1979 NIELSEN REPORT ON TELEVISION

Copyright 1979 by A. C. Nielsen Company. Printed in U.S.A. All rights reserved.

The Nielsen data in this booklet are estimates of the audiences and other characteristics of television usage as derived from Nielsen Television Index and Nielsen Station Index measurements. The use of mathematical terms herein should not be regarded as a representation by Nielsen that such measurements are exact to precise mathematical values.

1979 NIELSEN REPORT ON TELEVISION

Television today is available virtually everywhere. Events in a seemingly remote area are relayed instantly by earth satellite around the world. And in the U. S., TV stations are now using satellites to beam their signals across the country for pickup by cable systems.

Use of satellites plus other technological advances such as computerized station operations and home video recorders provide new and exciting opportunities for the television industry.

A. C. Nielsen Company has been proud to have a role in such a dynamic medium, chronicling TV's growth and providing continuous, essential audience research for advertisers, their agencies, broadcasters, and program producers.

Annually, we have provided a summary of the television year for our clients and others interested in the medium. We trust you will find our 24th report as informative as its predecessors.

Media Research Services Group

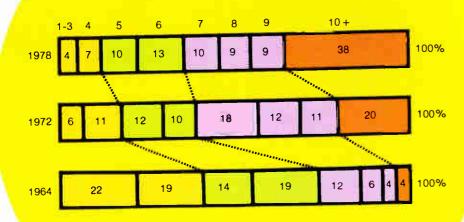

Viewers Have a Choice of Many Stations

As of January 1, 1978, there were 727 commercial and 259 public television stations or a total of 986 stations in the U.S., according to the Federal Communications Commission.

Ninety-six percent of all the country's TV households can receive four or more stations, 66% can receive seven or more stations, and 38% can receive ten or more stations as reported in the accompanying chart based on a special Nielsen analysis.

STATIONS RECEIVABLE PER TV HOUSEHOLD

(% SHARE OF TV HOUSEHOLDS)

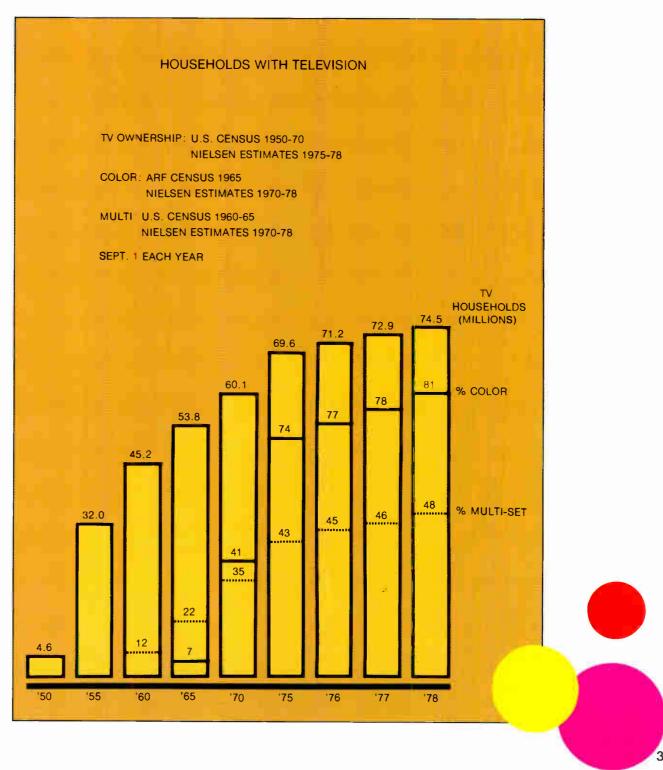

SOURCE: NTI SAMPLE

98% of U. S. Households Own TV's

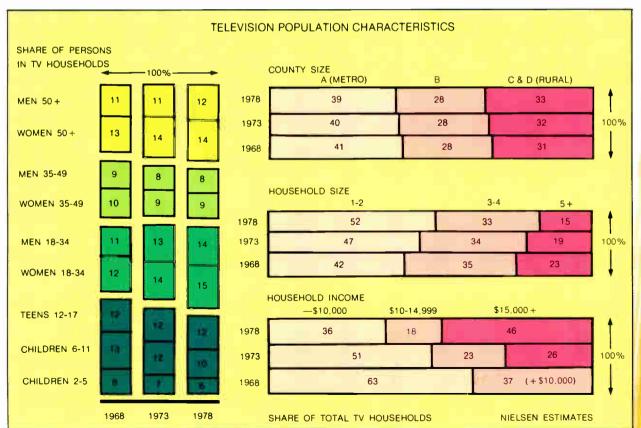

Nielsen's annual September update of television ownership shows that 74.5 million households or 98% of all households in the U. S. own at least one television set. This is an increase of over 14 million homes since 1970.

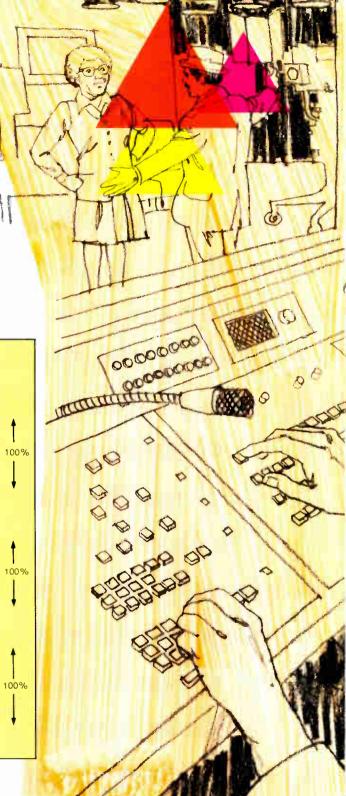

An estimated 48% have two or more TV sets and 81% have at least one color set.

TV Population Characteristics Continue to Change

Not only has the average size of the nation's TV households declined over the past ten years (from 3.23 persons to 2.75 persons), but there have been other changes worth noting. Household composition by people's ages has shifted, so now there is a larger percentage of older and younger adults and a smaller percentage of mid-aged adults and children ages 2-11. There has also been a slight shift of the population from "A" metro counties to "C & D" rural counties. Today only 36% of the households report earnings of \$10,000 or less compared to 63% in 1968.

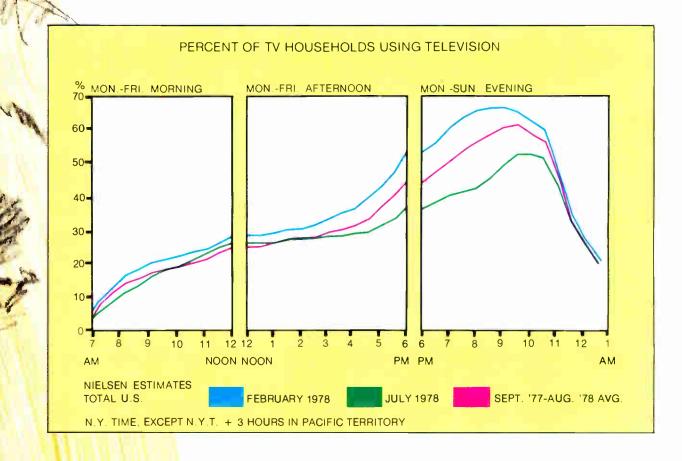

TV Viewing Hits Peak in Mid-Evening

Television viewing levels increase throughout the day, reaching a peak generally between 8:00 and 10:00 p.m. By 11:00 p.m., there is a sharp decline as viewers go to bed.

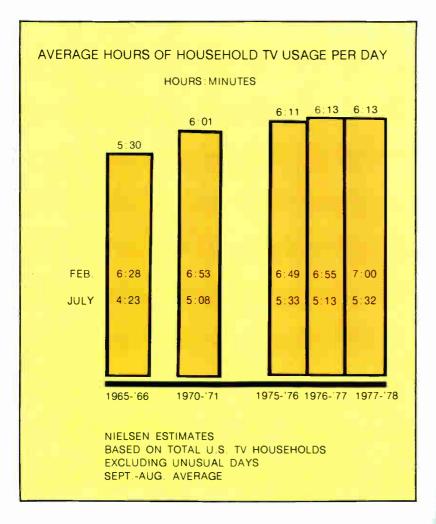

There is a considerable variation in TV usage levels from winter to summer. These differences are slight during early morning and late night, but are very noticeable during the afternoon and evening hours.

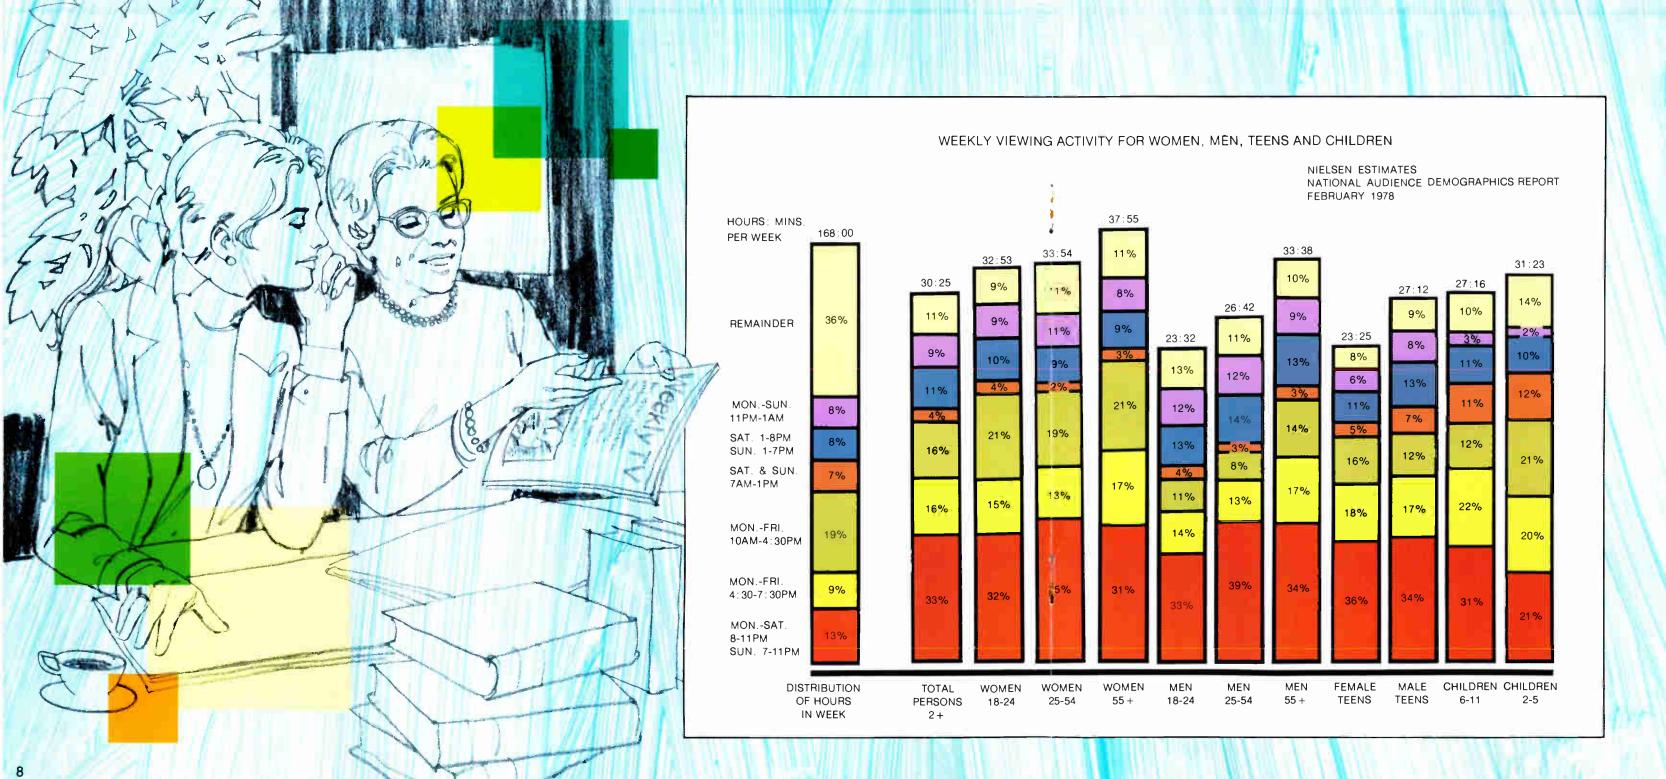

Household TV Usage Almost 6 1/4 Hours a Day

TV households, on the average, viewed an estimated 6 hours and 13 minutes of television a day during the 1977-'78 TV season. This is similar to that of recent seasons, but considerably higher than 12 years ago and 12 minutes more than 7 years ago.

In February, 1978, TV usage averaged 7 hours a day compared to just over 5 1/2 hours in July.

Women View the Most TV and Female Teens the Least

As a general rule, women view more television than men, and older men and women view more than younger age groups. Also, younger children view more than older children and teenagers.

The viewing actually is distributed disproportionately throughout the day, taking place mainly during each age group's availability. For example, prime time (Monday-Saturday, 8:00-11:00 p.m. & Sunday, 7:00-11:00 p.m.) makes up only 13% of the week's total hours, yet with the exception of children 2-5, accounts for over 30% of people's viewing.

Sunday Still the Most Popular Night for Watching TV

Year after year, Sunday night continues to attract the largest TV audience during the viewing week. Friday evening continues to be the least viewed by adults and teens, but one of the highest viewed for children. On the average, during November 1978, when these figures were compiled, nearly 90 million people were watching TV between 8:00 and 11:00 p.m. EST on the average night.

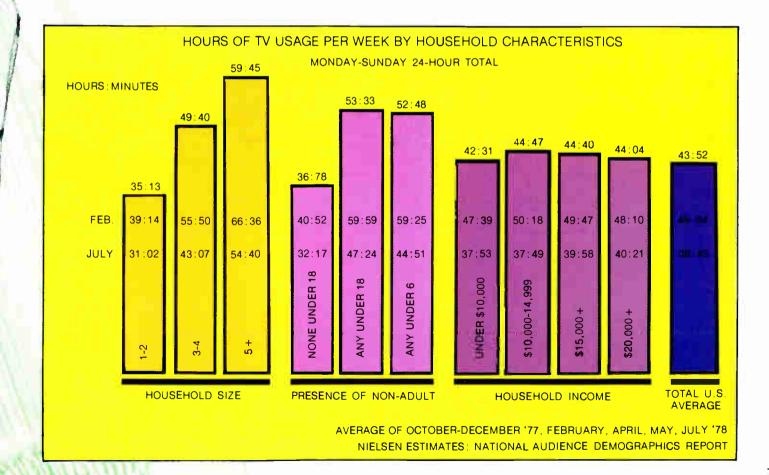

The composition of the audience changes from 8:00 to 11:00 p.m. as the children, teens and finally the adults retire for the night.

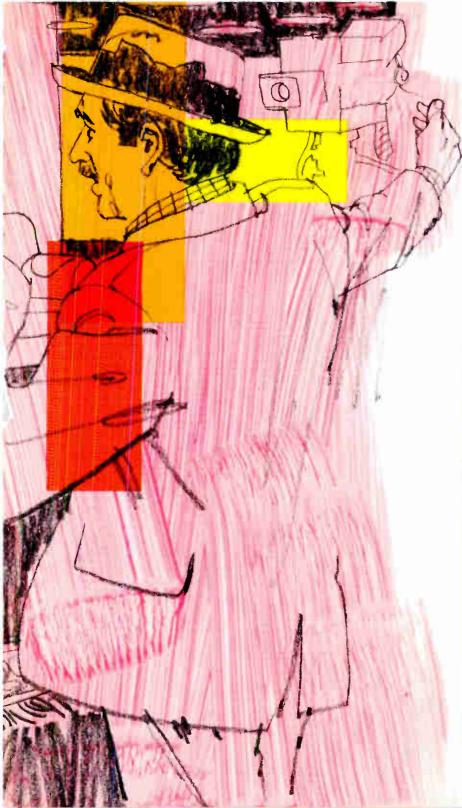

PERSONS VIEWING PRIME TIME (AVERAGE MINUTE) 99 12 3.60 7.80 9 24 BY HALF HOUR BY NIGHT OF THE WEEK TOTAL PERSONS (MILLIONS) 89.55 CHILDREN → 3.15° 2-5 7.63 2-5 CHILDREN TEENS / 12-17 CHILDREN 2-5 WOMEN 18+ WOMEN 18 MON TUE WED THU FRI SAT SUN 8:30PM 9:00PM 9:30PM 10:00PM 10:30PM 11:00PM AVERAGE AVERAGE 8-11PM EASTERN TIME, EXCEPT 7-11PM SUNDAY NATIONAL AUDIENCE DEMOGRAPHICS REPORT (NOVEMBER 1978) EXCLUDES UNUSUAL DAYS

TV Usage Affected by Family Size and Presence of Children

Even though all types of households view television regularly, certain types view more than others. As shown here, households with five or more persons watch television substantially more than the average U. S. TV household. Those viewing the least are one and two person households and households with no children.

TV usage varied very slightly by household income levels. Only those households with under \$10,000 annual income viewed under the average for the total U. S.

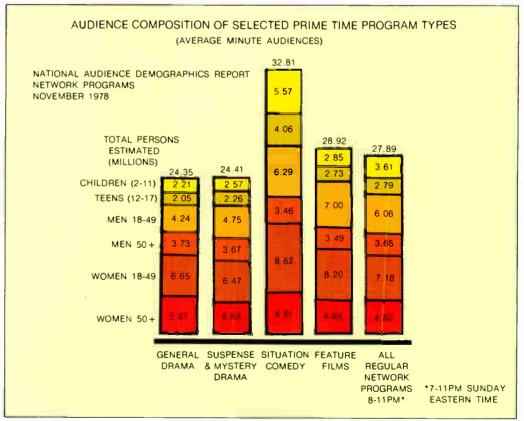

Situation Comedies Most Popular Program Type

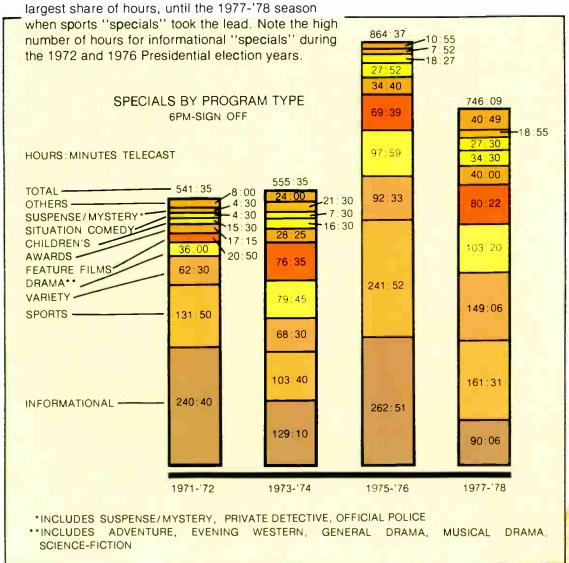

Situation Comedies continue to attract the largest overall audiences during prime time and are the most popular type of program for children and teens and younger women. As for men 18-49, audiences were the highest for feature films, while adults 50 + preferred drama.

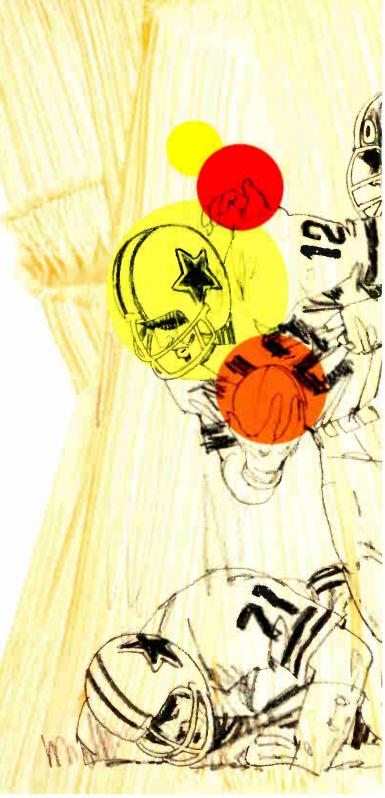

Programs scheduled during other dayparts also have a high appeal among certain audiences. For example, men dominate weekend sports audiences, children Saturday morning audiences and women daytime audiences.

"Specials" Now a Television Standard

Over the years TV "specials" have played a major role in the networks programming. Since the 1971-'72 TV season, the hours of "specials" have increased 73%. Of the four seasons reported, informational type "specials" accounted for the largest share of hours, until the 1977-'78 season

Nielsen Top Ten "Specials"

The elite group of all-time top ten "specials" from 1960-1968, consists of five Roots telecasts, three Super Bowl football games and two Bob Hope Christmas Shows.

The 50th Annual Academy Awards and Holocaust Part IV, were the only two non-sports "specials" in the top ten for the 1978 calendar year.

Top 15 Syndicated Programs

Currently there are well over 300 different programs which independent distributing organizations offer for sale to individual local stations, including network affiliates as well as independent stations. Many of these programs were at one time on network schedules, and many have never been seen on TV as other than "syndicated" programs. As a result individual stations can supplement network offerings, provide diverse regional programs, and offer national programs attuned to the preferences of the local area.

The top 15 syndicated programs among different segments of our population are listed here. The programs are ranked on the basis of their average quarter-hour rating in the Designated Market Area in which they were aired during November 1978.

Nielsen Top 15 Programs

Many different programs rank in television's top 15 in the course of the year. Those shown here were the regular programs that ranked highest during prime time in Nielsen Television Index measurements from mid-September through December, 1978.

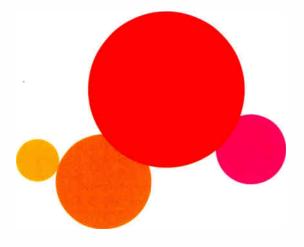

The size of a program's audience is but one of a number of ways to assess its worth or success. For example, many programs below the top 15 or 20 are successful because they appeal to a specific target audience that an advertiser or a broadcaster wishes to reach.

Cable in 18% of U. S. TV Homes

Over the last year cable has grown by over 10%, bringing current penetration estimates to approximately 18% of U. S. TV households. November 1978 estimates show that about 13,400,000 TV households subscribed to a cable service.

Individual market data from our May 1978 all-market measurement indicates that cable penetration (cable households as a percentage of all TV households) continues to be higher, generally, in the less urban markets. Fifty-four percent of cable homes are located in the smaller C and D size counties.

Nielsen Television Services

IN THE UNITED STATES. . .

Nielsen Television Index provides continuing estimates of TV viewing and national sponsored network program audiences, including national ratings 52 weeks per year. Data regularly reported include persons audiences and household audiences by market sections, Daily Ratings, Fast National and Multi-Network Area Ratings, Cost/1000 Estimates and Program and Brand Cumulative Audiences. In addition, the National Audience Demographics Report provides estimates of audiences by persons categories within household demographics. NTI's DATA COMMAND multiphase time-sharing computer systems offer clients direct access to a wide range of network program analyses.

Nielsen Station Index measures television station audiences in over 200 local markets and provides season-to-season reports (up to eight per market per year), on viewing by time periods and programs. NSI measurements include Metro Area and Designated Market Area (DMA) ratings, Station Total audiences, program pre-emptions, cumulative audiences and "times viewed," and estimates of viewing over a wide range of demographic categories.

Metered Market Service provides daily and weekly reports on television audiences in New York, Los Angeles, Chicago and San Francisco via a sample of households with Audimeter® instruments linked directly to Nielsen computers.

IN CANADA. . .

Nielsen Broadcast Index (NBI) is the Canadian counterpart of the Nielsen Station Index in the United States. NBI measures television station audiences in the 40 DMA's that comprise the total Canadian national market. NBI report frequency varies from 3-16 weeks depending on market size. Report book features include demographics, special vs. regular time period listings, trends, cumes, week-by-week ratings and metro area ratings for major reports.

Nielsen Television Index (NTI) publishes network television audience measurement reports for 37 weeks of the year. These reports cover all programs carried on Canadian networks: CBC, CTV, Global, Radio-Canada and TVA

IN JAPAN. . .

Nielsen Station Index was established there in 1960 and produces Metered Market measurements for the Tokyo, Osaka and Nagoya areas and diary measurements for 7 other markets.

OTHER COUNTRIES. . .

Nielsen also provides television audience research services in Italy and Belgium.
