

DEPARTMENT OF COMMERCE

RADIO SERVICE BULLETIN

ISSUED MONTHLY BY BUREAU OF NAVIGATION

Washington, July 2, 1923—No. 75

CONTENTS.

	Page.		Page.
Abbreviations.....	1	Miscellaneous—Continued.	
New stations.....	2	Computations of the inductance of coils for radio apparatus.....	18
Alterations and corrections.....	6	Methods of measuring the properties of electrical insulating materials.....	19
Miscellaneous:		Continuous wave radio transmission on a wave length of 100 meters, using a special type of antenna.....	19
Regulations governing general and restricted amateur radio stations and amateur operators.....	16	Reducing the guesswork in tuning.....	19
Information from the Berne bureau.....	16	References to current periodical literature....	20
Alaskan stations reopened for summer season.....	17		
Public Resolution—No. 48—67th Congress....	17		
Tests of radio receiving sets (II).....	17		

ABBREVIATIONS.

The necessary corrections to the List of Radio Stations of the United States and to the International List of Radiotelegraph Stations, appearing in this bulletin under the heading "Alterations and corrections," are published after the stations affected in the following order:

- Name = Name of station.
- Loc = Geographical location. O=west longitude. N=north latitude. S=south latitude.
- Call = Call letters assigned.
- System = Radio system used and sparks per second.
- Range = Normal range in nautical miles.
- W. L. = Wave lengths assigned: Normal wave lengths in italics.
- Service = Nature of service maintained.
- PG=General public.
- PR=Limited public.
- RC=Radio compass station.
- P=Private.
- O=Government business exclusively.
- Hours = Hours of operation:
- N=Continuous service.
- X=No regular hours.
- m=a. m. (12 m=midday).
- s=p. m. (12 s=midnight).
- Rates = Ship or coast charges in cents: c.=cents. (The rates in the international list are given in francs and centimes.)
- I. W. T. Co. = Independent Wireless Telegraph Co.
- R. C. A. = Radio Corporation of America.
- S. O. R. S. = Ship Owners' Radio Service.
- C. w. = Continuous wave.
- I. c. w. = Interrupted continuous wave.
- V. t. = Vacuum tube.
- FX = Fixed station.
- U. S. L. = After operating company denotes that the change applies only to the List of Radio Stations of the United States.
- Kc. = Kilocycles.

RADIO SERVICE BULLETIN.

NEW STATIONS.

Commercial land stations, alphabetically by names of stations.

[Additions to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations published by the Berne bureau.]

Station.	Call signal.	Wavelengths.	Service.	Hours.	Station controlled by—
Baltimore, Md. ¹	WEQ	751, 909.....	FX	X	Board of Fire Commissioners.
Candle, Alaska ²	KGF	300, 550, 600.....	FX	X	Robinson & Greenberg.
Clearwater, Calif. ¹	KNR	3375, 4200, 5500.....	FX	Federal Telegraph Co.
Cleveland, Ohio.....	WTK	300, 600.....	PG	Inter-City Radio Telegraph Co.
Detroit, Mich. ³	WWJ	300, 600, 750.....	FX	X	Evening News Association.
Hidden Inlet, Alaska ⁴	KQL	300, 450, 600.....	PG	X	A. & P. Products Co.
Honolulu, Hawaii ⁵	KOG	300, 450, 600.....	PG	Mutual Telephone Co.
Kukak Bay, Alaska ⁶	KDN	300, 450, 600.....	FX	X	Hemrich Packing Co. (Walter Hemrich).
Mobile, Ala.....	WNN	Tropical Radio Telegraph Co.
Union Bay, Alaska ⁷	KON	300, 450, 600, 1800.....	PG	X	A. & P. Products Co.

¹ Range, 150; system, composite v. t. telephone and telegraph; rates, none.
² Loc. (approximately) 61° 58' 00", N. 65° 55' 00"; range, 25; system, U. S. Navy v. t. telephone and telegraph; rates, none.
³ Loc. 0.118° 09' 40", N. 33° 53' 45"; range, 1000; system, Federal arc; hours, 7 a. m.—11 p. m.
⁴ Loc. 0.82° 15' 00", N. 43° 19' 40"; range, 150; system, Western Electric v. t. telegraph; rates, none.
⁵ Loc. 0.130° 20' 02", N. 54° 50' 40"; range, 300; system, R. C. A., 1000; rates, ship service 6 cents per word.
⁶ Loc. (approximately) 0.157° 37' 30", N. 21° 15' 00"; range, 200; system, composite v. t. telegraph; hours, 7.30 a. m.—11 p. m.; rates, interisland, 15 cents per word, no minimum; interisland night letter 24 words \$1, 4 cents each additional word.
⁷ Loc. (approximately) 0.135° 15' 00", N. 57° 15' 00"; range, 150; system, composite, 1000; rates, none.
⁸ Loc. 0.122° 11' 38", N. 55° 47' 22"; range, 300; system, R. C. A., 1000; rates, ship service 6 cents per word, no minimum; cable count, station to station 8 cents per word, minimum 60 cents domestic count; station to station night letter, 60 cents for 50 words, 12 cents each additional 10 words; station to station night message, 5 cents per word, minimum 60 cents, domestic count.

Commercial ship stations, alphabetically by names of vessels.

[Additions to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations published by the Berne bureau.]

 NEW YORK, N. Y. (WNY).—W. l., add 2000, fixed service with Chatham.
 NORTHVILLE, MICH.—W. l., 1809.
 POINT REYES, CALIF. (Bolinas).—W. l., 13100.
 SAN GABRIEL CAMP, CALIF.—W. l., 1764.
 SPRINGFIELD, OHIO.—W. l., 1875.
 TAMPA, FLA.—W. l., add 450.
 TENAKEE, ALASKA.—Service, PR; communicates with certain land stations and ships in vicinity.
 TULSA, OKLA.—W. l., 1599.

COMMERCIAL SHIP STATIONS ALPHABETICALLY BY NAMES OF VESSELS.

[Alterations and corrections to be made to the List of Radio Stations of the United States, edition of June 30, 1922, and to the International List of Radiotelegraph Stations, published by the Berne bureau.]

- ABRON.—W. l., add 706.
 ADLER.—Range, 100; system, Canadian Marconi, 240; rates, 8 cents per word; station operated and controlled by owner of vessel.
 ADMIRAL GOODRICH.—W. l., 300, 450, 600.
 ADMIRAL SCHLEY.—W. l., 300, 450, 600, 706.
 ADVANCE.—W. l., add 706.
 AGNES DOLLAR.—W. l., add 706; station operated and controlled by R. C. A.
 ALAMEDA (KOBN).—System, R. C. A., 1000; w. l., 300, 450, 600, 706.
 ALAMEDA (WAA).—W. l., add 706.
 ALDEN ANDERSON.—W. l., add 706.
 APACHE.—W. l., add 706.
 ASTRAL.—System, R. C. A., 1000.
 BELFAST.—W. l., add 706.
 BERNARD.—Range, 300; system, Navv-R. C. A., 1000; w. l., 300, 450, 600; station

RADIO SERVICE BULLETIN.

7

- BOHEMIAN CLUB.—System, Federal arc, 1000 with chopper.
- BOWDOIN.—Call signal changed to WNP; range, 100; system, composite v. t. telephone and telegraph; w. l., 220, 300, 600, 750; service, PR; hours, X. This station is to be used for communicating with amateur, ship, and Government stations.
- BRAMMELL POINT.—Name changed to Los Alamos; General Petroleum Co. owner of vessel.
- BUFORD.—Fred Linderman owner of vessel.
- CALVIN AUSTIN.—W. l., add 706.
- CAMDEN (KDKL).—W. l., add 1800.
- CAMDEN (KRC).—W. l., add 706.
- CAPE ANN.—Range, 200; system, Navy-Lowenstein, 1000; w. l., 300, 450, 600, 706; Cape S. S. Co. owner of vessel.
- CAPE COD.—Cape S. S. Co. owner of vessel; station operated and controlled by R. C. A. (U. S. L.)
- CAPE MAY.—W. l., add 706.
- CAPTAIN A. F. LUCAS.—W. l., add 706.
- CARACAS.—System, R. C. A., 1000.
- CARIB (KJIU).—New York & Porto Rico S. S. Co. owner of vessel.
- CARL D. BRADLEY.—W. l., 300, 600, 706, 909; service, PS and PR; PR service is Rogers City, Mich., and the vessel Seeadbee.
- CARRILLO.—W. l., add 706.
- CASTANA.—Range, 300; system, Navy-R. C. A., 1000; w. l., 300, 450, 600, 706; station operated and controlled by I. W. T. Co.
- CATHWOOD.—Station operated and controlled by owner of vessel.
- CAYO MAMBI.—W. l., add 706.
- CHINCHA.—W. l., add 706; Planet S. S. Line owner of vessel.
- CIRCINUS.—System, R. C. A., 1000; w. l., 300, 450, 600, 700; Planet S. S. Corporation owner of vessel.
- CITY OF BANGOR.—W. l., add 706.
- CITY OF COLUMBUS.—W. l., add 706.
- CITY OF MIAMI.—Name changed to E. G. Crosby; Crosby Transportation Co. owner of vessel.

- EL SIGLO.—W. l., 300, 600.
- EVERETT.—W. l., add 706.
- FINLAND.—W. l., add 706.
- FOREST KING.—W. l., add 706.
- FRANCIS E. POWELL.—Range, 300; system, R. C. A., 1000; w. l., 300, 450, 600; Atlantic Refining Co., owner of vessel; station operated and controlled by R. C. A.
- GEO. H. JONES.—W. l., 300, 450, 600; system, R. C. A., 1000.
- GOVERNOR DINGLEY.—System, R. C. A., 1000; W. l., 300, 450, 600, 706.
- GRIFFDU.—W. l., add 706.
- GULFKING.—W. l., 300, 450, 600, 706.
- GULFMAID.—Station operated and controlled by I. W. T. Co.
- GULF OF MEXICO.—Station operated and controlled by I. W. T. Co.
- GULF QUEEN.—W. l., add 706.
- GULFSTAR.—W. l., add 706.
- GULFTRADE.—W. l., add 706.

HAWATONKA.—Name changed to Gulfpoint; W. l., add 706; station operated and controlled by I. W. T. Co.
 HALWAY.—W. l., 300, 600, 706, 1800; station operated and controlled by I. W. T. Co.
 HAMILTON.—W. l., add 706.
 HELEN.—W. l., add 706.
 HOG ISLAND.—W. l., add 706.
 HOLLYWOOD.—W. l., 300, 450, 600, 706.
 HOWARD.—Range, 150; system, R. C. A., 1000; W. l., add 706.
 H. T. HARPER.—W. l., add 706.
 IMLAY.—Malstrom Co., owner of vessel.
 IOWAN.—W. l., add 706.
 JAVA ARROW.—W. l., 300, 450, 600.
 J. M. DANZIGER.—System, R. C. A., 1000.
 JOLEE.—W. l., add 706.
 JUNIATA (KQJ).—System, R. C. A., 1000.
 JUVIGNY.—Station operated and controlled by R. C. A.
 KENTUCKIAN.—W. l., add 706.
 LAKE CAYUGA.—Frank Paramino, owner of vessel.
 LAKE FANNIN.—Name changed to Osage.
 LAKE FILBERT.—W. l., add 706; Alaska S. S. Co., owner of vessel; station operated and controlled by owner of vessel.
 LIBERTY MINQUAS.—American Petroleum Co., owner of vessel; station operated and controlled by R. C. A.
 LIMON.—W. l., add 706.
 LUBRICO.—Standard Oil Co. of California, owner of vessel.
 MAHUKONA.—W. l., add 706.
 MANCHURIA.—W. l., add 706.
 MANOA (WMQ).—W. l., add 706.
 MARACAIBO.—System, R. C. A., 1000; w. l., add 706.
 MATSONIA.—W. l., add 706.
 MENOMINEE.—System, Navy-Simon, 1000.
 METAPAN.—W. l., add 706.
 METEOR.—W. l., add 706.
 MEVANIA.—System, Federal arc, 1000 with chopper; w. l., add 706; Malstrom Co., owner of vessel; station operated and controlled by I. W. T. Co.
 MILLER COUNTY.—System, Navy-R. C. A., 1000; w. l., 300, 600, 706; Sun Shipbuilding & Dry Dock Co., owner of vessel; station operated and controlled by R. C. A.
 MILLINOCKET.—W. l., add 706.
 MISKIANZA.—W. l., 300, 450, 600.
 MOMUS.—W. l., add 706.
 MOUNT BAKER.—Range, 200; system, Gray & Danielson, 240.
 MOUNT CLINTON.—W. l., add 706.
 MUNMOTOR.—W. l., add 706.
 NEW JERSEY.—W. l., 300, 450, 600.
 NORTHLAND (KJD).—W. l., add 706.
 NORTHWESTERN.—W. l., 300, 600, 706.
 OREGONIAN.—W. l., add 706.
 OZAMA.—New York & Porto Rico S. S. Co., owner of vessel.
 PACIFIC.—W. l., add 706.
 PANAMA.—W. l., add 706.
 PARADISO.—Name changed to Florence Olson; Oliver J. Olson & Co., owner of vessel.
 PAULSBORO.—System, R. C. A., 1000.
 PEARL SHELL.—W. l., 300, 450, 600, 706.
 PENNSYLVANIA SUN.—Range, 300; system, R. C. A., 1000; w. l., 300, 600.
 PLYMOUTH (KND).—W. l., add 706.
 PRESIDENT ADAMS.—W. l., add 706.
 PRESIDENT ARTHUR.—W. l., add 706.
 PRESIDENT GARFIELD.—W. l., add 706.
 PRESIDENT JEFFERSON.—W. l., add 706.
 QUABBIN.—Name changed to Cape Cod; Cape Cod S. S. Co., owner of vessel.
 QUAKER CITY.—W. l., add 706.
 RICHMOND (WTR).—W. l., 300, 450, 600, 706.
 ROCKAWAY PARK.—W. l., add 706.
 ROMAGNE.—Station operated and controlled by R. C. A.
 SAGADAHOC.—W. l., add 706.

RADIO SERVICE BULLETIN.

9

SAN LORENZO.—System, R. C. A., 1000.
 SANTA ANA (WAL).—Range, 200; hours, X.
 SANTA ELISA.—W. l., add 706.
 SANTA MALTA.—W. l., add 706.
 SAPULPA.—Name changed to Cape Ann; station operated and controlled by R. C. A.
 SAUCON.—System, Navy-Wireless Specialty Apparatus Co., 1000; w. l., 300, 450, 600, 706.
 SCHENECTADY.—W. l., add 706; station operated and controlled by R. C. A. (U. S. L.).
 SCHOHARIE.—W. l., add 706.
 SHRINER.—Range, 300; system, R. C. A., 1000; w. l., 300, 450, 600.
 SIALIA.—W. l., 300, 600, 706, 909, 1713; service PG and PR; PR service is with all Ford Motor Co. stations.
 SOCONY.—Standard Transportation Co. owner of vessel.
 SOCONY 83.—Range, 150; system, R. C. A., 1000; w. l., 300, 600, 706.
 SOUTHLANDS.—W. l., add 706.
 STEEL ENGINEER.—System, R. C. A., 1000.
 STEEL EXPORTER.—System, R. C. A., 1000; w. l., add 706.
 STEEL VOYAGER.—W. l., add 706.
 STEEL WORKER.—W. l., 300, 450, 600, 706.
 SUCUBACO.—Rates, 8 cents per word; station operated and controlled by R. C. A.
 SUEDECO.—Station operated and controlled by R. C. A. (U. S. L.).
 SUELOCO.—Station operated and controlled by R. C. A. (U. S. L.).
 SULANIERCO.—Rates, 8 cents per word; station operated and controlled by R. C. A.
 SUMANCO.—Rates, 8 cents per word; station operated and controlled by R. C. A.
 SUNEWARECO.—Rates, 8 cents per word; station operated and controlled by R. C. A.
 SUNEWCOC.—System, Navy-Wireless Specialty Apparatus Co., 1000; w. l., add 706.
 SUPORTCO.—Station operated and controlled by R. C. A.
 SURAILCO.—Rates, 8 cents per word; station operated and controlled by R. C. A.
 SUTERMCO.—Rates, 8 cents per word; station operated and controlled by R. C. A.
 THOMAS CROWLEY.—Thomas Crowley owner of vessel.
 UNITED STATES.—Peninsular & Northern Navigation Co. owner of vessel; hours, X.
 VESTA.—System, R. C. A., 1000.
 VICTORIA.—W. l., 300, 600, 706.

 KFDD (Boise, Idaho).—W. l., 252; frequency, kc. 1190.
 KFEY (Kellogg, Idaho).—Station operated and controlled by Dunker Hill & Sullivan Mining & Concentrating Co.
 KFFB (Boise, Idaho).—W. l., 240; frequency, kc. 1250.
 KFPO (Hillsborn, Oreg.).—W. l., 229; frequency, kc. 1310.
 KLN (Monterey, Calif.).—W. l., 261; frequency, kc. 1150.

- KRE (Berkeley, Calif.).—W. l., 278; frequency, kc. 1080.
 KZV (Wenatchee, Wash.).—W. l., 360 only.
 WAAN (Columbia, Mo.).—W. l., 254; frequency, kc. 1180.
 WABO (Rochester, N. Y.).—W. l., 252; frequency, kc. 1190.
 WBT (Charlotte, N. C.).—W. l., 360 only.
 WCAD (Canton, N. Y.).—W. l., 280; frequency, kc. 1070.
 WCAG (New Orleans, La.).—W. l., 268; frequency, kc. 1120; station operated and controlled by Clyde R. Randall.
 WCB D (Zion, Ill.).—W. l., 345; frequency, kc. 870.
 WDAE (Tampa, Fla.).—W. l., 360 only.
 WDAI (Syracuse, N. Y.).—W. l., 246; frequency, kc. 1220; station operated and controlled by Hughes Radio Corp.
 WDAL (Jacksonville, Fla.).—W. l., 360 only.
 WDAP (Chicago, Ill.).—W. l., 360 only; station operated and controlled by Board of Trade.
 WDT (Stapleton, N. Y.).—W. l., 405; frequency, kc. 740.
 WEAA (Flint, Mich.).—W. l., 280; frequency, kc. 1070.
 WEAN (Providence, R. I.).—W. l., 273; frequency, kc. 1100.
 WEAO (Columbus, Ohio).—W. l., 360 only.
 WEV (Houston, Tex.).—W. l., 360 only.
 WEW (St. Louis, Mo.).—W. l., 261; frequency, kc. 1150.
 WHAD (Milwaukee, Wis.).—W. l., 280; frequency, kc. 1070.
 WIAB (Rockford, Ill.).—W. l., 252; frequency, kc. 1190.
 WIAC (Galveston, Tex.).—W. l., 360 only.
 WIAS (Burlington, Iowa).—Station operated and controlled by Home Electric Co.
 WKAR (East Lansing, Mich.).—W. l., 280; frequency, kc. 1070.
 WLAJ (Waco, Tex.).—W. l., 360 only.
 WLB (Minneapolis, Minn.).—W. l., 360 only.
 WLW (Cincinnati, Ohio).—W. l., 309; frequency, kc. 970.
 WMAK (Lockport, N. Y.).—W. l., 360 only.
 WMAN (Columbus, Ohio).—W. l., 286; frequency, kc. 1050.
 WMAT (Duluth, Minn.).—W. l., 266; frequency, kc. 1130.
 WOAJ (Parsons, Kans.).—W. l., 258; frequency, kc. 1180.
 WOAK (Frankfort, Ky.).—W. l., 240; frequency, kc. 1250.
 WQAL (Mattoon, Ill.).—W. l., 258; frequency, kc. 1160.
 WQAB (Springfield, Mo.).—W. l., 236; frequency, kc. 1270.
 WQAE (Springfield, Vt.).—W. l., 275; frequency, kc. 1090.
 WQAN (Scranton, Pa.).—W. l., 280; frequency, kc. 1070.
 WQAT (Westhampton, Va.).—Changed to Richmond, Va.
 WQAV (Greenville, S. C.).—W. l., 258; frequency, kc. 1160.
 WQAW (Washington, D. C.).—W. l., 236; frequency, kc. 1270.
 WSAT (Plainview, Tex.).—W. l., 268; frequency, kc. 1120.
 WWB (Canton, Ohio).—W. l., 268; frequency, kc. 1120.

Strike out all particulars of the following-named stations: KDZG, San Francisco, Calif.; KDZX, San Francisco, Calif.; KFBD, Hanford, Calif.; KFBH, Marshfield, Oreg.; KPCE, Phoenix, Ariz.; KFEB, Taft, Calif.; KFGB, Pueblo, Colo.; KJJ, Sunnyvale, Calif.; KNI, Eureka, Calif.; KNN, Los Angeles, Calif.; KOA, Denver, Colo.; KSL, San Francisco, Calif.; WAAL, Minneapolis, Minn.; WAAY, Youngstown, Ohio; WCAB, Newburgh, N. MISCELLANEOUS.

REGULATIONS GOVERNING GENERAL AND RESTRICTED AMATEUR RADIO STATIONS AND AMATEUR OPERATORS.

JUNE 28, 1923.

General and restricted amateur radio station licenses will be issued permitting the use of any type of transmitter (CW, spark, AC-CW, ICW, unfiltered CW, and phone), with the restriction that when using pure CW they are authorized to use wave lengths from 100 to 200 meters, and when using spark, AC-CW, ICW, unfiltered CW, and phone the wave lengths from 175 to 200 meters only can be used. The types of transmitters must be specified in the application and the license. Special amateur radio station licenses will be issued permitting the use of pure continuous wave transmitter only, authorizing the use of wave lengths from 150 to 200 meters.

For the purpose of application to amateur stations pure CW is defined, as follows: A system of telegraphing by continuous oscillations in which the power supply is substantially direct current as obtained from (1) a generator, (2) a battery, or (3) a rectifier with an adequate filter. (A filter is not deemed adequate if the supply modulation exceeds 5 per cent). General restricted and special amateur stations are not permitted to use a transformer input exceeding 1 kilowatt, or equivalent of this power based upon watt input to plates if tubes are used. (Where input rating of tube is not specified by manufacturer this rating will be considered as double the manufacturer's output rating.)

On licenses issued for amateur stations you will include the following: "This station is not licensed to transmit between the hours of 8 and 10:30 p. m., local standard time, nor Sunday mornings during local church services." Special amateur stations must be operated by persons holding an extra first-grade amateur operator's license, or a commercial first-class operator's license, or a commercial extra first-class operator's license. Applicants must also meet the requirements of Regulations 63.

A new class of amateur operator's license is hereby established to be known as "Amateur extra first grade." Licenses of this grade will be issued to persons passing the required special examination with percentage of at least 75 and code speed in sending and receiving at least 20 words a minute, five characters to the word, who have had at least two years' experience as a licensed radio operator, and who have not been penalized for violation of the radio laws subsequent to the date of these regulations.

A. J. TYLER, Acting Commissioner.

Approved:

S. B. DAVIS, Acting Secretary of Commerce.

INFORMATION FROM THE BERNE BUREAU.

Ecuador.—The coast station at Puno, Guayas is now open to PG service. Other particulars of this station are as follows: Geographical location, 0.79° 53' 00" N., 2° 45' 00" S; call letters, HCP; range, 100 miles; system, c. w. telephone and telegraph; 8-11 a. m., 1-5 and 7-10 p. m., local time; rates, ship service 60 centimes per word, minimum 6 francs.

Great Britain.—General call signal BXZ has been assigned to all British war vessels. The coast station Guernsey has been dismantled. Station Portland Bill is reopened.

Cape Verde Islands.—The coast station Praia is open from 10 a. m.—1 p. m. and from 4 p. m.—7 p. m. (G. M. T.).

France.—The legal time is advanced 60 minutes in France from May 26 last to October 6.

ALASKAN STATIONS REOPENED FOR SUMMER SEASON.

Becharof (KUDV), opened May 28; Carlisle (KOV), opened May 31; Clarks Point (KHG), opened May 28; Daly (KDJT), opened June 2; Egegik (KMF), opened May 27; Ekuk (KMG), opened May 21; Koggiung (KVV), opened May 27; Libbyville (KMT), opened May 27; Metha Nelson (moored vessel) (KMP), opened June 18; Naknek (KMK), opened May 28; Nushagak (KKAE), opened May 30; Port Beauclaire (KWO), opened June 16; Pybus Bay (KFC), opened June 4; Snag Point (KHF), opened May 23; Tenakee (KOSC), opened May 25; Ugashik (KMU), opened June 1; and Warren (KDJU), opened May 25.

For the information of all concerned the following resolution is published:

[PUBLIC RESOLUTION—No. 48—67TH CONGRESS.]

[H. J. Res. 7.]

Joint Resolution To amend section 2 of the joint resolution entitled "Joint resolution to authorize the operation of Government-owned radio stations for the use of the general public, and for other purposes," approved June 5, 1920.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the joint resolution entitled "Joint resolution to authorize the operation of Government-owned radio stations for the use of the general public, and for other purposes," approved June 5, 1920, be, and the same is hereby, amended to read as follows:

SEC. 2. That the Secretary of the Navy is hereby authorized, under the terms and conditions and at rates prescribed by him, which rates shall be just and reasonable, and which, upon complaint, shall be subject to review and revision by the Interstate Commerce Commission, to use all radio stations and apparatus, wherever located, owned by the United States and under the control of the Navy Department—(a) for the reception and transmission of press messages offered by any newspaper published in the United States, its Territories or possessions, or published by citizens of the United States, in foreign countries, or by any press association of the United States, and—(b) for the reception and transmission of private commercial messages: *Provided*, That the rates fixed for the reception and transmission of all such messages, other than press messages between the Pacific coast of the United States, Hawaii, Alaska, and the Orient, shall not be less than the rates charged by privately owned and operated stations for like messages and service: *Provided further*, That the right to use such stations for any of the purposes named in this section, except for the reception and transmission of press messages, other than press messages between the Atlantic coast of the United States and ships at sea, shall terminate and cease as between any countries or localities or between any locality and privately operated ships, whenever privately owned and operated stations are capable of meeting the normal communication requirements between such countries or localities or between any locality and privately operated ships, and the Secretary of Commerce shall have notified the Secretary of the Navy thereof, and all rights conferred by this section shall terminate and cease on June 30, 1925, except that all such rights conferred by this section in the Republic of China shall terminate and cease on January 1, 1924.

Approved April 14, 1922.

TESTS OF RADIO RECEIVING SETS. (II).

The results of tests on receiving sets made by the radio laboratory of the Bureau of Standards are given in a series of letter circulars which are now being issued. The first letter circular of this series is Letter Circular No. 90, which gives results of tests on certain electron tube receiving sets. The second letter circular of the series is Letter Circular No. 93, which describes the results of tests on a number of receiving sets which utilize crystal detectors. It is believed that the methods followed and the examples given in these reports will be of assistance to manufacturers in the development of methods of testing and describing and improving their products. The particular receiving sets are referred to by arbitrary reference numbers rather than by a statement of the manufacturers' names and type and model numbers.

These letter circulars are available only in mimeographed form, but a limited number of copies are available for distribution to testing laboratories, manufacturers,

COMPUTATIONS OF THE INDUCTANCE OF COILS FOR RADIO APPARATUS.

In electrical circuits the property of inductance plays a very important part. In the design of electrical apparatus it is very desirable that it shall be possible to calculate the inductance of the various types of coils which may be used. Inductance coils form an important part of every type of radio apparatus, whether used for transmitting, receiving, or measurement, and the recent rapid increase of popular interest in radio apparatus has made the calculation of the inductance of coils of even greater importance.

The calculation of the inductance of coils is, in general, a fairly difficult mathematical problem. Scientists have derived methods of calculating the inductance of certain particular kinds of coils. Even with the formula for a particular kind of coil available the actual computation of the inductance may be a tedious task unless tables are available from which the various quantities required in the computation may be readily taken. Several years ago Doctor Rosa and Doctor Grover, of the Bureau of Standards, collected in convenient form the available formulas for inductance calculations, added certain new formulas, and also added a number of tables of the various quantities required in computations, so that the time required for a given computation was greatly shortened. This paper was published as Bureau of Standards Scientific Paper No. 169, Formulas and Tables for the Calculation of Mutual and Self Inductance. A supplement to this paper, giving additional formulas and tables, including, among others, "pancake" or disk coils, was later published as Bureau of Standards Scientific Paper No. 320.

Recently there was issued Bureau of Standards Scientific Paper No. 455, Tables for the Calculation of the Inductance of Circular Coils of Rectangular Cross Section, which is concerned with several types of coils having more than one layer. Multiple-layer coils are particularly useful when a large inductance is required. For radio work it is important that the capacity of an inductance coil be small, and for this reason only certain types of multilayer coils are suitable for radio work. Among the types which have been used to secure small capacity are the "banked winding" and the "honeycomb" winding, which are here treated. Persons designing multi-layer coils will find Scientific Paper No. 455 useful.

They are now finding frequent use in radio circuits, coils wound on forms such that each turn incloses a square, a hexagon, an octagon, or other regular polygon. Not only are such coils easy to construct, but it is necessary to support the wires of the coil only at the vertices of the polygon. This method of support brings only a very small amount of insulating material directly in contact with the wire and gives losses in the insulating material which are much smaller than the losses occurring in circular coils wound on insulating tubes. With the polygonal frame, the capacity can also be kept low. With coils wound on cylindrical tubes of insulating material every point of every turn of wire is in close contact with the tube, which fact often causes a considerable decrease in the selectivity and sensitivity of a receiving set in which the coil may be used. This decrease is, in part, due to the dielectric losses occurring in the insulating material composing the tube; for some kinds of insulating materials these losses may be considerable. Formulas have not heretofore been available for calculating the inductance of hexagonal and other polygonal coils having a greater number of sides.

There has recently been issued Bureau of Standards Scientific Paper No. 468, by F. W. Grover, Formulas and Tables for the Calculation of the Inductance of Coils of Polygonal Form, which derives formulas for the calculation from their dimensions of the inductance of single-layer coils of triangular, square, hexagonal, and octagonal form, and explains how calculations may be made for multilayer coils and for other polygonal forms, such as 12-sided polygons. Tables are also given which facilitate the computation of the inductance of such coils. The inductance of a long single-layer coil of polygonal cross section is substantially the same as the inductance of the single-layer coil of the same length and number of turns, having a circular cross section of the same area as the area of the polygon. On the other hand, the inductance of a single wire in the shape of a polygon is substantially the same as the inductance of a single circular turn having the same perimeter as the polygon, not the same area. The coils of short and medium lengths used in practice lie between the very long and the single-turn coils, and it is convenient to base the calculation of their inductance on the inductance of these equal-area and equal-perimeter circular coils, which are limits between which their inductance lies. The larger the number of sides of the polygon the more closely these limits approach each other. Formulas are already available for calculating the inductance of circular single-layer coils. For approxi-

All of these papers can be secured by purchase from the Superintendent of Documents, Government Printing Office, Washington, D. C. The price of Scientific Paper No. 169 is 20 cents, and the price of the other papers is 10 cents each.

METHODS OF MEASURING THE PROPERTIES OF ELECTRICAL INSULATING MATERIALS.

A paper which has recently been issued by the Bureau of Standards gives a series of electrical, thermal, chemical, and mechanical test methods which have been found useful in the study of solid electrical insulating material.

The several tests described are those used in obtaining the data reported in Bureau of Standards Technologic Paper No. 216, entitled "Properties of Electrical Insulating Materials of the Laminated Phenol-Methylene Type." The several test methods described are radio-frequency phase difference or power loss, dielectric constant and flashover voltage, direct-current surface resistivity and volume resistivity, tensile strength, modulus of elasticity (tensile), proportional limit, modulus of rupture, modulus of elasticity (transverse), Brinell hardness, scleroscope hardness, resistance to impact, permanent distortion, density, moisture absorption, machining qualities, thermal expansivity, and the effects of heat, acid, and alkali.

The methods and apparatus are described to some detail, first, so that the data in Technologic Paper No. 216 will be definite and be capable of being correctly compared with other data; second, so that any of the tests may be reproduced by others.

This paper is Bureau of Standards Scientific Paper No. 471, Method of Measurement of Properties of Electrical Insulating Materials, by J. H. Dellinger and J. L. Preston, a copy of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 15 cents.

CONTINUOUS WAVE RADIO TRANSMISSION ON A WAVE LENGTH OF 100 METERS, USING A SPECIAL TYPE OF ANTENNA.

A paper describing a method and apparatus for radio transmission on a wave length of 100 meters, which are the results of work at the Bureau of Standards, has recently been published in the Proceedings of the Institute of Radio Engineers. An electron-tube set which employed four 50-watt tubes was used. This was coupled to a special form of antenna rectangular in shape 18 feet high and 40 feet long. A special 100-meter receiving set is described which was developed in connection with transmission tests conducted with this antenna.

This method was successfully used for communication between Washington and Pittsburgh, and it was found that daylight communication was about as good as at night, and little fading occurred. Tests were made at Dayton, Ohio, in transmitting with this set from the ground to an airplane in flight, and directional characteristics of the antenna were determined.

A detailed account of these experiments is given in a paper entitled "Continuous Wave Radio Transmission on a Wave Length of 100 Meters, Using a Special Type of Antenna," by F. W. Dunmore, which appeared in the Proceedings of the Institute of Radio Engineers for June, 1923.

REDUCING THE GUESSWORK IN TUNING.

The recommendations of the Second National Radio Conference depend for success on the operation of radio broadcasting and other stations accurately on the frequencies to which they are assigned. The attainment of the necessary accuracy is made possible by improvements which the Bureau of Standards has made in recent months in the accuracy of its frequency measurements. The bureau now furnishes standards of frequency which permit the setting of transmitting stations on the exact number of kilocycles. The fundamental frequency basis has been established by four independent methods of primary standardization. The frequency standards are furnished through the transmission of standard frequency signals, the testing of wave meters, and the measurement by the bureau of frequency of various transmitting stations of which the frequency is known to be kept constant.

In the July (1923) issue of Radio Broadcast an article by Dr. J. H. Dellinger, chief of the radio laboratory of the bureau, entitled "Reducing the Guesswork in Tuning," gives a general statement of the methods employed in establishing the frequency
