Mail coupon below for Free Book which describes fully the amazing money-making opportunities in Radio and tells you how YOU can earn from \$5,000 to over \$10,000 a year.

THE astounding growth of Radio has created thousands of big money opportunities. Millions of dollars were spent during last year in Radio, and thousands of young men are needed right now to meet the ever-increasing demand of work.

Men are needed to build, sell and install Radio sets—to design, test, repair—in Radio offices and receiver—as operators at land stations and on ships traveling the world over—as operators at the hundreds of broadcasting stations. And these are just a few of the marvelous opportunities.

Easy to Learn Radio at Home in Spare Time

No matter if you know nothing about Radio now, you can quickly become a Radio expert. In our marvelous new method of practical instruction—instruction which includes all the material for building the latest up-to-date Receiving Sets.

Scores of young men who have taken our course are already earning from \$75 to \$200 a week. Ernest Welch, right after finishing his training, started earning \$260 a month and expenses. Still another graduate, only 16 years old, is averaging \$75 a week in a Radio store.

Double Salary

I can very easily make double the amount of money now than before I enrolled with you. Your course has benefited me approximately \$2,000 now and shows what I would have earned had I not taken it.

T. WINNER,
Grand Junction, Colo.

From \$15 to \$80 a Week

Before I enrolled with you I was making \$15 a week as a farm hand. Now I earn from \$2,000 to \$4,000 a year, and the work is a hundred times easier than before. Since graduating a little over a year ago, I have started almost \$1,000, and I believe the money will be \$200,000 to me.

BROADCASTING TO EMERGE FROM PRESENT CHILDHOOD DISEASE BETTER THAN EVER

BY THOMAS STEVENSON

Predictions are current that confusion and chaos will result this winter from the breakdown in broadcasting regulation. Those who are pessimistic even go so far as to say that the entire broadcasting structure is endangered by the present state of affairs.

It is admittedly true that fans may suffer to some extent from interference due to the influx of new stations and from the promiscuous switching about of wave lengths. Just how long it will take to straighten out this problem, time alone will tell.

But it borders on the absurdity to even suggest that broadcasting will receive any deep or permanent injury from the struggle through which it is going at present. Too great a public service has developed in this new method of communication for it to die of some such childhood disease. So great would be the public resentment that even Congress would not dare to involve broadcasting in the political muddle that generally accompanies legislative treatment of such matters.

One of two things must be done, however, before unnecessary interference will be eliminated. A number of present stations must sacrifice their broadcasting privilege or new channels must be opened up.

Under the present arrangement there are 95 broadcasting channels, five of which belong to Canada for exclusive use. More than 550 stations are attempting to use the 90 American channels, that is better than six stations to a wave length. With the rapid increase in power, it is obvious that these stations will drown out each other unless somebody takes a hand.

If Congress passes a law, it should contain the authority for some agency to take drastic steps in this connection. If Congress does not pass a law, it is a safe prediction that the stations themselves will work out a satisfactory solution. In other words, it would be a survival of the fittest or rather of the strongest.

Perhaps, in the final analysis, the public would be better served if Congress withheld action on radio legislation. Although broadcasting might suffer for a short period, the chances are that a better and healthier service would result from the elimination of the weak and the poor.

LIST OF STATIONS BY WAVE LENGTHS

It is unusual with most sets to pick up distant stations of less than 100 watts power. To prevent this list from becoming too bulky, stations of less than 100 watts are not included.
