street • Belleville 9, N. J.

Dept. BG53

Pioneers and developers of better gold, silver, nickel, copper, cadmium and rhodium salts and solutions.

Intricate parts and precision components can be **LECTROFORMED!***

If the radio frequency component you need cannot be made by conventional methods or is difficult and costly to manufacture, the possibilities are it can be made by **LECTROFORMING**.

LECTROFORMING can produce parts of intricate design, accurate interior dimensions and with high interior surface finish up to 5 micro-inch. Combinations of metals may be used such as silver, gold, copper, nickel and iron for specific applications such as conductivity, strength and corrosion resistance. Dimensional stability is easily obtainable whereas it would be impossible to hold dimensions by any other method.

LECTROFORMING is the manufacturing of an article by the electrodeposition of metal on a form of predetermined size, shape, accuracy and finish. We welcome the opportunity to discuss your problem, no matter how difficult it may seem.

GIANT

 in miniatures

The inevitable process of "separating the men from the boys" is still going on in the comparatively new electronics industry. Yet Volkert has already established itself as the leading independent supplier of stamped components for miniature tube sockets, and other precision stampings.

Volkert was the *first* to produce shield bases for sockets on a progressive die in a one-press setup. Through Volkert's creative die engineering, a cost-saving method was initiated to stamp the tiny contacts *two at a time*. And now Volkert turns out over

one hundred million contacts every year.

Add to these achievements Volkert's modern production facilities, its ability to work with all types of specialty metals, and its emphasis on precision *plus* automaticity—and you have the reasons why Volkert is your *best* source for *all* precision stampings at low cost.

Volkert's outstanding facilities for design engineering, tooling, production, assembly and inspection—all combined under a single roof—are described in a 16-page booklet, "3-Way Facilities for Precision Stampings." Write for your copy.

SEND FOR SAMPLES AND NEW BOOKLET . . .

A comprehensive eight page booklet is yours for the asking. Contains complete electrical and mechanical data on all products of Cast Optics. Send request on company letterhead and a booklet will be promptly forwarded.

CAST POLYSTYRENE (cross-linked Styrene polymer) AN INSULATING PLASTIC designed for use in electronics

CP-2 is a plastic specifically developed to meet the demands for an insulating material for use at ultra-high frequencies and possessing high heat resistance and good machinability. It is furnished in rods or cast sheets for structural components in ultra-high frequency equipment where the lowest power factor is required, and where operating temperatures prevent the use of many commercially available materials such as polystyrene. CP-2 meets specification MIL P77A type E-2. SIZES: 3' x 4', 4' x 4', 40" x 50". Extra-large sizes are available with special order.

Electronic applications include . . . UG connector beads, UHF spacers, feeder spreaders, air-wound coil supports, rigid coaxial spacers, terminal strips, and UHF antenna and oscillator coils.

COCOR CP-1

Cast Polystyrene is a pure thermo-plastic material, clear as plate glass. Has good impact strength and is not sensitive to rough or chipped edges. It does not exhibit any warping or shrinkage when heated, and can therefore easily be hot formed and deep drawn. The lowest price range of any plastic now on the market — even lower than acrylics. If price is important, CP-1 is the answer.

COCOR CR-39

A plastic sheet allymer for applications requiring flat or curved surface contours, CR-39 has important advantages over other transparent plastics. Some points of superiority are: Absolute clarity, great resistance to abrasion, practical immunity to attack by all solvents, absence of crazing or checking, meets MIL-P-77A; JAN-P-77; USAF-12040; and MIL-P-8257 (USAF). Complete detailed fabricating instructions available upon request.

Electronic
TEST UNITS

Formica Company offers the industry the latest development in electronic laboratory furniture and equipment — test benches and units made up of prefabricated sections, factory assembled from stock to suit the special requirements for your individual application.

Designed by engineers for engineers, with serviceability in mind — the individual sections are constructed to afford the greatest number of varied selections and combinations. Made of heavy-gauge furniture steel, Formica's benches are sturdy and can take a beating, yet are modern in style and practicability, to meet today's laboratory needs.

These testing units offer unusual space-saving arrangements. Through their design, available working area has been increased at least 50% over that in other types now in use. For more information write for brochures and specifications.

INDUCTOROIDS

TOROIDAL INDUCTANCES OF HIGH "Q" QUALITY

Toroidal Inductances wound on Molybdenum Permalloy compressed powdered dust cores are available in all practical inductance values. Several core sizes and types are stocked making it possible to supply high Q inductances, especially suitable for *your* frequency and load ranges. We supply Inductoroids either cased or uncased

Filters and Equalizers

Because of their high Q, great inductance stability, and extremely low pick-up from external fields toroidal coils are highly desirable for such applications as wave filters, equalizers, and similar circuits. We supply these networks built to meet your circuit specifications or we will design and build such networks to meet your performance specifications.

Important! Send us your specific requirements.

There is a light, compact highly efficient I-R blower to give you maximum heat dispersion under all climatic or temperature conditions. One of these blowers requires minimum space and produces maximum C.F.M. Specifications listed below so that you may choose the one best suited to your needs.

SPECIFICATIONS

Model 1, Wgt. (less motor)	2½ oz.
Output: 3 to 22 C.F.M.	Hgt. 3"
Model 2, Wgt. (less motor)	5 oz.
Output: 10 to 30 C.F.M.	Hgt. 3¾"
Model 2½, Wgt. (less motor)	5½ oz.
Output: 10 to 65 C.F.M.	Hgt. 4¾"
Model 3, Wgt. (less motor)	12½ oz.
Output: 40 to 170 C.F.M.	Hgt. 6½"

Models have light-weight, high-impact plastic housings, turbo-type wheels and are available for either clockwise or counter-clockwise rotation. Available with or without motor.

BOBBINS and COIL FORMS for magnetic windings

The superiority of bobbin-wound coils for saving space and obtaining greater efficiency is widely recognized. Many manufacturers of field coils—radio and television—solenoids—relays and other products have solved their problems with BUCKEYE bobbins and coil forms.

TYPE "R" Bobbins having round tubes or cores are generally used for relays, solenoids and certain types of small motors. They can be supplied with round, square or irregularly shaped flanges. TYPE "S" Bobbins having square or rectangular tubes are frequently used for field coil windings, inductance windings and such. They may have round, square, rectangular or irregular shaped flanges.

Buckeye Bobbins are available in a vast range of insulating materials such as Vulcanized Fibre, Kraft Boards, Laminated Phenolics, Laminated Polyesters with Glass and many others.

THE BUCKEYE BOBBIN & MANUFACTURING COMPANY

12200 SPRECHER AVE., CLEVELAND 11, OHIO

TRANS-SONICS*

Type 71-5

BARORESISTOR

Important New Servo Component

The Type 71-5 Baroresistor is a pressure actuated potentiometer designed for operational use in aircraft. It features:

HERMETICALLY SEALED MECHANISM

The potentiometer winding and operating parts are hermetically sealed in a vacuum. Pressure is applied inside the bellows only. Therefore, the Type 71-5 Baroresistor is not affected by dust, fungi, or moisture.

RUGGEDIZED CONSTRUCTION

A special high force mechanism was developed for the Trans-Sonics Baroresistor to avoid the necessity for employing microforce potentiometer elements. Shock of 30g in any direction will not cause electrical discontinuity.

MACHINE CALIBRATION

Each instrument is calibrated by machine and its performance is automatically recorded as a graph of resistance versus pressure. Every turn of the winding is inspected. All electrical characteristics are automatically checked in an eleven stage inspection cycle.

CONDENSED DATA

Range: 0-15 psi. absolute
Resistance: 7500 ohms
Maximum voltage: 75 volts
Resolution: 1/3 %
Accuracy: 2% of full scale

Typical Applications

SERVOS—Vary servo loop gain as a function of altitude.
COMPUTERS—Voltage divider, P total/P static.
FIRE CONTROL—Air density measurements.
TELEMETERING—Pressure transducer.
RECORDING—Pressure transducer.

IF YOU WANT TO...

have coils, condensers, resistors and all wiring at a fraction of their present cost, eliminate assembly errors, reduce size of product—THEN **CENTRONICS'**

PRINTED CIRCUITS (Using our own improved photo-etch process)

are for you.

KEEP AHEAD OF COMPETITION

More than likely your competitors may be contemplating using printed circuitry. In that case they will have the advantages of lower costs, smaller space and greater precision.

WHERE PRINTED CIRCUITS ARE BEING USED

In all phases of the electronic field. For instance TV I.F.'s, TV Tuners, UHF TV cross over networks, and switches. You can also replace the entire wiring of radios, TV sets and many other devices.

HOW TO OBTAIN MORE INFORMATION

Send for our brochure or ask for our sales engineer in your area to visit you to discuss your needs.

If you wish, send us a sketch or blue print of your product today. In return you will receive from us a sketch of your unit showing its appearance as a printed circuit and complete price quotations.

RADIATION SUPERVISOR

Automatically and Continuously
Monitors Radiation

MODEL DZ14 RADIATION SUPERVISOR designed to provide continuous automatic monitoring of radiation in your laboratory. It can be used to monitor the laboratory and sound remote control alarm systems in office or in safety control centers. Instrument has built-in Aural and Visual Alarm System, adjustable sensitivity, and is complete in all respects. Just plug it in. The Radiation Supervisor has an infinite life type counter that plugs directly into top of chassis. The DZ14 has been engineered for long life under continuous operation and has the best of electronic components. Protect your personnel. Safeguard against unauthorized removal of "hot" isotopes either during or after working hours. Has many other uses. The Radiation Supervisor is sold under Detectolab's GUARANTEE. Write direct or for further information to the us. Price \$225.00 complete. Catalog available upon request.

- Low Loss Factor — excellent surface resistivity.
- High Dielectric Strength.
- High Arc resistance
- High Shock, tested at 15G
- Service over wide Temperature Range

Details on Request

NEW INDUSTRIAL MICROPAIN

NEW SILVER SHIELDING COATING

The new, low-cost SS12 Silver-Shielding Micropaint was designed especially for shielding and conducting uses requiring very low resistances.

Uses include hearing-aid shielding, meter and instrument shielding, radio and TV-circuit shielding, TV-cable shielding, etc. It covers up to twice as much area per ounce, but costs approximately half as much per ounce as similar coatings now available. You can reduce your electronic silver-coating costs as much as 67%.

Adhesion to difficult surfaces such as glass is excellent. Square resistance is around two ohms. Comes in a brushing grade and a spraying grade for rigid surfaces. Either can be adapted to application on flexible surfaces. Data and prices upon request.

See our ad on Static Shielding for CR tubes, etc., Printed Circuits, and Temperature-Sensitive Resistors on page 160.

AS LOW AS **45¢** per oz.

NEW BUFFALO MICHIGAN

M & M TEST CABINETS

COLD TEMPERATURE . . . HUMIDITY . . . ALTITUDE SIMULATION
A Complete Line . . . SIZES for Every Requirement

ALTITUDE SIMULATION CHAMBER

- Altitude Range to 120,000 feet
- Temperature Range from 300° F. to -140° F.
- Micrometer Temperature Adjustments hold $\pm 2^\circ$ F.
- Compact Design . . . Requires less Floor Space
- Humidity Cycle available

Providing extreme flexibility in temperature and vacuum ranges, M & M Altitude Simulation Chambers give you precise control and easier, simpler operation that will reduce test costs considerable. Custom-quality built in every detail, M & M Chambers are designed to meet Government altitude simulation test standards. Available with many optional features to speed testing, such as Program Heating, Cooling, and Humidity Cycles, Automatic Recorder for controlling and integrating temperature, humidity and altitude.

HUMIDITY TEST CABINET for

Laboratory or
Production Testing

(Supplies Relative Humidities between 20% and 90%—Temperatures +350 F. to +185° F.)

- Built-in refrigeration and condensing systems provide FAST TEMPERATURE and HUMIDITY changes WITHOUT CONDENSATION ON TESTED PARTS
- Close Control of humidity and temperature ratios
- 27 cu. ft. working space
- Hermetically sealed refrigeration unit—Extra capacity condenser system
- 6 electrical leads in work space for fast, easy connections
- Forced air circulation—glass viewing panel

Built-in humidification, heating and refrigeration systems provide fast, accurate humidity testing . . . quick temperature rise or pull-down and minimum condensation on material being tested. Individual and/or interlocked control of temperature, humidity and cooling provide flexibility to meet any need. Optional equipment includes time control system for presetting dry and wet bulb temperatures for automatic variation of relative humidity. Cabinets are laboratory tested and shipped ready for operation.

LOW TEMPERATURE CHESTS FOR HEAVY DUTY USE

- Ranges to -140° F.
- Hermetically Sealed Refrigeration Units
- Micrometer Adjustment Maintains Temperature to $\pm 2^\circ$.
- Automatic overload protection
- 9 Standard Models
- Heating Cycle Available

Model LTP-10-150 has heavily insulated cabinet packed with extra thick, low-conductivity insulation. Test space 33"x26"x20" has water-tight stainless steel liner refrigerated on four sides with heavy duty all copper coil welded for trouble-free service. Snap locks positively seal double-gasket on counterbalanced lid. Vibration eliminators on all tubing. Recessed controls are placed for convenience and accessibility. Designed for long, trouble-free service—manufactured to insure dependable low cost operation.

TRIMPOT

Trade Mark

An adjustable . . .
Sub-miniature potentiometer
for precise circuit trimming

BOURNS TRIMPOT is a wire-wound potentiometer designed for miniaturized equipment. Adjustments are simple and accurate . . . they are made by turning the exposed slotted shaft with a screw driver. Settings are securely maintained during severe shock, acceleration and vibration.

TRIMPOTS can be installed individually or in stacked assemblies with two mounting screws through the eyelets in the body. Superior electrical characteristics are achieved by the use of precious metal contacts and precision resistors.

BOURNS designs and manufactures other potentiometers which measure linear motion, gage pressure, differential pressure, altitude and acceleration.

BUYERS' GUIDE

Sensitive DC-VTVM Furtheres Electronic Research and Production

Progress in electronic engineering, as in other fields of engineering, is closely linked with the development of more sensitive measuring instruments. During the past 4 years our MV-17B DC Vacuum Tube Millivoltmeter has helped substantially to advance both research and production throughout the entire electronic field. Crystal diodes and transistors for instance have benefited from it due to its ability to measure small DC voltages with minimum circuit loading (1 mV full scale, 6 megohms input impedance). As a null detector, in bridges, the MV-17B can be overloaded up to 100,000 times, thereby eliminating suspension-galvanometer trouble and increasing measuring ranges and sensitivity. Grid current measurements, small voltage drops in regulated power supplies, delicate temperature measurements, insulation material research are but a few other applications which have made this instrument a reliable stand-by in nearly all leading laboratories in America and abroad.

**MV-17B
DC-Millivoltmeter**

*"It Measures
Where Others Fail"*

Other Millivac Meters, Similar to MV-17B.

- MV-17BX DC Millivolt meter, identical with MV-17B but equipped with external output terminals. Used as a high-gain DC amplifier or to operate external indicating and recording instruments.
- MR-67B DC Millivolt Recorder, sensitivity 200 microvolts per centimeter. Uses Sanborn heat-writing unit.
- MV-18B High Frequency Voltmeter. Has MV-17B DC measuring circuit and external crystal probes. Covers 1 MC to 2,500 MC, lowest reading 1 mV. Measures also 100 microvolts to 10 mV DC.

**A COATING FOR EVERY
APPLICATION... COMPONENTS,
WIRING, CHASSIS, PANELS!**

INSL-X fungicidal coatings absolutely inhibit organic attack; prevent moisture infiltration. Years of research and improvement have made these products the finest available for protecting electronic equipment, wiring and components against the deteriorating effects of moisture, mildew and corrosion.

INSL-X coatings are available in many types, each of which offers the maximum protection for a specific group of requirements—impregnation, surface coating, high dielectric strength, low loss characteristics, etc. All of the coatings are easy to apply, biologically effective, non-toxic to humans and non-corrosive. Chemical and thermal stabilities are excellent and insure long term protection in every application. INSL-X fungicidal coatings meet rigid government specifications.

Write for complete specifications and application data on all INSL-X insulating coatings and compounds—fungicidal and regular; no obligation.

ADVERTISERS:

How about the NUCLEAR field?

There are a good many advertisers
in this BUYERS' GUIDE who should
be advertising in NUCLEONICS.
Particularly in instrumentation and
laboratory equipment, there is a cross-
over of use in the electronic and in
nuclear field.

But, there is very little cross-over in
subscriber lists of the two publica-
tions — a matter of a few percentage
points.

It is quite possible that you are doing
an effective presentation of your prod-
ucts and abilities in this excellent is-
sue, but are missing such presentation
in more one of the fastest growing fields
in the country's history — the field of
atomic energy.

The sales representatives of ELEC-
TRONICS are also the sales represen-
tatives of NUCLEONICS. They have
much evidence pointing to the oppor-
tunities in this great NEW field. Ask
them to show you what your potentials
can be.

HIGH LEVEL PULSE SOURCES

CLEGG LABORATORIES takes pleasure in announcing the development of a series of pulse generators and accessories for laboratory and production applications.

Available units cover the peak power range from 10 KW to 25 Megawatts with average powers from 10 watts to 25 KW.

We are also prepared to supply special components and accessories for use in the high level pulse field. These include non-reactive current-viewing resistors, peak pulse voltmeters, capacity dividers and timing sequence generators.

Our engineering department will welcome your inquiries regarding your pulse source requirements.

MULTI-Use POWER SUPPLIES for AIRCRAFT, INDUSTRIAL and LABORATORY bench applications

Pictured here is the latest model 1028 (and 1028F) Selenium Power Supply - available for quick delivery in both filtered and unfiltered types, adaptable to a wide variety of uses. These Power Supplies deliver continuously-variable low voltages at high current for long periods. They are ideal for bench testing of aircraft radio transmitter, dynamotors, etc., for research, development and engineering applications, and light-duty electroplating — to mention a few services.

YOU CAN

Solve THESE PROBLEMS
in PLASTICS

Parisian Novelty Company supplies immense quan-
tities of printed and fabricated plastic sheets, rods
and tubes for hundreds of industrial and military
applications all over the world.

- ★ **DIALS and DIAL CRYSTALS**
at their best when made of plastics by Parisian.
All sizes and shapes. Accurately calibrated.
- ★ **IDENTIFICATION BADGES and Pass Holders**
All styles available. Tamper-proof, dirt resistant,
long lasting. Your employees will be proud to
wear them.
- ★ **INSTRUCTION and NAME PLATES**
Durable, soil proof, easy to read, and excellent in
appearance. Our plastic does not shrink, stretch
or warp.
- ★ **SCHEMATICS and CHARTS**
Plastics are ideal for diagrams, charts and sche-
matics. Resistant to wear, grease stains and corro-
sion. Non inflammable.
- ★ **INSULATED SPEAKER MOUNTING SCREWS**
Insulated and plastic covered ornamental screws
approved by Underwriters Laboratories.

Present your plans and problems to
us for prompt analysis, suggestions
and prices.

GOSLIN AIRCRAFT TRANSFORMERS

GUARANTEED TERMINAL PERFORMANCE

Specialists in Transformer miniaturization for aircraft application. Designed for lightweight, high altitude, vibration, humidity, temperature, etc., competent engineering, controlled quality, skilled workmanship.

CUSTOM-MADE TRANSFORMERS FOR RADAR, ELECTRONIC AND MANY OTHER ELECTRICAL EQUIPMENT APPLICATIONS: POWER PULSE • CHOKE • BIAS • AUDIO • FILAMENT • MODULATION PHASE SHIFT • ISOLATION • INDUCTOR • STEPDOWN, ETC.

Hermetically sealed or open framed airbourne units meet or surpass all military and civilian specifications. Complete facilities for all JAN-tests. Consult GOSLIN on your Transformer requirements—they can be engineered to your specifications.

ALFAX the NEW Universal Recording Paper

for HELIX, STYLUS, ROLLER
or IMPRESSION
PRINTING and RECORDING

Now for the first time there is available a universal paper for instrument and facsimile recording applicable to any type of printing or recording means known today.

ELECTRICITY IS THE INK

Marked by current as low as 1 volt, ALFAX now makes possible low-cost recorders of new simple design.

ALFAX is the only paper capable of high speed recording — normal writing speeds up to 300" per second.

ALFAX records faithfully under extreme humidity, and over all temperature ranges from stratospheric to sub-tropical.

ALFAX provides a THIRD DIMENSION thru 14-step tone response.

Find how this new universal paper can serve you to PRODUCE Memories — to RECORD Computer Totals, Radar Signals, Sonar Signals, Infra Red Signals, Telemetered Data — to DISPATCH Business Records and Information — to MONITOR Any Operation, Any Process — to PROVIDE Information for Analysis Studies.

Request Booklet "Recording with Alfax" — describe your problem.

Alden Monitoring Recorders

Providing an extremely simple method of getting permanent records of number and time of almost any actions or occurrences — with simple rugged Recorders that can be used under almost any conditions — installed by anybody.

The basic simplicity of these recorders is made possible by the use of Alfax Electro-sensitive Paper in which electricity is the ink. This paper records under climatic extremes of humidity and temperature and making possible simple, rugged recorders without need of delicate mechanisms or complex moving parts.

ALDEN MAGAZINE RECORDER

Records 2 actions plus timing marks. Just plug into AC outlet and run wires to source of on-off actions.

ALDEN MULTI-CHANNEL RECORDER

To record up to 30 separate tests, actions and processes, all on 5" paper.

Facsimile Components Available

It's immensely simple — and inexpensive — to build your own recorders with our unitized facsimile recorder components.

EST. 1922

POPPER & SONS INC. 300 FOURTH AVENUE
NEW YORK 10, N. Y.

TYPE 302 CONTINUOUSLY VARIABLE DELAY LINE

Time Delay:
Continuously variable from
zero to 0.6 microsecond.
Impedance:
960 ohms nominal.
Rise time:
Less than 10% of time delay
at any point.
Construction:
Distributed parameter.
Overall size:
4" x 12" x 12".

TYPE 506 MINIATURE CONTINUOUSLY VARIABLE DELAY LINE

Time Delay:
Continuously variable from
zero to 0.25 microsecond.
Impedance:
190 ohms nominal.
Rise time:
Less than 10% of the time
delay at any point.
Construction: Distributed
parameter.
Overall size:
1" x 4" x 4".

Type 202 VECTORLYZER

Frequency Range:
8 cps to 2 mc through
panel binding posts, 20
kc to 500 mc through
probe.
Input Impedances:
Probe—2.5 uuf shunted
by 100,000 ohms, coaxial
arrangements for
matching low impedance
cables are available and will be furnished when
specified.
Binding Posts:—16 uuf shunted by one megohm.
Voltage Range:
Binding Posts—0.06, 0.6, 6, 60, and 600 volts
full scale.
Probe—0.6, 6, and 60 volts full scale.
Phase Angle Range:
0-180, and 180-360 degrees, ranges with better
angular sensitivity can be obtained through panel
adjustment.
Accuracy:
± 2% through panel binding posts, ± 1 db
through probe for phase angle measurements.
Power Supply:
115 volts rms ± 15%, 50-60 cycles, 80 watts.

Type 404A PHASE METER

Frequency:
External indicator—
100 kc to + 0 cps.
Panel Meter—100
kc to 0.001 cps.
Range:
36°, 90°, 180°, and 360° full scale, phase lead
or lag.
Input voltage:
0.5 to 300 volts from + 0 cps to 10 kc, then the
lower limit increases slowly up to 1 volt at 100
kc; better sensitivity can be obtained through
panel adjustment.
Accuracy:
± 1% or one degree from + 0 cps to 10 kc,
then increases slowly up to 4% or four degrees
at 100 kc with external indicator; an additional
error of + 1.5% at any operating frequency with
panel meter.
Waveform:
Any symmetrical or unsymmetrical periodic wave-
form does not affect the accuracy of the instru-
ment.
Input Impedances:
One megohm shunted with 16 uuf on the "Cathoda
Follower" input, and 24000 ohms shunted with
25 uuf on others.

TYPE 601 STEP VARIABLE DELAY LINE

Time Delay: Variable in step of 0.2
microsecond up to 2.2 microseconds.
Impedance: 190 ohms nominal.
Cutoff frequency: 6.2 mc nominal.
Construction: Lumped parameter.
Overall size: 3" x 3" x 3".

Tensolite

MINIATURE
SUPER-FLEXIBLE

PLASTIC
INSULATED
WIRE and
CABLE

TENSOLON HOOK-UP WIRE

Teflon insulated for continuous use up to 250°C, "Tensolon" is available in 14 solid colors and features a free-stripping, thin wall covering with high dielectric strength.

TENSOLEX JAN-C-76 HOOK-UP WIRE

Types WL, SRIR, and SRHV available in small wire sizes in all standard colors including spiral striping. Nylon jackets can also be supplied for greater resistance to abrasion.

SUB-MINIATURE WIRE AND CABLE

Thin wall vinyl insulation over flexible stranded conductors (AWG sizes down to #40) meets many requirements for small space factor. Available in all standard colors with or without wire braid shields.

SUPER-FLEXIBLE CABLES

Tensolite super-flexible cables, featuring the patented tensulation process, solve many problems calling for limpness and long flex life. Phonograph pick-up cables, hearing aid cordage, and telephone fimsels are regularly being supplied.

TENSOLITE WIRE KITS

For laboratory and prototype requirements, the following convenient desk size wire kits are now available from stock: Teflon Kit, SRIR Kit, Sub-miniature "1482" Kit, Flexible Cable Assortment.

SPECIAL CONSTRUCTIONS

Tensolite's engineering and development facilities are also available for collaboration in the solution of many special cable problems. Simple or complex, Tensolite will welcome an opportunity to estimate on your requirements.

TUNGSTEN RIBBON

Sizes: Widths from .004" up to .125"
Thicknesses from .040" down to .001"

Down to .0008" at widths up to .060"
Down to .0005" at widths up to .015"
Down to .0002" at widths up to .006"
Tungsten ribbon made to above sizes is manufactured from round, ductile wire.
CHEMICAL PURITY: 99.9% pure
FINISH: Roll finish—black or cleaned
CAMBER: Approximately 1/16" in 2' lengths
EDGES: Slightly rounded and smooth

TOLERANCES:

Thicknesses:	.0005" to .001"	± .00005"
	.002"	± .0001"
	.003"	± .0002"
	.004"	± .00015"
	.005" to .006"	± .00025"
	.007" to .010"	± .00035"
	.011" to .030"	± .0005"
	.031" to .040"	± .001"
Widths:	.006" to 0.10"	± .0005"
	.011" to .020"	± .001"
	.021" to .030"	± .0015"
	.031" to .060"	± .002"
	.061" to .093"	± .003"
	.100" to .125"	± .005"

Supplied to mg. wgt.—if required.

STRIP

Widths up to 1½" with thickness down to .001" in random lengths 6" and up. This is rolled from heavy strip.

THORIATED

Widths up to .125" down to .001" thick
Widths up to ½" down to .002" thick
Wgt. per Sq. In. at .001" Thickness is 0.316 Grams

TANTALUM RIBBONS are available in sizes and tolerances similar to those shown for molybdenum. STRIP .001" down to .0005" at widths up to 2".

INQUIRIES ON FORMED PIECES MADE OF TUNGSTEN OR MOLYBDENUM RIBBON AND STRIP, OR THORIATED TUNGSTEN WILL RECEIVE PROMPT ATTENTION.

MOLYBDENUM RIBBON

Sizes: Widths from .006" up to .250"
Thicknesses from .060" down to .0006"

Molybdenum Ribbon made to above sizes is manufactured from round, ductile wire.

CHEMICAL PURITY: 99.9% pure

FINISH: Roll polished finish, cleaned

CAMBER: Approximately 1/16" in 2' lengths

EDGES: Slightly rounded and smooth

TOLERANCES:

Thicknesses:	.0006" to .001"	± .00004"

NO OTHER LIKE IT!

- Spring loaded piston made of special invar alloy having extremely low temperature coefficient of expansion.
 - Silver band fused to exterior of precision drawn quartz or glass tube serves as stationary electrode.
 - Piston dimensional accuracy is held to close tolerance maintaining minimum air gap between piston and cylinder wall.
 - Approximately zero temperature coefficient for quartz and ± 50 P.P.M. per degree C. for glass units.
 - "Q" rating of over 1000 at 1 mc.
 - Dielectric strength equals 1000 volts DC at sea level pressure and 500 volts a. 3.4 inches of mercury.
 - 10,000 megohms insulation resistance minimum.
 - Operating temperatures, -55 C. to $+125$ C. with glass dielectric. And -55 C. to $+200$ C. with quartz dielectric.
 - Over 100 megohms moisture resistance after 24 hours exposure to 95% humidity at room temperature.

Test requirements

RUGGED PROTECTION for VITAL EQUIPMENT: Finnflex Mounts isolate vibration and shock from *Electronic, Communication, and Control Equipment*. They offer unimpaired efficiency from -80° to $+250^{\circ}$ F. "Selective Action" friction dampening, non-linear steel springs, and other features. Wide range of sizes and load ratings available.

SHOCK MOUNTS for Signal Corps Mobile Equipment and for Naval Fire Control Units.

SPECIAL PROBLEMS: Complete facilities for designing and fabricating Shock and Vibration Mounts to order — regardless of size or weight of equipment mounted.

Specify **FINNFLEX**—for Ruggedness, Efficiency, and Economy.

Gyros

(above) two axis gyro (below) rate gyro

American Gyro Corporation miniature gyros are reliable, rugged, hermetically sealed instruments with sufficient accuracy and sensitivity to satisfy most missile and aircraft requirements.

Designed for maximum performance with a minimum of accessory equipment, these gyros operate without heating or temperature control over the entire AN temperature range. Full flotation construction assures reliable operation under extreme acceleration and vibration conditions. Self-governed gyro motors eliminate close voltage and frequency control of the motor power supply.

THE LO-C OSCILLOPROBE

MODEL HF-3

WHAT IT IS

The LO-C OSCILLOPROBE is a unique low capacity probe and wide-band amplifier combination having 1/5 the input capacity of the conventional accessory probe.

WHAT IT DOES

The LO-C OSCILLOPROBE transfers a signal from a circuit under observation to any oscilloscope without amplitude loss or waveform distortion.

- C Input <math>< 2 \mu\text{f}</math>
- Z Input = 5 Meg. Ω
- 10 cps. to 10 Mcps
- .035 μs rise time
- Z Out = 60 Ω
- .25 Mv. Noise Level
- 3 Stage amplifier

Double Barrel Advertising

Advertising men agree—to do a complete advertising job you need the double effect of both Display Advertising and Direct Mail.

Display Advertising keeps your name before the public and builds prestige.

Direct Mail supplements your display advertising. It pin-points your message right to the executive you want to reach—the person who buys or influences the purchases.

More and more companies are constantly increasing their use of Direct Mail because

it does a job that no other form of advertising will do.

McGraw-Hill has a special Direct Mail Service that permits the use of McGraw-Hill lists for mailings. Our names give complete coverage in all the industries served by McGraw-Hill publications—gives your message the undivided personal attention of the topnotch executives in the industrial firms. They put you in direct touch with the men who make policy decisions.

Some people have a wrong conception of Direct Mail. There's no hocus-pocus to it—there's no secret formula—nor is there need for an extensive department to plan and execute your mailing program. You don't even need your own mailing lists.

Probably no other organization is as well equipped as McGraw-Hill to solve the complicated problem of list maintenance in industrial personnel. Our lists are compiled from exclusive sources, based on hundreds of thousands of mail questionnaires and the reports of a nationwide field staff, and are maintained on a twenty-four hour basis.

In view of present day difficulties in maintaining your own mailing lists, this efficient personalized service is particularly important in securing the comprehensive market coverage you need and want.

Ask for more detailed information today. You'll be surprised at the low over-all cost and the tested effectiveness of these hand-picked selections.

7 DAYS PROGRAMMING OF...

TEMPERATURE • HUMIDITY • ALTITUDE

—100°F to +230°F 20% to 95% R.H. 100,000 Ft.
COMPLETELY SELF CONTAINED IN ONE PORTABLE UNIT

This machine was built for the U. S. Navy at Johnsville, Penna., to control and record a 7 day program of varying temperature, humidity and altitude conditions to very close tolerances. The first day's program involves temperature of —85°F., with altitude of 65,000 Ft., return to sea level with temperature of +221°F., and humidity of 95%, reduce temperature to +77°F., rise to +122°F., and reduce to +77°F. Then hold +77°F., and produce condensation in the chamber once each hour for the remainder of the 24 hour period. The following six days are occupied with variations of the first day cycle, all automatically controlled. Many variations of programming are possible and it is also possible to operate with conventional non-program control.

ADVERTISERS:

Know about the NUCLEAR field?

There are a good many advertisers using this BUYERS' GUIDE who should be advertising in NUCLEONICS. Particularly in instrumentation and laboratory equipment, there is a cross-over of use in the electronic and in the nuclear field.

But, there is very little cross-over in the subscriber lists of the two publications — a matter of a few percentage points.

It is quite possible that you are doing an effective presentation of your products and abilities in this excellent publication but are missing such presentation in one of the fastest growing fields in the country's history — the field of atomic energy.

The sales representatives of ELECTRONICS are also the sales representatives of NUCLEONICS. They have the evidence pointing to the opportunities in this great NEW field. Ask them to show you what your potentials can be.

(Continued on page 646)

ALNICO FIELD MOTORS

(Approx. size overall . . . 3 3/4" x 1 1/4" diameter)
DELCO TYPE #5069600:
 27.5 volts DC; 250 RPM
 \$19.95

PM Motor, Delco Type #5069371; 27.5 volt;
 DC Alnico Field; 10,000 r.p.m.; dimensions
 1" x 1" x 2" long; shaft extension 1/2", diam-
 eter 0.125" \$12.50

PIONEER GYRO FLUX GATE AMPLIFIER
 Type 12076-1-A, complete with tubes
 \$27.50 ea.

AC CONTROL MOTOR

Diehl Mfg. Co., FPE-25-7, 20 Volts, 2 ph
 1600 RPM, .85 amps. \$15.00

A. C. SYNCHRONOUS MOTOR Type RBC
 2505; Volts 115; Cycles 60; RPM 60; Mfg.
 HOLTZER CABOT ELECT. Approx. size:
 2 3/8" x 2 1/2" x 2 3/8" \$15.00 ea.

400 CYCLE MOTORS

PIONEER: TYPE CK5 2 Phase; 400 cycles
 \$35.00 ea.

EASTERN AIR DEVICES TYPE J49A: 115 V;
 0.1A; 7000 r.p.m. Single phase 400
 cycle \$17.50 ea

AIRESEARCH: 115V; 400 CPS; Single
 phase 6500 RPM; 1.4 amp; Torque 4.6 in.
 oz.; HP .03 \$10.00 ea.

EASTERN AIR DEVICES TYPE JM6B:
 200 VAC; 1 amp; 3 phase; 400 cycles.
 6000 RPM \$12.50 ea.

EASTERN AIR DEVICES, TYPE J31B:
 115 V. 400-1200 Cycle. Single Phase
 \$12.50 ea.

AIRESEARCH: AC Induction, 200 V; 3
 Phase, 400 Cycle, 2 H.P.; 11,000 RPM; 8
 amps \$79.50 ea.

AIRESEARCH: AC Induction, 200 V; 3
 Phase, 400 Cycle, 12 H.P.; 6500 RPM; 1.5
 amps \$25.00

Electric Motor: PNT-1400-A1-1A Serial
 No. 207, 208 V., 400 cycles, 3 phase Kearfott
 Co., Inc. \$17.50 ea.

SERVO MOTOR 10047-2-A; 2 Phase;
 400 Cycle. with 40-1 Reduction Gear
SMALL DC MOTORS

DELCO #5068750: constant speed; 27 VDC;
 160 RPM; built-in reduction gears and
 governor \$17.50 ea.

J. OSTER: series reversible motor; 1/50th
 H.P.; 10,000 RPM; 27 1/2 VDC; 2 amps;
SPERRY # 806069; approx. size 1 3/8" x 3 1/2"

(Approx. size . . . 4" long x 1 1/4" dial.)
General Electric Type 5A10AJ37; 27 volts,
 DC; 5 amps, 8 oz. inches torque; 250 RPM,
 shunt wound; 5 leads; reversible. \$15.00 ea.

General Electric, Mod. 5BA10FJ33; 12 oz.
 inches torque, 12 V DC, 56 RPM, 1.02 amp.
 \$15.00 ea.

General Electric-Type 5BA10AJ52C; 27
 volts, DC; 5 amps, 8 oz. inches torque;
 145 RPM; shunt wound; 4 leads; reversible
 \$15.00 ea.

GENERAL ELECTRIC DC MOTOR Mod.
 5BA10AJ64, 160 r.p.m.; 65 amp; 12 oz.-in.
 torque; 27V DC \$19.95 ea.

**SCHWEIN
 REMOTE CONTROL
 DUAL GYRO**

Free and rate gyro type
 45600. Contains two 28 volt
 DC constant speed gyros . . .
 one operates horizontally,
 the other vertically. Vertical
 master gyro influences hori-
 zontal gyro position, which
 in turn will actuate a series of limiting
 switches controlling any number of elec-
 trical devices. Both gyros turn in excess of
 the 30,000 rpm. Size 8" x 4 1/4" x 4 1/4". Comes
 with metal cover. \$22.50 ea.

BLOWER

Eastern Air Devices,
 Type J31B; 115 volt;
 400-1200 cycle; single
 phase; variable fre-
 quency; continuous
 duty; L & R #2
 blower; approx. 22 cu.
 ft./min. \$15.00

BLOWER ASSEMBLY

115 Volt, 400 Cycle, Westinghouse Type
 FL, 17CFM, complete with capacitor.
 New \$12.50 ea.

SENSITIVE ALTIMETERS

Pioneer Sensitive altimeters,
 0-35,000 ft. range . . . cali-
 brated in 100's of feet. Baro-
 metric setting adjustment. No
 hook-up required. . . \$12.95 ea.

INVERTERS

10563 LELAND ELECTRIC

Output: 115 VAC; 400 cycle; 3-phase;
 115 VA; 75 PF. Input: 28.5 VDC; 12
 amp. \$69.50 ea.

PE 218 LELAND ELECTRIC

Output: 115 VAC; Single Phase; PF 90;
 380/500 cycle 1500 VA. Input: 25-28 VDC;
 92 amps; 8000 RPM; Exc. Volts 27.5
BRAND NEW \$39.95 ea.

MG 153 HOLTZER-CABOT

Input: 24 V. DC, 52 amps; Output: 115
 volts—400 cycles, 3-phase, 750 VA. and 26
 Volt—400 cycle, 250 Va. Voltage and fre-
 quency regulated \$95.00 ea.

PIONEER 12130-3-B

Output: 125.5 VAC; 1.15 amps, 400 cycle
 single phase, 141 VA. Input: 20-30 VDC,
 18-12 amps. Voltage and frequency regu-
 lated \$89.50 ea.

12116-2-A PIONEER

Output: 115 VAC; 400 cyc; single phase;
 45 amp. Input: 24 VDC 5 amp. . . . \$79.50 ea.

10285 LELAND ELECTRIC

Output: 115 Volts AC, 750 V.A., 3 phase,
 400 cycle, .90 PF, and 26 volts, 50 amps,
 single phase, 400 cycle, .40 PF. Input:
 27.5 VDC, 60 amps. cont. duty, 6000 RPM.
 Voltage and Frequency regulated. \$195.00

10486 LELAND ELECTRIC

Output: 115 VAC; 400 Cycle; 3-phase; 175
 VA; .80 PF. Input: 27.5 DC; 12.5 amp; Cont.
 Duty \$90.00 ea.

PIONEER 10042-1-A

DC INPUT 14 Volts; OUTPUT 110 Volts; 400
 Cycle 1-Phase; 50 Watt. \$90.00

12133-1A PIONEER

Output: 115 VAC; 3-phase; 400 cycle; 250
 VA; 0.7 PF. Input: 24 VDC; 18 amp. Volt-
 age and freq. regulated. \$125.00

94-32270-A LELAND ELECTRIC

Output: 115 Volts; 190 VA; Single Phase;
 400 Cycle; .90 PF, and 26 Volts; 60 VA;
 400 Cycle; .40 PF. Input: 27.5 Volts Dc;
 18 amps; cont. duty, voltage and freq.
 regulated \$95.00

115 VOLT GENERATORS

Brand new Eclipse
 generators: 115 VAC;
 9.4 amp; 1000 watts;
 single phase; 800
 cycles, 2400-4200 rpm.
 DC output is 30 volts
 at 25 amp. Unit has spline drive shaft and
 is self-excited \$29.95

REVERSIBLE MOTOR
 U.S.N. No. 451-1314
 Rotational Speed 2.3 RPM.
 A lightweight unit suit-
 able for all types of rota-
 tion application. Excellent
 for rotating light beams,
 antennas or anywhere a
 low RPM high torque
 motor is needed. Output
 torque approx. 100 lbs.
 Consists of high speed series reversible
 motor. Requires 24 VDC or 24-40 VAC @ 1
 amp. Overall size 6"L x 4"W x 4 1/4" dp.
 Shipping wt. 6 lbs. USED, GOOD. . . \$11.95

TRANSFORMERS

SOLA TRANSFORMER, #30663; 1 KVA;
 210-270 Volts; 240 Sec.; 3-Phase. . . \$175.00
FILAMENT, Gen. Elec. #7455321; Primary
 110/125 Volts. Secondary 11 Volts 65 Amps.
 975 KVA. Shipping wt. approx. 60 pounds.
 \$24.95

FILAMENT, AMERTRAN #29048; Primary
 115 Volts, 50/60 cycle. Secondary 5 volts,
 190 amps. Shipping weight approx. 75 lbs.
 \$36.50

VARIABLE, AMERTRAN #29144; 250 VA,
 103-126 commutator range, fixed windings,
 115 volts, max. 2.17 amps. \$19.95

Immediate Delivery
ALL EQUIPMENT FULLY GUARANTEED
 All prices net FOB Pasadena, Calif.

**TACHOMETER INDICAT
 SINGLE**

Sensitive Type, Kollm-
 Mark V; Range 0-3500 R.
 in 3 1/2 revolutions of
 indicating pointer. \$9.95
Tachometer Indicator and Gener- Both \$3
TACHOMETER GENERATOR (MARK \$25.50

G. E. GENERATOR

General Electric Type
 ASB-81JJ3; 400 cycle
 at 115 volts; 7.2 amps;
 rpm.; size 6" long x
 dia. \$99.50

SINE-COSINE GENERATORS

(Resolvers)

Diehl Type FJE43-9 (Single Phase Rot
 Two stator windings 90° apart, prov-
 two outputs equal to the sine and cosin-
 the angular rotor displacement. Input v-
 age 115 volts, 400 cycle. \$30.00

Diehl Type FPE-43-1 same as FJE-
 except it supplies maximum stator volt-
 of 220 volts with 115 volts applied
 rotor \$25.00

Arma Resolver Type 218014; equal in
 to size 5 synchro; 55-60 cycle; single ph-
 primary, 2 phase secondary. \$78

VOLTAGE GENERATORS (RATE)

ALNICO MIDGET D.C. VOLTAGE GEN-
 ATOR Type B-35-D \$1

ALNICO MIDGET D.C. VOLTAGE GEN-
 ATOR Type B-44-D \$1

A.C. GENERATOR: 67 V., 20 Cyc., 2-Ph.
 .015 Amps, Type PM-1, 1200 R.P.M. . . \$1

**SYNCHRONOUS
 SELSYNS**

110 volt, 60 cycle,
 brass cased, approx.
 4" dia. x 6" long.
 Mfg. by Diehl and
 Bendix.

Quantities Available.
REPEATERS \$20.00
TRANSMITTERS \$20.00

SYNCHROS

IF Special Repeater (115V-400 Cycle) . . \$15.00
2JF 3 Generator (115-400 cyc.) . . \$10.00
5C Control Transformer: 90-50 Volt
Cyc. \$50.00
5F Motor (115/90 volt-60 cyc.) . . \$60.00
5G Generator (115/90 volt-60 cyc.) . . \$50.00

5/DG Differential Generator (90-90 v-
-400 cyc.) \$30.00
TRANSMITTER, BENDIX C-78248;
 Volt, 60 Cycle \$25.00
Differential-C-78249, 115 Volt; 60 Cycle
 \$25.00

REPEATER, BENDIX C-78410; 115 V
60 Cycle \$37.50
REPEATER, AC synchronous 115 V.
cycle, C-78863 \$15.00
REPEATER, DIEHL MFG. No. FJE 2
115 Volt; 400 Cycle; Secondary 90 Volt
 \$27

7G Synchro Generator (115/90 volt;
cycle) \$75
6G Synchro Generator (115/90 volt;
cycle) \$60
6DG Synchro Differential Generator (90
volt; 60 cycle) \$60
2JF51 Selsyn Control Transformer: 105
Volts, 60 Cycle \$50
2JD5J2 Selsyn Motor: 115-90 Volts; 60 cy
 \$50

5JD5HA1 Selsyn Generator: 115-105 Vol
60 cycle \$50
2JF1 GENERATOR: 115-57.5 Volt;
cycle \$12.50
2JH1 DIFFERENTIAL GENERATOR: 5
-57.5 Volt; 400 cycle. \$12.50
2JG1 CONTROL TRANSFORMER: 57.5
57.5 Volt; 400 cycle. \$7.50

PIONEER AUTOSYNS

AY-1 26 Volt—400 Cycle. . . \$6
 AY-5 26 Volt—400 Cycle. . . \$7
 AY27D \$12
 AY6—26 Volt—400 cyc. \$4.95
 AY30D—26 Volt—400 cyc. \$25.00
 AY14D \$10.00
 AY34 \$20
 AY20—26 Volt—400 cyc. \$12.50

PIONEER TORQUE UNITS

TYPE 12625-7-A: 400 Cycles, 26 Volts. \$95.
TYPE 12604-3-A: Contain CK5 Motor co-
 pled to output shaft through 125:1 gear r-
 duction train. Output shaft coupled to aut-
 syn, follow-up (AY43). Ratio of outp-
 shaft to follow-up Autosyn is 15:1. \$70.00
TYPE 12602-1-A: Same as 12606-1-A ex-
 cept it has a 30:1 ratio between output sha-
 and follow-up Autosyn. \$70.00
TYPE 12603-1-A: Same as 12606-1A ex-
 cept it has base mounting type cover
 motor and gear train. \$70.00

MICROPOSITIONER

Barber Colman AYLZ 2133-I Polarized D.
 Relay: Double Coil Differential sensiti-
 Alnico P. M. Polarized field. 24V contact
 .5 amps; 28 V. Used for remote position-
 synchronizing, control, etc. \$12.50

THE ELECTRONICS, INC. STORY

Ready for you:

- A TREMENDOUS (No other word describes it) stock of standard brands of electronic equipment.
- This stock is well organized—no confusing delays looking for ordered items—you get FAST action.
- This stock is properly stored. It is fully protected against damage or deterioration. Not just "piled up". You get good reliable items, in A-1 condition.
- All items fully GUARANTEED. All items MAKE GOOD—or we do. But you'll have NO REPLACEMENT TROUBLES when you buy ELECTRONICS, INC.
- The items we show here are but a small fractional part of our stock, which consists mostly of
- Condensers (all types). Transformers (surplus, made for military equipment). Resistors. Potentiometers. Sel-syns. Pulse Transformers and Networks.
- Yes—for RUSH deliveries on what you want—it's first, last and all the time ELECTRONICS!

THIS NEW BUILDING

Weston

MAKES THE HIGHEST QUALITY TEST EQUIPMENT

We specialize in the fabrication of test equipment and can re-create those pieces now no longer available through normal commercial channels. In the course of such activity over the past years certain pieces of test equipment similarly constructed by Weston Laboratories, Incorporated have been widely adopted for commercial and government defence purposes. We should like the opportunity to quote on your needs. A card of inquiry will result in our new catalogue being sent promptly. Among the pieces available are the following:

AN-APA-10	I-95A	IF-12/C	TS-33/AP	TS-138	TS-263

FIELD TRANSMITTERS

- SCR-284**—The famous mobile and ground equipment station for field use, complete with all accessories. Range 3.8—5.8 mcs; 20 watts cw, 5 watts phone.
- SCR-510**—Mobile, portable FM radio station. Operates from 6, 12, or 24 volt dc supply. Frequency range: 20.0 to 27.9 mcs.
- SCR-610**—Same as SCR-510, but with built-in speaker and range of 27.0-38.9 mcs.
- SCR-528**—Mobile FM radio station, operates from 12 or 24 volt dc. Frequency range: 20.0-27.9 mcs.
- SCR-628**—Same as SCR-528, but with range: 27.0 to 38.9 mcs.
- BC-325**—400 watts c.w., 100 watts new or voice operates from 110 or 220 volts ac. Freq. range: 1.5-18.0 mcs. Master oscillator or crystal control.

14C—400 watts phone or 800 watts c.w. Operates from 220 volts ac. Freq. range: 2.0-18.1 mcs. Has automatic dial selection of anyone of ten preset channels. Mfr. Western Electric.

ROTATING MACHINERY

Thousands of convertors, inverters, dynamotors, and motor-generator sets in stock.

MARINE TRANSMITTERS

- TCS**—Collins mfd. Navy radiotelephones for shipboard and mobile use, complete with all accessories for operation from 12, 24, 110, 230 volts d.c. and 110 or 220 volts a.c.
- TDE**—Navy or commercial marine transmitters, complete 110 & 220 volts d.c. and a.c.
- TBK**—Navy high frequency transmitter, 2-20 mcs; 500 watts output. Supplied complete with m/g and starter for d.c. or a.c. operation.
- TBM**—same transmitter but with speech input equipment to give 350 watts phone.
- TBL**—Navy all-wave transmitter; 350 watts output: CW and phone. Supplied complete with m/g and starter for d.c. or a.c. operation.
- TAJ**—Navy intermediate freq. transmitter, 175-550 kcs; 500 watts output. Supplied complete with m/g and starter for a.c. or d.c. operation.
- TBN**—200-3,000 kcs, complete with 220/440 volt, 3 ph. 50-60c power supply—conservatively rated at 1 kw. output.

RADAR BEACONS

- AN/CPN 3 cm.
- AN/CPN-8 10 cm.
- YJ and YG for shipboard use
- AN/CPN-6 3 cm.
- AN/CPN-8 10 cm.

5D21 NJ3A—27 VDC input; output 110 Volt 400 cycle, 1 Phase 485 VA.....\$39.50
 PE-109D—Input 13.5 VDC 29 A; output 115 V 400 cycle, 1 Phase 1.53 Amps.....\$59.50
 PU-7/AP—Input 28 VDC 100 A; output 115 V 21.6 A 400 cycle 2500 VA.....\$89.50
 PE-118—Input 28 VDC 100 A; output 115 V 400 cycle, 1 Phase 1500 VA.....Used: \$14.95
 PE-218—Input 28 VDC 100 A; output 115 Volt 400 cycle, 1 Phase 1500 VA.....Used: \$24.95
 PE-115 or PE-206—Input 28 VDC 36 A; output 80 Volts 800 cycle 7.2 Amps.....Like New: \$12.95
 TYPE 800-1-D—Input 28 Volts 62 A; output 115 V 7 Amps, 1 Phase 800 cycle.....Used: \$39.95
 NEW: \$69.35

**TRANSFORMERS AND CHOKES:
400 TO 2600 CYCLE**

PLATE TRANSFORMER—Primary: 0-80-115 Volt 400-2600 CPS Max. VA 785; Sec.: 2000-0-2000 .3 Amps. Ins. 9000 Volts, Thermador #CS-5626.....\$19.95
 FILAMENT TRANSFORMERS:
 Primary: 0-80-115 Volt 400-2600 CPS Max. VA 35; Sec.: 2.5 Volts 10 Amps. Ins. 5000 Volts. Thermador #CS-8751.....\$6.95
 Primary: 0-80-115 Volt 400-2600 CPS Max. VA 100; Sec.: 5 Volts 15 Amps. Ins. 5000 Volts. Thermador #CS-8750.....\$9.95
 FILTER REACTOR—Inductance 2 Hy. DC current, 0.3 Amp. Ins. 5000 Volts.....\$6.95

BLOWERS

115 Volt 60 cycle BLOWER (pictured), approx. 100 CFM Dis. 2 1/4" intake; 2" outlet. Quiet running Motor size: 2 1/2"x3 1/4". NEW — not Gov't surplus. **\$8.95**
 Order No. 1C930
 DUAL BLOWER—Same as RN-520 above, except has blower assembly in each side of motor. Order No. 1C880.....\$13.95
 COMPACT TYPE—108 CFM motor built inside squirrel case. 4-1/2" Intake: 3-3/4" x 3" Dis. Complete size: 4-1/4" W. x 9-3/8" H x 8-3/8" D. Order No. 2C067.....\$14.50
 FLANGE TYPE—140 CFM, 3-1/2" Intake; 2-3/8" Dis. Complete size: 8-1/2" W x 7-1/4" H x 6-3/4" D. Order No. 1C807.....\$13.95
 FLANGE TWIN—275 CFM, 4-1/2" Intake: 3-3/4" x 3" Dis. Complete size: 11-3/4" W x 9-3/8" H x 8-1/16" D. No. 2C069.....\$21.95

DYNAMOTORS:

PE-103 Dynamotor with Filter Base and Cables, 6 or 12 VDC input; output 500 VDC 160 MA. NEW: \$39.95 — Used: \$29.95
 DYNAMOTOR and BLOWER: 9 Volts DC Input; output 450 volts 60 MA. 4500 RPM. At 6 Volts DC input: output 260 Volts 65 MA. 3000 RPM.....\$4.95
 ALSO—PE-73; PE-36; DM-63; DM-33; 5055; DM-416.

MOTORS:

24 VOLT DC 1/10 H P
 2800 RPM Reversible Motor. Size: 3-3/4" x 3-1/2". Shaft Size: 1" x 1/4". Emerson #186-0412 — Price: \$5.95
 GEAR HEAD for above motor. Ball Bearing Geared Shaft, 10 to 1 reduction.....Price: \$5.95
 COMBINATION: Motor and Reduction Gear.....\$10.00
 24 VAC OPEN FRAME—20 RPM Double Shaft Back Gear Motor with Disengage Clutch. Shaft size: 1-1/2" x 3/16".....Price: \$6.95
 24 VAC OPEN FRAME—30 RPM Back Gear Motor. Shaft size: 1" x 3/16".....Price: \$5.95
 24 VDC REVERSIBLE—5000 RPM with Magnetic Brake, Flange Mount, Spline Shaft—size: 3/8" x 3/16". Motor: 4" L. x 2-1/2" Dia. GE Motor only #513A25AJ2A.....Price: \$8.95
 24 VDC AIRWAY MOTOR—Model #Z-350. Approx. 5000 RPM. Motor size: 2-1/2" x 1-3/8". Shaft size: 1/8" x 1/4".....Price: \$4.95
 26 VOLT 60 CYCLE—60 RPM Synchronous Cramer Motor #1147. Shaft size: 1" x 1/8".....\$1.95
 110 VDC 1/70 HP, 1550 RPM. Motor size: 4" x 2-1/2". Shaft size: 1" x 3/16". Redmond #157.....\$4.95
 6 VDC 1/20 HP, 4000 RPM. Motor size: 5" x 3". Shaft size: 3/4" x 1/4". Redmond #E-56.....Price: \$4.95
 12 VDC 1/30 HP, 4500 RPM. Motor size: 3" x 2-3/8". Shaft size: 1" x 3/16". Delco #5047520.....\$4.95

24 VDC REVERSIBLE

MOTOR—3.7 RPM, 40 lb. Torque Motor Size: 5-1/2" x 4-1/2" x 3-5/16". Shaft Size: 2 1/2" x 5/16". Also operates 24 VAC. Philco No. 441-1008.....\$5.95
 27.5 VDC—6000 RPM, 1.5 oz. in. Shaft Size: 1-1/8" x 1/4". Motor Size: 2-1/2" x 1-1/2". No. 5069-267.....\$6.95
 27VDC—1-10 HP—3500 RPM. Shaft Size: 5/8" x 1/4". Motor Size: 4" x 3-1/2". Air Assoc. No. EP-763.....\$6.95
 80 VDC—1 50 HP—3000 RPM. Shaft Size: 5/8" x 1/4". Motor Size: 5" x 3" G.E. No. 5 PN38FA10.....\$8.95
 28.5 VDC—1 35 HP—2200 RPM. Shaft Size: 1-1/2" x 1/4". Motor Size: 4-1/2" x 3-3/4". Electrolux No. 16876.....\$5.95

TRANSFORMERS—100V. 60 Cycle Pri.

5 VOLT CT-25A—10,000 V. Ins. OPEN FRAME—6" x 5" x 4-1/2".....\$7.95
 Sec. Two 12 V. 4 A. Windings—gives 12 V. 8 A or 24 V. 4 A.....\$5.95
 Sec. 24 Volt 1/2 Amp.....\$1.50
 Sec. 24 Volt 1 Amp.....\$1.95
 Sec. 24 Volt 6 Amp.....\$5.95
 Sec. 6-24 or 30 Volts 8 Amp.....\$5.95

— THE BEST IN ELECTRONIC SURPLUS —

TRANSMITTERS—RECEIVERS ETC.

DQ VHF 100-156 MC. 50W. AM X-mtrr for 110 V. 50/60 C. AC.
C-797 VHF 110-126 MC. 50W. AM Output for 110 V. 50/60 C. AC.
CR-694, Vibrator or Transportable Trans-R'cvng Eqpt., 3.3 to 6.5 MC, 20 Watts CW, 5 Watts voice. Complete with all accessories.
CR-522 VHF, 4-Channel, 100-156 MC Trans-Rcvng. Eqpt. for Plane or Ground Communications.
CR-511, Walky-Talky, 3-6 MC, Crystal Controlled Trans-Rcvng. with Plug-In Units for Freq. Changing.
200A, 2KW Wilcox X'mtrr, 125-525 KC, 3 Cabinets: RF Unit, 50-A Modulator, 36-A Rectifier; A1, A2 and A3 Emission.
KW GE FM RF Amplifiers, Type BF-3-A, 88-108 MC with separate Power Supply. **NEW UNITS!** Excellent for increasing power of FM & Television stations. **Write for Prices and descriptive data.**
40 & 500 WATT SOUND SYSTEMS for Airports, Shipyards, Amusement Parks, Civilian Defense, Etc. **Write for Prices and Literature.**
VS X-mtrr-Receiver for Ship or Shore.
WK HF 500W, 2-20 Mc. Transmitter with MG, Starter, and Spares.
AJ 500 W. Output, 175-550 Kc. with M.G. for AC or DC operation.
AQ, Same as TAJ above but 1,000 Watts output, with MG.
BL 350 W. Output, A1, A3, I.F. & H.F. for AC or DC operation.
PN-4 Loran Eqpt. R-9A/APN-4 Receivers and 1D-6A & 6B Indicators, with tubes, crystal, etc. Reconditioned to like-new. **WRITE FOR PRICES.**
D-9 100/125 W. IF, HF Ship or Aircraft Transmitter, A1 and A2 Emission. All New with Spares.
ED Aircraft Transmitters. 50 W. A1 & A3. 1.5 to 9.05 MC. NEW.
P-7 Aircraft Transmitters.
8-3 ILAS Eqpt.
R-283 Rcvg. & X-mting Eqpt. Complete.
F-3/ARN-1 Altimeter.
ADIOSONDES AN/AMQ-1A to D. New.
E-75U Gas Engine Generators. NEW. w/Spares.
21/GR-3-C Sound Ranging Microphones for locating Artillery Fire.
LA Underwater Beacon Equipment.
D-57-B Switchboards, telephone.
T-2 Tape Reels.
H-23, 33 Headphones.
V-CRT-1A Sonobuoys.
7-2 **DIRECTION-FINDERS**, Aircraft or Marine, 15 to 1750 KC in 6 bands, for 24/28 D.C. operation. With 34" or 55" Loop Tension Shaft. Complete. NEW eqpt. with Dynamotor, Loop, Extension Shaft and Control, Cables, Instruction Manual, etc., export packed in 2 cases per set.

GE 10 KW FM POWER AMPLIFIERS and RECTIFIERS

BRAND NEW, not war surplus, 10 KW FM Power Amplifiers with associated separate Power Rectifiers, designed for boosting low power FM broadcasting stations. Can be used for increasing power of television stations (sound portions), or by changing L and C can be converted to power amplifier on other frequencies. Present range 88-108 MC. Rectifier Power Supply delivers approximately 5,000 V. at 18.4 KVA. Operates from 220 V., 50/60 Cycles, 3 phase AC. Power Amplifier uses 2 GL5518 (not supplied) forced-air cooled GE high efficiency tubes. Includes internal blower system, reflectometer amplifier (with tubes) and GL-8008 rectifier tubes. Beautifully constructed, new equipment at terrific price savings!

PRICE, Type BF-3-A 10 KW RF FM Amplifier and Separate Rectifier, less RF Final Tubes\$5,500.00

RECTIFIER ONLY, if desired. **WRITE FOR PRICE.**

600 WATT W. E. AUDIO OR SUPERSONIC POWER AMP.

NEW, Western Electric Audio Power Amplifiers in wooden transportable case, 600 watts max. output, for use as PA amplifier, modulators, or use as 400 to 1200 cycle power source to test servos, radar, test eqpt., etc., requiring 110 V., 400 to 1200 cycles AC up to 600 watts. Requires 40 watts max. to drive to full output. Less than 10% total harmonics in output. Input imp. 250/500 ohms; Output imp. 15 to 18 ohms. Uses 4-805's (supplied) in push-pull parallel. H.V. Power Supply uses selenium rectifiers (no tubes) and motor blower for forced-air cooling. Operates from 115, 3-Phase, 60 cycles, or 208V., 4-wire (3-phase) 60 cycles AC. Rugged design and construction. Freq. response 200-6000 cycles (amplifier only) substantially linear. **Easily converted to Supersonic Driver & Amplifier for testing, operating magnetostriction units, by changing input & output transformers (20 to 25 KC available AC additional cost).** Dim: 21" x 24" x 28" overall. NEW, UNUSED eqpt.

PRICE, EACH\$435.00
Driver Amplifier, WE, for above, with tubes\$175.00
Speaker, 12 units, PM horn type, in 2 sections, shock and blast proof, with 6 lb. #5 alnico slugs\$245.00
20-25KC (Tunable) Input & Output Transformers, for conversion of above, for 600W. Output. **PAIR**.....\$120.00

This Section

is typical of the advertising carried month after month in the SEARCHLIGHT SECTION.... more than is carried by any other publication.

Yes, month after month the leading dealers in surplus new or used electronic equipment and components use these pages to tell the more than 32,400 paid subscribers of ELECTRONICS what they have to offer from stock.

And these dealers use this Section month after month because it steadily and consistently produces results—and sales. It produces because it is the "text book" for researchers, designers, production engineers, purchasing agents—the key men—in the three-way market of electronic manufacturing, communication and non-communication industrial electronics.

So when you have surplus new or used electronic equipment and components to offer, you can get best results through the SEARCHLIGHT SECTION.

1N58A	100v max.	120v min.	4.0	50	600 @-100v
1N60	25v max.	30v min.	†	50	†30 @-1.5v

*For zero dynamic resistance.

**Duo-diode consisting of two units matched in the forward direction at +1v so that the current flowing through the higher resistance unit is within 10% of that in the lower resistance unit. Ratings shown for each diode.

†Units are tested in a circuit employing an input of 1.8 volts rms. at 40 mc, 70% modulated at 400 cycles. Demodulated output across a 4700 ohm resistor shunted by 5 μ f. capacitor is a minimum of 1.55 volts peak-to-peak.

Sylvania Germanium Diodes are long-life, lightweight, heaterless components that have found hundreds of applications in clippers, limiters, discriminators and other circuits calling for low power rectification at frequencies up to several hundred megacycles. They have low shunt capacity and no contact potential. Convenient pigtail leads eliminate the need for mounting hardware.

Sylvania Duo-Diodes consist of two matched diodes mounted in a single unit.

Sylvania Varistors, types 1N40, 1N41 and 1N42, consist of 4 specially selected and matched germanium diodes whose resistances are balanced within $\pm 2.5\%$ in the forward direction at 1.5 volts. Sylvania Varistor Type 1N71 consists of 4 matched low impedance diodes, whose forward currents are within a range of 1 ma with +1 volt applied.

Ratings shown are for each diode.

Types 1N40, 1N42 and 1N71 are plug-in type; 1N41 is lug type.

GERMANIUM VARISTORS

Type	Cont. Reverse Working Voltage	Reverse Voltage*	Fwd. Curr. at +1.5v (ma min.)	Av. Anode Current (ma max.)	Recurrent Peak Anode Curr. (ma max.)	Reverse Current (μ a max.)
1N40	25v max.	75v min.	12.75	22.5	60	40 @-10v
1N41	25v max.	75v min.	12.75	22.5	60	40 @-10v
1N42	50v max.	120v min.	12.75	22.5	60	6 @-3v 625 @-100v
1N71	40v max.	50v min.	15 (@+1.0v.)	60	200	300 @-30v

*For zero dynamic resistance.

Sylvania Silicon Diodes 1N21B, 1N21C, 1N23B, 1N25, 1N26 and 1N53 are used chiefly as first detectors in radar and other microwave superheterodyne receivers.

Type 1N79 is designed for use in microwave test probes, power indicators and other instruments.

Types 1N31 and 1N32 are used as video detectors.

MICROWAVE CRYSTAL DIODES

Type	Design Freq. (mc)	Max. Conv. Loss (db)	Max. Output Noise Ratio	Burnout Test	I. F. Imp. (ohms)
1N21B	3,000	6.5	2.0	Bs=2.0 erg	200-800

1N79		Operating range 0-3,000 mc instrument rectifier			

Bs=total energy in simulated spike of pulse from TR box in radar service.
Bp=peak power pulse under pulsed conditions.

SYLVANIA

LIGHTING • RADIO • ELECTRONICS • TELEVISION

MICROWAVE COMPONENTS

MAGNETRONS

The Sylvania family of Magnetrons operates in the shf band at peak power levels ranging from 7 to 300 kw and at average power ranging from 14 to 300 watts. 2J42 and 6027 are of the vane type; 4J50, 4J52 and 4J78, hole and slot. All are supplied with magnet. Write for bulletin EC-37C.

Type	Frequency Range (mc)	Pulsed Power Out (kw)	Avg. Power Out (watts)
2J42	9345-9405	7-14	14
4J55	9345-9405	40	40
6027	9345-9405	18-35	18
4J50	9345-9405	300	225
4J52	9345-9405	65-120	65
4J78	9003-9168	300	225

ROCKET TUBES

Sylvania Rocket Tubes are planar-electrode disc-seal triodes for use as oscillators and amplifiers at frequencies up to 3300 mc. Design permits broad band operation. Tuning is simpler and covers a greater continuous range than that of many other types of uhf tubes

2C36 is a pulse-modulated oscillator for frequencies up to 1200 mc.

2C37 is designed for use as a c.w. oscillator up to 3300 mc. Plate disc is flat, grid disc folded.

5764 is a pulse-modulated oscillator for use up to 3300 mc.

5765 is for use as a c.w. oscillator without external feedback in the range from 900 to 3000 mc.

5767 is a c.w. oscillator for use up to 3300 mc. Both discs are folded.

5768 is intended for use as a c.w. amplifier-multiplier up to 3000 mc.

6018 is intended for use as a c.w. amplifier-multiplier up to 3000 mc.

For complete information, write for bulletin ES-4810.

PENCIL TUBES

5794 is intended for use at 1680 mc as a c.w. oscillator.

5876 is intended for use at 1700 mc as a UHF triode for c.w. oscillator, amplifier and frequency multiplier operation.

TR's and ATR's

Sylvania TR and ATR Tubes are used chiefly as automatic electronic transmit-receive switches in radar equipment. Major characteristics of some of the more commonly used types are shown in table. For full data on complete line call your nearest Sylvania sales office.

1B63A

Type	Frequency Range (mc)	Insertion Loss (db)	Max. Recovery Time (u sec at 3-db)

1B35A	9000-9600	5	-.06 to +.06	0.8

KLYSTRONS

Sylvania Types 6BL6 and 6BM6 are intended for use as c.w. oscillators. They are of the separate cavity type, with oscillation frequency depending chiefly on external tuning. 6BMA, 5836 and 5837 are suitable for either c.w. or pulsed operation. Write for catalog EC-40B.

6BL6

Type	Mode	Frequency Range (mc)
6BL6	1 $\frac{3}{4}$	1600-4000
	2 $\frac{3}{4}$	2100-4500
	3 $\frac{3}{4}$	4000-5500
6BM6 6BMA	1 $\frac{3}{4}$	550-2300
	2 $\frac{3}{4}$	1100-3000
5836	1 $\frac{3}{4}$	1600-4000
	2 $\frac{3}{4}$	2100-4500
	3 $\frac{3}{4}$	4000-5500
5837	1 $\frac{3}{4}$ 2 $\frac{3}{4}$	550-2300 1100-3000

HYDROGEN THYRATRONS

Sylvania Hydrogen Thyratrons are designed for pulsing service at high repetition frequencies, high peak currents and high voltages. An outstanding feature is very short de-ionization time, which permits an unusually high switching rate.

INDUSTRIAL ELECTRONIC TUBES

R4330

FLASH TUBES

Sylvania Flash Tubes, used with suitable equipment, provide blue-white flashes of intense brilliance and extremely short duration. They find extensive use in flash photography, and may also be used in beacons, obstruction markers and signaling devices.

Type R4330 has a maximum rate of 6 flashes a minute, with a peak light output of 12,000,000 lumens and an integrated output of 3,500 lumen-sec. per flash.

STROBOTRONS & TRIGGERTUBES

Sylvania Strobotrons provide a means of "freezing" the motion of rotating or reciprocating machinery. Type 1D21/SN4 produces neon-red flashes at rates up to 240 per second. SA-309 produces bluish-white light pulses, and is ideal for applications where true-color viewing is essential. Maximum flashing rate of the SA-309 is 100 per second.

Triggertube Type 0A5 provides a convenient means of triggering any of the above Strobotrons from very low current sources. Type 0A5 may also be used for other electronic relay and for regular Strobotron purposes.

1D21/SN

GLOW MODULATOR TUBES

Light output of Sylvania Glow Modulator Tubes varies in an essentially linear manner with the current passing through the tubes. Tubes are of the crater type, providing high ionization density.

GAS DISCHARGE TUBE PIRANI TUBE—TYPE R1111

Sylvania Pirani Tube, Type R1111, is convenient for measuring low gas pressures directly. When used with suitable auxiliary equipment, rapid, continuous readings may be obtained with a precision of 5%. The useful pressure range is from one to one thousand microns. It is extremely useful as a pressure gage and leak detector in evacuating apparatus or in automatic pressure control and recording equipment.

Average Characteristics and Ratings

Envelope . . . Nonex Glass (8" max. Leng. 1-1/16" max. Dia.) Terminal Connections . . . Unpolarized

Electrical Ratings

Resistance (Cold) . . . 6.6 ohms
Resistance (Hot—evacuated tube, 100 μ a. current) . . . 15.5-17.0 ohms
Operating Voltage . . . 1.5 volts

MISCELLANEOUS TUBES

SD-759A Ramberg Accelerometer

The Accelerometer is an electronic tube useful in measuring linear acceleration. Its operating range is from 1 to 50 g's. Operates at plate voltage of 10 volts per plate.

X-6090 Ionization Tube

The Sylvania X-6090 Ionization Tube has an ozone output of approximately 5 mg per hour under typical operating conditions. Operating voltage is approximately 3,200 volts ac.

ELECTRONICS DIVISION LITERATURE

Germanium Diode Applications Literature

These books comprise the most complete collection of germanium diode applications ever published. "40 Uses for Germanium Diodes" covers applications in receiver, transmitter instruments and control circuits. "Electronics Shortcuts for Hobbyists" describes applications in all types of devices of interest to the home hobbyist, "screwdriver mechanic," and electrical experimenter. "Crystal Diode Circuit Kinks" describes many new applications of germanium diodes in crystal meters, TV receivers, and electrical experiments. Price of each book—25¢.

SYLVANIA ELECTRONIC COMPONENTS

Precision parts engineered for highest quality and finest performance . . . custom-designed to your specifications.

Today Sylvania offers you the ideal solution to any parts problem. Now, due to greatly increased production facilities and improved techniques, Sylvania is in a position to provide highest quality precision components to meet any volume requirements.

On these pages are illustrated a few representative types of the many hundreds of Sylvania electronic components now being produced. So, whether you need a few thousand parts or a million a month, put it up to Sylvania. Address your inquiries to Sylvania Electric Products Inc., Dept. 3A-46, 1740 Broadway, N. Y., N. Y.

CATHODE RAY TUBE SOCKETS

Are available in types to meet any equipment design specifications. Full-round and half-round duo-decal sockets furnished complete with color-coded lead wires. New spring-type anode connector furnished to meet the requirements of any manufacturer.

PLUGS AND CONNECTORS

Finest quality plugs and connectors are now offered by Sylvania to meet every need. Standard units include antenna jacks and plugs, interlock plugs, battery plugs, speaker plugs, bathtub and power receptacles and auto fuse holders. Metal contacts cadmium-plated brass.

SYLVANIA

LIGHTING • RADIO • ELECTRONICS • TELEVISION

SYLVANIA ELECTRONIC COMPONENTS

RADIO TUBE SOCKETS AND SHIELDS

Sylvania's complete line of tube sockets includes both molded and laminated types made to rigid specifications. Molded sockets are available for button type sub-miniature, 7 and 9 pin miniature and octal tubes, vibrators and GRC octals, UHF sockets and integral eyelet sockets. Sockets are supplied with either top or bottom mounting, a

wide variety of saddles with or without ground lugs, and with or without center shield. Contacts are of brass, phosphor bronze or beryllium copper, cadmium or silver plated. Various socket insulators include general purpose phenolic, low-loss phenolic, or NEMA grade laminated phenolic. All made to Sylvania's highest quality standards.

MOLDED PLASTICS

Sylvania is equipped to offer manufacturers the widest possible variety of injection or compression molded plastic parts of highest precision and durability. These include Push Buttons, Escutcheon Dials, Terminal Blocks, Knobs and many others. Tell us your problems and we'll be glad to suggest an economical solution.

TO ASSURE FINEST TELEVISION SET PERFORMANCE

1. Check with SYLVANIA Test Equipment 2. Install High Quality SYLVANIA Tubes

Quality tested and engineered to highest standards, Sylvania tubes have earned a world-wide reputation for finest performance. Today 7 of the 10 leading television set makers use Sylvania Picture Tubes and Sylvania Receiving Tubes.

In test equipment, too, Sylvania quality-built components and improved circuit engineering assure you of the last word in accuracy and dependability.

Television Oscilloscope—An exceptionally high-gain wide-band oscilloscope designed for television. Accurately displays any TV pulse or wave-shape on a large, eye-saving 7" screen. Sensitivity: 0:01 v./in. Vert. response useful to 4.0 mc. Recommended for servicemen; laboratories; advanced schools and industry. Price: \$249.50.

Voltage Calibrator—Accurately measures peak to peak voltage of any wave-form displayed on scope. Uses voltage regulated clipper circuit to give extreme accuracy in spite of line voltage fluctuation. Switch feeds either calibrating voltage or signal voltage to scope. Essential instrument for better service shops and laboratories. Price: \$44.50.

Polymeter—A Vacuum Tube Voltmeter of high sensitivity for measuring ohms, DC volts, AC volts, RF volts and DC current. Input impedance is 17 megohms on DC volts, 2.7 megohms on AC and 2.3 megohms (with only 3 μ f shunt capacitance) on RF. Special subminiature diode tube in RF probe gives flat response to 300 megacycles on scales from 3 volts to 300 volts in five ranges. Zero center seals for FM. Illuminated meter. Accessory probes (type 225) for 30,000 volts DC. Price: \$99.50.

High Voltage Probes—These fine quality Sylvania DC Probes permit the measuring of high voltages by increasing the DC range of polymeters. Type 223 is 10,000 volt probe (\$9.95). Other types extend Polymeter range to 30KV (\$12.50).

Type 500 Sweep Generator—No mechanical sweep. Uses reactance tube sweep in two ranges; 0-15 mc for TV, 0-600 kc for FM. Fundamentals from 2 to 230 mc. Special circuits to assure extreme linearity. Output 300 to 100,000 microvolts. Companion to 501 Marker. Price: \$139.50.

Marker Generator (Type 501)—Provides 2 separate signals for marking an oscilloscope trace of response curves. Accurate adjustment of traps, frequency spotting, measuring band width, and correct adjustment of the popular 4.5 mc. intercarrier sound circuits. VFO covers 15 to 240 mc. range. Price: \$129.50.

Modulation Meter—Directly indicates per cent of AM modulation. Compact; requires no direct connection to circuit. Used by amateurs, transmitter builders and others. Indicates carrier shift. Price: \$29.50.

For further information concerning Sylvania Tubes or Test Equipment address: Sylvania Electric Products Inc., Dept. 3R-46, 1740 Broadway, N. Y. 19, N. Y.

Tube Testers—219 counter type, 220 portable type. Composite mutual conductance and emission checker rejects tubes failing either requirement. Relative amount of heater-cathode and inter-element shorts or leakage shown on METER. Designed by a tube manufacturer to check tubes for modern applications. Price: \$114.50.

AIR BREAKDOWN CHART

FOR RADAR PULSES

Chart gives approximate breakdown voltage between conductors in air in the three major frequency ranges that are related to the mean free path of electrons in air. Chief use is design of high-voltage pulse circuit components for radar installations

USE of high-power pulses in radar depends on the dielectric strength of air. The design of equipment to handle these pulses should be based on estimates of the breakdown voltage in the air gaps between conductors. The various configurations of the conductor contours make such estimates difficult, but a few simple rules and the accompanying chart are a great help.

The primary purpose of the chart is to show the variation of breakdown voltage with frequency. Breakdown by an alternating voltage is an effect of cumulative ionization by collision during successive cycles of alternation. At high frequencies, such that the electrons and ions oscillate in the field without reaching the electrodes, the free charges accumulate until the ionization and recombination rates reach equilibrium.

At low frequencies, such that the electrons and ions would oscillate further than the distance between electrodes, the free charges are partially collected during each cycle and hence do not accumulate. Consequently the breakdown gradient is greater at lower frequencies. Likewise, the breakdown gradient is greater in smaller distances, which also facilitate the clean-up. These effects are summarized by the three curves on the chart.

The transition between the

By **HAROLD A. WHEELER**

medium-frequency and high-frequency curves occurs at certain frequencies and pressures, as indicated for a few cases that have been tested. At high frequencies the gradient is constant (2.9 kv per mm at one atmosphere pressure).

Transition Frequencies

If the distance is of the order of 1,000 times the mean free path of electrons in the air, this transition between middle and lower curves occurs at frequencies of the order of 100 mc, as shown on the chart. This relation is independent of the pressure, although the value of the mean free path is inversely proportional to the pressure. In other words, the product of pressure times distance is proportional to the ratio of distance over mean free path. This is the reason why a single family of curves is valid over a great range of pressure and distance.

The transition between the upper and middle curves (not shown) occurs at frequencies about 1/100th as great, since the velocity of ions is less than that of electrons in about this ratio, and their mean free path is nearly the same.

In either case, the transition occurs at a value of pressure-times-distance which is inversely proportional to the frequency.

Uniform Gradient

The simplest case for computation and formulation is a uniform voltage gradient between parallel plane conductors. Ordinary configurations have a peak gradient greater than the average, so the maximum gradient may be taken as a criterion of breakdown over a certain distance. This is valid at high frequencies; at lower frequencies the correct criterion is somewhere between the maximum and the average gradient, usually closer to the maximum.

A uniform gradient causes no corona, just a well-defined spark. A maximum gradient much greater than the average gradient causes corona below the sparking voltage, which expedites the final breakdown when the voltage is increased to that point. At high frequencies, it is even possible to have a breakdown (ball of fire) in a limited space separated from the electrodes.

At low frequencies, there can be no spark in a gas at a voltage less than a certain value (about 0.3 kv in air), because the electrons are collected before they can gather sufficient momentum. At high frequencies, this rule fails because most of the elec-

Chart giving breakdown voltage in air between parallel planes. For atmospheric pressure, horizontal scale represents distance in millimeters between the plane electrodes

ns oscillate without reaching electrode.

Experimental Basis

The chart is based on a steady alternating voltage (unmodulated c-w). Short pulses of dielectric voltage (of the order of one microsecond) occurring at much longer intervals (of the order of one millisecond) stop before equilibrium is reached, so their breakdown voltage is naturally somewhat greater than that of a steady direct voltage, the highest curve on the chart. Such short pulses of high-frequency voltage have been presumed to show a similar tendency relative to the first curve, and there is some experimental evidence to this effect.

The chart is valid at lower

pressures, provided that the distance is many times the mean free path of electrons, which is true over the range plotted.
